The Future of Small Settlements in China and the World Heritage Convention Summary Report

This is a summary report of the *Future of Small Settlements in China and the World Heritage Convention* workshop, organised by WHITRAP Shanghai on June 14th to 15th, in relation to the research on small settlements in China and the Asia Region that WHITRAP has been developing since February 2017.

I. Introduction

Marie-Noël Tournoux, Project Director WHITRAP

The *Future of Small Settlements in China and the World Heritage Convention* workshop, held on June 14th and 15th, 2018, at WHITRAP Shanghai headquarters, was the first opportunity for the Institute to present its findings in the Small Settlements research to researchers and institutions active in the field, reviewing its approach and expected outcomes.

Why select Small Settlements as a research topic? Currently, there is an urgent need for in depth research on rapidly changing settlements, territories and landscapes. They reflect a long interaction between human beings and their environment and today, these unique territories and complex landscapes are undergoing dramatic transformations at an unprecedented pace. External forces, large-scale developments, and endogenous mechanisms impacting local communities – especially in economically fragile areas – threaten their cultural, economic and social values. All these elements are deeply intertwined, and an effective analysis of small settlements must be site based and consider all the structural links and the historic and geographic background to create a body of knowledge. Any territorial strategy should not be developed without fully understanding the complex territorial systems at play, and identifying the cultural and natural, tangible and intangible values these landscapes carry. Therefore, knowledge is a key tool in understanding the driving forces of change, and in promoting cultural values as assets for different development policies. Through this research, WHITRAP carries out its mandate to support UNESCO in advocating the role of culture as a driving force behind revising development paradigms, and highlight heritage as a key power in shaping the “future we want”.

The workshop was organised by the WHITRAP Shanghai team, curated by Marie-Noël Tournoux, WHITRAP Project Director, and Anna-Paola Pola, Director of Urban

Planning and Researcher, in charge of the above-mentioned research project, with the coordination of Ms Lu Wei, Executive Deputy Director, and the logistical support of Ms Zhou Jiyun, Administrative Assistant.

Seventeen national and international experts from different professional and academic fields (heritage studies, architecture, anthropology, law, urban planning, nature-based tourism, agronomy, sociology, etc.) attended the meeting. The list of the participants can be found in **Annex 3** of this document.

The first day of the workshop was devoted to the presentation of papers, while the second day was conceived as an open discussion based on topics raised the previous day which were highlighted as main themes by Prof. Plácido Gonzáles Martínez, rapporteur of the workshop. These were: Social, Developmental, Political, Economic, and Methodological issues.

The meeting, chaired by Marie-Noël Tournoux, was opened by Simone Ricca, Vice-Director of WHITRAP, who underlined the role of WHITRAP in strengthening the implementation of the *1972 World Heritage Convention* (whc.unesco.org/en/conventiontext/) in the Asia and the Pacific region, and the relevance of the workshop and the research on Small Settlements within the on-going international discourse. The agenda of the two-day workshop can be found in **Annex 2** of this document.

A preliminary outline, which described the contents and scope of the workshop, was shared in advance with the participants, **Annex 1**. A number of topics were brought to the attention of the guests, such as: the relationship between development and heritage, between settlements and territorial systems, as well as some methodological issues related to accessing sources, research tools and references. Participants were also invited to consider the following issues: how are cultural and natural values considered and acknowledged? What types of heritage are defined as important, and are cultural values identified as assets for development strategies? Speakers were asked in what way local communities rooted in a specific territory could provide sustainable practices and ideas to inform the larger national society. Lastly participants were invited to share lessons learned from traditional settlements and their territory.

As a result, participants highlighted several topics throughout the workshop which are part of the international debate on heritage.

Firstly, one key subject was the identification of heritage values processes and their significance. Consequently, whom defines heritage and for whom, who regulates and manages it, was a recurring concern. Additionally, authenticity and integrity as relevant criteria to assess and define heritage values was also questioned.

Furthermore, the discussions underlined the importance of linking natural and cultural values and considering the tangible and intangible heritage of small settlements especially in rural areas. Such an integrated approach is consistent with any institutional framework, be it local or national programmes focusing on heritage, protection and conservation policies, or the implementation of international instruments such as UNESCO's Culture Conventions.

Also, participants observed the crucial need to further analyse the wider context, including economic, environmental, social, and functional linkages as well as governance mechanisms. This same approach could be applied to any research area. More specifically for rural areas, understanding agricultural production types (crops, husbandry, forestry, fishing, hunting), agricultural systems (subsistence, mixed, intensive to name a few) and their economies, land use, land rights, spatial organisation, and large and small scale geographic linkages is what allows researchers to grasp the structure of these complex, intertwined systems.

