World Heritage Nomination Proposal for
The Landscape of Grand Pré
Nova Scotia, Canada

January 2011
As the Minister responsible for Parks Canada, I am pleased to support the nomination of The Landscape of Grand Pré for inscription on the United Nations Educational, Scientific and Cultural Organization’s (UNESCO’s) World Heritage List. Grand Pré and the stories it tells are recognized to be of national historic significance to all Canadians. Equally, these stories are universal and part of the heritage of humanity, and Canada is proud to share them with the world.

Parks Canada, as manager of Grand-Pré National Historic Site of Canada (one of the key components of the nominated property), has been an active partner, along with the Government of Nova Scotia, the Municipality of the County of Kings, la Société Nationale de l’Acadie, the Grand Pré and Area Community Association, the Kings Regional Development Agency, la Société Promotion Grand-Pré and the Grand Pré Marsh Body, in the development of this nomination. Parks Canada is fully committed to the protection, conservation and presentation of the Landscape of Grand Pré and will continue to collaborate with its partners.

Original signed by

The Honourable Peter Kent, P.C., M.P.
Canada’s Environment Minister and
Minister responsible for Parks Canada
Nova Scotia is tremendously proud to support the Nomination Grand Pré Advisory Board in its efforts to achieve a successful UNESCO World Heritage Site designation for the landscape of Grand Pré. The province shares the belief that Grand Pré would benefit from the recognition that a UNESCO World Heritage Site designation would provide.

The process to prepare this nomination dossier is an achievement that all Nova Scotians, including our Acadian communities, can take pride in. Grand Pré is an integral part of our rich history and holds significance for all Nova Scotians. It is a place of farming and agricultural legacy, where the current farming community continues to harness the power of the dykeland and drainage system, using traditional collective management practices. For the Acadian communities here and abroad, the Grand Pré landscape is a homeland, a place to share their common heritage, reaffirm their identity, and continue to build on their sense of community. The landscape tells the story of the survival of a language and culture against a forced removal, the Grand Dérangement. The landscape of Grand Pré is truly remarkable and we are pleased to honour all of the meanings that it offers.

A successful designation represents an opportunity to connect more visitors from around the world with the story of Grand Pré, further strengthening Nova Scotia’s tourism industry and better positioning Grand Pré and the province as a heritage destination.

The province remains committed to forming a long term working relationship with the Nomination Grand Pré Advisory Board, the potential Grand Pré World Heritage Site Stewardship Board, and other partners and levels of government for the future management and protection of the landscape of Grand Pré.

December 17, 2010

Grand Pré is a special place for many people for many reasons. Grand Pré is located in Kings County, in the heart of Nova Scotia's Annapolis Valley. It is associated with and well known for the traditional agricultural practises carried out on the dyklands, the unique landscapes, the Land of Evangeline, and the history of and memorials to the Acadian peoples.

It is our shared legacy that makes Grand Pré worthy of protection and important to celebrate and share with the rest of the world. Inscription as a UNESCO World Heritage Site will provide recognition of its importance and as well ensure the protection and management of those elements which make Grand Pré not only unique and exceptional, but also important to the world.

On behalf of the people of Kings County, we are committed in our support of the nomination of Grand Pré as a UNESCO World Heritage Site. We have worked in partnership with community and other organizations in contributing to the preparation of this dossier. We will continue to support the protection, preservation and promotion of this exceptional and unique place as it is of importance for present and future generations of all humanity.

The preparation of this submission has involved a great deal of cooperation and partnering with many organizations united by our common belief that Grand Pré is an exceptional place with outstanding universal value. The Municipality would like to thank the Grand Pré and Area Community Association, Grand Pré Marsh Body, Kings Regional Development Agency, Parks Canada Agency, the Province of Nova Scotia, Société Promotion Grand-Pré and the Société Nationale de l'Acadie for their contribution in preparing this document.

It is our hope that this nomination for inscription will be looked favourably upon by the World Heritage Committee.

Sincerely,

[Signature]

Diana Brothers
Warden,
Municipality of the County of Kings
Dieppe, le 15 décembre 2010

Madame, monsieur,

La Société Nationale de l’Acadie, représentante du peuple acadien, appuie sans réserve la nomination de la région de Grand-Pré au site du patrimoine mondial de l’UNESCO. Pour les Acadiens et Acadiennes, fiers membres d’un peuple sans état, Grand Pré est l’endroit principal d’ancrage de leur identité, un lieu qui témoigne de leur appartenance et de la fierté de leur patrimoine, un lieu enfin de recueillement et de souvenir comme en témoignent les milliers de gens qui y font le pèlerinage chaque année.

La Société Nationale de l’Acadie représente depuis plus de cent vingt ans les intérêts du peuple acadien et, consciente de l’importance de Grand-Pré, elle s’est engagée depuis le tout début auprès des divers organismes qui veillent à sa promotion et auprès de ceux qui travaillent à la candidature de l’UNESCO.

En tant que responsable des symboles du peuple acadien, je tiens à vous assurer que la SNA continuera à veiller sur Grand-Pré pour s’assurer que le site atteigne son plein potentiel et qu’elle assurera la coprésidence du comité d’intendance du site.

Chaque peuple a son lieu de mémoire. Pour le peuple acadien, c’est Grand-Pré, un lieu qui témoigne de notre histoire, de la rencontre avec les peuples autochtones et de notre cohabitation amicale, un endroit enfin dont la géographie porte à jamais la marque des efforts de notre peuple d’agriculteurs pour dompter les forces de la baie de Fundy et donner au lieu la richesse d’un terroir.

Grand Pre Marsh Body
661 East Long Island Road
Grand Pre, Nova Scotia
B0P 1M0

To whom it may concern,
Grand Pre is a place rich in history. As a seventh generation farmer in Grand Pre, I have a great appreciation for the hard work and determination undertaken; first by the Acadian people and then by my forefathers to create this beautiful and exceptional place.

The marsh was claimed from the sea in the 1600’s and today consists of over 3000 acres of very fertile farm land. At least 20 separate farms grow crops on the marsh land. Some of these crops such as corn, wheat and soybeans are sold as cash crops while others including corn, wheat and soybeans, as well as legumes, grass and pasture are used on the farms to produce milk, meat and poultry products. Since these lands are very fertile and make up a significant portion of the land holdings of the various farms, this land must be preserved and protected for future agricultural uses.

The Grand Pre Marsh Body is an organization of the owners of the land on the Grand Pre marsh. Its purpose is to ensure the maintenance of the road system on the marsh, to maintain the drainage system on the marsh and to monitor the overall well being of the marsh and the dyke walls. The Grand Pre Marsh Body is totally committed to the conservation of the marsh land and keeping it in agricultural production for many years and generations to come.

Respectfully,

Robert E. Palmeter
Chairman, Grand Pre Marsh Body
Nomination Grand Pré is proud to have led the preparation of the nomination proposal for the Landscape of Grand Pré. Since 2007, the farming, Acadian, local, and Mi’kmaq communities connected to Grand Pré, together with the support and active participation of government, universities, and businesses, have worked on the preparation of a nomination dossier that reflects their values.

We have supported the discussions between residents of Grand Pré, North Grand Pré, Hortonville, and Lower Wolfville which resulted in the first Community Plan that will guide the sustainable development of those communities. The process brought together these communities for the first time to tackle shared challenges and seize opportunities that would benefit everyone.

We have encouraged research with the help of universities, researchers, and local residents to better understand our past and our present.

We have raised awareness about the value of the Landscape of Grand Pré for the communities involved and the importance of protecting this place for future generations.

We have built bridges between communities, organizations, and peoples to listen to each other’s perspectives and share a common vision for the Landscape of Grand Pré.

These accomplishments are the result of the nomination proposal drafting process. We have all learnt invaluable lessons about our heritage and about our values, both individually and collectively. We have also discovered with greater clarity how special this place is to us and have a greater appreciation for this land, its many stories and the shared legacy that binds us together.

Gérard C. Boudreau PhD  
Member of the Acadian community  
Co-chair  
Nomination Grand Pré

Peter Herbin  
Local resident  
Co-chair  
Nomination Grand Pré

Nomination Grand Pré est fier d’avoir guidé la préparation de la proposition d’inscription pour le Paysage de Grand-Pré. Depuis 2007, les communautés liées à Grand Pré, incluant la communauté acadienne, les groupes d’agriculteurs et de résidents, ainsi que les Mi’kmaq, travaillent de concert avec l’appui des gouvernements, des universités, et du monde des affaires pour préparer un dossier d’inscription qui reflète leurs valeurs.

Nous avons appuyé concrètement les discussions entre les résidents des collectivités de Grand Pré, North Grand Pré, Hortonville, et Lower Wolfville par la mise en œuvre d’un plan communautaire guidant leur développement durable. Ce processus a rassemblé ces collectivités pour la première fois, leur permettant d’aborder les défis et les opportunités communs.

Nous avons encouragé la recherche avec le soutien des universités, de chercheurs, et des résidents afin de mieux comprendre notre passé et notre présent.

Nous avons sensibilisé le public par rapport à l’importance du Paysage de Grand Pré pour les différentes communautés et à la nécessité de protéger ce lieu pour les générations futures.

Nous avons bâti des ponts entre les collectivités, les organisations, et les communautés pour comprendre les perspectives individuelles et définir une vision commune pour le Paysage de Grand-Pré.

Ces réalisations sont les résultats du processus de préparation du dossier d’inscription. Ce processus nous a mené, individuellement et collectivement, à redécouvrir notre patrimoine et nos valeurs. Finalement, cette expérience nous a permis de découvrir combien ce lieu est important pour nous tous et ainsi d’avoir une plus grande appréciation pour la nature de cette terre, riche d’histoires et l’héritage en commun qui nous rassemble.

Name of Property
The Landscape of Grand Pré

Geographic coordinates to the nearest second (LAT LON NAD 83)

LATITUDE: N45° 07' 06"
LONGITUDE: W64° 18' 26"

Textual description of boundaries of the nominated property

The nominated property is situated in eastern Canada in Nova Scotia. The property comprises 1323.24 hectares of land protected from the waters of the Minas Basin in the Bay of Fundy by 5.53 kilometres of dykes. It extends 4.4 kilometres east–west along Highway 1 in the northeastern corner of the County of Kings, east of the Town of Wolfville.

The boundary was assigned to include the area that has been dyked from the 1680s up to the present day, that is under the stewardship of the Grand Pré Marsh Body, and that continues to support exclusive agricultural use. It also includes the heart of the traditional settlement on the uplands and the lands that host the memorials associated with the Acadian Deportation.

The boundary of the nominated property follows, on the north side, the boundary of the marshland as defined in the designation under the Nova Scotia Agricultural Marshland Conservation Act. Counterclockwise, it continues southward following the line of dykes in their middle and again follows the boundary of the designated marshland up to the point where the dykes make a westward right angle (Point 1) (the corresponding geo-coordinates for each point are illustrated in the following map). The boundary then continues straight towards the uplands, turns east and follows the Dyke Road, including the entire right-of-way. As it reaches Miner Lane, the boundary follows Miner Lane southward in the middle of the road and turns east on Old Post Road, including the right-of-way. The boundary follows Old Post Road until it reaches Horton Cross Road. It then turns south, including the right-of-way, and turns immediately east on Middle Street including the right-of-way. It continues in a straight line towards the Gaspereau River. When the boundary meets the river, it turns north and follows the coastline up to the place called Horton Landing, where the dyke resumes (Point 2). The boundary then follows the line of dykes in their middle and the boundary of the designated marshland until it meets with the north boundary.

The boundary is defined by legal descriptions within the Agricultural Marshland Conservation Act, as well as by topographic features that ensure it is clearly identifiable on the ground. The boundary guides appropriate management.

**Justification (Statement of Outstanding Universal Value)**

**Brief Synthesis**

The Landscape of Grand Pré is a dynamic agricultural landscape claimed from the sea. It is also a powerful symbolic landscape for the Acadians.

The Landscape of Grand Pré is the most intact agricultural polder in the world that uses an ingenious vernacular system for transforming salt marsh into fertile agricultural farmland. This system of earthen dykes, ditches, aboiteaux, and community-based management was first implemented at Grand Pré in the late 17th century by French (Acadian) settlers. The location they chose was subject to the most extreme tides in the world, which presented great challenges but also great opportunities in the extraordinary fertility of the land they transformed. Today, the agricultural landscape is still protected and drained by the same system, still exhibits distinctive field patterns, and is still managed through the same community approach, a testimony to the original Acadian settlers, the New England Planters who succeeded them, and the farmers who work the land today.

Symbolically, the Landscape of Grand Pré is the single most important lieu de mémoire for the Acadians. The Acadians are one of the first people of European descent to call North America their homeland. The Landscape of Grand Pré is directly associated with the emergence of their new identity in this new land, but also with their tragic forced removal from it, their subsequent migration, and their renaissance. Today, this lieu de mémoire embodies the cultural consciousness of a widely scattered people. It is a landscape that has been peacefully and symbolically reclaimed by the Acadians, and it is their emotional and spiritual centre. It illustrates the importance of the connection between people and places in defining collective identity.

**Criterion (vi):** Owing to the imposing presence of the dyke-lands, the Memorial Church and other memorials, and its enduring use by the Acadian people, the Landscape of Grand Pré is the most important lieu de mémoire for the Acadians, an evocative example of a homeland symbolically and peacefully reclaimed by a diaspora that has triumphed over hardships. The legacy of the Acadian people overcoming the tragedy of a forced removal, the Grand Dérangement, their renaissance, and the ongoing efforts of reconciliation are embodied in the Landscape of Grand Pré. Here, Acadians share their common heritage, reaffirm their identity, and continue to build their sense of community in a spirit of peaceful reconciliation with history. The Landscapes of Grand Pré provides a poignant and powerful living example of the universal human aspirations to belong to a community, to connect with one’s homeland, and to seek reconciliation.

**Integrity and Authenticity**

The nominated property has integrity because its clearly defined boundaries encompass all the elements relevant both to the agricultural landscape, created from the transformation of salt marsh into farmland over several centuries, and to the symbolically reclaimed landscape. These elements include earthen dykes, ditches, aboiteaux, and field patterns, as well as the memorials, archaeological evidence of the village, and commemorations related to the forced removal and subsequent renaissance of the Acadians. The nominated property comprehensively represents the past and present agricultural settlements as defined by dykeland farmland, upland farmland, and the heart of the community. It includes the dykeland managed world, created extraordinarily fertile farmland, and began a tradition of collective management. This land reclamation system and this management tradition continue to ensure the livelihood of the local community today. The Landscape of Grand Pré is an outstanding example of a thriving farming community that interacts with its environment by using a successful land reclamation system and management tradition that predate the introduction of engineered drainage systems.
collectively by the Grand Pré Marsh Body and the entire area of symbolic importance to the Acadians. The integrity is enhanced by the farmland included in the buffer zone. The nominated property’s attributes are in good condition. Policies and mechanisms are in place to reduce or eliminate pressures on the agricultural use and the archaeological sites.

The nominated property has authenticity because the archaeological and historical evidence confirms the locations of the original Acadian and Planter settlements, the enduring agricultural use, and the location of the memorials. That evidence also confirms that the dykelands are maintained in the 21st century using the same principles and techniques originally implemented by the Acadians in the 17th century and that they have been managed collectively for over 300 years. The Acadians’ continuing use of Grand Pré for individual and collective events attests to the profound value of this landscape to their community.

Protection and Management Requirements

The legal protection of the nominated property is enforced provincially on lands under provincial jurisdiction by the Nova Scotia Agricultural Marshland Conservation Act (Appendix 3E) and the Nova Scotia Special Places Protection Act (Appendix 3K), and federally on lands administered by the Parks Canada Agency under the Parks Canada Agency Act (Appendix 3D), and the Canada National Parks Act (Appendix 3A). The protective measures are appropriate to safeguard the dykeland, its agricultural use, and the archaeological sites from undue development and environmental pressures. A buffer zone around the nominated property, encompassing both land and water, was defined through community engagement leading to the adoption of the Grand Pré and Area Community Plan (Appendix 2J) to ensure that zoning remains compatible with the aims of protecting the nominated property. All of these mechanisms are sufficient to control development, ensure agricultural land capacity, and monitor the effects of coastal erosion that could otherwise threaten the value of the nominated property.

The overall management system for the nominated property is exemplary. It involves community management through the Grand Pré Marsh Body, municipal zoning, and federal and provincial government legislation for protection of the site. The Management Plan for the Landscape of Grand Pré (Appendix 2A) is a strong framework document that ensures the coordination of multiple jurisdictions and stakeholders inside the boundary of the nominated property and its buffer zone. Parks Canada, as a federal government agency, is responsible for managing Grand-Pré National Historic Site of Canada and Horton Landing. The Province of Nova Scotia, mainly through its departments of Agriculture and of Tourism, Culture and Heritage, is responsible for protecting the dykelands and archaeological sites not located on federal lands. Finally, the Municipality of the County of Kings is responsible for implementing the Grand Pré and Area Community Plan (Appendix 2J) and the zoning regulations contained in it. The Management Plan depends on the Community Plan, the Grand Pré National Historic Site of Canada Management Plan (Appendix 2I), provincial departmental policies, and the Grand Pré Marsh Body for its effective implementation. The management system is coordinated by the Grand Pré World Heritage Site Stewardship Board and involves the local community, the Acadian community, and government administrative bodies in its decision-making process. Local residents are proud and effective stewards of the land.
Criteria under which property is nominated

The Landscape of Grand Pré is nominated for inscription to the World Heritage List under the following criteria of the Operational Guidelines for the Implementation of the World Heritage Convention:

Criterion v
Be an outstanding example of a traditional human settlement, land-use or sea-use which is representative of a culture (or cultures), or human interaction with the environment especially when it has become vulnerable under the impact of irreversible change.

Criterion vi
Be directly or tangibly associated with events or living traditions, with ideas, or with beliefs, with artistic and literary works of outstanding universal significance. (The Committee considers that this criterion should preferably be used in conjunction with other criteria).

List of Organizations Referenced in this Document

Destination Southwest Nova Association: is an independent, not-for-profit tourism marketing and management organization encompassing the Fundy Shore and Annapolis Valley, Yarmouth and Acadian Shores, and South Shore tourism regions.

Grand Pré Marsh Body: is an association of dykeland owners who together, under legislation, have the responsibility to manage the designated agricultural dykelands at Grand Pré.

Grand Pré World Heritage Site Stewardship Board: will serve as the site manager for the Landscape of Grand Pré. The Stewardship Board will ensure the implementation of the Management Plan through a coordinated management approach between all jurisdictions, promotion of the property’s outstanding universal value, engagement of the stakeholders in the stewardship of the property, and reporting on the condition of the property.

Kings RDA (Regional Development Agency): is the regional development authority for the County of Kings, Nova Scotia, which contains the nominated property. It is a community-driven, non-profit society that works with all levels of government and community partners to make the County of Kings a better place to live, visit and do business.

Municipality of the County of Kings: governs the County of Kings, where Grand Pré is located, and engages in administration, planning, recreation, protective services, engineering and public works within the county.

Nomination Grand Pré: is the organization that coordinated this proposal. Its purpose is to “bring those with a connection to Grand Pré together to celebrate and steward the Outstanding Universal Value that makes this place special and worthy of sharing with the world.”

Nova Scotia Department of Agriculture: provides public services to improve rural communities, and life for all Nova Scotians, in order to foster prosperous and sustainable agriculture and food industries.

Nova Scotia Department of Natural Resources: has responsibilities relating to developing, managing, conserving and protecting the forests, minerals, parks and wildlife resources in Nova Scotia, as well as administering the province’s Crown land.

Nova Scotia Department of Tourism, Culture and Heritage: promotes, develops and preserves Nova Scotia’s tourism, culture and heritage resources, for social and economic benefits.

Nova Scotia Department of Transportation and Infrastructure Renewal: builds and maintains provincial infrastructure in Nova Scotia, including highways, bridges, and government buildings.

Parks Canada Agency: is a federal government agency. Parks Canada’s mandate is to “protect and present nationally significant examples of Canada’s natural and cultural heritage, and foster public understanding, appreciation and enjoyment in ways that ensure their ecological and commemorative integrity for present and future generations.”

Société Nationale de l’Acadie: is a national body representing the Acadians.

Société Promotion Grand-Pré: is a non-profit Acadian organization in charge of organizing all activities and events at Grand-Pré National Historic Site.
Glossary of Key Terms

_Aboiteau_ (pl. _Aboiteaux_): a structure that includes a sluice with a hinged clapper valve installed at the bottom of a creek running through a reinforced dyke allowing fresh water to run off the salt marsh, while preventing salt water from entering at high tide. _Aboiteau_ can also refer to the entire drainage system of the marsh that is protected by dykes.

_Acadian_: French immigrants who settled in Grand Pré in the 1680s and built the first dykes in the area, to farm the salt marshes. The Acadians were deported from Grand Pré in 1755.

_Acadie_ (English: _Acadia_): the name of lands in northeastern North America controlled by the French during colonial times, 1605–1710. The borders of _Acadie_ changed over time and were often in dispute. In 1713 _Acadie_ corresponded to settlements on the Bay of Fundy and in mainland Nova Scotia. In colonial times, due to unclear territorial claims, parts of New Brunswick, Prince Edward Island, and Cape Breton were considered by some to be part of _Acadie_.

_Commemorative Integrity_: the condition or state of a national historic site of Canada when the site is healthy and whole. This is the desired state for a national historic site.

_Deportation and Grand Dérangement_ (English: _Great Upheaval_): the forcible removal of more than 14,000 Acadians from their homes in _Acadie_ between 1755 and 1762. Deportation generally refers to the events taking place only during that timeframe. _Grand Dérangement_ refers to the displacement of Acadian people over a longer period of time, starting in 1749 with the British founding of Halifax, until as late as the 1780s, when Acadians were given land in New Brunswick and Nova Scotia. _Grand Dérangement_ is the culturally significant term used today by the Acadian people.

_Dyke_: a long wall or embankment built to prevent flooding.

_Dykeland_: a polder (see below). “Dykeland” is the term used in Grand Pré.

_Juncus gerardii_ (salt marsh rush): a plant found on the marshes of Grand Pré. Its natural resilience to tidal forces makes it an ideal plant for dyke building and maintenance.

_Mean tidal range_: the difference in height between mean high-water levels and mean low-water levels over the year. Tide heights vary throughout the year, but the height difference between high and low tides remains relatively constant (National Ocean Service, 1992). Grand Pré has a mean tidal range of 11.61 metres.

_Mi’kmaq_: indigenous people of eastern Canada.

_New England Planters_: settlers to Grand Pré, arriving in 1759 and 1760. They were brought from New England by inducements from the British.

_Polder_: an area of land, enclosed by dykes, reclaimed from a body of water.

_Saros cycle_: used to predict the locations of the sun and moon. Every 18.03 years the sun, earth and moon return to the same relative space. As the sun and the moon affect the tides, the tides are higher than average during particular points in the Saros cycle.

_Saunier_: French term for a salt gatherer, salt maker, or salt merchant.
Seigneurie: a settlement pattern used in North American colonies under French control. Long narrow strips of land were provided to tenants. The overall land was managed by a seigneur. The land itself belonged to the King of France. Grand Pré was, in the 1680s, part of the seigneurie of Alexandre LeBorgne de Bélisle.

Seigneur: the landlord, or manager, of a seigneurie. The seigneur divided the land into long narrow strips and rented it to tenants. Seigneurs in North America were not always nobles, as in France; some were military officers, clergy or unions.

Sluice: a culvert equipped with a hinged clapper valve that opens or closes automatically depending on the direction the water is flowing.

Spartina patens (salt marsh hay): a plant found on the marshes of Grand Pré. Its natural resilience to tidal forces makes it an ideal plant for dyke building and maintenance.

Tidal range: the difference in height between one high tide and the next low tide. The vertical difference between the high-water and low-water marks will vary throughout the tidal cycle. The head of the Minas Basin, where Grand Pré is located, has the greatest tidal range in the world, at 16 metres.

Uplands: the areas of the nominated property, and buffer zone, which are not part of the dykelands. These areas are at a higher elevation than the dykelands, and are referred to locally as the uplands.

1.0 Identification of the Property

1.a. **Country**

The nominated property is located in Canada.

1.b. **Province**

The nominated property is located in the province of Nova Scotia.

1.c. **Name of property**

The official name of the property is “The Landscape of Grand Pré.”

1.d. **Geographical coordinates to the nearest second**

The geographical coordinates (to the nearest second) for the approximate centre of the property are:

(LAT LON NAD 83)

**LATITUDE:** N 45° 07’ 06”

**LONGITUDE:** W 64° 18’ 26”

1.e. **Maps and plans, showing the boundaries of the nominated property and buffer zone**

1.e.i. **Property boundary**

The nominated property is situated in eastern Canada in Nova Scotia (see Map 1: Regional Setting for the Landscape of Grand Pré Nominated Property). The property comprises 1323.24 hectares of land protected from the waters of the Minas Basin in the Bay of Fundy by 5.53 kilometres of dykes (see Map 2: Boundary of the Nominated Property and Buffer Zone). It extends 4.4 kilometres east–west along Highway 1 in the northeastern corner of the County of Kings, east of the Town of Wolfville.

The boundary was assigned to include the area that has been dyked from the 1680s up to the present day, that is under the stewardship of the Grand Pré Marsh Body, and that continues to support exclusive agricultural use. It also includes the heart of the traditional settlement on the uplands and the lands that host the memorials associated with the Acadian Deportation.

The boundary of the nominated property follows, on the north side, the boundary of the marshland as defined in the designation under the Nova Scotia Agricultural Marshland Conservation Act (Appendix 3F). Counter-clockwise, it continues southward following the line of dykes in their middle and again follows the boundary of the designated marshland up to the point where the dykes make a westward right angle (Point 1) (the corresponding geo-coordinates for each point are listed in Table 1-1 and illustrated in Map 2). The boundary then continues straight towards the uplands, turns east and follows the Dyke Road, including the entire right-of-way. As it reaches Miner Lane, the boundary follows Miner Lane southward in the middle of the road and turns east on Old Post Road, including
the right-of-way. The boundary follows Old Post Road until it reaches Horton Cross Road. It then turns south, including the right-of-way, and turns immediately east on Middle Street including the right-of-way. It continues in a straight line towards the Gaspereau River. When the boundary meets the river, it turns north and follows the coastline up to the place called Horton Landing, where the dyke resumes (Point 2). The boundary then follows the line of dykes in their middle and the boundary of the designated marshland until it meets with the north boundary.

The boundary is defined by legal descriptions within the Agricultural Marshland Conservation Act (Appendix 3F), as well as by topographic features that ensure it is clearly identifiable on the ground. The boundary guides appropriate management.

1.e.ii. Buffer zone

The buffer zone is an area surrounding the nominated property. It has complementary legal requirements placed on its use and development to give an added layer of protection to the property.

The nominated property of Grand Pré requires a buffer zone to ensure that the integrity of the dykelands and the continuity of its agricultural use are maintained.

The buffer zone includes a land component and a marine component. The land component includes Long Island, Boot Island and the lands surrounding the nominated property to the south, up to the boundary of the Grand Pré and Area Community Plan (Appendix 2J).

The buffer zone is managed through legislation and policies that add to the protection of the nominated property. The legislation and policies are described in Chapter 5.

The boundary of the Grand Pré and Area Community Plan encompasses four communities: the hamlet of Grand Pré at the centre, and the communities of North Grand Pré to the north, Hortonville to the east, and Lower Wolfville to the west. Starting at the southern tip of Grand Pré Road as it meets the Gaspereau River (Point 3, see Map 2 for the location of points), the boundary follows the river counter-clockwise in the middle up to its mouth where it meets the Minas Basin at the former railway bridge. Then the boundary continues northward and follows the coastline, turns westward along Long Island and continues to follow the coastline. As it reaches the western tip of Long Island, it continues southward, still following the coastline. It then makes a sharp turn westward (Point 1) as it meets the corner of the dyke and continues westward until it meets the legal boundary of the town of Wolfville (Point 4). It turns southward following that boundary to the southern limit of the right-of-way of Highway 101. It follows this right-of-way until it intersects the western right-of-way of Martin Cross Road. It continues south on Martin Cross Road 0.07 kilometres until it meets a point opposite the southwest corner of a property, PID #55222047 (Point 5). It then continues westward along the southern limit of several properties to the southeastern corner of property PID #55222897 (Point 6). The boundary turns southward on Biggs Road by the middle to Hamilton Road (Point 7), continues eastward on Hamilton Road, in the middle, to Grand Pré Road, finally continuing southward on Grand Pré Road, in the middle, ending at the Gaspereau River.

The marine component of the buffer zone extends 500 metres from the water-facing boundary of the property and, where relevant, from the land buffer zone. On the eastern side of the property, the marine component of the buffer zone begins at Point 8 and extends north along the property extending from the edge of the nominated property. It then continues eastward around Boot Island following the coastline. At Point 9, the boundary for the buffer zone follows the edge of the coastline of Long Island westward until Point 10, where it then follows the coastline of the nominated property. At Point 11 it turns westward following the edge of the area covered by the Grand Pré and Area Community Plan. At Point 12, the marine component of the buffer zone ends with a straight line southward, meeting with the land buffer zone. The marine component of the buffer zone includes salt marsh, beaches and mudflats.
1.1. Area of the nominated property (ha.) and proposed buffer zone (ha.)

The area of the nominated property is 1323.24 hectares. The land component of the buffer zone is 1248 hectares. The marine component of the buffer zone is 945.09 hectares. The total area of the buffer zone is 2193.09 hectares.

Chapter 2

This place is self-evident in its special nature...
The waters made the land, the land’s made the people.

Charles Curry, 7th generation dykeland farmer

Grand-Pré représente la persévérance devant l’adversité,
la réconciliation, le pardon... l’histoire est une chose.... on vit
avec le passé mais on vit dans le présent en préparant l’avenir.

Gérald C. Boudreau, Acadian
2.0 Description

2.a. Description of the property

The nominated property consists of 1323 hectares of dykelands, known elsewhere as polders, and uplands on the southern edge of the Minas Basin, an eastern arm of the Bay of Fundy in western mainland Nova Scotia. It is bordered by the Gaspereau River to the east, the Cornwallis River to the west, Long Island to the north, and parts of the communities of Grand Pré, Hortonville, and Lower Wolfville to the south. Dominating the distant background, beyond the nominated property, Cape Blomidon extends into the basin as an instantly recognizable landmark.

The nominated property includes the dykeland area that the Acadians created in the 17th century, which successive generations of farmers have expanded. It also includes distinctive representative sections of the Acadian settlement and of the current agricultural community, as well as the entire planned settlement for the New England Planters, a British town grid.

No clear historical record marks the boundaries of the 17th and 18th century community of Grand Pré. In fact, historical accounts and maps alternately use the names Grand-Pré and Les Mines to refer to the general area next to the Minas Basin and to the reclaimed marsh between the Rivière-aux-Canards (Canard River) and the Rivière Gaspereau (Gaspereau River). Even so, other records attest to the presence of the Acadian settlement on the uplands portion of the nominated property. The heart of the Acadian settlement is now defined by a concentration of archaeological remains of houses, field patterns, the cemetery, the traditional location of the remains of the parish church of Saint-Charles-des-Mines, and the intersection of main roads.

The southeast corner of the nominated property includes the surviving evidence of the planned British town grid in Hortonville. The grid is defined by Railway Street, King Street, and Middle Street running east–west and by Horton Cross Road, Wharf Road, and Patterson Street running north–south.

Today, the agricultural community surrounds the dykelands and extends over the hills to the Gaspereau River. The nominated property includes the heart of the Acadian settlement and the British town grid. Since the time of the first Acadian settlement in the 17th century, people have continuously worked these dykelands. The property also includes parts of the hamlet of Grand Pré, which hosts provincially and municipally designated heritage properties and some local services, plus farms on the hills and an expanse of fields and pastures.

At the heart of both the nominated property and the Acadian settlement lies Grand-Pré National Historic Site of Canada. The national historic site consists of the commemorative gardens, the Memorial Church, cemeteries, and many other memorials to the Acadian Deportation (see Map 3: Overview of Features of the Nominated Property).

Through tangible and intangible evidence, this exceptional landscape illustrates the harsh environment, the genius of the dyking system, the productivity of the farmland, and its symbolic reclamation by the Acadian people.
2.a.i. An exceptional setting

To understand the environmental challenges and opportunities that have faced communities here since earliest times, one needs to understand the setting.

The setting is defined by its location on the Minas Basin. Here, the shores are pounded twice a day by the highest recorded tides in the world, with a mean range of 11.61 metres. Over 100 billion tonnes of seawater flow in and out of the basin at every tide, more water than the combined flow of all the world’s rivers. Yet, those tides create not only an extraordinary challenge to settlement but also an extraordinarily fertile environment, ideal for agriculture.

For approximately 5000 years, the tides of the Minas Basin have deposited the rich alluvial silts of the Bay of Fundy in the intertidal zone at Grand Pré. The resulting mudflats and salt marshes provide habitat to many species of fish, shorebirds and seabirds. They also produce highly fertile and nutrient-rich soils ideal for agriculture. One can see, in the exposed iron-stained sandstones and siltstones beneath their cap of basalt on nearby Cape Blomidon, the type of material that has contributed to the fertility of the wetland. Nutrients were continually being stored in the soils of the marsh as the marsh level rose to keep pace with gradual sea level rise. No comparable productive wetland exists in North America at the same latitude. This intertidal zone is now over 1300 hectares of highly productive farmland protected by 13 kilometres of dykes, and is locally referred to alternatively as the marsh, dykeland or marshland. Surrounding the dykeland, on its fringe, are pockets of the salt marsh (see Figure 2–1) as it would have looked before it was dyked, as well as some remains of the previous dykes that were abandoned to the force of the sea. The marsh continues to host Spartina patens and Juncus gerardii, two grass species whose natural resilience to the tidal forces makes them ideal for dyke building and maintenance (see Figure 2–2). That salt marsh and the archaeological remains of previous dykes are included in the buffer zone.
The land, as well as the sea, presented challenges and opportunities to people who settled here. The surrounding community primarily sits on the uplands, a row of hills bordering the marsh to the south. Houses and trees are also on Long Island, no longer an island but recognizable from a distance because of its elevation above the flat dykeland. Communities settled on higher ground to protect themselves from floods and to take full advantage of the fertile dykelands. Boot Island, to the east of Long Island, has been eroded by the tides to such an extent that it is now barely visible. Boot Island was, up to the 19th century, attached to Long Island. Archival and sparse physical evidence points to Acadian and New England Planter settlements on that island. An open water channel, or “guzzle,” has been forming since the early 20th century between Long Island and Boot Island and continues to increase in size. The rapid erosion of Boot Island has destroyed much archaeological evidence and is one more indicator of the constant challenge of protecting land from the forces of the tide. Long Island and Boot Island are included in the buffer zone.

Grand Pré and the surrounding area retain a strong agricultural sense of place, largely characterized by fields, vineyards, orchards, and rural dwellings. It has no large-scale commercial activities.

2.a.ii. Tangible attributes

The Dykeland as the Heart of the Agricultural Landscape and the Cornerstone of the Symbolic Landscape

The dykeland defines the agricultural landscape and is the foundation for the symbolic landscape. It also connects the two.

Grand Pré, meaning great meadow or great field, derives its name from the 1300 hectares of dykeland that form the majority of the nominated property. Grand Pré has been dyked and farmed for over 300 years. It is a vast expanse of flat land interrupted only by meandering creeks, private farm roads, and a single public road bordered by utility poles. The land has been almost exclusively used for agriculture, regardless of the era or cultural group living alongside it. No permanent buildings stand on the dykeland. The key tangible features of the dykeland include the creeks, the dykes, the aboiteaux, and the field pattern (see Figure 2–3).

Because of its origins as an intertidal zone, the clayish soil of the dykeland has low permeability. The compactness of the soil and the often humid conditions in the area can make it difficult to operate heavy machinery here. These conditions in effect limit the size and weight of the farming equipment.

Ransom Creek, Great Discharge Creek, and Deportation Creek are three of the main discharge arteries on the dykeland. They have been an integral and virtually unchanged part of the dykeland since the late 17th and early 18th centuries. Smaller creeks drain into these larger arteries and are part of the overall drainage system of the dykeland. Today many of the fields have been “landformed” to improve drainage and retain heat, and the drainage of the dykeland begins with the runoff of water from the soil into ditches. These ditches have a 30-centimetre drop over 300 metres and run through the fields towards one of the three main discharge creeks. The water then continues down those creeks towards the Minas Basin and under the dyke through an aboiteau.
Dykes surround the area that was transformed from wetland into farmland. Currently, there are approximately 13 kilometres (8.1 miles) of dykes along the east, west, and part of the north boundaries of the nominated property, all dating from the 20th century. A vestige of an Acadian-period dyke remains on the east side of the dykeland, in the nominated property, protected by a landowner and his ancestors for generations (see Figure 2–4).

2–4 The raised ridge is the only above-ground vestige of an Acadian-period dyke.

It is the only above-ground vestige of that period and no longer serves as a barrier to protect land. Because the dykes were moved and reinforced according to their ability to withstand the changing forces of the tides, there are underground vestiges of dykes from different periods within the boundary of the nominated property, and above ground and underground in the buffer zone. Dykes in the nominated property area were traditionally built from sod taken directly from the salt marsh. Farmers would cut bricks of sod with specialized instruments and arrange them into a solid structure that would resist the impact of the tides. More recently, the operation has been mechanized, with large machines extracting the sod and topping the dykes. Ongoing maintenance of the dykes includes weed control to support the growth of sod and other useful vegetation. In many places, the dykes are faced with boulders on the water side to help protect them from the force of the tides (see Figure 2–5). Smaller portions of the dykes in the nominated property have been built privately by individual farmers. For all dykes, the building principles and their function have remained the same over time: restricting tidal inputs of seawater into the dykeland and protecting the farmland.

2–5 Dykes at Grand Pré are faced with rocks to help them withstand the force of tides and storms.

Aboiteaux, both functioning and abandoned, are found in creeks and under dykes throughout the dykelands (see Figure 2–6). These aboiteaux are the key technological component of the agricultural landscape. They continue to facilitate the passage of fresh water from the dykeland into the ocean at low tide, while keeping salt water from entering during high tide. Each aboiteau consists of a tubular structure with a simple valve at one end that regulates the flow of water. These structures were once made of wood, either from a hollowed tree trunk or an assembly of planks; today they are made from a combination of PVC piping, wood, and concrete. Once aboiteaux cease to function, they are left in place and new ones are installed immediately on top of or next to the old ones. Remains of earlier aboiteaux are regularly found by farmers as they carry out their drainage maintenance work. Five functioning aboiteaux are located within the nominated property and one is within the buffer zone.
The field patterns on the dykeland are a practical response to the geo-physical realities of drainage on the dykelands (see Figure 2–7). Their organically shaped patterns illustrate the smaller size and uneven form of fields common in the 1700s, even though many of these fields have changed sizes and shapes since then.

Some 31 per cent of current field patterns date back to 1760, when the New England Planters were first allotted land. Landowners did not separate fields with hedges, walls, or any other physical obstacle, except when needed to keep cattle, a tradition that endures. In many instances, ditches that collect water are located along the edges of each property, which may include more than one field. Crops grown in recent years on the dykeland include corn, salt hay, soy, alfalfa, oats, and winter and spring wheat. At various times throughout the year, and in various locations, the dykeland is used as a common area to pasture cattle.

2–6 A working aboiteau drains water from the dykelands.

2–7 Fields on the dykelands are shaped to create optimal drainage conditions.
The dykeland also plays an important part as a feature of the symbolic landscape. Through its association with the land that was once characteristic of Acadian settlements and the setting of Longfellow’s poem Evangeline, the dykeland serves as the foundation for the symbolic reclamation of the landscape by the Acadians. It is a reminder of the land that was lost at the time of the Deportation, even representing a “paradise lost” in an idealized vision of history for the Acadian people. Its proximity to the features of the symbolic landscape, which are discussed later, gives meaning to the memorials by setting them in a context that reflects the origins of the Acadians.

The Agricultural Landscape and its Features

The uplands to the south and Long Island, both on the edges of the dykeland, are where the agricultural community of Grand Pré has lived since Acadian times. Four distinct communities surround the dykeland: the hamlet of Grand Pré on the south-central boundary of the nominated property and Hortonville to its east, North Grand Pré on Long Island, and Lower Wolfville to the west of the hamlet of Grand Pré. The boundary of the nominated property includes portions of Hortonville and of the hamlet of Grand Pré. The remainder of these communities, North Grand Pré, and Lower Wolfville, are included in the buffer zone.

In addition to the dykelands themselves, the key tangible features of the agricultural landscape are the settlement, the French field pattern, the British planned town grid, the roads, and the archaeological heritage.

The settlement

The settlement pattern at Grand Pré has changed remarkably little over more than three centuries. Despite all the economic, political, military, and social changes that have swept the region, Grand Pré retains the pattern of a linear, dispersed, and low-density settlement (see Figure 2–8). The settlement continues to spread out across the hills and upland areas, adjacent to but never on the dykelands.

This pattern reflects the importance of the farmland, a need to live near it as the main workplace, and a need to protect the settlement from risk of floods. The uplands retain key aspects of the agricultural community that complement the use of the dykelands, including farmland, agricultural buildings, and some woodlands. The many and layered architectural styles of the dwellings and farm buildings – from the oldest house dating back to the late 18th century to the modern bungalow – and the presence of the cemetery provide evidence of an evolving landscape and of its ongoing use by an agricultural community. The settlement extends over the hills, interrupted only by Highway 1 and Highway 101, down to the Gaspereau River where it meets smaller dyked wetlands. This section of the settlement is included in the buffer zone of the nominated property.

The French and British settlement patterns

While today’s dispersed settlement is the most tangible evidence of the historic settlement pattern, one can see evidence of other forms of settlement that the French and British colonial authorities tried to impose.

