

UNITED NATIONS EDUCATIONAL, SCIENTIFIC
AND CULTURAL ORGANIZATION

CONVENTION CONCERNING THE PROTECTION OF
THE WORLD CULTURAL AND NATURAL HERITAGE

WORLD HERITAGE COMMITTEE

Thirtieth Session

Vilnius, Lithuania

8-16 July 2006

Item 11 of the Provisional Agenda: Periodic Reports

11A.1. Presentation of Parts I and II of the Periodic Report for Europe (2005-2006)

SUMMARY

This document contains a synthesis and analysis of the Periodic Report (sections I and II) for Europe, whereas Information Document *WHC-06/30.COM/INF.11A* contains the Sub-regional Synthesis Reports.

The synthesis report for Section I was presented to the World Heritage Committee at its 29th session (Durban, 2005) but was not discussed, due to time constraints. The Committee, decided to review sections I and II at its 30th session (Vilnius, 2006).

This document is presented as follows:

Part I: The Implementation of the *World Heritage Convention* in Europe – Introduction and Brief History

Part II: The Application of the *World Heritage Convention* by States Parties in Europe at the State Party Level – Results of Section I of the Periodic Reporting Exercise

Part III: The Application of the *World Heritage Convention* by States Parties in Europe at the Property Level – Results of Section II of the Periodic Reporting Exercise

Part IV: Synthesis of the Results of Sections I and II of the Periodic Reports by Sub-region

Part V: Action Plan for Europe

Part VI: Draft Decision for the World Heritage Committee regarding the Results of Sections I and II of Periodic Reporting for Europe

Draft Decision: 30 COM 11A.1, see Part VI

Disclaimer

The designations employed and the presentation of material throughout this report do not imply the expression of any opinion whatsoever on the part of UNESCO concerning the legal status of any country, territory, city or area or its authorities, or concerning the delimitation of its frontiers or boundaries

THE STATE OF WORLD HERITAGE IN EUROPE

Periodic Report (Sections I and II) – 2005/2006

EXECUTIVE SUMMARY

Over the past thirty years, European States Parties have been a very active partner in the implementation of the *World Heritage Convention* and Europe has a long history in heritage conservation. With the exception of one country, which is not a Member State of UNESCO, all States Parties in Europe have ratified the *World Heritage Convention*. Many of these States Parties have also served on the World Heritage Committee and its Bureau over the past thirty years and have actively and financially contributed to its implementation.

The diversity of Europe's cultural and natural heritage, and of its cultural traditions and religious history, partly accounts for the high number of European properties inscribed on the World Heritage List (412). A majority of these sites are cultural properties – mainly architectural monuments, historic centres and archaeological sites. Natural heritage sites in Europe are mainly vast wilderness areas (some of them located politically but not geographically in Europe), national parks and sites of geological significance. In recent years, the diversity of Europe's cultural and natural heritage is increasingly being recognised by States Parties in Europe and has brought about a change in the perception of heritage. It has shifted from the nomination of single monuments to the consideration and nomination of large-scale properties such as landscapes, urban areas as well as new categories of heritage. This has resulted in exemplary cooperative initiatives amongst States Parties in Europe and other regions of the world, who are actively cooperating on the elaboration of transnational serial nominations. In the context of the Committee's Global Strategy, Tentative List harmonisation meetings have been organized by the World Heritage Centre in the Baltic sub-region, the Caucasus region as well as in Central Europe. The majority of Tentative Lists in Europe however remain accumulative and are in need of systematic reviews, with the exception of the Nordic sub-region. As early as in 1996, in cooperation with the Nordic Council of Ministers, the Nordic countries successfully harmonised their Tentative Lists on a sub-regional basis, focusing on underrepresented cultural heritage and natural heritage categories. Evidently, the success of the implementation of the Global Strategy is reflected in the increasing number of underrepresented types of properties and the serial and transnational nomination being submitted by States Parties in Europe and subsequently inscribed by the World Heritage Committee.

Over the past twenty years, the World Heritage Committee has examined a great number of state of conservation reports on specific properties in Europe. Successful conservation and preservation efforts, responding to the threats to the sites caused by armed conflicts and civil unrest in the South-Eastern European region, as well as successful conservation measures taken at a property in Central Europe, led to the removal of five sites from the List of World Heritage in Danger. The current List of World Heritage in Danger includes two European properties – *Cologne Cathedral* (Germany) and the *Walled City of Baku* (Azerbaijan). The main threats justifying these inscriptions on the List of World Heritage in Danger are predominantly urban development pressures, paired with inadequate administrative and legislative provisions for the protection of the World Heritage properties.

Considerable international cooperation for the preservation and conservation of World Heritage properties has been generated through international assistance under the World Heritage Fund and bi- and multilateral agreements. In the most recent years, several States Parties in Europe have offered their financial support to the *World Heritage Convention* through specific Funds-in-Trust arrangements and cooperation agreements signed with UNESCO. World Heritage Fund activities focused mainly on support to the implementation of the *Convention* in European States Parties, specifically for improving site management and supporting conservation efforts mainly in developing countries, but also in Central, Eastern and South-Eastern Europe. In addition, a number of key institutions in Europe have

established programmes for cultural and natural heritage. However, despite the wealth of information and diversity of heritage related activities, a systematic approach to funding under these programmes has yet to be established.

In the context of the implementation of the *Convention* by States Parties in Europe, considerable contributions to the preservation, management and presentation of World Heritage have been made in the region. The aim of this report is to present the state of World Heritage in Europe, with its successes and challenges, and to propose an Action Plan to enhance the protection and conservation of World Heritage in this region. Article 29 of the *World Heritage Convention* establishes that States Parties are to submit reports on their application of the *Convention*. This report, prepared by the UNESCO World Heritage Centre under World Heritage reporting mechanisms introduced in 1998 in application of Article 29 of the *Convention*, constitutes the first Periodic Report on the state of the World Heritage in Europe. For the first time in the World Heritage Periodic Reporting, it is based on data received in the Periodic Reports submitted digitally as well as in hard copy by the States Parties, regarding the overall application of the *World Heritage Convention* (Section I) and the state of conservation of specific World Heritage properties (Section II). Furthermore, the sub-regional reports were prepared by international experts in close cooperation with the Advisory Bodies and the World Heritage Centre. Both an electronic evaluation tool of the on-line reports and a sub-regional network of experts (focal points) contributed to the analysis of the Periodic Reports.

Part I of this report provides a brief history of the implementation of the *World Heritage Convention* in Europe, Part II assesses the overall application of the *World Heritage Convention* (Section I), highlighting significant achievements and challenges in terms of conservation policies and practices, technical studies and promotional activities at the State Party level. Part III, analyses the state of conservation of specific World Heritage properties (Section II), providing insight on management issues and particular challenges or threats to sites. Part IV, draws on the results of Sections I and II of the Periodic Reports to identify the strengths and weaknesses of each sub-region and to propose tailored recommendations for improved protection and conservation of the properties. The sub-regional analysis illustrates that certain strengths and weaknesses are common to a number of States Parties within a region. In reviewing the reports from a sub-regional perspective, specific needs and concerns were identified. These conclusions drawn from general trends and asserted challenges in the sub-regions, as well as from State Party inputs from a Europe-wide meeting (Berlin, Germany, 8 - 9 November 2005), formed the basis for the development of the Action Plan, presented in Part V of this report. Part VI presents a draft decision for the World Heritage Committee based on the conclusions of this report. Information document *WHC-06/30.COM/INF.11A* contains the sub-regional synthesis reports for Sections I and II of the Periodic Reports, and provide additional sub-regional and site-specific data on the state of conservation of European properties.

Overall, the answers provided in individual reports concerning the understanding of the requirements of the *Convention* and the decisions formulated by the Committee emphasised that considerable efforts still have to be made on a regional and local level to ensure the effective implementation of the *Convention*. Lack of documentation, loss of institutional memory and need for capacity building have been identified by States Parties and site managers in all sub-regions, notably in Eastern and South-Eastern Europe. In Western European States Parties the long history and tradition in heritage preservation and the experience gained through the implementation of the *World Heritage Convention* in the past thirty years has brought to light the need for further revisions of legislative and administrative measures, taking into account present-day circumstances in heritage conservation and preservation. Systematic dissemination of information and documentation, as well as sharing

of experiences on the sub-regional, national and even local levels, would greatly assist the heritage conservation efforts.

A distinction between the abundance of scientific and professional expertise in Western Europe and the under-valorised knowledge of experts and technical studies in some areas of Central, South-Eastern and Eastern Europe became apparent in the reports. This is partly due to the lack of opportunities for experts, lack of recognition of scientific studies and exchange and limited funding for scientific institutions. Regional and sub-regional strategies for capacity building in administrative provisions, management of heritage and conservation techniques needs to be developed in close collaboration with the Advisory Bodies and the States Parties.

In recognition of decreasing national budgets for heritage preservation, States Parties have realised the need for fund-raising that is being achieved through grants from private foundations as well as lottery arrangements. The opportunities for fund-raising in Eastern and South-Eastern Europe are rather more limited than in the other parts of Europe. Although European Union (EU) programmes are available to a number of European States Parties, a more systematic approach to these funding sources needs to be established. It also became evident that the European Parliament Resolution on World Heritage (*European Parliament resolution on the application of the Convention Concerning the Protection of the World Cultural and Natural Heritage in the Member States of the European Union* (2000/2036(INI)), which was presented to the World Heritage Committee at its 25th session in 2001 has not been implemented. While a number of countries contribute to conservation and preservation of heritage through particular cooperation agreements and Funds-in-Trust arrangements with UNESCO and the World Heritage Centre, enhanced cooperation for Eastern and South-Eastern Europe is needed. Regional and sub-regional strategies need to be developed to ensure a systematic approach to funding, drawing on the existence of European networks, specialised institutions and foundations in the field of heritage conservation.

The Periodic Reporting exercise carried out between 2001 and 2006, has provided an opportunity to reflect on the implementation of the *World Heritage Convention* in Europe. This exercise has increased interest and awareness among governments and institutions in the *Convention* and brought to light a number of challenges and concerns, as voiced by both the States Parties and the site managers. The sub-regional recommendations and overall Action Plan have been designed, in collaboration with sub-regional focal points and the Advisory Bodies, to respond to these concerns. The Periodic Reporting exercise is an important achievement for the whole region, has resulted in the digital collection of all data made available by States Parties and has set the pace for increased cooperation between States Parties within the framework of the *World Heritage Convention*.

ACKNOWLEDGEMENTS

The World Heritage Centre and the Europe team preparing this document specifically thank all States Parties, all focal points and the Advisory Bodies for their contribution to the success of both sections of the Periodic Report for the European region. Without the continuous commitment of many individuals in the 48 countries of Europe, the 100% submission rate of the on-line Periodic Reports of both Sections I and II would not have been achieved. We therefore dedicate this report to our partners in the World Heritage system.

We are also grateful for the substantive financial support received from the Flemish and Dutch Funds-in-Trust and the Nordic World Heritage Foundation as well as temporary staff support received from the Carlo Schmid Foundation (Germany) and the Government of Greece.

INTRODUCTION

1. Background

Periodic Reporting is the procedure by which States Parties to the *World Heritage Convention* provide information, in accordance with Article 29 of the *World Heritage Convention*. It follows the decisions of the 11th General Assembly of States Parties and the 29th General Conference of UNESCO, "... on the legislative and administrative provisions which they have adopted and other action which they have taken for the application of the *Convention*, including information on the state of conservation of the World Heritage properties located on their territories."

To this end, the World Heritage Committee adopted a Format for the Periodic Reports and determined that these reports be examined region by region on the basis of a six-year cycle. Since the management and protection of World Heritage properties is the responsibility of the States Parties, the Periodic Reports are to be prepared by the State Party itself. The Committee therefore requested the World Heritage Centre, at its 22nd session in December 1998, to assist the States Parties in this process and to synthesize these reports on a regional basis, making full use of the expertise of the Advisory Bodies, States Parties, competent institutions and expertise available within the regions.

Based on experience and information acquired through the preceding Periodic Reporting exercises in the Arab States (2000), Africa (2001-2002), Asia and Pacific (2003), and Latin America and the Caribbean (2004) the method and means for reporting were further developed and improved. To facilitate the work of both the European States Parties and the World Heritage Centre, a Questionnaire was developed, which was based upon the Periodic Reporting Format and Explanatory Notes, adopted by the World Heritage Committee, to facilitate the work of the States Parties.

In order to adequately manage the immense amount of information which was to be provided by the European States Parties, the World Heritage Centre created an electronic database (*electronic tool*) to simplify the information management. The electronic tool was developed in close cooperation with the Rapporteur and the Chairperson of the Working Group on European Periodic Reporting¹ and the Advisory Bodies, following the format of the questionnaire. Its development was funded by a major grant from the Flemish Funds-in-Trust and the Netherlands Funds-in-Trust. It allows all States Parties to electronically answer the questions contained in the questionnaire. This will benefit future Periodic Reporting cycles, so that all States Parties will be able to submit information via this electronic tool and to digitally update it as necessary. The questionnaire itself was revised for the European Periodic Report on the basis of previous experiences, and to provide data in a form more suitable for analysis.

¹ An open working group was established at the meeting in Nicosia, Cyprus, in May 2003 for the European Periodic Reporting. Mr Tamas Fejerdy (Hungary) was elected Chairperson and Mr Christopher Young (United Kingdom) Rapporteur. The working group, which consisted of all States Parties focal points, the Advisory Bodies and World Heritage Centre staff did not meet formally, except for the Berlin Meeting in November 2005, but exchanged views over e-mail and internet to prepare the Periodic Reports.

01.03 Organisation(s) or entity(ies) responsible for the preparation of this report:	<div style="border: 1px solid black; padding: 2px;"> Organisation name and department: National Institute for the Protection and Conservation of Monuments and Sites (NIPROCOMOS) and (as the institution superior to it) Ministry of Culture. </div>

The on-line tool was a breakthrough in terms of information management, in particular for the European region, where 48 States Parties reported on Section I and 244 World Heritage properties (European sites included on the World Heritage List up to 1998) were reported on in Section II. The on-line tool for both Sections I and II was made available on-line in January 2004, in both English and French, accompanied by explanatory notes providing guidance for the preparation of the report. The World Heritage Centre has compiled all the data on both these sections and analysed the information received with the assistance of an *electronic analysis and statistical evaluation tool*.

The overall acceptance of the *electronic tool* and revised questionnaire was positive. It will be important to evaluate and refine this methodology for the future cycles in order for Periodic Reporting to truly become a dynamic and effective tool for States Parties and for the successful implementation of the *World Heritage Convention*.

This report comprises the World Heritage Periodic Report on Section I and II for Europe, which provides an assessment of the overall application of the *World Heritage Convention* and proposals for a future Action Plan.

2. Methodology of the Report

One of the objectives of Periodic Reporting is to encourage States Parties to cooperate on a regional and sub-regional basis and exchange information and experiences in the implementation of the *World Heritage Convention*. This regional and sub-regional approach to Periodic Reporting is a means to promote collaboration among States Parties. Furthermore, this approach allows for the specific characteristics and needs of the sub-region to be identified and incorporated into an overall strategy and action plan.

The examination of the European Periodic Report in 2005 and 2006 was determined by the World Heritage Committee in order for the quantity of information to be provided by the 48 States Parties and 248 World Heritage properties inscribed up to 1998, to be analysed adequately. In this respect, the World Heritage Centre presented to the World Heritage Committee at its 21st session held in Helsinki, Finland, in 2001 (WHC-01/CONF.208/24) the proposal to divide the European reporting into two sections. Accordingly, Section I was completed by all European States Parties in December 2004, whereas Section II was submitted for review in October 2005.

In the preparatory phase of the European cycle (2001-2002) different methodologies for data collection were discussed and the Nordic World Heritage Foundation started a pilot project with GRID-Arendal for Periodic Reporting. At the same time, the World Heritage Centre initiated a partnership with the Council of Europe, who had created a European Heritage Network (HEREIN), an electronic databank on national policies. The idea was to create a synergy between Periodic Reporting (Section I) and HEREIN, and to further develop their system for data collection and information sharing on heritage policies in Europe. Although this partnership was endorsed by the World Heritage Committee in 2001, this tool was nevertheless not fully adaptable for the purpose of World Heritage Periodic Reporting and issues of information storage and rights (including copyright) were not solved. In addition, many of the 48 States Parties to the *World Heritage Convention* were not part of the HEREIN project. Nevertheless, an additional chapter was added to the HEREIN project to include some World Heritage information². As agreed with the Council of Europe the future potential of information sharing with HEREIN will be further explored, once the Periodic Report is finalized.

In commencing the regional Periodic Reporting process, the World Heritage Centre presented the Periodic Reporting exercise to the European States Parties at Information Meetings in 2002 and 2003 (see Table 3). The World Heritage Centre also informed all European States Parties by Circular Letters (see Table 1, below) and requested to identify national focal points, in both the cultural and natural heritage domain, to integrate all relevant information for the Periodic Reporting by the State Party.

Table 1: Circular letters sent to Permanent Delegations, National Commissions and focal points in Europe, 2002-2006

Nr.	DATE	REFERENCE	SUBJECT/OBJET
14	27/11/02	CL/WHC/14/02	Periodic Reporting on the application of the <i>World Heritage Convention</i> and on the state of conservation of World Heritage properties in Europe and North America

6	02/11/04	CL/WHC.06/04	LAST REMINDER for the Submission of Section I of the Periodic Reporting on the application of the <i>World Heritage Convention</i> and on the state of conservation of World Heritage properties in Europe by <u>December 2004</u>
1	20/02/05	CL/WHC.01/05	Periodic Reporting on the application of the <i>World Heritage Convention</i> and on the state of conservation of World Heritage properties in EUROPE - SECTION II - Submission date: <u>31 October 2005</u>
/	04/07/05	WHC/PR/EUR/CD/MR	Periodic Reporting on the application of the <i>World Heritage Convention</i> and on the state of conservation of World Heritage properties in Europe
1	23/01/06	CL/WHC.01/06/PS	Requests for Changes to names, boundaries, criteria or Statements of Significance (statement of outstanding universal value) of properties on the World Heritage List arising out of Section II Periodic Reports
3	08/03/06	CL/WHC.06/03	European Periodic Reporting on the application of the World Heritage Convention and on the state of conservation of World Heritage properties: presentation of results to the 30th session of the World Heritage Committee (Vilnius, Lithuania, July 2006)

The first joint European meeting of national focal points was held at the UNESCO-Council of Europe meeting in Nicosia (Cyprus) from 7 to 10 May 2003 which coincided with the '3rd Meeting of the European Heritage Network (HEREIN) national correspondents'. The participants of the meeting agreed to establish an open Working Group, to provide advice and support throughout the European Reporting process. The former Chairperson of the World Heritage Committee, Mr Tamás Fejérdy, was elected as Chair and Mr Christopher Young as the Rapporteur of the Working Group.

² See: [http://www.coe.int/T/E/Cultural_Co-operation/Heritage/European_Heritage_Network_\(HEREIN\)/](http://www.coe.int/T/E/Cultural_Co-operation/Heritage/European_Heritage_Network_(HEREIN)/)

Collaboration on sub-regional levels was initiated after the Nicosia Meeting. The Nordic-Baltic Countries agreed to collaborate for the European Periodic Reporting process for their region through the Nordic World Heritage Foundation (NWHF). Further sub-regional collaboration evolved in Central and South-Eastern Europe with meetings in Budapest (Hungary) for Central Europe and Trieste (Italy), for South-Eastern Europe. The Russian Federation offered to coordinate the Eastern European exercise and meetings, whereas the Mediterranean Countries and the Western European countries did not foresee coordination meetings in the sub-regional groups. The German speaking countries met on two occasions and prepared a sub-regional report for their countries.

It should be noted that the sub-regional grouping of Europe is artificial and was chosen for the convenience of this exercise. However, inter-regional collaboration, cooperation and coordination already established among some countries and the geographical and geo-cultural locations of other countries were some of the motivations behind this division into sub-regions, as was the need to accentuate the diversity in the implementation of the *Convention* in Europe.

Table 2: Sub-regional grouping of States Parties in Europe

Nordic and Baltic European Region	Western European Region	Mediterranean European Region	Central and South-Eastern European Region	Eastern European Region
Denmark, Estonia, Finland, Iceland, Norway, Latvia, Lithuania, Sweden	Austria, Germany, Switzerland	Andorra, Portugal, Spain	Albania, Bosnia & Herzegovina, Bulgaria, Croatia, Czech Republic, Former Yugoslav Republic of Macedonia, Hungary, Poland, Romania, Serbia & Montenegro, Slovakia, Slovenia	Armenia, Azerbaijan, Belarus, Georgia, Republic of Moldova, Russian Federation, Ukraine
	Belgium, France, Ireland, Luxembourg, Netherlands, Monaco, United Kingdom	Cyprus, Greece, Holy See, Italy, Israel, Malta, San Marino, Turkey		
8 States Parties	10 States Parties	11 States Parties	12 States Parties	7 States Parties
5 Sub-Regional Synthesis Reports 48 States Parties				

Information Meetings (Table 3) were organized by the World Heritage Centre in UNESCO and during World Heritage Committee sessions since 2001 to ensure that all States Parties were kept up-to-date. All the relevant documents and information for the completion of the on-line tool questionnaire were presented as well as discussed and an e-mail mailing network with all the focal-points was established.

The Advisory Bodies identified their focal points for the European Periodic Reporting exercise who were invited together with the Chair and the Rapporteur of the Working Group to some of the sub-regional meetings. Some national and sub-regional meetings were organized within small working groups without the explicit participation of the Advisory Bodies or the World Heritage Centre. In general, sub-regional cooperation has been successful and was at times a natural outcome in some of the identified groups, who have held sub-regional coordination meetings and continuous discussion. Although there has been little collaboration among countries in the Western European Group and the Mediterranean Group, national cooperation was greatly enhanced by the requirements of Periodic Reporting and also brought together all relevant stakeholders within the each country. Accordingly, meetings were mostly held on a national level (in particular for countries with more than 20 properties inscribed) in smaller working groups.

January 2003	Information meeting for all European States Parties, UNESCO Headquarters	Paris, France
May 2003	First Joint European and World Heritage network meeting	Nicosia, Cyprus
July 2003	Periodic Reporting Information Meeting, during 27th session of the Committee	Paris, France
July 2003	Periodic Reporting meeting for site managers from German speaking countries (Austria, Germany, Switzerland)	Brühl, Germany
September 2003	Periodic Reporting meeting for the Nordic and Baltic Countries	Riga, Latvia
September 2003	Periodic Reporting meeting for cultural heritage for Russia and Eastern European CIS countries	Moscow, Russian Federation
March 2004	South-Eastern Europe Periodic Reporting Meeting	Trieste, Italy
March 2004	Europe Periodic Reporting Information Meeting, (as part of the Information Meeting of the States Parties to the <i>World Heritage Convention</i>)	Paris, France
April 2004	2nd Periodic Reporting Meeting for site managers from German-speaking countries	Potsdam, Germany
April/May 2004	Follow-up meeting Russia and CIS countries, Section II	Moscow, Russia
May 2004	Periodic Reporting Workshop for Central Europe	Visegrad, Hungary
May 2004	Periodic Reporting Meeting of the Iberian Peninsula	Lisbon, Portugal
June/July 2004	2nd Sub-Regional meeting on Periodic Reporting for Nordic and Baltic Countries	Stockholm, Sweden
December 2004	Europe Periodic Reporting Information Meeting during the 7th Extraordinary session of the Committee	Paris, France
April 2005	Central-Eastern European Periodic Reporting Meeting, Section II	Levoča, Slovakia
April 2005	3rd Sub-Regional meeting on Periodic Reporting for Nordic and Baltic Countries, Section II	Copenhagen, Denmark
July 2005	Lunchtime meeting during the 29th session World Heritage Committee on Periodic Reporting: presentation and results of the sub-regional reports for Section I	Durban, South Africa
November 2005	Berlin meeting: Periodic Reporting on World Heritage in Europe: Towards and Action Plan	Berlin, Germany

All the European States Parties and the sub-regional groups have established very different mechanisms for the preparation of their reports. Every State Party has invested great efforts into organizing the reporting process at the national level. Considering the vast diversity of languages in Europe (even within States Parties) as well as the variety of governmental structures and administrative arrangements, several States Parties translated the questionnaire into national languages to facilitate the report preparation and established national working groups. Detailed timetables for the completion of the reports were set-up to ensure that the documentation was compiled and translated.

Table 4: Percentage of reports received for Section I by the deadline of 31 December 2004, by sub-region

Sub-Region	31 December 2004 On-line and/or hard copy report
Nordic and Baltic Region	88%
Western European Region	40%
Mediterranean Region	82%
Central and South-Eastern Region	50%
Eastern European Region	43%

All national reports were entered into the on-line tool, which was made available to all States Parties in January 2004, after each State Party had officially appointed focal points. The deadline date for submission of Section I reports was 31 December 2004, at which time 29

reports were received in either hard copy or through the on-line tool. Two States Parties from the Western European Group were the last to complete their reports, the last being submitted on 16 February 2005. The 100% reply rate (six weeks after the deadline) alone is an immense success for the electronic tool and the methodology proposed for the preparation of the report. Section II received a similar and very positive response rate by the deadline of 31 October 2005, reaching 100% on 15 December 2005.

An *electronic analysis and statistical evaluation tool* has been developed in the World Heritage Centre which allowed for most of the statistical data in Sections I and II to be analysed. Many of the graphs and tables in this document have been prepared with this tool.

For the preparation of the sub-regional synthesis reports, the World Heritage Centre appointed international experts to assist in their preparation. This work was also supported by selected resource persons who have particular knowledge of the sub-regions and assisted with the overall analysis of the information contained in the sub-regional reports. The Nordic and Baltic Sub-region was coordinated by the Nordic World Heritage Foundation, who co-arranged the sub-regional meetings and has been responsible for the drafting of the sub-regional synthesis report. For Western Europe, the Rapporteur of the Working Group fulfilled this task, for Central Europe its Chairperson, as well as the Chairperson of the UNESCO Working Group for South-Eastern Europe (SEE), for Eastern Europe the Chair of the Russian World Heritage Committee, whereas for the Mediterranean Europe the national focal point for Italy was selected.

Sub-regional meetings were organized on both Section I and II (see Table 3). In addition, other training meetings were used to explain Periodic Reporting processes including a meeting in Chisinau, Republic of Moldova (6-9 May 2005), which resulted in a declaration by the National Commissions for UNESCO of Armenia, Azerbaijan, Georgia, Moldova and Ukraine on the Implementation of the *World Heritage Convention*.

The World Heritage Centre held informal meetings with the Chairperson and the Rapporteur of the Working Group in October 2004, March 2005 and in March 2006. The international experts responsible for the sub-regional synthesis reports participated in the meetings in March 2005 and March 2006, which were arranged to review the draft reports as well as to jointly define the framework for an Action Plan as a follow-up to the Periodic Reporting on Section I. In terms of the Action Plan, the Chair and Rapporteur as well as the experts emphasised that the completion of Section I separately from Section II had disadvantages, in particular with regard to the formulation of final conclusions, follow-up actions and regional programmes. Administrative and legislative provisions for the implementation of the *Convention* and the identification of training needs and capacity building are closely related to site-specific issues. Therefore, the Action Plan presented in Part V of this synthesis report draws on the results of both Sections, and takes into account the results of different meetings, the qualitative and quantitative analysis of the data received, and in-depth comments and review by consultants, the Advisory Bodies and the World Heritage Centre.