Lastly, the issue of the economy of villages and their territorial environment was highlighted throughout the workshop. Focus was placed on the issue of the liveability of communities, their aspiration for a higher quality of life, the shift of costs in building materials and labour, transport etc. and their effects on rural heritage. In this regard, the research on small settlements should contribute to any further work on economic indicators, and rethinking heritage values as assets and not as a commodity.

We hope that this workshop will play a key role in developing a network of experts and scholars around WHITRAP's initiatives and researches. The next step is to finalize the research and ensure its distribution. In the longer term such research should be a knowledge tool for developing planning guidelines and principles as well as fostering innovative regulatory tools acknowledged by decisions makers at national, regional and local levels. Such an approach would be fully in line with the policies and tools advocated by UNESCO's *Recommendation on the Historic Urban Landscape* (whc.unesco.org/en/hul/).

Finally, we would like to thank all the participants for their contributions, both in terms of the presentation of their papers and for their comments, ideas and active involvement in discussion, especially Prof. Plácido Gonzáles Martínez for his dedication and contribution as rapporteur.

More information is provided on WHITRAP's website at www.whitr-ap.org/index.php?classid=1461&newsid=2925&t=show.

DANGJIA CUN 党家村
Shanxi Province

Dangjia Cun is located 5km south of Huanghe (The Yellow River). It was founded and developed in the Ming and Qing Dynasties (14th-19th Centuries) by wealthy families (clans), which put an emphasis on education ensuring that the villages became renowned for being the home of learned and intellectual men. The village is characterized by elaborately decorated houses of differing heights, whose combination of elements depended on the status and wealth of the owner. It is predominantly made of brick, stone and wood, with a plan which situates rooms and halls around interior courtyards, along four or three lateral sides. Its state of conservation throughout the years testifies to the quality of the materials, design and technologies utilized for construction. Building elements sizes and measurements, as well as their distribution, follow Chinese beliefs rooted in folk tradition and Confucian philosophy. This also extends to the location of the village themselves, which was carefully selected following both spiritual as well as practical considerations linked to geographic and climatic conditions.

Dangjia Cun, *Ancient Residences in Shanxi and Shaanxi Provinces*, China Tentative List (designed by Anna-Pola Pola)

II. Trans-disciplinary approaches in village studies: diversities, common threats and an uncertain future

Anna-Paola Pola, Director of Urban Planning and Research Fellow WHITRAP

1. Overall framework

In the past years, interest in rural areas and small settlements exponentially grew in China. This is part of a global phenomenon. All around the world, initiatives trying to promote the enhancement and development of villages and small towns are becoming more and more frequent.

Small settlements reflect an articulated, fine-tuned interaction – developed throughout time – between mankind and the natural environment. This relationship has shaped unique landscapes, multiple cultures and belief systems, and influenced social and spatial organisation.

Today, however, these territories are undergoing dramatic transformations. Villages are experiencing out-migration and marginalisation, and their surrounding landscapes are witness to a revolution in farming, infrastructure and energy production to meet the needs of the world's population. The critical role played by villages, small towns, and their vast surrounding environment is gaining global acknowledgment as a complementary counterpart to growing cities, acting as extraction sites, reservoirs for food, freshwater, and air, and as leisure spaces.

Since the 2000s, in China, national attention has begun to focus on issues related to rural areas (grouped under the expression “three rural problems” 三农问题). As the Country is facing unbalanced development and dealing with strong disparities between rural and urban conditions, the national driving focus is put on poverty reduction, generally achieved through urbanisation of rural areas and bringing urban standards of living to the countryside (the Chinese model of development is closely connected with the urbanisation process).

At the same time, new attention to preservation was raised – in particular for villages and their diverse local traditions – with new regulations and guidelines for protection. However, Chinese approach to preservation remains mainly focused on tourism demands to inject new economic vitality into marginal areas, which often results in controversial effects on the social and built fabric.

The crucial issue that needs to be addressed is how to integrate the conservation of local cultures with development and the improvement of communities' quality of life, and how the heritage embodied in architectural objects, beliefs and landscapes can become an asset for the definition of new development strategies.

The *2030 Agenda for Sustainable Development* (www.un.org/sustainabledevelopment/sustainable-development-goals/), approved by the United Nations General Assembly in September 2015, has acknowledged the role of culture in promoting local knowledge systems and environmental management practices, preventing biodiversity loss, fostering innovation and poverty alleviation. The Agenda suggests that culture could be understood as the crosscutting contributor to the three dimensions of sustainable development: economic, environmental and social.

The acknowledgement of culture as an enabler and as a driver of sustainable development is an important step for the definition of a more comprehensive concept of sustainability, but also of a different vision of culture.

In this framework, the *UNESCO Culture for Sustainable Development Initiative*, launched in 2015, seeks to demonstrate the link between the implementation of the UNESCO Culture Conventions and both the goals of the *2030 Agenda for Sustainable Development* and the recommendations of the *New Urban Agenda* (habitat3.org/the-new-urban-agenda/). The initiative attempts to ground the theoretical insight on empirical evidences, finding experiences and indicators able to prove the relationship between cultural heritage recognition and transmission and sustainable development.

