### 3. Statement of Outstanding Universal Value

#### 3.1 - Statement of Outstanding Universal Value for the property as adopted by the World Heritage Committee

##### Statement of Outstanding Universal Value

###### Brief synthesis

The Tropical Rainforest Heritage of Sumatra (TRHS), Indonesia comprises three widely separated National Parks; Gunung Leuser (GLNP), Kerinci Seblat (KSNP) and Bukit Barisan Selatan (BBSNP), and covers a total area of 2,595,124 hectares, constituting one of the biggest conservation areas in Southeast Asia. The site is located on Bukit Barisan range and holds the greatest potential for long-term conservation of the diverse biota of Sumatra, including many endangered species.

The biodiversity of the property is exceptional in terms of both species numbers and uniqueness. There are an estimated 10,000 species of plants, including 17 endemic genera. Animal diversity in TRHS is also impressive, with 201 mammal species and some 580 species of birds, of which 465 are resident and 21 are endemics. Of the mammal species, 22 are endemic to the Sundaland hotspot and 15 are confined to the Indonesian region, including the endemic Sumatran orang-utan. Key mammal species also include the Sumatran tiger, rhino, elephant and Malayan sun-bear.

The TRHS includes the highest volcano in Indonesia, Gunung Kerinci (3,805 m asl) along with many other physical features of exceptional natural beauty, including; Lake Gunung Tjueh the highest lake in Southeast Asia, numerous other volcanic and glacial high-altitude lakes, fumaroles, waterfalls, cave systems and steep rocky backdrops. Both Gunung Leuser National Park and Bukit Barisan Selatan National Park contain frontages to the Indian Ocean, making the altitudinal range of the TRHS extend from the highest mountains on Sumatra to sea level. All three protected areas in the TRHS exhibit wide altitudinal zonation of vegetation, from lowland rainforest to montane forest, extending to sub-alpine low forest, scrub and shrub thickets and covering an astounding diversity of ecosystems.

**Criterion (vii):** The parks that comprise the Tropical Rainforest Heritage of Sumatra are all located on the prominent main spine of the Bukit Barisan Mountains, known as the 'Andes of Sumatra'. Outstanding scenic landscapes abound at all scales. The mountains of each site present prominent mountainous backdrops to the settled and developed lowlands of Sumatra. The combination of the spectacularly beautiful Lake Gunung Tjueh (the highest lake in southeast Asia), the magnificence of the giant Mount Kerinci volcano, numerous small volcanic, coastal and glacial lakes in natural forested settings, fumaroles belching smoke from forested mountains and numerous waterfalls and cave systems in lush rainforest settings, emphasise the outstanding beauty of the Tropical Rainforest Heritage of Sumatra.

**Criterion (ix):** The Tropical Rainforest Heritage of Sumatra represent the most important blocks of forest on the island of Sumatra for the conservation of the biodiversity of both lowland and mountain forests. This once vast island of tropical rainforest, in the space of only 50 years, has been reduced to isolated remnants including those centered on the three components of the property. The Leuser Ecosystem, including the Gunung Leuser National Park, is by far the largest and most significant forest remnant remaining in Sumatra. All three parks would undoubtedly have been important climatic refuge for species over evolutionary time and have now become critically important refuge for future evolutionary processes.

**Criterion (x):** All three parks that comprise the Tropical Rainforest Heritage of Sumatra are areas of very diverse habitat and exceptional biodiversity. Collectively, the three sites include more than 50% of the total plant diversity of Sumatra. At least 92 local endemic species have been identified in Gunung Leuser National Park. The property contains populations of both the world's largest flower (*Rafflesia arnoldi*) and the tallest flower (*Amorphophallus titanum*). The relict lowland forests in the sites are very important for conservation of the plant and animal biodiversity of the rapidly disappearing lowland forests of Southeast Asia. Similarly, the montane forests, although less threatened, are very important for conservation of the distinctive montane vegetation of the property.

###### Integrity

The serial property straddles the equator and comprises three widely separated nationally protected areas along the Bukit Barisan Mountain Range, running from Aceh in the north-west to Bandar Lampung in the south-east and representing whole or part of the three most significant remnant "islands" of the once vast Sumatran forests. Biological and ecological processes are preserved within the property because it contains a sufficiently large number of ecosystems, forest types, ranges of altitudes and topographies. The exceptionally beautiful features of Sumatra such as Gunung Tjueh and Gunung Kerinci are contained within the site in their entirety.