Follow-up to the preliminary results of Periodic Reporting on Section I, the preparation of recommendations for Section II and reflections on the process and methodology applied in the European Reporting cycle were the subject of a two-day meeting held in Berlin (Germany) between 8 and 9 November 2005. At the invitation of the German authorities, this meeting assembled the representatives of the Working Group, all European focal points for Periodic Reporting, with the participation of the Advisory Bodies and the World Heritage Centre. The meeting considered the preliminary results of Periodic Reporting and in particular the means and methods needed to address the requirements effectively. This meeting resulted in the adoption of elements for an overall Action Plan for the Europe Region, and in the adoption of

the Berlin Appeal. The Action Plan proposed in Part VI of this report is based on these two documents as well as on the conclusions of the analysis of both sections of the Periodic Reporting exercise for all five sub-regions.

3. Structure of the Report

This report is structured according to the questionnaire for Periodic Reporting. It draws conclusions from the sub-regional synthesis reports and proposes preliminary recommendations for the development of a regional action plan for the strengthened application of the *World Heritage Convention* in the Europe region.

It is divided into six parts. Part I introduces the reader to the diversity of the natural and cultural heritage of Europe and gives an overview of the implementation of the World Heritage Convention over the past thirty years. It summarises past research and information that is available in World Heritage Centre databases, technical reports and publications, working documents for the World Heritage Statutory Bodies and reports of the sessions of the World Heritage Committee and information available on European organizations and institutions. Part II contains an analysis of the States Parties reports on Section I on the application of relevant articles of the *World Heritage Convention* dealing with administrative and legal measures. Part III presents an analysis of the Section II reports received from States Parties regarding protection measures, management and threats to World Heritage properties. Part IV provides a reflection on the results of Part II and Part III by sub-region, and is based on the critical analysis of the sub-regional reports. Part V contains an Action Plan for Europe based on the results of the Periodic Reporting exercise, taking into account the results of the different meetings, the qualitative and quantitative analysis of the data received, and the comments and in-depth review by consultants, the Advisory Bodies and the World Heritage Centre. Part VI presents a draft decision for the World Heritage Committee

**PART I:
THE IMPLEMENTATION
OF THE
WORLD HERITAGE CONVENTION
IN EUROPE**

INTRODUCTION AND BRIEF HISTORY

THE IMPLEMENTATION OF THE *WORLD HERITAGE CONVENTION* IN EUROPE

Considering the wealth of cultural and natural heritage as well as the diversity of cultures and languages in Europe, this chapter is essential in order to lay emphasis on the array of the application of the *World Heritage Convention* by States Parties in Europe. Since the adoption of the *Convention* in 1972 and the Global Strategy in 1994, its implementation in Europe and especially Eastern and Central Europe, has seen considerable developments in terms of identification of World Heritage, international assistance and training, particularly following the political changes in Europe in the 1990s.

The implementation of the *Convention* in Europe is a very dynamic process. Over the past thirty years, knowledge and experience in the conservation and preservation of natural and cultural heritage has changed and advanced considerably. In Europe, this change in perception of heritage preservation has greatly influenced the attitudes towards identification of heritage, brought about legislative renewal and adjustments and furthered research and expert knowledge in this field. Changes in legal systems, institutions and administrations in many European countries have, however caused loss of institutional memory and absence of records. Therefore, the data provided in the Periodic Reports has to be interpreted taking into consideration the changes which have taken place as well as the differences in interpretation of terminologies. In this chapter, the World Heritage Centre has tried to complement the information provided by States Parties with additional data and available research.

1. An Introduction to the Cultural and Natural Heritage of the Region

Geography and environment

Europe is geologically and geographically considered to be a peninsula, the westernmost part of Eurasia. It is often considered to be a continent, which may be more a cultural perception than a geographic definition, so a 'sub continent' may be more exact. Geographical Europe is delimited to the north by the Arctic Ocean, to the west by the Atlantic Ocean (including Iceland and Greenland), to the south by the Mediterranean Sea and the Black Sea, and to the east by the Ural Mountains and the Caspian Sea. In any case this definition does not coincide with the 48 countries which are the subject of the European Periodic Reporting exercise, which includes all of the Russian Federation (and not only the western part to the Ural) as well as Turkey and Israel in addition to some overseas territories (ranging from the sub-arctic to the tropics) of France, The Netherlands, the United Kingdom and Norway. Europe also includes the subtropical islands of the Canaries (Spain), Madeira and Azores (Portugal).

The topography and relief in Europe shows enormous variation within relatively small areas. The southern regions, with the Alps, Pyrenees, Carpathians and the Caucasus are more mountainous. Moving north and east the terrain descends to hilly uplands, and low plains, which cover vast areas in the east. Uplands also exist along the northwestern seaboard, in the western British Isles and Norway.

This description does not do justice to the diversity of Europe, as the Iberian Peninsula, Italy, Aegean Islands, etc. contain their own complex features. This generalization of the relief of Europe already illustrates its complex geological features as well as the regions of many different sub-regions, which are home to separate nation states and diverse cultural systems throughout its rich historical development.

In terms of biogeographical regions, Europe covers tundra and arctic, temperate and arid regions (semi arid and dry sub-humid). It shows a fine pattern of biogeographical provinces and ecoregions in Europe, which explain its varied biological and agricultural diversity.

Historical developments

It would be impossible to describe the diverse and complex history of Europe from Prehistory to today. However the rich cultural heritage of the region, its high number of cultural World Heritage properties and potential sites is intrinsically linked to this history. Europe's cultural history starts in the Paleolithic period and some of the origins of European culture are attributed to Ancient Greece and the Roman Empire. The influence of the Roman Empire remained strong in Europe for centuries after its decline. The vibrant cultures of Europe in the post Roman period are variously influenced by its legacy, by Christianity and Islam and by successive waves of migration. The Byzantine Empire has offered an administrative, educational and overall cultural model to a large part of Eastern Europe, the Black Sea region and the Mediterranean area for over ten centuries.

Many of the characteristics of the Renaissance and the development of modern Europe can be traced back to the so-called Middle Ages which were a seminal era of European history. The Renaissance itself was an influential cultural movement, marking modern history, discovery, exploration and scientific revolution and knowledge. This also marked the expansion of Europe and the building of large colonial empires by Denmark, Portugal, Spain, France, Belgium, The Netherlands and the United Kingdom with vast holdings in Africa, the Americas, and Asia³.

Following the period of discoveries revolutionary ideas and democracy propagated across the continent. After much tension, civil unrest and wars, Europe entered a stable period. The Industrial Revolution in the late 18th century was another key occurrence, leading to economic and scientific evolution and an immense population increase.

Europe is a diversity of different cultures and religions, West and East, North and South, Catholicism and Protestantism, Eastern Orthodoxy, Judaism, and Islam, which influenced the diverse heritage of the region. Many cultural innovations and movements, which spread across the globe, have originated in Europe.

After the First World War, many States in Europe took their present form. At the same time both the First and Second World War destroyed much of the cultural heritage and led to international protection efforts in safeguarding this heritage. After the Second World War, Europe was more or less divided politically and economically into two blocks through the Cold War: the communist East and the capitalist West. These developments resulted also in different heritage policies and perceptions. Europe today evolved with the break up of the divide in the 1990s, the fall of the Berlin Wall and the ongoing extension of the European Union to the East.

2. The World Heritage Convention

An overview of the involvement of States Parties in Europe commencing with the initial operational phase of the World Heritage Convention is presented in the following paragraphs.

2.1. States Parties

Among the first 20 States Parties to sign the Convention after its adoption in 1972, were Bulgaria, Cyprus, France, Switzerland and Yugoslavia, leading to its entering into force in 1975. Europe has the most complete ratification rate of all regions. To date Liechtenstein is the only country in Europe that has not ratified the Convention and is not a Member State of UNESCO. The most recent ratification was the Republic of Moldova in September 2002.

³ Some of this history and related colonial heritage has been covered in the Periodic Reports of Africa, Latin America and Asia.

Table 5: Year of ratification of *World Heritage Convention* by States Parties in Europe

YEAR of ratification	STATES PARTIES
1973	-
1974	Bulgaria
1975	Cyprus, France, Switzerland
1976	Germany, Poland
1977	Norway
1978	Italy, Malta, Monaco
1979	Denmark
1980	Portugal
1981	Greece
1982	Holy See, Spain
1983	Luxembourg, Turkey
1984	United Kingdom of Great Britain and Northern Ireland
1985	Hungary, Sweden
1986	-
1987	Finland
1988	Belarus, Russian Federation, Ukraine
1989	Albania,
1990	Romania,
1991	Andorra, Ireland, San Marino
1992	Austria, Croatia, Georgia, Lithuania, the Netherlands, Slovenia
1993	Armenia, Azerbaijan, Bosnia and Herzegovina, Czech Republic, Slovakia
1994	-
1995	Estonia, Iceland, Latvia
1996	Belgium
1997	the Former Yugoslav Republic of Macedonia
1998	-
1999	Israel
2000	-
2001	Serbia and Montenegro
2002	Republic of Moldova
2003-2005	-

Many European countries ratified the *Convention* prior to 1991, on average two countries per year. A notable rise in numbers of European States Parties and increased participation in World Heritage activities is visible, in particular, after the change in the political landscape in the 1990's in Eastern and South-Eastern Europe. This particular situation in Europe had a significant impact on the growth of the World Heritage List and requests for International Assistance submitted from those States Parties also increased considerably.

Table 6: Historical information concerning States Parties to the *World Heritage Convention* in Europe

STATE PARTY	DATE of Deposit of the original instrument of ratification/acceptance /accession	NOTES	STATE PARTY
Federal Republic of Germany	23 August 1976	Through the accession of the German Democratic Republic to the Federal Republic of Germany, with effect from 3 October 1990, the two German States have united to form one sovereign State	<i>Germany</i> 23 August 1976 (ratification)
German Democratic Republic (GDR)	12 December 1988		

U.S.S.R	12 October 1988	After the dissolution of the former USSR, the Russian Federation informed the UN Secretary-General that as at 24 December 1991 the Russian Federation maintained full responsibility for all the rights and obligations of the USSR under the Charter of the United Nations and multilateral treaties deposited with the Secretary-General.	<i>Russian Federation</i> 12 October 1988 (ratification)	
Belarusian SSR Ukrainian SSR	12 October 1988 12 October 1988	Belarus and Ukraine ratified the <i>Convention</i> in 1988 in their quality of UNESCO member States (since 1954).	<i>Belarus</i> 12 October 1988 (ratification) <i>Ukraine</i> 12 October 1988 (ratification) <i>Armenia</i> 5 September 1993 (notification succession) of <i>Azerbaijan</i> 16 December 1993 (ratification) <i>Estonia</i> 27 October 1995 (ratification) <i>Georgia</i> 4 November 1992 (notification succession) of <i>Latvia</i> 10 January 1995 (acceptance) <i>Lithuania</i> 31 March 1992 (acceptance) <i>Republic of Moldova</i> 23 September 2002 (ratification)	
Yugoslavia	26 May 1975	On 11 September 2001, the Federal Republic of Yugoslavia notified its succession to UNESCO treaties to which the former Yugoslavia was a party. As of 4 February 2003, the name of the Federal Republic of Yugoslavia was changed to Serbia and Montenegro.	<i>Serbia and Montenegro</i> 11 September 2001 (notification succession) of <i>Bosnia and Herzegovina</i> 12 July 1993 (notification succession) of <i>Croatia</i> 6 July 1992 (notification succession) of <i>The former Yugoslav Republic of Macedonia</i> 30 April 1997 (notification succession) of <i>Slovenia</i> 5 November 1992 (notification succession) of	
Czech and Slovak Federal Republic	15 October 1990	The Czech and Slovak Federal Republic was dissolved on 31 December 1992 and, as of 1 January 1993, was separated into two distinct States: the Czech Republic and the Slovak Republic	<i>Czech Republic</i> 26 March 1993 (notification succession) of <i>Slovakia</i> 31 March 1993 (notification succession) of	

A total of 17 countries became States Parties to the *Convention* in the years between 1992 and 1997. This is partly due to the additional number of countries in the South-Eastern and Central European Region following the political changes in the regions along with an increased awareness of the *World Heritage Convention*. With a total of 181 States Parties further adhesions to the *Convention* has nearly reached its close.

Overseas territories

It should be noted that several other islands and territories in the Caribbean and the South Pacific participate in the *Convention* through the governments of France, The Netherlands and the United Kingdom. A number of World Heritage properties are located in these territories⁴.

International Conventions

The 7th extraordinary session of the World Heritage Committee held in 2004, considered other standard-setting instruments elaborated by UNESCO aiming at the protection of cultural heritage and underlined the importance of the 1954 Hague Convention for the Protection of Cultural Property in the Event of Armed Conflict and its 1954 and 1999 Protocols; the 1970 Convention on the Means of Prohibiting and Preventing the Illicit Import, Export and Transfer of Ownership of Cultural Property; the 2001 Convention on the Protection of the Underwater Cultural Heritage; and the 2003 Convention for the Safeguarding of the Intangible Cultural Heritage. It specifically invited States Parties to consider adhering to other international, regional and sub-regional instruments related to the protection of natural and cultural heritage.

2.2. The World Heritage Committee

Active involvement of European countries in the work of the *Convention* through participation in World Heritage Committee membership is illustrated in Table 8 below. Eastern and South-Eastern European representation in the Committee commenced in the early years of the *Convention*, with Cyprus, Bulgaria, Poland and Turkey being members between late 1970s to late 1980s. This was followed by a long period without any Eastern European State Party being represented in the Committee until 1997, when Hungary was elected, followed by the Russian Federation in 2001 and Lithuania in 2003 (see Table 8).

A number of World Heritage Committee meetings were held in Europe in the years from 1980 to 2002. The following sessions were hosted in European States Parties: **1980** – 4th session held in Paris (France); **1983** - 7th session held in Naples (Italy); **1995** - 19th session held in Berlin (Germany); **1997** - 21st session held in Naples (Italy); **2001** - 25th session held in Helsinki (Finland); **2002** - 26th session held in Budapest (Hungary) and **2006** - 30th session held in Vilnius (Lithuania).

Table 8: European States Parties with overview of World Heritage Committee membership (1978-2005)

3. Identification of World Heritage in Europe

3.1. The World Heritage List

Since the first sites were inscribed in 1978, the World Heritage List has continuously increased. In Europe the total of properties currently inscribed is 379⁵. The total number of cultural heritage properties in Europe comprises 339 which are more than half of the overall amount of cultural heritage inscribed on the World Heritage List, which number 628. On the other hand, the number of natural heritage properties in Europe is relatively low, 31 natural properties in comparison to a total of 160. The same applies for mixed heritage sites which number 9 in Europe in comparison to 24 in total inscribed on the World Heritage List.

The increasing predominance of some regions and types of heritage has widened the gap, both between cultural and natural heritage and between countries. Within Europe, the reasons for these gaps have to be seen in relation to several factors. In terms of number of properties, several States Parties that were very active in the early years of the *Convention* have acquired sufficient knowledge and practice in the preparation of nominations and have submitted nominations on average every second year. Other countries have experienced constraints in terms of technical capacities for the preparation of nominations and lack of effective legal systems and management structures which have hindered the nomination and inscription process. The predominance of architectural monuments, religious properties and historic urban heritage can be explained by the historically rooted concept and approach to heritage preservation which very much concentrated on single monumental entities. In recent years, the diversity of cultural heritage is being recognised by inclusion of technological and agricultural heritage, cultural landscapes, and cultural routes, and by recognition of cultural associations encompassing intangible values of monuments and landscapes.

The analysis of sites inscribed on the World Heritage List and Tentative Lists undertaken by ICOMOS and IUCN, as requested by the 24th and the 26th sessions of the World Heritage Committee, provides more detailed studies of the types of heritage included on the World Heritage List⁶. Cultural heritage properties in Europe inscribed on the World Heritage List are predominantly historical centres or cities and religious monuments followed by architectural ensembles and archaeological sites. Although an increasing amount of industrial heritage properties have been inscribed in recent years as well as cultural landscape, these types of sites are relatively under-represented.

Only 19 of the 48 States Parties in Europe have natural heritage sites, while mixed heritage sites are located in six States Parties. Natural heritage properties are mainly wilderness areas and national parks and sites of geological significance. Only recently (2004), two natural sites in the Arctic region have been inscribed.

The global analysis made by IUCN of the representation of the different biomes concluded that the following systems were underrepresented or missing from the World Heritage List: lake systems, tundra and polar systems, temperate grasslands and cold winter deserts. Concerning Europe, nominations within these biomes should in priority include the sub-polar arctic tundra and the large river deltas in Russia. In addition, serial and transboundary nominations should be considered in order to raise the level of submitted files and simultaneously to reduce the number of nominations.

⁵ This includes the transboundary World Heritage property of Uvs Nuur Basin (N(ii) (iv), 2003), shared by Mongolia and the Russian Federation.

⁶ WHC.04/28.COM/INF.13A and WHC.04/28.COM/INF.13B

IUCN also referred in its analysis of the World Heritage List to the importance of national, regional and other international protected area systems for natural heritage preservation, in particular the regional networks such as Natura 2000 as well as the Ramsar sites⁷, UNESCO Biosphere Reserves and Geoparks. The degree of human intervention in many parts of Europe may limit the possibilities of future natural World Heritage nominations but may provide opportunities for cultural landscapes. Since 1995 the World Heritage Centre has cooperated with the Council of Europe in the preparation of the European Landscape Convention to enhance the protection of this type of property in Europe. Furthermore cooperation with other international instruments, like the Ramsar Convention on Wetlands or UNESCO MAB programme, or European conventions and programmes such as European Landscape Convention, Pan-European Strategy, European Diploma of protected areas, etc has to be strengthened.

To assist States Parties in identifying natural sites with outstanding universal value in Europe and following IUCN/WCPA Parks For Life Action Plan (1994), an identification study «Potential Natural World Heritage Sites in Europe» was finalized in 1998. In addition, the category of geological and fossil sites was addressed during a special World Heritage session to identify potential sites was organized at the International Geological Congress held in Sofia, Bulgaria, in June 1998. The number of incoming nominations and the number of cultural landscapes on Tentative Lists illustrate the need for thematic studies to identify the sites of potential outstanding universal value within the region.

Although the number of World Heritage properties in Europe is very high, a great number of Eastern and South-Eastern European States Parties have three or less World Heritage properties inscribed. Table 9 below, lists European States Parties to the *World Heritage Convention* by number of sites inscribed on their territories.

Table 9: Number of World Heritage properties by European State Party – 2005

Number of World Heritage sites	State Parties in Europe
0 WH sites	Monaco, San Marino,
1 WH site	Andorra, Azerbaijan, Bosnia and Herzegovina,, Iceland, Luxembourg, Republic of Moldova, Slovenia, the Former Yugoslav Republic of Macedonia,
2 WH sites	Albania, Estonia, Holy See, Ireland, Latvia
3 WH sites	Armenia, Cyprus, Georgia, Malta, Ukraine
4 WH sites	Belarus, Denmark, Lithuania
5 WH sites	Israel, Serbia and Montenegro, Slovakia,;
6 WH sites	Croatia, Finland, Switzerland,
7 WH sites	The Netherlands, Norway, Romania
8 WH sites	Austria, Hungary,

12 WH sites	Czech Republic, Poland
13 WH sites	Portugal
14 WH sites	Sweden
16 WH sites	Greece
23 WH sites	Russian Federation
26 WH sites	United Kingdom
30 WH sites	France
31 WH sites	Germany
38 WH sites	Spain
40 WH sites	Italy

*The numbers in this table include transboundary or transnational properties.

⁷ Designated for inclusion in the Ramsar List of Wetlands of International Importance under the Convention on Wetlands (Ramsar, Iran, 1971).

Despite the already high number of European sites on the World Heritage List if compared to other regions of the world, the nominations from this region are still largely dominant. It is also worth mentioning that several States Parties in Europe, notably in the Western European region, have provided expert and financial assistance to States Parties in other regions for the preparation of Tentative Lists and nominations.

3.2. Tentative Lists

In recent years, activities of the World Heritage Centre concentrated on European regions currently underrepresented on the World Heritage List and where, in the past, nominations had not been successful partly due to the lack of technical capacities or insufficient information and documentation. These activities were concerned mostly with the Caucasus Region, the Baltic States and Central Eastern Europe.

In the Nordic countries, sub-regional coordination of national Tentative Lists began as early as in 1986. In the framework of the Nordic Council of Ministers cooperation, an interdisciplinary project was started in 1994 which focused on the identification of natural heritage and cultural landscapes in the Nordic countries. The report, which was published in 1996, was the first example of a successful initiative to harmonise Tentative Lists in a region. Nominations which have been presented since then have largely been based on the recommendations of this project.

Following the requirements in *Operational Guidelines* and the Committee's repeated recommendation to States Parties for the harmonisation of Tentative Lists on a regional and sub-regional level, the World Heritage Centre in close collaboration with the Advisory Bodies, organized and encouraged and co-organized sub-regional Tentative List harmonisation meetings, seeking to address the shortcomings and gaps in certain types of natural and cultural heritage in this sub-region.

Table 10: Tentative List harmonisation meetings and activities in Europe

Sub-region	Title	Place and date	Funding source
Nordic Countries	Nordic World Heritage: Proposals of new areas for the UNESCO World Heritage List Nordic Report – Nord 1996:31 Nordic Council of Ministers (NCM)	Interdisciplinary working group Nordic Countries 1994-1996	NCM
Baltic Countries	Harmonisation of Tentative Lists in the Baltic Region	Latvia June 2003	World Heritage Fund (WHF), Nordic World Heritage Fund (NWHF), German Foundation
Caucasus Region	Harmonisation Meeting for Tentative Lists in the Caucasus region	Georgia October 2002	WHF
Central European Region	International workshop on identification of cultural sites in the Ukraine and the harmonisation of Tentative Lists of neighbouring countries in Eastern Europe	Ukraine May 2003	WHF
Central European Region	International workshop on identification of potential natural World Heritage sites	Ukraine October 2004	WHF

A number of Tentative Lists have been revised following these meetings and in response to the request of the World Heritage Committee for potential natural heritage sites to be included in the Tentative Lists. These harmonisation meetings have also inspired these States Parties to include potential transboundary and transnational proposals in their revisions of Tentative Lists. Accordingly, in the years 2003 and 2004, the number of revised Tentative Lists submitted to the World Heritage Centre increased considerably. This can also be explained by the heightened awareness of potential World Heritage sites by States Parties in Eastern and

South-Eastern Europe, together with a better knowledge of the procedures and the scope of documentation required for Tentative Lists and subsequently nomination dossiers (See: Chart 1, in the Appendix).

In terms of cultural heritage, the analysis of ICOMOS⁸ shows that in Europe archaeological properties, architectural monuments, historic towns/urban centres and religious properties are predominant on these Tentative Lists. However, in comparison to other regions of the world, the number of cultural landscapes, and symbolic properties included on these Lists is also much higher. While modern heritage figures predominantly on European Tentative Lists, it is barely acknowledged in the other regions.

The high number of properties on European Tentative Lists is due to an accumulation of sites over time and is not necessarily a realistic prognosis for future nominations and their order in presentation. Regional and local pressures on national authorities often result in ad hoc decisions for sites to be included on Tentative Lists and for nominations to be prepared. A serious revision of Tentative Lists taking into account the recommendations of the Committee, the *Operational Guidelines*, the gap analyses of advisory bodies, regional harmonisation and a conscious application of the notion of ‘outstanding universal value’ is necessary.

3.3 Global Strategy for a Representative World Heritage List

At the 18th session the World Heritage Committee in 1994, the Global Strategy for a representative and credible World Heritage List was adopted. By adopting this Strategy, the Committee wanted to broaden the interpretation of World Heritage to better reflect the full spectrum of our world’s cultural and natural diversity and to provide a comprehensive framework and operational methodology for implementing the *World Heritage Convention*.

Concurrent with the development of the Global Strategy, the Committee began considering the possibility of including cultural landscapes in the World Heritage List. At its 16th session in 1992 the World Heritage Committee adopted three categories of World Heritage cultural landscapes and revised the cultural criteria used to justify inscription of properties on the World Heritage List to ensure the recognition of “the combined works of nature and of man”. Since 1992, 53 cultural landscapes have been inscribed globally on the List, of which 33 are in Europe, which illustrates an overwhelming response to this concept in the region.

The World Heritage Centre and the Advisory Bodies have contributed to the implementation of the Global Strategy through global and regional studies and have assisted States Parties in the preparation of Tentative Lists and nominations along with encouragement to States Parties to select sites from underrepresented categories. A number of regional and thematic meetings on cultural landscapes were organized by the World Heritage Centre in cooperation with the Advisory Bodies and the European States Parties concerned to address the issue of cultural landscapes.

⁸ ICOMOS Analysis of the World Heritage List and Tentative Lists and follow-up action plan (WHC-04/28.COM/INF.13A)

Table 11: Meetings on cultural landscapes and natural heritage in Europe

April 1996	Expert Meeting on European Cultural Landscapes of Outstanding Universal Value WHC.95/CONF.201/INF.09	Vienna, Austria
October 1998	International Symposium - Monument - Site - Cultural Landscape Exemplified by the Wachau (Austria, October 1998) Proceedings, Verlag Berger, 1999	Dürnstein, Austria
September/October 1999	Expert meeting on Cultural Landscapes in Eastern Europe WHC.99/CONF.209/INF.14	Bialystok, Poland
March 2000	Cultural Landscapes: Concept and Implementation WHC.00/CONF.202/INF.10	Catania, Italy
June 2000	Thematic Expert Meeting on Potential Natural World Heritage Sites in the Alps WHC.00/CONF.204/WEB.2	Hallstatt, Austria
July 2001	World Heritage Thematic Expert Meeting on Vineyard Cultural Landscapes WHC.01/CONF.208/INF.7	Tokaj, Hungary
July 2001	States Parties Meeting towards a joint nomination of areas of the Alpine Arc for the World Heritage List WHC.01/CONF.208/INF.6	Turin, Italy

At these meetings, experts from States Parties reviewed Tentative Lists in terms of regional and thematic definitions of categories of natural and cultural heritage of potential outstanding universal value. As a result, the States Parties were encouraged to revise their Tentative Lists, to harmonise them with the neighbouring States Parties, and to prepare nominations of properties, based on the Tentative List, from categories currently not well represented on the World Heritage List.

The increase of cultural landscapes inscribed on the World Heritage List in Europe is a direct result of these thematic meetings and a reflection of the change in the perception of heritage, shifting from the nominations of single monuments to larger properties such as landscapes, historic urban areas as well as transnational and serial sites. Evidently the success of the Global Strategy is reflected in the increasing number of underrepresented types of properties and serial and transnational nominations being submitted and inscribed, consequently leading to enhanced international collaboration through networks and working groups.

