

**CONVENTION CONCERNING THE PROTECTION OF
THE WORLD CULTURAL AND NATURAL HERITAGE**

**INTERGOVERNMENTAL COMMITTEE FOR THE PROTECTION
OF THE WORLD CULTURAL AND NATURAL HERITAGE**

**Eighteenth Extraordinary Session
Paris, UNESCO Headquarters
24 January 2023, 10 am – 6 pm**

Item 5 of the Provisional Agenda: Nominations to the World Heritage List – Nominations to be processed on an emergency basis

Summary

This document presents three nomination dossiers to be processed on an emergency basis for examination by the World Heritage Committee at its 18th extraordinary session. The document is divided into two parts:

Part I Examination of nomination dossiers to be processed on an emergency basis

Part II Record of the physical attributes of the three sites to be examined at the 18th extraordinary session

The document presents for each nomination the proposed Draft Decision based on the recommendations of the relevant Advisory Body as included in document WHC/23/18.EXT.COM/INF.5.

Decisions required:

The Committee is requested to examine the recommendations and Draft Decisions presented in this Document, and, in accordance with paragraph 153 and 162 of the *Operational Guidelines*, take its Decisions concerning inscription on the World Heritage List and the List of World Heritage in Danger.

I. EXAMINATION OF NOMINATION DOSSIERS TO BE PROCESSED ON AN EMERGENCY BASIS

Summary

1. At its 18th extraordinary session, the Committee will be examining three cultural nominations to be processed on an emergency basis. All three nominations are new nominations, having not been presented to the Committee previously.
2. ICOMOS is recommending all three sites for inscription on the World Heritage List and at the same time on the List of World Heritage in Danger.

Alphabetical Summary Table of Nomination Dossiers to be Processed on an Emergency Basis and Index of Recommendations by ICOMOS to the 18th Extraordinary Session of the World Heritage Committee

State Party	World Heritage nomination	ID No.	Recommendation	Criteria proposed by the State Party	Pp
Lebanon	Rachid Karami International Fair-Tripoli (Date of receipt 08/04/2022)	1702	I + Danger	(i)(ii)(iv)	2
Ukraine	Historic Center of the Port City of Odesa (Date of receipt 11/10/2022)	1703	I + Danger	(ii)(iv)	5
Yemen	Landmarks of the Ancient Kingdom of Saba in Marib Governorate (Date of receipt 11/02/2022)	1700	I + Danger	(iii)(iv)	8

KEY

I	Recommended for inscription
R	Recommended for referral
D	Recommended for deferral
N	Not recommended for inscription
Danger	Recommended for inscription on the List of World Heritage in Danger

(i)(ii) etc Criteria proposed by the State Party

Nominations in **bold** are considered "new", having not been presented to the Committee previously.

- In this document, ICOMOS Recommendations are presented in the form of Draft Decisions and are taken from the ICOMOS Evaluations book (WHC/23/18.EXT.COM/INF.5). In some cases, a few modifications were required to adapt them to this document.

Disclaimer

The Nomination files produced by the States Parties are published by the World Heritage Centre at its website and/or in working documents in order to ensure transparency, access to information and to facilitate the preparations of comparative analysis by other nominating States Parties.

The sole responsibility for the content of each Nomination file lies with the State Party concerned. The publication of the Nomination file does not imply the expression of any opinion whatsoever of the World Heritage Committee or of the Secretariat of UNESCO concerning the history or legal status of any country, territory, city or area or of its boundaries.