In order to analyse this theme in the context of small settlements, WHITRAP Shanghai, at UNESCO's invitation, has developed a research focusing on villages in China and in the Asia region. The outcome of WHITRAP's work should serve as a basis reference for an international conference on the same topic foreseen to take place in China in the coming months, in line with the thematic priorities related to culture and development promoted by UNESCO.

2. Research outline

The objective of the research is to showcase and analyse the current situation of small settlements in China and in South/Southeast Asia, focusing on existing values (cultural, natural and social), preservation, and sustainable development strategies.

The research was developed through collecting data and case studies on small settlements, which were defined in terms of dimension (less than 50 000 inhabitants), urban-type, and geographical area.

This work was an opportunity to inventory villages and small towns included in the World Heritage List, as well as sites included on the National Tentative Lists, taking into consideration Natural, Cultural and Mixed properties and sites.

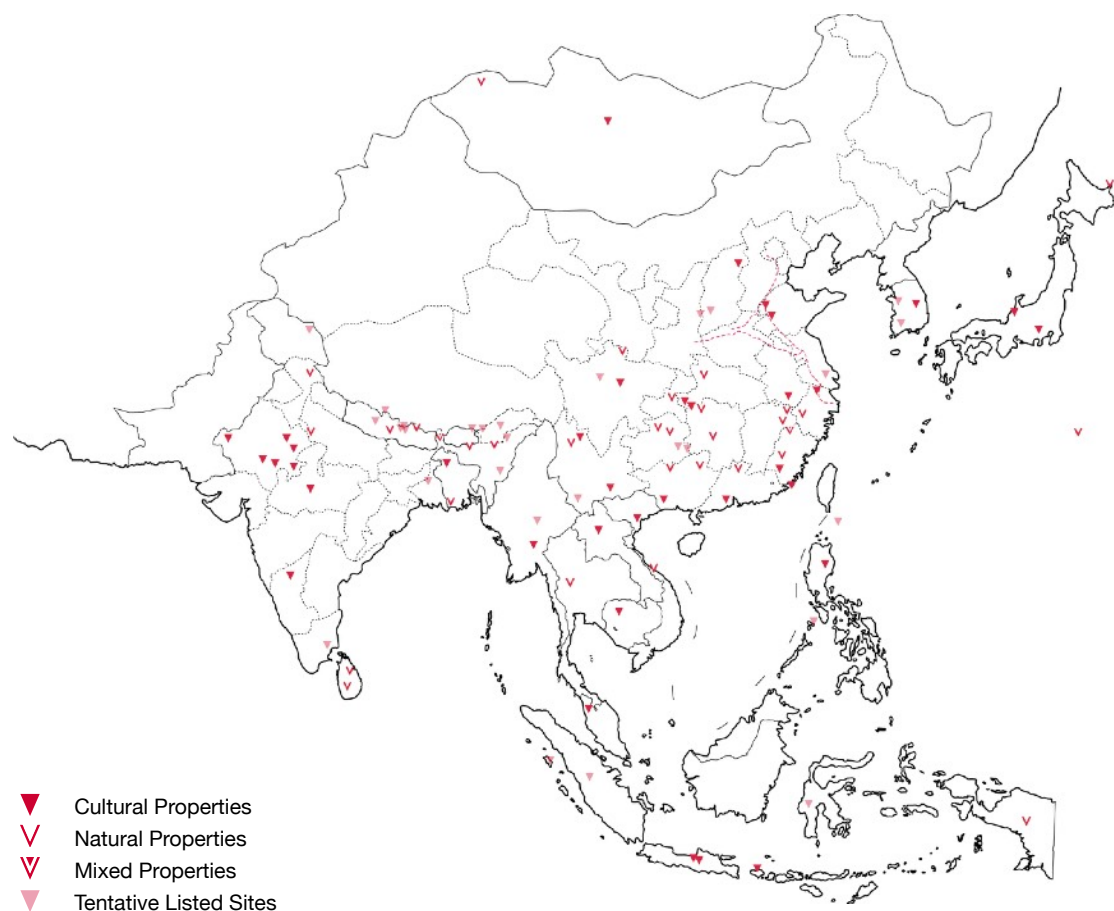

Fig. 1: Inventory of villages in the World Heritage Properties and Tentative listed Sites (map by Anna-Paola Pola)

The research also collected a series of case studies resulting from a call launched in February 2017 that invited experts and scholars to submit researches and projects on regional small settlements. To present a critical reading of the data collected, scholars from different disciplines were asked to comment on the key issues underlined in the case studies.

The research highlights the peculiarity of the China's situation in the international framework, analysing the evolution of the strategies put forth in China for the preservation and revitalization of small settlements in the context of the national priorities on poverty alleviation and urbanisation.