In response to the increasing number of nominations and in support of the evaluation process of nominations undertaken by the Advisory Bodies, thematic and comparative studies have been carried out. Some of the comparative studies were also carried out in response to the emergence of new types of nominations for which comparative studies are needed to assess the outstanding universal value.

Although most studies also concern other parts of the world some studies particularly concern European heritage, such Brick Gothic cathedrals (1995), Teutonic Order castles in Eastern Europe (1997), Roman theatres and amphitheatres (1999), Coal-producing sites in Europe, Japan and North America (2001), Orthodox monasteries in the Balkans (2003), Historic Fortified towns in Central Europe (2003) and Historic vineyard landscapes (2004) for cultural heritage; and Potential Natural World Heritage sites in Europe (WCPA, 1998) for natural heritage.

A number of specific initiatives were undertaken in the framework of the Global Strategy to review the situation of the World Heritage List in Europe and to identify gaps and specific categories important to this region.

One key exercise was a cooperation project by the European group of the IUCN World Commission for Protected Areas (WCPA, formerly CNPPA), who commissioned a study,

which was presented at the “European Regional Working Session on Protecting Europe’s Natural Heritage” in Rügen, Germany in 1997. The conclusions⁹ were: a) the emphasis on the rich heritage linking culture and nature, including the recognition of the great potential of cultural landscapes in the region; b) the identification of outstanding natural features, including geological heritage, boreal forests and specific features such as the Wadden Sea. Other organisations, such as the International Union of Geological Sciences (IUGS) and Progeo, proceeded with the identification of specific paleontological, fossil and geological heritage sites. Furthermore, a number of specialised workshops were organized, such as the one on Karst (Slovenia, November 2004) to discuss the potential of such sites in Europe, transboundary and transnational cooperation, and assist States Parties in their identification.

Valuable collaboration with the Council of Europe emerged concerning the protection of geological and fossil sites, which led to the participation of both UNESCO and World Heritage experts from different States Parties in the preparation of a Recommendation by the Council of Europe. The Recommendation Rec(2004)3 on Conservation of the Geological Heritage and areas of special Geological Interest was adopted by the Committee of Ministers on 5 May 2004.

In addition, sub-regional collaboration for natural heritage among States Parties developed in a number of regions, such as the Alpine Region, where the first natural World Heritage site was inscribed as recently as 2002. Meetings of all States Parties concerned, together with representatives of the Alpine Convention¹⁰, were organized in 2000 and 2002 and reports were subsequently presented to the World Heritage Committee¹¹. The Committee encouraged States Parties to collaborate on potential serial and transboundary nominations and a number of natural heritage nominations within the Alpine region were presented. However, none of them as transboundary or transnational properties, although discussions among States Parties resumed in 2005.

4. Examination of the State of Conservation

Over the past ten years, in the framework of the strategic objectives of the “Four Cs”¹², the conservation of World Heritage properties has become one of the main concerns of the World Heritage Committee. To ensure an effective management and conservation of World Heritage properties, monitoring the state of conservation is an important tool to assist this process.

4.1. Systematic Monitoring Exercises

Recognising the need for an appropriate monitoring system to effectively measure the state of conservation of World Heritage properties, the World Heritage Committee and the Advisory Bodies focused their attention on this subject in the early 1980s. Monitoring reports on sites were being presented to the Committee by ICOMOS, IUCN and the World Heritage Centre in different formats. In response to the Committee’s desire for a more systematic approach, the

⁹ Synge, H. (ed). *Parks for Life. Proceedings of the IUCN/WCPA European Regional Working Session on Protecting Europe’s Natural Heritage*. The Federal Agency for Nature Conservation, Federal Ministry of the Environment, Nature Conservation and Nuclear Safety, Federal Republic of Germany and IUCN – The World Conservation Union. Gland, 1998.

¹⁰ Adopted on 7 November 1991.

¹¹ WHC-2000/CONF.204/WEB.2 and Umwelt Dachverband (ed): *Proceedings of the Regional Thematic Expert Meeting on Potential Natural World Heritage Sites in the Alps, Hallstatt, Austria 18 to 22 June 2000*. Vienna: text.um 4/01, 2001.

¹² In 2002, during its 26th session, the World Heritage Committee adopted four Strategic Objectives – the ‘Four Cs’, defined in the Budapest Declaration – focusing on Credibility, Conservation, Capacity Building and Communication.

Advisory Bodies initiated experimental monitoring exercises during the expert meeting organized in Cambridge (United Kingdom) in 1993. This led to specific systematic efforts in a number of European countries, such as Norway, Sweden and the United Kingdom. A number of States Parties, notably in Central and South-Eastern Europe are developing or have commenced systematic monitoring exercises. Concerning urban heritage, a systematic review process has been carried out by UNDP in the Mediterranean Region. The efforts of systematic exercises led them to the Periodic Reporting adopted by the Committee in 1998.

4.2. Reactive Monitoring

In recent years, the number of properties inscribed in Europe and which have been subject of a report to the World Heritage Committee has increased dramatically¹³.

Table 12: Reactive Monitoring reports on European World Heritage sites, 1986-2005

Reactive Monitoring Reporting	Total of reports presented to Bureau, extraordinary Bureau and Committee	Total of reports examined by World Heritage Committee
Number of reports/decisions	480	326
Average per year	26.7	16.3

¹³ Figure excludes state of conservation reports of which the Committee took note (Annexes to the Committee reports on session of Extraordinary Bureau from 1992-2001)

The figures in this table are illustrative of the changing situation in Europe, with a notable increase in reports being presented and examined by the World Heritage Committee. This rise in reactive monitoring reports is due to (a) the numerous European sites inscribed on the World Heritage List and the high number of new nominations from European States Parties which continue to be inscribed; (b) increase in threats ranging from civil unrest and war (e.g. Balkans), urban developments and infrastructure, natural threats (e.g. floods and earthquakes), human-related disasters (e.g. impact of mining, oil spills) and lack of appropriate management, staffing and resources; and (c) general deterioration of monuments and sites. State of conservation reporting is a time consuming exercise for all actors involved but is an important contribution to ensuring the credibility of the *World Heritage Convention*.

Between 1986 and 2005, European reports examined by the World Heritage Committee amount to approximately 25% of the worldwide total. Many sites have been reported on continually over several years, especially those properties which were discussed for danger listing or were inscribed on the List of World Heritage in Danger.

4.3 List of World Heritage in Danger

The reasons for which some of the European World Heritage properties, listed in the tables below, were inscribed on the List of World Heritage in Danger have also changed in recent years. Successful conservation and preservation efforts in Croatia and in Serbia and Montenegro, following the threats to the sites caused by armed conflicts and civil unrest in the South-Eastern European region, have led to the removal of those sites from the List of World Heritage in Danger. Bulgaria successfully addressed threats to the water levels of a major wetlands system, whereas Poland undertook appropriate measures by installing dehumidifying system at the salt mines.

¹³ See also Part III for greater detail and analysis on this issue.

Table 13: Current List of World Heritage in Danger in Europe – 2006

State Party	World Heritage site	Year of Inscription on the World Heritage List	Year of Inscription on the List of World Heritage in Danger
Serbia and Montenegro	Natural and Culturo-Historical Region of Kotor	1979	1979-2003
Poland	Wieliczka Salt Mine	1978	1989-1998
Croatia	Old City of Dubrovnik	1979, 1994	1991-1998
Croatia	Plitvice Lakes National Park	1979, 2000	1992-1997
Bulgaria	Srebarna Nature Reserve	1983	1992-2003
Albania	Butrint	1992	1997-2005
Azerbaijan	Walled City of Baku with the Shirvanshah's Palace and Maiden Tower	1999	2003
Germany	Cologne Cathedral	1996	2004

Threats in terms of urban development projects and upgrading of infrastructure as well as inadequate administrative and legislative provisions for protection of a World Heritage property are the reasons for the recent inscription on the List of World Heritage in Danger of the *Walled City of Baku* in Azerbaijan and *Cologne Cathedral* in Germany. In the case of *Butrint*, the threats to the property identified by the Committee in 1992, mainly looting of the archaeological remains, have been addressed and monitored carefully by the national authorities and three international expert missions¹⁴.

5. Cooperation for World Heritage

5.1 International Assistance under the World Heritage Fund

The granting of International Assistance is based on priorities set out in the *Operational Guidelines*. In the European context, International Assistance takes on a different role in comparison to the other regions of the world, mainly as only countries in Eastern and Central Europe have priority access to the World Heritage Fund, whereas Western European countries are primarily contributing to the Fund as well as to extrabudgetary resources.

Predominantly, States Parties in Central and Eastern Europe and South-Eastern Europe, whose World Heritage properties amount to more than 100 sites collectively, requested International Assistance (See Chart 2 in the Appendix). Most of these have received funding for conservation projects, training and the preparation of nominations and Tentative Lists. In recent years, a new focus emerged in the framework of the Global Strategy towards the harmonization of Tentative Lists and regional cooperation. The change in the political landscape of Central and South-Eastern Europe in the 1990s brought about a considerable increase in assistance requests for the preparation of first-time nominations as well as for urgent conservation measures. The current situation in these countries still requires additional financial assistance for World Heritage, in particular capacity building and identification of heritage.

Several States Parties in Western Europe participated in International Assistance activities through their voluntary contributions to the World Heritage Fund and by providing support through international experts to conservation projects and campaigns for World Heritage properties located in other countries. In paragraph 5.3, the particular agreements established with some of these States Parties are discussed in more detail.

The type of assistance provided ranges from preparatory assistance for nominations and the preparation of Tentative Lists, to conservation projects, international meetings and seminars.

¹⁴ See also Part III of this report.

Some States Parties have received funding (e.g. Norway, Israel, Greece, Denmark, Finland) for a range of training activities and seminars of global or regional relevance, including travel funding for experts from Central and Eastern Europe or from other regions of the world. A number of States Parties have received funding for sites which have been the subject of extensive conservation and rehabilitation programmes. With the enlargement of the European Union, access to the World Heritage Fund comes to a close for new European Union members

5.2 UNESCO Activities in support of World Heritage in Europe

UNESCO's Division for Cultural Heritage has provided valuable assistance to selected World Heritage properties in the region, such as the Old City of Dubrovnik (Croatia) (UNESCO major safeguarding programme); Historic Areas of Istanbul (Turkey) (Division for Cultural Heritage), or the Caucasus Region (Division of Cultural Policies and Intercultural Dialogue).

Major World Heritage Cooperation Projects in the European Region were also carried out by the UNESCO Field Offices. The UNESCO Moscow Office, which is the Cluster Office for Armenia, Azerbaijan, Belarus, (Georgia until 2006), the Republic of Moldova, and the Russian Federation, is carrying out decentralized World Heritage Fund and Regular Programme projects. The Field Office also provides assistance for the preparation of nominations and re-nomination of properties for other values. It has also assisted the Russian National Committee for World Heritage in the organization of the meetings and training workshops held in connection with Periodic Reporting. In addition, extrabudgetary projects are developed by the Office to assist in the management and conservation of cultural and natural World Heritage sites of the region. International cooperation and coordination with other organizations and partners, such as the UNDP/GEF Project "Demonstration of sustainable conservation of biodiversity in four Russian Kamchatka Protected Areas" is one of the key functions of the Office.

The UNESCO Venice Office (Regional Bureau for Science in Europe, ROSTE)¹⁵ very actively promotes the safeguarding of cultural and natural heritage in South-Eastern Europe (SEE) and in the Mediterranean region, as part of a larger environmental integration effort that transversally involves all the key development activities and well reflects the multi-faceted mandate. A recent example is given by the joint UNESCO-ROSTE-IUCN international workshop on "MAB Biosphere Reserves and transboundary cooperation in the SEE region", held in Belgrade and Tara National Park, Serbia and Montenegro, 13-17 June 2004. Other concrete actions are focused on fostering initiatives of territorial development, by assisting the Member States in designing appropriate capacity-building programmes and training activities. Cooperation between the UNESCO-ROSTE and the World Heritage Centre in particular is devoted to foster initiatives to protect and promote natural and cultural heritage in South-Eastern Europe, by integrating these assets into the national and regional territorial policies of the various countries.

Special efforts are being made by the Venice Office to contribute to reconstruction and reconciliation following the tragic destruction of cultural heritage, such as in Mostar (Bosnia and Herzegovina). All these actions are to be seen as part of a larger policy and attempt in the South-Eastern European region to foster the intercultural dialogue and the scientific and technical cooperation among the countries, by promoting cross-border cooperation.

¹⁵ In March 2006, UNESCO-ROSTE was renamed the UNESCO Regional Bureau for Science and Culture in Europe (BRESCE).

5.3 Bi- and Multilateral Cooperation

Through the UNESCO Associate Experts' Scheme young professionals with skills in the heritage fields have been funded by a number of European Member States. In addition, some European States Parties have also chosen other mechanisms for staff support to the World Heritage Centre including secondments.

In response to the increasing challenges in conservation and preservation of cultural and natural sites, a number of States Parties in the Western European region have provided specific contributions to the implementation of the *World Heritage Convention* and UNESCO. To this end, framework agreements with UNESCO at large involving several sectors of the Organization have been signed (e.g. France and Belgium) to help support and develop conservation and management of heritage. Other States Parties (Spain, The Netherlands, United Kingdom) have signed Funds-in-Trust agreements offering their support to the implementation of the *Convention*, in particular for the promotion of the Global Strategy and improving site management and supporting conservation efforts. In principle assistance is provided to the States Parties in Africa, Asia, Latin America and the Arab States. However, select projects and programmes in Eastern Europe have received assistance in the framework of these agreements, including Albania, Armenia, Azerbaijan, and Bosnia and Herzegovina.

Through bilateral cooperation, development agencies in many European countries (e.g. Denmark, Finland, Germany, Norway, Spain and Sweden) have made contributions to World Heritage conservation in other regions of the world.

Established in 2002 in Oslo, the Nordic World Heritage Foundation (NWHF) was an initiative of the Norwegian Government in cooperation with the Nordic governments to support the implementation of the *World Heritage Convention*. The Foundation was granted the status of an international centre under the auspices of UNESCO by the 32nd General Conference in October 2003. It supports World Heritage activities in other parts of the world through mobilising funds for conservation. The Foundation also acts as the focal point for the Nordic countries and has coordinated the Periodic Reporting exercise in the Nordic and Baltic Sub-region. A number of other foundations also support World Heritage activities such as the German World Heritage Foundation.

5.4 European Heritage Networks and European Cooperation

The protection of cultural and natural heritage was a central idea in the establishment of European institutions. In the following paragraphs, the key institutions and their relationship to World Heritage policies are briefly reviewed. However, the wealth of information concerning World Heritage related activities cannot be given justice in this brief overview.

Council of Europe (CoE):

The Council of Europe (Strasbourg, France) founded in 1949, groups together 46 countries.¹⁶ The Council of Europe's co-operation programme for cultural and natural heritage entails devising common policies and standards, developing transnational cooperation networks, providing technical support for member states and organizing schemes to increase awareness of heritage values. Policy development is at the core of the Council of Europe programme on Culture, both at the political level, to identify democratic, participatory and empowering policies to ensure access to culture for the public at large and through a better knowledge of

¹⁶ The CoE has the application by another country (Belarus) and granted observer status to 5 more countries (the Holy See, the United States, Canada, Japan and Mexico).

other cultures, to encourage intercultural dialogue and at the field level, to ensure access and creativity and sustain Europe's cultural richness in its identities and diversities.

The European Heritage Network (HEREIN) is an information system of the Council of Europe linking European governmental departments responsible for cultural heritage conservation. Since the 4th Council of Europe Conference of Ministers responsible for Cultural Heritage (Helsinki, Finland, 1996) it has been developed as an instrument for implementing and monitoring the European conventions on the architectural and archaeological heritage. Table 7 provides an overview of the ratification status of cultural and natural heritage Conventions in Europe including the Council of Europe instruments.

European Union (EU):

The activities of the European Union in the field of both culture and environment are diverse and multifaceted. They provide for legislative measures mainly in the environmental area¹⁷. Environmental policies through European Union legislation have made significant progress. The Environment Action Programme takes a wide-ranging approach and gives a strategic direction to the European Commission's environmental policy over the next decade, when the Community expands its boundaries. Of the 48 States Parties in Europe, 25 are members of the European Union: Austria, Belgium, Cyprus, Czech Republic, Denmark, Estonia, Finland, France, Germany, Greece, Hungary, Ireland, Italy, Latvia, Lithuania, Luxembourg, Malta, Poland, Portugal, Slovakia, Slovenia, Spain, Sweden, The Netherlands, and United Kingdom.

The European Parliament, the parliamentary body of the European Union with elected Members of Parliament of the European Union countries, passed a specific resolution on World Heritage in 2001: *European Parliament Resolution on the application of the Convention Concerning the Protection of the World Cultural and Natural Heritage in the Member States of the European Union* (2000/2036(INI)). This resolution states that 'heritage is a key element of society' and that 30% of the World Heritage properties are located in European Union countries. The Resolution calls for Member States of the European Union to reconsider their Tentative List and acknowledges the Committee's Global Strategy. It further calls on the Commission 'to strengthen programmes to aid the training of professionals working in the field of conservation of cultural heritage' and 'before approving projects financed by the Structural Funds, to examine the impact they may have on the cultural and natural heritage in the Member States of the Union'. The resolution was provided to the World Heritage Committee at its 25th session in Helsinki, Finland (2001).

The European Commission (EC) is the executive organ of the European Union, based in Brussels, which monitors the proper application of the Union treaties and the decisions of the Union institutions.

The European Regional Development Fund (ERDF)¹⁸ was set up in 1975 mainly to redress regional imbalances through participation in the development and structural adjustment of regions whose development is lagging behind; and the conversion of declining industrial regions. It is the main instrument of the Community's regional policy. Among its programmes is INTERREG, for cross-border cooperation projects between regions at the Community's internal and external borders.

¹⁷ <http://europa.eu.int/scadplus/leg/en/s15006.htm>

¹⁸ Articles 158 to 162 of the EC Treaty.

The European Union and the Council of Europe have launched a series of initiatives and programmes to protect and enhance heritage preservation. In a wider sense World Heritage properties have benefited from these programmes.

Table 14: Example of programmes and initiatives by the European Union and the Council of Europe

Council of Europe	European Union
<p>SOCRATES programme: support to educational projects in the field of cultural heritage involving schools and universities; within this the Leonardo da Vinci programme supports training in traditional crafts, restoration of cultural heritage.</p> <p>European Heritage Days: held in different cities since 2001 as a joint European Union and Council of Europe activity.</p> <p>Heritage Laboratories: projects which focus on World Heritage properties and natural heritage programmes for bio-diversity</p>	<p>Culture 2000 programme: supports projects for conserving European heritage of exceptional importance.</p> <p>EUROMED Heritage programme: regional programme fostering development of cultural heritage in Mediterranean Europe.</p> <p>European Parliament Resolution on World Heritage: Resolution adopted on 16 January 2001 with regard to the implementation of the Global Strategy in the European Region as well as the protection of World Heritage sites (2000/2036 (INI)). Presented to the 25th session of the World Heritage Committee in 2001 as INF.16.</p> <p>Asia-ProEco (replacing ASIA URBS): support to urban development projects launched jointly by Asian and European cities.</p> <p>Interreg III: Community initiative that aims to stimulate interregional cooperation in the EU between 2000-06. It is financed under the European Regional Development Fund (ERDF). This phase of the Interreg initiative is designed to strengthen economic and social cohesion throughout the EU. The Community Initiative Interreg III promotes the development of projects of this kind across borders. One of the chapters of the Innovative Actions provides incentives for regions to build cooperation with each other on the theme of the regional identity.</p>

The European Bank for Reconstruction and Development (EBRD)¹⁹ was established in 1991 and assists in 27 countries from central Europe to central Asia. The EBRD mobilises significant direct foreign investment beyond its own financing. It provides project financing for banks, industries and businesses. The EBRD is the largest single investor in Central and Eastern Europe and the CIS. One example is a project which relates to tourism and traffic management in the World Heritage site of the historic city of Dubrovnik.

Nongovernmental organizations in Europe:

There are numerous NGOs in the European region working on natural and cultural heritage. Among them are the following, which have been working with the World Heritage Centre in the past:

- Europa Nostra Pan-European Federation for Heritage (The Hague, The Netherlands);
- Ecovast, the European Council for the Village and Small Town (Eastleigh, United Kingdom);
- Europarc (Grafenau, Germany);
- Organization of World Heritage Cities (OWHC) (Quebec, Canada) and its regional groups (European region: North-West Europe; Central and Eastern Europe; South Europe and Mediterranean; and Euro-Asia).

¹⁹ For further information see <http://www.ebrd.com/>

6. World Heritage Training and Education

6.1 Training

In the past, training assistance under the World Heritage Fund was provided to States Parties in Central and Eastern Europe for national and regional training activities on a general basis. The Global Training Strategy encourages a more proactive use of the World Heritage Fund and ensures that training activities are carried out in the framework of the results of Periodic Reporting and the Global Strategy.

World Heritage conservation and management issues are included in ICCROM's international and sub-regional training programmes, notably in the Mediterranean and the North Eastern European regions. In the framework of ICCROM's ITUC Programme (Integrated Territorial and Urban Conservation Programme) launched in 1995, a number of training activities and seminars were held in the Baltic States, increasing awareness of the need for integrated approaches to territorial and urban conservation among key authorities and decision-makers, and increasing the ability of managers and professionals to integrate concern for heritage conservation in mainstream developmental decision-making. ICCROM has also provided a training course for Azerbaijani professionals in the management of heritage sites (Rome, June 2004) and an information course on the *World Heritage Convention* for Italian experts and administrators in March 2002.

In Eastern Europe, cooperation focused on meetings of natural heritage site managers to enhance capacity building including for potential nominations – seminars in the Russian Federation and for Russian site managers were financed by the German Agency for Nature Protection. In some instances, regional seminars and training workshops were financed and organized by other agencies, such as the Europarc Workshop on Natural World Heritage in Poland in 2001 for (potential) World Heritage site managers from Central and Eastern Europe. In Sopron (Hungary) a meeting on site management planning for site managers from 9 countries in North-Eastern, Central and South-Eastern Europe was organized in 2003 with World Heritage Fund assistance.

6.2 Education

UNESCO Chairs

Numerous UNESCO Chairs have been established both for cultural and natural heritage fields in the European region, including on heritage studies, and biodiversity and World Heritage²⁰.

In past years, a number of countries in Europe have actively participated in UNESCO's Young People's World Heritage Education Project launched in 1994 and supported this work through funding to meetings such as those in Bergen, Norway (1995); Dubrovnik, Croatia (1996); Karlskrona, Sweden (2001); Novgorod, Russian Federation (2002); Bratislava, Slovakia (2002); Veliky Novgorod, Russian Federation (2002); Rhodes, Greece (2003); and Newcastle, United Kingdom (April 2005).

7. Conclusions

The information and analysis provided in this chapter illustrates the significant participation by States Parties in Europe in the implementation of the *World Heritage Convention*. Almost all countries in Europe are States Parties to the *Convention*, with the exception of Liechtenstein, and actively participated in the work of the World Heritage Committee. In

²⁰http://portal.unesco.org/education/en/ev.phpURL_ID=1324&URL_DO=DO_TOPIC&URL_SECTION=201.html

Eastern Europe only Bulgaria and Poland served on the World Heritage Committee in the early years between 1976 and 1984. However, several countries from the Western European region and Mediterranean Europe have served several terms on the World Heritage Committee. After the change in the political situation in Europe in the 1990s, an increased participation in the *World Heritage Convention* and membership of the Committee by Central and Eastern European and Baltic countries occurred.

Nominations to the World Heritage List have been submitted by European States Parties commencing with three properties in 1978 and 20 properties already in the following year. The total number of properties inscribed in Europe is 368 of which alone 329 are cultural heritage properties, 31 natural properties and 8 mixed cultural and natural heritage properties. The number of nominations submitted increased hugely in the years between 1993 and 2000 after which the rate of submissions dropped slightly (See: Chart 3 in the Appendix).

A great number of States Parties in Central and Eastern Europe, the Baltic States and South-Eastern Europe have between one and three properties inscribed. In terms of types of heritage, historic centres, religious monuments and architectural ensembles have been predominant. In recent years however, the potential of underrepresented categories such as industrial heritage, cultural landscapes and modern architecture, is being recognised. Active participation in international meetings to address under-represented natural heritage from Europe has increased the awareness of national authorities to the potential of Alpine heritage, forests, and geological or fossil sites.

In the context of the Global Strategy, a series of Tentative List harmonisation meetings have focused on priority areas such as the Baltic Region, Ukraine and its neighbouring countries and the Caucasus Region. The recommendations of these meetings have yet to be fully implemented with a number of Tentative Lists still to be revised.

Noteworthy progress achieved in the implementation of the Global Strategy, is the exemplary project initiated by the Nordic countries in 1995, in the framework of the Nordic Council of Ministers meetings. It was the first active attempt at a regional harmonisation of Tentative Lists and resulted in a report, published in 1996. As a result of this study, the Nordic countries have identified heritage of underrepresented categories such as cultural landscapes and natural heritage properties and have selected the most outstanding example from the region for their Tentative Lists. In recent years, successful nominations have been submitted according to this study. This sub-regional cooperation is unique and should be adopted by other regions.

In Western Europe and in Mediterranean Europe harmonisation of Tentative Lists is lacking. A systematic approach, based on most recent studies and scientific information has not been followed in view of the high number of sites included on some of these Lists.

Systematic monitoring activities have been carried out in Europe, notably in Norway, Sweden and the United Kingdom which were the basis for discussions on the overall monitoring process. State of conservation reporting on properties inscribed on the World Heritage List has increased drastically with issues ranging from development pressures, natural disasters, deterioration of cultural sites and lack of appropriate management. The sites currently inscribed on the List of World Heritage in Danger are partly threatened by development pressures or lack of appropriate protection and management mechanisms. Five sites were inscribed on the List of World Heritage in Danger in South-Eastern Europe, which were included due to armed conflict and post-conflict management issues. None of these sites remain on this List today. This success in addressing the threats is the result of the determined commitment of States Parties to the *Convention* and focused international cooperation.

Although a number of States Parties mainly in the Baltic States, Central and Eastern Europe, South-Eastern Europe have been granted International Assistance under the World Heritage Fund, there is a discernable imbalance in the concentration of funding provided to some States Parties. World Heritage Fund assistance²¹ is linked in particular to conservation programmes and concentrated safeguarding initiatives, and a considerable diversity of activities in support of World Heritage receives funding through the World Heritage Fund, UNESCO field offices, bilateral agreements and funds-in trust arrangements. Furthermore, the chapter on European Heritage Networks and European Cooperation illustrates a number of activities and programmes available to European countries. A systematic approach to funding under these programmes is not visible, despite the European Parliament Resolution on World Heritage presented to the World Heritage Committee in 2001. This fragmentation of funding has yet to be addressed.

A number of international training courses have concentrated on specific natural and cultural heritage issues, such as wooden heritage, cultural heritage management and ICCROM's Integrated Territorial and Urban Conservation programme (ITUC). Natural World Heritage training activities have also been organized in cooperation with other institutions and organizations, such as EUROPARC and WCPA.