Draft Decision: 18 EXT.COM 5.1

The World Heritage Committee,

- Having examined Documents WHC/23/18.EXT.COM/5 and WHC/23/18.EXT.COM/INF.5,*
- Inscribes the **Rachid Karami International Fair-Tripoli, Lebanon**, on the World Heritage List according to the emergency procedure, on the basis of **criteria (ii) and (iv)**;*
- Adopts the following Statement of Outstanding Universal Value:*

Brief synthesis

The Rachid Karami International Fair-Tripoli has been erected in Tripoli, the second largest city in Lebanon and the capital of the Northern Governorate, and was designed by Oscar Niemeyer between 1962-1967 and built until 1975. The main building of the International Fair consists of a huge oblong covered exhibition space, the Grand Canopy, under which the exhibition pavilions of several countries could be freely installed. The entrance to the International Fair complex begins at the southern end of the Grand Canopy: a vast ramp leads to a raised portico from where the visitors can discover the entire composition. A series of educational, recreational and cultural facilities were immersed within a “Brazilian Tropical Garden” and connected by water pools and pedestrian passages. In the northern part, a ceremonial ramp leads to the outdoor amphitheatre, surmounted by a monumental arch forming a symbolic gateway to modernity and a landmark of the city of Tripoli.

The use of traditional elements of local architecture was intended to express the aspirations of the newly independent Arab peoples to take part in the universal process

of modernisation. For its scale, its daring structural solutions, its architectural expression, its vast modernist public spaces and gardens, its links to post-independence identity buildings, and despite the deterioration of most of its structures and the endangered integrity of several of its components due to the ageing of the concrete, the Rachid Karami International Fair-Tripoli is one of the most representative works of modern architecture of the 20th century in the Arab States.

Criterion (ii): *The Rachid Karami International Fair-Tripoli expresses in an exceptional way the successful integration of Brazilian modernist concepts into the context of the Arab Near East in Tripoli and is a vivid example of cultural exchange in the field of architecture. The collaboration between Oscar Niemeyer, the architect of the complex, and the Lebanese engineers and contractors has given them valuable experience in sophisticated large-scale reinforced concrete structures and concrete shells, while a new generation of Lebanese architects was inspired by Niemeyer's "Brazilian modernism", which is reflected in several of their works, whether in Lebanon or in the Arab Near East.*

Criterion (iv): *Oscar Niemeyer's monumental International Fair project in Tripoli is an outstanding example of world fairs that emerged in the newly independent Arab countries to express national pride and take part in the universal process of modernisation. It constitutes an outstanding architectural example of a large-scale modernist exhibition complex, which defines an architectural typology characterised by simplicity and discipline where a single main large structure hosts the pavilions; a set of smaller structures serve social- reformative and educational purposes.*

Integrity

The Rachid Karami International Fair-Tripoli covers an elliptical area corresponding to the limits of the fairground as it was built and contains all buildings designed by Niemeyer. Almost all buildings and structures were preserved according to Niemeyer's original design but lie in a state of abandonment, while outdoor and landscaped areas are maintained. Despite the loss of interior finishes, fixtures, glazing, doors and equipment due to the war, the attributes of Outstanding Universal Value have retained sufficient integrity. Some interventions on the Grand Canopy dictated by modern uses are reversible; the transformation of Niemeyer's Collective Housing Prototype has seriously affected its architectural quality and erased the traces of the original design, but attempts have been made to restore the structure to its original conditions. However, the integrity of the property is extremely vulnerable, with the main threat coming from the precarious state of conservation of most buildings, which face serious stability problems due to the severe steel corrosion and the ageing of concrete.

Authenticity

The layout and almost all buildings of the Rachid Karami International Fair-Tripoli have been preserved according to Niemeyer's design. In most of the buildings of the complex, the structure defines their form and volume and is proudly exhibited to the audience. The main original structures of the International Fair complex, most of which are made of authentic materials, credibly reflect their period of construction and the quality of their execution. Despite the loss of interior finishes, fixtures and equipment, the transformation of the collective housing prototype into a hotel, and the interventions to the southern part of the Grand Canopy, the surviving attributes credibly convey the Outstanding Universal Value through the overall layout, the design of the structures, their sculptural conception, and the construction materials. The reflective pools and the hard landscape elements around the buildings are preserved according to Niemeyer's design, the tropical gardens are still present and retain their "Brazilian spirit". The International Fair complex in Tripoli still bears witness to an era of modernisation and social liberalisation in Lebanon and the Arab Near East.