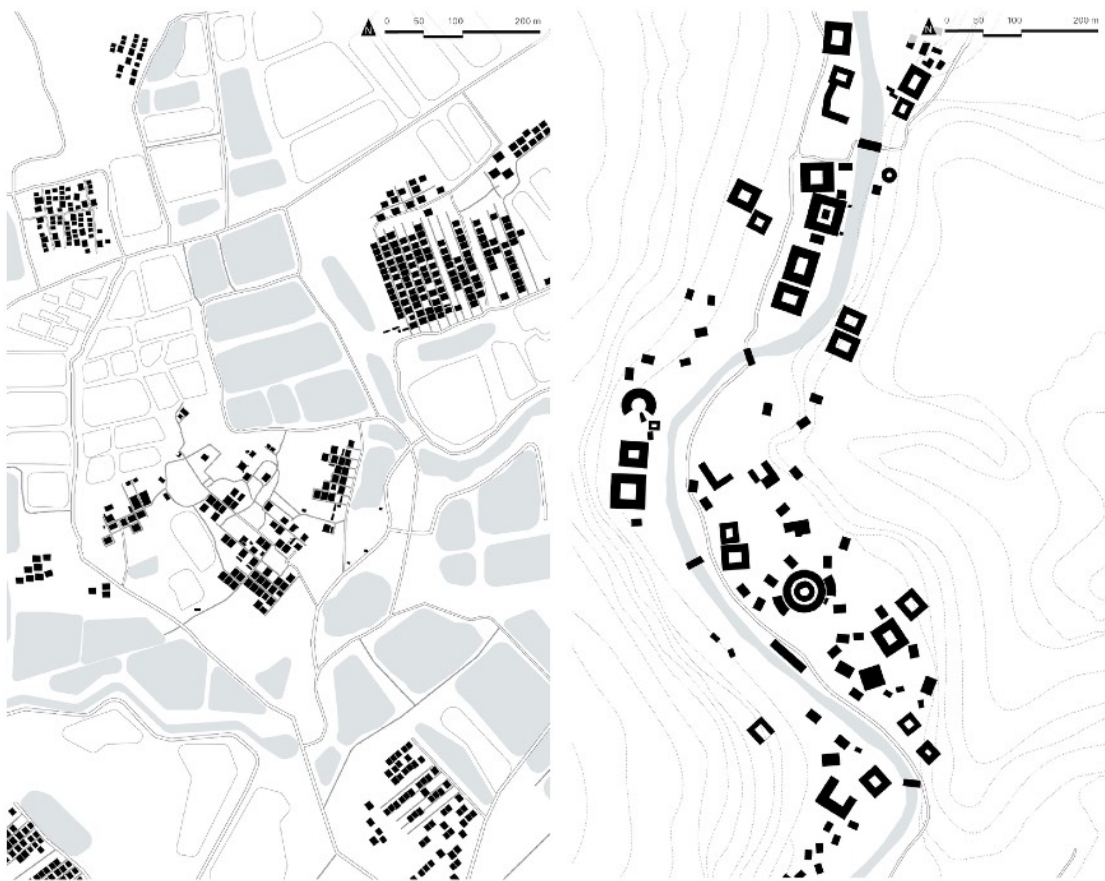

Fig. 2: Maps of Zili Village, Kaiping City, Guangdong, and Hongkeng Tulou Cluster, Hukeng Town, Fujian (drawings by Anna-Paola Pola and Caterina Villani)

Texts, pictures and maps describe each case study and World Heritage site. Particular attention has been paid to provide a uniform graphical representation at the same scale of the cartographic material to encourage comparative reading of cases.

3. Synthesis of the workshop debate

This section develops a brief synthesis of the major common themes that were raised and discussed by the participants throughout their presentations and at the round table discussions.

Several key considerations were brought up. These issues can be grouped into the following main categories: territorial perspective, recognition of values and authenticity, social transformations, and methodological issues.

The starting point of many presentations was the intimate structural interaction between villages, environment and society.

All participants observed, whatever the different disciplines of study they referred to, that villages belong to a wide and complex system, comprising of economic, environmental, and social factors, as well as agricultural systems, farming technologies, land use, land rights, governance mechanism, spatial organisation, settlements' morphology, building techniques, customs, oral traditions, etc. All these elements are deeply intertwined, and an effective preservation strategy cannot be conceived without integrating this system of relationships.

The acknowledgement of this wide perspective, shared by all lecturers, confirms the trend of a conceptual “shift” of paradigm (Li Kuanghan) in the study and comprehension of villages, and in the **recognition of a more inclusive and rich set of values for small settlements** (Du Xiaofan).