The unique shape and size of the property provide significant habitat for in-situ conservation of thousands of Sumatran species, in particular species that require larger home ranges like Sumatran tiger, Sumatran orang-utan, Sumatran elephant, Sumatran rhino and Sumatran ground cuckoo. The property is a living laboratory for science and contains some of the most distinguished research centres in Indonesia (Way Canguk, Ketambe and Suaq Belimbing) and hosts international high-level collaborations from world renowned institutions.

Threats to the integrity of the property include road development plans as well as agricultural encroachment. The main fundamental threatening processes are directly linked to the access provided by roads and failure to effectively enforce existing laws. Road access facilitates illegal logging, encroachment and poaching which all pose significant threats to the integrity of the component parks of the property. Collaboration with stakeholders, including Rhino Protection Unit (RPU), WWF Elephant Patrol, FFI Tiger Protection and Conservation, Zoological Society of London – Tiger Conservation has significantly reduced poaching incidents. Joint patrols with related parties including police officers and local government officers, and rangers recruited from local communities, support the Ministry of Forestry to enforce existing laws.

###### Protection and management requirements

The TRHS is comprised of three national parks, and as such benefits from the highest protected area status under Indonesian law. All three parks are public lands designated as national parks by the Government of Indonesia and are managed by the Directorate General of Forest Protection and Forest Conservation (PHKA) within the Ministry of Forestry. The boundaries of the three component parts of the property require clear demarcation to indicate their location in the field. This is particularly important with regards to effective management of the property and the inclusion of important habitat national resources, but only a limited proportion of the property's perimeter can be marked per year. For Kerinci Seblat National Park, the inclusion of 14,160 hectares former production forest of the Sipurak Hook area in 2004, delayed the recent boundary demarcation process due to the negative response from the inhabitants of the area.

The property has strong and clearly explained management plans and each is included in the Indonesian Biodiversity National Strategy and Action Plan. Stakeholder forums have been established in each park and include bi-annual dialogue with local governments, national and international NGOs, local people and private sectors. However, there is variation in the involvement and contribution of these stakeholders in the three parks, which needs to be addressed. Intensive coordination among park management remains a priority with acknowledgement that coherent and coordinated protection measures among the three parks are paramount in the effective protection of flora and fauna, and particularly for threatened species.

A Presidential decree on illegal logging and saw-mill eradication issued in 2005 was followed-up by an integrated effort from the provincial and district governments, as well as from the Departments of Justice, Police and Forestry. As a result these threats have been virtually eradicated from the property. Mining, which occurs exclusively outside the boundaries of the property, remains a potential threat to the property. Within the property anti-poaching units are active, while site-specific human-wildlife conflict mitigation and anti-encroachment efforts are in place. Encroachment remains the most complex and difficult issue affecting the property and attempts to address it at a national level through the "Kelompok Kerja Penanganan Perambahan", an Indonesian-wide Anti Encroachment Task Force are required. The threat to the integrity of the property from road development requires effective planning, environmental assessment and regulatory measures to protect the property from damage to its Outstanding Universal Value.

Routine forest patrols take place in every park, along with site-specific law enforcement actions and encroachment eradication programmes. The State Party has

made financial support for the TRHS a priority, with the aim to improve ground level management, particularly concerning building staff capacity to combat illegal wildlife trade and encroachment. The size of the property, while providing a degree of protection, requires adequate and increased patrolling efforts and human resources to adequately cover the property, and establishment of an effective GIS based monitoring system would assist with this. The recruitment of local rangers is also encouraged. Invasive species also provide an additional emerging management issue in certain components of the property.

#### 4.17. Serial inscriptions (national or transnational)

**4.17.1 - If your property is a serial inscription (national or transnational) please identify which components of the property are impacted by each factor**

#### 4.18. Prediction of the state of conservation at next cycle of Periodic Reporting.

**4.18.1 - Please predict what the state of conservation of each attribute will be approximately 6 years from now (at the time of the next cycle of Periodic Reporting)**

## 5. Protection and Management of the Property

### 5.1. Boundaries and Buffer Zones

#### 5.1.1 - Are the boundaries of the World Heritage property adequate to maintain the property's Outstanding Universal Value?