Protection and management requirements

The Law N°274-10/03/2022 on the Reorganization of Rachid Karami International Fair is the main legal instrument that covers the property and includes basic protection mechanisms. The law sets out differentiated protection mechanisms for the rectangular area (800x500 metres) encompassing all Niemeyer designed structures and the extant part of the oval. Most of the buildings on the fairground need immediate stabilisation measures, maintenance, and structural repairs to preserve their integrity; the Conservation Management Plan that is being developed for the entire property should be finalised urgently to guarantee the conservation of its cultural and historical values in any future development processes.

The long-term conservation of the Outstanding Universal Value of the property will benefit from the recognition of its cultural value under the national legislation for heritage protection, beyond the 2022 special law. An inclusive management structure involving heritage protection authorities, professionals and academic organisations and civil society representatives can guarantee a shared vision for the future of the property and its long-term protection. The systematic application of a Heritage Impact Assessment approach and related mechanisms provides the framework for ensuring compatible conservation, rehabilitation and reuse of the Rachid Karami International Fair-Tripoli.

4. Also inscribes the **Rachid Karami International Fair-Tripoli, Lebanon**, on the List of World Heritage in Danger;
5. Recommends that the State Party invite a joint World Heritage Centre/ICOMOS reactive monitoring mission to the property to establish a Desired state of conservation and a programme of corrective measures for the removal of the property from the List of World Heritage in Danger;
6. Also recommends that the State Party give urgent consideration to the following:
 - a) Providing the exact geographical coordinates of the boundaries of the property,
 - b) Considering, with the assistance of the joint World Heritage Centre/ICOMOS reactive monitoring mission, the establishment of a buffer zone as per paragraphs 103 to 105 of the Operational Guidelines to ensure an added layer of protection to the property,
 - c) Developing detailed land-use and zoning guidelines for the planning of the immediate setting of the Rachid Karimi International Fair-Tripoli and of the portion of the oval within the property outside the nationally relevant “core zone”,
 - d) Setting up a management structure for the property that also includes among its members representatives of the cultural heritage protection institutions, professionals and academic organisations and the civil society,
 - e) Carrying out a geometric and architectural survey and a detailed condition assessment of Niemeyer’s structures as a knowledge basis for emergency stabilisation measures, conservation and structural rehabilitation interventions,
 - f) Considering a digital project of the documentation preserved at the various publicly accessible archives, to promote research and ensure that the original project documentation is not lost due to disasters or accidents,
 - g) Informing the World Heritage Centre of the intention to undertake or authorise any major projects which may affect the Outstanding Universal Value of the property, in line with paragraph 172 of Operational Guidelines,
 - h) Developing and implementing a Heritage Impact Assessment for any project proposals that may have an impact on the Outstanding Universal Value of the property (including the “Knowledge and Innovation Centre” (KIC) project) and for the revision of the master plans of El-Mina and Tripoli;

7. Requests the State Party to submit to the World Heritage Centre by 1 February 2024, a report on the implementation of the above-mentioned recommendations for examination by the World Heritage Committee at its 46th session.

Site	Historic Center of the Port City of Odesa
ID. N°	1703
State Party	Ukraine
Criteria proposed by State Party	(ii)(iv)
Date of receipt	11/10/2022

See ICOMOS Evaluation book, January 2023, page 25.

Draft Decision: 18 EXT.COM 5.2

The World Heritage Committee,

1. Having examined Documents WHC/23/18.EXT.COM/5 and WHC/23/18.EXT.COM/INF.5,
2. Inscribes the **Historic Center of the Port City of Odesa, Ukraine**, on the World Heritage List according to the emergency procedure, on the basis of **criteria (ii) and (iv)**;
3. Adopts the following Statement of Outstanding Universal Value:

Brief synthesis

The historic centre of Odesa is part of a port city located on the Ukrainian shores of the Black Sea. It stands on a shallow indentation of the seacoast about thirty kilometres north of the Dniester River estuary. The city was founded in 1794 by a strategic decision of the Empress Catherine II to build a warm-water port following the conclusion of the Russo-Turkish war of 1787-1792.