²¹ An evaluation of international assistance is currently under way and will be presented in document WHC-05/29 COM/14B

**PART II:
THE APPLICATION
OF THE
WORLD HERITAGE CONVENTION
IN EUROPE**

**RESULTS OF SECTION I
OF THE
PERIODIC REPORTING EXERCISE**

THE APPLICATION OF THE *WORLD HERITAGE CONVENTION* BY STATES PARTIES IN EUROPE

This chapter provides an analysis of the information contained in the Periodic Reports submitted by the European States Parties. It is also based on the sub-regional synthesis reports prepared by international experts for Western Europe, the Mediterranean Sub-region, Nordic and Baltic Sub-region, Central and South-Eastern Europe and Eastern European sub-regions as well as on the individual State Party reports. Comparisons on a regional and sub-regional level are made.

1. Introduction and Methodology of Analysis

All 48 States Parties in Europe have submitted the Periodic Report on Section I in hard copy. Most States Parties also provided their reports in the on-line *tool/questionnaire* with a few exceptions, where additional assistance from the World Heritage Centre was provided to complete the electronic reports. The data analysis of the Section I reports has been assisted by the *electronic analysis and statistical evaluation tool*. The majority of figures and graphs contained in this report have also been produced with this statistical evaluation tool.

The integration of both cultural and natural heritage in one Periodic Report has been successful, although a great number of countries have experienced difficulties due to lack of institutional cooperation and sharing of information. At times, this is reflected in the lack of information provided, specifically concerning the natural components of the questionnaire.

The reason for the absence of certain data in nearly all European Periodic Reports should be considered in the light of the specificities of the sub-regions. Differences in understanding of the World Heritage terminologies and particularly the monitoring terms, have caused diverse responses. Moreover, changes in administrative and legislative systems, as well as reorganization of responsibilities within ministries and agencies, have caused loss of institutional memory.

Based on a long and continuous tradition in heritage preservation in Western Europe, the understanding of heritage and its conservation has evolved considerably in the last 20 years due to increased knowledge and (best) practice. Eastern Europe has experienced great changes due to political and economic developments and pressures, and has had to adapt to new political situations. Heritage tradition and heritage memory play a vital role in the European context of the implementation of the *World Heritage Convention*, which is truly a dynamic process. The Periodic Reporting exercise in Europe highlights some of these issues.

2. Agencies Responsible for the Preparation of Section I of the Periodic Report

State Party responses

In the European States Parties the majority of reports were prepared by the Ministries of Culture and their relevant departments. Only in very few cases the reports have been prepared jointly with natural heritage authorities. Although natural heritage institutions and specialised agencies were consulted at the national and/or regional level, the majority of State Party Periodic Reporting mainly concerned cultural heritage issues.

3. Identification of the cultural and natural heritage properties

Inventories of natural and cultural heritage of national importance, referred to in Articles 3, 4 and 11 of the *Convention*, form the basis for the identification of potential World Heritage sites. The following three points clarify on which level, and to what extent national inventories and Tentative Lists are used as a planning tool for World Heritage nominations.

3.1 National Inventories

State Party responses

Inventories of cultural and natural heritage have been established in all States Parties in Europe, although the levels at which these are prepared varies from sub-region to sub-region. The overall responsibility lies with the national authorities, while regional and local participation in this process has been mentioned in most cases.

Natural heritage inventories have been prepared in the majority of countries and special mention has been made of protected areas listed under the European Union Natura 2000 programme, especially in the Western European region and the Nordic countries. Nearly all States Parties in the sub-regions have used these inventories for selecting World Heritage sites.

Observations

The inventories of cultural and natural heritage in some of the Eastern European countries and the Baltic States have been based on lists of cultural monuments compiled during the Soviet era. Although these lists have partly been revised, some States Parties in Eastern Europe, the Baltic States and South-Eastern Europe have mentioned that these inventories are incomplete and revisions should be made, taking into account recent research and the diversity of heritage.

3.2 Tentative Lists

According to the decisions of the Committee at its 24th session (Cairns, December 2000) and the 12th General Assembly of States Parties (UNESCO Headquarters, 1999) Tentative Lists are to be used as a planning tool to help reduce imbalances in the World Heritage List. This has been reflected in the *Operational Guidelines* (2005, paragraphs 70-73)

State Party responses

Out of the 48 States Parties in Europe, only two have not presented Tentative Lists: Monaco and the Holy See. The majority of Tentative Lists have been revised in recent years, in response to the decisions of the World Heritage Committee, whereby States Parties are required to prepare Tentative Lists of both cultural and natural heritage prior to their nomination. A great number of Tentative Lists was revised between 2002 and 2004 in compliance with the *Operational Guidelines*.

All Tentative Lists are prepared by the cultural and natural heritage authorities. In several States Parties proposals for inclusion of sites on the Tentative Lists are based on a consultative process, whereby regional and local authorities, specialist groups and institutions and the public are involved. This increased involvement of the regional and local authorities, as well as national ICOMOS Committees was mentioned in most reports. The number of properties included on Tentative Lists remains very diverse, however, an increasing number of natural heritage sites and cultural landscapes have been included.

Observations

Tentative Lists have been compiled for most of Europe on the national level; however an increasing involvement of regional and local institutions and communities can be seen in many States Parties. Greater importance is also being attached to the Tentative Lists as a planning tool at the national level, as well as at the regional level. Though, considering the high number of sites on some Tentative Lists, the correction of the imbalance of the World Heritage List is not realistic. In many cases Tentative Lists have not been compiled on the basis of a systematic review and sound inventories, but are accumulative due to ad-hoc revisions in view of new nominations and are partly outdated.

Harmonisation meetings for Tentative Lists have been carried out in the Baltic countries, the Nordic countries and in the Caucasus region with particular focus on the identification of types of heritage reflecting the diversity of the sub-regions and on heritage currently underrepresented on the World Heritage List.

Some States Parties in Eastern Europe have noted that access to information on cultural and natural heritage is often limited and that documentation is incomplete and requires substantive revision and supplement.

3.3. Nominations for Inscription on the World Heritage List

The States Parties listed properties that had been nominated for inscription on the World Heritage List and their current status. Details on the process by which nominations were prepared, the motivations, obstacles and difficulties encountered, as well as perceived benefits, were also supplied.

State Party responses

The difference in responses illustrates that not all States Parties understood the type of information that was requested. The listing of properties and their inscription status also included properties which are on the Tentative Lists and had not been submitted as nominations. Furthermore, the information on the status of some nominations was incorrect, i.e. nomination of properties which the Bureau did not recommend or Committee did not inscribe, were listed as ‘withdrawn’, etc. This inconsistency of information can be explained by the lack of information available within some States Parties due, in part, to changes in the responsibilities of national authorities and institutions, as well as loss of documentation. However, lack of understanding of terminologies and linguistic differences are a common cause for inconsistencies in responses provided.

Only two States Parties have no sites inscribed on the World Heritage List: Monaco and San Marino.

The principal authority for submitting nominations lies with the central governments. The responsibilities for preparation of the nominations are shared between the regional and local governments, specialist institutions and experts. The almost equal involvement of regional/local authorities, organizations and site managers in the preparation of documentation is very visible in the Eastern European sub-region, whereas the responsibility of site managers is very low in most other sub-regions.

The majority of States Parties in Europe indicated that the preparation of nomination dossiers was by and large carried out by the central government and local authorities, with some input from site managers. Increasingly the involvement of local inhabitants and authorities at the early stages of the nominations process is mentioned in the Western European and Nordic regions.

In analysing the answers provided regarding the motivations for nominating sites and the perceived benefits, European States Parties do not consider increased funding a primary motivation for nomination of a property, nor has funding been seen as a primary benefit. Around 50% of States Parties consider enhanced conservation as being the key motivation for nomination, a high number of States Parties replied that honour and prestige was the key motivation.

Some States Parties in the sub-regions of Central Europe and South-Eastern Europe mentioned that if the site was under threat this could be a motivation for initiating the

nomination process. In other regions this hardly applies due to the well established legal provisions and protection mechanisms.

The main obstacles and difficulties encountered during the nomination process were lack of staffing, lack of funding and development pressures. Several States Parties located in the Eastern European and South-Eastern European region mentioned that the inadequacy of available documentation, as well as difficulties in accessing information, had been an obstacle in preparing nominations. Other issues mentioned in the reports were the increasing complications encountered in the delimitation of boundaries and buffer zones of properties, stemming from increasing pressures of urban development and, for natural sites, the potential threats from mining and other extraction industries.

Observations

A greater awareness of the *World Heritage Convention* in all States Parties has considerably raised public attention to the importance of nominations. Political interest and economic prospects associated with World Heritage listing have increased the pressures on the central governments to submit new nominations. However, it is evident that there is a considerable gap between awareness of the international significance of the *World Heritage Convention* and the understanding at regional and local levels of the recommendations made by the World Heritage Committee.

There is still a need for a better integration of cultural and natural heritage conservation concerns on a regional and local level. Pressures for nominations are immense and an improvement in information management, institutional support and assistance is particularly needed in some Eastern European States Parties and South-Eastern Europe.

The variation in responsibilities is due to the different management structures in Europe.

4. Protection, Conservation and Presentation of the Cultural and Natural Heritage

4.1 General Policy Development

States Parties in Europe have provided information on the measures and policies established to integrate conservation and protection into comprehensive planning programmes.

State Party responses

All States Parties in Europe have legislations and regulations for cultural heritage protection and separate legislations for natural heritage conservation. The majority of States Parties have regional and local regulations, while only a few have specific World Heritage related planning regulations. National strategies are in some cases being developed to enhance natural heritage conservation.

Only very few States Parties in Europe have specific planning legislations for World Heritage. However particular mention of legislations and regulations for World Heritage has been made by Germany, Israel, Latvia, Lithuania and Switzerland. A number of countries have created special agencies responsible for World Heritage.

The requirement of management plans for World Heritage sites has become a principal concern for the World Heritage Committee. The answers received for Section I of the Periodic Reporting exercise indicate that most States Parties have understood the importance of management plans or are in the process of designing management plans for their sites²². In the

²² Section II results of the Periodic Reporting exercise and answers received from site managers, contradict this claim (See Part III).

United Kingdom for example, management plans have been completed for most sites and several more are being prepared while in Germany management plans are not required.

Interestingly, changes to legislations and regulations are foreseen in all sub-regions, however not all changes are in support of conservation. A new system of heritage protection is planned in the United Kingdom, whereby pilot projects are being carried out in view of legislative changes for the 2006/2007 biennium.

As mentioned in Part I, the rate of ratification of other International Conventions by European States Parties is very high. Tables 7a and 7b illustrates that the Biodiversity Convention of 1992 and the Ramsar Convention of 1971 have almost equally as many States Parties as the *World Heritage Convention*. The level of integration of the requirements of international conventions is very different in all States Parties, although the measures required by the conventions are either integrated into national laws, implemented through government actions or taken into account in policy planning.

Observations

The detailed information provided by some States Parties concerning legislative provisions and policy development has shown that protecting World Heritage properties and the importance given to it has guided preservation planning and the elaboration of policies in general. Greater understanding and experience of heritage preservation and protection has progressed considerably in the past 30 years. Accordingly, some European States Parties are making changes to their legislation and adopting new management policies to specifically integrate World Heritage concerns.

The need for assistance with setting-up adequate management mechanisms/plans has been mentioned by several States Parties. Although management mechanisms have increasingly been established, the extent to which these ensure adequate preservation in terms of World Heritage status is questionable, especially considering the high number of conservation and preservation issues raised in state of conservation reports, presented to the World Heritage Committee over the past 10 years.

4.2. Status of Services for Protection, Conservation and Presentation

States Parties in Europe have provided information on services which have been set up for the protection, conservation and presentation of the cultural and natural heritage.

State Party responses

In all countries, the state authorities are responsible for the implementation of legislation. In most countries, services for cultural heritage and natural heritage are separate. In general, the organizational structure and levels of services for cultural heritage is more elaborate than for the natural part. Commonly mentioned in all reports is the sharing of responsibilities between national and regional authorities and specialised agencies and local organizations. Institutional integration of the cultural and natural heritage is generally achieved through cooperation between the national authorities rather than legislative frameworks. However, in Eastern Europe institutional integration is very low.

There are slight variations in the role of the private sector in all sub-regions. While in Western Europe the private sector participates in heritage conservation issues due occasionally to ownership of heritage sites, in Eastern Europe and Central and South-Eastern Europe the private sector is primarily a funding partner, providing sponsorships and funds for conservation and restoration efforts.

Local communities are very active in nearly all sub-regions, participating in discussions, projects, consultative processes and hearings. In Eastern Europe, the local communities more commonly provided with assistance through voluntary participation in heritage conservation work.

The important role of NGOs in Europe is equally highlighted. A network of foundations, associations and charitable bodies is actively providing expertise and funding for the cultural and natural heritage, in particular in the Western European region, the Nordic countries and Mediterranean Europe. The history and tradition of heritage conservation originates from some of these associations which were founded in the middle of the 19th century, and today continue to play an important and proactive role in heritage conservation.

Lottery funding for heritage conservation has been mentioned by some States Parties, particularly in Germany and in the United Kingdom, involving considerable amounts. Fund raising is also carried out by some of these institutions and foundations. More details are found in the sub-regional reports.

Increasingly States Parties have established special World Heritage agencies, occasionally within the National Commissions or in the national agencies, to coordinate the implementation of the *World Heritage Convention* and managing both the natural and cultural heritage aspects.

Observations

Information on human and financial resources was hardly provided, although in general, lack of staffing and financial means was mentioned.

The very active involvement of NGOs such as foundations and associations for heritage conservation and protection issues are partly historically founded in Western Europe. In other parts of Europe the increased involvement of private institutions and charitable foundations reflects greater awareness of the importance of heritage preservation, and changes in society, and is also a response to the limited resources available for this kind of activity.

In general, financial and human resources are considered insufficient in many States Parties while the Eastern European States Parties have particularly mentioned the need for institutional capacity-building.

4.3 Scientific and Technical Studies and Research

State Party responses

States Parties in Europe have provided information on a range of documents, research and publications, technical studies and conference proceedings which are related to heritage issues in general and not necessarily related to World Heritage issues.

In recent years, numerous studies relating to specific World Heritage properties and the typology of sites have been carried out in several States Parties. In this regard, it is worth mentioning that several research projects as well as survey methods were carried out on a bilateral and international level, and were of particular benefit to World Heritage sites and related issues.

The long tradition in heritage preservation is one of the foundations for scientific expertise and professional knowledge in several countries. Therefore, a wide range of scientific studies, heritage conservation methodologies and conservation and restoration techniques, as well as visitor/tourism management strategies have been developed. The State Party Periodic Reports should be consulted for more detailed information on the subject of studies and publications, although some of this information is available on the Internet.

The loss of knowledge of traditional craftsmanship applied to conservation has been mentioned, and some States Parties in Eastern Europe and South-Eastern Europe have indicated the need for wider dissemination of these studies and the opportunity for national experts to participate in research studies and discussion at an international level.

Observations

Europe has a long history in scientific research and some of the oldest universities and institutions are located in the region which accounts for the wealth of information and heritage related studies. In Eastern European countries there is a great wealth of scientific and professional expertise, which due to limited funding of scientific institutions, has not been developed and has little influence at the international scientific level. Mention was also made of the limited access to international scientific literature within the region.

4.4 Measures for Identification, Protection, Conservation, Presentation and Rehabilitation

States Parties provided information on relevant financial measures that have been adopted for the identification, protection, conservation, preservation and rehabilitation of cultural and natural sites.

State Party responses

For a vast majority of States Parties the principal funding source is provided from State budgets. However, similar to the complexity of management structures and services, the funding sources vary according to the type of heritage, ownership and other partners involved. Interventions and funding for urban centres, State-owned monuments and buildings, religious monuments and private properties differ greatly, and frequently multiple funding sources are mentioned in all sub-regions. Natural heritage also receives funding from State budgets as well as additional funding through foundations and grant schemes. A number of sites in Western Europe, the Nordic and Baltic Sub-region and Central and Eastern Europe have received European Union funding for heritage preservation (see also Part I, Paragraph 5.3).

While in Western Europe and the Nordic countries funds from regional and local authorities are viewed as very important and at times comprise the main source of funding, some States Parties in Eastern European and Mediterranean Europe mentioned that funding from regional and local authorities was minimal.

Important funding in Central and South-Eastern Europe is received through the private sector. The immense differences in levels of budgets and funds received for heritage in all sub-regions are very striking. States Parties only provided partial information on this subject. (See Chart 4 on the sources of funding for World Heritage in Europe, in the Appendix)

Several States Parties have assisted in the establishment of (private) foundations for World Heritage, notably Austria, Germany, Switzerland, Norway and the Russian Federation.

In terms of additional funding for World Heritage, Belgium, France, the Flemish authorities, Italy, the Netherlands, Spain and the United Kingdom support specific World Heritage projects in all parts of the world through cooperation agreements and Funds-in-Trusts. Thirteen out of 48 States Parties have provided direct financial assistance to World Heritage or through (earmarked) contributions to the World Heritage Fund. World Heritage sites have benefited from such funding within the framework of the European Union programmes.

Observations

From the information provided by States Parties, it is clear that State budgets for heritage preservation are rather limited and that complementary funding and fund-raising is being sought through the various public and private institutions and foundations, as well as with European programmes.

4.5 Training

States Parties have provided information on training and educational activities that have been employed for professional capacity-building along with information on the establishment of national or regional centres for training and education in the field of protection, conservation and presentation of cultural and natural heritage.

State Party responses

In this section there is a notable difference in the needs identified in the Sub-regions. Eastern European States Parties have underlined the need for institutional training and the creation of training opportunities for site managers. In South-Eastern Europe, the States Parties have underlined the need for education in specialised domains such as conservation and preservation of wall paintings, icons, and mosaics, as well as enhanced competence in languages and computer skills. Central Europe and South-Eastern Europe require capacity building of staff, particularly with regard to management planning and mechanisms.

The high-level of answers provided in replying to the question concerning identification of training needs in the questionnaire illustrates that the majority of States Parties have identified training needs, with the exception of Western Europe, where seven States Parties have not explored these issues.

The need to explore training opportunities on a national and international level was mentioned by Eastern European States Parties. South-Eastern European countries require specialised training in conservation techniques. In general, most States Parties proposed further capacity-building and professional training programmes and expressed the need for better coordination in training.

The majority of States Parties in the Nordic and Baltic Sub-region, Western European and Mediterranean Europe have a number of universities and institutions specialising in heritage conservation and preservation. The list of these institutions is extensive and the State Party reports should be consulted for further information. Specialised courses in conservation techniques and building traditions are also mentioned. Particular World Heritage programmes and masters degrees related to World Heritage have been established in universities in Ireland, and Germany, while Spain and Italy have organized training courses on World Heritage management.

World Heritage site manager meetings in the Nordic countries have been held for a number of years, dealing with specific themes such as tourism management, conservation and site accessibility. Similarly, some National Commissions and national authorities organize training and briefing sessions for staff and site managers.

Observations

The lack of information on national institutions and universities or other relevant bodies in South-Eastern Europe and in Eastern Europe illustrates an absence of adequate national institutions. There is little encouragement for scientific research in support of educational and training activities. Increased support to universities and better collaboration with current institutes are required, as well as ensuring participation at the international level in research and training activities.

5. International Cooperation and Fund-raising

Information on cooperation with States Parties from other regions for the identification, protection, conservation and preservation of World Heritage has been provided by States Parties in Europe.

State Party responses

A range of responses has been provided by States Parties. International cooperation in a number of States Parties is based on bi- and multilateral agreements in the field of heritage conservation which is the case mainly in Western Europe, the Nordic countries and in Mediterranean Europe. In Eastern Europe, Central and South-Eastern Europe international cooperation has mainly occurred at the expert level (participation in seminars and training courses).

International cooperation for States Parties in the South-Eastern part of Europe has been very limited which is partly due to the rather isolated position of these countries and due to the changing political circumstances.

In Europe, around 77% of States Parties have cooperated with other States Parties for the identification, protection, conservation and preservation of World Heritage sites. Cultural heritage cooperation within the Nordic region has in recent years been extended to the Baltic States, partly through the Nordic Council of Ministers' programme and on bilateral cooperation levels. Western European States Parties have mentioned in particular bilateral assistance to States Parties for the preparation of nomination dossiers in other regions of the world, as well as cooperation agreements with UNESCO and Funds-in-Trust arrangements for World Heritage.

States Parties in South-Eastern Europe have mentioned that international cooperation has been insufficient and that networks need to be further developed. On the whole, numerous States Parties have established networks for cooperation for the implementation of the *World Heritage Convention* and have created specific centres and foundations providing financial as well as expert assistance. A success story is the creation of the Nordic World Heritage Foundation with representation on its Board of all Nordic countries. The Nordic World Heritage Foundation was established as a Foundation by the Norwegian Government in March 2002. The 32nd General Conference (2003) granted the Foundation the status of a regional centre under the auspices of UNESCO²³.

Differing information has been provided by States Parties concerning the question on twinned sites. Transboundary properties have in some cases been used as examples for twinning, although other transboundary properties were not mentioned as an example for co-operation. Arrangements for collaboration among municipalities have been set up in several countries, especially through the Organisation of World Heritage Cities (OWHC). Particularly in Western Europe, the Nordic and Baltic Countries specific site twinning within Europe and with World Heritage sites in other parts of the world exist and further twinning arrangements are being developed.

A low rate of participation in hosting/attending international training courses and seminars is visible in Eastern Europe with less than half the States Parties having hosted or participated in training courses and seminars.

²³ Records of the General Conference, 32nd session, Paris, 29 September to 17 October 2003, v. 1: Resolutions.

In terms of measures which have been taken to avoid damage directly or indirectly to World Heritage on the territory of other States Parties, the participation in other UN programmes of States Parties is in Western Europe and Mediterranean Europe considerably higher than in any of the other sub-regions.

Observations

Cooperation through the programmes of the European Union has been mentioned by some States Parties although a more detailed overview of the various activities have not been provided. In the future, the participation of several new European Union member countries in the various programmes will increase.

Bilateral agreements as well as cooperation agreements and Funds-in-Trust arrangements have greatly supported World Heritage activities around the world. Similarly, the creation of specific foundations and working groups for World Heritage has increased in recent year.

Due to the past isolation and post war restructuring in a number of States Parties in South Eastern Europe networking in this region is very limited.

6. Information, Awareness Building and Education

State Party responses

The inscription of a site on the World Heritage List greatly increases public attention to the *World Heritage Convention*. In the majority of European States Parties the promotion of World Heritage properties and the *Convention* is achieved through publications, films, media campaigns, internet and other related activities such as Heritage days and festivities.

Around 51% of States Parties in Europe have reported that activities undertaken to increase public awareness through the above-mentioned activities and means is inadequate. Proposals to ameliorate this situation include the organization of seminars/workshops, media events and publications, training of researchers and the dissemination of their findings, establishment of museums and the conducting of restoration and excavation activities.

States Parties provided diverging information on education programmes in the field of protection and conservation of World Heritage. In several cases university programmes were mentioned, as well as UNESCO programmes. Other international organizations and institutes such as ICCROM and universities in other countries were also mentioned.

UNESCO's Associate Schools programme and World Heritage in Young Hands have been well received in many European countries, although the information on the level of participation has not been very detailed. A number of States Parties have played leading roles in the development of the Teachers' Training Kit and in the organization of annual activities for children and students.

Observations

In general the majority of States Parties feel that improvements in education, information and awareness-raising have to be made and are working on measures to remedy this situation. A more systematic approach to development of educational programmes, information and promotional activities is needed.

7. Conclusions

Considering the substantial efforts invested by European States Parties for the completion of the Periodic Reports of Section I and the overall 100% submission rate, the implementation of the Periodic Reporting exercise can be considered highly successful. However, some shortcomings of the reports include the lack of information due to a lack of documentation and information available within the competent institutions, difficulties in understanding questions and/or differences in interpretation as well as a lack of co-ordination between the different institutions and agencies. At times very formal answers were provided while other reports were very detailed and explanatory. Confusion also occurred between questions relating to cultural and natural heritage in general, and those relating specifically to World Heritage. However, some States Parties have provided very detailed information and precise explanations on administrative structures, institutions and scientific studies which is commendable. Regrettably, this report cannot do justice to all of these efforts.

For the most part, the requirements of the *Convention* have been fulfilled by States Parties. The following paragraphs provide a synthesis of the main strengths and weaknesses as reported by the States Parties, as well as a short summary of the main conclusions of Section I of the Periodic Reporting exercise.

Strengths

- In replying and analysing the different aspects of the implementation of the *Convention* in the Periodic Report, States Parties in Europe have identified a number of weaknesses and future actions;
- Cooperation at the regional and national level has been enhanced, bringing together the different actors in the field of cultural and natural heritage and thereby contributing to the exchange of information;
- Inventories on natural and cultural heritage have been compiled in all States Parties and have been used as a basis for the Tentative Lists;
- Recognition of the diversity of heritage in Europe and of underrepresented types of heritage has increased;
- Preparations of nominations of serial, transboundary and transnational properties have augmented and thereby enhanced international cooperation;
- Involvement of regional and local authorities as well as public participation in the nomination process has greatly increased;
- Positive legal and administrative arrangements have been undertaken in the field of heritage preservation and planned revisions are based on “lessons learnt” from World Heritage;
- Active international cooperation for World Heritage has been enlarged;
- Interest of authorities and public in World Heritage has been strengthened through promotion.

Weaknesses

- Only very few legislations cover both cultural and natural heritage in one system;
- Tentative Lists have in general not been systematically established or revised. With some exceptions, Tentative Lists remain cumulative, outdated and have not been prepared in a sub-regional context;
- Considerable imbalances remain in the number of cultural and natural properties on the World Heritage List within Europe;
- Overrepresentation of certain types of cultural heritage;
- Management plans have not been systematically prepared or implemented;
- Considerable divergence of information management, outdated systems and loss of institutional memory;
- Lack of integrated policies for both cultural and natural World Heritage conservation;

- Deficiencies in a coordinated approach to funding sources;
- Shortage of staff in the competent institutions responsible for heritage preservation and conservation;
- Lack of cooperation and coordination among national and regional agencies and institutions responsible for heritage preservation and conservation;
- Limited capacity-building at institutional levels;
- Lack of resources at some national, regional and local levels has been noted.

The Periodic Reporting exercise has contributed to increased collaboration among States Parties within sub-regions, though Western Europe and Mediterranean Europe did not attain this sub-regional level of co-operation. The German speaking countries did prepare a synthesis report for their part which was integrated into the Western European sub-regional report.

Inventories of cultural and natural heritage have been used in all States Parties as the basis for the identification of World Heritage properties. Improvements to these lists are felt necessary in South-Eastern Europe and Eastern Europe, especially seen in conjunction with the revision of Tentative Lists which are at times outdated and do not reflect the diversity of cultural and natural heritage. Although harmonisation meetings for Tentative Lists have been held in the Baltic region, Ukraine with neighbouring countries, and the Caucasus region the recommendations have yet to be applied. Furthermore, States Parties in these regions have highlighted deficiency of documentation and difficulties of access to relevant information. Noteworthy is the initiative of the Nordic countries, which in 1996 harmonised their Tentative Lists on a regional basis and identified sites of underrepresented categories, particularly focusing on natural heritage. For Mediterranean and Western Europe, a revision and updating of Tentative Lists has not been completed, as they have a tendency to be cumulative rather than systematic and reflective.