The French pattern illustrates the seigneurial regime in that area. Typical of French North American settlement forms of land distribution, it is characterized by long and narrow property boundary lines running uphill from the closest body of water. It aimed
to provide an equal amount of woodlot to each settler as well as access to the water, at the time the main transportation corridor. At Grand Pré, long and narrow field shapes extending from the edge of the dykelands towards the top of the uplands are visible today (see Figure 2–9).

These field patterns are identical to those noted on a map by the British surveyor-general of Nova Scotia, Charles Morris, in 1760 (see Figure 2–10) and on a map from surveyor John Bishop in 1770.

These property lines do not follow the typical British authority’s approach of providing equal-sized parcels to new settlers, however there are no obvious physical conditions or obstacles that account for the different approach. In fact, a close examination of these maps highlights field divisions along the Gaspereau River similar to those along the dykeland and reveals the presence of a communal space, all key attributes of the seigneurial regime’s spatial organization. This leads historians to suggest that these field patterns are the vestiges of the seigneurial regime that was introduced when the settlement was created in the 1680s. This evidence is included in its entirety in the nominated property’s boundaries.

The British town grid in Hortonville (see Figure 2–11) is evidence of the British authorities’ plans for settling the New England Planters after the Deportation of the Acadians.

The 1760 map of Grand Pré shows field patterns identical to those seen today. (Note: north is at the bottom of this map.)

The plans for the Planter town of Horton followed the typical British settlement grid pattern.
The arrival of the New England Planters, commemorated by a Historic Sites and Monuments Board of Canada monument at Horton Landing next to the Deportation Cross, marks the beginning of their presence and that of their descendants in the area. The roads and field patterns are intact evidence of the British town plot, a rectilinear grid designed in 1760 and typical of British North American settlement patterns. The Hortonville town grid remains visible, and about half of the original roads are still used today. Middle Street runs east–west at the top of both the grid and the hill. Today, only two-thirds of the street is accessible by vehicle, while the remaining one-third is a footpath that connects with Patterson Street. King Street and Railway Street also run east–west in the grid, Railway Street being the most northerly of the three east–west roads. Patterson Street is currently the most easterly street in the grid and runs north–south. Horton Cross Road is the most westerly north–south road in the grid. About one-third of this road is not rectilinear like the others in the grid system, but curves following the natural shape of the land. Wharf Road, a dirt road running north–south, leads to Horton Landing. See Map 4: Site Plan for Hortonville.
Both the French and the British settlement patterns are reminders of the two colonial powers that struggled to take control of Acadie. The two patterns contrast with the dispersed low-density vernacular adaptation that the settlers used for successfully working on the dykelands. Tangible evidence of that rivalry is commemorated by a Historic Sites and Monuments Board of Canada’s cairn. Located on the corner of Grand Pré Road and Old Post Road, the cairn commemorates the Franco-British imperial rivalry that led to the 1747 attack by French and Aboriginal allies on the British troops stationed at Grand Pré. That event influenced the British authorities’ decision to deport the Acadian population in 1755.

Roads

Several historic roads lie within the nominated property. Old Post Road is one of the most important and historically significant roads in the area, connecting the communities from east to west. It dates back to Acadian and New England Planter times and is the southernmost boundary of the nominated property. Today, the road has been graded and paved, but not widened, retaining its original feel as a rural road. Grand Pré Road is the only public road that runs north–south through the dykeland, connecting North Grand Pré with Grand Pré. A portion of this road may date back as far as the 17th century, but most of it is from the late 19th century. Over time, it has been widened, graded and paved.

Smaller, private roads were built on top of dykes, and may date back as far as the late 17th century. Most of these roads are the responsibility of the Grand Pré Marsh Body. Lower Grand Pré Road is a historic dirt road that begins at Old Post Road and descends to the dykeland, gently curving across to Long Island and the community of North Grand Pré. It has been widened and graded in places. The Old French Road (also referred to in part as Shore Road) dates back to the 1680s and runs parallel to the dykelands (see Figure 2–12).

2–12 The Old French Road (as seen today) dates back to the 1680s and runs east–west along the dykelands.

Archaeological heritage

The nominated property includes a number of known archaeological sites. It also contains areas that may contain archaeological resources according to historical evidence and predictive modelling. While archaeological evidence confirms that humans were present here
for thousands of years before the Acadians arrived, the key attribute relates to the archaeological heritage from the 1680s onwards. On the dykeland, on which no homes have ever been built, archaeological sites consist essentially of sub-surface remains of dykes, *aboiteaux*, and roads. Due to the anaerobic nature of the dykelands soils, any discovered organic material would be in good condition. On the settled uplands, numerous sites have been found through surveys and by accidental discoveries (see Figure 2–13). These include structural features from the Acadian period, the New England Planter period, and the later 19th century. Archival evidence suggests the presence of important structures, burial grounds, and other features dating from the 17th and 18th centuries. Additional research is required to confirm their presence.

Grand-Pré National Historic Site of Canada has been the location of most of the archaeological research in the area (see Figure 2–14).

Since the 1960s, archaeologists have studied depressions in the ground and later identified them as Acadian-period buildings. Two are located on the triangular piece of property that houses the Blacksmith Shop. Other archaeological evidence has been uncovered at the historic site, mostly adjacent to the Memorial Church and near the Herbin Cross. Most of the artifacts discovered on this property are either on display in the visitor centre or housed in the Parks Canada facility in Dartmouth, Nova Scotia.

**Memorials of the Acadian Symbolic Landscape**

Creating the memorial park and erecting the memorials have physically transformed the landscape of Grand Pré into an Acadian symbolic landscape. These memorials are concentrated at the Grand-Pré National Historic Site of Canada and at Horton Landing.
The Grand-Pré National Historic Site of Canada lies along Grand Pré Road where the road meets the railway. It hosts key memorials associated with the Acadians, such as the commemorative garden, the Memorial Church (église-souvenir) (see Figure 2–15), the Herbin Cross, the Longfellow monument, and the Statue of Evangeline.

The visitor centre, at the entrance to the historic site on Grand Pré Road, offers exhibit areas, an audio-visual theatre, a gift shop, a multipurpose room, storage space, and washrooms. Between mid-May and mid-October, this is where visitors to the site are welcomed, oriented, and informed about their visit and the history of Grand Pré.

The commemorative gardens were designed by Canadian architect Percy Erskine Nobbs, by commission from the Dominion Atlantic Railway in 1918. His design links the different key memorials, displays the symbols of Acadian identity, provides a contemplative setting to reflect on the events surrounding the Deportation of the Acadians, and stands in marked contrast to the agricultural setting surrounding the historic site (see Figure 2–16).

The Memorial Church is revered by Acadians worldwide. The Memorial Church is a place revered by the Acadians and their Louisiana cousins, the Cadiens (Cajuns). It has become a destination for an untold number of personal and group pilgrimages and is considered sacred, even though it has never been consecrated by the Roman Catholic Church. The cornerstone was, however, blessed upon completion of the church. Built of fieldstone, the church was finished in 1922, and resembles a Norman French church (see Figure 2–17). It symbolizes the trauma and dislocation associated with the
Deportation of the Acadians, as well as the perseverance and hope with which later generations of Acadians were able to surmount their challenges and hardships. The Memorial Church is believed to be near the location of the 18th-century Acadian church of Saint-Charles-des-Mines. It has iconic status as a symbol of Acadian history in general and of Grand Pré in particular.

The Herbin Cross represents one of the earliest attempts to mark, formally and artistically, the prior presence of the Acadians on the ground at Grand Pré (see Figure 2–18). It was erected in 1909 at the direction of John Frederic Herbin, an Acadian descendant and the founder of the historic site, to mark the place where old coffins were uncovered during the 19th century. Constructed from fieldstones collected on location and presumed to be from Acadian houses, it accurately indicates where the Acadian cemetery was located from the 1680s to 1755. A plaque honouring Herbin was added to the cross in the 1930s.

The Longfellow monument is a plaster bust of American poet Henry Wadsworth Longfellow, author of the poem Evangeline, *A tale of Acadie* that brought worldwide attention to Grand Pré and the plight of the Acadians following their Deportation (see Figure 2–19). The monument was erected in the park in 1955 by the Province of Nova Scotia, on the occasion of the 200th anniversary of the Deportation of the Acadians. It symbolizes the impact that Longfellow’s poem, retelling the forced migration of the Acadians, had on readers around the world and on the collective memory of the Acadian people. It also acknowledges how the success of that literary creation brought untold numbers of tourists to Grand Pré.
The bust of Longfellow commemorates the attention the author brought to the Acadian story.

The poem’s main character, the fictional Evangeline, acquired symbolic status with Acadians and non-Acadians. The character represents hope, the strength of a people’s character in adversity, and the trauma of losing one’s homeland, all essential aspects of the Acadian experience. That symbolic status was confirmed with the erection of a bronze statue of Evangeline commissioned by the Dominion Atlantic Railway and executed by Montreal sculptor Henri Hébert in 1920 (see Figure 2–20). The Statue of Evangeline, especially with the Memorial Church as its backdrop, has become an iconic symbol of the Acadian history of Nova Scotia in general and of the tragedy of the Acadian Deportation from Grand Pré in particular.

Longfellow’s Evangeline popularized the story of the Acadian people around the world.

The Statue of Evangeline, as well as the other attributes of the national historic site, are depicted in Map 5: Site Plan for Grand-Pré National Historic Site of Canada.
Chapter 2 - Description
Horton Landing

Horton Landing lies at the end of Wharf Road where the land meets the mouth of the Gaspereau River. It is a small triangular piece of land, marking the spot where Acadians were boarded onto small boats to begin their forced migration in 1755 (see map 6, Site Plan for Parks Canada Administered Property – Horton Landing). An iron cross, known as the Deportation Cross, symbolically marks the place of the beginning of the forced migration and honours the sufferings of the Acadian people (See Figure 2–21).
Originally erected by the Acadian community in 1924 next to a nearby creek and the railway, the Deportation Cross was moved to Horton Landing in 2005 as new information confirmed the exact location of the event. It displays a plaque that reads,

The dry bed of the creek which is in sight, a few paces in the marsh is the spot where the VICTIMS OF THE EXPULSION OF THE ACADIANS OF 1755 were embarked on the small boats to be rowed over to the transports lying at anchor in Minas Basin.
2.a.iii. Intangible attributes

As an agricultural landscape, the main intangible attribute, resulting in the tangible attributes described earlier, is the community-based approach to maintaining the dykeland, including its drainage and roads. Since creeks are maintained as the main drainage outlets, the drainage of individual fields is directed towards those creeks. The result is the characteristic field pattern of a patchwork of shapes and sizes. As a symbolic landscape, the main intangible attribute of the nominated property is the Acadian community’s continuing understanding and use of the landscape as a lieu de mémoire.

These intangible attributes illustrate the integral relationship between the agricultural and symbolic dimensions of the landscape.

Community-based Management of the Dykeland

The first Acadian builders of the dykes adopted a collaborative approach to managing the dykeland. Today, the dykeland continues to be managed the same way. The Grand Pré Marsh Body is an association of dykeland owners who together, under legislation, are responsible for managing the designated agricultural dykeland. Its membership stands at about 30 owners who use and manage thousands of hectares of dykeland. Many of the current members are descendants of the New England Planters. Their families have been farming the land for close to eight generations, which is extremely rare in North America. Newer members include Dutch farmers who settled in Canada after the Second World War. The centuries-old knowledge of the principles of working the land, of dyke building, and of drainage maintenance is shared among members and within families. It is a thriving organization that ensures collaboration and respect for the land.

The ongoing agricultural use of the dykeland, the maintenance of the drainage and dykes, and the incredible productivity of the land are the result of that knowledge and of its nurturing through the Grand Pré Marsh Body (see Figure 2–22). The dykeland area included in the nominated property is managed under the jurisdiction of the Grand Pré Marsh Body.

Lieu de mémoire for the Acadians

Grand Pré is a place where Acadians commemorate their collective experiences and celebrate their identity, a lieu de mémoire.

As a lieu de mémoire, the symbolic landscape of Grand Pré shows how the Acadians are associated with this area beyond the tangible memorials. This is particularly evident in the many ways Acadians use the commemorative spaces, in particular at the national historic site and at Horton Landing. These uses include annual “Acadian days,” annual events commemorating the Deportation and the Acadian National Day, and other cultural and social events. Acadians organize events and take an active role in managing the national historic site. It is also evident in the references to the Memorial Church and to other symbols of Grand Pré in literary and artistic works.
In 2008, the organizing committee of the Acadian Games gathered 1500 young Acadian athletes at Grand-Pré to learn about their history and celebrate their pride in Acadie.

Numerous events at Grand Pré have brought together Acadians from around the world in the past century. These gatherings have united Acadians and allowed them to celebrate and express their collective memory (see Figure 2–23).

Notable events include the bicentenary of the Deportation of the Acadians in 1955 and the World Acadian Congress in 2004, an event organized and held in a different region of the Acadian diaspora every five years.

These intangible associations are evidence of the ongoing evolution of the landscape. They also demonstrate the ability of the Acadian community to continually transform this lieu de mémoire to reflect its values and its renaissance.
2.b. History and development

The Evolution of an Agricultural and Symbolic Landscape

Since the 1680s, when a small group of Acadian settlers first arrived in the area and called the vast wetlands *la grand pré*, the human history of Grand Pré has been linked to its natural setting and the exceptional fertility of this land by the sea.

The earliest settlers were isolated. They were a long way from home and were mostly ignored by the various French and British authorities who administered the area. The settlers developed close relations with the local Mi’kmaq, the indigenous people of Nova Scotia – not just at Grand Pré but elsewhere in Acadie – as they came to grips with the natural setting and began to claim fertile land from the sea by building dykes. All of these factors contributed to their developing a new and distinct identity. Though French by birth, over the course of the second half of the 17th century they came to see themselves as belonging to l’Acadie, as being Acadiens and Acadiennes.

During the roughly 70 years before their forcible removal in 1755, the Acadian community of Grand Pré introduced an environmental management approach that had been applied elsewhere in Acadie. Acadians took European practices, developed for wetlands and salt pans, and adapted them to the much different environment in Acadie.

Faced with the highest recorded tides in the world (see Figure 2–24), the Acadians at Grand Pré worked for three generations to transform over 1300 hectares of tidal marsh into farmland. The farmland was then – and remains today – some of the finest farmland in North America.

In 1760, five years after the Acadians were first deported from Grand Pré and dispersed throughout the world, a contingent of New England Planters was settled at Grand Pré to take over the lands. Then, as now, the transformed marsh was the primary focus for the area’s inhabitants. Like the Acadians before them, the New England Planters in the Grand Pré area developed their own strong connections to the land and their rural way of life. The Grand Pré dyked land remains highly fertile today, and the most important features of the original dyked area remain in place.

Then, beginning in the late 19th century and continuing until today, Grand Pré developed as the most important lieu de mémoire of the Acadian people. Memorials and commemorative gardens were created adjacent to the transformed marsh to mark the ancient Acadian settlement, commemorate the removal of the people in 1755, and celebrate the vitality of the Acadian community. This last transformation completed the symbolic reclamation by the Acadians of an agricultural land from which they had been forcibly removed.

Before the Arrival of the Acadians: The Highest Tides in the World, a Fertile Environment, and the Mi’kmaq

The Highest Tides in the World

Following the retreat of the glaciers after the last Ice Age about 14,000 years ago, sea levels around the planet rose. Rivers draining from the newly deglaciated land began to wash away sediment. In Eastern Canada, these sediments came to line the bottom of the Bay of Fundy. At this time, the Minas Basin was a shallow freshwater or brackish lake, and Georges and Browns Banks at the entrance to the Bay of Fundy were dry land. As sea levels continued to rise, and Georges Bank became submerged, more sea water entered the Bay. By 4000 years ago, the tidal range in the Minas Basin was only about 1 to 1.5 metres (3.2–4.9 feet), but this range has steadily increased over time to an average of 12 metres (39 feet) in the Minas Basin, 11.61 metres (38 feet) at Grand Pré and a maximum in excess of 16 metres (52.5 feet) – the highest recorded tides in the world.

The greatest ranges and the greatest extent of an intertidal zone occur today in the Minas Basin. As part of the tidal cycle – two high tides and two low tides daily – 100 billion tonnes of sea water flow in and out of the Minas Basin twice each day. That is more water than the combined daily flow of all the world’s rivers.
As a result of the large tidal range, extensive mudflats at Grand Pré are visible at low tide.
A Natural Fertility

By any measure, the Bay of Fundy is an extraordinary, complex and highly productive ecosystem. All coastal waters and estuaries tend to be biologically rich because they are adjacent to land that provides a steady supply of nutrients, are generally shallow so that light and nutrients are available to support plant growth, and provide a diverse array of habitats for different species. In the Bay of Fundy, these natural attributes are enhanced by the dramatic tides. Tides create major upwelling areas at the mouth of the Bay in which cold, nutrient-rich water is brought to the surface where light is available to support growth of phytoplankton. This is the foundation for a highly productive food chain that sustains vast numbers of animals from plankton to whales. This is also one of the major reasons that numerous species of fish, birds and mammals migrate to the Bay of Fundy to feed each year.

At the head of the Bay, in the Minas Basin, the larger tides drive a totally different ecosystem, one in which the waters are cloudy because of silts and clays kept in suspension by the tides. There is little biological production in the water, but at the same time large areas of intertidal zone are exposed where phytoplankton and salt marshes flourish. Sustained both by the constant provision of sediment and by the continuous supply of nutrients brought in on the rising tide, salt marshes are more extensive in the Minas Basin, allowing the marsh to grow as sea level rises. As a result, the Fundy marshes are naturally among the richest in the Northern Hemisphere. With the coming of the Acadians, and the dyking of some of these marshes, that fertility became available for agriculture. Indeed, topsoil is on average four and a half metres deep. Although the low permeability of the sediment makes it difficult for salt to be washed out of the soil, farmers were still able to grow shallow-rooted crops. Prior to the Acadian settlement, human use of the Bay of Fundy was mainly through the capture of animal life – shellfish, fish, birds and mammals.

In the period just before the first Acadians came to settle at Grand Pré, the lower-lying parts of what is today the Grand Pré dyke-lands were covered twice a day by sea water. The higher areas were covered less frequently, just during extreme high tides. When the tide fell, it revealed an extensive salt marsh, consisting of over 1000 hectares of marsh grasses and tidal drainage creeks. This luxuriant marsh was home to a wide range of marine and estuarine life.

The First People, the Mi’kmaq

For thousands of years before the arrival of Europeans in northeastern North America, the Mi’kmaq, the indigenous people of Nova Scotia, lived, hunted, and fished throughout parts of the maritime provinces and Gaspé peninsula in Québec, in a region that came to be known collectively as Mi’kma’ki. The particular district in which the shores of the Minas Basin and Grand Pré are located was called Sipekni’katik, the name by which today’s Mi’kmaq still know it.

Their presence in the broader landscape is confirmed from traditional, archaeological, and ethnographic sources. The archaeological discovery in 2009 of a 4000-year-old stone gouge at Horton Landing provides the earliest date of use of the area by the ancestors of the Mi’kmaq. The Minas Basin figures prominently in the history, legends, and spirituality of the Mi’kmaq, especially Cape Blomidon, which has been for centuries the dominant feature on the landscape in the overall Grand Pré area. This is the setting for the stories of Glooscap – the most important Mi’kmaq hero – including Glooscap and the Whale, Glooscap’s battle with the Beaver, and Glooscap and Lazy Rabbit. These stories and more confirm the importance of the Minas Basin and the lands surrounding it for the Mi’kmaq.

Archaeological and ethnographic evidence shows that the Mi’kmaq had settlements in the area, particularly on nearby Oak
Island (see Map 2 for location), at Melanson along the Gaspereau River, and at Horton Landing, confirming their presence in the area over several thousand years. Among the many important Mi’kmaq sites in the Grand Pré area is a burial ground on Oak Island. The Minas Basin falls within range of a regional trading network that brought chert mineral, a stone similar to flint and used to make tools, and traded stones and products from the sea.

The Mi’kmaq typically harvested a wide range of resources in estuarine environments like the one that existed at Grand Pré: waterfowl, fish, shellfish, sea mammals, and medicinal plants. It is almost certain that the Mi’kmaq took the resources they needed from the area on a seasonal basis, such as when certain fish species were abundant in adjacent waters and when the huge flocks of migratory birds came to the area to rest and fatten up.

The Acadians and the Creation of the Dykeland 1680–1755

When the first Europeans arrived in the 17th century to the area that is now Nova Scotia, they found willing trading partners in the Mi’kmaq, who had developed sophisticated trading networks over the millennia. During the succeeding centuries, European settlements gradually encroached on Mi’kmaq territory, especially the rich coastline, and intense competition for the region’s resources ensued. Early on, though, the French authorities and the Mi’kmaq forged positive relationships that led to alliances. One such alliance resulted from the historic baptism of Grand Chief Henri Membertou in 1610, the first Aboriginal person to be baptized in what would later become Canada. There are no known treaties between the French and the Mi’kmaq.

When the Acadians began transforming the marsh at Grand Pré, the Mi’kmaq did not prevent them from altering and ultimately removing a vast wetland from the regional resource base. This attests to the harmonious relationship that generally existed between the two peoples, a relationship that was rare in colonial era North America. Acadian settlers maintained positive relations with the Mi’kmaq throughout the late 17th and early 18th centuries, which were years of political uncertainty. As the French and British imperial powers fought for control of Nova Scotia, the settlers were left to build their own alliances and trade networks. The physical transformation of the landscape could only have taken place with the acceptance of the Mi’kmaq, since the latter greatly outnumbered the Acadians in that area in the late 17th century. An analysis of the Acadian parish records between 1707 and 1748 reveals a high number of mixed heritage individuals at Grand Pré. Of the many different Acadian communities before 1755, Grand Pré was the one with the highest percentage of mixed heritage families. There are also frequent documentary references to the Mi’kmaq being at or near Grand Pré, in what the Acadians called the district of Les Mines.

The French in Acadie

The Acadians are a people born in North America. Their identity is the result of the transformation of their individual European values as they came into contact with a new environment and new people. Their story begins with the French settlement of North America.

In 1604, the French made their first attempt to establish a permanent settlement in North America, at Ile Sainte Croix in the Bay of Fundy. They were quickly demoralized and threatened by the rigours of winter in this climate. In 1605, they tried again, better prepared and better located at Port Royal in today’s southwestern Nova Scotia. That settlement succeeded, signalling the foundation of a territory called Acadie which the French claimed included roughly the lands between the 40th and 60th parallels along the Atlantic Ocean. This would cover today’s Canadian provinces of Nova Scotia, New Brunswick, and Prince Edward Island, plus eastern Québec and parts of three American states in New England.

From Port Royal, the French began their expansion throughout Acadie and New France by founding Québec (1608), Beaubassin (early 1670s), and Grand Pré–Les Mines (1682). The settlers came from the French regions of Poitou, Saintonge, and Aunis to an unknown land with the promise of a better life.

The transition from French to Acadian came gradually as a result of environmental, social, and political influences. The settlers found themselves in a wholly unfamiliar environment and having to adapt
to a new climate, wildlife, and vegetation. Socially, they were shaped by their contact with the Mi’kmaq, the indigenous people of Nova Scotia. Through the mutual trust and relative harmony that the two peoples established, the French were able to settle peacefully and learn the ways of the land to survive and thrive. The high number of mixed marriages confirms the good relations and strengthened the bond between the two peoples. Politically, since Acadie was strategically important for the imperial powers and changed hands frequently between the British and the French, the settlers were often left to fend for themselves. Consequently, they took matters of justice, administration, and community life into their own hands. These three environmental, social and political influences greatly affected the settlers’ sense of independence, initiative, and ownership of the land. By the mid-17th century, these characteristics were distinctive enough to have French officials take note and refer to the French settlers as Acadians. As for the British, they referred to them as “French Neutrals,” after the 1730s, as a result of their steadfast resolve to remain neutral in the conflicts between France and Britain.

A Disputed Territory

While the French claimed Acadie as their own, the British were competing with them for territorial claims over similar areas. Located strategically between New England to the south and New France to the west, Acadie from the early 1600s onward was often a battleground for control of key settlements and military positions. There were numerous violent incidents and, occasionally, outright wars. The struggles were sometimes between French and Anglo-Americans, sometimes among rival groups of French colonists, sometimes between French and British forces, and sometimes between the Mi’kmaq and British or Anglo-American forces. All skirmishes, battles, and raids during the 17th and 18th centuries occurred in the broader context of European conflicts resulting from the race to colonize new worlds, dominate lucrative trading routes, and expand empires in Europe and abroad.

The conflicts resulted in the colony of Acadie changing hands frequently. It was under French authority six times and British authority (which, after 1621, sometimes referred to the land as Nova Scotia) four times over 155 years until the French lost Canada in 1763. During that era, Acadians were actively establishing their communities along the Bay of Fundy, the Atlantic Coast, Ile Royale (now Cape Breton Island in Nova Scotia), and Ile Saint-Jean (now the province of Prince Edward Island).

The Minas Basin area was not spared the negative effects of the conflicts. In both 1696 and 1704, expeditions from New England, led by Benjamin Church, came to different parts of Acadie. In the latter expedition, the attackers devastated the community at Grand Pré. They burned houses, carried off prisoners, and broke the dykes to let in sea water, because they knew that the enclosed dykeland was crucial to the Acadians’ agricultural output. A contemporary account says that the soldiers dug “down the dams [dykes], and let the tide in, to destroy all their corn, and everything that was good.” Once the force left, the Acadians returned to the area, rebuilt their houses and repaired their dykes to begin anew.

This incident took place during the War of the Spanish Succession, a European conflict that had many repercussions in North American colonies. When the war ended with the signing of the Treaty of Utrecht in 1713, one of the terms of the peace agreement was to have a major impact on the Acadians and their settlements. The clause in question saw France transfer sovereignty over Acadie/Nova Scotia to Great Britain. The British presence in Nova Scotia was small at the time, with few British settlers and small garrisons only at Annapolis Royal and Canso. Most of the territory either remained under the control of the Mi’kmaq or was home to growing Acadian villages. Nonetheless, beginning in 1713 and increasingly in the years that followed, British officials regarded Acadians as a people owing obedience to their monarch, with all the obligations that this entailed. The question of the Acadians’ loyalty was one that would not be settled – to the satisfaction of the British officials – between 1713 and 1755. In fact, this question played a major role in the sequence of events that led to the forcible removal of Acadians from Grand Pré and elsewhere beginning in 1755.

Despite these conflicts and transfers of power, the settlers managed to expand the colony and grow roots in Acadie.
Settling Grand Pré

When the French settlers came to Les Mines (Grand Pré) from Port Royal in the 1680s, they occupied lands that were initially part of the seigneurie of Alexandre LeBorgne de Bélisle who was the seigneur of Port Royal. As was the custom in New France, the settlers were granted lands shaped as long strips that extended away from the nearest water course. This seigneurial pattern, common to New France and somewhat to Acadie, allowed each settler to have access to the water, to varying degrees of land quality, and to woodlots. It was the task of the settler to clear the land for farming. The seigneur would collect rent and build a mill for the community.

For Grand Pré, little is known about the strength of the relationship between the seigneur and his settlers, or about the first years of settlement. LeBorgne de Bélisle had tried to reinstate the authority of the seigneur after years of nominal British authority (1654–1670), but he seems to have failed. Even so, it is most likely that the settlers adopted the typical seigneurial land pattern, although no maps or description have survived to confirm that. From the archival evidence and landscape analysis described earlier in section 2.a., historians and archaeologists believe that the settlers of Les Mines did in effect implement a seigneurie, and that tangible and visible evidence of that landscape form exists today.

While the first settlers may have adopted the seigneurie, their settlement pattern evolved in response to the creation of the dykeland. They created farmland by transforming marshland rather than by clearing woodland. In order for the community to be close to their work area without settling on the newly created land, they built their homes alongside the marsh. The Acadians erected their houses, barns, mills, and other buildings on the adjacent upland and created a system of roads and footpaths to link them with other Acadian villages.

Over time, they cleared land from the uplands to make way for the buildings, roads, and paths, as well as to create some farmland and allow access to the woodlots. From these lots they extracted the building material for their houses, barns, aboiteaux, and dykes. From the 1680s onwards, three generations of Acadians gradually enclosed and converted the marsh (la grand pré). The resulting agricultural abundance brought prosperity to the local community and allowed it, along with other similar Acadian communities, to enjoy a remarkable population growth.

The Acadians Create Farmland from the Marsh

The Acadians’ focus and ability to transform marshes is distinctive in colonial North America. They were the only pioneer settlers in that era to farm so extensively below sea level.

In 1670, the new French governor of Acadie observed the settlements close to Port Royal and wrote, “On these dykes they raise with so little labour large crops of hay, grain and flax, and feed such large herds of fine cattle that an easy means of subsistence is afforded, causing them altogether to neglect the rich upland.” This comment, which ignores the back-breaking work that went into creating the dykelands, could well have applied to Grand Pré a decade later. In Grand Pré, the great fertility of the dyked marsh was an important key to the region’s success.

By the 1680s, Acadians already had half a century’s experience of transforming land in Acadie. The first recorded evidence of dykelands comes from the Port Royal area at the site of the first successful permanent French settlement in North America. While the origin of land transformation in Acadie is not recorded, there are two possible sources of the Acadians’ knowledge: one individual and one collective. It seems that these sources may have been at work simultaneously.

In 1636, Isaac de Razilly, governor of Acadie, enlisted five sauniers from western France for the purpose of “dyking the marsh” (faire des marais) at Port Royal, which may be interpreted as either creating salt pans or dyking for agricultural purposes. Their presence in the colony is confirmed in the roll call of their ship the Saint Jehan, a list where they were specifically identified along with dozens of other settlers from different parts of France, but mainly from the coastal region of Aunis and Saintonge. These sauniers were keepers of the centuries-old expertise of building dykes and draining lands in western France. Dykelands were indeed created in Port Royal as confirmed by the 1670 observation by the French governor at the time. Historians,
however, have lost track of these sauniers, and their impact is difficult to assess. While there is no indication that salt collection per se was ever attempted in Acadie, it is reasonable to believe that these sauniers would have had a role in carrying knowledge acquired in Europe and adapting it to the environmental conditions of Acadie.

The other possible origin, one noted at the turn of the 20th century by historian William Francis Ganong and more recently by historians Yves Cormier, John Johnston, and Ronnie-Gilles LeBlanc, is a collective knowledge of dyke building that the French settlers likely brought with them to the new world. The majority of these settlers came from western France, where marshy areas had been transformed and reclaimed over centuries to create much-needed land. In particular, they came from Poitou, Aunis, and Saintonge, areas along the Atlantic coast with large expanses of marsh. These areas were the home of peoples that had mastered the skills of dyking, land drainage, and salt extraction since the Roman period. These regions were also the target of intensive land transformation as early as the 11th century under the direction of religious and political authorities. By the late 16th century, salt water had again flooded many of these large tracts of transformed lands, largely as a result of the dyking and drainage works having sustained great damage from the religious wars that swept across Europe in that century.

However, the knowledge of dyking and drainage was not lost. Many dyking systems still remained, particularly in Poitou, Aunis, and Saintonge, and local populations made constant efforts to maintain them for agricultural use and to protect their settlements. Some of the settlers who came to Acadie at the beginning of the 17th century certainly carried this knowledge with them. Its application in Acadie is an extension of that tradition from Europe to North America and reflects a simple dyking and drainage experience that predates the large engineering works of the 17th century. The use of more advanced technology to drain the dykes was never necessary. The extreme tides at Grand Pré make mechanized draining unnecessary, because the low tide is well below the level of the dykelands (see Figure 2–25).

At the turn of the 17th century, western France was again the focus of large projects, this time under the engineering leadership and the financial backing of the Dutch. Invited by the royal and seigneurial authorities, the Dutch undertook significant work in France to reclaim those lands through a more systematic and improved system of drainage that involved canals, channels, gates, and landscape design. The Dutch made a significant contribution to land reclamation in those regions, primarily by introducing these engineering designs works. They had a lasting impact on the design and technology of dyking and drainage.

The technology that the Acadians used to transform wetlands and marshes could not have been simpler: special spades, pitchforks, axes, and hollowed-out tree trunks. Much more important than the tools was the ingenuity of the people to read the natural drainage systems of the marshes and then to build dykes that channelled the flow of those creeks in only one direction, discharging into the sea. One element of the Acadians’ success was to use sod cut from the original wetlands in their earthen dykes. In a process similar to peat extraction in western Europe, special spades were used to cut bricks of sod in specific sizes and shapes that were then assembled to form the dyke. The grasses and rushes in the sod could withstand being covered by salt water for many hours each day. They also had deep and densely matted root systems that anchored them when the sea water swirled over them, protecting the exposed sides of the dykes at high tide. Cutting the sod and assembling the dykes were a communal undertaking because of the skills, efficiency and speed the work required.

2-25 Illustration of a cross-section of the dykelands at Grand Pré, including the tidal range, salt marsh, aboiteau system and fields. Note the aboiteau refers to the section of the dyke surrounding the sluice; this cannot be accurately represented in a cross-section, but can be seen in 2-26. Additionally, the tidal zone at Grand Pré includes mudflats that extend for hundreds of metres. In order to illustrate the mean tidal range, this diagram considerably reduces the mudflats.
Along with using the strong, dense plant growth in the sod, the Acadians took advantage of the natural drainage patterns of the marsh by building aboiteaux in the small creek beds that drained the marshes at low tide. The aboiteau, a term used in Acadie, refers to the section of the dyke surrounding the sluice, as well as to the completed dyking project. The sluices each had a clapet (clapper), a wooden valve that allowed fresh water out of the sluice and into the river or bay at low tide but did not allow sea water back in during high tide (see Figure 2–26).

Once a section of marsh was enclosed, the fresh water from rain and snow melting gradually washed the salt out of the top layers of the soil. The desalination process generally took two to three years for each plot of dyked land. The aboiteau approach used by the Acadians was imaginative and ingenious, an adaptation of techniques used in Europe and elsewhere for centuries before French colonists arrived in North America.

Impressed by the fertility and productivity of the initial transformed lands in Acadie, the Acadians would go on, until 1755, transforming many marshes of different sizes along tidal rivers and various coves and bays around the Bay of Fundy, in many parts of today’s Nova Scotia and New Brunswick. Acadians came to be known as défriicheurs d’eau (water pioneers), to distinguish them from other colonists in North America who created farmland by clearing the forest. The Acadians did clear some upland areas for their villages, orchards, gardens, and livestock, but the dominant element in their agriculture, highly unusual in North America, was to claim the tidal marshes by enclosures.

Though the Acadians used marsh enclosures to give themselves agricultural land in many different areas, the high tidal range at Grand Pré presented exceptional challenges. Along the Annapolis Basin, where the first Acadian dykes were erected, the tidal range varies from 4 metres to a maximum of 8.5 metres. Within the Minas Basin at Grand Pré, the mean tidal range is 11.61 metres, and the highest tides in the basin reach more than 16 metres. To the Acadian dyke builders, countering this churning volume of sea water required toughness and ingenuity. They had to devise a building technique that would not wash away as the dyke was being built, dexterity to assemble the different parts of the dyke effectively, collective coordination to transform large tracts of lands quickly, and great labour to build large dykes that could withstand the pressure of such formidable amounts of water (see Figure 2–27).

Yet dyking the marshlands was also a major agricultural opportunity. Between 1680 and 1755, the Acadians took on the project of excluding the sea and claiming the highly fertile tidal marshes. They appear to have begun with the easiest part of the marsh, in the centre not far from the upland shore. Once they had successfully enclosed that area, they moved on to a series of other dyking projects. Biologist
and dykeland historian Sherman Bleakney offers a likely construction sequence of the dykeland enclosures in his book *Sods, Soils and Spades* (2004) (see Figure 2–28). Construction began near the centre and progressed in large sections around that first enclosure in 12 sequences that follow the three main creeks and their drainage watershed. Gradually, the Acadian farm families of Grand Pré turned nearly all of *la grand pré* into agricultural land.

They left only a portion at the western limit of the wetland undyked, a project that the descendants of the New England Planters would successfully complete after their arrival in 1760. At Grand Pré, the Acadians eventually reclaimed over 1000 hectares, a massive artifact that still exists as an active testament to the Acadian accomplishment. It was also the largest single dyking project that Acadians, or any settlers of European descent, would complete anywhere in North America before 1755.

As the Acadians transformed *la grand pré*, the adjacent village grew steadily. Within a few decades, the Grand Pré area had become the most populous of all the Acadian settlements. Acadians began to export their surplus production, especially grain, to both French and British settlements. The exports were shipped in vessels that anchored in the Minas Basin and loaded and unloaded their cargoes at the landing point (now known as Horton Landing) on the Gaspereau River. Eighteenth-century British and French commentators acknowledged the unrivalled fertility of the dykelands created by the Acadians. For example, Grand Pré was renowned for its grain production.

It is noteworthy that the dyking projects at Grand Pré, and in most other Acadian settlements in the late 17th and early 18th centuries, were community projects (see Figure 2–29). Archival evidence
and first-hand accounts from travellers and authorities, in the 18th and 19th centuries, indicate that communities had rules to guide collective work for the benefit of all. The main rule governing collective management was that each landowner contributed to the building and maintenance of dykes and aboiteaux by providing either labour or financial compensation.

2–29 Artist Lewis Parker’s painting, Acadians building dykes and aboiteaux at Grand Pré, shows the collaborative building of dykes at Grand Pré.

It is clear also that collaboration did not mean collective ownership. Evidence suggests once the collective transformation had been completed, the land was allotted through a lottery system. In order to consolidate fields or acquire better land, landowners would then trade or buy fields. An entrepreneurial spirit characterized the farming activities of the settlers. Local farm families made the decision to transform the vast wetlands of Grand Pré, and their children and grandchildren continued the work. Most other Acadian land transformations followed the same process. The only exceptions were the original dykes initiated at Port Royal in the 1630s and the uncompleted project in the Tantramar marshes of the Chignecto area that straddled the border between New Brunswick and Nova Scotia in the 1750s. These two projects were initiated and controlled by a leader or hierarchical figure. By contrast, the more common community approach helped to shape the Acadian identity and strengthen the ties of their close-knit society over the long term.

Continuing French and British Conflict

As France and Great Britain continued to jockey for imperial domination of North America throughout the 18th century, most Acadians, including those at Grand Pré, wanted to stay out of the conflict and be accepted as neutrals. Unfortunately, neither French nor British officials were willing to accept that position. Both powers wanted the Acadians, or the “French neutrals” as the British and Anglo-Americans labelled them, to support their cause and, ideally, to fight for it. The French saw the Acadians as natural allies, since they were Roman Catholics, mostly of French descent, and spoke French. The British, on the other hand, viewed the Acadians as subjects of their king since the signing of the Treaty of Utrecht in 1713. A few Acadians were pro-French and a few others worked with the British, but most were caught in the middle between competing imperial aspirations. Following the Treaty of Utrecht, the Acadians were expected to take an oath of allegiance to the King of Great Britain. This they at first refused to do, in an attempt to maintain their identity and their neutrality.

In 1729–30, Acadians throughout mainland Nova Scotia agreed to a modified oath proposed by the British governor based at Annapolis Royal. The governor assured the Acadians that they would not be forced to take up arms against the French and the Mi’kmaq, and that they would be allowed to remain neutral. Events in the 1740s and 1750s, however, led later British administrations to revisit the question of Acadian neutrality.

In addition to their concern over the Acadians, the British were also troubled with their relations with the Mi’kmaq. As the British strengthened their position in New England and Acadie at the
beginning of the 18th century, they signed treaties with the Aboriginal peoples of those regions, including a treaty signed in Boston in 1725 with the Wabanaki Confederacy intended to ensure the protection of existing British settlements from attack. The Mi’kmaq, who were part of the Confederacy, agreed to the treaty in 1726 after several modifications.

After three decades of peace, Great Britain and France again found themselves in conflict during the War of the Austrian Succession (1744–1748). The main theatre was in Europe, yet Canada saw its share of action. Several incidents at or near Grand Pré had a long-term impact on the Acadian population.

In the summer of 1744, a military expedition from the French stronghold at Louisbourg on Cape Breton Island advanced through the main Acadian communities, including Grand Pré, appealing to the Acadian men to join the campaign. Few answered the call. Acadians wanted to remain neutral, and they had a harvest to bring in. While the overall Acadian response in 1744 disappointed the French, it worried the British, who had hoped to see them actively turn against the French.

The following year, 1745, the French launched an unsuccessful attack on the British base at Annapolis Royal. At around the same time, a large army of provincial soldiers from New England, supported by British warships, captured Louisbourg. In 1746, France outfitted a massive expedition to cross the Atlantic on a mission to regain Louisbourg, to take Annapolis Royal, and to compel the Acadians to commit themselves to the French cause. The expedition ended in disaster because of delays, storms and illnesses.

Both the French and the British strengthened their positions in the Atlantic region in the late 1740s. In the autumn of 1746, in response to earlier French actions in the area, the British sent roughly 500 New England soldiers to establish a post in the village of Grand Pré. The Anglo-American troops took over several houses on the uplands overlooking the reclaimed marsh and settled in for the winter. A few hundred kilometres away in the Chignecto region near the New Brunswick border, a contingent of 250 French soldiers and 50 Maliseet and Mi’kmaq warriors heard reports of the New Englanders’ occupation of Grand Pré. Despite being outnumbered two to one and facing the hardships of mid-winter travel, they set out for Grand Pré in January 1747. They were joined or assisted by a small number of Acadians who were sympathetic to the French cause. At the same time, some pro-British Acadians warned the New England soldiers that an attack might be imminent. The New Englanders ignored the warnings, thinking the severe winter conditions made an attack unlikely.

In the early morning hours of 11 February 1747, in the middle of a blinding snowstorm, the French, Maliseet, and Mi’kmaq force caught the New Englanders by surprise. Known to history as the Attack at Grand-Pré, the encounter left as many as 80 New England men dead, including their commander (see Figure 2–30). The bodies of the soldiers were interred in a mass grave, while their commander was buried separately nearby.