The notion of the “heritage of villages” has been recently extended from tangible to intangible values, from singular objects to ensembles and landscapes, know-hows and beliefs. Conservation strategies shifted from a strict protection system to the management of sustainable transformation, from a top-down sectorial approach of experts to participative community-based initiatives (Li Kuanghan, Zhao Xiaomei, Ren Hexin). This conceptual extension has already been acknowledged and integrated at a Chinese national level by official documents and lists of protected villages (Li Kuanghan, Du Fanding, Anna-Paola Pola). The relevance of the concept of cultural confidence was also evoked (Zhao Xiaomei).

This new approach has also been perceived as a conceptual tool for the economic, touristic and educational promotion of a more inclusive range of traditional settlements within a broader strategy for poverty alleviation (“The more traditional the village, the more poverty alleviation is strengthened,” Du Xiaofan).

The presence of diversified forms of culture, many of them related to ethnic minorities (Zhao Xiaomei), has been incorporated into the official discourse, transforming villages into precious archives of differences (cultural, social, biological, etc.). Villages and diversity therefore become crucial elements for the redefinition of a wider, diversified “Chinese identity”, playing a role on the global stage and strengthening the overall national soft-power strategy (Anna-Paola Pola).

The participants underlined the complexity of the theme, in view of the multiplicity and diversity of existing small settlements, and suggested a more focused approach to this topic (Du Xiaofan, Li Kuanghan), proposing to narrow the scope of the research to villages and settlements directly related to traditional agricultural systems (Li Kuanghan).

Many interventions underlined how the shape of the **territorial system**, as a physical form of collective memory, materialises this broad and comprehensive system of relationships. The role of the landscape is never to be seen simply as decor or background. Local environments allowed the creation of unique settlements and landscapes, and, based on sophisticated production mechanisms through a wise and balanced use of local resources, minimise waste and unnecessary consumption (Anna-Paola Pola).

Widening our comprehension of the broad territorial system is the first step to promote a more in-depth knowledge of villages (Du Xiaofan, Du Fanding, Bin Huizhong, Violaine Allais, Christian Nolf). An accurate understanding of the meaning of the territory throughout time can disclose the outstanding characteristics of these places that could, otherwise, be perceived as ordinary (Li Kuanghan, Christian Nolf, Bin Huizhong). “Only by understanding this meaning”, implicit in its symbols and forms, “can we accordingly preserve the object,” said Paolo Vincenzo Genovese. Deepening our understanding of the *raison d’être* of the territorial systems allows us to “reconfigure” (Christian Nolf) on-going transformations in a more accurate and sustainable method (Violaine Allais).

Many participants raised the issue of the **on-going transformations** of villages and their environments. At this historic phase, Chinese villages are facing a dilemma, simultaneously trying to achieve truly sustainable long-term development and a better quality of, while preserving their cultural diversities and values.

Different reasons were underlined for such transformations:

- Aspiration for a better livelihood and poor sustainability of traditional economies;
- Tourism development, whenever promoted by the national strategy of poverty alleviation (Gao Kun), private investors, or NGOs (Lukasz Madrzynski);
- Transformations due to rural area land policies (Ivan Cardillo);
- Changes of agricultural patterns of production (Christian Nolf); etc.

Since spatial configuration goes hand in hand with social organisation (Zhao Xiaomei), the workshop also addressed the **transformation of society**.

Transformations can be observed in the deterioration of the traditional village landscape when a community loses its sense of cohesion (Du Qian), and can be recorded in the personal stories and the various motivations of people who decided to move to rural areas, whether returning natives or newcomers (Zhong Xiaohua). The opposite trends of urban migration and rural gentrification are transforming the social pattern of small settlements, bringing new factors to traditional communities (Zhong Xiaohua, Zhao Xiaomei).

Another sensitive topic put forward during the discussion was the concept of **authenticity** (Lukasz Madrzynski). To what extent can transformations be considered acceptable without affecting the authenticity of a place? To which community does the concept of authenticity refer (Ren Hexin)? How can we deal with growing differences within local communities (Zhao Xiaomei)? Moreover, how do we preserve a historical territory, making sure it continues to represent a society in rapid evolution?

Some examples were brought up. Cultivations around the Fujian Tulou World Heritage site, reconfigured from rice and tobacco to fruit trees, represent a transformation that doesn't denature the relation between built and natural environment at the territorial scale (Du Fanding). While on the other hand, the transition to an intensive and automated agriculture system near Lake Tai on the Yangtze River Delta, has completely detached the villages from their surrounding landscape (Christian Nolf).

Many speakers stressed the fact that the integration of the experts' work with local communities is a key element for the correct recognition of the values attributed to small settlements, and especially for the achievement of a truly effective protection strategy and the sustainable management of transformations (Gao Kun, Li Kuanghan, Du Fanding, Du Qian, Zhao Xiaomei, Lukasz Madrzynski, Ren Hexin). Finally, the participants of the workshop discussed issues related to the **methodological aspects** of research and fieldwork. The definition of "small settlement" has been underlined as a complex subject with no commonly agreed upon definition. However, all participants agreed that size and scale should not be the only criteria in identifying this category of settlements.