Difference in numbers of nominations and inscription in the sub-regions can be explained by the long period of participation in the implementation of the *Convention* by some of these States Parties in Western Europe and the Mediterranean region. Lack of capacities and the shortcomings of inventories have been an obstacle for some of the other sub-regions. Serious consideration should be given to the possible linking of World Heritage properties representing parallel categories at a national level and at an international level. Increased awareness of the full diversity of cultural and natural heritage is emerging and States Parties are investing great efforts into serial transnational nominations, which are a particular collaborative accomplishment. Similarly, increased regional, local and public participation in the nomination process can be seen in the majority of States Parties. This move from a purely central government-driven exercise to a participatory process is at the heart of the *Convention* and needs to be supported in some sub-regions.

Administrative and legal measures undertaken by States Parties in the field of identification, protection, conservation, preservation and presentation of World Heritage vary within the sub-regions. For most of Western Europe, the Nordic countries and the Mediterranean, the provisions are adequate and measures to improve planning policies and management mechanisms are being planned. Ratification of international standards legislative and policy reforms as well as capacity-building are needed in South-Eastern Europe and Eastern Europe and special World Heritage policies are increasingly being developed in these countries. Only some national legislations cover both cultural and natural heritage and separate approaches vary especially in States Parties with federal systems.

Although the majority of States Parties in Western Europe, the Nordic countries and Mediterranean Europe have a wide range of training facilities and extensive studies in

heritage matters, the overall need for more specialised training as well as institutional capacity-building has been identified in all reports.

International cooperation is being carried out in all States Parties, however to varying degrees. While a number of countries contribute to conservation and preservation of heritage through particular cooperation agreements and Funds-in-Trust arrangements with UNESCO and the World Heritage Centre, enhanced cooperation in Eastern and South-Eastern Europe is needed. In recognition of decreasing national budgets for heritage preservation, States Parties have recognised the need for fund-raising that is being achieved through grants from private foundations as well as lottery arrangements. The opportunities for fund-raising in Eastern and South-Eastern Europe are rather more limited than in the other parts of Europe. Although European Union programmes are available to a number of European States Parties, a more systematic approach to these funds is needed, in particular, in view of the rather complex procedures for funding applications.

Regional centres and national World Heritage committees are increasingly being set up in States Parties, which ensure a more systematic approach to the implementation of the recommendations of the World Heritage Committee, the General Assembly and the application of the *Convention*.

States Parties have employed various means to promote and present the *Convention* at national levels and partly at the international level. However, awareness-raising and appropriate presentation of World Heritage sites need to be further explored at the regional and local levels.

The potential of educational programmes for heritage matters has not been fully explored although a number of States Parties in the different sub-regions have actively participated in the UNESCO Associated Schools programme and the World Heritage Education Project.

**PART III:
THE APPLICATION OF THE
WORLD HERITAGE CONVENTION
IN EUROPE**

**RESULTS OF SECTION II
OF THE
PERIODIC REPORTING EXERCISE**

1. Introduction

This chapter presents the state of conservation of European World Heritage sites inscribed on the World Heritage List prior to 1998. Europe is the region with the highest number of sites, with 39 reporting countries divided into 5 sub-regions (Nordic-Baltic countries, Western Europe, Mediterranean countries, Central and South-Eastern Europe, and Eastern Europe) and 244 sites concerned²⁴. The information and statistics compiled in this chapter are based on the answers received in Section II of the Periodic Reporting questionnaires, submitted by all States Parties in late 2005 with a particularly successful participation rate of 100%. All countries have used the web-based version of the questionnaire developed by the World Heritage Centre. In addition a number of meetings in the sub-regions provided not only training for the focal points but also assisted in the analysis of needs.

The structure of this chapter follows, to a large extent, the headings of the Section II questionnaire. Statistics were drawn from the replies collected from the reports and analysed in cross-reference to the qualitative responses received for the longer, more descriptive questions, such as observations of important facts or reported strengths and weaknesses. This chapter provides an analysis of this quantitative data. Appendix II presents statistical data based on the answers received to individual questions in Section II. Answers are expressed both in absolute values (number of reports) and percentages. Response rates are expressed in percentages. A table summarizing the key answers received for each site is included in Information Document *WHC-06/30.COM/INF.11A*. Periodic Report Section II synthesis reports for each of the five sub-regions are also available in Information Document *WHC-06/30.COM/INF.11A* and should be read in parallel to this report. Section II of the Periodic Reporting exercise also allowed the preparation of datasheets summarizing the main characteristics of each of the 244 sites. These sheets are due to be published in 2007 along with the regional and sub-regional synthesis reports for Europe.

2. Statement of Outstanding Universal Value (Statement of Significance)

The first section of the questionnaire focuses on the information and data available on the site at the time of its inscription on the World Heritage List and on the maintaining of the outstanding universal value of the properties since their inscription on the World Heritage List. The aim of this exercise is not only to verify which sites have complete and up-to-date Statements of Significance²⁵, but also to address the adequacy of the Statement of Significance in reflecting the outstanding universal value of the property. This also informs the World Heritage Centre on the need, or not, to update information on properties or to re-nominate these sites should a re-nomination or extension be required according to the *Operational Guidelines* for the changes requested (adding new criteria, substantially modifying the buffer zones and property boundaries, etc).

The answers received in the reports brought to light a variety of issues, in particular a considerable misunderstanding of World Heritage terms and concepts, such as a property's Statement of Significance and the definition of the outstanding universal value of a site, which are often misunderstood, misinterpreted or altogether ignored. These concepts are specific to the *World Heritage Convention* and are not traditionally found in all States Parties' national heritage terminology. This gives rise to lack of understanding and misinterpretation, increased

²⁴ A total of 248 reports were received for these 244 sites due to transboundary sites.

²⁵ The term Statement of Significance was used in compliance with the Operational Guidelines in force at the time of the exercise.

by the lack of institutional memory and poor coordination between different stakeholders – in some cases even between national institutions and their regional branches.

This problem underlines the need to reinforce staff training on World Heritage concepts at the national and local levels as well as to promote communication and cooperation between the World Heritage Centre and States Parties, but also between the different institutions and levels of management involved in the conservation of World Heritage sites within the States Parties themselves. Training and capacity building activities, and the spreading of documentation related to the status and inscription of World Heritage properties, can help improve the understanding of the *World Heritage Convention* and its *Operational Guidelines*.

2.1 Justification for inscription

As is the case across the Europe region, the large majority of World Heritage properties represented is cultural. The most largely represented cultural criteria in this region are C (iv), followed by C (ii)²⁶. The most common natural criteria is N(iii).

There is a particularly significant imbalance towards the representation of cultural criteria in nominated properties in the earlier years of the World Heritage List. For example, the Nordic-Baltic region, before 1998, had no natural site and only one mixed property on the World Heritage List. The Mediterranean sub-region, hosting the largest number of sites in Europe, had only two natural sites inscribed before 1998.

Interestingly, the proposed changes of criteria reported in the Periodic Reports indicate a wish to truly reflect the diversity of the inscribed properties – and particularly its natural values – much as the Section I reports reflected a recent trend among States Parties to balance the World Heritage List by proposing, on their Tentative Lists, new sites presenting less represented categories and less frequent criteria. A total of 19 properties²⁷ consider that their site should be reconsidered for additional criteria. They proposed a total of 25 additional criteria²⁸ – 14 cultural and 11 natural.

The responses by property and country ranged widely in regards to the Justification for Inscription for World Heritage sites, which may partly reflect the imbalance in the understanding of this concept across the region. It also reflects the evolution of this concept through the history of the *Convention's* implementation. While the outstanding universal value of each site was identified at the time of its inscription, the World Heritage Committee frequently made no official statement for sites inscribed in the early days of the *Convention*. The fact that Europe has a high number of the early inscribed sites –in the Mediterranean sub-region, for instance, more than half of the sites were inscribed before 1993– partly explains the confusion over justification for inscription concepts. Today, according to paragraph 155 of the new *Operational Guidelines*, a Statement of Outstanding Universal Value is now required for all new World Heritage nominations. Generally, the responses of sites inscribed at a later time showed a better grasp of the concept, since this was consequently built into the process, including nominations, evaluation and statement by the Committee.

²⁶ In the revised *Operational Guidelines*, which entered into force on 2 February 2005, the numbering of criteria has been changed (*Operational Guidelines*, II.D 77). This report refers to criteria according to the original classification at the time of inscription of the site on the World Heritage List.

²⁷ A discrepancy appears here between questions 02.06 and 17.01a. In answer to the first question, 19 site managers request additional or changes of criteria, but in answer to the second question –repeating the first– only 15 site managers request a change in criteria.

²⁸ Several additional criteria could be proposed for each property. Six French sites requested additional criteria. Other States Parties include: Albania, Belarus/Poland, Bulgaria, Denmark, Germany, Malta, Poland, the Russian Federation, Spain and the United Kingdom.

Almost 29% of site managers responded that the outstanding universal value of their properties had not been defined by the Advisory Bodies or the World Heritage Committee at the time of inscription. Twenty-six site managers reported that the value of their sites had changed since inscription but these changes are often positive in nature or are not foreseen to negatively affect the authenticity/integrity of the site.

Similarly, the answers received to the question on Statements of Significance give a clear indication that site managers are unclear as to what is considered to be the Statement of Significance and as to the existence of such a Statement for their properties. Confusion between Advisory Body recommendations and Statements of Significance were also common. In answer to the question on the decisions required from the World Heritage Committee, 10 sites request a change to the Statement of Significance of their sites, and 88 reports request an altogether New Statement of Significance. Again, there are different interpretations of the question in the reports. For instance, all Greek reports and all but one report from Turkey request a new Statement of Significance. Overall, many new Statements of Significance proposed are too short, incomplete or compile descriptive data on the history of the site. It must be remembered that a Statement of Significance should reflect the outstanding universal value of the site and be considered a working tool for the management of the property. In the light of the various changes requested by the site managers, it may be advisable for States Parties, during next few years, to focus on re-nominations of already inscribed properties rather than on new nominations, so as to strengthen the credibility of the World Heritage List.

2.2 Boundaries and Buffer zones

Questions relating to the boundaries and buffer zones of the site had a high rate of response. Many properties inscribed on the World Heritage List before 1998 were nominated without a clear demarcation of their boundaries and buffer zone. Thus, 23% of site managers consider their boundaries inadequate, and 42% of sites do not have a buffer zone. In most cases, the request for change to boundaries consists of an enlargement of the site or the inclusion of the setting or landscape around the site.

A number of reports from Western Europe, the Mediterranean sub-region and the Nordic-Baltic countries, reported that a buffer zone was not needed. This was often the case in urban historic areas with clear geographical limitations, in a landscape setting or well defined specific monuments, or in parks or archaeological sites. Strong legal protection – as in the case of the Baltic and Nordic countries, which all have effective national legislation through various Plan and Building Acts, Environmental Codes and Local Plans – also makes the need for new buffer zones less critical. It must however be reminded that increasing development pressure makes buffer zones and the definition of clear boundaries more relevant as an instrument for protection.

In Central and South-Eastern and Eastern European reports, a large number of sites mentioned inadequate boundaries and acknowledged the need for further work on the buffer zones. During workshops and meetings in these sub-regions (in particular, the Periodic Reporting sub-regional workshops in Visegrád, Hungary and Levoča, Slovakia) the idea was raised that in the case of some State Parties, the status and protection of a buffer zone in the framework of national legislation is not well defined. The lack of understanding of the buffer zone concept was put forward as a subject of concern. The procedures of the buffer zone definition and adoption are not adequately regulated by national legislations, and Eastern European States Parties lack the experience in the field of the establishment of protective regimes within buffer zone limits. Cases were mentioned in which development projects taking place in

poorly defined buffer zones could have negative visual impacts on the site. In a few cases, Periodic Reports mentioned the need to clarify boundaries and buffer zones in response to ongoing construction and/or development. However, a number of reports have brought evidence of a more proactive approach which may serve as a model for all European sites: some urban sites will undergo a re-evaluation of their buffer zones as a result of improved national legislation, to ensure better protection of the properties.

The UNESCO Moscow Office proposed the organization of a workshop on World Heritage mapping as a follow-up to the Retrospective Inventory project conducted by the World Heritage Centre. Such activity would assist site managers in providing improved maps and other necessary information for properties that do not have clearly defined boundaries or maps. Training initiatives should be extended to the entire European region, as issues surrounding boundaries and buffer zones issues have revealed two significant problems relevant in all European sub-regions. Firstly, it is evident that the original maps in many cases have insufficient or inaccurate delineation of boundaries and buffer zones. Secondly, communication between staff at World Heritage sites and those working with GIS-technology and staff training on the use of GIS should be provided. On a more general level, such training would also address the insufficient knowledge about World Heritage concept and procedure regarding boundaries and buffer zones in the entire sub-region, especially true in early inscribed sites.

3. Statement of Authenticity/Integrity

While the maintenance of a property's World Heritage value is the responsibility of each State Party, the statement of authenticity and/or integrity is a crucial tool in retaining this value and in ensuring the adequate conservation and management of properties.

Usually, evaluations carried out by ICOMOS and/or IUCN of sites inscribed on the World Heritage List before 1993 did not contain statements of authenticity and/or integrity for the property at the time of inscription. Over 65% of reports mentioned that such an evaluation had been carried out for their sites, but several answers received – whether positive or negative – were incorrect, which once again reveals a lack of institutional memory. In fact, as the majority of sites in the region are early inscriptions, there are many misunderstandings about authenticity and integrity concepts. In cases where no evaluation had been carried out by the Advisory Bodies at the time of inscription, re-assessment had been performed for only 17% of sites, with an exceptionally high rate (46%) in the Nordic-Baltic sub-region.

A significant number of sites (21%) have had changes affecting the authenticity and integrity, particularly urban sites. The pressures of urban development, traffic, changes to the landscape and cityscape and uncontrolled growth or displacement of population are all mentioned as serious threats to the sites. In Central and South-Eastern Europe, it becomes fairly clear that the alterations affecting authenticity and/or integrity are deeply linked with conservation issues and threats such as uncontrolled development. Another element having possible impact on authenticity or integrity also emerged during workshop discussions, namely the 'movement' of reconstruction in urban centres. This is partially based on the (re)birth of national identities, but also on several other reasons such as the desire to recover from the damage of war. Reports from the Mediterranean region stress that the changes affecting the outstanding universal value of the sites are mainly due to new development issues, but changes in the traditional use of the site and natural setting are also mentioned. In the Nordic-Baltic countries, several properties experience increasing or decreasing populations, tourism development, building construction and infrastructure as major factors influencing the sites. In Western Europe, development pressure is the most common threat. Other changes reported included the modification of the physical aspect of some sites or changes in their traditional

use. Although the anticipated changes are foreseen to affect the outstanding universal value of 15% of sites, the reports stressed that these changes were either sufficiently strongly addressed to ensure the adequate preservation of the sites and its values, or positive changes improving the presentation, conservation or protection of properties. No changes were reported that might negatively impact the authenticity and/or integrity of the sites.

4. Management

World Heritage sites in Europe are predominantly used for visitor attraction, with or without entrance fees, with the exception of Eastern Europe where sites are predominantly used for religious purposes. However, it is important to remember that multiple uses could be expressed in response to this question. Many sites were also said to have a dual primary purpose. In this sub-region, sites are also often situated within national parks or national protected areas (53%), or rural landscapes (53%). Besides the choices offered in the report, 'other' uses reported in Eastern and Central and South-Eastern reports, included archaeological reserves, concert venue, agricultural landscape (separated from 'rural landscape'), fulfilling government functions as a capital city, museum and/or conference or academic research centre, and an internationally important memorial site. In the Mediterranean sub-region, the Nordic-Baltic countries and Western Europe, 'other uses' include activities such as cultural centres (art exhibits, concerts or theatre performances), housing or administrative use and research and education purposes. Recreational use and cultural landscapes are also reported as main uses. Chart 5 lists the current use of sites by sub-region.

In answer to the question: 'How could the overall management system of the site best be described?'²⁹, large majority of site managers replied that their properties were 'managed under protective legislation', or directly 'by the State Party'. Eastern European reports also stressed management under traditional protective measures or customary law as the second most common management system in the sub-region.

A majority of World Heritage sites have different levels of public authority involved in site management. National authorities were the most commonly cited in all sub-regions except Western Europe, followed closely by local authorities. In Western Europe, reports stressed the predominance of management by local authorities (85%) with roughly equal involvement from the regional and national authorities (65% and 62% respectively). In the Mediterranean sub-region, national level authorities are involved with the management of properties in a majority of cases, which reflects the common structure of legal conservation frameworks and the representation of sites.

All in all, States Parties have a wide variety of departments and specialized agencies in charge of heritage, providing services from national to local levels. Other levels of authorities in charge of site management include religious communities, private institutions, trusts, societies and foundations (The Netherlands, Germany, United Kingdom). However, complex networks of partners further complicate the management of sites, and require a high level of cooperation and inter-agency communication. Some sites, or parts of sites, may also belong to private users, or may be managed by independent, not-for-profit associations.

The complexity of management systems emphasize the need for steering groups or site managers acting as focal points for the management of the site. Only 50% of sites across the European region have appointed steering groups or similar management committees, whose

²⁹ Site managers could select multiple responses to this question.

primary function is to inform, discuss and coordinate the work between the main responsible bodies, with the highest percentages in the Nordic-Baltic sub-region (71%), Eastern Europe (59%) and Western Europe (57%). But while such groups are formally constituted in the Nordic-Baltic sub-region (93%) and in Western Europe (83%), they are legally established in Eastern Europe (90%) and Central and South-Eastern Europe (74%). A number of reports however reported that the mandate of such groups (usually when formally constituted) should be clarified.

The Mediterranean sub-region has the highest percentage of sites having appointed a site coordinator (55%) and a majority of those that do not have a coordinator (66%) express the need for one. In Central and South-Eastern Europe, only 45% of sites have a site manager but 64% of reports mentioned the need for one. Several sites have a steering committee or coordination bodies for specific issues (e.g. visitor management, educational programmes or research activities).

Very often, as shown in the questionnaires, State Parties and/or site managers believe that legal protection and the control, or the daily running of an organization by State institutions, are the same as site management. In Western Europe, for instance, only 40% of properties have a site manager and a remarkably low number of sites (24%) reported the need to appoint one. In general, the reports showed that although most sites see a coordinator as desirable, only a few sites work actively towards appointing one.

Overall, 88% of sites consider their management systems highly or sufficiently effective, with the highest percentage rate of sites reporting needs for improvement in Central and South-Eastern Europe and Eastern Europe (See: Chart 6 and Chart 7 in the Appendix).

4.1 Protection

Protective legislation is an essential tool in the protection and conservation of World Heritage sites. Although, there is no special legislation for World Heritage sites, 90% of sites reported legislative protection of some kind, which varies widely across national boundaries and the type of properties. In the Mediterranean sub-region 96% of reports mentioned a legislative framework for their sites, against only 71% in Eastern Europe. However, a number of reports deal with this issue in the answers for management plans, which makes it difficult to draw conclusions about the specific legal frameworks.

When it exists, heritage legislation usually has a separate framework of laws for cultural and natural heritage. Many cultural sites fall under a mixture of national-level legislation regarding cultural monuments and local level planning regulations, in particular those located in urban centres. Natural sites are more likely to be protected by national or regional park legislation. Information Document *WHC-06/30.COM/INF.11A* provides detailed information on World Heritage protection measures and legislation for each sub-region.

Overall, 93% of reports considered the current protection arrangements sufficient (73%) or highly effective (20%). In the Mediterranean sub-region, no site considers protection arrangements insufficiently effective, whereas in Eastern Europe and in Central and South-Eastern Europe, protection arrangements were considered not sufficiently effective in 29% and 15% of cases respectively, while 75% and 66% of reports stressed that improvements were needed (See Chart 8 and Chart 9 in the Appendix). In addition, in these two sub-regions, some sites were not able to provide specific information on the protective legislation in place yet still rated the protective measures in terms of their sufficiency. This indicates inability to link the actual use of protective legislation with its practical application.

One of the most significant impacts of political changes in post-Soviet countries in Eastern Europe, Central and South-Eastern Europe and some Baltic states, is the large scale (re)privatisation of properties and reduction of State control and ownership, usually resulting in a shift of control and responsibility to local authorities. A number of properties reported changes in ownership that may affect World Heritage sites, and in particular private or foreign ownership. This problem was mentioned in reports submitted by Serbia and Montenegro, Slovakia, Estonia and Lithuania. The privatisation of properties represents a structural threat as it diminishes control over the site and infrastructure development. Specific strategies to counter this problem include raising public awareness regarding site protection, and improving and finalizing draft urban planning measures at the local level; including steps towards strengthening protection legislation within future management plans. It is hoped that the evolving relationship of the European Union with some of the countries in these sub-regions will contribute to enhancing protective legislation for the management and protection of properties.

4.2 Management Plans

While, today, a documented management system is mandatory for the inscription of new sites on the World Heritage List, it was not compulsory for early nominations and many of the early sites did not have original management plans or systems³⁰. In fact, guidelines for management plans were only officially adopted in 1993 and, even today, there is no single accepted definition as to what a management plan is or should be. Section II reports of the Periodic Reporting exercise revealed that the concept and use of management plans is still misunderstood or misinterpreted. In the reports, only 40% of European sites responded positively to the question ‘Is there a management plan for the site?’ but several negative answers revealed a certain amount of confusion and misunderstanding of the difference between *management plans* and *management system*.

According to the responses received in the Periodic Reports, Eastern European sites have the highest percentage of management plans based on a Statement of Significance, in comparison to other sub-regions, and all are considered to be very effective or adequate. However, in some cases the correspondence of the existing management plan to the contemporary standards is, again, quite doubtful. Other sites, particularly in Western Europe, report that management plans are currently in place but date back several decades, occasionally to the 1960s or 1970s – and in one case to the 1940s.

In many cases the other large scale or umbrella plans – master plans, land use plans, city development plans etc. – are identified as management plans, giving orientations and guidance in same field but with not enough content to be implemented as management plans. In some cases management plans are developed, but not implemented. Reasons for this include having no clear hierarchy defined between other regulatory plans and management plans, no adequate management structure in place, the management of the site by multiple stakeholders, the management of the site as an ecclesiastic centre (especially in Central and South-Eastern Europe and Eastern Europe) or simply because of a lack of financial and/or human resources sources.

Perhaps the greatest threat is the lack of realization of the long-term implications of the absence of management plans for the sites. Despite the evident lack of management plans for sites, 240 of the 244 sites consider themselves to have adequate or very effective management plans to sustain outstanding universal value. This fact is particularly striking in the

³⁰ In Western Europe, this requirement was usually interpreted as meaning a management plan.

Mediterranean sub-region where, according to the questionnaire only 31 % of sites have a management plan, although the current management of the site is considered adequate or very effective in 96% of cases. Overall, nearly all sites currently without a management plan have such plans under preparation and expect to implement them in the near future, but the lack of tools and guidelines may mean that such management plans may remain inadequate. UNESCO should provide easy access to best practice models and guidelines for management plans for World Heritage properties. Some of these could be found, for instance, in some States Parties in Western Europe or in the Nordic-Baltic sub-region, where management plans were mostly developed since 2000, usually prepared by staff on site or through a consultative process, and often based on the Statement of Significance.

4.3 Financial Resources

Site managers provided information on the annual operating budget for the site in only 63% of cases. The reason for difficulties in presenting information has been that management responsibilities are shared with many agencies and stakeholders, especially in urban centres and in cultural landscapes. Funding sources are numerous although there is hardly any specific World Heritage budget allowance. The main source of funding of World Heritage sites, all sub-regions put together, is public funds, whether nationally distributed, or through regional or local funding partners or institutions. Funds from the private sector are also very important, including grants from special foundations, the private sector and sponsors, private owners and ecclesiastic institutions, and bilateral cooperation at large.

Section I of the Periodic Reporting exercise, submitted in 2004, revealed that in Western European countries the budget for heritage is very important and even increasing in several States Parties. However, site needs vary from one property to the next and funding may be insufficient for some sites. Thus, one-third of Western and Mediterranean sites consider funding available for the management of the site insufficient, reaching 43% in the Nordic-Baltic sub-region (See Chart 10 and Chart 11 in the Appendix). The problem, in certain cases, may be related to inadequate management, or a lack of cooperation between national institutions in charge of the sites. Replies received for the question on funding for the protection and conservation of the sites follow the same sub-regional trends (See Chart 12 and Chart 13).

Lack of funding is a particularly common issue throughout the Eastern and Central and South-Eastern European sub-regions where respectively 65% and 53% of site managers consider funding for the management of the site insufficient. However, there is a high profile of international financial assistance in the Central and South-Eastern Europe sub-region and hopes that such trends persist. As a result of the changes to the political and economic situation in these sub-regions, new national boundaries have been formed and economic ties have been revised. Outside funding has consistently been drawn for training, site conservation and expertise. The World Heritage Fund has supported roundtables, workshops and expert meetings for 46% (Eastern Europe) and 44% (Central and South-Eastern Europe) of sites in these two sub-regions. Consistent support has also been drawn from international organizations and foundations, as well as UNDP, Europa Nostra, the World Bank, the World Monuments Fund, the Getty Institute. The Baltic States, and several Mediterranean countries such as Turkey and Malta, have also received assistance through the World Heritage Fund, UNESCO International Campaign, National and/or regional projects of UNDP, the World Bank and other agencies or through bilateral cooperation.

Even though there are no specific World Heritage European Union programmes, the European Union is nonetheless also a source of funding for World Heritage sites within the broader framework of European Union programmes. With the accession of several countries to the

European Union and with the pre-accession status for several others, the Eastern European, Central and South-Eastern European, and Baltic sub-regions are in a specific transition period which affects financial resources. European Union funding is also of increasing importance in the Mediterranean sub-region. For sites in these sub-regions, World Heritage status is a significant factor in raising additional funding through European Union-projects and programmes.

However, there are no national strategies for applying to these funds. Specific National Development Plans should be designed and within these, projects that affecting indirectly (or directly) World Heritage properties should be flagged. In all sub-regions, annual ‘earmarked’ government funding for World Heritage properties should also be discussed, as is the case in Sweden through the recently established association ‘World Heritage Sites in Sweden’. Considering the economic wealth and the capacities of the Western European sub-region and Nordic states, international cooperation at the bilateral or multilateral levels could also be enhanced by sharing expertise, developing partnerships with other sub-regions and providing best practice examples.

4.4 Staffing Levels (Human Resources)

It is a complex task to identify the number of staff members employed full-time on World Heritage sites. As all properties are different in character, establishing a number of persons working strictly on World Heritage related issues remains a complicated task. The number of staff reported in the questionnaire fall into a wide variety of categories depending of the character of the site, which makes comparison difficult. The remarkably high figures provided in some reports, especially for Eastern European sites, concerning the number of staff dedicated full time to the World Heritage site reveals the difficulty encountered by some site managers in obtaining reliable numbers or deciding upon fixed criteria, if not altogether indicating a misunderstanding of the question³¹.