#### 5.1.2 - Are the boundaries of the World Heritage property known and recognised?

The boundaries **are known** by the management authority **but are not known** by local communities/landowners

#### 5.1.3 - Are the buffer zone(s) of the World Heritage property adequate to maintain the property's Outstanding Universal Value?

The buffer zones **do not limit** the ability to maintain the property's Outstanding Universal Value but they could be improved

#### 5.1.4 - Are the boundaries of the buffer zones known and recognised?

The buffer zones of the World Heritage property **are known and recognised** by the management authority **but are not known** by local communities/landowners

#### 5.1.5 - Comments, conclusions and/or recommendations related to boundaries and buffer zones of the World Heritage property

### 5.2. Protective Measures

#### 5.2.1 - Protective designation (legal, regulatory, contractual, planning, institutional and/or traditional).

All three parks are public lands designated as national parks by the Government of Indonesia. National Park status is the appropriate level of legal protection in Indonesia.

Source: Periodic Reporting Cycle 1; Periodic Reporting Cycle 2

#### 5.2.2 - Please list any legislation and other measures (regulatory -including spatial planning- contractual, institutional or traditional) not included in 5.2.1 and indicate the category

#### 5.2.3 - Is the legal framework (i.e. legislation and/or regulation including spatial planning) adequate for maintaining the Outstanding Universal Value including conditions of Integrity and/or Authenticity of the property?

An **adequate legal framework** for maintaining of the Outstanding Universal Value including conditions of Authenticity and/or Integrity of the World Heritage property exists **but there are some deficiencies in implementation**

#### 5.2.4 - Is the legal framework (i.e. legislation and/or regulation) adequate in the buffer zone for maintaining the Outstanding Universal Value including conditions of Integrity and/or Authenticity of the property?

The **legal framework** in the buffer zone for maintaining the Outstanding Universal Value including conditions of Authenticity and/or Integrity of the World Heritage property **is inadequate**

#### 5.2.5 - Is the legal framework (i.e. legislation and/or regulation) in the broader setting of the World Heritage property adequate for maintaining the Outstanding Universal Value including conditions of Integrity and/or Authenticity of the property?

The **legal framework** for the broader setting of the World Heritage property **is inadequate** to ensure the maintenance of the Outstanding Universal Value including conditions of Authenticity and/or Integrity of the property

#### 5.2.6 - Can the legal framework (i.e. legislation and/or regulation) be enforced?

There are **major deficiencies in capacity/resources** to enforce legislation and/or regulation in the World Heritage property

#### 5.2.7 - Please provide a short summary of how the legislation, including spatial planning and other regulation, works in practice

#### 5.2.8 - Comments, conclusions and/or recommendations about the information related to the measures taken to protect the World Heritage property

### 5.3. Management System/Management Plan

#### 5.3.1 - Please check the box which most closely match the character of the governance and management system of the property

Public management system at provincial/regional level

If 'Other', please specify

#### 5.3.2 - Management System: Please indicate which of the various management tools listed below are used to help protect the property.

A statutory Management Plan or zoning plan for the property.

A management plan

An annual work plan or business plan

An assessment of biological and cultural diversity and ecosystem services provided by the property

#### 5.3.3 - Please give a brief description of the management system currently in place at your property

#### 5.3.4 - Management Documents

#### 5.3.5 - Has any use been made of the 2011 Recommendation on the Historic Urban Landscape in developing policies and best practices for the protection of this property?

#### 5.3.6 - If the Historic Urban Landscape Recommendation has been used at this property, please describe briefly what has been done.

**5.3.7 - Has any use been made of the Policy Document on the Impacts of Climate Change on World Heritage Properties at the property?**

**5.3.8 - If the Climate Change policy has been used, please briefly describe what has been done along with any research on the impacts of Climate Change on the property:**

**5.3.9 - Has any use been made of the Strategy for Reducing Risks from Disasters at World Heritage Properties at the property ?**

**5.3.10 - If the Strategy for Reducing Risks from Disasters at World Heritage Properties has been used, please briefly describe what has been done**

**5.3.11 - Rate the coordination between the various levels of administration (i.e. national/federal; regional/provincial/state; local/municipal etc.) involved in the management of the World Heritage property**

There is **coordination** between the range of administrative bodies involved in the management of the property, **but it could be improved**

**5.3.12 - Is the management system/plan adequate to maintain the property's Outstanding Universal Value?**