Participants also underlined the difficulty of identifying and accessing primary sources (Paolo Vincenzo Genovese), data and knowledge tools. They also highlighted the crucial purpose of identifying and contacting people on site and acting as mediators between local communities and governments.

4. Outcome

This scientific workshop was a fruitful moment of convergence between national and international researchers and professionals based in China.

Overall, the meeting gave insight on further developments, and confirmed the main assumptions of WHITRAP's research on Small Settlements, in particular:

- The strategy put forth in China for the preservation and revitalisation of villages and its implications (Chinese lists of villages, concept of heritage, relevance of villages in the Chinese official discourse, etc.);
- The relevance of an approach integrating natural and cultural values;
- The importance of a “territorial perspective” to understand villages, an approach that is beginning to be integrated in official Chinese practices;
- The relevance of land-ownership, land rights, and land uses for Chinese villages;
- The problematic management of tourism;
- The complexity of accessing historic sources (maps and archives), and therefore the soundness of the path of research to overcome this issue by developing a set of standardised maps at the same scale to facilitate comparative analysis.

ANNEX 1

The Future of Small Settlements in China and the World Heritage Convention

Outline for presentations and contributions

Since February 2017, WHITRAP — as a research institution active at the Chinese and international level — has developed, in the framework of the UNESCO discussion on the role of Culture for Sustainable Development, a research focusing on small settlements in China and in the Asia Region from the sustainable development and conservation point of view.

This research has been an extraordinary opportunity to analyse the evolution of the strategies put forth in China for the preservation and revitalization of small settlements in the context of the World Heritage Convention and of the national priorities on poverty alleviation and urbanisation.

Small Settlements reflect a long interaction between human beings and environment. This interaction shaped the territory creating unique landscapes based on sophisticated production mechanisms, rich and multiple cultures and belief systems, and influenced ways of living, social and spatial organization, building techniques, settlements' morphology, land use and, at a larger scale, transport systems and commercial networks.

Today, however, these landscapes are undergoing dramatic transformations at an unprecedented pace. External forces, large-scale developments, and endogenous mechanisms impact local communities especially in economically fragile areas.

Until recently, traditional lifestyles, know-hows and values were considered as opposed to modern development and progress, and this negative perception has favoured the abandonment, destruction, and radical modification, of villages all over China.

In the past years, the one-size-fits-all urban model began to be challenged by the perception that the cultural, natural and social values linked to small settlements and their landscapes can provide an alternative development model.

Small settlements have values that are now deemed relevant for the definition of Chinese identity; thus more and more villages are protected, enhanced, and listed as heritage sites. The crucial issue that should be addressed is how to integrate the conservation of these values with development and improvement of local communities' quality of life, and how these values can play a role in the definition of new development strategies.

The objective of the workshop is to present the findings of WHITRAP's Small Settlement research to Chinese researchers and institutions active in this field, reviewing its approach and expected outcomes. The workshop also aims to identify current trends in territorial management in relation to (world) heritage values, and the 2030 Urban Agenda.

Core issues and topics for discussion

In view of the above, we would like to invite you to address the role of cultural and natural values in territorial development and management.

What lessons can we learn from traditional settlements and their territory? How can local communities rooted in a specific territory provide sustainable practices and ideas that could inform the larger national society?

How, in your specific field of research and practice, are cultural and natural values considered and acknowledged? What type of heritage is defined as important? Are cultural values identified as assets and integrated in development strategies?

We would be grateful if you could address the following points in your presentations/ contributions for day 1 and day 2:

Day 1

- Relationship between development and heritage in your field of research/site;
- Small settlements in their wider setting and territorial systems, and in relation to surrounding towns and villages (rather than as singular isolated entities);
- Knowledge gaps, and main challenges.

Day 2

- Identifying and accessing sources & research tools;
- Relevant recent examples (success and challenges) of research on small settlements;
- Relevant references.

Expected Outcome

The workshop is an opportunity to develop a platform of researchers and institutions active in the field. Experts' contributions and feedback will help identifying knowledge gaps and research areas to be further developed to improve the Small Settlements Report findings and conclusions.

A summary of the workshop outcome will be published online on WHITRAP's website and shared with a larger network of researchers and institutions active on this field in Asia and beyond.

Furthermore it is expected that the results of the workshop will contribute to define/ finalize the introductory chapters of the Small Settlements book to be published by WHITRAP.