Evaluation of staff resources is generally positive across disciplines, although responses are more mixed for the areas of management, promotion and visitor management. Staffing levels in Conservation is the discipline in which staffing levels are the most satisfactory with only six sites considering their staffing levels in this area as bad (Western Europe, Mediterranean sub-region, Central and South-Eastern Europe). Access to staff in interpretation, throughout the European region is also satisfactory in 95% of cases. Staff available in education is also satisfactory in 95% of cases, with the exception of Central and South-Eastern Europe where 11% of sites claimed their staffing levels to be inadequate in this domain.

Lack of staff in management also seems to be problematic for the Central and South-Eastern European and Eastern European sub-regions: in Central and South-Eastern Europe, 19% of sites reported that their access to professional staff in management was ‘bad’, and 18% as ‘very bad’ in Eastern Europe. Eastern European sites also reported difficulties in their access to staff in promotion, considered as ‘bad’ or ‘very bad’ in 18% of reports – in comparison to a general trend of 7% dissatisfaction in the overall region. The question on access to professional staff in visitor management received the lowest satisfaction rate, with 30% ‘bad’ and ‘very bad’ responses in Eastern European reports, 17% for Central and South-Eastern Europe, and 10% for the Mediterranean sub-region.

³¹ For example: 880 staff members as said to work for the *Architectural Ensemble of the Trinity Sergius Lavra in Sergiev Posad* (Russia) or 594 for *Kiev: Saint-Sophia Cathedral and related Monastic Buildings, Kiev-Pechersk Lavra* (Ukraine).

Despite this fact, Central and South-Eastern European and Eastern European reports claimed that respectively 72% and 71% of site management agencies have adequate staff resources to protect, maintain and promote the site, against 68% for Western Europe, 52% for the Nordic-Baltic sub-region and only 42% for the Mediterranean sub-region (See Chart 14 in the Appendix). However, 103 sites, especially in Central and South-Eastern Europe (51% of sites in this sub-region), Western Europe (47%) and Eastern Europe (47%), benefit from the support of regular volunteers, which partly contributes to breaching the gap in staff resources. Regular volunteer support is often in the form of guided visits carried out by voluntary associations.

4.5 Sources of Expertise and Training in Conservation and Management Techniques

The Mediterranean sub-region has the best access to training in the European region, with a rate of access to training for stakeholders of 61%, compared to 50% in Central and South-Eastern Europe and 48% in Western Europe and the Nordic-Baltic sub-region respectively (See Chart 15 in the Appendix). Most properties have access to experts in numerous fields from national agencies, universities, and museums. The availability of technical expertise is very high in the fields of conservation techniques at both national and regional level. Most sites throughout all sub-regions rely on local or regional museums, county administrative boards, universities and scientific institutions for training, particularly in regards to conservation. In Eastern Europe, however, training is only available at an alarmingly low number of sites (2 of a total of 17 reports for this sub-region). Section I of the Periodic Reporting exercise³² had already stressed the lack of training in institutions and for individuals involved in World Heritage preservation, and that gaps in conservation techniques and professional skills are common issues shared by all sites within the Eastern European sub-region. This stresses the need for increased cooperation among sub-regions, for the multiplication of training activities and the sharing of knowledge and skills between sites.

Gaps in staff training exist in various areas of expertise, including such diverse fields as conservation (especially in Central and South-Eastern Europe); guard training; communication; and visitor management (as revealed by the previous section on staff resources). Some sites, especially in Western Europe and the Nordic-Baltic sub-region, have also identified training needs in areas such as the preservation and enhancement of traditional know-how and crafts, acting as conservatories of uses and techniques and giving most properties their specific value. Such training activities are important to promote sustainability and the integrated management of heritage. Mediterranean reports have identified training needs in specific fields, such as preventive conservation and monitoring, visitor management and landscape conservation.

However, while a few sites reported that all their training needs were being met an important number of sites seemed uncertain about their specific needs, or reported that their training needs were not being met. It is therefore important to identify the specific needs of sites and to develop training activities on a national, international or multilateral level, and encouraging cooperation between sites.

Training opportunities on site management are of special importance especially for sites that do not hold integrated management bodies or specific management mechanisms. Sub-regional thematic training opportunities and dissemination of best practice would benefit sites facing

³² WHC-05/29.COM/INF 11B

new conservation challenges. These issues must be developed focusing on World Heritage management as there is seldom appropriate training available in universities and scientific institutions.

Overall, training available for home-owners at site level is insufficient although it is a fundamental awareness raising activity and should exist at all sites. Whereas training courses for schools appear more easily available in all sub-regions and should be encouraged, it is important to note that this cannot replace staff training and on-site capacity-building activities.

4.6 Visitors

Annual visitor numbers vary from a few individuals to several million, depending on the size and accessibility of the site. A record number of 21 million visitors were reported for *Paris, Banks of the Seine* (France) in 2004. However, the statistics are based on a wide range of estimation tools (tickets sold, visitor centres, number of booked hotel rooms, etc.) and are difficult to compare (See Chart 16 and Chart 17 in the Appendix).

It is worth noting that the designation of World Heritage status often leads to an increase – more or less rapid – in visitor numbers, with the exception of Eastern Europe, where the tourism industry has stagnated over the last decade. While this reduces threats related to tourism pressure, it must be remembered that organized tourism is an integral component of the sustainable use of cultural heritage and the development of sustainable tourist management policies should therefore be encouraged.

In all sub-regions, reports stated that there is a need for further support and development regarding visitor management. World Heritage status has brought with it the benefits of a higher profile in the tourism market but it has also left some site managers unable to cope with the pressures of rapidly increasing tourism numbers. Many sites have underlined the double-sided effect of the tourism increase following World Heritage inscription. An increase in visitor numbers induces financial advantages – increasing visitor-related revenues and heightening national and international visibility which in turn may attract funding from private sources. Some sub-regions, such as the Mediterranean countries (Italy, Spain etc.), are particularly affected by seasonal tourism and high-number of visitors over short periods, which further complicates the visitor management process. Actions taken to deal with seasonal tourism pressure include diversification of tourism activities and mitigating the visitor impact on monuments and in urban spaces. Despite the general need better visitor management and organization of guided visits, and the numerous reports recording site managers' concern over tourism pressure on their properties, only 40% of sites have adopted a tourism or visitor management plan, though many management plans also cover tourism issues. As tourism pressure poses a growing threat to World Heritage sites, further efforts are needed to register visitor numbers and to design and implement adequate tourism/visitor management plans in all sub-regions.

Another way in which sites must adapt to increasing visitor numbers is by multiplying facilities, guaranteeing safety and security for visitors on site, and ensuring the adequate preservation and restoration of properties. Visitor facilities have been developed for 61% of sites, with higher rates in the Mediterranean sub-region (67%) and Central and South-Eastern Europe (64%), but many properties see room for improvements. The need to upgrade tourist facilities, limit access to vulnerable areas, open appropriate areas to larger numbers, and to communicate with the local tourism community were noted in all sub-regions. Tourism management could also be seen in a wider geographic context of national or international cooperation, sharing knowledge and capacity with adjacent heritage sites and/or between sub-regions to balance the negative impacts of tourism.

4.7 Scientific Studies

An average of 60% of properties possess an agreed research framework or strategy for the site, reaching up to 87% in Eastern Europe, 68% in Mediterranean Europe, and 61% in Central and South-Eastern Europe (See Chart 18 in the Appendix). Sub-regions with the lowest rates of properties holding research frameworks are Western Europe (52%) and the Nordic-Baltic sub-region (33%). However, many sites not currently holding an agreed research strategy stated a desire to correct this, and it is hoped that this issue is addressed through management planning.

The responses reflect a wide range of studies across disciplines, in all sub-regions. In Central and South-Eastern Europe, studies related to the value of the site are the most commonly reported (83%), followed by archaeological surveys (69%) and monitoring exercises (65%). Other types of research programmes include ecological studies at natural sites, town planning studies at urban sites, socio-economic analyses, and feasibility studies regarding site access. There have been notably fewer studies on transportation and the impact of World Heritage designation at the site level. From State Party answers, it is clear that *targeted* World Heritage studies supporting a higher level of understanding and more efficient management are still needed.

In Eastern Europe, monitoring exercises and condition surveys are the most common research initiatives at the property level (mentioned in 87% of cases respectively), followed by archaeological surveys (69%). Risk assessment and studies related to the value of the site come fourth (62%).

In the Mediterranean sub-region, Western Europe and the Nordic-Baltic states, archaeological surveys are the most frequent (79%, 67% and 71% respectively). In the Mediterranean sub-region and Western Europe, studies related to the value of the site are the second most common research initiatives, followed by condition surveys in the Mediterranean sub-region, and visitor management in Western Europe. In the Nordic-Baltic states, condition surveys are the second most common studies undertaken (62%), before risk assessment and studies related to the value of the site (52% respectively).

In all sub-regions, only a small percentage of scientific studies and research have been dedicated to the impact of World Heritage designation, which demonstrates a lack of consideration regarding the role of designation as a World Heritage site in the design and planning of scientific studies and research programmes.

The Periodic Reporting exercise revealed that there is a need for systematic development and implementation of strategies for scientific research, and that research on World Heritage-related topics should be further encouraged. Cooperation with universities and research institutions on World Heritage issues needs to be improved, leading to a more interdisciplinary and international approach allowing shared and comparable results. Further efforts are also required to make the results of research studies more easily accessible.

4.8 Education, Information and Awareness Building

Despite the fact that most sites having participated in the Periodic Reporting exercise were inscribed on the World Heritage List during the first two decades, 38% of properties still have no or not enough signs showing the World Heritage status of the sites. Furthermore, the use of the *World Heritage Convention* emblem on publications for the property is not systematic, and 16% of properties reported that the emblem was never used.

While awareness of the World Heritage site is adequate among local authorities and visitors in 87% and 80% of cases respectively, awareness amongst local communities (72%), and local businesses in particular (60%), remains largely insufficient. Initiatives should be stepped up, if proper resources can be made available (See Chart 19 in the Appendix). Financial benefits may be reaped from developing partnerships with the private sector. Involvement of the local population and communities through a regular consultation process should also be encouraged to raise awareness to World Heritage values and stir public support and cooperation for conservation and promotion purposes.

Less than half the sites (47%) have an agreed education strategy or programme, reaching 63% in Western Europe and 51% in the Mediterranean sub-region, against 32%, 31% and 29% Central and South-Eastern Europe, in Eastern Europe and the Nordic-Baltic states respectively. Overall, 72% of sites not currently holding an education strategy plan to develop one in the near future – 87% in the Nordic-Baltic sub-region. Despite these rather low rates, efforts to improve education strategies were recorded in several sub-regions. In Eastern Europe, for instance, a majority of States Parties are part of the *Young People's Participation in World Heritage Preservation and Promotion Project*, co-ordinated jointly by UNESCO's *Associated Schools Project Network* (ASPnet) and the World Heritage Centre. The World Heritage Education Resource Kit has been translated into Russian, Georgian and Armenian. In the Mediterranean sub-region, site-specific educational committees have been developed.

Generally speaking, although States Parties do not seem to offer specific curriculum in schools dealing with World Heritage, many sites have developed training courses, visits and exhibition, designed to welcome pupils or students from local schools or universities. School programmes – not necessarily specific to World Heritage but concerned with heritage at large – have been carried through successfully in several countries, but their enforcement depends on national policies and curricula development. Reports from the Nordic-Baltic states also mentioned that classes could 'adopt' monuments or rock art sites, and the teachers were given special kits developed by UNESCO to educate their classes about World Heritage. Specific university-level programmes linked to World Heritage properties have also been developed, especially in Western Europe, the Mediterranean countries and the Nordic-Baltic states, but also on several sites in the other sub-regions.

Specific events and exhibitions presenting the World heritage site have been developed on 65% of properties, and include Heritage days, international events and opening sites to the public. However, it is important that the people living in World Heritage areas be further involved through adequate awareness-raising, education and promotion campaigns. This should be addressed, as local communities can play a key role in the safeguarding of World Heritage properties.

Over 81% of the properties have websites, but these are not necessarily dedicated to World Heritage issues. Websites reported are often those of a Ministry, an institution or even the local tourism centre, with only a few lines on the site itself. The development of online tools and information resources concerning World Heritage properties would further contribute to public awareness-raising and fund-raising efforts for these properties.

5. Factors Affecting the Properties

The majority of site managers (76%) stated that the state of conservation at their respective sites was at least 'adequate'. Those seen as 'patchy' and 'needing more resources' make up over 22% of the total (See Chart 20 and Chart 21 in the Appendix). Three site managers reported that their properties were 'very vulnerable': the *Historic Fortified City of Carcassonne* (France), the *Cultural and Historic Ensemble of the Solovetsky Islands* (Russian Federation), and the *Historical Monuments of Mtskheta* (Georgia).

Visitor/tourism pressure (60%) and development pressure (58%) are the most commonly reported threats to sites, except in the case of Eastern Europe, where 82% of sites mentioned environmental pressure as the greatest threat to World Heritage properties, against an average of 45% for the European region as a whole. Tourism pressures, either on seasonal or daily basis, and a lack of support in dealing with them were often noted as a direct result of a steep increase in tourism numbers. The major problems include visitor pressure, wear on monuments, removal of *in situ* objects from a property (mural paintings, or archaeological objects) and an overall lack of trained staff and site-guides. However, as mentioned earlier, comparatively few sites have an agreed tourism strategy despite the predominance of development-related threats listed in the reports (See Chart 22).

The problems quoted in the reports regarding development pressure include uncontrolled pollution and traffic, insufficient conservation project planning, changes in socio-economic development, delinquency, land speculation, lack of funding for regular maintenance and monitoring (bad conservation), infrastructure pressure (threat to cityscape, high-rise buildings, destruction of historic urban fabric, need for urban rehabilitation and the modernisation of the local infrastructure, negative visual impacts) and a lack of human resources and expertise. In Central and South-Eastern Europe, for instance, one of the specific factors potentially affecting World Heritage properties is the rapid acceleration of large-scale infrastructure development after (or during) European Union accession in an effort to reach the same level of infrastructure available in Western Europe. (See Information Document *WHC-06/30.COM/INF.11A* for more detailed analyses of specific threats for each sub-region).

Natural disasters come in fourth position of threats listed with 40% of sites claiming that their properties were affected by such threats, against 59% in Eastern Europe. Such threats are difficult to predict. Threats deriving from the local populations (number of inhabitants) and agricultural or forestry regimes reached 14% and 13% respectively, the only exception being Central and South-Eastern Europe where threats related to the number of inhabitants were recorded in 24% of reports. Threats due to agricultural or forestry regimes are also particularly high in Western Europe (20%).

The number of threats quoted in the reports further underline the need for adequate integrated management mechanisms, statutory development plans, assessment of risks and cumulative impact, monitoring, equipment for visitors, and mapped boundaries and buffer zones. Improved protection mechanisms must be developed as well as increased cooperation with all stakeholders, especially with the local community.

6. Monitoring

The purpose of monitoring World Heritage sites is two-fold: measuring to what extent the implementation of the management plan is successful, and identifying the physical condition and state of conservation of the site. The quality of monitoring systems, at sites where they exist (See Chart 23 and Chart 24 in the Appendix), varies widely, to the extent that it is not always comparable between properties. Overall, monitoring is irregular and sporadic, frequently these are carried out on an ad-hoc basis with no set indicators; or are project-related, prior to or during works on the site. The monitoring programmes reported cover mainly technical conservation measures and environmental monitoring (climate, seismic factors), often disregarding tourism or development pressures. The absence of clearly defined indicators calls into question the credibility of monitoring exercises, in particular regarding the choice and use of monitoring variables. It is evident that some of the sites have inadequate monitoring systems and that knowledge of monitoring methodologies is limited. The concepts of monitoring systems and key indicators were not always understood by site managers, despite the crucial role of monitoring. There were, however, encouraging signs of continued

implementation of monitoring systems at sites that had received World Heritage Funds for monitoring equipment or training. Good monitoring practices require training and the use of relevant modern technology, and further efforts are needed to develop or improve monitoring programmes in the region.

When answers received for the question: ‘Has the site been the subject of (a) Reactive Monitoring Report(s) to the Committee?’ are compared against actual records from the World Heritage Centre, a surprising number of sites failed to respond correctly to the question. Only 46 site managers were aware that their sites had been subject to reactive monitoring, compared to the total of 101 sites that have been subject to reactive monitoring since their inscription (including one transboundary site). Among these, many provided wrong dates or incomplete answers. A total of 54 site managers were unaware had been subject to reactive monitoring, and 2 refrained from answering this question. Five properties reported that they had been subject to reactive monitoring although their properties had never undergone the reporting process. These responses highlight a problem of institutional memory regarding certain World Heritage concepts such as reactive monitoring – important information appears to have been either misunderstood or simply not retained through time. The failure to provide adequate answers to the above-mentioned question must be seen as a serious indicator that all information of the World Heritage context and process is not shared by all stakeholders, especially not at site level, and that vital World Heritage information and documentation is lacking.

It is also worth noting that a total of 143 out of the 244 European properties having participated in the Periodic Reporting exercise have never been subject to reactive monitoring since their inscription.

7. An Integrated Perspective on Management

Site managers perceive the benefits of World Heritage status to lie in many areas, although the main benefit seen are mostly the strengthening of conservation efforts (81%), especially in Eastern Europe (94%), Central and South-Eastern Europe (89%), and Western Europe (85%). Economic benefits were also listed in 54% of reports –in terms of tourism, the creation of financial partnerships, and increasing state funding. Social benefits are also reported (47%), especially in the Mediterranean sub-region, Central and South-Eastern Europe and Eastern Europe. Other benefits reaped from World Heritage listing include fostering new scientific and research initiatives. International acknowledgement and prestige and both visitor and local awareness to heritage values are also reported as the strengths of the World Heritage status. Site managers also claimed to see positive results such as strengthened protection measures, site promotion, wider access to expertise and international cooperation.

Interestingly, only 39% of reports claim that World Heritage status has improved management for properties. In fact, these answers reveal that, in all sub-regions, there is a need for renewed efforts and a better integration of resources to strengthen the long-term conservation of the site within management strategies. In summary, the following weaknesses in management were identified:

- Better coordination and cooperation between responsible authorities is needed.
- Where applicable, States Parties, with the help of UNESCO and the Advisory Bodies, must bring about necessary legal and institutional reforms and administrative arrangements aimed at the modernisation of site-management systems.
- The training of site managers is of paramount importance and must focus on integrated management and the sustainable use of heritage.
- Better methods for evaluating the effectiveness of the overall management mechanism of a property are needed.

8. Requests for decisions by the World Heritage Committee

Section II results indicate that there is a need to review current Statements of Significance, boundaries and buffer zones. In particular, this is the case for earlier sites (those nominated in the 1970s and early 1980s). However, confusion about the role and status of statements of significance, boundaries and buffer zones is evident in the Section II replies. Often, answers received to the question on Committee decisions (See Chart 25, Chart 26 and Chart 27 in the Appendix), differ from those received for similar questions in other sub-sections of the questionnaires, and the following figures may need to be reviewed in consultation with the States Parties involved.

According to the answers received for the question on the decisions required from the Committee³³:

- 15 reports request a decision from the World Heritage Committee on changes to the criteria for inscription;
- 10 reports request a decision from the World Heritage Committee on changes to the Statement of Significance;
- 88 reports request a decision from the World Heritage Committee on a new Statement of Significance;
- 46 reports request a decision from the World Heritage Committee for changes to the boundaries;
- 65 reports request a decision from the World Heritage Committee for changes to the buffer zone.

One of the main conclusions of the Periodic Reporting exercise is that there is a need for general planning framework, and the strengthening of management plans, tourism/visitor management plans, scientific research and education strategies, and monitoring frameworks. This Periodic Report has identified key weaknesses in the knowledge of World Heritage concepts, which underlines the need for continued training of all stakeholders involved in World Heritage conservation. Overall, the Periodic Reporting exercise has provided an opportunity not only to review the current situation of World Heritage, but also to facilitate better communication between sites and experts in the region. It is hoped that European World Heritage properties can continue to use this momentum to build towards better information sharing and awareness building in the future.

9. Conclusion: Trends and Challenges within the Strategic Framework of the Budapest Declaration

The following paragraphs examine site needs as expressed in Section II reports of the Periodic Reporting exercise, within the framework of the “Four Cs” defined in the Budapest Declaration (2002) mentioned earlier – Credibility, Conservation, Capacity Building and Communication.

³³ A table summarizing the key answers received for each site is included in Information Document WHC-06/30.COM/INF.11A. It provides a site-by-site summary of the main points regarding the conservation, management and characteristics of each site, as well as potential decisions requested from the World Heritage Committee. This section should also be read in parallel to the sub-regional synthesis reports in Information Document WHC-06/30COM/INF.11A.

Overall Framework for the Implementation of the *World Heritage Convention*: International Cooperation

Objective:

- To improve the overall framework for the implementation of the *World Heritage Convention*.

Main conclusions

A broader participation of stakeholders is needed for the effective conservation of World Heritage sites. The cooperation between World Heritage sites on a national and regional level has proven to be very successful. Fresh partnerships should be further developed between State Parties and between sub-regions, offering better access to expertise and training. Cooperation and networking needs include dissemination of best practice especially regarding participatory processes, new management techniques and site promotion. Existing international programmes and networks such as *World Heritage in Young Hands*, *European Heritage Days*, *European Heritage Network* (HEREIN) etc. should also be reinforced to promote international cooperation and awareness-raising activities.

Credibility of the World Heritage List

Strategic objective:

- To strengthen the credibility of the World Heritage List.

This is an area which suffers from a lack of institutional memory and a lack of understanding of the basic underpinnings of World Heritage (i.e. outstanding universal value, authenticity and integrity, the Global Strategy, Tentative List preparation and harmonisation). Improvements require better communication at the national and international levels and further training for site managers, as well as better dissemination of relevant documentation and best practice examples, in national languages when possible. It is also essential to formally establish and facilitate feedback to the sites from both States Parties and the World Heritage Committee in order to ensure credibility and engagement. The clarification of the World Heritage context and process, namely criteria, Statements of Significance, boundaries and buffer zones, is urgent and considered to be a priority for follow-up. There is a specific need to establish a common language regarding transboundary sites.

Periodic Reporting has contributed to the identification of various gaps in national as well as in site specific policies. There is no doubt that its procedures should be maintained, improved and enhanced.

Feedback and further contacts with site managers could be encouraged through specific actions (e.g. site visits, thematic workshops networks). These would also satisfy the need for transparency of World Heritage processes. The World Heritage Centre website could function as a communicative tool (preferably interactively) between site managers and specialists, where site managers should have access to more information on the website.

Conservation of World Heritage

Strategic objective:

- To ensure the effective conservation of World Heritage properties.

Questions regarding overall management cooperation and site interpretation are a current issue. It is essential to develop a culture of preventive conservation and maintenance as well as standards for site management. A major challenge for future action at national and international levels is the need for conservation policies at landscape level and the integration and synergy of natural, cultural, environmental, economic, and tourism policies at all levels of governance.

There is a need to raise the awareness about the values of World Heritage sites and its specificity as guiding principles for its management. Answers from the Periodic Reporting questionnaires have demonstrated that concepts of protection and management, particularly the meaning of management systems and management plans, are not well understood.

There is a general need to develop approaches, key indicators and benchmarks and best practice in preventive conservation to meet existing threats and the raised standards in conservation. The development of monitoring mechanisms for World Heritage related values is an urgent management issue. There is a need for support from Advisory Bodies in capacity building and in identification of best practice for preventive monitoring, including the use of qualitative indicators. Furthermore, indicators that will serve as benchmarks for the next Periodic Reporting process need to be determined.

The development of tourism management plans and dissemination of best practice provide significant options for further networking. The issues range from limiting and/or targeting tourism flows to promotion and coordination of stakeholders and activities. The need for linking tourism to local economic development and the concept of sustainable tourism is a future challenge.

The importance of including the local communities in the World Heritage site management is highlighted, and many sites are seeking examples of best practice and guidance in developing collaboration and awareness building with the local community.

Capacity Building

Strategic objective:

– To promote the development of effective Capacity Building in the States Parties.

Capacity building at different levels is an essential step in enhancing World Heritage conservation in Europe. World Heritage concepts need to be thoroughly discussed, analysed and promoted amongst all staff involved in World Heritage conservation and management, from site level to national and international levels. Stakeholders should also be involved in conservation and management processes and made familiar with World Heritage concepts. Sub-regional seminars and workshops with representatives from different World Heritage sites should be organized and experts from the advisory bodies and other organizations invited.

There is a strong need for best practice exchange in both conservation and management. Other current training needs regard ‘new’ conservation fields as site interpretation, landscape conservation, monitoring methodologies and integrated management strategies as, for example, fund raising, urban rehabilitation, communication strategies and participatory mechanisms. The dissemination of research results and shared experiences on a sub-regional or on a thematic base would be useful. The UNESCO Associated School Programme, as well as other educational activities at site level, should be reinforced.

Loss of institutional memory is a major problem, especially when World Heritage knowledge and property information pertains to only a limited group of people. Access to all World Heritage documentation must be facilitated.

Communication

Strategic objective:

– To increase public awareness, involvement and support for World Heritage through Communication.

The adequate protection of World Heritage sites requires the communication of *World Heritage Convention* intrinsic idea and concepts to all stakeholders. The inclusive partnership approach of the World Heritage should therefore be enforced. All relevant stakeholders,

especially on site level, should be updated about the results and decisions concerning Periodic Reporting process. The lack of institutional memory and knowledge about the World Heritage process highlights the need to implement an interactive communication between all concerned. There is a need for dissemination of successful strategies for a dialogue with the local community, with decision makers on all levels, property owners, with the broad public and within educational programmes.

10. Assessment of the Periodic Reporting Tool and Other Recommended Actions for the Reflection Year on Periodic Reporting

Section I:

In terms of the electronic questionnaire used by States Parties for the completion of Periodic Reporting on Section I, the overall assessment of the electronic tool has been positive, the user-friendliness being rated as good (43%), average (35%) and very good (20%). Improvements and changes were discussed during a meeting, arranged for all European focal-points, hosted by the German authorities in Berlin in 8-9 November 2005. Specific recommendations and suggestions for the reflection year for Periodic Reporting in 2007 were also a subject of a subsequent meeting (10-11 November 2005).

The future potential for information sharing with the Council of Europe (HEREIN) will be further explored. Translation of the questionnaire into different European languages may also be useful and may be taken into account in the further development of the methodology for Periodic Reporting.

Section II:

Overall, according to question 18, 73% of site managers found the information made available during the preparation of the Periodic Reporting either 'good' (54%) or 'very good' (19%). A quarter of the reports rated the information provided as 'average', and 5 reports (in Western Europe and the Nordic-Baltic Sub-region exclusively) considered it 'bad' or 'very bad'. Despite the rather positive feedback, the overall responses reveal a lack of understanding of key World Heritage concepts and a need for further information and documentation on World Heritage issues and terminology.

