

How To Apply

Application deadline - February 15, 2013

Coursework begins - August, 2013

Part 1 – Documentation to be submitted to the CLTL admissions committee on-line includes:

- Official transcripts from all undergraduate and graduate institutions attended
- Two letters of recommendation
- Completed CLTL application form (on-line)
- Resume or curriculum vitae

Please ensure all documentation is in digital format prior to completing the on-line application. Upload documentation to the “apply now” link at leadershipthroughlearning.org.

Part 2 – CSU Graduate School Application

- Complete the CSU Graduate School Application Form on-line:
graduateschool.colostate.edu
- Pay \$50.00 application fee to the Office of Admissions
- Report GRE scores directly to CSU

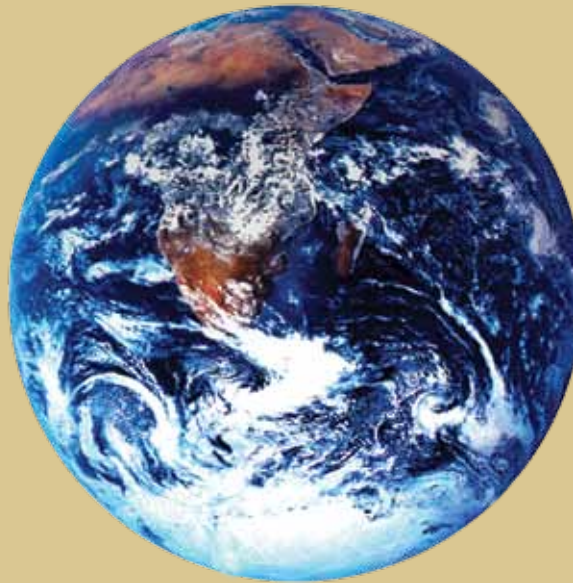

For information on tuition and study abroad costs visit: leadershipthroughlearning.org

Will you be
among the
next
generation
of
conservation
leaders?

**Conservation Leadership
Through Learning**

Master of Science

Colorado State University

WARNER COLLEGE OF NATURAL RESOURCES

How far are you willing to go to make a difference?

Society faces unprecedented challenges, from climate change to biodiversity loss to energy security and beyond. We need leaders who think differently, embrace complexity, and see the human and environmental condition as one intricate system.

Conservation Leadership Through Learning (CLTL) is a 21-month Master of Science degree that will prepare you to be a part of the next generation of conservation leaders.

Maybe you are working in conservation right now and are looking to recharge your career. Perhaps you are just back from Peace Corps or AmeriCorps and you want to further your knowledge of international conservation and development work. Or maybe you just completed an undergraduate degree and would like to further prepare yourself for the competitive job market.

Wherever your experience lies, you are driven to find solutions to environmental problems and to put your ideas into action.

Conservation Leadership: From Classroom to Action

In August 2013, the third cohort of students will embark on an intensive educational journey in the United States and around the globe to develop the knowledge and skills to become effective conservation leaders. CLTL merges trans-disciplinary university education with real-world action to train leaders who can deliver on-the-ground benefits for conservation and communities.

- Integrated curriculum spanning natural and social sciences, management, and leadership
- Field experiences throughout coursework in Colorado and for 7 months at one of our possible 2nd year field sites including: Bahamas, Belize, Kenya, Montenegro, New Zealand, Peru, and the Rocky Mountain west (USA)
- Intensive, cohort-based experience (approximately 25 students)
- International learning community of students, faculty, and practitioners from government, civil society, academic institutions, and local communities.

By reaching far beyond the classroom walls, students will benefit from a diverse range of mentorship and learning opportunities to hone leadership skills across the public, private, and nonprofit sectors.

Beyond the boundaries of traditional MS degrees.

CLTL changes the way we teach, learn, and think about conservation. More than classroom learning augmented with field experiences, applied learning forms the cornerstone of the CLTL experience. Students will take part in on-campus and field-based learning, ecological and social assessments of project sites, and implementation of conservation actions in partnership with communities. These programmatic areas will enable students to experience first-hand how technical knowledge and leadership skills can be used to guide implementation of conservation action and to inform policy. Through this integrated experience, CLTL graduates will be well-positioned to compete for leadership positions in the increasingly competitive conservation job market.

Collaboration

CLTL is a collaboration between Colorado State University, our partner conservation organizations (NGOs, Universities, Agencies), and you. Join the CLTL team and experience the nexus of conservation action and education.