ANNEX 2

The Future of Small Settlements in China and the World Heritage Convention

Programme

Day 1 (Thursday, June 14th) Chinese and English / translation provided

- 8.30-9.00 Registration of participants & welcome coffee
- 9.00-9.15 Welcome and Opening: Mr Simone Ricca, Vice Director WHITRAP
Meeting chaired by Ms Marie-Noël Tournoux, Project Director
Rapporteur Day 1: Mr Plácido Gonzáles Martinez, Associate Professor, CAUP Tongji University, Shanghai
- 9.15-9.25 Group photo
- 9.25-10.15 *Presentation of WHITRAP's Research*
Ms Anna-Paola Pola, Director of Urban Planning and Research Fellow
- 10.15-10.30 Coffee Break
- 10.30-10.50 *Community development in world heritage sites, Mount Qingcheng and the Dujiangyan Irrigation System*
Mr Gao Kun, Chief of the Heritage Conservation Section, Mt. Qingcheng-Dujiangyan Scenic Spots Administration
- 10.50-11.10 *Preserving the vitality of cultural rural heritage*
Mr Du Xiaofan, Professor of Department of Cultural Heritage and Museology, Fudan University, Shanghai
- 11.10-11.30 *The shifting paradigm of village as heritage in contemporary China*
Ms Li Kuanghan, Director of the China Heritage Program, Global Heritage Fund
- 11.30-11.50 *Recognizing the holistic and dynamic protection of rural settlements from the perspective of cultural landscape*
Mr Du Fanding, Vice Director of studio 3, Beijing Guo Wen Yan cultural heritage conservation center co., LTD
- 12.00-13.30 Lunch

- 13.30-13.40 Introduction to the afternoon session
- 13.40-14.00 *Formation, Transformation and Continuation of Tradition: the Study of Architecture and Landscape of Tangdu Village (Guizhou, China)*
Ms Du Qian, Researcher at the International Research Centre for Architectural Heritage Conservation - Shanghai Jiao Tong University
- 14.00-14.20 *Spatial representation and heritage creation in Chinese rural settlements*
Ms Zhao Xiaomei, Lecturer in the Department of Cultural Heritage and Museology, Fudan University, Shanghai
- 14.20-14.40 *Land Policies in China: legal framework, land use rights and property laws in rural settlements*
Mr Ivan Cardillo, Lecturer, faculty member, Zhongnan University of Economics and Law, Law School, Wuhan [video call]
- 14.40-15.00 Coffee break
- 15.00-15.20 *Rural China in transformation. Testing reconfiguration strategies in the Yangtze River Delta*
Mr Christian Nolf, Associate Professor in the Department of Urban Planning and Design at XJTLU, Suzhou
- 15.20-15.40 *Heritage conservation and community development: a sustainable nature-based tourism perspective*
Mr Lukasz Madrzynski, Doctoral Student at UNEP-Tongji Institute of Environment for Sustainable Development, Shanghai
- 15.40-16.00 *Landscapes and territories as dynamic systems: identifying environmental values and assets*
Ms Violaine Allais, Engineer in Agronomy and Economics of Environment at Agro-Paris Tech
- 16.00-16.20 *Actors and community: subjective motivation of rural revitalization*
Ms Zhong Xiaohua, Associate Professor of Sociology at Tongji University, Shanghai
- 16.20-16.40 *Protecting the Cultural Heritage of Rural Architecture from the Perspective of Historical Geography*
Ms Bin Huizhong, Associate Professor and Master Tutor, College of Fine Arts, Shanghai University

16.40-17.00 *Enhancing rural values through an eco-museum project*

Mr Ren Hexin, Director of Dimen Dong Eco-Museum

17.00-17.20 *Historical Heritage and Traditional Settlements, Preservation Strategy based on Bionic Approach and Data-Driven Analysis*

Mr Paolo Vincenzo Genovese, Professor School of Architecture, Tianjin University

17.20-18.00 Discussion & Conclusion

Day 2 (Friday, June 15th) Chinese and English / translation provided

Roundtable: Thematic debate and contributions based on the outcomes of Day 1 chaired by Ms. Marie-Noël Tournoux

9.00-9.10 Introduction

9.10 - 9:30 Report of Day 1 main points and outcomes, Prof. Placido Gonzales.
Presentation of proposed thematic issues for discussion

9.30-10.45 Discussion on thematic issues with reference to on going researches in a discursive framework (Contributions by all participants)

10.45-11.00 Tea break

11.00-12.15 Discussion on thematic issues with reference to on going researches in a discursive framework (Contributions by all participants)

12.15-12.30 Wrap-up and conclusion

12.30-14.00 Lunch

14.00-15.45 Research issues and methodology, way forward and road map
(Contributions by all participants)

15.45-16.00 Conclusion

ANNEX 3

The Future of Small Settlements in China and the World Heritage Convention

List of participants and biographies

GAO Kun

高坤

Title Chief of the Heritage Conservation Section, Mt. Qingcheng-Dujiangyan
 Institution Scenic Spots Administration
 都江堰市青城山—都江堰风景名胜区管理局遗产文物保护科科长