The incident was to loom large in the thinking of some British leaders in 1755, when they decided to implement a massive removal of the Acadians.

When the War of the Austrian Succession ended in late 1748, the Treaty of Aix-la-Chapelle returned Louisbourg to the French. Not long after, both France and Britain expanded their military presence in Atlantic Canada. France’s major move was to send an expedition of several thousand colonists to re-occupy Louisbourg in 1749. From 1749 to 1751, the French also established a post at the mouth of the Saint John River and two forts in the Chignecto region, at Beauséjour and Gaspareaux. The British, meanwhile, sent a massive expedition to establish Halifax in 1749 as a counterbalance to Louisbourg. Over
the next few years, the British also established several new posts, forts, and settlements beyond Halifax. They included Fort Edward within the Acadian community at Pisiquid, a small fort at Vieux Logis (Horton Landing) near Grand Pré, Fort Lawrence in the Chignecto region (opposite Fort Beauséjour), and a sizeable new town of “foreign Protestants,” mostly of German and Swiss origin, at Lunenburg, on Nova Scotia’s southeastern shore.

2–31 This 1748 map shows plans to settle Protestants at Grand Pré, labelled as “No 2” in this map, prior to the Acadian Deportation. The British authorities had planned settlements (shown as grids on this map) in the immediate vicinity of the existing Acadian settlements (illustrated as concentrations of houses here). Note, the large concentration of houses and the church (shown as a square with a cross) at Grand Pré, in the middle of the map, illustrating the importance of the settlement of Grand Pré.
Deportation and New Settlement 1755–1810

Deciding to Deport the Acadians

The Seven Years’ War, sometimes called the first “world war,” pitted Britain against France and involved allied countries on both sides. While France concentrated on the war in Europe, Britain sent 20,000 troops to North America in a bid to bring down France’s colonial empire. The war led to the fall of New France.

As world events crowded in on Acadian and British settlements in Nova Scotia, the British administration, known as the Nova Scotia Council, decided to revisit the question of Acadian neutrality. They did so more forcefully than in the past, when their control over the province had been more nominal than real. Over the next few years a complex series of events unfolded that culminated in what became known as the *Grand Dérangement*, the Deportation of the Acadians. This term refers collectively to many separate forcible removals that took place over seven years beginning in 1755.

In the early summer of 1755, the surveyor-general of Nova Scotia, Charles Morris, prepared a detailed plan for the Nova Scotia Council that outlined how the Acadians might be removed from their lands in Nova Scotia and dispersed elsewhere in other British colonies.

This plan revived a school of thought that dated back to the 1720s when some British officials favoured removing the Acadians from Nova Scotia and replacing them with Protestants, either British or “foreign,” who would be loyal to the British crown. The British had also noticed the value in the fertility of the farmlands owned by the Acadians, which were an economic driver in the area. The idea of attracting “foreign Protestants” surfaced periodically for several decades; even before the British brought over German and Swiss Protestants to establish the new town of Lunenburg in the early 1750s, a British plan of 1748 shows where Protestants might be settled in the Grand Pré area. The 1748 plan shows where the New England Planters would later establish their town (see Figure 2–31).

In June 1755, an expedition put together by acting Nova Scotia Governor Charles Lawrence and Governor William Shirley of Massachusetts captured the two French forts in the Chignecto region, Fort Beauséjour and Fort Gaspareaux. When news reached Halifax that 200 to 300 Acadians had taken part in the defence of Beauséjour – compelled to do so by the French commander of the fort – the authorities in Halifax saw this as a sign of Acadians’ complicity with the French. The Nova Scotia Council decided that all Acadians in the Chignecto region would be rounded up and deported, even if they or a member of their family had not helped to defend the French fort.

About a month later, on 28 July 1755, after meeting twice with the deputies of the Acadian communities on mainland Nova Scotia, the Nova Scotia Council resolved to remove every Acadian man, woman and child from all of Nova Scotia. The Deportation would begin at Grand Pré and nearby Pisiquid in early September.

While the deportation of the Acadians was about removing a disloyal group, there is no denying that the fertile dykelands at Grand Pré and elsewhere were also extremely important to the British plans for settlement. The acting governor of Nova Scotia, Charles Lawrence, offered the following opinion on 18 October 1755, in a letter to the Lords of Trade in London, England:

... As soon as the French are gone, I shall use my best endeavours to encourage People from the Continent to settle their lands ... and the additional circumstances of the Inhabitants evacuating the Country will, I flatter myself, greatly hasten this event, as it furnishes us with a large Quantity of good Land ready for immediate Cultivation.

In the end, of the slightly more than 14,000 Acadian men, women and children, three quarters were deported to other parts of North America or to Europe. The rest went into hiding or fled.

The Deportation at Grand Pré

The events at Grand Pré were among the earliest and largest of the Deportation. Most importantly, they were recorded by some of the key British participants. The records provide a detailed historical account of the events and their impact on the Acadians, and also set the context for later depictions of Acadian culture. They also provide later Acadians with a snapshot of a transformative event in their
cultural history. The following information comes from the two most important sources: the journals of Lt-Col. John Winslow and of one of his junior officers Jeremiah Bancroft.

Lt.-Col. John Winslow of Massachusetts was the officer in charge of rounding up and deporting the Acadians from Grand Pré. He arrived on 19 August 1755 with about 300 New England provincial soldiers. He gave no indication of what was to happen, but gave the impression he was there on a routine assignment. His first act was to establish a secure base of operations, because his force was greatly outnumbered by the 2100 Acadian men, women and children living in the Minas Basin area. For his stronghold, Winslow chose the area around the Grand Pré parish church, Saint-Charles-des-Mines. His soldiers erected a palisade around the priest’s house, the church, and the cemetery, and his troops pitched their tents within that enclosure (see Figure 2-32). So as not to upset the Acadians unnecessarily, Winslow informed community leaders they should remove the sacred objects from the church before it became a military base. By early August 1755, the parish priests of Saint-Charles-des-Mines, and of neighbouring parishes, had already been arrested and brought to Halifax to await their deportation to Europe.

As August 1755 came to a close and September began, the Acadians of Grand Pré and other nearby villages were harvesting crops from the dyked land and cultivated upland areas. This harvest, although the Acadians could not know it, would be their last in Grand Pré.

On 4 September 1755, Lt.-Col. Winslow issued a call for all men and boys aged 10 and older to come to the parish church at three o’clock the next afternoon to hear an important announcement. A similar ploy was used by Capt. Alexander Murray to call Acadian males of the nearby Pisiquid region to come to Fort Edward, on the same day at the same time. In fact, the British had used a similar ruse on 11 August in the Chignecto area to attract and imprison some 400 Acadian men in Fort Beauséjour, renamed Fort Cumberland after its capture, and Fort Lawrence. Winslow and his men had witnessed this just before their departure for Grand Pré.

On 5 September, 418 Acadian males of Grand Pré proceeded to their parish church – now surrounded by a palisade and controlled by armed soldiers – to hear the announcement. Once they were inside, Winslow had French-speaking interpreters tell the assembled men and boys that they and their families were to be deported. Included in the announcement was this statement:

that your Lands and Tenements, Cattle of all Kinds and Live Stock of all Sorts are Forfeited to the Crown with all of your Effects Saving your money and Household Goods and you your Selves to be removed from this ... Province.

Jeremiah Bancroft, one of Winslow’s junior officers, records in his journal that the look on the Acadian faces as they heard the announcement was a mixture of “shame and confusion ... together with anger.” He added that the “countenances” of the Acadians were so altered they could not be described.

The removal of the roughly 2100 people who lived at Grand Pré and in the neighbouring villages proceeded neither quickly nor smoothly. Winslow had to cope with a shortage of transport ships and provisions. The men and boys spent more than a month imprisoned within either the church of Saint-Charles-des-Mines or on the transports anchored in the Minas Basin before the rest of the population was forced on board the ships. Winslow described the scene of the
first contingent of young men, marching from the church along the road beside the dykeland to what today is known as Horton Landing (see Figure 2–33).

He wrote,

[they] went off Praying, Singing, & Crying, being Met by the women & Children all the way...with Great Lamentations upon their knees praying.

2–33 The stained glass at the Memorial Church at Grand-Pré National Historic Site of Canada depicts the deportation of the Acadians.
On 8 October 1755 the mass embarkation of the men, women, and children to the waiting ships began, with the small boats setting off from Horton Landing. Those who lived at Grand Pré and Gaspereau went first. Winslow recorded that,

[the inhabitants left] unwillingly, the women in Great Distress Carrying off Their Children in their Arms, Others Carrying their Decrepit Parents in their Carts and all their Goods moving in Great Confusion and appeared a scene of Woe and Distress.

Acadians lived together in large, extended family units. Although Winslow gave orders that families were to be kept together, this often proved impossible in the confusion and because of the small size of the ships. Friends, relatives and neighbours were separated, never to see each other again.

On 19–21 October, the soldiers compelled families from outlying communities to assemble at Grand Pré in preparation for their eventual loading on board transport ships. This group of Acadians numbered about 600, from 98 families. While they waited for the transports to arrive, they lodged in the now-empty Acadian homes near Winslow’s camp, along the upland area by the reclaimed marsh. These families were deported to the Anglo-American colonies just before Christmas 1755. This time the departure point was not Horton Landing but another spot nearby.

The Acadian Odyssey

In the coming decades, thousands of Acadians would land at ports around the world, only to depart again in search of a place from which they could one day return to their homeland in Acadie. Out of this Odyssey was born the Acadian diaspora.

Between 1755 and 1762, the British authorities organized the gathering of Acadian populations in key locations to board ships and sail in convoys to various destinations (see Figure 2–34). In the last months of the year 1755 alone, 6000 Acadians, or close to half the entire population, had been deported: from the Minas Basin area, including Grand Pré, from the Pisiquid area, from Chignecto and from Port Royal.

In the Minas Basin area that year, a total of 2100 Acadians were removed. This includes the removal, by late October 1755, of over 1500 Acadian children, men, and women – with children by far the largest category – from Grand Pré and nearby villages onto the transport ships. The convoy sailed out of the Minas Basin bound for Pennsylvania, Virginia, Maryland, Connecticut, and Massachusetts. At the same time, transport ships carrying an estimated 1119 Acadian deportees from the Pisiquid area also sailed south to destinations in the Anglo-American colonies. These ships formed a convoy as they were joined by those carrying the 1100 deportees from the Chignecto area who were destined for the southernmost colonies of the Carolinas and Georgia. In December, some 1664 Acadian men, women, and children from the Port Royal region were also deported from Annapolis Royal to the Anglo-American colonies.

In the years that followed, thousands more would be deported from Acadie, mainly to France, following the fall of Louisbourg in 1758. Some 4000 Acadian deportees from île Royale (Cape Breton Island) and île Saint-Jean (Prince Edward Island) were deported directly to France in the fall of 1758, as were more than 200 inhabitants from the Cape Sable area in 1758 and early 1759. In the summer of 1762, another 915 Acadian men, women, and children were deported from Halifax to Boston. The Boston authorities refused to accept them. The ships brought the Acadians back to Nova Scotia, where they were detained as prisoners of war. The movement of the Acadian people is illustrated in Figure 2–34.

These deportees were sent to different locations, with the intent by Governor Charles Lawrence to “divide [the Acadians] among the colonies ... as they cannot easily collect themselves together again.” Some were sent to the New England colonies, whose authorities were required to provide shelter and food. Many colonies did not wish to take on that burden and did not allow the ships to land, forcing them to continue on to the next port. In many cases, families were separated, children were assimilated into Protestant families, and adults were subject to imprisonment or servitude. In some colonies, the governors were anxious to get rid of the deportees and granted
Destinations and movements of the deportees during the Acadian Odyssey. Based on an original design by Robert Leblanc.
them passports to travel freely between borders, with the hopes that they would move back to Nova Scotia. Some Acadians, after Virginia refused to welcome them in 1756, were sent as prisoners of war to Britain, where they were distributed among the coastal towns of southern England. These were eventually sent to join thousands of deportees that had made it to France. The return to France did not offer any comfort, however, as there was too little land for them to settle. Many ended up destitute.

After the fall of New France in 1760, the authorities in Nova Scotia did not wish to have the Acadians back, even though the British no longer deemed the French to be a threat. Authorities in other parts of Canada needed settlers and were open to attracting the Acadians. The Governor of Quebec, James Murray, was one who pursued that idea. In a 1761 letter to Jonathan Belcher, the Lieutenant Governor of Nova Scotia at the time, Murray wrote that Belcher would be ill advised to allow the Acadians back to the lands they had vacated. He argued that it “... must renew to them in all succeeding Generations the miseries the present one has endured & will perhaps alienate for ever their affections from its Government, however just & equitable it may be.” Nova Scotia’s need for settlers prevailed, however, and in 1764 the British authorities gave Acadians leave to settle there again, with certain conditions attached to their return: they could not settle on the lands they had once occupied, and they could not concentrate in large numbers. This latter condition was to prevent them from forming a community. Some 1600, or a little more than 10 per cent of the pre-Deportation Acadian population, decided to settle in Nova Scotia and the two neighbouring maritime provinces.

The Acadian regions of present-day Nova Scotia are now hundreds of kilometres away from their former settlements, primarily in the southwest and in Cape Breton. Most of those who survived the Deportation preferred to settle instead in Quebec, in France, or in French territory such as Saint-Pierre et Miquelon, Santo Domingo (present-day Haiti), and Guyana. In 1785, some 1584 Acadians made their way from France to Louisiana, then a Spanish colony. They are among the ancestors of today’s Cajuns.

The Acadians who had been deported to France came directly from the conquered French colonies of Ile Saint-Jean and Ile Royale in 1758 and, in 1763, from Virginia via England where they had spent seven years in detention. In total, some 3000 deportees arrived in France in the mid-18th century. They were concentrated in the Poitou area and in Belle-Ile-en-Mer in Brittany. Most were unsuccessful in settling, and the French authorities increasingly considered them a burden. In 1785, two-thirds of them departed for Louisiana. Two decades earlier, in 1763, others had arrived in the French island territory of Saint-Pierre and Miquelon near the coast of Newfoundland in the Atlantic Ocean. They were removed by the French in 1767 and brought back in 1768. In 1778, the British took control of the islands and deported the entire population to France. The islands changed hands several more times before the French recovered them in 1816 and Acadians were finally able to return. Both in France and in its overseas territories, the few Acadian families that settled there eventually adapted to mainstream society but retained a sense of their ancestry and their identity through oral tradition and artistic expressions.

Acadians had settled in Louisiana as early as 1764. Some families came from Nova Scotia via Santo Domingo, in 1764–1765, while most of the other families went directly from Maryland and from other Anglo-American colonies, through the Caribbean. They were joined in 1785 by the large group from France that had not succeeded in resettling among the French. Acadians were concentrated principally in southern Louisiana and exerted much influence in politics and in the economy. Until the American Civil War in 1861, Louisiana was a bilingual state where French was actively used in public administration, the courts, and business. Steadily, however, that presence was eroded as mainstream Louisiana society came to view the expression of Cajun (Acadian) culture as inappropriate. Legislation was passed in the early 20th century to integrate Cajuns into mainstream society through the school system. Throughout the 19th century, much as in Acadie, the Cajuns preserved their traditions because of relative isolation. They followed in the steps of Acadians in Canada and adopted some symbols, including Notre Dame de L’Assomption as their patron saint. Music, songs, and other artistic expressions maintained the oral tradition of their story and the collective sense of identity.
However, the Cajuns had to wait until the middle of the 20th century to rekindle a severed relationship with their homeland in Acadie. Grand Pré was to serve as the location of that return.

The Acadians who ended up in Guyana and the Caribbean were sent there by the French authorities, whose twofold aim was to relieve the burden on the administration in France and to settle the colonies that France had kept after signing the Treaty of Paris in 1763. From France, the Acadians were sent to settle the Falkland Islands, Guyana, and Haiti. Although some families remained where they had landed, over time the majority made their way to Louisiana. There is little awareness today, in Guyana and the Caribbean, of an Acadian identity at a community level.

In Québec, the Acadians settled in every corner of the province starting in the late 1760s. Mostly concentrated along the St. Lawrence River, they progressively settled in other areas where agriculture was predominant. The province of Québec is where the largest Acadian population was living by the end of the 18th century. Because of the similarities in religion, language, and social status with the Canadiens (French Canadians, today’s Québécois), the Acadians easily integrated into mainstream society. The Acadians who lived in the province embraced the struggle for the rights of French speakers that drove politics and social discourse in Québec throughout the 19th and 20th centuries. Despite their integration, these communities maintained an awareness of their ancestry and contact with the Acadian communities of eastern Canada. In the late 19th century, delegates from those communities in Québec attended the national Acadian conventions held in New Brunswick. The largest population of Acadian ancestry is still in Québec.

The Arrival of the New England Planters and their Legacy

Having addressed the Acadian threat by deporting most of the Acadians, the British authorities sought to address the Mi’kmaq threat by signing treaties with them throughout the 18th century. Indeed, the Mi’kmaq had been allies of the French and the Acadians. During the Deportation, the Mi’kmaq helped some Acadians escape into the forest and in many instances sheltered them as their own. For the British Crown, these treaties meant peace with the Mi’kmaq and the freedom to settle Nova Scotia with populations whose loyalty was unquestionable.

Once the Acadians were removed from their lands, the British endeavoured to attract settlers from New England. In late 1758 and early 1759, they issued inducements to attract land-hungry settlers from those colonies. The colonists, known collectively as the New England Planters, arrived in 1760 at Grand Pré, an area they knew by reputation to be a highly productive agricultural district (see Figure 2–35). What they found instead was that a large portion of the dyke-land was submerged.
After the Acadians were forcibly removed from Grand Pré in 1755, no one was left to carry out routine repairs on the dykes. In November 1759, a great storm struck at the peak of the 18.03-year Saros cycle, when tides are unusually high in the Bay of Fundy and Minas Basin. A sea surge broke the dyke walls at Grand Pré in several places alongside the Gaspereau River, and sea water flooded a large portion of the eastern and western sections of the dykeland. Some of the dykes that had protected earlier enclosures were still intact and stopped the water from invading the entire dykeland.

In 1759, the British authorities subdivided Nova Scotia into counties for administrative purposes. The County of Kings covered a large area along the Bay of Fundy, including the Minas Basin. The county was divided into three townships: Cornwallis, Horton, and Falmouth. Grand Pré fell within the jurisdiction of the township of Horton. It had the largest amount of dykeland – over 2000 hectares (5000 acres) – and included 1200 more hectares of cleared upland. These conditions were ideal for an agricultural settlement.

The authorities drew up plans for a town in Horton township based on their typical colonial settlement pattern, a rectilinear town grid with central squares, perched on the highest point of land. For Grand Pré, renamed Horton except for the vast marsh that retained its original French name, the town plot was laid out on the hills adjacent to Horton Landing nearest to the Gaspereau River. The settlers were allocated four types of land: a parcel in the town plot, a parcel of cleared upland, a parcel of dykeland and a woodlot. The New England Planters were directed to settle the town and to relocate existing buildings and erect new ones.

The first order of business for the British authorities was to take possession of the dykelands, redistribute them to the new farmers, and ensure that the farmers acquired the skills they needed to maintain the dykes. The interior sections of the Acadian-created dykeland were still protected by dykes, and the authorities immediately distributed them to individual farmers. The sections that had been flooded with seawater in 1759 posed a greater challenge. New England Planters had no experience with dyke building and dykeland farming practices before they arrived in Grand Pré. The British authorities turned to imprisoned Acadians, some of whom were at nearby Fort Edward, for advice, assistance and labour.

New England Planters were at first not as successful farmers as their predecessors. They knew nothing about drainage on the dykelands, the little need for manure on those lands, the value of ploughing in autumn rather than in spring, and crop rotation, all practices that arose from an understanding of the environmental conditions of an intertidal dykeland. Over time, thanks to the knowledge and techniques they learned from the imprisoned Acadians, the newcomers who settled on the uplands at Horton eventually became master dyke builders themselves.

The British settlement pattern proved inefficient for the farmers. The four types of land they had been allocated were often scattered across the landscape. As a result, many parcels of land were sold or exchanged. Most farmers wanted to live on their best land, not in a town plot on a promontory. The New England Planters quickly understood the efficiency of the Acadian settlement pattern. As they were under no threat from the French or the Mi’kmaq after the fall of the Fortress of Louisbourg in 1758 and Québec in 1759, they abandoned the town plot in favour of the dispersed and linear Acadian settlement pattern along the dykeland. They continued the Acadian relationship between the living space on the uplands, the primary farmland on the dykeland, and the woodlots for building materials. The New England Planters expanded the living space farther upland, erecting churches and community halls, and settled on Long Island as well. By 1817, the Governor of Nova Scotia Lord Dalhousie would note, “There is no town of Horton; it is a scattered settlement of neat common houses, small farmers, but rich in their way of life.”

It is noteworthy that the Acadian pattern of local ownership and control over the dykeland would be continued when the New England Planters took over Grand Pré in 1760. In fact, the first legislation relating to dykeland was passed by the government of Nova Scotia as early as 1760. It provided for a group of owners to appoint commissions and a Commissioner of Sewers for each dykeland in Nova Scotia. This recognized that building and effectively maintaining dykelands can only be done collectively and locally (see Figure 2–36). The Commissioner would decide what work was required and arrange for labour and
the raising of all funds to meet costs associated with keeping the dykes in repair. The farmers would share expenses for dyke maintenance. They would also appoint from among themselves individuals to assess the size and value of dykelands, to “police” the dykelands and monitor the condition of the fields, to verify fences and enclosures, and to perform other similar duties of common interest.

As time went by, the New England Planter settlements at Horton and elsewhere put down deep roots. Much of Horton itself would, in the 20th century, see its name revert to what the Acadians had called it: Grand Pré. Wherever they settled, the New England Planters and their descendants exerted an influence on Nova Scotia’s culture, politics, landscape, and architecture. The best-known standing buildings in Grand Pré associated with the New England Planters are the Crane house (1767), the Calkin house (1768), and the Covenanter Church, constructed between 1804 and 1811. Nearby Acadia University, in Wolfville, also has a link with the New England Planters, although it dates from a few generations later. A Prime Minister of Canada, Sir Robert Borden (1854–1937), is probably the best-known New England Planter descendant. He was born and raised in the village of Grand Pré.

A Productive Dykeland and the Birth of a Symbol 1806–1907

Expansion of the Dykeland and Agricultural Productivity in Grand Pré

The first expansion of the dykeland occurred in 1806 on the west side, with the building of the “New Dike” or “Wickwire Dyke”.

It was built west of the north–south Acadian dyke in an area the Acadians had never dyked, in part because of the challenges of resisting the tidal pressure. This dyke enclosed over a hundred hectares of new farmland and withstood the brunt of storms and tides coming from the west. It did not break until 1869, when the Saxby Gale lashed the coast, bringing a combination of high tides and strong winds. As the Acadian dykes had been left in place after the Wickwire Dyke was built, the main Grand Pré Marsh remained relatively untouched. The Wickwire Dyke was rebuilt in 1871.

The maintenance and expansion of the dykes allowed farmers to maintain a high level of productivity that was admired by experts and visitors. The foremost Nova Scotian expert on agriculture in the early 19th century, John Young, offered an assessment of the Grand Pré dykeland in 1822. At that point, the dykelands had been in New England Planter hands for about 60 years:

The coast of the Bay of Fundy is unquestionably the garden of Acadia, and accordingly we find that the French planted themselves there on the first occupation of the country. They threw across those dikes and aboiteaux by which to shut out the ocean, that they might possess themselves of the rich marshes of Cornwallis and Horton, which prior to our seizure they had cropped for a century without the aid of manuring. ... Spots in the Grand Prairies [Grand Pré] of Horton have been under wheat and grass alternately for more than a century past, and have not been replenished during that long period with any sort of manure.
Writing in the early 1880s, another expert, D.L. Boardman, observed, “[The] Grand Pré Dike [dykeland] is one of the oldest in Kings County and one of the best in the province. The old French had dikes here on the first occupation of the country, and there are now to be seen all over the Grand Pré remains of old dikes within those now doing their duty in keeping back the tide. These have been plowed down and leveled off in places, but it is not a difficult matter to trace them.”

The American biologist and writer Margaret W. Morley (1858–1923) was clearly impressed by what the Acadians had first achieved and the New England Planters maintained when she wrote in 1905: “[We] cannot gaze upon the broad meadows before the door of Grand Pré without remembering the hands that first held back the sea.”
The Birth of a Symbol

The Deportation of the Acadians scarred the landscape. In 1755, the New England and British troops burned many Acadian houses, barns, churches and other structures as they depopulated the areas. They wanted to make sure that no shelter was left behind for anyone who escaped Deportation. In the overall Minas Basin area, soldiers set fire to about 700 houses, barns, and other buildings.

Those acts of destruction set the stage for the mythological and symbolic aspects of the Deportation. In reality, the village of Grand Pré itself was spared, at least initially. Winslow had his headquarters there, and approximately 600 Acadians were later brought from neighbouring communities and held in the houses for over a month before being sent into exile. Some of the structures at Grand Pré may have been burned after that date. However, sources produced in 1760 describe that at least some – and possibly a good many – of the buildings in Grand Pré were still standing. According to the surveyor-general of Nova Scotia, Charles Morris, roughly 100 houses were still standing at Grand Pré when the New England Planters arrived in the spring of 1760. One of those buildings was apparently the church of Saint-Charles-des-Mines. Regardless of the extent of the destruction, the rupture has been symbolically expressed in oral tradition and the collective memory of the Acadians as they recounted a destruction by fire and the desolation of the land following the removal of the population.

In the early 19th century, certain individuals and organizations began to commemorate the bygone Acadian presence at Grand Pré. Two major forces were at work. One related to the historical, literary and artistic works that linked Grand Pré more than any other pre-1755 Acadian village to the Acadian Deportation (see Bibliography for a list of literary works). The other was the Acadian renaissance that began in the latter half of the 19th century throughout the maritime provinces of Canada. Together, the two forces combined to overlay the agricultural landscape with a symbolic landscape.

Evangeline, A Tale of Acadie

The most influential of the many literary works connected with Grand Pré was Henry Wadsworth Longfellow’s epic poem Evangeline, A Tale of Acadie, published in 1847 (see Figure 2–37). The poem tells a love story about two fictional characters, Evangeline and Gabriel, yet it was based on a tale Longfellow had heard of a young couple separated at the time of the Deportation.

2–37 Longfellow’s 1847 epic poem, Evangeline, has gone through many translations and editions, including this 1922 version.
The American poet was not the first to write about the upheaval in a literary form, but his characters and plotline became by far the best known and were instrumental in creating Grand Pré as a symbol. Longfellow’s description was loosely based on Thomas Chandler Haliburton’s *An Historical and Statistical Account of Nova-Scotia* (1829), in which the historian described the events at Grand Pré in 1755 by presenting material from the eyewitness account in John Winslow’s journal. Grand Pré, a real place with a real history, became the opening scene for a fictional work that for the next century would become the best-known interpretation of the Acadian Deportation.

Over the next 100 years, Longfellow’s *Evangeline* went through at least 270 editions and 130 translations. The first foreign-language adaptations were in German and Polish in 1851. French and Danish followed in 1853, Swedish in 1854, Dutch and Italian in 1856, and so on around the globe. Illustrated editions began to appear in 1850, and over the next 150 years dozens of artists offered their visual (and often fanciful) interpretations of Grand Pré and other locales. When motion picture technology was developed, the story of Evangeline and the Acadian Deportation soon turned up in cinemas. Short, one-reel adaptations of Longfellow’s tale were produced in 1908 and 1911. In 1913, the first feature-length film ever produced in Canada was a five-reel production of Evangeline that lasted over an hour. American film versions of the *Evangeline* story were released in 1919 and 1929.

Though the Evangeline phenomenon began among non-Acadians, first the Americans and then the British, it was quickly embraced by Acadians and other Francophones (see Figure 2–38). They often came to know the story through the French-language adaptation written by Pamphile Lemay in 1865 and revised in 1870. Lemay’s adaptation differed significantly from the original poem by Longfellow, yet the central characters were the same, the opening setting remained Grand Pré, and the narrative arc was essentially the same.

Longfellow generated a high public awareness of the Acadians’ story and of its link with Grand Pré. He was followed by many others who physically transformed the landscape so that it symbolically reflected the attachment of the Acadians to their homeland, commemorated the Deportation, and displayed symbols of their values.

In 1869, at the newly opened Grand Pré railway station, the Windsor and Annapolis Railway Company hung a sign that read: “Welcome to the Land of Evangeline and Gabriel.” The next year, the first organized tour by rail of the “Land of Evangeline” brought Americans from Boston. Acadians were not involved.

In 1895, an article by historian Henri L. d’Entremont appeared in the principal Acadian newspaper *L’Évangéline*, in which the author argued that Acadians needed to honour their ancestors at the emerging tourist site at Grand Pré. This article, along with political speeches and other public appeals, raised Grand Pré as a place of significance in the Acadian consciousness. A little over a decade later, Acadians took their first concrete steps to commemorate Grand Pré, following the renaissance of their culture and identity.

**The Acadian Renaissance**

The Acadian Renaissance was a period of renewed cultural awareness during the 19th century in Canada’s maritime provinces. Its effect then influenced the identity of Acadian communities elsewhere in the world. While each community had its own challenges
to overcome in maintaining its identity, for the Acadians who came back to Nova Scotia after 1764, the challenge of returning to their homeland, and making a new home, was enormous. Unable to return to their original lands, Acadians became tenants until, in time, they acquired their own lands.

Throughout the ordeal of their wandering, Acadians held onto their culture. It survived in part because they were relatively excluded from the predominant society, and in part because they maintained strong oral traditions. Folklore was passed on between generations and within each small community. Following the resettlement of some Acadians in Nova Scotia, communities began rebuilding on the foundations of their French language, their Catholic faith, and their family ties. These settlements were small and dispersed, as required by the conditions set for their resettlement. This added to the difficulty of maintaining a sense of community, especially within the larger context of a new and very different social and political structure. The strong foundation of Acadian culture allowed the elite to build a sense of national Acadian identity.

The story of the Acadian forced removal had shocked British society at the time, but this sentiment provided no tangible opportunities for rebuilding Acadian society or acknowledging the wrongs they had suffered. In fact, those opportunities only materialized in the middle of the 19th century with the publication of the poem Evangeline, A Tale of Acadie. While entirely fictional, its success allowed the real story of the Deportation to be heard and communicated to the world.

The publication of Evangeline was a seminal moment in the emergence of the Acadian Renaissance. First, it was written in English, which brought it to many readers in North American and British society. Second, it emerged in elite circles of New England, a region with which Nova Scotia had close ties, both because of the history of the New England Planters and because of the many Acadian deportees who found themselves in New England after the Deportation. That connection provided the conditions for Evangeline to become equally popular among English speakers and Acadians. Evangeline was, even as fiction, the first public acknowledgement of the events that had surrounded the forced removal of the Acadians almost 100 years earlier.

The story of Evangeline quickly resonated with the Acadian religious and social elite, who saw an opportunity to enhance their own efforts to build a strong community and claim rights for it. The characters in the poem and their story embodied the values that the Acadian elite recognized in their own people, and they inspired a gradual period of political, economic, and social empowerment. Evangeline, the main character, and her devotion to her lover Gabriel throughout her ordeal became a symbol of the power of faith in a greater purpose. Her belief echoed the message from the Catholic Church to the Acadians and illustrated the perseverance of the people in the face of adversity. These characteristics, and the values of sacrifice, obedience, and resignation to life’s ordeals, were consistent with the church’s teachings, thus making Evangeline acceptable. The Catholic Church authorized the reading and even the teaching of Evangeline as a means to raise the cultural awareness, sense of identity, and history of the Acadians. As the educated elite became immersed in the story and the emotions surrounding the Deportation, they now had a medium for conveying that story and a set of symbols to supplement the oral tradition with which they had grown up. Most importantly, Evangeline provided a tangible setting as a focus for the Acadians’ cultural reawakening. Grand Pré was introduced to the collective memory of the Acadian people. It became a point of reference, so much so that the expression “the children of Grand Pré” was used in political discourse of the time to refer to the Acadians. It embodied the lost homeland, the symbol of what Acadians aimed to return to, and the evidence of the wrongs they had suffered.

The Catholic Church’s acceptance and promotion of this poem was important at a time when it played a key role in Acadian society and provided the tools for its renaissance. The Church was a driver in building the Acadian national identity, providing, amongst other things, access to education and their language and symbols. In 1854, the first Acadian school of higher learning, the Collège Saint-Thomas, was founded in Memramcook, New Brunswick. In 1864, it became the Collège Saint-Joseph under the authority of the Congregation of the Holy Cross and obtained degree-granting status, later becoming a
During the 1880s, the Acadians of the Maritimes began to hold “national conventions,” following the participation of Acadians in French Canadian political gatherings in Québec, to defend the interests of their community. Their focus was to achieve cultural objectives by promoting the use of the French language in education and in the political, economic, and religious spheres. The Church played an instrumental role, along with the educated elite, in leading these conventions. The first convention was held in 1881 at the Collège Saint-Joseph in Memramcook where most of the young Acadian elite who took part in these patriotic events had been educated. The delegates to that convention created the Société nationale L’Assomption, whose mandate was to promote and defend the interests of the Acadian people in Atlantic Canada. The second convention took place in Miscouche, Prince Edward Island, in 1884. At that convention, the Acadians adopted a national feast day (15 August), a patron saint (Notre Dame de l’Assomption), a flag (the French tricolour with a gold star in one corner, see Figure 2–39), an anthem (Ave Maris Stella) and a motto (L’union fait la force – unity makes strength).

By the end of the decade, Acadians had three French weekly newspapers, the oldest one being the Moniteur Acadien, founded in 1867 in Shédiac, New Brunswick, and members of their elite were elected to the highest offices of the province and the country. By the beginning of the 20th century, Acadian folklore had acquired status along with these symbols to entrench the foundations of Acadian identity. All these manifestations of social empowerment became sources of pride and self awareness.

The Acadian Renaissance was a period of social and political transformation of the Acadian community of Canada in the late 19th century. Through various collective acts, Acadians acquired a sense of unity, in spite of the original British intention to keep them dispersed. Embracing the wave of nationalistic consciousness that moved through Europe and North America in the 19th century, the Acadians elected to reclaim their presence in eastern Canada through incremental actions that gave them the tools for political, economic, and cultural empowerment. An important step was to choose symbols of identity such as a flag, a patron saint, and an anthem, and to tell a national story, all adopted in part or in whole by Acadian communities of the diaspora. Grand Pré grew to become the location to anchor that identity, those symbols, and the collective memory.
Acadian Anthem

French

Ave Maris Stella  
Dei Mater Alma  
Atque Semper Virgo  
Felix Coeli Porta  
Acadie ma patrie  
À ton nom je me lie  
Ma vie, ma foi sont à toi  
Tu me protégeras  
Acadie ma patrie  
Ma terre et mon défi  
De près, de loin tu me tiens  
Mon cœur est acadien  
Mon cœur est acadien  
Acadie ma patrie  
Ton histoire je la vis  
La fierté je te la dois  
En l’Avenir je crois  
Ave Maris Stella  
Dei Mater Alma  
Atque Semper Virgo  
Felix Coeli Porta  

English

Ave Maris Stella  
Dei Mater Alma  
Atque Semper Virgo  
Felix Coeli Porta  
Acadia my homeland  
To your name I draw myself  
My life, my faith belong to you  
You will protect me  
Acadia my homeland  
My land and my challenge  
From near, from far you hold onto me  
My heart is Acadian  
My heart is Acadian  
Acadia my homeland  
I live your history  
I owe you my pride  
I believe in your future  
Ave Maris Stella  
Dei Mater Alma  
Atque Semper Virgo  
Felix Coeli Porta  

A Century of Tourism, Agriculture, and Lieu de Mémoire 1907–present

The Physical Transformation of a Landscape into a Symbol

Individuals such as John Frederic Herbin and Father André-D. Cormier, private companies such as the Dominion Atlantic Railway and the Société nationale l’Assomption, and the Acadian community transformed Grand Pré into a historic site and a major tourist attraction in North America. The commemorative monuments, buildings and garden they created were a symbolic reclaiming of the Grand Pré area by the descendants of the people who were forcibly removed in 1755. As a result, for people of Acadian descent, Grand Pré became the most cherished of all their historical sites.

In 1907, John Frederic Herbin, a jeweller and poet – of Acadian descent – in nearby Wolfville, purchased the land at Grand Pré that contained the most prominent ruins that were said to date back to before 1755. Herbin had published a book of local history in 1898 that had echoed the opinions of historian Henri L. d’Entremont, who had argued for the need to honour Acadian ancestors at Grand Pré. The oral tradition of the time held that the ruins on Herbin’s new property were vestiges of the old Acadian parish church, Saint-Charles-des-Mines, the same church in which Acadian males were imprisoned on 5 September 1755. Not far from those ruins was a well, also said to date back to the Acadian period (see Figure 2–40). A little farther on was the old Acadian burial ground or cemetery. Nearby were a number of old willow trees, which in the oral tradition were said to have been silent witnesses to the events of 1755 (see Figure 2–41).
The purchase was a public acknowledgement that this land was significant to the Acadians. Herbin’s vision that “...The Grand Pré memorial field is the outstanding historical landmark most closely associated with the occupation of the Acadians of this country for seventy years” convinced others to protect and commemorate the site.

In 1908, the Government of Nova Scotia passed an Act to recognize and incorporate the trustees of the “Grand-Pré Historic Grounds.” This was the first attempt by any government at any level to safeguard the site at Grand Pré.

In 1917, Herbin and the other trustees sold the property with the ruins on it to the Dominion Atlantic Railway (DAR) on the condition that the church site be deeded to the Acadian people so they could erect a memorial to their ancestors. The following statement by Herbin explains his vision:

The proposed restoration of the Memorial Park will consist of buildings to be erected by the Acadians upon the site of the St. Charles’ Church. A statue of Evangeline on a stone base with bronze tablets will be erected on the space between the stone cross and the old well. Roads, walks, flower beds and structures to mark the various spots, will add to the attractiveness of the place. From there the great stretch of the Grand Pré lies as a monument of unremitting labour.

The DAR assumed responsibility for the Grand Pré site and engaged renowned Canadian architect Percy Nobbs to bring Herbin’s vision to fruition. The architect developed a detailed landscape plan for the grounds, complete with pathways, flower beds and potential monument locations (see Figure 2–42).
With Nobbs’s drawings in hand, the rail company developed a “park” for tourists who wanted to see the spot Longfellow had made famous in his epic poem. The park-like setting—a cross between a jardin des plantes and a commemorative cemetery—encouraged many visitors to reflect on the tragedy of the Acadians in 1755. The first major artistic element added to the landscape was a bronze statue of Evangeline, unveiled in 1920. The statue was the work of renowned Québec sculptor Henri Hébert and was inspired by a design by his father, sculptor Louis-Philippe Hébert (see Figure 2–43). The Hébert artists were of Acadian descent.
Throughout the 1920s and 1930s the DAR, the provincial department responsible for tourism, and many private companies used images and slogans employing the Evangeline theme and Grand Pré association to sell their products. At the same time, there was a marked commercialization of Evangeline: various depictions of the fictitious heroine showed up on a range of products from soft drinks to car dealerships to chocolates.

Despite the commercial overlay and the frequent tie-ins with a literary figure, Acadians during the 1920s were becoming increasingly interested in Grand Pré and attached to it as an evocative site that was a symbolically reclaimed homeland and a legacy of the tragedy of their forced removal. In 1919, Father André-D. Cormier, a priest from New Brunswick, took part in the negotiations to acquire the property in Grand Pré to build a church. In 1921, the Société nationale l’Assomption (predecessor of today’s Société nationale de l’Acadie [SNA]) held part of its eighth national convention at Grand-Pré. At that convention, the SNA took official possession of the church site and launched a fundraising campaign to build a Memorial Church (église-souvenir) on or near the site of the presumed ruins of the parish church (see Figure 2–44).

Father Cormier became the founding president of the Memorial Church Committee and began organizing several fundraising campaigns. The Acadian diaspora from the maritime provinces, Québec, Louisiana, and France was solicited for donations. The construction of the church reflected the growing wave of Acadian nationalism that had been on the rise since the 1880s. Having achieved a number of successes in asserting Acadian rights and identity, the Acadian community now felt the time was right for such a symbolic gesture.

The Acadian community’s commemoration efforts at Grand Pré continued in 1923, when they raised funds for a sculpture of the Acadian patron saint, Notre-Dame de l’Assomption, to be placed inside the newly completed church (see Figure 2–45 and 2–46).
The next year, a group of Acadians from the maritime provinces and Québec, as well as non-Acadians interested in Acadian history, erected a poignant symbol of the 1755 Deportation. That new marker was an iron cross, referred to as the Deportation Cross, which was erected beside the DAR rail line, about two kilometres from the Grand Pré site. It was placed by a dry creek bed that was believed at the time to be where their ancestors had embarked in small boats during the Deportation. Later research found that the actual embarkation spot was at Horton Landing. The cross was relocated there in 2005.

Up to the mid-1950s, concerned citizens and organized groups, primarily within Canada but also from the United States, were responsible for all the commemorative action and development at Grand-Pré. By 1955, all the major elements of what has now become a lieu de mémoire (discussed later in this chapter) had been in place for three decades: the Memorial Church, the Statue of Evangeline, the Deportation Cross, the old willows, a stone cross to mark the Acadian burial ground, the well, and the flower beds. In May 1955, the Historic Sites and Monuments Board of Canada, the arms-length advisory body that recommends designations of national significance to the responsible federal minister, concluded that the “Grand Pré Memorial Park possesses historical features which would make it eminently suitable as a National Historic Park.” Negotiations took place over the next year. On 14 December 1956, the Société nationale l’Assomption finalized the sale of Grand Pré to the Government of Canada. Five years later, in 1961, the federal department responsible for historic sites officially opened Grand-Pré National Historic Site of Canada.