In fact, a total of 131 reports (53%) termed the clarity and user-friendliness of the questionnaire 'good' (44%) or 'very good' (9%), while 101 reports (41%) rated it as 'average'. Fifteen reports (6%) considered it 'bad' (5%) and 'very bad' (1%) (with the exception of Eastern Europe). Overall, 93% of site managers think that the Periodic Reporting process will produce benefits to the site (with a 100% satisfaction rate in Central and South-Eastern Europe and Eastern Europe respectively). Only sixteen reports, mostly from Western Europe and the Mediterranean Sub-region, replied negatively to this question and seemed sceptical as to any benefits.

Methodological issues concerning Section I and II questionnaires and the synthesis report as a tool for analysis, should be further discussed. The next Periodic Reporting cycle should be based on the clarification and simplification of the questionnaire and be supported by written documentation outlining method and analysis. Definitions of such concepts as statement of significance, outstanding universal value, steering committee, management plans, and reactive monitoring should be provided, as well as best practice examples for comparison. This work could involve present networks of focal points and experienced site managers. Furthermore, indicators that will serve as benchmarks for the next Periodic Reporting process need to be determined.

**PART IV:
SYNTHESIS OF THE RESULTS OF
SECTIONS I AND II
OF THE PERIODIC REPORTS
BY SUB-REGION**

SYNTHESIS OF THE RESULTS OF SECTIONS I AND II OF THE PERIODIC REPORTS BY SUB-REGION

In this chapter, an attempt is made to specifically review the strengths and weaknesses in each of the sub-regions as they were reported in Sections I and II of the Periodic Reports. Recommendations are then offered for each sub-region, based on the conclusions of this Periodic Report exercise.

1. Western Europe

Strengths

- Strong governmental and public awareness and increasing interest in heritage and particular World Heritage in recent years;
- Enhanced World Heritage dynamics which foster integrated development schemes;
- Sound legal basis and good regulatory tools for protection of cultural and natural heritage;
- General support from governments for Tentative Lists and nominations;
- Good network of professionals involved in heritage conservation, high-level of expertise and professionalism;
- Good national data survey systems;
- Considerable involvement of the private sector;
- Strong international solidarity through international cooperation (national, regional, and local levels) and active solidarity through exchange of expertise, and cooperation agreements. Wish to enhance cooperation, expertise and scientific exchange;
- Active involvement of NGO's and civil society;
- Measures and incentives to promote information and education on heritage.

Weaknesses

- High number of World Heritage properties leading to a great workload in the World Heritage system;
- Awareness for heritage but not always a good understanding of the *Convention* or of World Heritage;
- Lack of systematic approach to properties on the Tentative Lists and nominations.
- Need to harmonise Tentative Lists and lack of proper identification of natural properties;
- Lack of integration between natural and cultural heritage;
- Need for better information regarding management plans and buffer zones;
- Difficulties to implement management plans;
- Lack of coordination at times, due to dilution of responsibilities;
- Reorganization of functions and loss of expertise, division of responsibility between central and local government;
- Lack of local resources, and/or irregular resources.

Table 15: Recommended actions and responsibilities for World Heritage in Western Europe

Strategic Objective: Strengthen the Credibility of the World Heritage List	Responsibility				
	World Heritage Committee	World Heritage Centre	Advisory Bodies	States Parties	Sites
Strengthen the understanding of World Heritage conservation in the European Region by clarifying concepts, in particular those of 'outstanding universal value', World Heritage criteria, and authenticity and integrity, through training and capacity building in particular for States Parties and site managers	X	X	X	X	
Promote discussions through meetings and workshops on the implementation of the <i>World Heritage Convention</i> and its concepts at all levels in the sub-region.		X		X	X
Encourage the development of transnational sites as a tool of international cooperation	X	X		X	
Encourage all State Parties to consider linking inscribed World Heritage Properties of similar type (ex. churches, palaces, Classical sites etc.) on a national and international level through the preparation of transboundary/transnational agreements, requesting clarification on the process of joining existing sites when the Cairns Suzhou decision is reviewed in 2007	X	X		X	
Disseminate best practice nominations as models and assist in documentation and information collection for better prepared nominations		X	X		
Strategic Objective: Ensure the Effective Conservation of World Heritage Properties	Responsibility				
	World Heritage Committee	World Heritage Centre	Advisory Bodies	States Parties	Sites
Further disseminate the Berlin Appeal and follow-up on the cooperation with European institutions		X			
Strengthen collaboration among national and regional authorities as well as natural and cultural heritage agencies in order to encourage the development of integrated policy		X		X	
Analyse management frameworks in the sub-regional context and provide assistance for the development of model management systems		X	X	X	X
Promote updating of heritage legislation to reflect current approaches to buffer zones, landscape conservation, the integration of cultural and natural heritage and the concepts of integrity and authenticity. Develop and expand guidance on the Vienna Memorandum and other documents through specific regional workshops emphasising management of World Heritage properties in their broader landscape context		X		X	
Strengthen cooperation between natural and cultural heritage agencies and ensure coordination between the local and national levels			X	X	
Integrate World Heritage management into the wider regional, social and policy context at all levels				X	
Ensure a systematic approach to public and local involvement in heritage management and preservation				X	X
Assist in the development of management systems adapted to transboundary and transnational/serial properties		X	X		
Promote best practice through World Heritage site partnerships and twinning arrangements, particularly between Eastern and Western European countries and by thematic groups		X	X	X	X
Provide training for project proposal preparation and funding applications in several sub-regions		X	X		

Strategic Objective: Promote the Development of Effective Capacity Building in the States Parties	Responsibility				
	World Heritage Committee	World Heritage Centre	Advisory Bodies	States Parties	Sites
Facilitate training in the basic concepts of the <i>World Heritage Convention</i> , such as 'outstanding universal value' and Statement of Significance, and on World Heritage-related topics.		X	X	X	
Develop strategies and programmes for capacity building in the sub-region based on the results of the Periodic Reporting with the help of IUCN, ICOMOS and ICCROM		X	X		
Provide the States Parties with manuals, promotion material, best practices, and develop a tool-kit for site managers		X	X		
Ensure coordinated approaches to funding sources and encourage further acquaintance with funding institutions, including European Union institutions, and access to resources		X		X	
Based on a common strategic plan/programme, initiate short and long-term activities to enhance cooperation on World Heritage issues in the sub-region at the bilateral or multilateral levels by sharing expertise and developing partnerships		X		X	
Develop national and/or international research frameworks for World Heritage issues		X		X	
Strategic Objective: Increase Public Awareness, Involvement and Support for World Heritage through Communication	Responsibility				
	World Heritage Committee	World Heritage Centre	Advisory Bodies	States Parties	Sites
Develop strategies for information, awareness-building and education, based on identified needs in sub-regions in collaboration with the Advisory Bodies		X	X	X	
Develop models and standards for information material		X	X		
Support community participation in heritage preservation and management				X	X
Raise awareness of World Heritage at all levels of society including site managers and local communities (e.g. education, conscious media policy)				X	X
Identify and disseminate best practice (e.g. Tentative Lists, nominations, management planning, serial/transnational sites)		X	X	X	
Ensure that complete documentation is provided in reply to the retrospective inventory paralleling the European Periodic Reporting and to consider submitting the follow-up actions to Circular Letter of 23 January 2006 (names changes, boundary and buffer-zone revisions, criteria changes etc.) in a timely manner, at the latest by 2008				X	
Encourage the development of baseline data within States Parties and ensure effective feedback between the World Heritage Centre and the responsible authorities		X		X	
Develop preventive and proactive approaches (including updating of techniques and cross-sectoral approaches to risk management) to conservation by all stakeholders involved and integrate them into management planning		X	X	X	X
Encourage responsible approaches to tourism in and around World Heritage sites and encourage the use of effective tools and tourism planning models as well as codes of conducts		X		X	X
Ensure effective management of World Heritage properties and regularly monitor their conditions				X	X
Ensure that properties are adequately staffed according to site specific needs				X	X
Disseminate the final synthesis reports and decision by the Committee to all States Parties for transmission to national institutions, site managers and other stakeholders		X		X	

2. Nordic and Baltic Europe

Strengths

- Sound national legal systems for protection and conservation of cultural and natural heritage;
- Inventories on cultural and natural heritage compiled through regional and national cooperation and used as a basis for Tentative Lists;
- Long-term cooperation on Tentative List harmonisation in the Nordic countries;
- Properties in Nordic countries being nominated from underrepresented categories;
- Active role and involvement of NGO's and civil society in heritage conservation;
- Nordic World Heritage Foundation as an example of international cooperation and contribution to the implementation of the *Convention*;

Weaknesses

- Tentative Lists in the Baltic countries have not been revised, and consideration to Tentative List harmonisation not implemented;
- General lack of funding, especially in Baltic countries;
- Need for capacity building at different levels for improved management of World Heritage;
- Involvement of local communities to be improved at site level;
- Better coordination of media for promotion of World Heritage;
- Lack of coordination and communication between authorities in Baltic countries;
- NGO's position in Baltic countries to be strengthened.

Table 16: Recommended actions and responsibilities for World Heritage in the Nordic-Baltic sub-region

Strategic Objective: Strengthen the Credibility of the World Heritage List	Responsibility				
	World Heritage Committee	World Heritage Centre	Advisory Bodies	States Parties	Sites
Promote meetings and workshops on the implementation of the <i>World Heritage Convention</i> and its concepts (at sub-regional, national and local level) based on the new <i>Operational Guidelines</i>		X	X	X	
Promote sub-regional harmonisation of Tentative Lists to achieve a better balanced and representative World Heritage List		X		X	
Promote the participation of local authorities and different stakeholders in the identification and nomination of World Heritage sites				X	X

Strategic Objective: Ensure the Effective Conservation of World Heritage Properties	Responsibility				
	World Heritage Committee	World Heritage Centre	Advisory Bodies	States Parties	Sites
Enhance cooperation with the European Union and the Council of Europe	X	X		X	
Promote sub-regional cooperation for EU-funding		X		X	
Special national grants earmarked for World Heritage sites should be established				X	
Consider certain amendments to national legislation to enhance management and protection of World Heritage sites				X	
Ensure mainstreaming of World Heritage in national, regional, and local planning processes				X	X
Strengthen cooperation between natural and cultural heritage agencies			X	X	

Strengthen the implementation of the new <i>Operational Guidelines</i>		X	X	X	
Develop mechanisms for simplifying access to World Heritage documentation, and take measures to secure institutional memory		X		X	X
Develop and revise management plans in accordance with new requirements				X	X
Revise boundaries and buffer zones at World Heritage sites, if needed				X	X
Develop methodologies, criteria and guidelines for the management of buffer zones		X	X	X	
Develop and implement monitoring methodologies, criteria and indicators		X	X	X	
Consider the use of new technology in the monitoring process			X	X	X
Ensure that visitor/tourism management plans exists at all relevant sites				X	X

Strategic Objective: Promote the Development of Effective Capacity Building in the States Parties	Responsibility				
	World Heritage Committee	World Heritage Centre	Advisory Bodies	States Parties	Sites
Encourage the development of sub-regional networks for relevant capacity-building initiatives		X	X	X	
Facilitate training in the basic concepts of the <i>World Heritage Convention</i> , such as 'outstanding universal value' and Statement of Significance		X	X	X	
Facilitate training on the development of management plans and monitoring systems		X	X	X	
Promote cooperation and exchange of experiences at sub-regional, national and local level		X	X	X	X
Strengthen existing capacity building networks		X	X	X	
Use highly qualified World Heritage expertise (IUCN, ICOMOS, ICCROM) when needed			X	X	
Provide the States Parties with manuals, promotion material, best practices etc		X	X		
Develop a tool-kit for site managers		X	X		
Develop sub-regional and national strategies for scientific research		X		X	
Encourage international and interdisciplinary research on World Heritage related topics		X		X	
Systematically collect scientific studies relevant for World Heritage work and make them available to relevant parties		X		X	

Strategic Objective: Increase Public Awareness, Involvement and Support for World Heritage through Communication	Responsibility				
	World Heritage Committee	World Heritage Centre	Advisory Bodies	States Parties	Sites
Identify information channels for reaching relevant groups at local, national and international level		X		X	X
Establish mechanisms for effective communication between site, national and UNESCO levels		X		X	X
Develop appropriate information material for defined target groups		X		X	X
Develop information material encouraging sustainable tourism, such as a 'Code of Conduct'		X		X	X
Establish websites for all World Heritage sites focusing on World Heritage issues				X	X
Develop sub-regional and national strategies for education		X	X	X	
Strengthen higher level education for heritage conservation and management				X	
Include heritage education in established school curricula.				X	
Promote participation in 'World Heritage in Young Hands'		X		X	
Distribute information on the results of the Periodic Reporting exercise to relevant stakeholders		X		X	

3. Mediterranean Europe

Strengths

- Comprehensive national inventories and good data survey system;
- Legal basis and good regulatory tools for protection of cultural and natural heritage
- Some recently updated Tentative Lists;
- Good cooperation and collaboration with national, regional and local organizations;
- Active NGO and civil society participation in heritage protection;
- Particular working groups or committees established for World Heritage issues;
- International cooperation and expert cooperation with other regions;
- Very active promotion of World Heritage, through heritage days and festivities;
- IUCN Mediterranean Office.

Weaknesses

- Need for further understanding of World Heritage criteria and the nomination process;
- Need to increase involvement of local communities in site management;
- Need to strengthen management planning;
- Lack of integration of natural and cultural heritage legislations;
- Need for coordination of cultural and natural heritage management;
- Dilution of heritage responsibilities;
- Need for partnerships and fund-raising;
- Need for further professional training programmes and regional and international coordination in training.

Table 17: Recommended actions and responsibilities for World Heritage in Mediterranean Europe

Strategic Objective: Strengthen the Credibility of the World Heritage List	Responsibility				
	World Heritage Committee	World Heritage Centre	Advisory Bodies	States Parties	Sites
Strengthen the understanding of World Heritage conservation in the European Region by clarifying concepts, in particular those of 'outstanding universal value,' World Heritage criteria, and authenticity and integrity, through training and capacity building in particular for States Parties and site managers	X	X	X	X	
Promote and support cooperation and assistance among States Parties in the sub-region on World Heritage related issues		X		X	
Promote the participation of local authorities and all stakeholders in the identification and nomination of World Heritage sites				X	X
Encourage the development of baseline data within States Parties and ensure effective feedback between the World Heritage Centre and the responsible authorities		X		X	X

Strategic Objective: Ensure the Effective Conservation of World Heritage Properties	Responsibility				
	World Heritage Committee	World Heritage Centre	Advisory Bodies	States Parties	Sites
Integrate World Heritage management into the wider regional, social and policy context on all levels		X		X	X
Strengthen collaboration among national, regional and local authorities and heritage agencies in order to encourage the development of integrated policy				X	X

Urge all stakeholders to develop preventive and proactive approaches to conservation				X	X
Analyse management frameworks in the sub-regional context and provide assistance for the development of model management systems, including transboundary and serial sites		X		X	X
Update heritage legislation to reflect current approaches to buffer zones, landscape conservation, the integration of cultural and natural heritage and the concepts of integrity and authenticity. Develop and expand guidance on [or follow up to] the Vienna Memorandum and other documents through specific regional workshops emphasising management of World Heritage properties in their broader landscape context		X		X	
Ensure a systematic approach to public and local involvement in heritage management and preservation				X	X
Promote best practice through World Heritage site partnerships and twinning arrangements		X		X	X
Ensure coordinated approaches to funding sources and to encourage further acquaintance with funding institutions, including European Union institutions, and access to resources		X		X	

Strategic Objective: Promote the Development of Effective Capacity Building in the States Parties	Responsibility				
	World Heritage Committee	World Heritage Centre	Advisory Bodies	States Parties	Sites
Facilitate training in the basic concepts of the <i>World Heritage Convention</i> , such as 'outstanding universal value' and Statement of Significance and on World Heritage-related topics.	X	X	X	X	
Develop strategies and programmes for capacity building in the sub-region based on the results of the Periodic Reporting with the help of IUCN, ICOMOS and ICCROM		X	X	X	
Provide the States Parties with manuals, promotion material, best practices, and develop a tool-kit for site managers		X	X		
Identify and disseminate best practice regarding World Heritage related management issues		X	X	X	
Initiate and disseminate research on World Heritage related topics		X		X	
Encourage responsible approaches to tourism in and around World Heritage sites		X		X	X
Ensure that properties are adequately staffed according to site specific needs				X	X

Strategic Objective: Increase Public Awareness, Involvement and Support for World Heritage through Communication	Responsibility				
	World Heritage Committee	World Heritage Centre	Advisory Bodies	States Parties	Sites
Encourage broad recognition of the importance of sustainable use of World Heritage, including tourism, for the social and economic benefit of local and national communities		X	X	X	X
Develop strategies for information, awareness-building and education, based on identified needs in sub-regions in collaboration with the Advisory Bodies		X	X	X	X
Develop models and standards for World Heritage interpretation, site presentation and information material		X	X	X	X
Disseminate strategies and support community participation in heritage preservation and management		X		X	X

4. Central and South-Eastern Europe

Strengths

- Provision of selected positive administrative and legal measures in the field of identification, protection, conservation and presentation of World Heritage in the sub-region;
- Enhanced World Heritage activities for education, professional training and awareness raising in parts of the sub-region;
- Enhanced conservation activities in parts of the sub-region resulting in removal of properties from the World Heritage in Danger;
- Increased interest of governments and the general public towards the *World Heritage Convention* and World Heritage properties;
- Growing and recent involvement of local communities in conservation process;
- Ongoing European Union integration processes contributing towards sub-regional or regional cooperation;

Weaknesses

- Lack of heritage policies in the sub-region or the implementation of existing policies;
- Inadequate legal protection for World Heritage;
- Loss of institutional memory and documentation;
- Damage to the heritage from political conflict in parts of the sub-region;
- Inadequate capacity building and training in the institutions and of individuals involved in the World Heritage;
- Inadequate funding in the field of heritage;
- Inadequate representation of heritage of the sub-region on the World Heritage List and lack of adequate inventories in parts of the sub-region;
- Overall lack of national and sub-regional strategy for the implementation of the *World Heritage Convention*;
- Difficulties in developing focused strategies for the sub-region because of different needs resulting from political and historical background in each country.

Table 18: Recommended actions and responsibilities for World Heritage in Central and South-Eastern Europe

Strategic Objective: Strengthen the Credibility of the World Heritage List	Responsibility				
	World Heritage Committee	World Heritage Centre	Advisory Bodies	States Parties	Sites
Reach a broader recognition of the importance of WH as a model for sustainable use and tourism for the benefit of local/national communities	X	X	X	X	X
Ensure better coordination and co-operation between cultural and natural heritage in all relevant levels (from local to international)	X	X	X	X	X
Strategic Objective: Ensure the Effective Conservation of World Heritage Properties	Responsibility				
	World Heritage Committee	World Heritage Centre	Advisory Bodies	States Parties	Sites
Develop preventive and proactive approaches to conservation: <ul style="list-style-type: none"> - by involving all stakeholders and integrating them into management issues - by integrating WH management into national, regional and local planning mechanisms - by integrating conservation and development initiatives - by integrating (protective) measures for cultural and natural values 			X	X	X

Ensure that national institutions responsible for the (natural and cultural) heritage protection and Ministries of Foreign Affairs of the State Parties further review the whole complex of their legal base in order to define strengths and weaknesses of international cooperation in the field of heritage conservation and to develop general policies for future actions in this realm				X	
Ensure effective management by establishing adequate monitoring systems relying on the identification and use of site-specific indicators, including those related to tourism				X	X
Ensure adequate staffing (both in number and qualification), material/technical equipments with (sustainable) financial sources according to specific needs of WH properties				X	X

Strategic Objective: Promote the Development of Effective Capacity Building in the States Parties	Responsibility				
	World Heritage Committee	World Heritage Centre	Advisory Bodies	States Parties	Sites
Establish an effective network of national focal points and site managers both in the sub region and in a wider perspective, and enhance exchange between participants of those networks		X		X	X
Develop targeted training facilities for site managers by: - preparing focused tool kits on management - running specialised courses for site managers and other stakeholders - organizing thematic workshops and short (1-2 days) and information 'conferences' - establishing expert-exchange programmes		X	X	X	X
Produce and disseminate 'best practices' in all relevant fields, including: - sustainable use of WH sites - management issues (serial properties, tourism etc) - environmental impact assessments - training facilities and solutions		X	X		
Encourage WH focused research in several fields, including: - integrated management - monitoring (with indicators) - integrated development & conservation strategies (including impacts of large scale infrastructure projects)		X	X	X	

Strategic Objective: Increase Public Awareness, Involvement and Support for World Heritage through Communication	Responsibility				
	World Heritage Committee	World Heritage Centre	Advisory Bodies	States Parties	Sites
Update the WH Glossary and develop it linking with HEREIN Thesaurus (as many languages as possible), for a better common understanding		X	X		
Develop models and standards for information and interpretation		X			
Publish and disseminate: - basic WH documents and all relevant information as widely as possible - results of Periodic Reporting exercise, in local languages as far as possible		X		X	
Enhance and support participation in heritage preservation and management targeting: - the youth generation including young professionals - local communities and NGOs - media - education (universities etc.)		X		X	X

5. Eastern Europe

Strengths

- Provision of selected positive administrative and legal measures in the field of identification, protection, conservation and presentation of World Heritage in the sub-region;
- Increased interest of governments and the general public towards the *World Heritage Convention* and World Heritage properties;
- Growing participation of NGOs in the field of heritage conservation;
- Positive impacts of ratification of the *World Heritage Convention* on the safeguarding of national heritage;

Weaknesses

- Lack of heritage policies in the sub-region or the implementation of existing policies;
- Inadequate legal protection of World Heritage;
- Lack of capacity and training in the institutions and of individuals involved in World Heritage;
- Gaps in conservation techniques and professional skills;
- Inadequate funding in the field of heritage;
- Inadequate representation of heritage of the sub-region on the World Heritage List.
- Overall lack of national and sub-regional strategy for the implementation of the *World Heritage Convention*.

Table 19: Recommended actions and responsibilities for World Heritage in Eastern Europe

Strategic Objective: Strengthen the Credibility of the World Heritage List	Responsibility				
	World Heritage Committee	World Heritage Centre	Advisory Bodies	States Parties	Sites
Update national inventories using appropriate information management technologies (e.g. digitisation and databases)		X	X	X	X
Update documentation on existing World Heritage properties		X		X	X
Update Tentative Lists and develop policies concerning the procedures for such revision		X		X	
Harmonise Tentative Lists within the sub-region and with other sub-regions in Europe and globally		X	X	X	
Establish strategies for future nominations in each country and enhance inter-institutional cooperation for the preparation of nomination dossiers				X	

Strategic Objective: Ensure the Effective Conservation of World Heritage Properties	Responsibility				
	World Heritage Committee	World Heritage Centre	Advisory Bodies	States Parties	Sites
Define integrated policies for conservation of both cultural and natural World Heritage				X	
Reform existing heritage legislations				X	
Design sub-regional programme aiming to help States Parties establish the effective management mechanisms for the cultural and natural properties		X	X	X	
Establish appropriate management plans for all inscribed properties				X	
Enhance cooperation between States Parties in the fields of protection and conservation of heritage located on their territories, in particular in the case of shared heritage				X	
Develop scientific studies and research programmes specific to World Heritage		X		X	X

Strategic Objective: Promote the Development of Effective Capacity Building in the States Parties	Responsibility				
	World Heritage Committee	World Heritage Centre	Advisory Bodies	States Parties	Sites
Explore national and international funding for World Heritage activities in general and improving the level of service for heritage conservation in particular		X	X	X	
Develop sub-regional programmes focused on capacity-building for institutions and site managers involved in heritage management and conservation activities	X	X	X	X	X
Institutionalise and reinforce the Focal Points Network		X		X	
Develop sub-regional programmes to create training opportunities for policy and decision makers, site managers, conservation specialists and NGOs		X	X	X	
Develop an ICCROM global training strategy for World Heritage in the sub-region			X		
Provide specific training to help the States Parties to define boundaries and buffer and core zones for World Heritage sites		X	X	X	
Develop a European and worldwide programme to foster cooperation and exchange ideas, technical experience and contacts between specialists of different countries involved in World Heritage activities		X	X	X	
One of the main achievements of the Periodic Reporting lies in the creation of a community of Focal Points. Keep this network operational in the future, expand its responsibilities and provide it with all possible assistance		X	X	X	X

Strategic Objective: Increase Public Awareness, Involvement and Support for World Heritage through Communication	Responsibility				
	World Heritage Committee	World Heritage Centre	Advisory Bodies	States Parties	Sites
Organize workshops and other programmes to increase community participation in heritage conservation and management		X	X	X	
Join <i>Young People's Participation in World Heritage Preservation and Promotion Project</i>				X	
Design a sub-regional project to support the involvement of NGOs and the private sector in the implementation of the <i>World Heritage Convention</i>		X	X	X	
Develop a sub-regional programme to coordinate awareness-raising activities		X	X	X	

**PART V:
ACTION PLAN FOR EUROPE**

ACTION PLAN FOR EUROPE

The first elements for an Action Plan following the analysis of Section I were included into document WHC-05/29.COM/11B. However, the finalized Action Plan could only be presented once Section II was completed. As the Committee at its 29th session did not have the time to review the document and the results of Section I, the European Periodic Reporting Meeting hosted by the German authorities in Berlin from 8 to 9 November 2006 provided a new opportunity for all States Parties to review the outcome of Section I and the preliminary results of Section II. Therefore, the Berlin Meeting led to the adoption of two documents that form the basis for the Action Plan below:

- (a) the Berlin Appeal which calls for enhanced European cooperation specifically between UNESCO the Council of Europe and the European Union (See Box 1 opposite) and
- (b) elements for the final Action Plan.

Subsequently, a meeting between the Chairperson and Rapporteur of the European working group, the Advisory Bodies, the sub-regional consultants and the World Heritage Centre staff, took place from 27 February to 3 March 2006 at UNESCO to review the results of the Section II reports and integrate the Berlin Action Plan elements. It should be also noted that in parallel the sub-regional reports for Section II with were also compiled based on the detailed results of the qualitative (review of hardcopy reports) and quantitative (statistical examination from the electronic tool) analysis. All sub-regional reports (both Section I and Section II) are contained in Information Document *WHC-06/30.COM/INF.11A*. Furthermore, a new approach was taken to have consultants from the Advisory Bodies as part of the drafting group to enhance long-term cooperation, ensure consistency in the approach and to better coordinate the follow-up activities proposed in the Action Plan.

The Berlin meeting was also a major success in terms of networking between the regions and the national focal points. It encouraged national authorities and regional groups to continue the Periodic Reporting collaboration. This led to a number of follow-up activities including a meeting of the Mediterranean sub-region hosted by Italy in Rome (February 2006), a meeting for South-Eastern Europe suggested by Greece (Thessaloniki, September 2006) and a meeting proposed by the French authorities for Western Europe (Paris, October 2006).

The Action Plan below is the result of five years of work and intense cooperation on both the sub-regional and European levels. It takes into account the results of the different meetings, the qualitative and quantitative analysis of the data received, and the comments and in-depth review by consultants, the Advisory Bodies and the World Heritage Centre. It is primarily structured according to the Strategic Objectives adopted by the World Heritage Committee at its 26th session in 2002 and actions are grouped according to the requirements of the *Convention*.