The new city, built on the site of a Turkish fortress, was initially planned by a military engineer and then expanded further during the 19th century.

Odesa owes its character and rapid development during the 19th century to the success of its port, the favourable policies of its governors, and its status as a free port city from 1819 to 1859. Trade attracted many diverse people who formed multi-ethnic and multicultural communities, making Odesa a cosmopolitan city. Its pace of development, the wealth it generated and its multiculturalism all influenced its architectural expression and the variety of styles that still remain in the urban landscape. It has also caused tensions that, beginning in 1821, triggered a series of violent events.

The historic centre of Odesa is a grid system of spacious tree-lined streets divided into two rectangular blocks, the direction of which conformed to the orientation of two deep ravines cutting through the Odesa high plateau perpendicular to the sea. The city is characterised by relatively low-rise buildings. Designed by renowned architects and engineers, many from Italy in the early years, its theatres, religious buildings, schools, private palaces and tenement houses, clubs, hotels, banks, shopping centres, warehouses, stock exchanges, terminals and other public and administrative buildings represent both eclectic diversity in architectural styles and all the main activities of a trading city.

Prymorsky Boulevard, stretching along the edge of the plateau, Potemkin Stairs coming down to the shore, and the ensemble of the Odesa Opera and Ballet Theatre, and the Palais-Royal are the main landmarks of the city.

While the urban planning and architectural quality represented in Odesa can also be found in other cities in the former Russian and Austro-Hungarian Empires, Odesa has preserved large areas of its historic fabric that reflect its rapid and prosperous

development in the 19th century and its population which was far more diverse than in many other cities. Thus, Odesa, through its urban planning and built heritage as a reflection of many cultures, values, customs, social structures, and denominations, can be considered to stand out as a testimony to multicultural and multi-ethnic traditions of Eastern European cities of the 19th century.

Criterion (ii): *The historic centre of Odesa represents an important interchange of human values within Eastern Europe through its heterogeneous architectural styles, developed during its rapid growth in the 19th century, that reflect the coexistence of many cultures and the combination of influences characteristic of the border area of Europe and Asia.*

Criterion (iv): *The historic centre of Odesa is an outstanding “time capsule” of the 19th-century urban planning, with heterogeneous buildings mostly from the second half of the 19th century and the early 20th century, which reflects both the exceptionally fast growth of the town, based on the prosperity generated by the Industrial Revolution, and its notable diversity.*

Integrity

While the designed plan of Odesa evolved in certain respects as the city grew, its main outline remained unchanged. The grid structure and the linear connection with the port and the sea are retained and legible in the cityscape, and many of 19th-century buildings have survived. The modified boundaries matching those of the Integrated Protection Zone of the current General Plan of Odesa encompass all the necessary attributes expressing the Outstanding Universal Value.

The intactness of the city’s 19th- and early 20th-century architecture, seems to be mainly satisfactory for the key buildings, but remains highly vulnerable due to the lack of adequate planning controls and inappropriate conservation. The integrity of the form and characteristics of the building quarters behind the main street facades, also appears highly vulnerable to modern infill and inadequate conservation. Given the emergency procedure and the lack of a mission to the site, at the moment of inscription an appropriate assessment of how well the integrity of individual buildings and group of buildings has been maintained is to be envisaged.

Authenticity

The key attributes of Outstanding Universal Value relate to the planned layout of the city, and its heterogeneous architecture that reflects the diversity of its multicultural trading communities. The modified boundaries matching those of the Integrated Protection Zone of the current General Plan of Odesa, encompass all the necessary attributes that convey the idea of a coherent city, developed rapidly during a period of exceptional economic growth and with buildings that reflect fully the intertwined social, cultural and architectural influences that prevailed.

Given the emergency procedure and the lack of a mission to the site, at the moment of inscription an appropriate assessment of the authenticity of individual buildings, their state of conservation, how their contexts have been respected, and how the new buildings developed during the last twenty years have impacted adversely on the overall authenticity of the urban ensemble is to be envisaged.