Since that transition, Parks Canada has maintained the original commemorative monuments and worked closely and collaboratively with representatives of the Acadian community. Since the mid-1990s, the Société Promotion Grand-Pré, a new group representing the Acadian community at Grand-Pré National Historic Site of Canada, has worked closely with Parks Canada to promote and enhance the national historic site, supporting the tradition of erecting memorials and organizing events that reflect the Acadian identity and attachment to the site.

A Place that Brings Together a Diaspora

Since the beginning of the 20th century, many events have taken place in Grand Pré that have secured its role as the heart of Acadie and the place most closely associated with Acadian identity. These include Acadian congresses, events commemorating the Deportation, pilgrimages, and cultural events.

The first major Acadian event at Grand Pré was associated with an Acadian Congress. In 1921, the eighth general convention of the Société nationale l’Assomption took place at Church Point (Pointe-de-l’Église) in southwestern Nova Scotia. It ended with a pilgrimage to Grand Pré, where delegates officially took possession of the lot that was said to contain the vestiges of the former parish church of
Saint-Charles-des-Mines. This was a powerful gesture. It highlighted an event of great historical significance for the Acadian people, symbolically reclaiming an important part of their homeland. The following year, hundreds of Acadians came back to Grand Pré to celebrate the first mass held there since 1755 (see Figure 2–47). It was directed by the first Acadian bishop, Monsignor Édouard LeBlanc. On that occasion, the cornerstone of the Memorial Church was blessed, completing the erection of the most significant symbol of the homeland.

2–47 The first mass at Grand-Pré since 1755 was held in 1922, led by the first Acadian bishop, Monsignor Édouard LeBlanc.

The Deportation Cross, an important symbol of the Acadian experience, was erected in 1924. The cross was unveiled during the first of two pilgrimages organized by the daily newspaper Le Devoir from Montreal (see Figure 2–48).

2–48 First pilgrimage organized by Le Devoir, in 1924, at which time the Deportation Cross was erected.

At the time, the founder of that newspaper, Henri Bourassa, encouraged French Canadians of Acadian ancestry to join him in the return to the “sacred land” (terre sacrée), the “land of memory” (terre de mémoire) of Grand Pré, which they did in great numbers. The Deportation Cross, as it is known, has since inspired artists and Acadians around the world, symbolizing the memory of the Deportation but also the identity of the people. Since 2003, it has been reproduced in different locations where Acadians have landed or settled, including Louisiana, New Brunswick, Nova Scotia, PEI, Newfoundland and Saint-Pierre et Miquelon. More will soon be erected in France, New England, and Great Britain.

The 175th anniversary of the Deportation in 1930 was the first major event that brought together Acadians from Canada and the United States and sealed Grand Pré’s role as the heart of Acadie. That year, Senator Dudley LeBlanc from Louisiana led a delegation of “Évangélines” to Québec, New Brunswick, and Nova Scotia, where they took part in the anniversary celebrations in Grand Pré (see Figure 2–49).
The following year, a delegation of “Évangélines” from Canada went to Louisiana. Since then, Cajuns have regularly participated in events in Grand Pré and elsewhere in Acadie.

In 1955, thousands of Acadians from around the world gathered in Grand Pré to mark the bicentenary of the Deportation. Social and cultural events were organized everywhere in Acadie as well as in other parts of Canada. The open air mass held on 15 August (the national day of the Acadians) in Grand Pré was the high point of the commemoration. Over 10,000 Acadians participated in the mass, celebrated by the Apostolic Nuncio for Canada, along with three archbishops, eleven bishops, hundreds of priests, and members of religious orders from Canada, France, and even Haiti (see Figure 2–50).

In 1994, Acadians began organizing events specifically to bring together the diaspora. The Congrès mondial acadien, held every five years in an Acadian region, is a display of the Acadian culture and an opportunity for Acadians with common ancestors to get together in the context of retrouvailles (reunions). The first was held in southeastern New Brunswick, the second in Acadia in southwestern Louisiana (United States), and the third in Nova Scotia. The third Congrès, in 2004, also celebrated the 400th anniversary of the founding of Acadie with the settlement of Île Sainte Croix. During that congress, Grand Pré, as so many times before, hosted an open-air mass that attracted 10,000 Acadians.
The following year, in 2005, Grand Pré again welcomed thousands of Acadians, this time to commemorate the 250th anniversary of the Deportation. This event celebrated the vitality of the Acadian people and their culture. At this time, the Deportation Cross was moved to its current location at Horton Landing, where the Acadians were forced to board the ships in 1755 (see Figure 2–51).

In addition to these major anniversaries, every year on 5 September an event takes place in Grand Pré to commemorate the day in 1755 when the men and boys of Grand Pré were imprisoned in the church and then on transport ships. Hundreds of Acadians walk from the Memorial Church to Horton Landing, remembering the walk that the Acadians from Grand Pré took in 1755 on their way to exile.

Through the years, Grand Pré has welcomed many social and cultural events. In 2008, the organizing committee of the Acadian Games (Société des Jeux de l’Acadie) gathered 1500 young athletes at Grand Pré to learn about their history and celebrate the pride of Acadie.

Dyke and Aboiteau Maintenance at Grand Pré

This strong symbolic landscape has remained a strong agricultural landscape. The dykes at Grand Pré are maintained, and new expansions have been partially built as well on the west side. The northeastern dyke on Long Island and parts of the eastern dykes were built in the 1940s, some behind the previous lines of dykes, others in front. The Wickwire Dyke, rebuilt in the 19th century, was again abandoned in 1932 following years of degradation from violent storms. It was rebuilt for a second time in 1959. The footprints of sections of other dykes were moved to maintain their ability to withstand the tides. In each case, the decision to build dykes was based on the capacity to maintain the integrity of the system of dykes and aboiteaux.

The dykes built in the 1940s, along with the rebuilding of the Wickwire Dyke, were part of a government initiative known as the Emergency Programme. In 1943, the federal government and the provincial governments of Nova Scotia and New Brunswick established the Maritime Dykeland Rehabilitation Committee (see Figure 2–52).
An even more ambitious initiative followed in 1948, with the creation of the Maritime Dykeland Rehabilitation Administration through an act of the Parliament of Canada. The task of maintaining the condition of all dykelands in the maritime provinces was thus treated as a single project that unlocked major financial resources. By the late 1960s, all major projects of rebuilding dykes and replacing *aboiteaux* had been completed. Supervision of the dyke maintenance was transferred to the provinces, where the responsibility remains to this day.

Throughout three centuries of evolution and changes, Grand Pré farmers have retained their distinctive approach to building and maintaining the original dykeland. The design of *aboiteaux* has not changed, although new materials now enhance their reliability and lifespan. The dykes are still built from earth, and the native vegetation continues to protect them. For 300 years, local farmers have experimented with different combinations of materials to strengthen the dykes – sometimes using rocks, sometimes wooden planks held with rods as facing (known as a “deadman”) – yet the basic technology is the same. The creeks have been kept intact to ensure the proper drainage patterns.

Today’s farmers, some of New England Planter descent and many of Dutch origin who arrived after the Second World War, continue to retain the knowledge of dyke building and maintenance. While few local farmers still know how to handle a spade to cut sod into bricks, many understand the appropriate design and the inner workings of drainage and of *aboiteaux*, as evidenced by the private dykes and *aboiteaux* that continue to be built. The Department of Agriculture has some of this knowledge, but it needs the experience of the farmers to maintain the dykes.

Community-based management continues today in the 21st century. The farmers of the Grand Pré Marsh Body own the land individually but share resources and make decisions collectively about maintaining the marsh. The farmers do not have direct responsibility for the dykes but retain an essential role in their maintenance and the experience of building them. Their management approach keeps alive the spirit of collective concern for this agricultural landscape and the individual desire to thrive. Throughout the major federal and provincial government projects of the past 70 years, the Grand Pré Marsh Body maintained its role. The Grand Pré Marsh Body’s recorded minutes and archives go back to the late 18th century. It is the oldest and most active organization of its type in North America.

Centuries of Progress and Adaptation

In the past, dykeland was used for crops during summer and as common pasture in the fall. This allowed nutrients in the form of manure to be reintroduced into the soil. The farmers would gather in Grand Pré next to the dykelands to divide the herds into two, one for the east section and one for the west. They would identify individual branding tools, fence the area, brand the animals, and let them loose on the dykelands. That practice continued until the 1970s, when crops became more sensitive to the impact of cattle and when new farming techniques lengthened the season. Today, cattle are still sent for pasturing on the dykeland, but only in specific areas (see Figure 2–53).

Starting in the 1970s, farmers placed an emphasis on the surface drainage of these soils. Their method of drainage became known as
landforming and involved shaping the surface of a field so that excess rainfall ran off into grassy ditches (see Figure 2–54).

Landforming in Grand Pré consists of open ditches with a 30-centimetre drop over a distance of 300 metres to drain into the creeks. As a result, the soil dries much faster and holds the heat more efficiently. Farmers can begin working the land earlier in the season and grow a greater variety of crops. Typical crops are pasture, hay, cereals, soy, alfalfa, and some vegetables. During dry summers, dykeland soils hold water better than the upland soils.

Many farmers today raise milk-producing cattle and grow crops for their animals. As milk production is a regulated industry, the farmers have a stable means of ensuring their livelihood. Most of the crops grown on the dykelands are intended as cattle feed for both local consumption and sale. The farmers of Grand Pré are recognized as being progressive in their techniques, tools, and use of fertilizers as well as protective of their traditions. Today, 100 per cent of the dykeland is used for agriculture, and the area retains its point of pride of being one of the most productive agricultural communities in Atlantic Canada. That enduring use is evidence of a successful adaptation to the prevailing environmental conditions and community management. Future success is assured by the farmers continuing to be the stewards of this agricultural landscape, the product of hard labour, pride, and centuries of acquired knowledge.

A lieu de mémoire of enduring relevance

Since the early 1980s, the journées acadiennes are celebrated annually at Grand Pré at the end of July. It is a week-long event that showcases Acadian culture, arts, and history and typically attracts thousands of people. At the same time a commemorative event takes place next to the Deportation Cross, on 28 July, the national day commemorating the deportation (see Figure 2–55).
The national day of commemoration of the Deportation was declared by the Parliament of Canada in 2003 and first celebrated in 2005. This was the result of individual and collective efforts from members of parliament, members from the Cajun community in Louisiana, and the Société nationale de l’Acadie who were seeking a formal apology from the British Crown and an acknowledgement of the impact of the Deportation on the Acadians. This came in the form of a Royal Proclamation signed by Queen Elizabeth II as Queen of Canada which included the following statements:

“[...]Whereas on July 28, 1755, the Crown, in the course of administering the affairs of the British colony of Nova Scotia, made the decision to deport the Acadian people; [...]”

Whereas We acknowledge these historical facts and the trials and suffering experienced by the Acadian people during the Great Upheaval; [...]”

Whereas We hope that the Acadian people can turn the page on this dark chapter of their history; [...]”

The proclamation concludes with the declaration of a national day of commemoration of the event every year on 28 July, which is the day when the Order of Deportation was signed by the Governor in Halifax in 1755. The proclamation was another important milestone in the public awareness in Canada of the events surrounding the Deportation. The first year was celebrated in New Brunswick and Nova Scotia with the unveiling of the first two monuments to the Acadian Odyssey, marking the location of Deportation and resettlement of Acadians around the world.

Since 2005, a multi-faith event has been held at the Deportation Cross at the initiative of local non-Acadian residents (see Figure 2–56).

It typically includes a ceremony with Catholic priests, Anglican ministers, Mi’kmaq elders, and recently members of other faiths; a mass at the Covenanter Church in Grand Pré; and a walk from that Church to the Memorial Church.

This last event is significant as it involves non-Acadians in an important commemorative event. Throughout the years, non-Acadians have played a role in supporting the Acadians’ aspiration to symbolically reclaim Grand Pré. From the early years of the 20th century, when a local jeweller partly of Acadian descent acquired the land and the DAR developed the site for tourism purposes, to today’s local community, non-Acadians have learned about the Deportation and its impact on the Acadians and contributed toward the commemoration of Acadian heritage at Grand Pré. Acadian politician Pascal Poirier noted in 1917 that “the return to Grand Pré is a symbolic resurrection of Acadie [an event] that should not offend our friends and fellow citizens of foreign nationality. On the contrary, a sincere feeling of fraternity and peace oversee this return.” This spirit continues to underpin the relationships in Grand Pré.
The relationship between Acadians and non-Acadians has been an ongoing exercise of mutual understanding and respect. Grand Pré is not a contested landscape, as the local residents and other non-Acadians have recognized for a long time the Acadian layer of heritage. The local community has been celebrating the Apple Blossom Festival since the 1930s as a means to advertise the agricultural products of the Annapolis Valley but also to celebrate the scenic beauty and Acadian history that was the background to *Evangeline*.

Recently, during the Acadian World Congress in 2004 and the 250th Anniversary of the Deportation in 2005, the local community worked to welcome Acadians on their ancestral land by hosting them and offering resources to carry out their events. One particularly powerful moment was when a farmer whose family had lived and farmed in Grand Pré since the 1760s offered to host the descendants of the Acadian family that once owned that land. The event was attended by hundreds of people, descendants of the Thibodeau family from Canada and Louisiana, as well as the current landowners, the Shaws.

Actions such as these are important indicators of a mutual desire to understand, remember and learn from experiences. They allow a peaceful, symbolic reclamation by the Acadians of their homeland and are evidence of ongoing efforts towards reconciliation, efforts foreshadowed by Pascal Poirier in the early 20th century when he stated “that [the acquisition of the lands] will result in our return home, here at Grand Pré, owners of our ancestral land, amongst our fellow citizens of foreign ancestry, now our friends.” The landscape of Grand Pré continues to play a central role in the reclamation by the Acadians of their homeland.
Puis levant la tête et le poing au ciel, la vieille Arcadie, paradis perdu surgi de ses cendres, hucha aux générations à venir : Vous y reviendrez en pèlerinage pour y fleurir les tombes de vos aïeux.

Antonine Maillet, Acadian Author, Prix Goncourt 1979
3.0 Justification for Inscription

3.a. Criteria under which inscription is proposed

The Landscape of Grand Pré is an outstanding example and enduring model of the human capacity to overcome extraordinary natural challenges and cultural ordeals.

Canada wishes the Landscape of Grand Pré to be considered a cultural landscape.

Criterion (v): “an outstanding example of a traditional human settlement which is representative of a human interaction with the environment.”

Grand Pré is a vibrant agricultural landscape, carved out of its harsh coastal environment three centuries ago by Acadian settlers. Working collectively, they applied an ingenious system of dyking and drainage to hold back the highest tides in the world, created extraordinarily fertile farmland, and began a tradition of collective management. This land reclamation system and this management tradition continue to ensure the livelihood of the local community today. The Landscape of Grand Pré is an outstanding example of a thriving farming community that interacts with its environment by using a successful land reclamation system and management tradition that predate the introduction of engineered drainage systems.

An ingenious dyking and drainage system

The dyking and drainage technology applied at the Landscape of Grand Pré is ingenious in its simplicity and its use of natural forces. The *aboiteau*, a sluice with a valve, is its key component. The design and installation of *aboiteaux* is determined by the drainage pattern formed by creeks, which operate in response to the natural force of the incoming and receding tides. In effect, farmers who build and maintain the dykeland use gravity and hydrographical patterns to drain it. Indigenous grasses of the salt marsh, *Spartina patens* and *Juncus gerardii*, have always been used in creating and maintaining the dykes because of their natural resilience and resistance to the eroding forces of the formidable tides. Both the adaptation to the area’s geomorphology and the use of natural building materials for the dykes are evidence of the enduring use of an approach that successfully drained large areas of salt marsh for centuries in North America and in Europe before the introduction of pumps and designed drainage channels. The design and principles of building dykes and *aboiteaux* at Grand Pré have not changed since they were first created in the 17th century.

An extremely challenging coastal environment

Grand Pré lies on the shores of the Bay of Fundy, on the northeastern coast of North America. The dykes that protect Grand Pré’s landscape are assailed by tides that have an average range of 11.61 metres. Twice a day, 100 billion tonnes of sea water flow in and out of the bay, more than the combined flow of all the world’s rivers. This churning volume of sea water presented a major challenge to the Acadians, the area’s first European settlers and first dyke builders. Yet they saw beyond the challenge to the major agricultural opportunity this environment presented. If they could exclude the sea and allow rain and snow to wash the salt from the soil, they could claim the highly fertile tidal marshes for agriculture. This work began in the 1680s, with a series of dyke-building projects that went on for over 70 years. Today, the Landscape of Grand Pré exhibits the work of the Acadians and their successors, the New England Planters: more than 1300 hectares of tidal marsh transformed into fertile farmland in one of the most challenging coastal environments in the world.
The Landscape of Grand Pré showcases the most intact example in the world of this traditional vernacular technology as part of an agricultural system.

**A successful agricultural settlement**

Grand Pré was the largest and most prosperous of all Acadian-settled regions. Within decades of the Acadians’ arrival, it became one of the most productive agricultural settlements in colonial North America. Its productivity resulted from the natural fertility of the land and the system of collective management that the Acadians put in place when they created the land. The land has remained highly productive over the centuries and is still dedicated exclusively to agricultural use.

This spirit of collective management is maintained through the Grand Pré Marsh Body, the oldest known and most active marsh body in North America. This exceptional example of a community-based approach to managing the farmland and the dykes is a form of land management now rare in North America and Europe. The natural conditions, the collective effort, and the technology used in the Landscape of Grand Pré provided the ingredients for a successful agricultural settlement, one that continues to ensure the livelihood of the local community.

**Criterion (vi): “a property that is tangibly associated with beliefs of outstanding universal significance.”**

Owing to the imposing presence of the dykelands, the Memorial Church and other memorials, and its enduring use by the Acadian people, the Landscape of Grand Pré is the most important lieu de mémoire for the Acadians, associated with the forced removal of that people from its homeland and with the subsequent survival of its diaspora. Over a period of seven years beginning in 1755, British authorities deported more than three-quarters of the approximately 14 000 Acadian men, women and children living in what are now the easternmost provinces of Canada. Some of those who survived the Deportation resettled in Nova Scotia after 1764, while most settled in what is now Quebec, Louisiana, France or French territories such as Saint-Pierre et Miquelon, Santo Domingo (present-day Haiti), and Guyana. Today, most of these places are home to thriving Acadian or Cajun communities. They share a common sense of history, values, and traditions that is embodied in the Landscape of Grand Pré.

Once strictly an agricultural landscape, Grand Pré has been progressively transformed since the mid-19th century. The transformation began with the 1847 publication of American poet Henry Wadsworth Longfellow’s internationally renowned poem *Evangeline, A Tale of Acadie*, which brought an awareness of the Deportation and of Grand Pré to the world stage. The memorials found at Grand Pré commemorate the forced removal of the Acadians and celebrate their survival. Memorials such as the Deportation Cross are reproduced in Europe and elsewhere in North America where the Acadians landed during their *Odyssey*. The memorials’ association with the dykeland as an agricultural landscape completes the sense of place as the homeland. Today, Acadians come to Grand Pré to understand their ancestors’ legacy as expressed by the dykelands, the archaeological remains, and the memorials erected by their predecessors. The landscape and the memorials are powerful, tangible symbols of the impact of the Grand Dérangement on the Acadians, their attachment to their ancestral lands, their cultural survival, their collective memory, their identity, and their aspirations. Through that discovery and through the use of that landscape for key formative cultural events,
Grand Pré is a place that allows Acadians to reaffirm their identity and to continue building their community on these foundations. Visitors to Grand Pré share this experience and can find inspiration in this place of contemplation that illustrates the universal human aspirations to belong to a community, to connect with one’s homeland, and to make peace with the past.

A symbolically and peacefully reclaimed landscape

Grand Pré is a landscape that has been symbolically and peacefully reclaimed through the actions of Acadians and non-Acadians over more than a century. By raising public awareness, acquiring land, and erecting memorials, they have created a landscape that has united Acadians around the world. They did it without either resorting to conflict or disrupting the ongoing agricultural community, in a landscape that was primarily lived in by those who succeeded the Acadians after the Deportation. Grand Pré continues to be a place that is inclusive and open to the world, touching Acadians and non-Acadians alike. It is an exceptional landscape of reconciliation and peaceful sharing of the land.

3.b. Proposed Statement of Outstanding Universal Value

Brief Synthesis

The Landscape of Grand Pré is a dynamic agricultural landscape claimed from the sea. It is also a powerful symbolic landscape for the Acadians.

The Landscape of Grand Pré is the most intact agricultural polder in the world that uses an ingenious vernacular system for transforming salt marsh into fertile agricultural farmland. This system of earthen dykes, ditches, aboiteaux, and community-based management was first implemented at Grand Pré in the late 17th century by French (Acadian) settlers. The location they chose was subject to the most extreme tides in the world, which presented great challenges but also great opportunities in the extraordinary fertility of the land they transformed. Today, the agricultural landscape is still protected and drained by the same system, still exhibits distinctive field patterns, and is still managed through the same community approach, a testimony to the original Acadian settlers, the New England Planters who succeeded them, and the farmers who work the land today.

Symbolically, the Landscape of Grand Pré is the single most important lieu de mémoire for the Acadian people, one of the first people of European descent to call North America their homeland. The Landscape of Grand Pré is directly associated with the emergence of their new identity in this new land, but also with their tragic forced removal from it, their subsequent migration, and their renaissance. Today, this lieu de mémoire embodies the cultural consciousness of a widely scattered people. It is a landscape that has been peacefully and symbolically reclaimed by the Acadians, and it is their emotional and spiritual centre. It illustrates the importance of the connection between people and places in defining collective identity.

Criterion (v): Grand Pré is a vibrant agricultural landscape, carved out of its harsh coastal environment three centuries ago by Acadian settlers. Working collectively, they applied an ingenious system of dyking and drainage to hold back the highest tides in the world, created extraordinarily fertile farmland, and began a tradition of collective management. This land reclamation system and this management tradition continue to ensure the livelihood of the local community today. The Landscape of Grand Pré is an outstanding example of a thriving farming community that interacts with its environment by using a successful land reclamation system and management tradition that predate the introduction of engineered drainage systems.

Criterion (vi): Owing to the imposing presence of the dyke-lands, the Memorial Church and other memorials, and its enduring use by the Acadian people, the Landscape of Grand Pré is the most important lieu de mémoire for the Acadians, an evocative example of a homeland symbolically and peacefully reclaimed by a diaspora that has triumphed over hardships. The legacy of the Acadian people overcoming the tragedy of a forced removal, the Grand Dérangement, their renaissance, and the ongoing efforts of reconciliation are embodied in the Landscape of Grand Pré. Here, Acadians share their common
The nominated property has integrity because its clearly defined boundaries encompass all the elements relevant both to the agricultural landscape, created from the transformation of salt marsh into farmland over several centuries, and to the symbolically reclaimed landscape. These elements include earthen dykes, ditches, aboiteaux, and field patterns, as well as the memorials, archaeological evidence of the village, and commemorations related to the forced removal and subsequent renaissance of the Acadians. The nominated property comprehensively represents the past and present agricultural settlements as defined by dykeland farmland, upland farmland, and the heart of the community. It includes the dykeland managed collectively by the Grand Pré Marsh Body and the entire area of symbolic importance to the Acadians. The integrity is enhanced by the farmland included in the buffer zone. The nominated property’s attributes are in good condition. Policies and mechanisms are in place to reduce or eliminate pressures on the agricultural use and the archaeological sites.

The nominated property has authenticity because the archaeological and historical evidence confirms the locations of the original Acadian and Planter settlements, the enduring agricultural use, and the location of the memorials. That evidence also confirms that the dykelands are maintained in the 21st century using the same principles and techniques originally implemented by the Acadians in the 17th century and that they have been managed collectively for over 300 years. The Acadians’ continuing use of Grand Pré for individual and collective events attests to the profound value of this landscape to their community.

**Protection and Management Requirements**

The legal protection of the nominated property is enforced provincially on lands under provincial jurisdiction by the Nova Scotia Agricultural Marshland Conservation Act (Appendix 3F) and the Nova Scotia Special Places Protection Act (Appendix 3K), and federally on lands administered by the Parks Canada Agency under the Parks Canada Agency Act (Appendix 3D), and the Canada National Parks Act (Appendix 3A). The protective measures are appropriate to safeguard the dykeland, its agricultural use, and the archaeological sites from undue development and environmental pressures. A buffer zone around the nominated property, encompassing both land and water, was defined through community engagement leading to the adoption of the Grand Pré and Area Community Plan (Appendix 2J) to ensure that zoning remains compatible with the aims of protecting the nominated property. All of these mechanisms are sufficient to control development, ensure agricultural land capacity, and monitor the effects of coastal erosion that could otherwise threaten the value of the nominated property.

The overall management system for the nominated property is exemplary. It involves community management through the Grand Pré Marsh Body, municipal zoning, and federal and provincial government legislation for protection of the site. The Management Plan for the Landscape of Grand Pré (Appendix 2A) is a strong framework document that ensures the coordination of multiple jurisdictions and stakeholders inside the boundary of the nominated property and its buffer zone. Parks Canada, as a federal government agency, is responsible for managing Grand-Pré National Historic Site of Canada and Horton Landing. The Province of Nova Scotia, mainly through its departments of Agriculture and of Tourism, Culture and Heritage, is responsible for protecting the dykelands and archaeological sites not located on federal lands. Finally, the Municipality of the County of Kings is responsible for implementing the Grand Pré and Area Community Plan (Appendix 2J) and the zoning regulations contained in it. The Management Plan depends on the Community Plan, the Grand-Pré National Historic Site of Canada Management Plan (Appendix 2J), provincial departmental policies, and the Grand Pré Marsh Body for
its effective implementation. The management system is coordinated by the Grand Pré World Heritage Site Stewardship Board and involves the local community, the Acadian community, and government administrative bodies in its decision-making process. Local residents are proud and effective stewards of the land.

3.c. Comparative analysis

The Landscape of Grand Pré is a dynamic agricultural landscape claimed from the sea. It is also a powerful symbolic landscape for the Acadians.

The Landscape of Grand Pré is presented as the most intact agricultural polder in the world that uses an ingenious vernacular system for transforming salt marsh into fertile agricultural farmland. This system of earthen dykes, ditches, abôiteaux, and community-based management was first implemented at Grand Pré in the late 17th century by French (Acadian) settlers. The location they chose was subject to the most extreme tides in the world, which presented great challenges but also great opportunities in the extraordinary fertility of the land they transformed. Today, the agricultural landscape is still protected and drained by the same system, still exhibits distinctive field patterns, and is still managed through the same community approach, a testimony to the original Acadian settlers, the New England Planters who succeeded them, and the farmers who work the land today.

The Landscape of Grand Pré is the single most important lieu de mémoire for the Acadian people, one of the first people of European descent to call North America their homeland. It is therefore also presented as a symbolically reclaimed homeland. The Landscape of Grand Pré is directly associated with the emergence of the Acadians’ new identity in this new land, but also with their tragic forced removal from it, their subsequent migration, and their renaissance. Today, this lieu de mémoire embodies the cultural consciousness of a widely scattered people. It is a landscape that has been peacefully and symbolically reclaimed by the Acadians, and it is their emotional and spiritual centre. Grand Pré is a symbol of collective achievement and pride that continues to shape their identity.

In light of this dual value, the Landscape of Grand Pré is compared to agricultural landscapes that are polders as well as to sites that serve as a lieu de mémoire for a particular community, reinforcing its shared identity. Although these values are connected at Grand Pré, for the purpose of providing a reasonable comparative framework both aspects will be compared individually to other sites. The analysis will first compare Grand Pré as an agricultural landscape, then as a lieu de mémoire and symbolically reclaimed landscape.

3.c.i. Establishing a list of comparable sites for Grand Pré as an agricultural landscape

The Landscape of Grand Pré applies a dyking and drainage system to transform intertidal lands into farmland, a type of landscape known locally as dykeland, but more commonly elsewhere as a polder.

Polders are typically defined as “a level area which was originally subject to a high water level, either permanently or seasonally and due to either groundwater or surface water. It becomes a polder when it is separated from the surrounding hydrological regime so that its water level can be controlled independently of surrounding regimes” (Segere, in ‘Polders of the World’, p. 15). They can be created in essentially three different types of environment:

- **Land reclaimed from the sea or any other body of water.** The Netherlands represents one of the best and most well-known examples of this type, where low-lying lands were claimed from the sea by means of complex drainage systems. Initially these systems involved sluices that drained the fresh water out of the area while keeping out the sea water. In the late Middle Ages, pump systems were added, which provided opportunities to extend the claimed land. These pumps were once activated by windmills that were and continue to be a distinctive feature of the Dutch landscape. The pumps are now predominantly operated electrically. While the need for land in part resulted from population and settlement expansions, the use of land for agriculture was also important.

- **Protected flood plains.** These were some of the first types of polders. They were recorded in Ancient Egypt, Mesopotamia, the Indus Valley and China, where annual floods were harnessed to irrigate...
The crops along rivers. The alluvial deposits nourished the soil to allow agriculture, and water was managed to ensure consistent and sufficient irrigation of the crops. In Europe, flood plains were also extensively used for agriculture, in such places as the Po Delta in Italy (first dyked by the Romans), Switzerland, and the Loire Valley in France.

- Protected and drained marshes. Over the centuries, fresh or brackish water marshes have been drained for public health reasons, for agriculture, or for peat extraction. The dyking of intertidal marshes was seen as an opportunity to access extremely fertile land, with early examples in Europe dating back to Roman times. Many areas around the world offer the right environmental conditions to create these marshes and have been dyked for agricultural purposes. In Europe, the marshes in the Netherlands were among the first to be dyked for land expansion. The northern coasts of Denmark and Germany have also seen these marshes dyked and drained for agricultural purposes at various times in history.

This analysis recognizes that transformation of land that is partly or wholly humid, i.e. wetlands, for agriculture occurred in many places in the world and in different environments. In Africa, Ancient Egyptians learned to master agricultural techniques in the face of the annual flooding of the Nile and adapted to the conditions of the soil along rivers by building canals and walls. In Western Africa, some societies apply a centuries-old ingenious technology, using hollowed palm tree trunks to drain rice fields in intertidal areas and in wetlands along rivers. Examples include areas along the Gambia River in the Republic of the Gambia, along the Casamance River in Senegal, and in estuaries and islands off the coast of Guinea-Bissau.

In pre-Columbian America, a number of societies had developed technologies to adapt to water environments. The Aztecs had experience building complex irrigation systems in valleys to allow for irrigation farming. While their canal technology is best illustrated by their main settlement at Tenochtitlan, built entirely on raised islets on Lake Texcoco, it also served an important function in expanding the productivity of farmland in valleys. In general, though, the Aztecs developed their technology to adapt to a lake or riverside environment. The Incas developed the camellones, a technology that consisted of raised land surrounded by channels along the banks of Lake Titicaca to protect crops from flooding and to regulate water. In these cases, the technique involved dykes or dams, and channels.

In Asia, irrigation farming and wet-field farming has long been used by societies in mainland China, the Mekong Delta, the Korean Peninsula, and Japan. Although creating rice paddy fields is the typical use of water-management works for agriculture in Asia, there are numerous examples of major engineering works, such as the one at Duijiangyan in Sichuan province in China that aimed to manage the excess water during major floods and redirect it to improve field irrigation and crop production.

In Europe, land transformation from wetlands has occurred for millennia. Areas that were once bogs, marshes, and other forms of wetlands were transformed as early as the 7th century BCE in Friesland in northern Europe. Through the centuries, Europe saw the emergence of dyked wetlands in western France, Flanders, northern Germany, Italy, and England. The Middle Ages was a defining period in land transformation in Western Europe. The population increased dramatically, forests and marshes were cleared to create farmland, the seignorial system (“seigneurial” in 17th century New France) was implemented, and significant strides were made in agricultural technology. All these factors contributed to an expansion of transformed wetlands for agriculture and the emergence of societies associated with that settlement pattern. This was followed by over a century of wars and plagues, and large tracts of the transformed lands were abandoned. The 16th century heralded a movement to reclaim these lands and develop advanced technologies to do so.

Today, land reclamation remains a significant approach to creating land for agriculture and settlement throughout the world.

This analysis focuses on comparing Grand Pré to other agricultural landscapes that were created from land reclamation of marshes in intertidal areas. The natural conditions of the intertidal...
environment represent both the challenge of the twice-daily force exerted by the tides on the polder’s walls and the opportunity of the typically rich nutrient content of the wetlands’ soil. Intertidal land reclamation is different from land reclamation projects along rivers or in river deltas, where the potentially destructive force of the tides is largely absent. The Landscape of Grand Pré does not compare to ancient land-reclamation projects typically found along the rivers and in the deltas of Africa and Southeast Asia.

In addition, the comparative context for Grand Pré focuses on protected and drained marshes in Europe because of their cultural connections. Europe is also the only region of the world, other than colonial North America, where land transformation from intertidal lands occurred extensively before the 19th century.

Finally, the approach to land reclamation at Grand Pré, with its system of aboiteaux, earthen dykes, cooperative management, and adaptation to land forms, is a simple, effective, and ingenious system that predates the use of pumps and other engineering feats and has withstood the test of time.

**Exceptional coastal conditions**

Among the locations in the world with the highest tides, as compiled by the United States National Oceangoicographic and Atmospheric Agency (NOAA), the locations in the Minas Basin, part of the Bay of Fundy, top the list (see Figure 3–1). Grand Pré is less than two kilometres from Horton Bluff, Avon River, Minas Basin, in Nova Scotia. Locations in the broader Bay of Fundy area account for 13 of the 50 highest tide locations.

Other high tide locations include Ungava Bay (Québec, Canada), Cook Inlet (Alaska, United States), Koksoak River entrance (Greenland, Denmark), Cape Astronomicheski (Kamchatka, Russian Federation), locations along the Magellan Strait (Chile and Argentina), Bristol Channel (United Kingdom), the Island of Jersey (United Kingdom), and locations along the English Channel and the Baie du Mont-Saint-Michel (France).

Of the 50 highest tide locations, 37 are located in areas that can support agriculture. Of these, intertidal polders have been created in the Baie du Mont-Saint-Michel, Bristol Channel, and Jersey.

**Reclaiming land in Western Europe**

Land transformation in intertidal environments similar to Grand Pré’s occurred notably in Britain, France, the Netherlands, and Germany for centuries prior to the settlement of Grand Pré. The Middle Ages witnessed intensive dyking activity as land-hungry religious and political authorities ordered or commissioned the building of dykes for agricultural purposes. Many of these lands were abandoned during the wars and plagues that affected Europe in the late Middle Ages.

Activities resumed in the 16th century, when people actively began to reclaim the abandoned lands. These projects were led by authorities advised by engineers, in effect shifting such projects from the traditional vernacular approach for draining lands to new engineered methods, leaving a very different imprint on the landscape. The coasts of western France (Saintonge, Poitou, Brittany, Normandy, Pas de Calais), Belgium, the Netherlands, Germany (the Wadden Sea), and the United Kingdom (primarily along the south and east coasts) were all transformed to create new agricultural land. These places still exhibit evidence of the different periods of reclamation. Today, in particular since the middle of the 20th century, the lands that had been reclaimed for agricultural use now have a mixed use and increasingly host permanent infrastructure. Also, where groups of landowners had historically fulfilled the primary stewardship role in managing those lands, government bodies have now taken over to ensure the management of the polders.
Only two sites already inscribed on the World Heritage List can be compared to The Landscape of Grand Pré, based on the Western European land-reclamation tradition that predates the introduction of pumps:

1. Beemster Polder (Netherlands)
2. Schokland and Surroundings (Netherlands)

In order to expand the comparison to sites not inscribed on the World Heritage List, the following sites are deemed comparable because of their location in extreme intertidal environments, their cultural affiliation with the Western European tradition of dyking, and their comparable agricultural systems:

3. Tantramar Marsh, Bay of Fundy (Canada)
4. Marais de Dol – Baie du Mont-Saint-Michel (France)
5. The Gwent Levels, in the Bristol Channel/Mouth of the Severn (United Kingdom)

Finally, some sites are not in intertidal environments as extreme as at Grand Pré, but they exhibit elements of the Western European dyking tradition before the use of pumps and date to the same period. These include:

6. Dutch and English dykes in the Bay of Delaware (United States)
7. Marais Poitevin (France)
8. Altes Land (Germany)

Figure 3–1 shows these sites in comparison with a list of the highest tides in places of the world capable of supporting agriculture.

The size of the European polders chosen for comparison is, in general, significantly larger than the one at Grand Pré. But keeping in mind that neither the Acadians nor the New England Planters could engage in large-scale reclamation projects because of the labour involved and the nature of North American politics at the time, this analysis does not consider size as a factor for comparison. Instead, the focus is on the quality of the attributes that define these types of polders.

The two World Heritage Sites will be discussed first, followed by sites 3 to 8, organized regionally with North America first and then Europe.
3–1 High Tide Comparison Chart: this graph shows the mean tidal ranges, in metres, for those locations capable of supporting agriculture among the top 50 highest tides in the world, compiled by the United States NOAA, and the mean tidal ranges for the sites included in the comparative analysis.
3.c.ii. Criteria for comparison for the agricultural landscape

As the Landscape of Grand Pré is being proposed as a polder landscape (known locally as dykeland) that reflects an agricultural settlement, the analysis will be based on criteria that allow for a comparison with similar landscapes. These criteria will particularly focus on comparing the coastal conditions, the polder system, the agricultural settlement, and the system of management.

The analysis is based on the World Heritage Committee having already recognized the outstanding universal value of sites associated with agriculture, particularly in Europe. Although the criteria applied here pertain to the different components of the agricultural system, the integrity and authenticity of the system as a whole will be the object of the comparison. In addition, the criteria allow for a comparison with similar environments, since the system at Grand Pré is an adaptation to specific and exceptional environmental conditions.

The following criteria will be used for comparing Grand Pré as an agricultural landscape to other agricultural landscapes:

1. Environment: this agricultural landscape is in part created from the interaction with a coastal environment and the forces of the tides. The comparison with other intertidal environments and the importance of the tides in contributing to the soil’s natural fertility are relevant.

2. Polder system: polders (or reclaimed lands) have existed for millennia and have been created from different technologies to dyke and drain desirable wetlands. These include ditches, channels, sluices, pumps, and dykes constructed from earth, vegetation, or stone.

3. Land tenure and management: land tenure and management approaches influence the use of an agricultural landscape and the success of an agricultural settlement. Categories of land tenure include individual ownership, communal ownership, and rental. Land-management categories include individual owner, community, and institutional.

4. Dykeland use: the Landscape of Grand Pré is primarily agricultural. The use of the dykeland and its importance for agriculture are relevant in the comparison. Uses may include crop growing, pasturing, infrastructure, and a mix of uses.

5. Settlement pattern: the relationship between the work space and the living area influences the physical shape of a settlement. The shape can indicate an adaptation to environmental conditions, a concern for efficiency, and the value attributed to certain types of lands. In the case of polders created for agriculture, the spatial organization of the settlement between dykeland and living areas, as well as the organization of the living areas themselves, is relevant in a comparison.

These five criteria enable comparison of the Landscape of Grand Pré as an agricultural landscape by focusing on the key elements articulated in the proposed Statement of Outstanding Universal Value, namely on challenging coastal environments (criterion 1), on ingenious dyking and drainage systems (criteria 2, 3, and 4), and on successful agricultural settlements (criteria 4 and 5).

3.c.iii. Comparative analysis for the agricultural landscape

Grand Pré is an agricultural landscape resulting from human interaction with the environment. It is a polder that exemplifies an agricultural system imported from Europe and adapted to the unique environmental and social conditions of North America. The productivity of those lands has sustained successful agricultural activities in Grand Pré for centuries. That productivity, coupled with a response to the market value of products, has resulted in an agriculture that is driven by economic forces rather than specialization in key crops.

The two sites on the World Heritage List directly associated with land transformation for agriculture, namely Beemster Polder (Netherlands) and Schokland and Surroundings (Netherlands), focus on the Netherlands’ long history of transforming wetlands into farmland.
From 1000 AD to 1300 AD, the majority of fenlands in Holland had been transformed and local water-management organizations created to collectively address operations and maintenance issues. These lands progressively subsided and were lost again, as sea levels rose, during the 1300s. They were reclaimed after 1400 with the help of windmills. Today, a vast majority of these lands are drained with the help of electric pumps. The Dutch experience is representative of the European expansion of agricultural land in the Middle Ages and later, which included wetland reclamation. Beemster represents the period after 1400 when land that had once been transformed but subsided was again reclaimed.

Schokland is different. Like Beemster, it emphasizes reclamation, but it also stresses the disappearance of a society that once lived in a distinct environment, the loss of land, and the fact that agriculture represents a threat to the integrity of the site.

Compared to the polders in the Netherlands that are already inscribed on the World Heritage List, as shown in Table 3–1, the nominated property is distinctive in having been created and maintained exclusively for agricultural purposes in an intertidal zone. In addition, its approaches to wetland transformation and land tenure were adapted from mediaeval Western European approaches, predating those used at the Dutch polders already on the World Heritage List. It stands out in its authenticity and integrity, as it has retained those three characteristics – agricultural use, vernacular approach to dyking, and community-based management – intact since its creation because of the ongoing protection and stewardship of farmers and authorities. While the Dutch polders on the World Heritage List focus on technical accomplishments as well as adaptation to settling wetlands, the Landscape of Grand Pré illustrates an ongoing human interaction with the environment and the settlement pattern that ensues.

