
Conservation efforts go beyond national borders

Tides of Time

Costa Rica's Cocos Island, the focus of the "Tides of Time" series, lies in the Panama basin of the eastern tropical Pacific along with three other World Heritage Island sites: Ecuador's Galápagos, Panama's Colón and Colombia's Malpelo.

Marine life abounds, from small coral-reef dwellers to large pelagic species.

"The island is designated as a natural laboratory for research. As a result, the waters teem with a great variety of marine life, including large pelagic species like sharks, sailfish and manta rays."

"Around Cocos, this oceanographic conundrum, some of high importance for the presence of abundant, abundant fauna," says Dr. Quirós. "It is common to see large feeding aggregations of sharks, manta rays and hammerheads, which are all extremely rare in other areas around the globe."

Terrestrial Cocos supports three distinct types of ecosystems that are isolated from each other by the distance from which the islands are separated, which prevents the exchange of genetic material and population aggregation. One major threat is illegal fishing and the presence of invasive species, which can disrupt the balance of the ecosystem.

The Duomètre Sphéro tourbillon, Jaeger-LeCoultre

Jaeger-LeCoultre, who started the company in 1833, has been producing some of the finest watches in the world for over 150 years. The Duomètre Sphéro tourbillon is a perfect example of the company's commitment to innovation and precision.

The watch features a tourbillon, a device that helps to reduce the effect of gravity on the watch's accuracy. The Duomètre Sphéro tourbillon is also equipped with a second time zone, making it perfect for travel enthusiasts.

Every woman has a Rendez-Vous, with Jaeger-LeCoultre

Rendez-Vous Night & Day is a unique timepiece that combines elegance and functionality. The watch features a large face with a day/night indicator, allowing the wearer to easily read the time whether it's day or night.