Management and protection requirements

General provisions for cultural heritage protection are established by the Law of Ukraine on Cultural Heritage Protection adopted in 2000. The Ministry of Culture and Information Policy of Ukraine is the highest authority in the sphere of cultural heritage, acting on behalf of the Cabinet of Ministers. It formulates and implements state policy on cultural heritage and directs the activities of state institutions related to culture and art. The Ministry is responsible for supervising and monitoring the protection of historic monuments. At the municipal level, the Department of Cultural Heritage Protection of the

Odesa City Council is responsible for the protection and conservation of cultural heritage sites in compliance with regulations on historic conservation in urban planning.

The property is protected according to the local regulations established in 2008 by the General Plan of Odesa.

The property is situated in the central zone, the most significant one in the city, where the main administrative, public, business, and cultural institutions are located. An Integrated Protection Zone was established. Its boundaries are delineated according to the current Historical and Architectural Reference Plan of Odesa, approved by the Order of the Ministry of Culture and Tourism of Ukraine and integrated into the General Plan of Odesa. Selected individual buildings and their complexes are listed in the State Register of Immovable Historical Monuments of Ukraine and protected in compliance with the Law of Ukraine on Cultural Heritage Protection as historic architectural monuments.

The enhancement of the management system is needed to cover all attributes and provide for coordinated management with supporting administrative tools and decision-making mechanisms. The management system should include detailed monitoring and conservation programmes, and an overall interpretation and presentation policy. Risk management should be included.

4. *Also inscribes the **Historic Center of the Port City of Odesa, Ukraine**, on the List of World Heritage in Danger;*
5. *Recommends that the State Party invite a joint World Heritage Centre/ICOMOS reactive monitoring mission to the property, if this is feasible, to establish a Desired state of conservation and a programme of corrective measures for the removal of the property from the List of World Heritage in Danger;*
6. *Requests the State Party to submit a map and geographical coordinates showing the modified boundaries of the property, with wider boundaries than those proposed in the nomination dossier and excluding the port area, covering the historic area of the city, as it was developed by the end of the 19th century and coinciding with those of the Integrated Protection Zone as shown in the General Plan of Odesa, with the port area as a part of the buffer zone, by **1 June 2023**;*
7. *Also recommends that the State Party give urgent consideration to the following:*
 - a) *Extending the buffer zone to encompass the immediate setting of the modified boundaries as well as the port area, and submit a minor boundary modification request in this respect with details of how the buffer zone will be managed to support the Outstanding Universal Value of the property,*
 - b) *Reinforcing the legal regulation for the Integrated Protection Zone to protect the attributes of the property against unsuitable development,*
 - c) *Integrating Heritage Impact Assessment mechanisms into the legal framework as a pre-requisite for development projects and activities that are planned for implementation within the property or its buffer zone,*
 - d) *Developing an inventory and indicators for the assessment of the state of conservation of the property together with developing and implementing a monitoring system,*
 - e) *Continuing the implementation of conservation programmes with priorities given to buildings at risk and areas that need urgent stabilisation or conservation interventions,*
 - f) *Developing a study to identify tangible and intangible aspects of multi-ethnic and multicultural heritage of the city and developing measures for an interpretation policy,*

- g) *Revising the draft management plan to include disaster, climate change and other risk preparedness measures, as well as implementation measures for emergency responses;*
8. ***Also requests** the State Party to submit to the World Heritage Centre by **1 February 2024**, a report on the implementation of the above-mentioned recommendations for examination by the World Heritage Committee at its 46th session;*
9. ***Decides** that the name of the property be changed to become **“The Historic Centre of Odesa”**.*

Site	Landmarks of the Ancient Kingdom of Saba in Marib Governorate
ID. N°	1700
State Party	Yemen
Criteria proposed by State Party	(iii)(iv)
Date of receipt	11/02/2022

See ICOMOS Evaluation book, January 2023, page 12.