Table 3–1 Comparison of Grand Pré with Beemster and Schokland
The Landscape of Grand Pré, in relation to agricultural landscapes and to polders already inscribed on the World Heritage List, is comparable in highlighting the importance of the connection between people and the land. However, it is distinct in that it focuses on the human interaction with the highest tides in the world to transform land into farmland, and it has organized a settlement pattern to take full advantage of the transformed land. In addition, the community of Grand Pré has maintained its agricultural focus.

**European polders in North America**

Other similar sites exist in eastern Canada. Close to 17 400 hectares (43 000 acres) of land have been dyked over the years in the Province of Nova Scotia and 14 973 hectares (37 000 acres) in the neighbouring Province of New Brunswick. While most of that land is dyked along the Bay of Fundy, as it is in Grand Pré, much of it is also found along rivers. However, not all of it is still farmed. In Nova Scotia, about 2610 hectares (6450 acres, or 15 per cent) of the total dyked agricultural land is not farmed any more, and the proportion is higher in New Brunswick with 6070 hectares (15 000 acres, or 41 per cent) no longer farmed, according to a study by the Mount Allison Coastal Wetlands Institute and the Mount Allison Rural and Small Town Programme in 2006. The trend in both provinces is a decline in agricultural use and an abandonment of those lands.

The Tantramar Marsh, which straddles the border between New Brunswick and Nova Scotia, stands as the best comparison to Grand Pré. It was first created in the late 1600s at the same time as Grand Pré and continues to be used for agriculture today. Once known as the largest hayfield in the world, the Tantramar Marsh exhibits the remains of this golden age in its barns and other farm-related structures. Over the years, however, many farms were abandoned, and historic structures were lost. The area has also lost integrity through intrusions that have altered the landscape and its use, such as freshwater marsh-regeneration ponds by Ducks Unlimited, a major highway connecting Nova Scotia to New Brunswick, and a radio-transmission site (see Figure 3–2).

At 1323 hectares, Grand Pré stands as the largest polder in eastern Canada in which 100 per cent of the land is actively farmed. In that respect it has the highest level of integrity for a polder created for agriculture. Moreover, it has the largest and most active group of landowners (the Grand Pré Marsh Body) and has been maintained as agricultural dykeland through centuries of local and provincial planning that has in effect ensured its authenticity. Other dykelands have suffered permanent structural intrusions, changes in function, and abandonment. Compared to other polders in eastern Canada, Grand Pré stands as rare intact evidence of the agricultural system that was once prevalent in the region and remains extremely successful in ensuring the livelihood of the local community.

The dyking of land for agriculture by European settlers in the 17th and 18th centuries occurred in other parts of Eastern North America, notably around the Bay of Delaware in the American states...
of Delaware and New Jersey. These dykes were built by Dutch, Swedish, Finnish, and English settlers. While these were also important endeavours, and traces still exist in New Castle County (Delaware) and in Salem and Cumberland counties (New Jersey), there are fundamental differences in their creation, use, and current condition.

The network of dykes built in those areas faced environmental challenges that were only partly similar to those encountered by settlers along the Bay of Fundy. The maximum tidal range is only about 2 metres in the Bay of Delaware, compared to 16 metres in the Bay of Fundy. During one particular storm in 1869 that combined strong winds with a perigean spring tide, the tidal range in the Minas Basin (which is part of the Bay of Fundy) was recorded at 21.6 metres (70.87 feet). This difference in tidal range represents a significant challenge in adapting settlement patterns to build polders and maintain agricultural land that can withstand the incredible force of the water flow, conditions of which most European settlers would have known nothing.

The dykes along the Bay of Delaware were primarily used for agricultural land, much as in Grand Pré and elsewhere in Acadie. However, in the Bay of Delaware those lands complemented the agricultural output of uplands; in Acadie they were the primary agricultural land. Today, the use of the dyked lands is still an essential component of the agricultural system in Grand Pré. Until the end of the 19th century, the transformation of wetlands to increase the agricultural potential was common practice among farmers along the Atlantic Coast of the United States, and to a lesser degree along the Gulf of Mexico. Today, the act of reclaiming land for agricultural purposes is almost non-existent.

In addition, the management approach along the Bay of Delaware was different. Soon after the British conquered the Dutch and Swedish colonies, the dyked lands were owned by meadow companies. These companies maintained the dykes cooperatively. The head of a company would hire men to build and maintain dykes, and the companies would work together to maintain a larger dyked area. In contrast, groups of landowners in Nova Scotia formed marsh bodies responsible for maintaining the dykes, drainage, and aboiteaux. These marsh bodies continue to exist today, as their status is enshrined in provincial legislation. The meadow companies of the dyked lands in the United States have largely disappeared or changed their mandate over time and lost their agricultural focus.

Finally, as industrialization pressed ahead and agricultural communities dwindled, the Bay of Delaware farms and their dykes were abandoned for the most part around the time of World War II (see Figure 3–3). The US Corps of Engineers progressively took responsibility for maintaining the dykes that are still essential for protecting roads, infrastructure, and key agricultural land. In the 1970s, some American states enacted legislation forbidding the reclamation of new land. In Nova Scotia, legislation emphasizes conservation for agricultural purposes, and landowners still play an active role in maintaining the drainage system of the marsh as a community of landowners.

3–3 Development has completely taken over the Bay of Delaware dykelands outside New Castle (United States). This land was once pasture and hay fields.
In conclusion, as shown in Table 3–2, The Landscape of Grand Pré is the best example compared to other similar landscapes in North America in terms of its exceptional environmental conditions, its maintenance of a community-based approach to management, its authenticity, and its integrity.

Table 3–2 Comparison of Grand Pré with the Tantramar Marsh and marshes on the Bay of Delaware
Important polders still exist in Western Europe that apply a dyking and drainage system using the natural conditions of their particular environment. Over time, these systems have been modified by the gradual introduction of pumps and channels to improve drainage where gravity and other natural forces were no longer sufficient. The polders of the Baie du Mont-Saint-Michel (France) and the Bristol Channel (United Kingdom) are notable as polders that apply a similar technology and were built in a comparable environment.

The Baie du Mont-Saint-Michel was inscribed on the World Heritage List in 1979, but the inscription focuses on the Abbey and its setting rather than the polders of the bay. Even so, the Mont-Saint-Michel area is a relevant comparison. It has been polderized for centuries, with an accelerated pace in land transformation that started in the 19th century. Much of the current work dates from that period.

The Marais de Dol, in Brittany, is protected by the Digue de la Duchesse-Anne, the largest dyke in the Baie du Mont-Saint-Michel and first built in the 11th and 12th centuries. In the centuries since then, it has been extended and now stretches more than 30 kilometres. Constructed from large cut-granite stones, the dyke protects over 12,000 hectares of land, once salt marsh, from the highest tides in Europe. These tides have a mean range of approximately 8.38 metres. Before the French Revolution, the dyke was maintained by the Parliament of Brittany, which protected land that fell under three seigniorial jurisdictions. Following the Revolution, the government allowed the creation of committees of owners responsible for maintaining the thousands of hectares of agricultural land. In 1799, the Association syndicale des propriétaires de Diguers et Marais was created to maintain the dyke and the drainage system. Today, much of the land has retained its agricultural use as pasture for sheep and farmland for crops (see Figure 3–4). Villages such as Saint-Méloir-des-Ondes were first settled in the Middle Ages following land-reclamation projects. Since then, they have been flooded numerous times over the centuries.

Like the Landscape of Grand Pré, the polders around the Baie du Mont-Saint-Michel are landscapes that demonstrate the human interaction with the environment and have maintained their identity as lands transformed from intertidal land.

Yet Grand Pré is different in that its dykes were built using earth, indigenous vegetation, and materials from the surroundings. The challenge of maintaining an earthen wall compared to one made of granite speaks eloquently to the specific environmental adaptation applied in Acadie. The simplicity of that approach was more easily reproduced and carried out by communities independently. The current infrastructure at the Marais de Dol includes flood gates, canals, and other mechanical devices introduced in the 19th and 20th centuries. In addition, the settlement pattern in Grand Pré has not been altered; it has maintained the relationship between living space on higher ground and work space on the fertile lowland. Settlements on the Baie du Mont-Saint-Michel had to concentrate and expand on the transformed land itself.
Finally, the community-based management at Grand Pré that continues in the form of the Grand Pré Marsh Body is similar in spirit to the *Association syndicale des propriétaires de Diggues et Marais*. Both groups are evidence of an ongoing stewardship and responsibility for the maintenance of vital land by the community. Where the Grand Pré Marsh Body has approximately 30 members who decide collectively on the work to be done and vote on the key decisions affecting life on the marsh, the *Association syndicale des propriétaires de Diggues et Marais* includes 8000 members who elect 57 representatives (*députés*), who in turn make decisions affecting the marsh. While there is no clear indication that Mont-Saint-Michel landowners had any type of collective management approach before the Association was set up in 1799, in Grand Pré not only was the Marsh Body established in 1760 without direction or funds from the government, but the historical evidence leads us to believe that a similar mechanism was in place during Acadian times. This would in effect predate the same approach used in France.

The Gwent Levels, in the United Kingdom, comprise the Wentlooge Level and the Caldicot Level in the Bristol Channel on the northern side of the Estuary of the River Severn. They cover some 11,100 hectares of land in an area that experiences some of the highest tides in the world. It is a challenging environment in which to practice agriculture, yet it also presented potential for great productivity. First drained by the Romans, it was flooded and abandoned until people returned to settle there during the Middle Ages. From then on, the Levels expanded in multiple phases, each phase representing a new accomplishment using the more advanced techniques available. The phase that is comparable to Grand Pré is the early mediaeval phase, which exhibits an irregular field pattern similar to that at Grand Pré. Later phases were “planned,” reflecting an organized settlement and field pattern. The mediaeval phase is most apparent in Rumney Marsh (Wentlooge Level), Nash, Goldcliff, Redwick, and Undy marshes (all in the Caldicot Level).

In the early phases, the dykes were built mainly from earth and protected in certain areas with rocks. A series of gouts (tidal doors) at the heads of embanked tidal pills (creeks) evacuated water from the reclaimed land (see Figure 3–5).

The gouts were later moved farther downstream so that the dyke would form a continuous wall. Today, the dykes protecting the Gwent Levels are for the most part the result of work performed between the 1950s and the 1970s. The work involved protecting the front of the dykes with large boulders, topping them with a concrete wave-return wall, and excavating a ditch behind the wall to store excess fresh water. While gouts are still in use in some parts of the Levels, pumps were introduced in the 1990s. Channels of different sizes criss-cross the Levels to allow water to be evacuated and also to be regulated for agricultural use. This is different from the Landscape of Grand Pré, where dykes continue to be built and maintained with soil and vegetation, where the only drainage approach is through the use of gravity and the force of the tides, and where there are no channels, just the natural shape and location of the creeks.

For centuries, the Gwent Levels were managed by the lords and their tenants. In the 13th century, the government began to get involved in their maintenance through the creation of Commissions of Sewers. The presence of such a commission at the Gwent Levels was first mentioned in the 16th century. From the beginning, members of these commissions were local gentlemen appointed for 10 years. They would supervise the condition and work on the marsh and had
the authority to levy taxes, resolve disputes, and impose maintenance work on the dykes and drainage to the local landowners. In the late 19th century, the responsibility for maintenance was removed from the landowners and assigned to the Commission of Sewers. The Commission ceased to exist after the Second World War and was replaced by government agencies. This is different from the Grand Pré management environment. Here, even though the Department of Agriculture is responsible for the dykes, the landowners in effect are the ones maintaining the drainage and roads. Landowners also continue to build private dykes, thus ensuring the maintenance of a local tradition of farming on the dykeland. Moreover, the Commission of Sewers that once existed at Grand Pré was never a committee of individuals appointed by the government. Instead, its members were elected by the landowners, worked with the landowners collectively to assess priorities and carry out work, and had very limited financial support from the government. This was truly a collective approach to managing the dykeland.

Finally, the current condition of the Gwent Levels is precarious. It is severely affected by development and has lost much of its agricultural land and use (see Figure 3–6), unlike Grand Pré’s dykeland which continues to be used strictly for agricultural purposes.
Other areas of western France that have a tradition of land transformation and reclamation are found where most of the settlers of New France came from, including the Poitou and Saintonge areas. The Marais Poitevin is one of the most impressive land-reclamation works in western France. Divided into a *marais humide* (wet marsh) and a *marais desséché* (dry marsh), it has evolved greatly over close to a millennium six centuries. The *marais desséché* is the section that is subject to tidal influences.

The Marais Poitevin has not retained much of its settlement pattern and agricultural system from the Middle Ages, when field patterns were irregular and the system relied on limited engineering works such as channels and gates (see Figure 3–7).

Table 3–3, below, compares the Landscape of Grand Pré to the Marais de Dol and the Gwent Levels.

Table 3–3  Comparison of Grand Pré with the Marais de Dol and The Gwent Levels
Chapter 3 - Justification for Inscription

3–7 The irregular field patterns and traditional drainage systems of the Marais Poitevin (France) are being eroded and replaced by regularly-shaped, larger fields for intensive agriculture.

Constant development pressures and the accelerated pace of introducing industrial agriculture have significantly altered its settlement pattern and natural ecosystem. The area now exhibits mostly modern transformations that have had an impact on the landscape, including the loss of the natural drainage system, an increase in field sizes, and an altered spatial organization. The Marais Poitevin was once actively managed by groups of landowners, now known as Syndicats de marais. However, these groups have been progressively disappearing under the pressures of an aging demographic and the financial responsibilities tied to managing the dykes. As a result, the traditional skills and knowledge of farming dykeland are becoming less common.

Overall, the Marais Poitevin has lost its integrity and its authenticity primarily as a result of intensive agriculture. Grand Pré is exceptional compared to the Marais Poitevin in that it has continuously evolved while maintaining the principles that created the dykeland. Farmers now use modern equipment and technology to carry out their work, but the way they build the dykes, maintain the drainage, and use a community-based approach to management have remained intact. This in turn has maintained the integrity of the landscape attributes.

Other areas of Europe have maintained an agricultural identity and a strong settlement pattern associated with transformed intertidal lands in the Middle Ages. The Altes Land in Germany, located along the Elbe River close to the North Sea and a few miles from Hamburg, is a particular example. It is the largest orchard in Europe and is typified by a settlement pattern known as Marschhufendörfer where farms with intricately decorated houses are located along main roads, with the farmland stretching behind them in long narrow fields delineated by ditches. While this area was transformed during the Middle Ages, it displays a very organized pattern different from the one at Grand Pré and reflects a different social organization (see Figure 3–8).

3–8 Altes Land (Germany) has regular field patterns.

Moreover, it does not face the same tidal range as in Grand Pré, thus removing some of the exceptional environmental challenge that this represents.
The Landscape of Grand Pré is distinct from agricultural landscapes that result from intertidal land transformation in Europe because of its adaptation to extraordinary environmental conditions. Despite centuries of political, social, and technological changes, it has maintained the integrity of its dyking and drainage system, its agricultural settlement, and its agricultural use of the lands (see Figures 3–9, 3–10, and 3–11).

Table 3–4  Comparison of Grand Pré with the Marais Poitevin and the Altes Land

The dykeland at the Landscape of Grand Pré continues to be solely used for agriculture. It also continues to use a simple system of drainage, including the aboiteau shown here, to drain the dykelands.
3–10 Drainage ditches allow water to drain from the fields and exit the dykelands.

This is apparent in the tangible evidence and in its community-based management. It has retained its value as significant agricultural land and continues to play a key role in the regional agricultural economy. Finally, it is also distinctive in that it transposed key components of a successful Western European agricultural system to the environmental and political reality of Eastern North America in the 17th and 18th centuries.

Although the Landscape of Grand Pré stands as just one example of the way in which human interactions with the environment shape the identity of societies, it also represents a significant experience in human history that profoundly affected agriculture, the landscape, the economy, and population expansion in Europe and North America for centuries. Dykeland farming is a tradition that has shaped the identity of peoples in Western Europe, particularly following the marsh-transformation projects of the Middle Ages.

The Landscape of Grand Pré stands as an exceptional testament to that dyking tradition as it disappears under pressure from industrial agriculture, urbanization, and changing demographics.
That tradition is inextricably tied to the enduring agricultural use of the area as well as to the distinctive settlement pattern. As such, the Landscape of Grand Pré is an outstanding example of an agricultural system defined by the landscape, its people, and their traditions.

3.c.iv. Establishing a list of comparable sites for Grand Pré as a lieu de mémoire and a symbolically reclaimed landscape

Lieux de mémoire

The Landscape of Grand Pré is the most important lieu de mémoire for the Acadian people. The term lieu de mémoire was coined by French historian Pierre Nora in the early 1990s. A lieu de mémoire is any material or non-material entity that has acquired a symbolic heritage value. It is those places, objects, people, events and other entities that materialize collective memory, values, and emotions. That materialization is manifest through objectification – such as plaques and historic designations – or through ongoing use and references by the community. Nora stresses that this phenomenon of creating lieux de mémoire is the result of modernity, one that emerges sometime in the 19th century.

In this comparative analysis, the emphasis is on places and their uses as lieux de mémoire. Places provide the historical evidence of past events to make sense of present situations. They serve as locations to anchor the collective identity, the symbols, and the collective memory of communities. American sociologist Eviatar Zerubavel elaborates on French sociologist Maurice Halbwach’s observations on collective memory and the role of place:

Constancy of place is a formidable basis for establishing a strong sense of sameness. Even as we ourselves undergo dramatic changes both individually and collectively, our physical surroundings usually remain relatively stable. As a result, they constitute a reliable locus of memories and often serve as major foci of personal as well as group nostalgia.

This observation in effect states that a lieu de mémoire embodies the universal human aspiration to belong to a community and to connect with one’s homeland.

Landscapes as lieux de mémoire

Landscapes as lieux de mémoire can become lieux de mémoire. They can be designed intentionally to embody meaning, for example by erecting monuments at a battlefield site. They may also be seen to express meaning implicitly, for example a battlefield that has been left untouched. These places, in the heart and mind of the community member, retain the memory of the particular event, people, or activity that has become essential to the identity of the community as a whole. The spirit and meaning of a place are experienced through the community member’s encounter with the place and through the circumstances of that encounter. This is where one learns about his or her ancestors and about their struggles and achievements. Whether that encounter occurs collectively through events or individually, it is an experience that allows the member of the community to develop an emotional, intellectual, and sensory connection with the past and with the collective identity. Individual members of the community are able to share a collective heritage, discover or reaffirm their belonging to the community, and contribute to its future in those places. This experience reinforces the perception that these landscapes are sacred because they have intrinsic qualities that “speak” to the community. It also suggests that knowledge of the events and their connection to that specific landscape is essential for the community to embrace it as a lieu de mémoire. British geographers Ian Robertson and Tim Hall have studied the memorialization of conflict in the Scottish Highlands, defining it as landmark making. They concluded this:

The aim is to transform an otherwise unremarkable landscape into a psychic terrain; symbolic spaces that fix, or attempt to fix, collective remembering and act as prompts for a shared identity.

This observation stresses the point that places as lieux de mémoire acquire the “power” to express collective memory and identity by design and through their use by the community. Uses are convincing indications that a place is a lieu de mémoire. In Nora’s definition, those
uses can create a lieu de mémoire and themselves be a lieu de mémoire by their association with cultural traditions, re-enactment of events, or pilgrimages. The argument has already been made that lieux de mémoire are places of learning about the past. There are, however, locations with a strong sense of place which, in addition, offer a distinctive opportunity for coming into direct contact with the past and the people that inhabited it. Zerubavel notes on the subject of pilgrimages that,

pilgrimage is specifically designed to bring mnemonic communities in close “contact” with their collective past. This mnemonically evocative aspect of place likewise underscores the role of ruins in solidifying such ties.

He highlights the relationship between the place, the tangible evidence, and the use of the place to explain the phenomenon that makes some places become lieux de mémoire.

This relationship is akin to ideas expressed by Romanian philosopher and historian of religion Mircea Eliade on the religious person’s perception of space and time. In his work The Sacred and the Profane, Eliade introduces the idea that, for the religious person, the world is organized into sacred spaces and non-sacred spaces. The sacred spaces are links to the gods, which are sometimes symbolically as well as physically represented through an axis mundi, a vertical object that connects the world of the gods with that of the humans. Similarly, for communities, there are places that retain a sense of sacredness in that they define their collective identity and are singularly different from the rest of the landscape. They connect members of those communities to their past, their present collective identity, and their future aspirations.

This perception of the spirit and meaning of place by community members, and the knowledge they need to perceive it, confirms the role of those landscapes as lieux de mémoire for both individuals and communities. They play their role through the objects they host: the statues, monuments, plaques, landscape designs, and other material expressions of culture. These lieux de mémoire also reflect and shape the identity of the community as it continues to use them for its social, cultural, and artistic development. The erection of memorials, the

pilgrimages, the social uses, the related political events and speeches, and the literary appropriations are all cultural manifestations of the role of a place in expressing and forming the community’s identity.

The Landscape of Grand Pré is an intentionally designed lieu de mémoire, as exemplified by the commemorative garden at the national historic site. It also has features of an implicit lieu de mémoire by virtue of the presence and ongoing use of the adjacent dykelands and of the archaeological heritage. It is a landscape that has retained its role for over a century as a place where Acadians learn about their heritage, reaffirm a sense of belonging to their community, and participate in its continuing evolution. It is the heart of their collective memory, one that continues to reflect the contemporary identity of the Acadians. Sites that compare with Grand Pré are lieux de mémoire and show tangible evidence of their community’s use and continuing transformation to reflect the community’s identity.

Landsapes symbolically and peacefully reclaimed

Australian archaeologist Laurajane Smith points out in her book Uses of Heritage:

Heritage is about a sense of place. Not simply in constructing a sense of abstract identity, but also in helping us position ourselves as a nation, community or individual and our ‘place’ in our cultural, social and physical world. Heritage, particularly in its material representations, provides not only a physical anchor or geographical sense of belonging, but also allows us to negotiate a sense of social ‘place’ or class/community identity, and a cultural place or sense of belonging.

Smith’s observation highlights the fact that some places provide an anchor in history and space for communities to share their common heritage, express their collective identity, and build a sense of community. These places are in Nora’s sense lieux de mémoire, while Smith’s point stresses that their presence connects a people with a place as a means to exist culturally, socially, and tangibly. These “anchor sites” create a sense of legitimacy of the community’s values and of its
place in history as much for the community itself as for the rest of the world. The sites in effect illustrate that to maintain that sense of belonging, these communities need to maintain their connection with a place. Smith also observes:

The meanings and memories of past human experiences are thus remembered through contemporary interactions with physical places and landscapes, and through the performances enacted within them – and with each new encounter with place, with each new experience of place, meanings and memories may subtly, or otherwise, be rewritten or remade. These experiences help to bind groups and communities not only through shared memories and identities, but also through shared experiences.

Some landscapes are considered character defining for a community, in that they play a role in building a community’s identity and shaping its culture. Smith summarizes from the work of British and Australian archaeologists and cultural geographers that, landscapes are not only shaped by cultural practices, but are symbolic of cultural and social beliefs, and in turn also shape and structure social encounters and relations.

The characteristics of these landscapes evoke the qualities of the people associated with them. Their features have formed and transformed the identity of the people, inextricably linking them to who they are. This is true for most peoples around the world, and never more evident than with a diaspora’s strong desire to maintain a link with its homeland within that homeland. For diasporas, these essential landscapes can represent their historical challenges and triumphs. The identification and preservation of these landscapes are tied to the diasporas’ struggle to maintain their collective identity and to remember their common heritage.

For a diaspora, breaking that connection creates a void in the sense of belonging and a loss of “place” in the cultural, social, and physical world. Reclaiming that “place” is necessary and a source of collective empowerment.

French historian Jacques Le Goff, in his book on history and memory, noted the same effect and described it in the form of a tension, a struggle for survival, and a source of power:

[...] collective memory is one of the huge forces at play in developed and developing societies, amongst those who wield power and those who are subject to it, all of whom are struggling for power or for life, for survival and for advancement.

Le Goff’s observation makes the connection between a lieu de mémoire, its function, and the forces at work in creating and maintaining it. It also suggests that, if one considers these forces at work, there are numerous avenues to achieve this sense of survival and advancement. One avenue is for the diasporas to symbolically reclaim these character-defining landscapes. For these diasporas, the challenge of reclaiming the landscapes arises from the presence of another group in the landscape and from the diaspora’s physical disconnect from the landscape.

Symbolic reclamation assigns a renewed use to a landscape. The act of symbolically reclaiming a landscape through use is twofold: it is material through the physical transformation of the landscape to display symbols of the displaced community, such as the erection of memorials and the acquisition of features considered sacred and culturally significant; and it is immaterial through the community’s use of the landscape for social and cultural purposes. The use of a reclaimed landscape is tied to the community’s desire to preserve and share the tangible elements of its common heritage, express its identity, and find inspiration for the continuing development of its community.

These landscapes exhibit the qualities of the mental image that communities hold about their “place” in the cultural, social, and physical world, as much as about the values they view as character defining. The mental image may be influenced by historical evidence, but because of the nature of lieux de mémoire, collective memory and the accepted elements of that memory have a great role in shaping the idea of collective identity. Similarly, for diasporas, a mental image of the homeland may not be accurate from a historical point of view, but it is accurate from the point of view of the collective memory’s
definition of that landscape. In any case, the features of that landscape need to reflect these ideas in order to be incorporated as a character-defining lieu de mémoire.

Groups that have been forcibly removed are denied a connection to their homeland, to the landscape that defines them. This results in a collective desire to return and, in Le Goff’s reasoning, a struggle for survival and advancement. Symbolic reclamation is a healing act, as it represents the symbolic return to the homeland. It is an act that bridges past and present by bringing together, through physical contact, the modern community with the evidence of the past community. That contact allows people to walk in the footsteps of their ancestors, to absorb their surroundings, and to attempt to make sense of their way of thinking. The experience leads to an emotional connection that transcends time and reflects the mental integration of, in the words of Zerubavel, otherwise disconnected historical events into a perceived single historical continuum. This means that emotions connect events separated by gaps in collective memory, a phenomenon that Bulgarian philosopher Tzvetan Todorov, in his essay The Abuse of Memory, observed as being the result of trauma or collective amnesia. This process leads to the perception of continuous identities between the ancestors and the modern community member.

Symbolic reclamation can also be an inspiring act, in that it contrasts with reclamation by aggressive means. Symbolically reclaimed landscapes can be particularly powerful examples of peaceful reconciliation, because their reclamation takes place in landscapes whose significance is contested among numerous groups. In effect, an act of symbolic reclamation is the layering of meaning on a landscape that is publicly expressed by a group. By extension, this suggests that other meanings are already present in that landscape. Accordingly, this reclamation can be a source of tension and mistrust. Yet it can also be a source of exchanges, learning, and sharing between the peoples affected. As American historian John R. Gillis pointed out in his book Commemorations,

In this era of plural identities, we need civil times and civil spaces more than ever, for these are essential to the democratic processes by which individuals and groups come together to discuss, debate, and negotiate the past and, through this process, define the future.

In any case, symbolic reclamation is an act of public appropriation without resorting to conflict and hence provides a platform for reconciliation.

Reconciliation may not always be the original intent of a symbolic reclamation, but it is often an important outcome and opportunity. A community’s act of reconciliation with history translates into a successful commemoration of the past, celebration of the present, sharing with others, and outlook on the future. The intent of a diaspora’s symbolic reclamation of a landscape, as with any lieu de mémoire, centres primarily on the community’s own needs to strengthen its identity and to anchor itself in history and place. However, a symbolic reclamation provides an opportunity to explore reconciliation. The erection of memorials marks the land and asserts a claim, but without resorting to aggressive means. For the diaspora, the purpose of the reclamation is to share a common heritage and to express its identity publicly. The reclamation is therefore a public statement of a community’s presence in history and place. The community also publicly shares that connection and the significance of the landscape for all to learn, share, and experience. As a result, the community has a sense of having appropriated those lieux de mémoire, yet the public awareness helps to bring about an inevitable evolution towards reconciliation.

The Landscape of Grand Pré has been symbolically and peacefully reclaimed. Over time, Acadians have symbolically reclaimed this landscape of their homeland, even though its new inhabitants were descended from those who had taken over the lands left vacant following the Deportation. The reclamation began with a work of fiction that publicly connected an event of deportation with the Acadian people and with the homeland, Acadie, they had been forced to leave behind. It followed with physical interventions on the agricultural landscape: the erection of memorials, the building of a church, and the study of archaeological remains. Today, it is a landscape that continues to be used by the Acadian diaspora to share its heritage, maintain its collective identity, and build its future. In addition, this
symbolic reclamation was done gradually and peacefully, without either resorting to conflict or harming the agricultural community and the people who today live in Grand Pré. The Landscape of Grand Pré progressively acquired status as a symbol of identity for the Acadians while at the same time becoming a bridge for reconciliation with history.

For Acadians, Grand Pré is the most powerful landscape that expresses their collective memory and an awareness of group consciousness: it is the heart of Acadie. Sites that compare with Grand Pré have those characteristics of having been symbolically reclaimed by a diaspora. The Landscape of Grand Pré bears the qualities of the homeland Acadians knew before 1755, one that was characterized by thousands of hectares of dykeland, green fields, the tides, and villages sitting on the uplands next to the dykeland. Sites that compare with Grand Pré bear the real or perceived qualities of a diaspora’s homeland and display evidence of the diaspora’s cultural identity. In addition, the Landscape of Grand Pré was reclaimed peacefully without conflict with the new inhabitants. It is a landscape where Acadians learn from the past but also celebrate their achievements, look towards the future and pursue reconciliation with history. Sites that compare with Grand Pré illustrate a successful reclamation through reconciliation.

List of comparable sites

Many places around the world can be considered lieux de mémoire based on their role in expressing and defining the collective memory and identity of peoples. Some of these places are currently inscribed on the World Heritage List, while others are not.

There are numerous sites on the World Heritage List that demonstrate the role of certain exceptional places in defining collective identity. Sites such as Tsodilo (Botswana), Koutammakou, The Land of the Batammariba (Togo), and Matobo Hills (Zimbabwe) provide evidence of the symbolic, religious, and spiritual significance for the traditional communities that continue to use them. They are eloquent testimonies to the association between people and landscape in supporting tradition as well as social and economic activities, and in shaping collective identity. These are all places of common heritage for the communities that have a strong connection with them, and they speak to the universal value of these connections.

Numerous other sites, also in Africa, on the World Heritage List demonstrate the role of certain exceptional places in defining the collective identity of the African diaspora. These sites are associated with slavery and the slave trade, including James Island and Related Sites (Gambia), the Island of Gorée (Senegal), Aapravasi Ghat (Mauritius), and Le Morne Cultural Landscape (Mauritius). The tangible evidence of these sites bears witness to the beginning and the abolition of slavery, to the plight of the slaves and indentured labourers, and to the acts of resistance by the slaves. Because of that evidence, these sites have become part of the collective memory of the African Diaspora and have relevance for communities beyond the boundaries of their location, and indeed for humanity as a whole.

The concept of a lieu de mémoire as a place where a community learns about, experiences, and enriches its collective identity is also evident at other sites on the World Heritage List. These highlight the coming together of a community through memory, ritual, and prayer such as at the Royal Hill of Ambohimanga (Madagascar) or through celebration of identity such as the Red Fort Complex (India), Rila Monastery (Bulgaria), Thingvellir National Park (Iceland), Masada (Israel), and National Historic Park – Citadel, Sans Souci, Ramiers (Haiti). They are evocative of humanity’s aspirations for a sense of community and for collective community endeavours. Finally, the World Heritage List includes lieux de mémoire that serve as symbols of collective memory and conscience such as the Old Bridge Area of the Old City of Mostar (Bosnia and Herzegovina), Robben Island (South Africa), and Auschwitz Birkenau German Nazi Concentration and Extermination Camp (1940–1945) (Poland) where humanity can reflect on its past and its common values.

If one takes a broader look at sites not inscribed on the World Heritage List, the list of sites that would qualify as lieux de mémoire, places where a community shares its heritage and expresses its identity, is extensive.

Lieux de mémoire emerge as a human expression of collective identity around the world. Some serve as sites of conscience for humanity
as a whole, emphasizing a particular dark period in our collective history with the intent of never forgetting it, learning from that history, and never repeating it. These include conflict-related memorials such as monuments associated with First World War battlefields and cemeteries, and internment camps in Europe, North America, and Australia associated with both world wars and Nazi concentration camps. These sites provide tangible locations for the populations that were affected, and for humanity as a whole, to connect with those events and reflect on that shared heritage so as to continue to build a better and more peaceful world. Other sites serve as landmarks associated with seminal moments in the advancement of human rights, including civil-rights-movement sites such as the Bethel Baptist and 16th Street Baptist churches in Birmingham (United States).

Finally, there are lieux de mémoire that are powerful symbols of pain and that tell the stories of those who were affected by it and triumphed, focusing on the lessons to be learnt from those events. Places such as the District Six Museum (South Africa) that commemorates segregation and the forced removal of tens of thousands of people under the apartheid regime in South Africa, and Villa Grimaldi (Chile) that preserves the memory of the abuse by the military regime in Chile in the 1970s, play a role as part of the process of remembering, learning, and contributing to efforts of reconciliation of people with their past.

All these sites are lieux de mémoire where humanity shares its common heritage of painful yet inspiring events. They are also places where a community discovers its own heritage and explores important parts of its collective experience.

These character-defining lieux de mémoire reflect and define a community’s identity. They are the places around which the community comes together to remember a particularly defining moment in its history. Such places can be linked to events that have affected a community’s sense of political and social independence, such as Batoche National Historic Site of Canada (Canada), the place of the military defeat of the Métis people’s rebellion in Canada in 1885, or the Brandenburg Gate (Germany) following the German reunification after the fall of the Berlin Wall in 1989 (reunification was in 1990, but the wall fell in 1989). They can be contested lieux de mémoire, places where more than one community claims a special connection that defines its identity, such as the city walls of Derry/Londonderry (United Kingdom/Northern Ireland), the location of annual parades by Protestant groups and a place of memory associated with the 1960s–1990s “Troubles” by the mainly-Catholic nationalist community. The fact that these landscapes are contested, together with an ongoing or historical struggle for recognition of identity, is essential to how these communities define themselves.

Finally, as discussed previously, a lieu de mémoire anchors the community in both a mental and a physical landscape, acting as a place of transition or an axis mundi linking different times and experiences in a single location. As a place of transition, it can reflect transformative events for the community, particularly where a community experienced a forcible migration from its homeland. Such places as the Trail of Tears National Historic Trail (United States), the route followed by the Cherokee and other Native American tribes during their forced migration, and Birchtown (Canada), the 18th-century settlement of escaped and freed slaves in Canada, are places that define the identity of those communities. As an axis mundi, certain lieux de mémoire are landmarks that identify the heart of the community for nations and cultural groups in their homeland and for diasporas, usually indicating the place they left behind. Examples of these include the memorials to the Scottish Highland Clearances in Helmsdale, Achinlochy, and Badbea (United Kingdom) and Dorsetshire Hill and Baliceaux (St. Vincent and the Grenadines) for the Garinagu after their deportation in 1796.

Of all the Acadian sites, Grand Pré emerges as the character-defining lieu de mémoire for the Acadian diaspora. Canada has several archaeological sites of abandoned Acadian settlements, particularly in the provinces of Nova Scotia, New Brunswick and Prince Edward Island, that are significant for the Acadian community. The cemeteries and remains of Acadian houses in places such as the Sainte-Famille cemetery, Pointe-à-Major cemetery, Belleisle, and Beaubassin National Historic Site of Canada (NHSC) (all located in Nova Scotia), and other locations associated with the Deportation, such as Boisbriand NHSC (New Brunswick) and Port-La-Joye–Fort Amherst NHSC (Prince Edward Island), are the end point of pilgrimages by members of the
Acadian community from around the world. The desire to connect with the place where their ancestors lived or from where they were deported motivates Acadians to visit those places. Finally, there are places associated with particular accomplishments and community pride such as Monument-Lefebvre NHSC (New Brunswick), the site of the first national convention of Acadians. Similarly, other locations in Europe and North America can claim to be important to the Acadians, in particular the places where Acadians landed after they were deported or settled. All these places contribute to the collective identity and awareness of the Acadian community, but none comes close to playing the role of Grand Pré as the most important lieu de mémoire. At Grand Pré, Acadians not only share their common heritage and celebrate their identity, they also continue to build their sense of community. Grand Pré is the centre of their reclaimed homeland, a reality they continue to demonstrate through their ongoing use of the landscape in key formative cultural events, in artistic expressions, and in the use of its symbols throughout the Acadian diaspora.

Irrespective of the reasons behind a community's identification and definition of a lieu de mémoire, these places all reflect the universal aspiration of wanting to belong to a community and to connect with one's homeland. They are essential places in forming a collective experience, one that allows the sense of belonging and the sense of a communal future. They emerge as communities need them, becoming the necessary landmark in their landscape to connect them with their past, reaffirm their identity, and build their sense of community.

As described in the sections above, sites that best compare with the Landscape of Grand Pré have the following characteristics:

- they are lieux de mémoire;
- they show the tangible evidence of the community's use and continuing transformation to reflect its identity;
- they have been symbolically reclaimed by a diaspora;
- they exhibit the qualities of the diaspora's homeland;
- they display evidence of the diaspora's identity;
- they illustrate a successful reclamation through reconciliation.

Based on these considerations, Grand Pré can best be compared with:

- James Island and Related Sites World Heritage Site (Gambia);
- Island of Gorée World Heritage Site (Senegal);
- Le Morne Cultural Landscape World Heritage Site (Mauritius);
- Aappravasi Ghat World Heritage Site (Mauritius);
- Royal Hill of Ambohimanga World Heritage Site (Madagascar);
- Masada World Heritage Site (Israel);
- Birchtown (Canada);
- Trail of Tears National Historic Trail (United States);
- Dorsetshire Hill and Baliceaux (St. Vincent and the Grenadines);
- Memorials of the Scottish Highland Clearances in Helmsdale, Achinlochy, and Badbea (United Kingdom).

This comparative analysis aims to compare and contrast the nominated property with other similar sites. By doing so, it will demonstrate the great value of Grand Pré and its universal message.

3.c.v. Criteria for comparison as a lieu de mémoire and as a symbolically reclaimed landscape

The following criteria will be used for comparing the Landscape of Grand Pré, as a lieu de mémoire and a symbolically reclaimed landscape, to other similar sites:

1. Association with a diaspora: The Landscape of Grand Pré is associated with the Acadians, a people that falls within the definition of a diaspora. Diasporas are not a recent phenomenon: world history recounts innumerable forced migrations, some resulting from tragedy (such as war or widespread famine), others from hope (such as a search for greater economic opportunities). Throughout their movements, these groups have retained an emotional connection with their homeland, which is perceived not only as what they left behind but as their ultimate point of return.

   British scholar Robin Cohen, a founding figure of contemporary diaspora studies, identifies the following features as common to all diasporas:
• dispersal from an original homeland, often traumatically, to two or more foreign regions;
• alternatively, the expansion from a homeland in search of work, in pursuit of trade or to further colonial ambitions;
• a collective memory and myth about the homeland, including its location, history and achievements;
• an idealization of the putative ancestral home and a collective commitment to its maintenance, restoration, safety and prosperity, even to its creation;
• the development of a return movement that gains collective approbation;
• a strong ethnic group consciousness sustained over a long time and based on a sense of distinctiveness, a common history and the belief in a common fate;
• a troubled relationship with host societies, suggesting a lack of acceptance at the least or the possibility that another calamity might befall the group;
• a sense of empathy and solidarity with co-ethnic members in other countries of settlement;
• the possibility of a distinctive creative, enriching life in host countries with a tolerance for pluralism. (Adapted from Cohen in Basu 2001:336)

Based on these features of diasporas, this comparative analysis is concerned only with studying the tangible expressions, in their homelands, of the collective memory and group consciousness of diaspora communities. This criterion focuses on the characteristics of a symbolically reclaimed landscape by identifying the historical and social context that led to its symbolic reclamation. The experience of a people becoming a diaspora and the resulting impact on their collective identity is one that transcends time and place. It is an experience that allows one to appreciate the full extent of humanity’s aspirations for sharing a common heritage and expressing identity in a spirit of reconciliation with history.

2. Authenticity of location and setting in relation to the homeland: the Landscape of Grand Pré is associated with the homeland of the Acadians and the most important events in their history. Authenticity in this case applies to both the knowledge of the actual location of the event being memorialized and the sense of place. It relates to the mental image of the homeland as well as to the tangible expression of that image in a specific place. This criterion focuses on the concept of homeland reclamation by stressing the importance of authenticity of the location and setting of the place being reclaimed. It highlights the symbolic reclamation of a homeland and addresses an essential aspect of a lieu de mémoire.

3. Elements of the memorial experience: the Landscape of Grand Pré exhibits memorials and use that embody its significance as a lieu de mémoire. Indeed, a lieu de mémoire exhibits various elements that express identity and the collective experience and memory of the past. These may include memorials, uses, events, symbols, artistic expressions, and other tangible and intangible expressions of identity. This criterion focuses on articulating the attributes that express the memorial experience and illustrate the efforts to share common heritage, reaffirm collective identity, and continue to build a sense of community.

4. Role of the site in collective memory: the Landscape of Grand Pré is the heart of Acadie, the most important lieu de mémoire for the Acadians. Communities may have multiple places of memory where they reflect on the lessons of the past and on how they define their present identity. Sites may commemorate events (such as the independence of a nation), celebrate historical outcomes (such as a military victory), or underscore a value (such as peace). Some sites are character defining for the community in that they are central to the community’s collective identity. Others are important for commemorating significant events or achievements and are part of a community’s memorial landscape but may not hold a central place in the formation of its identity. This criterion focuses on distinguishing sites that define a community’s character from those that simply address elements of a community’s collective memory, thus stressing
their role in sharing common heritage, reaffirming collective identity, and continuing to build a sense of community.