Box 1: The Berlin Appeal**Berlin Appeal*****“World Heritage Periodic Reporting in Europe: Towards an Action Plan”***

The 61 delegates representing 38 European countries, meeting in Berlin, Germany from 8 to 9 November 2005 with international experts, the Advisory Bodies to the *World Heritage Convention* (the International Centre for the Study of the Preservation on and Restoration of Cultural Property - ICCROM, the World Conservation Union - IUCN, the International Council on Monuments and Sites - ICOMOS) and the UNESCO World Heritage Centre, to review the progress of Periodic Reporting on the implementation of the *World Heritage Convention* in Europe since the meeting held jointly with the Council of Europe in Nicosia, Cyprus, in May 2003:

1. Thanking with appreciation the German national authorities for hosting the meeting and the National Commissions of Austria, Germany, Luxembourg and Switzerland for their cooperation,
2. Recall the Decisions by the World Heritage Committee on European Periodic Reporting since 2001;
3. Recognize the success of the implementation of the World Heritage in encouraging international cooperation among European States Parties in the Periodic Reporting process as well as its role in supporting sustainable use of our heritage for social and economic benefits of local and national communities;
4. Welcome the positive results of the cooperation among European States Parties in the implementation of the Periodic Reporting process and the overall active participation in the process by all 48 States Parties;
5. Urge all stakeholders to develop preventive and proactive approaches to conservation;
6. Note that UNESCO, the World Heritage Committee, the Council of Europe and the European Union all have roles in conservation and sustainable use of our common heritage;
7. Call on UNESCO, the World Heritage Committee, the Council of Europe and the European Union to examine ways to focus their efforts and to increase cooperation in the support of World Heritage and using it as an exemplar for management and sustainable use of European heritage;
8. Invite States Parties to the World Heritage Convention, organs of the European Union (Council of Ministers, European Parliament, and the European Commission) and the Council of Europe to develop consistent mechanisms and initiate the necessary measures to achieve these objectives;
9. Call on the Council of Ministers and the European Commission to implement the *European Parliament Resolution on the application of the Convention Concerning the Protection of the World Cultural and National Heritage in the Member States of the European Union (2000/2036 (INI))*, in particular with regard to giving priority funding to World Heritage in any future programmes.

Overall Action Plan	Responsibility				
	World Heritage Committee	World Heritage Centre	Advisory Bodies	States Parties	Site
<p>MAIN NEEDS:</p> <p><i>Better Understanding of World Heritage Concepts</i></p> <p>1- Strengthen the understanding of World Heritage conservation in the European Region by clarifying concepts, in particular those of:</p> <ul style="list-style-type: none"> - 'outstanding universal value', - World Heritage criteria, - authenticity and integrity <p>through training and capacity building in particular for States Parties and site managers;</p> <p>2- Continue improving the implementation of the <i>World Heritage Convention</i> within the framework of the Global Strategy using Periodic Reporting as an efficient tool on all levels;</p> <p>3- Spread awareness of World Heritage values among all levels of society and institutions involved in the conservation of sites of the benefit of World Heritage.</p>	X	X	X		
<p>STRATEGIC OBJECTIVE: STRENGTHEN THE CREDIBILITY OF THE WORLD HERITAGE LIST</p> <p><i>1- Inventories, documentation, information management</i></p> <p>1. Assist States Parties in the modernisation of their national inventories and conducting information management activities (digitisation, information systems and databases);</p> <p>2. Encourage wider dissemination of ICOMOS and IUCN studies and results of 'gap' analysis;</p> <p>3. Promote broad participation in meetings on international and national level on the identification of natural and cultural heritage.</p>		X	X		
<p><i>2- Tentative Lists</i></p> <p>1. Provide international expertise and best practice to assist States Parties in the definition of policies for each sub-region concerning the procedures of revision, up-to-date and harmonisation of Tentative Lists into account the diversity of heritage;</p> <p>2. Encourage States Parties to regularly review Tentative Lists and to implement recommendations of Tentative List harmonisation meetings, ICOMOS and IUCN 'gap' analysis, as well as best practice examples in Tentative Lists;</p> <p>3. Encourage further regional cooperation on Tentative List harmonisation and cooperation on joint themes by considering the possibility of selecting serial, transboundary and transnational sites (<i>Operational Guidelines</i>, paragraph 65);</p> <p>4. Request the World Heritage Committee to provide strategic advice on the implementation of the Global Strategy and its subsequent decisions on priorities and on how States Parties could best use the gap analysis and thematic studies to prepare Tentative Lists;</p> <p>5. Harmonize Tentative Lists at the national level, in particular for Federal States;</p> <p>6. Ensure protection and management of sites on national Tentative List as a preliminary step for the preparation for future nominations;</p>	X	X	X	X	

<p>3- Nominations</p> <ol style="list-style-type: none"> 1. Encourage States Parties to work on the definition of general policies in the field of nomination decision-making and on the development of more comprehensive interdepartmental cooperation at the national, regional and local levels; 2. Encourage States Parties to respect decisions of the World Heritage Committee relating to balance of the <i>World Heritage List</i> and thereby prioritising nominations of categories which contribute to a balanced representation of the diversity of cultural and natural heritage of the region; 3. Assist, in particular, those States Parties in Europe whose cultural and natural heritage of potential <i>outstanding universal value</i> is underrepresented on the World Heritage List, to develop nominations; 4. Encourage development of transnational sites as a tool of international cooperation; 5. Encourage all States Parties to consider linking heritage properties representing a certain category inscribed on the World Heritage List on a national and international level, by preparing transboundary/transnational agreements and linking of existing sites into transnational sites and request clarification on the process of joining existing sites when the Cairns Suzhou decision is reviewed in 2007; 6. Encourage the strengthening of management systems prior to inscription; 7. Disseminate best practice nominations as models and assist in documentation and information collection for better prepared nominations. 		X	X	X	
<p>STRATEGIC OBJECTIVE: ENSURE THE EFFECTIVE CONSERVATION OF WORLD HERITAGE PROPERTIES</p> <p>4- General Policy Development for Heritage Conservation</p> <ol style="list-style-type: none"> 1. Further disseminate the Berlin Appeal and follow-up on the cooperation with European institutions. 2. Share experiences in heritage legislation development and implementation among States Parties; 3. Strengthen collaboration among national and regional authorities as well as natural and cultural heritage agencies and encourage an integrated policy, including World Heritage research; 4. Analyse management frameworks in the sub-regional context and assistance to be provided to develop model management systems; 5. Encourage States Parties to harmonize their legislation at all levels (national, regional, local) and to implement it in order to ensure adequate protection of World Heritage; as many States Parties experience problems in implementing the <i>Convention</i>, particularly in Federal States the authorities responsible for the Convention are not necessarily responsible for individual natural or cultural properties; 6. Promote updating or reform of heritage legislation to reflect current approaches to buffer zones and landscape conservation, the integration of cultural and natural heritage and the concepts of integrity and authenticity; Develop and expand guidance on or follow up to the Vienna Memorandum on World Heritage and Contemporary Architecture (May 2005), the Declaration on the Conservation of Historic Urban Landscapes (October 2005), and other documents with specific regional workshops emphasising management of World Heritage properties in their broader landscape context; 7. Strengthen cooperation between natural and cultural heritage agencies, encourage integrated policies and ensure coordination between the local and national levels; 8. Integrate World Heritage management into the wider regional, social and policy context at all levels; 9. Ensure a systematic approach to public and local involvement in heritage management and preservation. 	X	X	X	X	X

<p>5 – Credible baseline data of each property</p> <ol style="list-style-type: none"> 1. States Parties to ensure the timely replies to the retrospective inventory paralleling the European Periodic Reporting and to consider submitting the follow-up actions to Circular Letter of 23 January 2006 (names changes, boundary and bufferzone revisions, criteria changes etc.) in a timely manner, at the latest by 2008 [cross reference to Committee decision]; 2. Encourage the development of baseline data within States Parties and ensure effective feedback between the World Heritage Centre and the responsible authorities; 3. Use the results of Periodic Reporting at the national level as baseline data for future application. 		X	X	X	
<p>6 – Conservation, management and protection of World Heritage properties</p> <ol style="list-style-type: none"> 1. Encourage broad recognition of the importance of sustainable use of World Heritage, including tourism, for the economic and social benefit of local and national communities, and encourage responsible approaches to tourism in and around World Heritage sites and using effective tools and tourism planning models as well as codes of conducts; 2. Develop preventive and proactive approaches (including updating of techniques and cross-sectoral approaches to risk management) to conservation by all stakeholders involved and integrate them into management planning; 3. Ensure effective management of World Heritage properties and regularly monitor their conditions; 4. Encourage the creation of national committees of all partners (government departments and other agencies) and of national networks of site managers, steering groups, local communities and other stakeholders and ensure effective on-site coordination and mechanisms as well as communication mechanisms; 5. Document best practice of both management and sustainable use of World Heritage properties; 6. Enhance exchange between site managers on best practice including the development of (thematic) site networks and site twinning; 7. Encourage World Heritage focussed research strategies particularly for effectiveness of integrated management, the identification of monitoring indicators, best standards of environmental impact assessment (EIA), and infrastructure projects; 8. Ensure that properties are adequately staffed according to site specific needs; 9. Ensure better coordination between cultural and natural heritage issues and demonstrating the conservation of both cultural and natural values in an integrated way; 10. Integrate World Heritage Management into national, regional and local planning mechanisms; 11. Make full use of existing networks and coordinate with other organizations in training and other activities; 12. Develop focused tool kits and mentoring programmes for site managers (specifically for cultural landscapes, archaeological sites, cities.....) not duplicating training manuals. 13. Assist in development of management systems adapted to transboundary and transnational/serial properties; 14. Promote best practice through World Heritage site partnerships and twinning arrangements, particularly between Eastern and Western European countries and by thematic groups; 15. UNESCO to ensure coordinated approaches to funding sources; 	X	X	X	X	X
<p>7 - Scientific and Technical Studies and Research</p> <ol style="list-style-type: none"> 1. Develop sub-regional programmes focused on capacity-building for institutions involved in the heritage management, preservation and conservation activities; 2. Enhance capacity building mechanisms and disseminate information; 3. Encourage States Parties to collaborate with national institutions and universities and foster experts' participation in 		X	X		

<p>international conferences and workshops;</p> <p>4. Promote focused conservation and heritage programmes in institutions, academies, universities;</p> <p>5. Improve cooperation at the sub-regional, European and global levels and activate circulation of scientific ideas, technological experience and contacts between specialists of different countries involved in the World Heritage related activities;</p> <p>6. Increase funding for focused programmes in institutions, academies and universities.</p>		<p>X</p> <p>X</p> <p>X</p>	<p>X</p> <p>X</p>	<p>X</p> <p>X</p> <p>X</p> <p>X</p>	
STRATEGIC OBJECTIVE: PROMOTE THE DEVELOPMENT OF EFFECTIVE CAPACITY-BUILDING IN STATES PARTIES					
8- Training and Capacity-building					
<p>1. Coordinate approaches to funding sources;</p> <p>2. Assist countries to develop further acquaintance with funding institutions and access to resources;</p> <p>3. Provide training for project proposal preparation and funding applications in several sub-regions for training and capacity-building;</p> <p>4. Bring together and share information on funding for World Heritage with a view to optimise the limited resources of the World Heritage Fund;</p> <p>5. Request ICCROM and IUCN to support and advise in implementing training activities in the sub-regions in the framework of the Global Training Strategy;</p> <p>6. Establish sub-regional programmes, specifically for Eastern and South-Eastern Europe, focused on capacity-building for institutions involved in heritage management, preservation and conservation activities; Implement training and capacity-building in the sub-regions of Europe in priority for integrated management planning and monitoring in coordination with the UNESCO field offices in Venice and Moscow, make best use of specific management courses at ICCROM, and best practice guidelines and tools by IUCN and implement the Global Training Strategy at national, regional and local levels. National training institutions should be closely involved and scientific and technical studies carried out in the relevant countries; Training for project proposals and development should be given priority for Eastern and South-Eastern European countries;</p> <p>7. Implement and further develop the global training strategy programmes for site managers;</p> <p>8. Enhance capacity-building at the institutional level as well as through specific courses and preparation of training manuals by ICCROM/ICOMOS and IUCN.</p>	<p>X</p> <p>X</p> <p>X</p> <p>X</p> <p>X</p> <p>X</p> <p>X</p> <p>X</p> <p>X</p> <p>X</p>	<p>X</p> <p>X</p> <p>X</p> <p>X</p> <p>X</p> <p>X</p> <p>X</p> <p>X</p> <p>X</p>			
9 - International Cooperation and Fund-raising					
<p>1. Encourage national institutions responsible for heritage protection, and Ministries of Foreign Affairs of the States Parties, to further review their international legal base in order to identify the strengths and weaknesses of international cooperation in the field of heritage conservation and to develop general policies for future actions in this realm;</p> <p>2. Encourage the States Parties to consider earmarked funding for World Heritage and earmarked contributions to the World Heritage Fund in support of training and management priorities;</p> <p>3. Encourage multilateral, not only bilateral, cooperation;</p> <p>4. Develop partnership with Council of Europe and its heritage related Conventions and programmes, as well as the European Union;</p>	<p>X</p> <p>X</p> <p>X</p> <p>X</p>			<p>X</p> <p>X</p> <p>X</p>	

<p>5. Explore possibility for creation of a European Programme and Fund for World Heritage with the European Union;</p> <p>6. Cooperate to review and influence European Union regulations affecting the environment;</p> <p>7. Improve financial allocations to natural and cultural heritage through government, private sector and European Union funding, including lobbying at the European Union level to ensure funding for World Heritage (States Parties, NGOs etc.) and develop synergies between existing processes for the benefit of World Heritage;</p> <p>8. UNESCO to ensure coordinated approaches to funding sources; and to assist States Parties in bringing together and sharing information on funding for World Heritage with a view to optimise the limited resources of the World Heritage Fund.</p>		<p>X</p> <p>X</p> <p>X</p> <p>X</p>		<p>X</p> <p>X</p>	
<p>STRATEGIC OBJECTIVE: INCREASE PUBLIC AWARENESS, INVOLVEMENT AND SUPPORT FOR WORLD HERITAGE THROUGH COMMUNICATION</p>					
<p>10 - Information, Awareness Building and Education</p>					
<p>1. Develop strategies, including focused sub-regional projects, for information, awareness-building and education, based on identified needs in sub-regions in collaboration with the Advisory Bodies;</p> <p>2. Develop models and standards for information material and World Heritage interpretational, including World Heritage site networks, , publication and websites;</p> <p>3. Support community participation in heritage preservation and management, and encourage the involvement of NGOs and the private sector;</p> <p>4. Encourage States Parties to actively join the Young Peoples Participation in World Heritage Preservation and Promotion Project;</p> <p>5. Encourage States Parties to translate World Heritage documents into national languages and to ensure broad dissemination;</p> <p>6. Raise awareness of World Heritage at all levels of society including site managers and local communities (e.g. education, conscious media policy);</p> <p>7. Identify and disseminate best practice (e.g. Tentative Lists, nominations, management planning, serial/transnational sites);</p> <p>8. Encourage European countries to assist with the translation of key World Heritage documents into other languages to better disseminate World Heritage information;</p> <p>9. Promote at State Party level the translation of a basic World Heritage Glossary by linking it to the Herein Thesaurus;</p>		<p>X</p> <p>X</p> <p>X</p> <p>X</p> <p>X</p> <p>X</p> <p>X</p> <p>X</p>	<p>X</p> <p>X</p> <p>X</p> <p>X</p> <p>X</p> <p>X</p>	<p>X</p> <p>X</p> <p>X</p> <p>X</p> <p>X</p> <p>X</p>	
<p>11 – Credible baseline data of each property</p>					
<p>1. States Parties to ensure the timely replies to the retrospective inventory paralleling the European Periodic Reporting and to consider submitting the follow-up actions to Circular Letter of 23 January 2006 (names changes, boundary and bufferzone revisions, criteria changes etc.) in a timely manner, at the latest by 2008;</p> <p>2. Encourage the development of baseline data within States Parties and ensure effective feedback between the World Heritage Centre and the responsible authorities;</p> <p>3. Use the results of Periodic Reporting at the national level as baseline data for future application.</p>		<p>X</p> <p>X</p>		<p>X</p> <p>X</p> <p>X</p>	<p>X</p>
<p>12 – Follow-up to Periodic Reporting</p>					
<p>1. Improve institutional memory and continuity by allowing continuous electronic updates of the Periodic Reports by States Parties and focal points;</p> <p>2. Disseminate the final synthesis reports and decision by the Committee to all States Parties for transmission to national institutions, site managers and other stakeholders;</p>		<p>X</p> <p>X</p>		<p>X</p> <p>X</p>	<p>X</p>

3. Publish the results in World Heritage Paper series for broad dissemination (both hardcopy and electronic);		X			
4. Encourage States Parties to consider making the data available to all other States Parties with their agreement;		X		X	
5. Maintain interest, as Periodic Reporting has stimulated awareness and cooperation within countries;		X	X	X	
6. Follow-up to European Periodic Reporting with an agreed process by (a) providing an interim report on the status of implementation of Circular Letter 23 January 2006 for 31 COM (2007) (b) report on progress made on the priority follow-up actions (management workshops, European cooperation.....), 2006-2008 (c) a Midterm assessment and evaluation of the results and implementation of the Action Plan in a five year period (by 2011);		X			
7. Build on the momentum of Periodic Reporting to maintain contacts between States Parties and Focal Points;		X		X	
8. Extend and enforce the network of World Heritage focal points in Europe and establish national and international networks of site managers according to thematic issues via the UNESCO web-page;		X		X	
9. Review the sub-regional set-up;	X	X		X	
10. Encourage follow-up activities and meetings stimulated by the Periodic Reporting exercise at the sub-regional and regional levels;	X	X		X	
11. Send all relevant documents to the Focal Points for the region and sub-regions, in order to keep them informed of the follow-up of the Periodic Reporting exercise.		X		X	

Follow up to Periodic Reporting in Europe

A number of States Parties have undertaken efforts to ensure the appropriate follow-up to Periodic Reporting in response to Circular Letter CL/WHC.01/06/PS of 23 January 2006. This ranges from the submission of name changes, boundary changes to the review of the criteria for which properties have been nominated.

Due to the high number of properties in Europe this will take considerable time and resources both at the States Party level as well as at the Advisory Body, World Heritage Centre and World Heritage Committee. This issue is being addressed in the preparation of the Reflection Year (see working document *WHC-06/30COM/11G*).

In addition States Parties are taking a new approach in pursuing the coordination with other States Parties, which is one of the positive and constructive results of European Periodic Reporting. An informal World Heritage Periodic Reporting meeting for the Mediterranean sub-region was hosted by the Italian authorities in Rome, on 10 February 2006. It was attended by 16 participants from 10 States Parties to review the follow-up activities specifically for changes required to existing properties.

Furthermore, a meeting for cultural heritage experts in South Eastern Europe will be organized by the Greek authorities in Thessaloniki in September 2006. The Bellagio Forum in collaboration with the German Environmental Foundation (DBU, Osnabrück, Germany) approved a capacity-building project for the management of natural properties and cultural landscapes in the Mediterranean to be launched with a first workshop in October 2006. The French authorities are hosting a meeting for focal points of Western Europe in France in October 2006.

The following table lists the meetings and workshops organized on a sub-regional or regional level as follow-up to both phases of the Periodic Reporting exercise for Europe.

Table 20: Follow-up to Periodic Reporting: meetings and workshops

Date	Title of meeting	Location
10 February 2006	1st Meeting of Mediterranean European Region focal points on the Periodic Reporting Exercise (Section I and II)	Rome, Italy
September 2006	Meeting of South-Eastern European States Parties on the Periodic Reporting Exercise (Section I and II)	Thessaloniki, Greece
27 October 2006	Meeting of Western European focal points on the follow up to the Periodic Reporting Exercise (Section I and II)	Paris, France
fall 2006	2nd Meeting of Mediterranean European Region focal points on the Periodic Reporting Exercise (Section I and II)	To be decided

Follow-up phasing and timetable

Taking into account the Action Plan and the follow-up required, the following timetable and budget table are proposed:

Table 21: Follow-up phasing and timetable

Timeframe	Activities In order of priority	Follow-up action	Budget	Timeframe
2006-2008	<p>(1) Follow-up to changes of names, criteria, boundaries and bufferzones and statements of significance;</p> <p>(2) Publication and Dissemination of the Periodic Reporting results and Action Plan</p> <p>(3) Detailed planning of follow-up meetings and harmonisation meetings of tentative lists</p> <p>(4) Specific Training workshops as per needs identified</p>	<p>(1) Circular letter of 23 January 2006 Decision by 30 COM Retrospective Inventory Project</p> <p>(2) World Heritage Centre to finalize, print and disseminate; States Parties to disseminate;</p> <p>(3) Inform all States Parties and Focal Points of planning schedule, deadlines etc.</p> <p>(4) Advisory Bodies and WHC to identify in order of priority needs by sub-region</p>	<p>(1) State Parties, WHF; Extrabudgetary)</p> <p>(2) WHF</p> <p>(3) State Parties, WHF; Extrabudgetary)</p> <p>(4) State Parties, WHF; Extrabudgetary)</p>	2006-2008
2008-2010	<p>(1) Ensure that all changes required are being processed by 2008</p> <p>(2) Review of activities carried out and re-orientation</p> <p>(3) Progress report to the Committee and detailed action plan 2008-2011</p>	<p>(1) Decision by 32 COM</p> <p>(2) WHC and Advisory Bodies</p> <p>(3) Decision by 32 COM</p>	<p>(1) WHF</p> <p>(2) WHF</p> <p>n.a.</p>	2008-2010
2011	<p>(1) Mid-term evaluation</p> <p>(2) Detailed report to the World Heritage Committee and preparation of next cycle of European Periodic Reporting</p>	<p>(2) Presentation to 36 COM</p> <p>(2) Decision by 36 COM</p>	<p>(1) WHF, extrabudgetary</p> <p>(2) WHF extrabudgetary</p>	2011

The Retrospective Inventory Project and follow-up to Periodic Reporting

The Retrospective Inventory Project, initiated in 2004, is a detailed examination of the contents of the nomination files of properties inscribed between 1978 and 1998. This information, together with an analysis of Bureau recommendations, Committee decisions, and various other changes made by States Parties to nomination proposals during the nomination process, will contribute to improved baseline documentation on World Heritage sites and form the basis for the work of the World Heritage Committee, the World Heritage Centre, the Advisory Bodies and States Parties to manage and monitor properties on the World Heritage List. States Parties in Europe have been requested to provide this additional and improved documentation (in particular detailed maps with clear definition of boundaries) to the World Heritage Centre in parallel to preparing Section II reports. Letters presenting the results of this analysis and requests for clarification and/or improved maps have been sent to 35 of the 40 Periodic Reporting focal points and States Parties the European Region with sites inscribed up to 1998.

Results of the Periodic Reporting exercise for Europe within the framework of the Reflection Year

As Europe was the last region of the first Periodic Reporting cycle, the European exercise brought to light additional elements to be taken into account for future reporting processes, including the need:

- for international assistance and cooperation within Europe as well as with the rest of the world;
- to encourage transparency of the processes at all levels;
- to develop mechanisms for and ensure feedback at all levels and in particular to site managers;
- to review and agree on the actions arising from this round of reporting before starting the next cycle (name changes, boundary changes, re-nominations, statement of significance etc.);
- to simplify the Questionnaire, while maintaining continuity;
- to clarify transboundary and serial sites and to update statuses with new / changed data in future rounds of Periodic Reporting.

Regarding the questionnaire and its potential improvement, the European Periodic Reporting exercised underlined the need:

- to verify follow-up from previous Periodic Reporting recommendations;
- to address problems of duplication in the questionnaire;
- to clarify the wording of the questions;
- to provide more guidance on the process of Periodic Reporting
- to ensure that the participatory process includes all stakeholders and uses it as training opportunity for stakeholders, and;
- to review possibilities for intermediate processes on updates of the database between cycles of Periodic Reporting.

These issues have already been transmitted to participants of the relevant meetings on the Reflection Year in 2005 and 2006 (see working document *WHC-06/30.COM/11G*).

**PART VI:
DRAFT DECISION
FOR THE
WORLD HERITAGE COMMITTEE
REGARDING
THE RESULTS OF SECTIONS I AND II
OF
PERIODIC REPORTING FOR EUROPE**

Draft Decision: 30 COM 11A.1

The World Heritage Committee,

1. *Having examined document WHC-06/30COM/11A.1 and taking note of document WHC-06/30COM/INF.11A,*
2. *Recalling Decisions 25 COM VII.25-27 and 7 EXT COM 5A.2, adopted respectively at its 25th session (Helsinki, 2001) and 7th extraordinary session (Paris, 2004),*
3. *Expressing its sincere appreciation for the considerable efforts by all 48 States Parties in Europe in submitting the Periodic Reports for Section I in 2004 and Section II in 2005,*
4. *Notes the successful use of an electronic tool, the development of an evaluation tool and the storage in a World Heritage Centre database of all information submitted by the States Parties;*
5. *Thanks the German authorities for hosting a European meeting (Berlin, Germany 8 - 9 November 2005) on the results of Periodic Reporting Section I and the finalization of Section II, as well as the development of an overall Strategic Action Plan and welcomes the “Berlin Appeal” to enhance cooperation and support by European States Parties and European Institutions on World Heritage;*
6. *Welcomes with satisfaction the synthesis report of the European Region illustrating a growing cooperation among States Parties;*
7. *Acknowledges and endorses the Action Plan of the European synthesis report on Section I and II and the sub-regional reports and requests the States Parties to make an effort towards a coordinated approach for its implementation;*
8. *Requests States Parties to work with the World Heritage Centre and the Advisory Bodies to start implementing the Action Plan for the European Region;*
9. *Further notes that preparations for the follow-up to the Periodic Reporting results, including name changes, boundary changes and statements of significance have started in some European States Parties, following the Circular Letter of 23 January 2006, and welcomes the meetings offered by the Greek authorities in September 2006 and by the French authorities in October 2006 to ensure a coordinated and systematic approach of these follow-up activities;*
10. *Strongly encourages the States Parties in Europe to continue the improved cooperation and requests all States Parties to submit any changes to names, criteria, boundaries and statements of significance in a timely fashion and in accordance with deadlines outlined in the Operational Guidelines;*
11. *Notes also that such proposals (and the similar ones made in Periodic Reports for other Regions) have considerable resource and workload implications for the Committee, the World Heritage Centre and the Advisory Bodies as well as for States Parties;*
12. *Further requests that all European States Parties provide an official letter to the World Heritage Centre by 31 September 2006, indicating their agreement to make the electronic database available for datasharing with the Council of Europe and other partners as well as on the World Heritage webpage for the general public;*
13. *Requests the World Heritage Centre and the Advisory Bodies to prepare a progress report on the follow-up to the European Periodic Report including time tables, budgetary implications and priorities for examination at its 31st session (2007).*