Contacts 625454829@qq.com

Resume Gao Kun, Male, 45 years old. In 1996, he graduated from Xi'an University of Architecture and Technology Construction Machinery Major, and is now working in Mt. Qingcheng-Dujiangyan Scenic Spots Administration as the Chief of the Heritage Conservation Section. He is mainly engaged in heritage conservation and management, and his major achievements are as follows: He has participated in records collection, arrangement and compilation of 3 national key cultural relics protection units of Dujiangyan, Chenhuang Temple and Mt. Qingcheng ancient building complex in the heritage site; the reconstruction of the heritage site after the 2008 "Wenchuan" earthquake; the planning and compilation, monitoring and protection of the heritage site.

高坤，男，45岁，1996年毕业于西安建筑科技大学建筑机械专业，现任都江堰市青城山—都江堰风景名胜区管理局遗产文物保护科科长。在工作期间主要从事遗产保护管理工作。主要工作成绩有：参与遗产地都江堰、灌口城隍庙、青城山古建筑群3处全国重点文物保护单位记录档案收集、整理、编写工作；遗产地2008“汶川”大地震后灾后重建工作；参与遗产地规划编制工作；牵头进行遗产地监测与保护管理工作。

DU Xiaofan

杜晓帆

Title Professor, Department of Cultural Heritage and Museology, Fudan University
Institution 复旦大学文博系教授

Dean, Centre for Land and Cultural Resources Research, Fudan University
复旦大学国土与文化资源研究中心主任

Vice President, Society for Conservation of Cultural Heritage in East Asia
东亚文化遗产保护学会副会

Vice President, World Heritage Research Committee, China Culture Relics
Academy – 中国文物学会世界遗产研究委员会副会长

Contacts xfd@fudan.edu.cn

Resume Xiaofan Du is interested in the management, practice and research of cultural heritage conservation. He was a special fellow of Nara Research institute for Cultural Properties and a cultural heritage protection commissioner of Beijing Office, UNESCO. He presided over many projects, such as conservation and restoration of traditional papermaking and paper culture relics in East Asia project, conservation of Hanyuan Hall, Daming Gong Palace project, conservation and restoration of Kumutula Cheonbuldong, Xinjiang project, conservation and restoration of Longmen Grottoes, Luoyang project, cultural landscape conservation and outline of community development for Guizhou dwellings and other UNESCO cultural heritage conservation projects. Besides, he has presided over many national and provincial scientific projects. He focuses on live cultural heritage, especially the conservation, transmission and application of rural cultural heritage.

长期从事文化遗产保护的管理、实践和研究，曾任日本奈良国立文化财研究所特别研究员，联合国教科文组织北京办事处文化遗产保护专员，主持了东亚传统造纸技艺和纸质文物保护修复、西安大明宫含元殿保护修复工程、新疆库木图拉千佛洞保护修复工程、洛阳龙门石窟保护修复工程、贵州村落文化景观保护与社区发展操作指南等多项联合国教科文组织文化遗产保护项目，并担任过国家、省部委的多项科研课题。现在主要关注活态文化遗产，特别是乡村文化遗产的保护、传承与活用。

LI Kuanghan

李光涵

Title Director of the China Heritage Program, Global Heritage Fund
Institution 全球文化遗产基金会的中国项目主任

Contacts han.li@globalheritagefund.org

Resume Kuanghan Li joined Global Heritage Fund in 2008 and currently serves as the Director of the China Heritage Program, managing all of GHF's conservation Projects in China where she works closely with public and private partners and the local communities on planning, conservation and development issues. Before joining GHF, Han has worked as a consultant to the Getty Conservation Institute's China Principles Project, and has diverse experiences with architecture design and historic preservation projects in the US, India, France, Morocco, and China. Han holds a BA in architectural studies from the National University of Singapore, a Masters degree in historic preservation and an Advanced Certificate in Architectural Conservation and Site Management from the University of Pennsylvania, and is currently a Ph. D. candidate at Peking University in cultural heritage conservation. Her recent practice and research focus is on the conservation and development of ethnic villages in Southwest China.

李光涵是（美国）全球文化遗产基金会的中国项目主任。在此之前曾于美国、印度、摩洛哥、法国等地参与过多项建筑设计和遗产保护项目。国内参与过的主要保护项目包括美国盖蒂保护研究所和国家文物局合作的中国准则项目、平遥古城保护项目等。李光涵毕业于新加坡国立大学建筑系本科、美国宾夕法尼亚大学历史保护系硕士，目前为北京大学考古文博学院文化遗产保护方向的博士研究生。其项目实践和研究方向为中国西南地区的传统村落保护与发展，特别是在贵州省榕江县大利侗寨的传统村落保护行动中践行了有关村落文化景观保护的理论与方法，进一步检验了已有的研究成果的应用性。