5. **Sharing of the landscape:** The Landscape of Grand Pré is shared by many communities. Different people can assign different meanings and values to landscapes. A single place may be the object of contested or shared use. This criterion focuses on highlighting sites of shared use and their ability to illustrate humanity’s aspiration for peaceful reconciliation.

6. **Condition of the site:** The Landscape of Grand Pré is in excellent condition, displaying the tangible and intangible evidence of a lieu de mémoire and of a symbolically reclaimed landscape. As per the requirements of the Operational Guidelines for the Implementation of the World Heritage Convention, the comparative analysis includes the state of conservation of similar properties. These criteria enable us to compare the nominated property to similar sites by focusing on the key elements articulated in the proposed outstanding universal value for the Landscape of Grand Pré. These key elements are a landscape transformed into a lieu de mémoire (criteria 2, 3, and 4) and a landscape symbolically and peacefully reclaimed (criteria 1 and 5).

### 3.c. vi. Comparative analysis of the lieu de mémoire and of the symbolically reclaimed landscape

**Sites on the World Heritage List**

The World Heritage List includes sites that are associated with the homeland of diasporas. Some are related to the slave trade, such as James Island and Related Sites World Heritage Site (Gambia), the Island of Gorée World Heritage Site (Senegal), and Le Morne Cultural Landscape World Heritage Site (Mauritius), and some are related to indentured labour, such as Aapravasi Ghat World Heritage Site (Mauritius). Others show the tangible evidence of a diaspora community’s use and continuing transformation to reflect its identity, such as the Royal Hill of Ambohimanga World Heritage Site (Madagascar) and Masada World Heritage Site (Israel). Each of these sites provides evidence of the identity of a diaspora symbolically expressed in a landscape.

**James Island and Related Sites (Gambia)**

James Island and Related Sites is a World Heritage serial site with seven components located along the Gambia River in Gambia. They consist of Portuguese and French colonial religious, administrative, and military buildings, as well as Mandinka villages on James Island and along the banks of the river. Together, they evoke the different aspects of the African-European encounter from the 15th to the 20th centuries, particularly the transatlantic slave trade.

Most relevant to this comparative analysis is that it was inscribed in part because it was “directly and tangibly associated with the beginning and the conclusion of the slave trade, retaining its memory related to the African Diaspora” (excerpt from the Statement of Outstanding Universal Value). It is associated with the beginning and the abolition of the transatlantic slave trade.

The Gambia River represents the first trade route between Africans and Europeans and became an early corridor for the slave trade. The Mandinka of the Kingdom of Kaabu had long traded with merchants along the Atlantic Ocean, including Phoenicians and Arabs. When the Portuguese arrived in the 15th century, later followed by the English in the 16th century and other colonial powers, these Mandinka settlements along the river functioned as the infrastructure necessary to support slave trade. They included forts and military structures, chapels and missions, European settlements, Mandinka villages, warehouses, slave houses, trading offices, and other administrative buildings. The setting that surrounds those structures includes agricultural land and the Gambia River. Today, most of the structures directly associated with the slave trade and the military settlement are in ruins. The Mandinka villages are still active and busy settlements. One warehouse has been transformed into a museum. These features are evocative of the slave trade and as such are important for the collective memory of the African Diaspora. Based on an assessment of condition performed by ICOMOS (International Council on Monuments and Sites) in 2003, the buildings and structures that are not in ruins are in good condition. The archaeological
heritage has in general been stabilized but in some areas is affected by coastal erosion.

James Island and Related Sites World Heritage Site is similar to the Landscape of Grand Pré in that both are associated with a diaspora. It also retains authenticity of location and setting with relation to the diaspora’s homeland. The location of the sites along the Gambia River, surrounded by agricultural fields and traditional villages, is evocative of the homeland and enables a connection with the traditional way of life and the ancestors’ culture. In addition, these sites are located where the activities involved in the slave trade occurred, reinforcing the spirit of the place.

At Grand Pré, the location of the memorials next to the dykelands and in the heart of the Acadian settlement, as confirmed by archaeological evidence, creates the sense of place and the authenticity of the lieu de mémoire. The dykelands are evocative of the agricultural land that was created by the ancestors of today’s Acadians, typical of their way of life. The presence of the archaeological features is tangible evidence of their historical presence and of the events surrounding the Deportation.

Where the Landscape of Grand Pré differs from James Island and Related Sites is that its Acadian diaspora continues to nurture a relationship with the site and enrich its memorial experience. Unlike James Island and Related Sites, the Landscape of Grand Pré exhibits memorials that were erected by the diaspora community and that reflect their collective identity. The Memorial Church at Grand Pré, the crosses, and other tangible objects echo the Acadians’ collective understanding of their heritage. The act of erecting those memorials is evidence of the Acadian community’s intent to reclaim the land from which they were forcibly removed and to create a lieu de mémoire central to their collective identity, as well as a sense of recovery of their homeland. The Landscape of Grand Pré is the heart of the Acadians’ community, the place where significant political, social, and cultural events that unite them take place. Their act of reclamation was performed in a landscape in which they no longer live. It is a testament to the value of reconciliation with the events of the past and reaching out to others in a spirit of mutual respect.

In conclusion, the nominated property illustrates the same values related to the importance of connecting with one’s homeland for which James Island and Related Sites was inscribed on the World Heritage List. Both sites retain enduring meaning in evoking painful historical events for the diasporas. In contrast, however, the Landscape of Grand Pré exhibits the evidence of the community’s ongoing efforts towards reconciliation with those events and striving to overcome them. The physical transformation of the landscape is the tangible manifestation of those efforts and allows the Landscape of Grand Pré to sustain its active role in reflecting the common heritage and identity of the diaspora.

Island of Gorée (Senegal)

The Island of Gorée World Heritage Site is a complex of buildings that functioned as the largest transatlantic slave trade centre between the 15th and 19th centuries. It is located on the island of Gorée off the coast of Senegal and occupied a strategic position between Europe and Africa, connecting the hinterland “source” of the slaves with the European ships that transported them to international markets.

When it inscribed the Island of Gorée on the World Heritage List, the World Heritage Committee concluded that “the various elements of this ‘memory island’ – fortresses, buildings, streets, squares, etc. – recount, each in its own way, the history of Gorée which, from the 15th to the 19th century, was the largest slave-trading centre of the African coast.” This statement confirms the Island of Gorée as a lieu de mémoire and a suitable comparison with the Landscape of Grand Pré.

The Island of Gorée is a small island in the Atlantic Ocean close to Dakar. Between the 15th century and the abolition of slavery in the 19th century, it was successively governed by the Portuguese, Dutch, English and French, each adding to the architectural character of the buildings. It is estimated that between the mid-15th century and the mid-18th century, some 20 million slaves passed through the island on their way to plantations and other markets around the world. The island displays evidence of a complex system of selection, preparation, and shipping of slaves, an illustration of the inhumanity of slavery. It contrasts the stark and squalid living conditions of the slaves with the
elegant houses of the European traders and administrators. The main tangible structures consist of a fortification sitting on a rocky promontory, a dock, slave houses with cells, the governor’s residence, and religious buildings. Based on the 2009 report to the World Heritage Committee and the minutes of the 33rd World Heritage Committee meeting in Seville, the conservation of the structures is a concern, and coastal erosion is affecting a significant section of the island.

The Island of Gorée is similar to the Landscape of Grand Pré in its association with a diaspora, the authenticity of its location and setting, the role of the site in collective memory, and the shared landscape. The Island of Gorée is a lieu de mémoire for the African diaspora, as recognized by the World Heritage Committee in its use of the expression “memory island” to convey its essence. Places associated with the slave trade are significant evidence of the experience of slavery and its everlasting impact on the identity of the African Diaspora. The Island of Gorée is the location of the treatment and transfer of slaves, which makes it an authentic place for descendants to connect with their heritage. This lieu de mémoire is a pilgrimage destination where all members of the African Diaspora, and indeed humanity as a whole, can learn about the conditions of slavery, assess the impact of the slave trade on the populations affected by it, and reflect on the horrors of human exploitation. The Statement of Outstanding Universal Value stresses that the Island of Gorée also aims to be a sanctuary for reconciliation and forgiveness. This last aspect mirrors the reality at Grand Pré.

The contrast with the Landscape of Grand Pré is apparent through the elements of the memorial experience, the role of the site in the collective memory, and the shared landscape. While the Island of Gorée is a “memory island” where the remains of the slave trade are the memorial elements of the landscape since reclaimed by the African Diaspora, Grand Pré exhibits a different expression of memorialization. Its memorial buildings, structures, and activities are designed intentionally to create a landmark and reclaim a homeland to share a common heritage and build a collective identity. These symbolize a return to the land from which they were forcibly removed. The Island of Gorée, in contrast, is a place of concentration and transition, without evidence of the cultural attributes associated with the identity of the diaspora. Furthermore, the ongoing erecting of memorials at Grand Pré, and use of the landscape for political, social, and cultural events, demonstrates the role that this landscape plays in nurturing and crystallizing the collective identity of the Acadians. Grand Pré is the heart of the community for Acadians. In their minds, it marks the beginning of their diaspora and brings it together. This is not the case for the Island of Gorée, which is one site among many important ones worldwide that set forth evidence of the tragedy of slavery. Finally, whereas the Island of Gorée is a sanctuary for reconciliation, in Grand Pré this act of reconciliation is ongoing. Reconciliation with history is effected both by Acadians through their cultural events and the celebration of the vibrant Acadian communities, and by Acadians and the local residents through acts of sharing, openness and dialogue.

In conclusion, the nominated property illustrates the same values related to the importance of belonging to a community and maintaining a shared heritage for which the Island of Gorée was inscribed on the World Heritage List. Both sites are lieux de mémoire tied to defining moments in the collective memory of diasporas and are important places of pilgrimage to learn and reflect on those moments. In contrast, however, the Landscape of Grand Pré demonstrates the contemporary relevance of these lieux de mémoire through the ongoing use and physical transformation of the place by the Acadians to reflect their collective identity. The Landscape of Grand Pré is a living landscape that continues to evolve in tandem with the community’s values, ensuring its enduring relevance as their most important lieu de mémoire.

Le Morne Cultural Landscape (Mauritius)
Le Morne Cultural Landscape World Heritage Site consists of a rugged mountain that projects into the Indian Ocean on the Island of Mauritius. It was used as a shelter for escaped slaves, making it a centre of resistance against oppression.

The site was inscribed as “an exceptional testimony to maroon-age or resistance to slavery in terms of it being used as a fortress for the shelter of escaped slaves, with evidence to support that use” as well as “a symbol of slaves’ fight for freedom, their suffering, and
their sacrifice, all of which have relevance beyond its geographical location, to the countries from which the slaves came – in particular the African mainland, Madagascar and India and South-east Asia.”

As a significant place for the descendants of the Maroons and for its relevance to places where the slaves came from, Le Morne is a lieu de mémoire that is important to a diaspora, particularly those of African and Malagasy descent.

The cultural landscape consists of archaeological sites and of the mountain of Le Morne acting as a natural fortress. In addition, the oral traditions surrounding the memory of the Maroons are the attributes that confirm the landscape as a lieu de mémoire. Based on an assessment carried out by ICOMOS in 2008, the condition of the site is good.

Mauritius became associated with the transatlantic slave trade as soon as the Dutch created their first settlement there in 1639. The Dutch brought hundreds of slaves to the island to exploit its natural resources. When French colonists settled Mauritius in 1721 after the Dutch had left, they also brought slaves with them. By the late 18th century, close to 85 per cent of the island’s population were slaves. As a result of this situation, slaves often attempted and in many cases succeeded in escaping from their owners. During the 18th and 19th centuries, Le Morne Mountain was the focal point for the Maroons, slaves who had escaped and were evading the colonial authorities. Some slaves were able to evade recapture for a short period of time, while others created small settlements on the mountain. Still others chose to plunge to their deaths from Le Morne Mountain rather than be recaptured. These stories were recounted by 19th century anti-slavery authors and became part of the collective memory of the Maroons as well as a symbol for the anti-slavery movement.

Le Morne Cultural Landscape is similar to the Landscape of Grand Pré in its association with a diaspora, the authenticity of location, and the role of the site in collective memory. Like Grand Pré, Le Morne Cultural Landscape serves as a focal point for the collective identity of a diaspora. It is a lieu de mémoire where members of the community come to learn about their shared heritage, commemorate a dark period in their history, and celebrate their achievement. Furthermore, that connection is enhanced by the features of the location itself. Reminiscent of an axis mundi, the mountain is the axis around which the connections between heritage, present sense of identity and collective aspirations revolve.

At Grand Pré, the place itself plays a similar role, with its concentration of memorials including the Memorial Church and the crosses. For both places, the stories linked to their diasporas were known beyond the diaspora itself, giving them an additional universal role in a broader collective memory.

The Landscape of Grand Pré contrasts with Le Morne Cultural Landscape in the elements of the memorial experience, in the role of the site in collective memory, and in its being a shared landscape. The impact of the Deportation on the Acadians is still felt and expressed in songs, pilgrimages to Grand Pré, and artistic expressions. The Acadians’ return to Grand Pré and their reclamation of it through symbols is a powerful illustration of the importance of lieux de mémoire in maintaining and nurturing a collective identity. The symbolic reclamation also illustrates a collective desire for reconciliation with history, with both the events of the Deportation and the resulting loss of land. Finally, Grand Pré is the most important lieu de mémoire for Acadians. In Acadian communities around the world, its memorials serve as landmarks and symbols of their shared heritage and collective identity. Unlike the descendants of the Maroons, the Acadians remain a diaspora that retains a sense of “paradise lost.” This is an important characteristic, as it contextualizes the act of symbolic reclamation of a homeland.

In conclusion, the nominated property illustrates the same values related to the importance of belonging to a community and maintaining a shared heritage for which Le Morne Cultural Landscape was inscribed on the World Heritage List. Both sites are focal points for the communities where they can share their common heritage and celebrate their achievements. In contrast, however, the Landscape of Grand Pré also illustrates connection to homeland. The ongoing reclamation of the landscape by the Acadian diaspora creates that focal point and stresses that connection. The Landscape of Grand Pré enhances the sense of loss and celebration that diasporas have experienced during their forced removal and their symbolic return.
Aapravasi Ghat (Mauritius)

Aapravasi Ghat World Heritage Site is set on the Bay of Trou Fanfaron in the Mauritius capital city of Saint Louis. It is a complex of three buildings erected in the 1860s, fewer than half the structures that were once present.

The site was inscribed on the World Heritage List because of its association with the use of indentured labour, in particular because it is “strongly associated with memories of almost half a million indentured labourers moving from India to Mauritius to work on sugar canes plantations or to be transshipped to other parts of the World.” Its association with a diaspora and with the memories of that diaspora validates the comparison with the Landscape of Grand Pré.

Mauritius was under French control from the time they formally possessed the island in 1721 until the British conquest in 1810. In 1834, Britain abolished slavery in all its colonies. To maintain a supply of workers for the plantations and other industries of the empire, a system of indentured labour was introduced. Saint Louis, in particular the Bay of Trou Fanfaron, became a central location for treating immigrants from India and transferring them to plantations around the world. Aapravasi Ghat was built in 1849, expanded over the years, and finally ceased to operate in 1923. Modern transformations, such as a bus station, a motorway, and the demolition of other buildings, have altered the site’s cohesion. Part of the site was landscaped in the 1990s to create a commemorative space. Every November a Hindu religious ceremony is held there to commemorate the arrival of the labourers and in memory of the jhaji bhai (shipmates’) spirits. Archaeological features are investigated and protected as important elements of the site. Based on an assessment carried out by ICOMOS in 2006, the condition of the site is fragile, and its conservation is good.

Aapravasi Ghat and the Landscape of Grand Pré are similar in their association with a diaspora, some elements of the memorial experience, and the role of the site in collective memory. Hundreds of thousands of people from India and Africa came through Aapravasi Ghat to work in the plantations or to be transshipped to other places around the world, in effect contributing to the forcible relocation of entire populations and creating a diaspora. The creation of a commemorative space and the holding of religious ceremonies echo the elements of the memorial experience at the Landscape of Grand Pré. Finally, the interest in researching and protecting the archaeological features reinforces the authenticity of the location and the importance of these attributes in creating the spirit of the place. This is similar to the Acadians’ erection of memorials on the location of the Acadian settlement.

The Landscape of Grand Pré is different from Aapravasi Ghat in the elements of the memorial experience and the role of the site in collective memory. Unlike Aapravasi Ghat, the Landscape of Grand Pré is a lieu de mémoire that reflects the identity of its diaspora and was symbolically reclaimed through the erection of memorials. It creates a landmark, a single focal point, for the sharing of common heritage and the expression of collective identity. Grand Pré is a starting and an end point, whereas Aapravasi Ghat is an important landmark and a focal point for some, but mostly marks a place of transition for the descendants of its diaspora. Their ancestors left their homelands and passed through Aapravasi Ghat on their way to conditions of indentured labour, a situation akin to the sites related to the slave trade.

In conclusion, the nominated property illustrates the same values related to the importance of belonging to a community and maintaining a shared heritage for which Aapravasi Ghat was inscribed on the World Heritage List. Both sites are focal points for the communities where they can share their common heritage and commemorate significant events in their history through the erection of memorials and pilgrimages. In contrast, however, the Landscape of Grand Pré displays the evidence of a character-defining lieu de mémoire, one that is a focal point for the community and anchors their identity in a place and time. This is demonstrated by the ongoing use by the Acadian community since the late 19th century for their most significant political, social, and cultural events.

Royal Hill of Ambohimanga (Madagascar)

The Royal Hill of Ambohimanga World Heritage Site is located in the hills of Madagascar, on the remains of the ancient capital and of the royal burial grounds.
It was inscribed on the World Heritage List as the “most significant symbol of the cultural identity of the people of Madagascar” and “an exceptional example of a place where common human experience has been focused in memory, ritual and prayer.” As such, the Royal Hill of Ambohimanga is a lieu de mémoire where the community shares a common heritage and expresses a collective identity. This is comparable to the Landscape of Grand Pré.

The site consists of a royal city, a burial site, and an ensemble of sacred places. It is built on a hill that includes woodland preserved for practical and spiritual reasons, clearings on the lower ground, and terraces on the lower hilltops. The site originates from the 15th century. By the 18th century, it had acquired the status of a capital with an elaborate defence complex of gates and walls. By the end of the 18th century, the capital was moved to Antananarivo, but Ambohimanga remained an important burial place and the religious capital. In the late 19th century, the French colonial authorities moved the remains of royalty to the new capital in an attempt to remove the sacred character of the site and the symbolic national identity attached to it. The tombs were demolished and a French garrison was built there instead. The site nevertheless has maintained its religious nature to this day and is an important pilgrimage destination. It is associated with feelings of identity, having maintained its symbolic and sacred character. Based on an assessment carried out by ICOMOS in 2001, the condition of the site is good.

The Royal Hill of Ambohimanga is comparable to the Landscape of Grand Pré in its authenticity of location and its role in the collective memory of the communities. The Royal Hill of Ambohimanga, because of its location on the remains of the royal city, is a lieu de mémoire for the Malagasy that connects them to the achievements and most illustrious moments of their history. That connection is best described as a spirit of the place which makes this landscape sacred. It allows the ongoing performance of pilgrimages, rituals, and other collective expressions of identity, confirming the Royal Hill of Ambohimanga as the location in which to share a common heritage, express identity, and seek inspiration to build the future of the community. In addition, this lieu de mémoire has consistently been for the Malagasy the most significant place of collective expression of identity, inextricably linking it to the strength of the community. For the Acadians, the Landscape of Grand Pré fulfills the same role.

However, the Landscape of Grand Pré contrasts with the Royal Hill of Ambohimanga because of its association with a diaspora, its elements of the memorial experience, and its character as a shared landscape. Although the Malagasy lieu de mémoire is important to any member of that community anywhere in the world, and although it is associated with colonial attempts to erase Malagasy identity, the site is not associated with a diaspora that was forcibly removed from its homeland. By contrast, the Landscape of Grand Pré illustrates clearly the consequences and challenges of maintaining a connection with the homeland for a population that was forcibly relocated. For Acadians, connecting with Grand Pré is an essential element in maintaining their collective identity. That contact allows them to anchor their heritage, identity, sense of community, and efforts of reconciliation with history in a single place. The symbolic reclamation of their homeland at Grand Pré is also an essential element in maintaining their collective identity. Unlike the Royal Hill of Ambohimanga, the Landscape of Grand Pré illustrates clearly the consequences and challenges of maintaining a connection with the homeland for a population that was forcibly relocated. For Acadians, connecting with Grand Pré is an essential element in maintaining their collective identity. That contact allows them to anchor their heritage, identity, sense of community, and efforts of reconciliation with history in a single place. The symbolic reclamation of their homeland at Grand Pré is also an essential element in maintaining their collective identity. Unlike the Royal Hill of Ambohimanga, the Landscape of Grand Pré illustrates clearly the consequences and challenges of maintaining a connection with the homeland for a population that was forcibly relocated. Consequently, both Acadians and current inhabitants have learned to share the landscape.

In conclusion, the nominated property illustrates the same values related to the importance of belonging to a community and connecting with one’s homeland for which the Royal Hill of Ambohimanga was inscribed on the World Heritage List. Both sites are focal points for the communities where they can share their common heritage and maintain a sense of community through pilgrimages and other collective expressions of identity. They illustrate the spirit of place that results from the strong and meaningful connection between a community and the lieu de mémoire that defines its identity. In contrast, however, the Landscape of Grand Pré also provides an illustration of the importance of that connection when a community has been forcibly removed from its homeland. The events that have led to the community’s departure and symbolic return to its homeland show that the identity, survival, and renaissance of that community were tied to its aspiration of returning home. In their
efforts to reinstate that connection, the Acadians moved towards a collective and peaceful reconciliation with their past and celebration of their future.

Masada (Israel)

Masada World Heritage Site is an archaeological site in the Judean desert in Israel. It consists of remains of a large fortress surrounded by the siege works of the Roman army. Masada was discovered in 1842 and extensively excavated in the 1960s. Based on an assessment carried out by ICOMOS in 2000, the condition of the site is good.

Masada was inscribed on the World Heritage List because, as articulated in its Statement of Outstanding Universal Value, it is a symbol of the Ancient Kingdom of Israel and because of its association with the creation of the Jewish Diaspora, with Jewish identity, and with universal events associated with the continued human struggle between oppression and liberty. Because it is a lieu de mémoire for the Jewish Diaspora, and because it displays evidence of the community’s identity and of its continuing use by that community, Masada is comparable to the Landscape of Grand Pré.

The site of Masada was first fortified in the second century BCE. It was the subject of numerous military and administrative structural developments for centuries until the Jewish Revolt of the first century AD against Roman rule. In the years following the fall of Jerusalem in 70 AD, a group of settlers arrived in Masada, a town that had been under the control of the Zealots since the beginning of the revolt. The Roman governor decided to eliminate this centre of resistance and sent a large contingent of soldiers to subdue the inhabitants. They established a camp around Masada, building impressive siege works and preparing for an assault. That assault came in the spring of 73 AD. The Roman troops successfully breached the walls of Masada. The Zealots defended the place with determination, but when it became clear they could not resist much longer, their leader convinced the inhabitants and remaining defenders that death was preferable to slavery. All but two of nearly 1000 men, women and children decided to take their own lives. As a result of this event, Masada became an important symbol of Jewish identity. Today, Masada still inspires generations of members of the Jewish people. It is there that newly minted soldiers of the Israeli Defence Force complete their training by taking their oath of loyalty. They are reminded of the sacrifice of their ancestors and encouraged to reflect on the universal message of freedom and the fight against oppression.

Masada is similar to the Landscape of Grand Pré in its association with a diaspora, its authenticity of location, elements of its memorial experience, and the role of the site in the collective memory. The fall of Masada was a turning point in Jewish history, one of a handful of events that completed the destruction of Judea by the Romans and marked the beginning of the diaspora. Because of that, it is one of the most important lieux de mémoire for the Jewish people. It is a place that has retained its authenticity and where the physical connection with the archaeological remains powerfully conveys the experience and its message of continued resistance against oppression. Similarly, Acadians have a strong sense of place in relation to Grand Pré. They connect with the events surrounding the deportation and reflect on the plight of their ancestors, taking inspiration from their perseverance and resilience in the face of adversity. Each group gathers around these lieux de mémoire as a means to share a common heritage, reaffirm its identity, and commit to continuing to build its sense of community.

The Landscape of Grand Pré is different from Masada in the elements of its memorial experience and the role of the site in the collective memory. While Masada is one of the most important sites of the Jewish Diaspora, the Landscape of Grand Pré is the single most important character-defining place for the Acadians. The complete story of the birth, deportation, renaissance, and ongoing evolution of the Acadians is expressed at Grand Pré through the memorials and the use of the place. Acadians go to Grand Pré to discover fundamental aspects of Acadian collective identity. Moreover, their connection with the lieu de mémoire was manifest through a physical transformation involving the creation of memorials to reclaim a land that was no longer theirs. Without that physical transformation, the presence of the Acadians in that landscape prior to their deportation, and hence their ability to express their collective identity, would have been forgotten. Finally, the Acadian experience at Grand Pré epitomizes the human aspiration of reconciliation with the events of the past that
still affect its present and future. The Landscape of Grand Pré is an ongoing act of reconciliation for the Acadian community, one that was and continues to be achieved peacefully through a sharing of a common heritage with the local inhabitants.

In conclusion, the nominated property illustrates the same values related to the importance of belonging to a community and connecting with one’s homeland to reaffirm its identity for which Masada was inscribed on the World Heritage List. Both sites are character defining for the communities: places where they can maintain a sense of community through the learning of past achievements, pilgrimages, and collective expressions of identity. Members of the diaspora come to those lieux de mémoire to reflect on significant events of their history and seek individual and collective inspiration from the way their ancestors overcame adversity. In contrast, however, the Landscape of Grand Pré is the most important such lieu de mémoire for the diaspora, as it ties all the key events of the Acadians’ history: their birth as a people, their forcible removal, and their renaissance. It not only stresses the difficult events of its past but also focuses on the way the community overcame them, thus allowing an ongoing effort of reconciliation with history.

The comparison of the Landscape of Grand Pré with sites already inscribed on the World Heritage List underlines the relevance for humanity as a whole of the aspirations to belong to a community, to connect with one’s homeland, and to seek reconciliation. These are fundamental to the human experience as they highlight the importance of a shared heritage in the collective development of communities. The Landscape of Grand Pré also introduces the human experience of creating lieux de mémoire through symbolic reclamation of a landscape by a diaspora. This experience, currently not represented on the World Heritage List, is an important illustration of the connection between a diaspora and its homeland, one experienced by many communities around the world, as well as an inspiring illustration of peaceful efforts by a diaspora to reconcile with its past and build for its future.

Sites not on the World Heritage List

The following sites are not on the World Heritage List, but they offer valuable comparisons between the Landscape of Grand Pré and lieux de mémoire for diasporas. They also highlight the value of Grand Pré to the Acadian people and to universal human experience.

Birchtown (Canada)

Birchtown is an 18th century Black Loyalist settlement located on the shores of the Atlantic Ocean in Nova Scotia, Canada. It commemorates the Black Loyalist Experience, an event of national historic significance in Canada. The commemorative plaque reads:

After the American Revolution, over 3500 free African Americans loyal to the Crown moved to Nova Scotia and New Brunswick where they established the first Black communities in Canada. Birchtown, founded in 1783, was the largest and most influential of these settlements. The population declined in 1792 when many Black Loyalists, frustrated by their treatment in the Maritimes, emigrated to Sierra Leone in West Africa. Although diminished in numbers, Birchtown remains a proud symbol of the struggles by Blacks in the Maritimes and elsewhere for justice and dignity.

The site consists of archaeological remains, religious and domestic buildings, landscape features, and spiritual structures. The condition of most of these features is good. Some of the buildings require preservation work.

The Black Loyalists were slaves who joined the British forces during the American Revolution in exchange for the promise of freedom. The British colonial authorities had resorted to that strategy to bolster the undermanned British army in North America and to weaken the enemy’s economy by removing its primary source of labour. After the war, a large number of those African Americans who had fought for the British Crown (3500, or 10 per cent of all Loyalists who relocated to Nova Scotia) were transported to Nova Scotia. That movement was recorded in the Book of Negroes, a late 18th-century
document that provides detailed information on the thousands of African-American slaves who had fought for the British Crown and were transported out of the United States of America. They were settled principally in Nova Scotia around Halifax, in the Annapolis Valley, and on the Atlantic Coast, and they quickly encountered living conditions that made it very difficult for them to envision a future there. First, the competition for land and resources was intense, as the white Loyalists were also vying for property and jobs. This led to tension and displays of racism, and the Black Loyalists were given poor land that was difficult if not impossible to render productive. Second, the weather proved to be a significant challenge, particularly in the absence of shelter and resources. Consequently, in 1791, half of the town’s population accepted a grant of land in Sierra Leone. Known as the Nova Scotians, these settlers founded Freetown and are the ancestors of most of Sierra Leone’s Creoles (Krios). Today, Birchtown is the site of ongoing efforts to memorialize the story of the Black Loyalists through the erection of memorials, the restoration of important structures, and the archaeological investigation of notable features. Descendants of those Loyalists come on a pilgrimage to Birchtown to trace the route their ancestors took to return to Africa. At a minimum, there is awareness in the Black Loyalist and in the Sierra Leone communities of those links.

Birchtown has similarities with the Landscape of Grand Pré in its association with a diaspora, its authenticity of location, and elements of its memorial experience. Because of the events and the people associated with its settlement, Birchtown reaches out beyond its borders. It is an important link between slavery and freedom; America and Africa; and European, African and North American experiences. In the case of Grand Pré, the site is an important link between peaceful settlement and forcible relocation, Europe and America, and European and North American experiences. Those links stress that, for both Birchtown and the Landscape of Grand Pré, the location itself was the setting for important character-defining events in the history of each community. However, the strength of the community and the aspiration to maintain a collective identity allowed each community to overcome the challenges of its history. This is most tangibly expressed in those landscapes through a similar memorial experience. That experience emphasizes erecting memorials and maintaining structural evidence on the site to reflect the presence and the values of the Black Loyalist descendant community at Birchtown and of the Acadians at Grand Pré. In both places, the community has reclaimed the landscape so it can share its common heritage and express its collective identity.

The Landscape of Grand Pré differs from Birchtown in its elements of memorial experience, the role of the site in collective memory, and in its being a shared landscape. In contrast to Birchtown, Grand Pré is a lieu de mémoire that is character defining for the Acadian community. It allows the sharing of the common heritage and, through ongoing cultural, social, and political use, has maintained its role in expressing and nurturing a collective identity. Grand Pré has been popularized among Acadians and non-Acadians for well over a century and has become part of the collective memory of Acadians. Since the middle of the 19th century, Grand Pré has been the tangible and intangible location of the consciousness of Acadians as a people, of their history, of their symbols of identity, and of their achievements. The huge international gatherings held there attest to its role as the active and foremost connection for a diaspora dispersed around the world. At Birchtown, the lieu de mémoire is next to a small Black Loyalist community and has been contested locally by members of neighbouring communities. By comparison, Grand Pré is no longer the site of an Acadian settlement, which means that another group has developed its own connection with the landscape. This suggests that for both communities to maintain their own connection with it, the landscape needs to be shared through mutual respect.

In conclusion, the comparison of the nominated property with Birchtown highlights that the Landscape of Grand Pré is a vibrant example of a lieu de mémoire that has deep meaning for a dispersed diaspora. Its ongoing use in the expression of collective identity confirms that spirit. It stresses that collective will, use, and engagement are instrumental in creating a character-defining lieu de mémoire.

Trail of Tears National Historic Trail (United States)
The Trail of Tears National Historic Trail is a route that connects the locations in the southeastern United States from which the United
States government forcibly relocated Native American tribes, beginning in 1831. Their point of arrival was thousands of kilometres away in the Midwest.

The trail was designated of national significance because it commemorates the forced removal of the Cherokee people from their homelands in the southeastern United States to Indian Territory (present-day Oklahoma) in 1838–1839. Its significance, based on its designation, lies in that it represents the tragic impact of Indian Removal policy on the history, culture, and soul of the American nation; it represents tenacity, perseverance, and resilience as survivors relocated/rebuilt their institutions despite great adversity; and it provides the opportunity for Native Americans and all people to reconnect with places that evoke the most important event in their history.

The Trail of Tears is a lieu de mémoire associated with a people expelled from its homeland, and it continues to be associated with the cultural identity of that people. In those respects, the Trail of Tears and in particular its places of commemorations are comparable with the Landscape of Grand Pré.

Since the early 19th century, the American government had adopted a policy of allowing Native Americans to remain east of the Mississippi River if they became better assimilated into Euro-American culture. This policy aimed to render these tribes dependent on white American settlers for goods and to force them to give up land to acquire these goods. In 1830, the Indian Removal Act was passed, allowing the forcible relocation of tribes east of the Mississippi. This made room for settlers and speculators to take over highly desirable land. It was also a tool to address the concern of some people that the presence of Native Americans in those areas was a threat to peace and security. Consequently, between 1831 and 1839, tens of thousands of people were expelled from their homeland and made to walk to Oklahoma, thousands of kilometres away.

In 1887, the United States Congress designated the Trail of Tears nationally significant. It consists of approximately 8000 kilometres of trails connecting the locations from which the Cherokee, Chickasaw, Choctaw, Muskogee-Creek, and Seminole were removed in the states of Georgia, Tennessee, Alabama, North Carolina, Mississippi, Louisiana, Kentucky, and Florida to their destination in Oklahoma. Several locations along the trail are individual places of memory, such as grave sites or temporary settlements. Other key locations are emerging as landmark sites of lieu de mémoire such as the Cherokee Trail of Tears Commemorative Park (Commemorative Park) in Hopkinsville (Kentucky) and the Cherokee Removal Memorial Park (Memorial Park) at Blythe Ferry (Tennessee). Those locations are the focus of memorial activities on the part of the Cherokee.

The Commemorative Park in Kentucky is the location of a Cherokee encampment in 1838 and 1839. It is also the burial site for two Cherokee chiefs who died during the removal. Statues of these chiefs were crafted by a local artist and recently unveiled with delegations from Cherokee bands present. A log cabin dating back to the period of the removal serves as the heritage centre of the Commemorative Park. Near the burial site, seven Red Cherokee Chief Dogwoods were planted to commemorate each of the seven Cherokee clans. Every year in September, an intertribal powwow is held at the park. It is a gathering of Native American people to celebrate their heritage, to express collective identity, and to share their pride with non-Native Americans. The condition of the site appears to be good.

The Memorial Park in Tennessee was the gathering point for 9000 Cherokee, where they camped for weeks prior to their removal. It now hosts a boardwalk, shelters, a visitor centre, and a genealogical library. It will soon host a memorial wall that will include a circular base, similar in form to the seal of the Cherokee Nation, surmounted by seven panels representing the seven Cherokee clans. The panels will list the names of the head of each of the 2537 households and the number of family members as shown in the 1835 Census that was taken in preparation for the removal. The condition of the site appears to be good.

The Trail of Tears, the Commemorative Park, and the Memorial Park bear similarities with the Landscape of Grand Pré in their authenticity of location, elements of the memorial experience, and role of the site in the collective memory of a people. The trail follows the path taken by the Native American tribes almost 200 years ago on their way to a foreign land. The experience of walking on that trail is
powerful for the descendants of those who were forcibly relocated. They connect with their ancestors in one of the character-defining moments of their history. By extension, the trail itself has defined the character of the identity of those tribes. Also, as with Grand Pré, the events of the Trail of Tears were popularized through public accounts, songs, and writings, ensuring that those events would remain part of the collective memory. Finally, the erection of memorials is an act of symbolically reclaiming the trail and leads to public awareness and recognition of the impact of those events on the Native American tribes.

The Landscape of Grand Pré is different from the memorial space at Blythe Ferry and the Trail of Tears in its elements of memorial experience, the role of the site in collective memory, and its shared landscape. While the Trail of Tears is a tangible testament to the particular events, it physically covers the entire experience of the forced migration, with no single place that emerges as a symbolic landmark of the people. Blythe Ferry is now being developed as a central point to learn about and experience the Cherokee removal. However, time is required to see whether it emerges as a focal point of the collective memory of the people. The recent commemoration of that event signals that the potential for reconciliation with history is only beginning. Finally, the symbolic reclamation is primarily related to the event rather than to a homeland.

In conclusion, the comparison of the nominated property with the Trail of Tears highlights that the Landscape of Grand Pré illustrates the importance of a lieu de mémoire as a single focal point to allow the sharing of a common heritage and the expression of a collective identity. In addition, the value of Grand Pré is well established. For almost a century, its ongoing use by the Acadian community has demonstrated its essential role as a lieu de mémoire. Finally, Grand Pré is a symbolic reclamation of a homeland, demonstrating the community’s aspiration to connect place, history, and collective identity. As such, it is more than a memorialization of an event; it is a symbolic appropriation that defines the value of its landscape for present and future generations.

Dorsetshire Hill and Baliceaux (St. Vincent and the Grenadines)
Dorsetshire Hill is a mountain and Baliceaux is an island in the islands of St. Vincent and the Grenadines, in the Caribbean. These sites relate to the deportation of the Garinagu in 1796 from their homeland to the island of Roatán off the coast of Honduras.

The Garinagu are a people of mixed African, Arawak and Carib ancestry whose presence and identity were recorded as early as the 1630s by French travellers. When the British took over the island from France after the Treaty of Paris in 1763, the Garinagu and the French settlers fought the new authorities. Under the leadership of Joseph Chatoyer, the Garinagu stood successfully against the British, eventually forcing them to sign a peace treaty in 1772. By 1795, Britain had demonstrated it had no intention of holding to the terms of the treaty, which led to a second insurrection, again led by Chatoyer. That conflict ended with Chatoyer’s death at Dorsetshire Hill and the internment of the Garinagu on the island of Baliceaux. Some 5000 people remained on the rocky outcrop for months. Half of the prisoners died, and the remainder were deported to the island of Roatán. The story of Chatoyer’s fight and death was recounted in 1823 in the play The Drama of King Shotaway, the first known play written by an African American. Today, the diaspora is located mainly in Honduras (Roatán and mainland), Belize, and the United States. Since at least the early 1990s, both Dorsetshire Hill and Baliceaux have served as places of pilgrimage and commemoration of the events of 1796.

Dorsetshire Hill consists of a forested and residential promontory overlooking the capital, Kingstown. A monument commemorating Joseph Chatoyer has been erected in the past decade and is now the subject of an annual wreath-laying ceremony. The monument is in good condition. Baliceaux is a rocky outcrop southeast of the island of St. Vincent. The setting and location are in good condition. Dorsetshire Hill and Baliceaux are similar to the Landscape of Grand Pré in that they are associated with a diaspora, they have authenticity of location, they have similar elements of the memorial experience, and they are a site of collective memory. The similarities in the history of each diaspora form an interesting parallel: both were forcibly removed because of real or perceived lack of loyalty to the authorities, both were people born from the meeting of two
worlds and who considered America their homeland, and both were uprooted and sent far away from their ancestral lands. The memorialization of the events on the site where they occurred reinforces the connection between today’s communities and their ancestors. These places have acquired spiritual significance, justifying a pilgrimage, rituals, and expressions of collective identity. The lieu de mémoire of Dorsetshire Hill and Baliceaux were maintained in songs, literature, and oral tradition before tangible memorials established them as such. This is similar to the situation at Grand Pré.

The Landscape of Grand Pré contrasts with Dorsetshire Hill and Baliceaux in the elements of the memorial experience, in the memorials’ role in collective memory, and in its being a shared landscape. Unlike Dorsetshire Hill, which commemorates the death of Joseph Chatoyer as much as it does the end of the Garinagu’s fight against the British, the Landscape of Grand Pré focuses on the collective experience of the deportation, its impact, and the renaissance of the people without lionizing individuals. The Acadian people as a whole are admired for their perseverance and resilience in the face of adversity, and those qualities become character-defining values that are shared and reaffirmed at Grand Pré.

Also, the collective experience at Baliceaux has not brought about a physical transformation of the space to reclaim a homeland. Both Baliceaux and Dorsetshire Hill are symbols of pride and collective identity for the Garinagu, who recently have begun carrying out annual rituals and pilgrimages. Those are different from the experience at the Landscape of Grand Pré, where rituals and pilgrimages have been inextricably tied to the development of the Acadians’ collective identity for the past century. It is not merely a question of carrying out those rituals. At Grand Pré, pilgrimages are part of the sharing of common heritage, reaffirmation of identity, and an ongoing development of collective identity.

The comparison of the nominated property with Dorsetshire Hill and Baliceaux highlights that the Landscape of Grand Pré illustrates a community’s experience of a lieu de mémoire about that same community. The Acadian deportation and later renaissance are communal events that were interpreted to reflect community values of perseverance and resilience. In Grand Pré, the community’s ongoing use of the lieu de mémoire allows the sharing of those values and the reaffirming of a collective identity based on them.

Memorials of the Scottish Highland Clearances in Helmsdale, Achinlochy, and Badbea (United Kingdom)

The memorials at Helmsdale, Achinlochy, and Badbea are three significant lieu de mémoire associated with the Highland Clearances, an event of forcible removal that took place in the 18th and 19th centuries in the Highlands of Scotland, in the United Kingdom. They are in the County of Sutherland in northeastern Scotland, the location of the most brutal phase of eviction.

After the battle of Culloden in 1746, where the Scottish Highland supporters of Charles Stuart were defeated, the British government enforced a series of acts that effectively put an end to the traditional clan system, the authority of the clan chief, and the social system of the small agricultural villages. One effect was to transform the role of clan chief into landlord and to alter the sources of revenue for the Scottish aristocracy. Coupled with an increasing demand for cattle and wool as a result of the industrial revolution underway in England, some Scottish lords saw an opportunity to “improve” their lands and the revenues they generated. They decided to replace their tenants with sheep. The Clearances saw the forced removal of hundreds of thousands of people from the Highlands to areas along the coast between the late 18th century and the middle of the 19th century. Some were forced to build their own homes and become fishermen. Others were boarded onto ships for North America, where they were promised a better life. Finally, many decided to emigrate on their own towards the British colonies in North America and Australasia. This forced removal altered Scottish identity and has had a permanent impact on the landscape of the Highlands and on Scottish Highland culture to this day. The Highland Clearances are remembered in Scotland, Canada, and Australia, where most of the descendants continue to perpetuate the stories of those events through oral tradition and memorialization.

