**3. Statement of Outstanding Universal Value**

**3.1 - Statement of Outstanding Universal Value for the property as adopted by the World Heritage Committee**

**Statement of Outstanding Universal Value**

**Brief synthesis**

The steep hillsides in the Dazu area near Chongqing, contain an exceptional series of five clusters of rock carvings dating from the 9th to 13th centuries. The largest cluster at Beishan contains two groups along a cliff face 7-10m high stretching for around 300m. There are more than 10,000 carvings dating from the late 9th to the mid-12th century which depict themes of Tantric Buddhism and Taoism. Inscriptions give insight to the history, religious beliefs, dating and the identification of historical figures. The late 11th century Song dynasty carvings at Shizhuanshan extend over 130m and depict Buddhist, Taoist and Confucian images in a rare tripartite arrangement. The Song dynasty carvings at Shimenshan dating from the first half of the 12th century extend along 72m and integrate Buddhist and Taoist subjects. At Nanshan the Song dynasty carvings of the 12th century extend over a length of 86m and depict mostly Taoist subjects. The culmination in terms of expression of Tantric Buddhism is found in the U shaped gorge at Baodingshan which contains two groups of carvings dating from the late 12th to the mid-13th century near the Holy Longevity Monastery. The very large group to the west stretches for about 500 metres and comprises 31 groups of carved figures depicting themes from Tantric Buddhism as well scenes of herdsman and ordinary life.

The carvings are known for their grand scale, aesthetic quality and rich diversity of subject matter as well as for being well preserved. Standing as an example of the highest level of Chinese cave temple art dating from the 9th to 13th centuries, the Dazu Rock Carvings not only underline the harmonious coexistence in China of three different religions, namely Buddhism, Taoism and Confucianism, but also provide material proof that cave temple art has increasingly shed light on everyday life. Large numbers of carvings and written historical materials within the heritage site show the great changes in and development of cave temple art and religious beliefs in China during that period.

**Criterion (i):** The Dazu Carvings represent the pinnacle of Chinese rock art in their high aesthetic quality and their diversity of style and subject matter.

**Criterion (ii):** Tantric Buddhism from India and Chinese Taoist and Confucian beliefs came together at Dazu to create a highly original and influential manifestation of spiritual harmony.

**Criterion (iii):** The eclectic nature of religious belief in late Imperial China is given material expression in the exceptional artistic heritage of the Dazu rock art.

**Integrity**

The Dazu Rock Carvings are among the best preserved of this form of Chinese cave temple art. Each of the five clusters is contained within its own designated demarcation of property area and buffer zone, which ensures the integrity of the statues, their natural and cultural landscapes as well as the historical information they bear.

**Authenticity**

The Dazu Rock Carvings retain the original characteristics and values of the period when the carvings were created, as they have not suffered man-made damage or destruction by natural disasters. Daily maintenance and care have strictly adhered to the principle of 'retaining the historic condition'. To date, the historical authenticity of the design, materials, technology and layout of the Dazu Rock Carvings have been maintained. In devoting effort to the conservation and protection of these statues, attention has also been paid to the protection of their surroundings, both natural and cultural. As a result, the historical scale, style and features of the Dazu Rock Carvings have been basically preserved, so as to retain to the utmost extent their functions of secular belief, cultural transmission and social education as a type of religious art.

**Protection and management requirements**

Laws and regulations for heritage protection apply at different administrative levels; at the highest level the property is protected by the *Law of the People's Republic of China on the Protection of Cultural Relics*. At the municipal level the *Regulations of Chongqing Municipality on the Conservation and Management of Dazu Rock Carvings*, have guaranteed that no damage or degradation will threaten the integrity and authenticity of the heritage in Dazu. In order to satisfy the necessary requirements, the local government has also incorporated the conservation and management of Dazu Rock Carvings into the local economic and social development plan.

As per the *Conservation Master Plan of Dazu Rock Carvings*, the conservation and management work of Dazu Rock Carvings will be carried out via the establishment of a fully elaborated heritage monitoring system, formulation of a scientific and precise conservation and maintenance plan and management measures, and the setting up of a team of conservation professionals.

By meeting sanitary standards of the country and the property, local residents have been engaged in business operations, increasing their income and enhancing their affection for the property. The Visitor Service Center of Baodingshan Cliffside Carvings was relocated, routes for tourists and vehicles separated, functional areas of visitor service, presentation and core attractions planned, enabling better interpretation of heritage value.

#### 4.4.7 - Please comment as necessary on how the factors selected as relevant in 4.4 are affecting the property either negatively or positively

Organisms and soluble inorganic salt contained in domestic sewage discharged in the property area and its surrounding area may infiltrate rocks and soil and cause damage to cliffside carvings. Acid rain would accelerate dissolution of minerals on the surface of carvings, causing reduced intensity, giving rise to pulverization, peeling off. Atmospheric particulates and dust accumulation would pollute the surface of carvings, conceal historical information and reduce heritage value.

#### 4.7.9 - Please comment as necessary on how the factors selected as relevant in 4.7 are affecting the property either negatively or positively

The high-temperature, high-humidity environment causes water condensation and erosion to cliffside carvings. Strong sunlight leads to pulverization, peeling off and color fading. Rain wash and water penetration through fractures would change internal structures of carvings. Dust accumulation would damage carving surface. Growing plant roots would cause cracking and animal excretions would pollute rock carvings and cause change of rock composition.

5.2. Protective Measures

5.2.1 - Protective designation (legal, regulatory, contractual, planning, institutional and/or traditional).

In 1961 the State Council of the People's Republic of China (PRC) designated the carvings at Beishan and Baodingshan in the first group of cultural properties to be protected under the provisions of Article 4 of the Law on the Protection of Relics as "sites of ancient culture, ancient tombs, and cave temples." In 1996, when the fourth group was declared, the Nanshan, Shizhuanshan, and Shimenshan carvings were similarly designated.

In addition to this basic protection, the sites are also covered by other statutes: the PRC Laws on the Protection of the Environment and on Urban Planning and on the PRC Criminal Law.