Draft Decision: 18 EXT.COM 5.3

The World Heritage Committee,

1. *Having examined Documents WHC/23/18.EXT.COM/5 and WHC/23/18.EXT.COM/INF.5,*
2. *Inscribes the **Landmarks of the Ancient Kingdom of Saba in Marib Governorate, Yemen**, on the World Heritage List according to the emergency procedure, on the basis of **criteria (iii) and (iv)**;*
3. *Taking note that the authenticity, integrity, protection and management of the property or its potential vulnerabilities could not have been fully evaluated at this stage due to the lack of a technical evaluation mission to the site,*
4. *Adopts the following Statement of Outstanding Universal Value:*

Brief synthesis

The Landmarks of the Ancient Kingdom of Saba represents a period of the South Arabian history from the 1st millennium BCE until the arrival of Islam to the region in 630 CE, when the ancient Yemeni kingdoms developed amidst the harsh and arid environment of the Arabian Peninsula and flourished through their involvement with the Incense Trade Route linking South Arabia to the Mediterranean, from about the 8th century BCE to the 3rd century CE, before it was overpowered by the Himyar people.

Located in the Marib Governorate in central Yemen, seven archaeological sites reflect the affluent Kingdom of Saba, arising from its control of the incense trade in South Arabia and its architectural, aesthetic and technological achievements that bear witness to a highly complex society with a strong, well-organised and centralised administration, as evidenced by numerous historical wall inscriptions.

The Sabaeans' culture and wealth is clearly evident in the ensemble of two cities, temples and extensive irrigation systems. The walled capital city Ma'rib, was the administrative, cultural and economic centre of the Kingdom of Saba, while the fortified city of Sirwah, some forty kilometres to the west, may have acted as its military capital. The monumental colonnaded sanctuaries in the temples of Ḥarūnum, Awām and Bar'ān were linked by a processional pilgrimage route, which attracted adherents from across the Arabian Peninsula. Technological knowledge in the field of hydrological engineering enabled the Sabaeans to create the Ma'rib dam, which fed an innovative irrigation

system of canals that allowed cultivation of a vast territory spreading north and south of Ma'rib, that was considered to be the largest artificial oasis in ancient Arabia.

Criterion (iii): *The Landmarks of the Ancient Kingdom of Saba, with the monumental architecture and the preserved hydraulic structures erected by the Sabaeans, demonstrate high level of technological know-how and engineering skills. They are an exceptional testimony to the affluence of the Kingdom of Saba, which dominated South Arabia in the period between the 8th century BCE to the 3rd century CE as a political and cultural power. They reflect the high socio-political and economic status of the kingdom, which owed its prosperity to control of the incense trade, and its survival in the harsh arid environment of the Arabian Peninsula through the creation of large oases based on a sophisticated irrigation system linked to the Ma'rib dam. The preserved wall inscriptions that document historical events, religious occasions, and administrative decisions offer a glimpse into the main domains of life of the kingdom.*

Criterion (iv): *The Landmarks of the Ancient Kingdom of Saba with their monumental architecture and diverse technological advances represent an outstanding example of an ensemble that testifies to the cultural tradition of the Kingdom of Saba that served as a central node in the frankincense trade route through the Arabian Peninsula. Flourishing within the semi-arid landscape of valleys, mountains and deserts of South Arabia thanks to a highly advanced irrigation system, the kingdom played a key influential role among neighbouring realms and in the wider network of cultural exchanges at a time when trade routes linked South Arabia with the Mediterranean and North Africa. The dam of the Ma'rib irrigation system, which enabled farming in what is said to be the largest artificial oasis in ancient Arabia, represents the pinnacle of hydrological engineering in the region.*

Integrity

The component parts of the property include the attributes necessary to ensure the representation of the features and processes, which convey the property's Outstanding Universal Value. The physical fabric of the property can be considered as very poor with some attributes having been gravely damaged. Considering the existing threats related to the war and the developmental pressures, integrity of the individual component parts and of the property as a whole can be considered as highly vulnerable.