Because the memorials are located in the homeland of the Scottish diaspora, and because they are a place of pilgrimage by memb-
bers of that community, the memorials to the Highland Clearances are comparable to the Landscape of Grand Pré.

Numerous places commemorate the Highland Clearances. Virtually any remains of a house or village are considered a memorial place for the respective descendants of each clan, and many people make a pilgrimage to their ancestral clan home. Two villages in the far north of Scotland, Achinlochy and Badbea, have served as longstanding memorials to those who were removed. Achinlochy is an abandoned settlement in the County of Sutherland, one of the main areas of aggressive expulsion by the landowners. The remains of 11 houses stand as witnesses to the impact of the Clearances.

Badbea is a coastal township built in the 18th and 19th centuries by families who had been evicted. It was abandoned in 1911. That same year, the son of a villager who had emigrated to New Zealand many years earlier returned and built a monument to the people of Badbea from the stones of his ancestors’ house. The monument is a simple cairn that stands in the middle of the village, an eloquent statement to the sense of loss and pride felt by the villagers. Badbea continues to attract visitors who wish to understand the impact of the Clearances.

In 2007, the Scottish government unveiled a monument depicting a family about to board a ship during the Highland Clearances in Helmsdale, the heart of the most tragic events surrounding the Clearances. The plaque reads:

“The Emigrants” commemorates the people of the Highlands and Islands of Scotland who, in the face of great adversity, sought freedom, hope and justice beyond these shores. They and their descendants went forth and explored continents, built great countries and cities and gave their enterprise and culture to the world. This is their legacy. Their voices will echo forever through the empty straths and glens of their homeland.

This new monument is intended to serve as a central point of commemoration of the Highland Clearances.

The memorials to the Highland Clearances are located in the homeland and are associated with a diaspora that was unable to return to that homeland. Through various commemorative actions in the many abandoned settlements of Scotland, the descendants have maintained the memory of the Clearances.

The memorials to the Highland Clearances are similar to those of Grand Pré in their association with a diaspora, their authenticity in location, some elements of the memorial experience, their role in collective memory, and some aspects of shared landscape. Like the Landscape of Grand Pré, the memorials to the Highland Clearances highlight the experience of forcible relocation and the subsequent diaspora. They are evocative testimonials of the community’s attachment to its homeland, an attachment that transcends time and space. Both the events and the places are recounted in songs, literature, and other artistic expressions, thus maintaining a collective memory about them. For some, a return to the place of their ancestors in the Highlands is a spiritual journey back to their roots. The authenticity of the location and of its inhospitable setting is essential to nurturing the connection with their forebears, their suffering, and their survival. Similarly, for Acadians, the authenticity of the location of the memorials on the site of the ancient Acadian settlement, within an agricultural landscape dominated by the dykelands, is vital. It reinforces the experience of sharing a common past and connecting with the challenges and successes of their ancestors.

The Landscape of Grand Pré contrasts with the memorials to the Highland Clearances in some elements of the memorial experience, the memorials’ role in collective memory, and some aspects of shared landscape. Sites such as Badbea and Achinlochy, which exhibit the deliberate abandonment of ruins, deliver a powerful reminder of the harshness of the Highlanders’ living conditions, the impact of a forced removal on a people and their sense of loss, and the destruction of a way of life. The Landscape of Grand Pré, however, reinforces the successful renaissance of a people by displaying memorials exhibiting the symbolic reclamation of a lost landscape. The physical transformation of Grand Pré evocatively illustrates the resilience of the people as much as it shows the impact of their forced removal. Helmsdale, Achinlochy, and Badbea are three important lieux de mémoire. Yet, although the Helmsdale memorial is intended to become the focal point of the commemoration, none of these three
places has yet become that focal point in the same way that Grand Pré is for the Acadians, as a place of gathering and celebration of identity. For Scots of the diaspora, the pilgrimage to the place of their ancestors is as important, if not more, as going to one of the collective lieux de mémoire.

The comparison of the nominated property with the memorials to the Highland Clearances highlights that the Landscape of Grand Pré represents an important aspect of lieux de mémoire: the importance of the authenticity of location and setting in enabling the connection between the diaspora and the experience of its ancestors. In addition, the Landscape of Grand Pré exhibits the extraordinary capacity of communities that have lost the tangible evidence of their existence in the past to affirm their existence in the present through memorials and the ongoing use of those memorials for collective identity. Table 3-5, on the next page, outlines the comparison of the Landscape of Grand Pré with all the foregoing sites that are also lieux de mémoire associated with diasporas.

Table 3-5 Comparison of the Landscape of Grand Pré with other lieu de mémoire associated with diasporas
Conclusion – The Landscape of Grand Pré: an evocative lieu de mémoire illustrating universal human aspirations

This comparative analysis has explored the complex phenomenon of lieux de mémoire. While the “label” is modern, it establishes a definition for a human behaviour of identifying those places, uses, and objects that are significant to collective identity and are rooted in history. The comparison of the nominated property with other sites that possess similar characteristics, emphasizing place and the use of place, has helped in the dissection of the notion of lieux de mémoire. The comparisons clearly show that the experience of lieux de mémoire is shared among many people and is expressed in many forms. They also highlight the particular experience of diasporas and their ability to define a heritage that maintains a sense of collective identity and of group consciousness.

By comparing and contrasting the Landscape of Grand Pré with other similar sites, this analysis has highlighted the value of Grand Pré in embodying the concept of lieux de mémoire. As is the case at all the comparable sites, the Landscape of Grand Pré illustrates the strong and enduring connection between people and place and its effect on collective identity: the African diaspora at James Island and Related Sites and the Island of Gorée, the descendants of indentured labourers from southeast Asia at Aapravasi Ghat, the Maroons at Le Morne Cultural Landscape, the Malagasy at the Royal Hill of Ambohimanga, the Jewish diaspora at Masada, the Black Loyalists at Birchtown, the Cherokee at the Trail of Tears, the Garinagu at Dorsetshire Hill and Baliceaux, and the Scots and the memorials to the Highland Clearances. The outstanding value of these lieux de mémoire is understood through their association to a community and through the tangible manifestation of the connection that binds place and people together. That value is the spirit that emanates from those places.

This analysis has also highlighted the value of Grand Pré in illustrating the experience of diasporas symbolically reclaiming their homeland. The connection between place and people and the maintenance of a sense of community are fundamental elements of a diaspora’s collective identity. The sense of loss experienced by diasporas and their hope to reconnect with their homeland are important drivers of their efforts to build a future for their community. The political, social, and cultural expression of those efforts through symbolic reclamation is one that supports the aspiration of peaceful reconciliation with history and strives for a return to a homeland in a spirit of respect with those other communities that have also come to build their own connections with the place.

The Landscape of Grand Pré is an exceptional example of both a lieu de mémoire and a symbolically reclaimed landscape. Associated with the Acadian diaspora, it was symbolically reclaimed over a century of erecting memorials and using it for cultural, social, and political events. The lieu de mémoire bears the qualities of the homeland the Acadians left behind when they were deported: dykelands, dispersed settlements, and agricultural activity. The symbolic reclamation occurred through the expression of their collective identity, such as the erection of a Memorial Church, and through the landscape’s ongoing use where music, literature, and other artistic expressions are on display. Finally, one extraordinary element of the Landscape of Grand Pré is its layering of meaning for different communities, illustrating a peaceful reclamation and ongoing efforts of reconciliation with history. The Acadians are an absent community among the inhabitants of Grand Pré, yet they were able to return and resurrect their former existence in the landscape and establish their present and future existence there. This was done progressively and peacefully, without resorting to conflict or disrupting the local community. In return, the local community has assisted, contributed and participated in this symbolic reclamation through tangible actions of sharing.

Throughout this comparative analysis, the Landscape of Grand Pré has been shown to be an exceptional lieu de mémoire. The authenticity of location and setting are intrinsic components of a lieu de mémoire. The location of the memorials on the remains of the ancient Acadian settlement next to the dykelands is the most evocative and complete illustration of a lieu de mémoire that brings together a diaspora as they return to their homeland. It enables modern Acadians to make a direct and tangible connection with their ancestors and their legacy. This connection allows the Acadians to gather together and fulfill the universal aspirations of sharing their common heritage, reaffirming their identity, and continuing to build their sense of community.
The Landscape of Grand Pré exhibits the key attributes of a lieu de mémoire, including memorial structures and its ongoing use through pilgrimage, events, and other forms of ritual. This physical transformation of the landscape is apparent. It reflects the cultural values and creates a focal point for those values. These attributes are tangible evidence of the Acadians sharing their heritage and expressing their collective identity.

The Landscape of Grand Pré plays an essential role in a people’s collective memory, confirming its place as a character-defining lieu de mémoire. It illustrates the main stages through which the present-day Acadians have formed their identity as a people. It has retained a deep meaning for a dispersed diaspora through over a century of their ongoing use of the reclaimed landscape. Grand Pré is their focal point, the most significant place of their collective identity, inextricably tied to their community’s heritage and aspirations. By symbolically reclaiming that landscape, the Acadians have symbolically appropriated it and defined its value for present and future generations. This landscape celebrates a community through communal experience around heritage and collective identity. It stresses the values of perseverance and resilience, inspired by the legacy of the community’s ancestors. Because of this role, the Landscape of Grand Pré has maintained a contemporary relevance for the community. It is a place of ongoing and evolving meaning which is evidence of its importance to the community.

As a shared landscape, the Landscape of Grand Pré is a successful reclamation and return by a diaspora. The lieu de mémoire serves as a catalyst and symbolizes an ongoing effort of reconciliation between members of the diaspora, history, and the local community. As individual Acadians discover their collective identity, they reflect on their history and its legacy; and as Acadians and the local inhabitants of Grand Pré use the place for cultural, social, and political purposes, they share their values and an open dialogue. It is a lieu de mémoire that reflects humanity’s aspirations for peaceful reconciliation with its past.

By comparing and contrasting the Landscape of Grand Pré with other similar sites, this analysis has clearly demonstrated the value of Grand Pré in illustrating the universal human aspirations to belong to a community, to connect with one’s homeland, and to seek reconciliation. Places as lieux de mémoire are tangible expressions of those aspirations. They emphasize the mnemonic role of landscape features, archaeological vestiges, and other tangible evidence in nurturing a contact with the past for a community and their importance in collective identity. In an ever-changing world, these lieux de mémoire anchor individuals and communities in history and in place. They serve as points of reference for values, identity, and aspirations.

Finally, the comparison has highlighted the value of the Landscape of Grand Pré in exemplifying communities’ aspirations to exist in history and to strive for reconciliation with the past. The loss of land, the fragmentation of a community, and the forced separation of a community from its ancestral land are traumatic individual and collective events that threaten the future of the affected community. A community’s will to reclaim its homeland is an expression of its will to remain part of human history and to contribute to it. A community’s will to reclaim that homeland through peaceful and symbolic means is an expression of its will to reconcile with history and to set a course for its future that stresses the value of sharing over conflict. These aspirations are expressed in the first paragraph of the preamble to the United Nations Declaration of Human Rights, in that the “recognition of the inherent dignity and of the equal and inalienable rights of all members of the human family is the foundation of freedom, justice and peace in the world.” In that, the Landscape of Grand Pré, the Acadian experience, and the stewardship of the local landowners, provide a poignant and powerful living example of the universal human aspirations to belong to a community, to connect with one’s homeland, and to seek reconciliation.
3.d. Authenticity and Integrity

3.d.i. Authenticity

The nominated property fulfills the conditions of authenticity set out in Section II E of the Operational Guidelines. The authenticity of the nominated property is found in its agricultural system through the dykes, aboiteaux, land use and patterns, and community-based management. The authenticity of the Landscape of Grand Pré is also expressed through, and associated with, the memorials to the Deportation of the Acadians.

The stewardship of the Grand Pré Marsh Body has contributed greatly to maintaining the authenticity of the agricultural aspect of the Landscape of Grand Pré. Another important factor in maintaining the site’s relevance and authenticity is the Government of Canada’s ownership of the part of the site that contains the memorials related to the Deportation, and the collaboration with the Acadian community to manage it. The agricultural and memorial dimensions are equally dominant in characterizing the spirit of Grand Pré.

Authenticity in form and design

The dykelands

The dykelands are characterized by an organic field pattern based on fields of irregular sizes and shapes (see Figure 3–12). The field pattern appears in John Bishop’s map (1770), the earliest detailed map of Grand Pré, and is consistent with the pattern of other Acadian dykelands of the time (see Figure 3–13). This pattern reflects the phases in which the dykelands were created, as well as how they were adapted to the geophysical features of the landscape.
Historical maps from the 18th, 19th and early 20th centuries, as well as aerial photography from the 1920s onwards, confirm the organic nature of the field patterns on the dykelands. Some 30 per cent of current fields have retained the same pattern as observed on maps from the 1760s. The most recent marsh reclamation occurred on the west side of Grand Pré Marsh in the mid 1950s and resulted in the same organically formed field pattern as those in the 1680s. New fields are indistinguishable from older fields.

The design of the drainage system of the dykelands has maintained its authenticity. The creeks still serve as the main drainage outlet, and the aboîteau is still the technology used to evacuate water into the Minas Basin. The creeks have followed the same footprint since the 1680s. The authenticity of the design is first recounted in 1699, in the relations de voyage in Acadie of a French traveller, the Sieur Dièreville. In the 18th and 19th centuries, numerous French, British, and American travellers describe the Grand Pré dykeland.

The aboîteaux and dykes

The aboîteaux are built with a simple and effective design that has been used for centuries. It consists of a hollowed tubular form (sluice) with a gate (flap) that opens and closes mechanically with the tides. Evidence of that simple design relies on archaeological discoveries of 17th, 18th and 19th century aboîteaux as well as design templates located in institutional, municipal, and provincial archives (see Figure 3–14).

3–14 This aboîteau, discovered in 2006, follows the same design as modern aboîteaux.

3–15 Modern aboîteaux use the same design and updated materials as those first constructed in Grand Pré by the Acadians.
The current *aboîteaux* use the same mechanism – a sluice with a flap – and the same approach to building and maintenance using simple and readily available materials (see Figure 3–15). Today, five *aboîteaux* drain the dykelands in the nominated property (see Figure 3–16). They were installed between 1982 and 1997 as part of regular maintenance because the previous sluices had filled with silt deposits. New *aboîteaux* are made from a combination of wood, PVC, metal, and concrete to enhance their durability and effectiveness.

The dykes are also built according to a simple and effective design. Based on current technology, and adapting to the natural conditions of Grand Pré, the dykes follow the ideal design to protect the largest amount of intertidal land transformed into farmland. The most recent dykes were built in the 1950s and have applied a simple design that has been used for centuries (see Figure 3–17). The design consists of a pyramid-shaped accumulation of soil whose structural stability over time has been strengthened by facings of grass, wood planks held with metal rods (a “deadman”), and rocks. The dykes’ base extends as far as required to ensure the proper height and protect the farmland from the tides.

The dykes and *aboîteaux* have always followed the same simple design at Grand Pré.

The memorials

The Memorial Church, the Herbin Cross, the Statue of Evangeline, the Deportation Cross, and the memorial garden have all maintained their authenticity in form and design. The original blueprints for the memorial garden and the technical drawings for the Memorial Church attest to the authenticity of the design as conceived by the architects. The memorial garden was conceived along the lines of a Victorian garden with carefully arranged flower beds and trees and clearly delineated paths that lead the visitor from one memorial to another. These paths meet at the Memorial Church, reinforcing the importance of that structure for the Acadians.

Based on photographic evidence and records of preservation actions undertaken, the design of the memorials is authentic (see Figures 3–18 and 3–19). The protection and maintenance programs of the Parks Canada Agency ensure that any interventions will maintain their authenticity.
The settlement pattern

Historical accounts, maps, and archaeological research confirm that the agricultural landscape of Grand Pré has maintained the same form of settlement pattern since its beginning. No known detailed early maps of the Grand Pré settlement exist prior to the John Bishop (1770) map. Earlier cartographic depictions are illustrative and provide cursory information, as evidenced by a map from 1739 (see Figure 3–20).

A 1748 description of Grand Pré by Charles Morris, a British official and the future surveyor-general of Nova Scotia, describes Grand Pré as follows:

... the Village Consists of about 150 Houses scatter’d on several small Hills, about two Miles and a Half in Length, extending by the side of the marsh Called Grand Pré which name is Commonly used for the Settlement... to the District of Minas is to be added the small settlements on the Gaspero and on the Habitant ye whole are Numberd at two Hundred Familys. This Village is made more remarkable to the English from their Misfortune there. Their Church is seated about the midst of the Town....
This description is consistent with the way the settlers would have initially developed their community: along the dykeland to be close to their work space.

Throughout the 18th and 19th centuries, maps, including those by the surveyor-general of Nova Scotia, and written descriptions of the area confirm a settlement pattern that consisted of a large work space – the dykelands – surrounded by the agricultural community. The earliest evidence from maps points to the community being concentrated on the uplands to the south of the dykelands (see Figure 3–21).

As the settlement’s population grew, and land was reclaimed to connect the mainland with Long Island, farms were built on Long Island, Boot Island, and farther uphill. Even so, throughout Grand Pré’s evolution since the 1680s, the pattern of a dispersed linear community next to the large open space of the dykelands has been maintained. This is despite the real attempts by the French and British authorities to organize the community along traditional 17th and 18th century seigneurial and town-plot settlement patterns respectively.

The earliest illustration that suggests the presence of a French seigneurial land pattern is the John Bishop (1770) map of Grand Pré (see Figure 3–22).

Historians have interpreted that pattern as evidence of the French seigneurial system because of its distinctive elongated fields running perpendicular to the closest body of water. This was also the land pattern that early Acadian settlers applied, and it is different from later land patterns. British military surveyors seem overall to have respected those divisions before distributing the empty Acadian land to the New England Planters.

The evidence of an Acadian settlement pattern is seen in both the historical and the archaeological records. Both suggest the presence of a typical Acadian settlement, which is linear and dispersed along the uplands close to the dykelands. This is comparable to other well-known Acadian sites from that period in the easternmost provinces of Canada.
The evidence of the British town plot in Hortonville is confirmed by historical accounts of the location of the settlement and through foot, aerial, and remote-sensing surveys. The roads that form the town plot of Hortonville follow what was shown on 18th century maps of the Horton town by Charles Morris (see Figure 3–23) and John Bishop, and 19th century maps by Harris and Church.

These maps also demonstrate the changes in field sizes and in building density in the town plot, confirming the British authorities’ failed attempt to concentrate the New England Planters in Hortonville.

**Authentication in materials and substance**

The dykes

One feature that speaks to the ingenuity of the dyking system is the use of sod from the marsh to build the dykes that transform that same marsh into farmland. From Acadian times until the 1950s, dykes were built by manually extracting bricks of sod composed of marshland grass – such as *Juncus gerardii* – to form the core and the facing of the dykes. This was ingenious for its use of locally available materials, especially a material that was naturally resistant to the forces of the tides. Today, dykes are still built from soil and sod. They continue to be topped up with soil and vegetation extracted directly from the salt marsh next to the dykes, just as they were in Acadian times (see Figures 3–24 and 3–25).

3–23 Section of the 1760 Charles Morris map showing the Horton town grid.

3–24 & 3–25 Dykes in Grand Pré are still topped with vegetation from the salt marshes. Rock facing is currently used to help withstand the force of the tides, rather than the wooden plank facing that was common in the 19th century.
Over time, different construction methods have been used to reinforce the dyke structure, taking advantage of improved technology and better understanding of the force of the tides. The dykes in the 19th century were once faced with wooden planks, but rocks are now used instead. Today, in areas that are more sensitive to coastal erosion, dykes are regularly faced with large stones (see Figure 3–25).

The memorials

The Memorial Church has retained its original materials from the time the Acadian community built it in the 1920s and according to the architect’s specifications. The Herbin Cross (see Figure 3–26), the well of Evangeline, the Statue of Evangeline, and the Deportation Cross have also all retained their original materials. They are managed according to Parks Canada’s cultural resource management policy and the Standards and Guidelines for the Conservation of Historic Places in Canada (Appendix 4G), which stresses the importance of retaining the original material in the ongoing maintenance.

Authenticity in use and function

The aboiteaux and dykes

The aboiteau is a core technology of the system that defines the agricultural landscape of Grand Pré. Since the dykelands were first created, aboiteaux have evacuated water and drained it via the creeks towards the Minas Basin. Historical accounts and archaeological investigations confirm that no other technology has ever been used to drain the dykelands. The dykes continue to serve as a barrier against the formidable tides of the Minas Basin.

The dykelands

The dykelands were created in the 17th century exclusively for agricultural use. They have seen different types of agricultural uses over the years including haying, vegetable and crop growing, pasturing, and sod extraction. At different periods, the dykelands were enclosed seasonally for common pasturing and then used to grow crops in the spring and summer. Sod extraction ceased in the 1980s and has not affected the authenticity of the area.

These activities and crops have been recorded extensively in Marsh Body meeting minutes, historical records, and oral tradition. There are many accounts from travellers and agricultural experts describing the agricultural use and the productivity of the farmland. The dykelands in the nominated area have been used exclusively for agricultural purposes since Acadian times.

The memorials

The Landscape of Grand Pré has inspired numerous references to its memorial importance for the Acadians over the past century.

Public calls for the Acadians to reclaim the land are particularly significant in demonstrating the authenticity of the function of this lieu de mémoire. French-language newspapers published articles such as Henri L. D’Entremont’s call, in the newspaper L’Évangéline in 1895, for Acadians to honour their ancestors. English newspapers also
carried statements by Acadians and non-Acadians alike, such as John Frederic Herbin’s observation in the early 20th century before the development of the park that

...The Grand Pre memorial field is the outstanding historical landmark most closely associated with the occupation of the Acadians of this country for seventy years. The Grand Pre burying ground with the church land, have reverted to the descendants of the exiled people. Here a simple cross marks the cemetery.

Later on, in 1917, the Acadians were taking steps to acquire the land at Grand Pré that was said to contain the vestiges of the church of Saint-Charles-des-Mines. Pascal Poirier, one of the Acadian community’s most influential politicians at the time, wrote in Acadian newspapers such as Moniteur acadien that to contribute to the fundraising campaign was a worthy effort since their return to Grand Pré was a symbolic resurrection of Acadie and an act to remember the painful events of the past. In reporting on the decisions of the committee responsible for acquiring the land, Poirier confirmed that the objective was to build a memorial church, a place where Acadians would remember their ancestors and be inspired by their accomplishments. Both Herbin, the creator of the memorial park, and Poirier, a leader in the fundraising campaign to build the Memorial Church, clearly had in mind that Grand Pré and its memorials were for the Acadians to use for their commemoration events and as a symbol of their identity.

The Deportation Cross, another important memorial, was erected in 1924 as a reminder and place of pilgrimage for Acadians. The plaque on the cross confirms the function of the memorial. It reads,

The year it was erected, Henri Bourassa – a prominent journalist and politician from Québec who had Acadian ancestry – organized a trip for the readers of the newspaper Le Devoir. He characterized the trip as an opportunity to undertake a “pilgrimage” to a “sacred land” and a “place of memory,” which confirms the function of this memorial as contributing to the symbolic landscape (see Figure 3–27).

Today, all these memorials retain the highest degree of authenticity as they continue to serve their original function as places of commemoration and celebration. They continue to be places for the community to gather for its cultural, social, and political events, as well as symbols that evoke the Deportation and the Acadians themselves. This is particularly evident for the Memorial Church, which is a character-defining element of the symbolic landscape and appears on most modern representations of Grand Pré; for the Deportation Cross, which serves as a symbol of the event itself and has been reproduced on monuments in Europe and the United States (see Figure 3–28); and for the Statue of Evangeline, who remains a symbol of the Acadians in music, literature, and art.
3–28 The Deportation Cross, here erected on a modern memorial in St. Pierre et Miquelon (France), has become a symbol of the Acadians worldwide.

Authenticity in location and setting

The settlements

The dykelands and settlements from different periods and groups are all in their original locations, as confirmed by historical and archaeological records.

Archival evidence shows that the dykelands have grown and shrunk over time, with periods of successful expansion and others of retreat due to tidal pressures on the dykes. Maps and historical records from the 19th and early 20th centuries show the challenges of building new dykes. This is particularly true for the western side, where the Wickwire Dyke was first built in the early 19th century, then was abandoned and rebuilt numerous times until its current form. The eastern side of the dykelands has also seen some adaptation, but not as pronounced as with the Wickwire Dyke. Consequently, the aboiteaux have been moved as needed. They have, however, always been located at the end of one of the creeks that serve as major drainage outlets. Similarly, historical maps, geological soil testing surveys, and archaeological investigations confirm that the locations and paths of the main drainage outlets are identical to the ones created in the 17th century.

Historical and archaeological records also provide evidence that the upland area of the nominated property was the heart of the community. These records detail the first settlement and identify the features central to the community, including cemeteries, roads, churches, mills, and other significant structures.

Historical accounts by travellers, such as the 1748 description by Charles Morris, confirm that the community was located next to the reclaimed farmland. Later maps from the late 18th century locate the settlement on the uplands south of the dykelands. Archaeological evidence confirms that the church, roads, cemeteries and other important structures of the Acadian settlement were all concentrated in that location. The location of the Horton town plot is confirmed by earlier maps prepared by Morris and Bishop. These maps show that the town plot was established on top of a hill next to the Gaspereau River near Horton Landing. The town plot is evident on later maps of the
19th and early 20th centuries. LiDAR (Light Detection and Ranging) mapping and aerial photography have confirmed the authenticity of the location of the town plot and the 18th century field pattern (see Figure 3–29). They have also identified the location of potential vestiges of houses.

The memorials

All the memorials except the Deportation Cross are located in their original settings. The Memorial Church stands on the land that was acquired by the Acadian community and was thought to contain the vestiges of the church of Saint-Charles-des-Mines. The Statue of Evangeline stands at the entrance of the commemorative gardens where visitors would have arrived from the train station. The Herbin Cross continues to mark the location of the Acadian cemetery. When the Deportation Cross was erected in 1924, it was placed where people then believed the Acadians had boarded the ships in 1755. The Acadian community moved it to its current spot at Horton Landing in 2005 to mark the 250th anniversary of the Deportation. By then, research had confirmed that Horton Landing was the actual site of the departure. Since the Deportation Cross’s location in the 1920s was intended to be where the Acadians had been boarded onto the ships, moving it has strengthened the authenticity of its location and setting. All the memorials are located next to the dykelands.

The words of John Frederic Herbin summarize the original idea of where to place the different memorials. With the exception of the Statue of Evangeline, all the memorials are located where he envisioned them:

> The proposed restoration of the Memorial Park will consist of buildings to be erected by the Acadians upon the site of the St. Charles’ Church. A statue of Evangeline on a stone base with bronze tablets will be erected on the space between the stone cross and the old well. Roads, walks, flower beds and structures to mark the various spots, will add to the attractiveness of the place.

Herbin’s vision confirms the importance of the connection between the memorials, the location of the historic Grand Pré, and the dykelands as essential to maintaining the authenticity of the place for the Acadians.
Authenticity in spirit and feeling

The spirit of the Landscape of Grand Pré is best described by its agricultural identity and its symbolic character as the spirit of Acadie, and a place of contemplation and identity. Both are omnipresent when one arrives at Grand Pré. The authenticity of the sense of place, including both layers of meaning, is strong and true (see Figures 3–30 and 3–31).

3–30 Acadian students, in Nova Scotia, participated in an art contest, in 2010, to express what Grand Pré meant to them.

3–31 Local students participated in an earlier 2010 art contest to express what Grand Pré meant to them.
The landscape has retained the agricultural character that the Acadians created along with the dykelands in the 17th century. Its character is the result of the landscape’s ongoing use for agriculture and of the community’s strong attachment to its farming tradition and land. Local people are proud of this agricultural identity, because they continue to achieve great productivity while meeting the ongoing challenge of protecting the land from the highest tides in the world. The place’s character has inspired travellers and artists for centuries, as can be seen in the many descriptions and iconographic representations of the Landscape of Grand Pré (see Figures 3–32 and 3–33).

Elizabeth LeFort, a well-known Canadian hooked-rug artist, completed a hooked rug of the Memorial Church and Statue of Evangeline in 1955. In 1968 it was presented to French President Charles De Gaulle.

Its agricultural spirit is also inseparable from the sense of place experienced by the Acadians, one that idealizes the paradise lost after the Deportation, and an important element of the symbolically reclaimed landscape. John Frederic Herbin, when he envisioned the creation of the memorial park in the early 1900s, clearly saw the connection between the memorials that would soon be erected and the agricultural setting as intrinsic to the sense of place:

[...] From there the great stretch of the Grand Pré lies as a monument of unremitting labour.

Herbin’s vision was consistent with the creation of the symbolic landscape anchored in a place of history, one that would commemorate a tragedy and celebrate the return of the Acadians on the land they were forced to leave:

...The Grand Pré memorial field is the outstanding historical landmark most closely associated with the occupation of the Acadians of this country for seventy years. The Grand Pré burying ground, with the church land, have reverted to the descendants of the exiled people.

The location connects the people with their ancestors and their story. From that connection emerges the sense of sacredness that the Acadians experience in the Landscape of Grand Pré. No structures or buildings from the Acadian period remain, and their absence is a powerful reminder of the Deportation’s impact on the people, reinforcing their connection to the land that was lost. The sense of place tied to the Acadian settlement and the importance of the people’s collective memory are embodied in the expressions of enduring emotional, spiritual, and artistic connection with Grand Pré (see Figure 3–34). This sense of place is evident in the ongoing references to the Landscape of Grand Pré in songs, paintings, novels, plays, and other forms of cultural expression. It is alive as a symbol that is present outside the boundaries of the nominated property (see Figure 3–35).
The Deportation Cross, first erected in Grand Pré, has become a symbol of Acadians worldwide. Here it stands in St. Martinville, Louisiana.

The spirit of Grand Pré is alive in the Acadian community. When asked about the significance of Grand Pré, Acadians use such words as homeland, identity, hope, and pride. The following testimonial from Ronald Bourgeois, an Acadian singer-songwriter from Nova Scotia, powerfully illustrates the spirit of Grand Pré for the Acadians:

Il existe pour tous les peuples du monde, un lieu sacré, propre à chacun, dont l’existence dépasse son importance historique et s’insère dans la conscience collective. Pour le peuple acadien, Grand-Pré est un tel lieu.

Grand-Pré est beaucoup plus qu’un endroit qui raconte l’histoire de cet acte dévastateur que fût la déportation.
de 1755. C’est dans ce paysage pastoral de grande beauté que vibrent les vestiges du grand rêve du peuple acadien. Ce rêve brûlant dans le cœur de chaque homme, femme, enfant, famille, le rêve de bâtir sur ces terres une vie où tout était possible.

À Grand-Pré, j’entends toujours le rire des enfants perdus dans le temps.

À Grand-Pré, je sens l’amour d’une mère pour ses enfants.

À Grand-Pré je marche dans les pas de mes ancêtres et je sais que c’est ici, sur cette terre, que je suis complet. C’est ici sur cette terre que je sens de façon viscérale qui je suis, d’où je viens et que j’appartiens à quelque chose de beaucoup plus grand. À Grand-Pré, je fais partie du cercle de la grande famille acadienne.

À Grand-Pré je suis chez moi, je ne suis plus seul.

À Grand-Pré, je suis Acadien.

(Translation: For all the peoples of the world, there exists a sacred place, unique to each, whose existence surpasses its historical importance and permeates the collective consciousness. For the Acadians, Grand Pré is such a place.

Grand Pré is far more than a place that recounts the story of the devastation that was the Deportation of 1755. It is here, in this pastoral landscape of great beauty, that the vestiges of the great dream resonate in the Acadian people. This dream, burning in the heart of every man, woman, child, family – the dream of building a life on the land where anything was possible.

At Grand Pré, I always hear the laughter of children lost in time.
At Grand Pré, I feel the love of a mother for her children.
At Grand Pré I walk in the footsteps of my ancestors and I know that it is here, on this ground, that I am complete. Here on this ground that I feel viscerally who I am, where I come from, and that I belong to something much larger. At Grand Pré, I am part of the circle of the great Acadian family.

At Grand Pré I am home, I am no longer alone.
At Grand Pré, I am Acadian.)

Bourgeois speaks of a deep connection with the land, which allows him to have a sense of identity and of belonging to a community. His words express no bitterness, sorrow, or desire for revenge. Instead, they express great pride in having overcome the challenges that history threw at the Acadian people.

The words of another Acadian, a Cajun from Louisiana thousands of kilometres away from Grand Pré, echo these feelings. Singer-songwriter Zachary Richard says:

Au cœur de [l’histoire de Grand-Pré] est l’intolérance et la résistance à l’intolérance. […] être Acadien est d’avoir le pardon dans son cœur. Grand-Pré s’aligne absolument dans cet esprit de réconciliation.

(Translation: At the heart of [Grand Pré’s history] is intolerance and the resistance against intolerance. […] To be Acadian is to carry forgiveness in your heart. Grand Pré is aligned absolutely with this spirit of reconciliation.)

Yet another Cajun expresses his connection to Grand Pré and to his community in terms of the values that both the place and his people’s history embody. Warren Perrin, a lawyer and president of the Council for the Development of French in Louisiana, says this:

J’ai un attachement viscéral à cet endroit qui a connu le meilleur et le pire de la nature humaine et qui demeure intacte. […] [Grand-Pré représente] l’indomptable esprit humain.

(Translation: I have a visceral attachment to this place which has known the best and the worst of human nature and remains intact. […] [Grand Pré represents] the indomitable human spirit.)
The experience expressed here is survival, the desire to overcome adversity. Grand Pré symbolizes the tragic event of the Deportation as well as the renaissance of the Acadian people, commemorating the negative and celebrating the positive. Those two elements are inseparable here. Acadian songs, literature, and works of art about Grand Pré include the song *Grand Pré* by Angèle Arsenault, a singer-songwriter from Prince Edward Island, Canada, from which this excerpt is taken:

Grand Pré, je ne veux pas vous faire pleurer
Grand Pré, mais je ne peux pas oublier
Grand Pré, que mes ancêtres étaient Français
Et tout ce qu’ils voulaient c’est vivre en paix
Grand Pré, nous n’étions que quelques milliers
Grand Pré, nous n’avons pas abandonné
Grand Pré, aujourd’hui nous pouvons rêver
Trois millions d’Acadiens et d’Acadiennes continuent à chanter
Nous avons survécu
Nous sommes les invaincus
Nous nous sommes relevés
Nous avons triomphé
Nous connaissons la guerre
La faim et la misère
Mais nous n’avons ni frontière
Ni haine, ni regard en-arrière
Nous marchons droit devant
Vers le soleil levant
Fiers de notre héritage
Pralant notre langage
Marchant à notre pas
Chantant Alléluya
Enfants de l’Acadie
Notre histoire nous a grandi
Notre histoire n’est pas finie.

*Translation:* Grand Pré, I do not wish to make you weep
Grand Pré, but I cannot forget
Grand Pré, that my forbears were French
And all they desired was to live in peace
Grand Pré, we were but a few thousand
Grand Pré, we have not forsaken
Grand Pré, today we can dream
Three million Acadians continue to sing
We have survived
We are unvanquished
We have arisen once again
We have triumphed
We have known war
Hunger and misery
But we have neither borders
Nor hate nor backward glance
We walk straight ahead
Toward the rising sun
Proud of our heritage
Speaking our language
Walking at our own pace
Singing Hallelujah
Children of *Acadie*
Our history has made us grow
Our story has not ended.

Grand Pré is a place of human experience. Its story begins with the forcible removal of a people, followed by survival, a yearning for returning to one’s homeland, and a collective determination in the face of adversity. That human experience is present at Grand Pré and demonstrates its authenticity.

These are but a few of the many testimonials collected over the past year. Many more are provided in Appendix 10G, and on the Nomination Grand Pré website, from Acadian artists, authors (see Figure 3–36) and other members of the community.
Quand l’Acadie est rentrée d’exil, à la fin du 18e siècle, elle a mis le cap sur Grand-Pré. Mais Grand-Pré était désert, brûlé et désert, depuis le jour fatal de septembre 1755. Par superstition ou par crainte de Dieu, on n’avait pas osé s’y installer, personne. On avait laissé là, abandonné aux goélands et aux herbes sauvages, ce bourg jalili si animé et prospère de la rive française appelée Baie du Fond.

Comme un cimetière antique...
Comme un berceau à la dérive...

L’Acadie restait là, tel un sphinx de pierre devant les décombres, murmuran pour elle seule des mots qui s’inscrivaient à mesure dans le firmament. Cette Grand’ Prée qui n’était point pour ses enfants ne serait point non plus pour les enfants des autres. Personne n’y ferait son nid, jamais... jamais.
Puis levant la tête et le poing au ciel, la vieille Arcadie, paradis perdu surgii de ses cendres, hucha aux générations à venir : Vous y reviendrez en pélerinage pour y fleurir les tombes de vos aïeux.

Je le dis à tous les LeBlanc, les Bourque, les Bourgeois, les Landry, les Cormier, les Giroué, les Belliveau, les Allain, les Maillet... à tous les enfants du pays qui durant dix ans ont remonté les côtes d’Amérique à pieds, en goélettes ou en charrettes à bœufs, ne touchez point à la Grand’ Prée, mais gardez-en mémoire au fond des cœurs et des reins.

Et dans la poche de son devanteau, l’Acadie renaissante a enfoui des mots, mots anciens avenus à cru de la goule de ses pères... et qu’elle ne voulait pas laisser en hairage à des gots étrangers. Elle y enfoui des légendes et des contes merveilleux, horrifi ques ou facétieux; elle y enfoui des croyances et coutumes enfîlées à son cou tel un bijou de famille qu’elle passerait à son tour à ses descendants; elle y enfoui l’histoire de son peuple commencée deux siècles plus tôt, puis ballottée aux quatre vents, et laissée moribonde dans le ruisseau... jusqu’au jour où un jongleur la ramasserait, et la ravigoterait, et la rentrerait de force au pays... Et l’Histoire, qui avait cru déchirer la page où s’était inscrit le nom de Grand-Pré, n’y pourrait rien. La petite histoire, butée, orale et sournoise, aurait le dernier mot.

Antonine Maillet
Authenticity in traditions, techniques and management systems

Community-based management

The agricultural system in place in Grand Pré has been recorded since the late 18th century through the minutes of the Grand Pré Marsh Body, the oldest and most active marsh body in North America. While the reference to the organization through its elected chair, known then as the Commissioner of Sewers, has changed to refer to the entire body, its structure, roles, responsibilities, and authorities have not changed. This is evident in the minutes of the Marsh Body as well as through the enshrining of the role of the Marsh Body in legislation in Nova Scotia as early as 1760. The provincial government is now responsible for maintaining the dykes, while the landowners have the predominant role in maintaining appropriate internal drainage, roads, and the internal condition of the dykes. The collaborative approach and shared landowner responsibility in maintaining the dykelands continue a tradition that began with the Acadians. This management approach, an essential component of the maintenance of this polder and its agricultural system, has the highest level of authenticity expected.

Farming techniques have evolved over time, and farmers now apply modern technology and materials for farming and dyking. The Grand Pré Marsh Body is recognized as one of the most progressive marsh bodies in Nova Scotia and one that is most aware of the importance of applying the appropriate farming technique. An important evolution, starting in the 1970s, was to apply landforming drainage techniques. This involves shaping the surface of the land to allow better and faster drainage towards ditches that run along the fields and into the creeks. The introduction of modern machinery made this technique possible. Landforming has maintained the traditional field pattern and the natural drainage patterns that are distinctive features of this landscape. Using this technique is consistent with the farmers’ centuries-old search for drainage improvements that do not alter the physical characteristics of the landscape, thus maintaining a high degree of authenticity.

3 d.ii. Integrity

Integrity is a measure of the wholeness and intactness of the cultural heritage and its attributes. The nominated property fulfills the conditions of integrity as set out in the Operational Guidelines.

It includes all elements necessary to express its outstanding universal value, is of adequate size to ensure the complete representation of the features and processes that convey the property’s significance, and does not suffer from adverse effects of development or neglect or both.

Incorporates all elements needed to express the outstanding universal value

As an agricultural landscape characterized by an ingenious polder system in an exceptional coastal environment, the Landscape of Grand Pré exhibits integrity of the polder system, land tenure, land management, dykeland use, and settlement pattern. The landscape has maintained the integrity of its polder system. The dykelands in the nominated property exhibit the characteristics of a polder system that reflects an adaptation to exceptional environmental conditions. The aboiteau is the only technology applied to drain water from the fields. The aboiteaux that were abandoned as they became inoperable have, for the most part, been left in place. New aboiteaux were built over the years on top of or next to abandoned ones. Occasionally, abandoned aboiteaux are uncovered during ditch maintenance work.

The natural creeks are the main outlets to evacuate water collected from small ditches in the fields towards the aboiteaux. Earthen dykes are the only form of dyke walls built in Grand Pré. The line of dykes has moved over time in response to the pressures from coastal erosion and tidal forces. The archaeological remains of the earlier dykes remain in place, mostly beyond the boundaries of the nominated property. The land tenure and land management also display integrity. The entire dykelands included in the nominated property are under individual ownership and communal management. An organization of landowners, the Grand Pré Marsh Body, ensures the
community-based management of those lands and has authority to discuss as a group the matters of common interest such as roads, drainage, and dyke maintenance. The entire dykelands included in the nominated property are used for agricultural purposes with the exception of the single public road and the roads used by farmers to access their fields (see Figure 3–37).