Authenticity

The authenticity of the individual component parts and of the whole series can be considered as highly vulnerable due to historical developments and contemporary threats. Despite changes in the landscape of the property associated with the development of the modern city of Ma'rib, and the urban sprawl that led to the destruction of some areas with archaeological potential, the historical oasis setting of the component parts can be still understood. Demolishing of post-Sabaeen vernacular architecture, which reflects the traditions that link the pre-Islamic Sabaeen culture with the cultures that developed in the area after the arrival of Islam, and which constitutes part of the historical context of the property, is of concern.

Management and protection requirements

The archaeological material at all component parts is legally protected at the national level through the Law on Antiquities N. 21/1994 and its amendments set forth by Law N. 8/1997. The ancient city of Ma'rib is protected as a historic town by Law N. 16/2013. The legal authority within the boundaries of the component parts is unclear, as are protection mechanisms that apply to the property. The legal basis for the buffer zones, including buffer zone B, is also not known at this stage.

Protection and management of the property reside at the highest level with the General Organization of Antiquities and Museums; the Ma'rib branch being responsible for the monitoring and maintenance of the component parts. The General Organization for the Preservation of Historic Cities in Yemen is in charge of the protection and management

of the ancient city of Ma'rib as a historic town. Besides the legal-institutional protection, the component parts benefit from traditional protection provided by the local tribes.

At present, there is no management plan for the property in place. Conservation and Management Guidelines have been developed to guide future management and protection of the component parts. But it is unclear how the proposed plan of action will be implemented given the precarious political situation. The management measures for the buffer zones, including buffer zone B, have not been provided.

5. *Also inscribes the **Landmarks of the Ancient Kingdom of Saba in Marib Governorate, Yemen**, on the List of World Heritage in Danger;*
6. *Recommends that the State Party give urgent consideration to the following:*
 - a) *Inviting, as soon as feasible, a reactive monitoring mission to the property, to:*
 - i) *Prepare a detailed report on the state of conservation,*
 - ii) *Assess protection of the property and its buffer zones,*
 - iii) *Consider the effectiveness of its boundaries,*
 - iv) *Establish a Desired state of conservation and a programme of corrective measures for the removal of the property from the List of World Heritage in Danger,*
 - b) *Halting the implementation of the 2018 Master Plan until a full assessment has been undertaken, through a Heritage Impact Assessment, of its potential impacts on the Outstanding Universal Value of the property and its setting, and, based on the results of the Heritage Impact Assessment, undertaking necessary revisions of the Plan,*
 - c) *Reinstating funding for management and conservation,*
 - d) *Developing as a matter of urgency risk preparedness plans for each component part to address vandalism and looting as well as overall protection,*
 - e) *Including local tribes as traditional custodians of the component parts in the management and protection of the property to ensure buy-in from local communities and prevent potential conflicts,*
 - f) *Extending protection measures onto the post-Sabaeen vernacular architecture in the ancient cities of Ma'rib and Sirwah as part of the safeguarding of the historic and traditional context of the property, and involving local populations in the protection and management of these heritage resources,*
 - g) *Completing an inventory of Sabaeen monuments and sites,*
 - h) *Enhancing the coordination of inputs from varied research institutions and international agencies to ensure that there is no duplication of work or resources and to maximise and sustain the initiatives aimed at capacity-strengthening, knowledge production, protection and management of the property,*
 - i) *Informing the World Heritage Centre of the intention to undertake or authorise all major projects which may affect the Outstanding Universal Value of the property, in line with paragraph 172 of the Operational Guidelines;*
7. *Requests the State Party to submit to the World Heritage Centre by **1 February 2024**, a report on the implementation of the above-mentioned recommendations for examination by the World Heritage Committee at its 46th session;*
8. *Decides that the name of the property be changed to become "**Landmarks of the Ancient Kingdom of Saba**", as the governorate of Marib is a present-day administrative unit which does not reflect the boundaries of the ancient Kingdom of Saba, there is no needed to reference it in the name of the property.*