3–37 Grand Pré Road is the only public road that runs through the dykelands of Grand Pré.

The polder system, the land tenure, the land management, and the land use together demonstrate the integrity of the principles that created that agricultural landscape in the 17th century and that have been maintained since then. The settlement pattern, as illustrated by field patterns and spatial organization, reflects those principles and has retained its integrity. The organically shaped field pattern on the dykelands reflects the adaptation to the natural physical environment of the salt marsh transformed into farmland. They follow the natural contours of the topography and depend on the location and flow of the creeks that drain the marsh naturally. The integrity of the relationship between the agricultural community’s work space on the dykelands and living space on the uplands has been maintained. There are no dwellings on the dykelands. In addition, the nominated property contains evidence of the presence of the French seigneurial settlement pattern, the British town plot, the Acadian settlement, and the contemporary settlement. This evidence is primarily demonstrated through field patterns, roads, and archaeological remains that are clearly visible in aerial photographs and the use of LiDAR technology. The presence of these in the Landscape of Grand Pré completes the characterization of the agricultural landscape.

As a symbolic landscape, the nominated property includes the location traditionally known as the heart of the pre-Deportation Acadian settlement of Grand Pré, all the memorials erected since the early 20th century by the Acadians, as well as the dykelands. These are all locations of importance to the Acadians. Their continued use, through events, pilgrimages, and other forms of social connection, demonstrates the integrity of the intangible connection.

Adequate size to ensure complete representation

The tangible features that convey the outstanding universal value of the Landscape of Grand Pré consist of elements of the polder system (dykes, creeks, aboiteaux), archaeological evidence, settlement patterns (field patterns, roads), and memorials. In addition, intangible features include the community-based management of the dykelands. These features complete the characterization of the agricultural landscape and the Acadian use of the memorials. The size of the nominated property ensures that all these tangible and intangible features are completely represented.

The vast majority of the dykeland under the authority of the Grand Pré Marsh Body is included in the nominated property. It encompasses the entire area initially dyked by the Acadians, including the potential remains of the first dykes and aboiteaux, and most of the area dyked since then. It clearly and convincingly exhibits the polder system, the agricultural use, and the community-based management approach.

The nominated property captures with integrity the heart of the traditional four settlement periods in Grand Pré. The entire intact area that is presumed to illustrate the French seigneurial pattern, with its distinctive elongated field pattern along the main water
The historic roads forming the town plot are intact and are all included in the nominated property. They are visible either on the ground or through the use of LiDAR technology. The historic Old Post Road is included as the main road connecting the historic settlement of Grand Pré/Hortonville with the rest of Nova Scotia. It is intact in its length and footprint. Historic access and circulation roads on the marsh are included and are intact.

All the memorials are included within the nominated property.

Absence of adverse effects from development and/or neglect

The nominated property does not suffer adverse effects from either development or neglect. The dyked lands included in the nominated property are protected under the Agricultural Marshland Conservation Act of the Province of Nova Scotia (Appendix 3F), and the municipal zoning protects the land for agricultural use. Any proposal that would change their use would require zoning changes and a request for exemption under the Agricultural Marshland Conservation Act. In addition, the dyked lands are entirely and intensively used for agricultural purposes and are managed communally by the Grand Pré Marsh Body, which ensures that they do not suffer from neglect. Finally, the dyked lands are not accessible to the public since they are for the most part private property and actively farmed. Signs and, in certain locations, barriers are used to alert the potential visitor.
Chapter 4

It’s an area of hope for people... The Acadian people come here and remember and treasure it; it helps to build their community and gives us hope all for the future that we can be recognized, and be seen as equals and have our own individual stories.

Peter Herbin, local resident and descendant of the founder of the memorial park, that would become the national historic site
4.0 State of Conservation and Factors Affecting the Property

4.a. Present state of conservation

Six different authorities are responsible for different elements of the nominated property. Information on the present state of conservation of the nominated property is therefore derived from these sources and their monitoring programs. The authorities and their responsibilities are listed in Table 4–1, below.

Table 4–1 Grand Pré authorities and responsibilities
Professionals within each agency or department performed the condition assessments. For ease of reporting, the regulatory authorities developed a single rating scale (good–fair–poor) to assess the condition of the various attributes. Table 4–2, Rating for condition assessments, defines these terms.

<table>
<thead>
<tr>
<th>Rating</th>
<th>Definition</th>
</tr>
</thead>
</table>
| Good   | Near ideal condition.  
         | No risk of accelerated deterioration.  
         | Any issues can be rectified through routine maintenance. |
| Fair   | Normal condition.  
         | Little or no risk of accelerated deterioration.  
         | Any issues can be rectified through routine maintenance. |
| Poor   | Below normal condition.  
         | Evidence or risk of accelerated deterioration.  
         | Issues cannot be rectified through routine maintenance. |

Table 4–2 Rating for condition assessments

A cross-disciplinary team of professionals assesses the condition of cultural resources at Parks Canada within the context of a Commemorative Integrity Statement. This feeds into the State of the Site Report prepared every five years. The most recent report dates from 2009 (Appendix 6C). The Cultural Resource Management Policy, the Standards and Guidelines for the Conservation of Historic Places in Canada (Appendix 4G), and various specific policies guide the development of conservation measures.

The condition of dykes is assessed by the Aboiteau Superintendent for the Grand Pré dykelands. As a staff member of the provincial Department of Agriculture, the superintendent visually assesses the conditions of dykes at least twice a year. A similar exercise is carried out to assess the conditions of the aboiteaux and the drainage outlets. Members of the Grand Pré Marsh Body also contribute by providing informal reports to the Aboiteau Superintendent. At present, the conditions are recorded on paper and reported to the departmental engineers. A database is scheduled to be in place by 2011 for the digital recording of condition assessments. Conservation measures are applied following best practices in dyke, aboiteaux, and drainage maintenance.

The condition of archaeological sites under provincial jurisdiction is assessed when a new site is discovered or at the time of an impact assessment. Sites are otherwise presumed to be in good condition. The development of conservation measures is guided by the Nova Scotia Special Places Protection Act (Appendix 3K) as well as the Standards and Guidelines for the Conservation of Historic Places in Canada (Appendix 4G).

Roads under provincial jurisdiction are assessed by the Department of Transportation and Infrastructure Renewal for their ability to accommodate a normal volume of traffic.

The availability and condition of agricultural land are assessed by the planners of the Municipality of the County of Kings as well as by the Department of Agriculture.

The Grand Pré Marsh Body can provide additional information on the condition of roads, drainage, and on agricultural use.

Summary of Present State of Conservation

The overall present condition of the nominated property is deemed to be good. Various policies are in place to guide conservation (see Chapter 5), most referring to best practices to carry out conservation and maintenance work, such as on the dykes and roads. The coordinated management of the nominated property, through a common management and the governance structure, will enhance each agency’s ability to deliver comprehensive conservation measures for all types of resources and ensure integrity of the nominated property.
4.b. Factors affecting the property

The factors that can affect the nominated property’s outstanding universal value are related to development pressures, environmental pressures, and visitor and tourism pressures.

4.b.i. Development pressures

Sustainability of Agriculture

The nominated property is a living agricultural landscape, expressed by the enduring agricultural relationship of local communities with the dykeland, and the maintenance of the fertile farmland created from transformed wetlands. The maintenance of an agricultural economy is key to the conservation of the property. For the agricultural landscape of Grand Pré to be preserved and to survive, there must be farmers, and there must be continuing possibilities for agriculture to develop in step with the times. At the same time, agricultural development must proceed hand in hand with conservation of the unique natural and cultural values existing within the nominated property.

Grand Pré and its surrounding communities are a vibrant agricultural community where modern agriculture is practised. However, like many agricultural communities, it is under pressure from changing demographics, loss of agricultural land to development, and economic realities (see Figure 4–1). Agricultural land in Grand Pré is valuable for its scenery and its importance to tourists and tourism-related businesses, such as farmers’ markets and wineries. Agriculture also supports the local economy through food production, value-added processing and agri-tourism.

As a result of changes in the agricultural economy over the years, some farm buildings have been abandoned or are being reused. In general, though, farmers have adapted their buildings to their needs. Local demographics indicate that most residents are between 40 and 60 years of age and that households are getting smaller. This information supports anecdotal information provided by local farmers about the future of their industry. They are concerned that younger generations are not interested in pursuing farming activities, which puts the agricultural economy’s future at risk. Moreover, most new residents are individuals who retire in Grand Pré to enjoy the rural setting while being close to amenities provided by the Wolfville–Coldbrook Development Corridor or even Halifax. Few of the new arrivals actively participate in the agricultural economy.

The number of landowners on the dykeland has decreased over the years, although no land has been left unattended. For the remaining landowners, the burden of responsibilities in maintaining the dykeland increases. This may create an issue of long term capacity to provide the financial and human resources to maintain an effective Grand Pré Marsh Body and implement its role in maintaining the dykeland, thus altering the relationship between the Department of Agriculture and the Marsh Body.

Although most of the land is part of an agricultural district, some exceptions allow for the development of structures that are not related to farming. While the conditions in Grand Pré are ideal for farming, certain pressures make the future of farming in Grand Pré, as in other parts of Nova Scotia, uncertain. In addition to concerns about where the next generation of farmers will come from, farmers
are under pressure from land-use conflicts between agricultural and residential uses. Farmers are also subject to the whims of the market: fluctuating agricultural prices make it difficult for them to ensure a stable income. These problems are not unique to Grand Pré.

The County of Kings has the most agriculturally based economy in Nova Scotia. As reported in the 2001 census, the county’s agricultural labour force numbers 2100, with an additional 2200 employed in agriculture-related activities. This local industry represents 30 per cent of the agriculture and 50 per cent of the agriculture-related manufacturing for Nova Scotia. The overall farming capability of the County of Kings is large relative to its modest agricultural land base. The total farm production per capita is 2 ½ times the national average.

Grand Pré’s agricultural economy revolves mainly around the production of milk, meat, and fruits. Crops grown in recent years on the dykeland include corn, salt hay, soy, alfalfa, oats, and winter and spring wheat. In the past, the area was renowned for its orchards, mainly apple, but over the past two decades, that industry has decreased in importance. Current expanding industries include grape growing for wine making (in the buffer zone), and cattle raising, mainly for milk production. Profitability in these crops, in milk production, or in value-added products, is essential to maintaining the dykeland and the whole of this unique agricultural landscape.

Although no specific data exists for farmers working in and around Grand Pré, they may be faring better than others in the province, since much of their production relies on supply and demand quotas, ensuring stability.

**Densification and Use Encroachment**

Densification (the increase in building density) and use encroachment of private property on the uplands are pressures that affect the integrity and authenticity of the nominated property’s distinctive settlement pattern. This settlement pattern is characterized by particular field patterns, roads, a dispersed settlement, and an active agricultural system. Use encroachment is the intrusion of one type of land use onto land that is zoned for a different use. Since the majority of the nominated property is part of an agricultural district, densification and use encroachment affect the dykeland, the uplands, the national historic site and the archaeological resources.

Fortunately, the Agricultural Marshland Conservation Act (Appendix 3F) and its Grand Pré Marsh Body Land Use Regulations minimize the pressure of densification and use encroachment on the dykeland. According to the Act and Regulations, no development can be accommodated on the designated marshland unless a variance permit, or an exemption, is granted by the government of Nova Scotia to allow for the construction of roads, the installation of utility poles or the installation or construction of structures used for the generation of power. In addition, the dykelands are zoned O1 Environmental Open Space, allowing agricultural activities but no permanent structures unless a provincial variance is granted.

Densification can also result from permitted smaller lot sizes. On the dykelands lot sizes vary depending on location and ability to drain. Development is not permitted unless a municipal re-designation and rezoning is approved. In Grand Pré Hamlet, zoned as Hamlet Historic Residential (R9), lot size requirements are a minimum of 50 000 square feet (4645 square metres), whereas in the Agricultural (A1) zone, which includes Hortonville, lot size requirements are a minimum of 20 000 square feet (1858 square metres). However, the Grand Pré and Area Community Plan (Appendix 2J) requires a minimum lot size of 50 000 square feet for all new non-farm dwellings in the A1 Zone.

The current Municipality of the County of Kings Municipal Planning Strategy (Appendix 4D), amended in 2009, does not allow for non-farm-related structures to be built on agricultural land unless the lot was created prior to August 1994, is designated as an agricultural infill or abandoned resource-extraction site, or has poorer quality soils subject to an agrologist’s report. Agricultural infill sites are defined as lots with existing dwellings on both sides and within 400 feet (122 metres) of each other or within 400 feet of a road right-of-way. Although these lands are permitted as agricultural infill, they have limited potential for agriculture production.

Approximately 64 permanent residences lie within the nominated property: 20 in Grand Pré Hamlet and the remainder in...
Hortonville. An estimated 14 lots fall within the parameters of a pre-1904 or infill lot, representing a total potential increase in densification of 22 per cent. This percentage excludes any potential to build additional structures in areas zoned agriculture.

Densification could put pressure on archaeological sites in an area that is historically known to have been heavily populated and used in the 17th, 18th, and 19th centuries. However, community members have collaborated with archaeologists for many years in reporting, locating and identifying archaeological sites. Many have been instrumental in protecting key attributes of the nominated property, such as above-ground remains of an old Acadian dyke, Acadian and Planter cellars, Aboriginal artifacts, and old aubépines. Most of these discoveries were accidental and were found on privately owned land. To ensure that all archaeological evidence is identified, clear guidelines have been developed for the reporting of all archaeological finds on private property. These guidelines, found within the Strategy for the Management and Conservation of Archaeological Heritage in the Landscape of Grand Pré (Appendix 2B), have been endorsed by the provincial and municipal authorities and Parks Canada Agency. Information will be provided to local residents on reporting and protecting archaeological evidence.

Use encroachment mainly takes the form of agricultural uses encroaching on road rights-of-way that are no longer in use. This is particularly apparent in Hortonville’s town grid. Maintained roads are protected, however, because they are public. Agricultural zoning now prevents any future densification that might result from use encroachment.

**Alternative Energy Sources**

The flat dykelands of the Grand Pré landscape, coupled with winds coming off the Minas Basin, create a desirable location for wind turbines. Alternative energy sources could put increased pressure on the authenticity and integrity of the nominated property. The area is identified on Nova Scotia’s wind-resource map as having moderate potential for the installation of utility-sized wind turbines. At 80 metres (262 feet) above ground level (AGL), the average wind speed is calculated at approximately 6.5–7.0 metres per second (m/s) (21.3–23.0 feet/second); at 50 metres (164 feet) AGL, the average wind speed is approximately 6.0–6.5 m/s (19.7–21.3 feet/second); and at 30 metres (98.4 feet) AGL, the average wind speed is approximately 5.5–6.5 m/s (18.0–21.3 feet/second). Large utility-sized wind turbines are between 40 and 80 metres (131–262 feet) in diameter, with tower heights of up to 100 metres (328 feet). To create a viable operation, a wind farm would require a large number and concentration of turbines. At present, the Grand Pré and Area Community Plan (Appendix 2J), allows only small-scale wind turbines in the nominated property, forbidding the construction of large-scale wind turbines. Small-scale turbines are less than 52 metres (170 ft) in height and produce less than 100 kW.

While this may be an attractive location for energy companies to generate alternative energy, no such proposals are currently being considered.

The use of tidal power is another major alternative source of energy being explored in the area. Nova Scotia Power and the government of Nova Scotia have been testing the tidal power potential of the Minas Basin by placing turbines at the bottom of the basin in an area close to Parrsboro, about 20 kilometres north of the Landscape of Grand Pré. Increased siltation in the region may be an impact from the turbines; however, the extent of siltation and other impacts are unknown and require further study.

4.b.ii. Environmental pressures

**Coastal Change and Rising Sea Levels**

Coastal change and rising sea levels are constant environmental pressures exerted on the nominated property, affecting mainly the dykes and shoreline along the east and west sides of the nominated property, as well as the north shore in the buffer zone. A coastal change study completed in 2010, Overview of Coastal Change Influences on the Landscape of Grand Pré (Appendix 6E), confirmed that coastal change, including coastal erosion and coastal regeneration, is occurring around the nominated property and buffer zone.
The nearly 13 kilometres of coastline, composed of geological materials that erode easily, such as sand, shale and gravel, are subjected twice a day to the highest tides in the world. Because of the range of the tides and the height of waves during storms, coastal change is a continuing concern and presents a significant risk to the local economy and cultural resources on the nominated property. Various mitigation strategies have been used to minimize the effects of coastal change, particularly erosion; however, the effects cannot be completely eliminated. Dykes have been maintained to ensure their stability and integrity, and shorelines, in some cases, have been protected by building rock faces.

Archaeological evidence indicates that many of the original dyke walls are buried under 1.5 to 1.8 metres of sediment, a testament to the steady rise in sea levels and alteration to the coastline. An average of 15 metres (50 feet) of shoreline erosion occurred along the North Grand Pré coastline between 1961 and 2002 according to aerial comparisons, with coastal erosion ranging from 0.3 to 68.4 metres (0.97 to 224.34 feet). Furthermore, on Boot Island, an average annual decrease of shoreline over two-year intervals was recorded from 1990 to 2008 at a rate of 0.34 to 0.85 metres per year (1.11 to 2.79 feet per year). Although coastal erosion is taking place along the east and west sides of the marsh, there is evidence of salt marsh regeneration. Salt marsh regeneration is a natural occurrence, but scientists do not fully understand the process. Map 7: Coastal Change in the Nominated Property and Buffer Zone illustrates the coastal changes.

With sea levels anticipated to rise 70 to 140 centimetres over the next century, and with more intense storm surges expected, it is anticipated that the dykes bordering the Grand Pré region will need consistent maintenance to minimize the hazard of dam breaches and to ensure that the dykelands contribute to the economic and cultural climate of the Grand Pré region. However, topping up the dykes increases their weight, and the added weight makes them slowly sink over time.

Coastal change is not fully understood. Additional studies are underway on the effects of coastal change in the area and on the effects of the various protection mechanisms in place. Continual monitoring and maintenance of the dykes are expected to reduce the negative effects of coastal change.

4.b.iii. Natural disasters and risk preparedness

The nominated property is vulnerable to strong storms throughout the year. During hurricane season, which typically extends from June to November, the Province of Nova Scotia is sometimes in the path of tropical storms. The main risk is for the nominated property to be flooded as a result of a combination of exceptionally high tides and strong winds or as a result of dyke failure. Should the nominated property flood, the land would be rendered unusable for agriculture for up to three years. If that were to happen, farmers would require support from federal and provincial agriculture programs designed to assist farmers in repairing any damage. Any damage to the dykes is the responsibility of the provincial government. The Aboiteau Superintendent visits the nominated property following severe storms to assess and repair the dykes if needed.

Fire is another natural hazard. The risk is mainly to the Memorial Church.

Roles, Responsibilities, and Coordination in the Event of a Natural Disaster

Risk preparedness is a shared responsibility among several jurisdictions. The Municipality of the County of Kings has an Emergency Response Plan (Appendix 4F) managed by its Emergency Management Coordinator (EMC), in accordance with the Province of Nova Scotia’s Emergency Management Act (Appendix 3I). In the case of an emergency, the municipality is the first responder. It may request assistance from the provincial Emergency Management Office if the severity of the emergency requires it. The EMC focuses on protecting lives and personal property.

In case of dyke rupture or flooding of the dykelands, the Department of Agriculture implements its own emergency preparedness plan that addresses the main priorities and resources that need to be considered during such an event. The Municipality of the County of Kings’ EMC is the first responder and would coordinate with the Department of Agriculture to consolidate the dykes. The priority of the Department of Agriculture is to protect the dykes and the farmland.

Map 7
Financial assistance is available to those farmers whose fields are affected. Depending on the severity of the damage, financial assistance may come from the Province of Nova Scotia or from the federal government.

Parks Canada is responsible for protecting the memorials since they are all located on Parks Canada administered land. The agency has protocols and tools in place to react to fires. These include a direct line to the local fire department, fire alarms, and fire-suppressant mechanisms in the visitor centre and in the Memorial Church. In addition, the memorials have been recorded to provide information in case they should need to be repaired or rebuilt. The local fire department is responsible for coordinating the response.

**Principles for Mitigating Risk**

A framework for managing natural disasters has been prepared. It outlines roles, responsibilities and procedures to mitigate the risks and effects of such disasters. These roles, responsibilities and procedures have already been agreed to by jurisdictions responsible for natural disaster response on the nominated property.

Multiple jurisdictions have authority to manage the consequences of a natural disaster depending on its severity: Société Promotion Grand-Pré, Parks Canada, Grand Pré Marsh Body, Municipality of the County of Kings, and the Nova Scotia Department of Agriculture. A number of principles have been prepared to help guide their preparation, intervention, and recovery actions.

These principles include the following:

- Preparedness will focus on providing additional protection against the main risks to the key attributes of the nominated property that support the outstanding universal value. Preparedness will also integrate relevant heritage considerations within the overall disaster-prevention strategy.
- Training will be provided to jurisdictional managers and emergency-management officers on the nominated property’s outstanding universal value, key attributes, and conservation considerations.
- During responses, every effort will be made to maintain the integrity of the key attributes.
- Recovery actions and mitigation activities will maintain the integrity and authenticity of the key attributes linked to the outstanding universal value.
- Regular review and update of response plans will ensure that adequate strategies are in place.
- The response plan is conceived in terms of the whole property and provides integrated concern for the structures, the archaeological sites, and the landscape features.

**Key Elements of Risk Preparedness**

Emergency management focuses on the before, during and after of particular events. Therefore, in effect, risk preparedness is one aspect of emergency management.

In the case of the nominated property, the natural-disaster management framework provides the broad strokes of preparedness, response, and recovery actions. It focuses strictly on managing these with relation to protecting the nominated property’s outstanding universal value and key attributes, and addresses some elements of visitor management.

4.b.iv. Visitor and tourism pressures

Visitor and tourism numbers are not expected to increase substantially and are therefore not considered a significant pressure on the nominated property. According to the study commissioned by Nomination Grand Pré in 2009, *Grand Pré: An Economic Impact Assessment of a UNESCO World Heritage Designation* (Appendix 7B), a 6.2 per cent increase in tourism per year is expected if the nomination is successful. This figure is based on previous tourism trends at the Grand-Pré National Historic Site of Canada and other World Heritage Sites. This would put the number of visitors to just over 30,000 per year. As tourism numbers in the area were significantly higher in the late 1990s, at 62,000 visitors, the area is capable of accommodating more tourists than the projected 6.2 per cent increase (see Figure 4–2).
The national historic site has the capacity to accommodate an increased number of visitors.

Carrying Capacity

The nominated property’s carrying capacity is defined as its ability to sustain the pressure from visitors and tourism-related activities. This includes limits of acceptable change and the ability for the visitor to experience the nominated property’s important attributes without harming them, or without the tourism-related services affecting them. Based on the 2010 *Tourism Strategy and Interpretation Framework for the Landscape of Grand Pré* (Appendix 2E), an increase in tourism at the nominated property would have both positive and negative impacts. These impacts suggest that the area has the capacity to adapt to increased tourism activity without harming the nominated property. The 2010 Strategy suggests that there are significantly more potential positive impacts than potential negative impacts resulting from a World Heritage inscription and concludes that the nominated property is able to sustain the consequences of inscription on the World Heritage list.

Potential positive economic and cultural impacts resulting from inscription on the World Heritage List are shown in Table 4–4.

<table>
<thead>
<tr>
<th>Impact</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>Increase in visitation</td>
<td>A conservative estimate of non-resident visitation suggests that an increase of 6.2 per cent will result from a UNESCO inscription. Although modest, this increase is seen as positive.</td>
</tr>
<tr>
<td>Incremental spending onsite and offsite</td>
<td>As the site becomes a distinctive attraction, an analysis of trends projects a 20 per cent increase in the average length of stay, a 15 per cent increase in visitor expenditure as a result of additional opportunities, and an additional 3000 visitors annually to the region (the County of Kings and the surrounding area to the Town of Windsor) as a result of the inscription, with an incremental impact of another $450 000 annually. The total tourism expenditure impact in the region is projected to be close to $1 M annually, directly and indirectly.</td>
</tr>
<tr>
<td>Employment</td>
<td>Any new infrastructure, interpretation programs, and tourism services will lead to additional employment.</td>
</tr>
<tr>
<td>Local businesses</td>
<td>Although it is not likely that significant new business activity would result from the inscription based on the modest visitation increase, nevertheless the marketing cachet for the region will help local and regional tourism-oriented businesses in their marketing efforts.</td>
</tr>
<tr>
<td>Cultural preservation</td>
<td>The inscription and the interpretation of the area’s heritage will contribute to the preservation of cultural heritage.</td>
</tr>
<tr>
<td>Educational opportunities</td>
<td>Onsite interpretive programs and outreach activities will provide specific educational opportunities for the general public.</td>
</tr>
<tr>
<td>Environmental conservation</td>
<td>The inscription and expansion of protected areas through additional land acquisition and site-management controls will help preserve the natural environment.</td>
</tr>
<tr>
<td>Community pride</td>
<td>A inscription will boost community pride, which spills over into community enhancements and beautification activities.</td>
</tr>
</tbody>
</table>

Table 4–4 Economic and socio-cultural impacts
Potential negative impacts were identified related to visitor experience, the agricultural economy, the relationship of residents to the local setting and community, and resource protection and property values. The 2009 assessment concluded that these negative impacts are unlikely to occur, because the current infrastructure is capable of handling projected increases in tourism.

4.b.v. Number of inhabitants within the property and the buffer zone

The total population of the nominated property and buffer zone varies according to the season (see summary in Table 4–5). Cottagers who reside in the buffer zone during the summer, especially around Evangeline Beach, will increase the population by about 60 per cent. Population estimates for the buffer zone are based on persons per dwelling: 2.4 persons per dwelling for year-round residents and 2.0 persons per dwelling for seasonal residents. Within the nominated property, residents are considered year-round, and the estimate of 2.4 persons per dwelling is applied. The population for the nominated property and buffer zone is only an estimate, because Canadian privacy laws prohibit the collection of actual population numbers for a community of this size. The persons-per-dwelling estimate came from trends within the 2006 Statistics Canada census data.

The nominated property has an estimated 64 year-round occupied dwellings with approximately 154 inhabitants. The buffer zone has an estimated 296 year-round occupied dwellings with an estimated 710 residents. Additionally, 67 seasonally-occupied dwellings and 130 seasonal trailers are within the buffer zone, increasing the seasonal population by an estimated 394 inhabitants. In total, the population for the nominated property and buffer zone is approximately 1258.

Table 4–5 Details of the population of the nominated property for the year 2006
Chapter 5

It’s a sacred trust... we have a piece of land that holds the last remaining bit of French dyke, and on penalty of death they are never to plough that land under and as long as the Curry people own that piece of land, it will remain there.

Betty Curry, wife and mother of dykeland farmers
Canada is a federal state consisting of a national government, ten provincial governments and three territorial governments. Within each province and territory, there are numerous municipalities, each with a local government. In this context, responsibility for cultural heritage conservation in Canada is shared among these three levels of government. Specifically, the federal government is responsible for the protection and management of the cultural heritage resources that it owns, for example national historic sites managed by Parks Canada or heritage buildings owned by government departments. Provincial and territorial governments have responsibility for legislating the protection and management of cultural heritage resources within their jurisdictions and for regulation of private property, including property with particular heritage value. Municipal governments have the authority to regulate and manage planning and development at the local level, within the context of relevant provincial or territorial legislation, which provides the municipal government with the ability to shape heritage conservation locally.

In recognition of this reality, the relevant federal, provincial and municipal government entities with responsibilities for the nominated property, along with key stakeholders and partners, have developed appropriate measures for the protection and management of the nominated property. They have signed a Memorandum of Understanding on the Governance of the Nominated Property (Appendix 2G) that ensures cooperative management of the property and creates a Grand Pré World Heritage Site Stewardship Board that will act as the site manager if the nominated property is successfully inscribed on the World Heritage List. Further, they have jointly developed a management plan for the nominated property (see section 5.e.) that provides an overarching framework to guide their work in protecting and interpreting the nominated property. Each regulatory authority with jurisdiction in the nominated property retains the ultimate authority to make decisions about activities and plans that apply to the nominated property. The Memorandum of Understanding confirms the commitment from these regulatory authorities to support the principles and goals of the management plan for the nominated property and to work together with the Grand Pré World Heritage Site Stewardship Board to protect the property’s proposed outstanding universal value.

The mandate of the Stewardship Board, as described in the Terms of Reference - Grand Pré World Heritage Site Stewardship Board (Appendix 2G), is to ensure a coordinated management approach between all jurisdictions, provide technical advice on the protection of the property’s outstanding universal value, promote the property’s outstanding universal value, engage the stakeholders in the stewardship of the property, and coordinate the reporting on the property’s condition. The regulatory authorities agree, through the terms of the Memorandum of Understanding which creates the Stewardship Board, to provide mechanisms to consult and receive recommendations from the Board on issues pertaining to the management of the World Heritage Site and on means to protect its outstanding universal value.

The Stewardship Board will be composed of residents, Acadian representatives, representatives from the three levels of government, and other representatives of stakeholders or communities of interest. The Stewardship Board will be assisted in its work by a Secretariat and a Site Management Coordinator whose mandate is to coordinate the management of the nominated property. The Stewardship Board will rely on three sources of expertise to provide advice on matters of protection, promotion, and education. The first is a Technical Advisory Committee, which will provide professional advice on matters pertaining to the protection of the dykelands and of the memorials. The second is the Education and Marketing Committee, which will provide direction and coordination between partners for matters
relating to interpretation, promotion, marketing, and education. The third will be a variety of outside sources of expertise in government agencies, non-governmental organizations, and consultancies when required.

The Stewardship Board will operate under a 10-year vision described in the Strategic Plan – Grand Pré World Heritage Site Stewardship Board (Appendix 5A), reviewed every five years, with yearly reports on conditions and activities.

Community members, local residents, and Acadians have all embraced the World Heritage nomination process. They have led the process through their participation in the Advisory Board for Nomination Grand Pré, by contributing to working groups, and by sharing insights into agricultural life in Grand Pré and the significance of the landscape for the identity of a people. They have shown, and continue to exemplify, commitment to the long-term protection of the nominated property.

Chapter 5 describes in detail the respective roles and responsibilities of the Parks Canada Agency, the Province of Nova Scotia, and the Municipality of the County of Kings for the protection and management of the areas of the nominated property under their jurisdiction, and the means by which they will cooperate and work with the Grand Pré World Heritage Site Stewardship Board to ensure the protection of the nominated property as a whole.

5.a. Ownership

There are four main categories of land ownership for the nominated property: Federal Crown land, Provincial Crown land, Grand Pré Marsh Body owned land, and private land. Private ownership accounts for the majority of the land at 92.63 per cent. Federal Crown land accounts for 1.92 per cent of the nominated property and consists of three sites owned by the Parks Canada Agency: Grand-Pré National Historic Site of Canada, Horton Landing (the site commemorating the Deportation of the Acadians and the arrival of the New England Planters) and the Historic Sites and Monuments Board of Canada plaque commemorating the Attack at Grand Pré in the Hamlet of Grand Pré. Provincial Crown land accounts for 3.09 per cent and consists of all roads in the Hamlet of Hortonville and Grand Pré and several roads on the dykelands. The rest of the roads on the dykelands, along with a small piece of land east of the centre of the nominated property, are owned by the Grand Pré Marsh Body. The Grand Pré Marsh Body owns 2.36 per cent of the land. Map 8: Land Ownership for the Nominated Property, Buffer Zone and Surrounding Area shows ownership in the nominated property.

The nominated property is managed under various legislation, both federal and provincial, to ensure the protection of the dykelands, agricultural use, archaeological resources, and the memorials. This complex ownership and legislative environment requires a coordinated approach to protect the nominated property. Lands with no clear ownership may be managed, depending on their location, under the authority of provincial legislation, the Grand Pré Marsh Body, and the County of Kings municipal plan.

A Memorandum of Understanding (Appendix 2G) has been signed by the federal, provincial, and municipal governments, along with local agencies to establish the governance structure for the nominated property. The property will be managed through the Grand Pré World Heritage Site Stewardship Board under agreements with the Municipality of the County of Kings, the Province of Nova Scotia, Parks Canada, the Kings Regional Development Agency, the Société Promotion Grand-Pré Inc., the Grand Pré Marsh Body, and the Grand Pré and Area Community Association. The Stewardship Board’s mandate is to ensure the implementation of the management plan through a coordinated management approach between all jurisdictions, promotion of the property’s outstanding universal value, engagement of the stakeholders in the stewardship of the property, and reporting on the condition of the property.

5.b. Protective designation

Three levels of government have jurisdiction over various parts of the nominated property. At the federal level, national historic sites owned by the Government of Canada through the Parks Canada Agency are established under the Canada National Parks Act (Appendix 3A) and protected under the Parks Canada Agency Act’s National Historic Sites Order (Appendix 3D) and its regulations. At the provincial level, archaeological sites are protected under the Special Places Protection Act (Appendix 3K), administered by the Nova Scotia Department of Tourism, Culture and Heritage. The dykelands are protected under the Agricultural Marshland Conservation Act (Appendix 3F) and its regulations, as well as by municipal zoning that prevents permanent structures. The municipal zoning bylaws, as defined in the Grand Pré and Area Community Plan (Appendix 2J), regulate activities and development on the land not covered by the Agricultural Marshland Conservation Act. The uplands are managed under the municipal bylaws, as defined in the Grand Pré and Area Community Plan. Additional provincial acts protect regions within the buffer zone, including the Beaches Act (Appendix 3G) and the Cemeteries Protection Act (Appendix 3H).

5.b.i. Parks Canada Agency Act (1998) (Canada)

The Government of Canada, through the Parks Canada Agency, owns a selected number of parcels of land within the nominated property, including Grand-Pré National Historic Site of Canada (NHSC), the site of the commemoration of the Attack at Grand-Pré, and Horton Landing. The Parks Canada Agency administers these properties under the authority of the Parks Canada Agency Act (Appendix 3D). Since these properties are owned by the Government of Canada and commemorated as national historic sites, all their elements of national historic significance, including those related to the outstanding universal value of the nominated property, are protected under federal legislation and policy. As stated, the purpose of this Act that applies to the outstanding universal value of Grand Pré is:

- to protect the nationally significant examples of Canada’s natural and cultural heritage in national parks, national historic sites, national marine conservation areas and related heritage areas in view of their special role in the lives of Canadians and the fabric of the nation;
- to present that heritage through interpretive and educational programs for public understanding, appreciation and enjoyment, both for international visitors and the Canadian public, thereby enhancing pride, encouraging stewardship and giving expression to our identity as Canadians;
- to carry out Canada’s international obligations and agreements to protect, conserve and present that heritage and to contribute towards the protection and presentation of the global heritage and biodiversity;
- to ensure the commemorative integrity of national historic sites;
- to commemorate places, people and events of national historic significance;
- to manage visitor use and tourism to ensure both the maintenance of ecological and commemorative integrity and a quality experience in such heritage and natural areas for this and future generations.
Pursuant to the *Parks Canada Agency Act* (Appendix 3D), the agency’s *Guiding Principles and Operational Policies* (Appendix 4B) provide detailed direction for the national program of natural and cultural heritage protection. The *Cultural Resource Management Policy* and the *National Historic Sites Policy* are part of the *Guiding Principles and Operational Policies*. The *Parks Canada Agency Act* requires the agency to implement them as they relate to the protection and management of protected heritage areas, including those that are included in the nominated property.

The *Canada National Parks Act* (Appendix 3A) enables the establishment of National Historic Sites of Canada (NHSC) under the *National Historic Sites Order*, in order to “(a) commemorate a historic event of national importance; or (b) preserve a historic landmark, or any object of historic, prehistoric or scientific interest, that is of national importance” (42).

The Parks Canada Agency is responsible for administering 158 NHSC. Of these 158 sites, 51 are included under the *National Historic Sites Order*, pursuant to subsections 42(1) and (3) of the *Canada National Parks Act*. This is the highest level of protection afforded to a national historic site. Grand-Pré NHSC is included under that Order, meaning that it is regulated under the *National Historic Parks General Regulations* part of that Act, the *National Historic Parks Wildlife and Domestic Animal Regulations*, and other relevant federal and provincial legislation. The Regulations allow for the management of various activities within the national historic site including the removal of historic objects, building and maintenance of services and facilities, use of vehicles within the park, and authorizations to enter the park.
5.b.iii. Historic Sites and Monuments Act (1985) (Canada)

Within the boundaries of the nominated property, four historic places of national historic significance commemorated under the authority of the *Historic Sites and Monuments Act* (Appendix 3C) are administered by the Parks Canada Agency. Within the buffer zone, there are two historic places of national historic significance commemorated under the same Act. As stated in the Act, a historic place includes “a site, building or other place of national historic interest or significance, and includes buildings or structures that are of national interest by reason of age or architectural design.”

The Grand-Pré National Historic Site of Canada and the Grand-Pré Rural Historic District National Historic Site of Canada are sites of national historic significance within the nominated property. The Covenanter Church is the only site of national significance within the buffer zone.

The Historic Sites and Monuments Board of Canada’s plaque commemorating the Arrival of the Planters at Horton Landing and the plaque commemorating the Attack at Grand Pré are locations of the commemoration of events of national historic significance. These historic places are owned by the Parks Canada Agency, but, because they are not sites as defined by the Act, only the policies relating to cultural resource management apply and not policies that apply to national historic sites.

The Special Places Protection Act (Appendix 3K) aims to provide for the preservation, protection, regulation, exploration, excavation, acquisition and study of important archaeological, historical and paleontological sites and remains, including those underwater throughout Nova Scotia. The Heritage Division of the Nova Scotia Department of Tourism, Culture and Heritage administers and enforces the Act by overseeing the protection of all sites and remains in the Province, managing the Heritage Research Permit system, and designating outstanding heritage sites as “Protected Sites.”

No part of the nominated property is designated a Protected Site under the Act. Nevertheless, the Act applies to the nominated property in terms of the protection of all archaeological and historical resources found within it, except those on federal lands. The Act states that no person shall knowingly destroy, desecrate, deface or alter archaeological or historical remains whether designated or not, unless he or she holds a heritage research permit to excavate the site. Should new construction or any modern intervention put pressure on an archaeological site, the Act requires that mitigation measures be carried out. The Act indicates that the developer may be required to cover the costs of any mitigation measures. Penalties are considered for anyone who contravenes the Act.

5–1 Archaeology on the nominated property falls under the jurisdiction of the Special Places Protection Act. This work was undertaken with a permit from the Special Places Program.

Map 11 Land Within the Nominated Property Managed under the Special Places Protection Act
(Nova Scotia)

The Nova Scotia Department of Agriculture is responsible for the application of the Agricultural Marshland Conservation Act (Appendix 3F). The purpose of the Act is to identify and protect those lands that “are subject to periodic flooding.” The Minister responsible for the Act may construct works described in the Act as "dykes, aboiteaux, breakwaters, canals, ditches, drains, roads and other structures, excavations and facilities for the conservation, development, improvement or protection of marshland to a standard appropriate for agricultural purposes.” The Act protects approximately 1220 hectares of the dyke-lands at Grand Pré.

The Agricultural Marshland Conservation Act sets out the responsibilities to create, maintain, operate, rebuild, and repair the dykes and other works. The Act establishes a Commission that advises the Minister on matters related to the conservation and protection of marshland and its development and maintenance. The Act also allows for the creation of marsh bodies whose authority and responsibilities consist of (a) acquiring, using, selling and leasing real and personal property, (b) constructing, reconstructing, reconditioning, repairing, maintaining, conducting and operating works, (c) entering into agreements with the Minister or other persons for the construction, reconstruction, reconditioning, repairing, maintenance, conduct or operation of works, (d) subject to the approval of the Commission, making rules respecting works and land within or affecting the marshland section, and (e) raising money for its purposes by borrowing or by the levying of rates pursuant to the Act.

The Cemeteries Protection Act (Appendix 3H) is administered by the Nova Scotia Department of Tourism, Culture and Heritage. It refers to any land that is set apart for the burial of human remains and includes all active and non-active cemeteries.

The purpose of the Cemeteries Protection Act is to prohibit the use of burial lands for any purpose other than burial or placement of human remains or memorialization. Pursuant to the Act, it is considered an offence for anyone to desecrate, damage, or destroy a cemetery. The Act applies only to known cemeteries; however, if remains are found outside of a known cemetery, this Act then applies. For example, if the mass grave of the British soldiers who died during the 1747 attack at Grand Pré, or the graves of the British officers, Colonel Noble and his brother, are found, then the Cemeteries Protection Act will apply to those sites.

The nominated property has one known non-active cemetery to which this Act applies. The Lower Horton Cemetery, located on the north side of Old Post Road, has approximately 25 gravestones from 1793 to 1943 inclusive. In the buffer zone, there is one active and one non-active cemetery to which this Act applies. The active cemetery is located on the south side of Old Post Road across from the Lower Horton Cemetery, and the non-active cemetery is located next to the Covenanter Church on Grand Pré Road.
The Parks Division of the Nova Scotia Department of Natural Resources administers the Beaches Act (Appendix 3G). The Act aims to protect beaches and associated dunes as sensitive environmental and recreational resources, as well as to provide regulations and enforcement of land-use activities on beaches.

No beaches lie within the nominated property; however, the Evangeline Beach, in North Grand Pré, is within the buffer zone, as are other smaller beaches along North Grand Pré and Boot Island. This Act applies to all beaches along the coast.

The Act prohibits the removal or deliberate displacement of any aggregate material from the beach including sand, gravel, stone or other material; however, the Governor in Council may make regulations granting the leases, licences and permits for the removal of any aggregate material. The Act further permits the Governor in Council to make regulations regarding the protection of flora and fauna located on the beach, to restrict or regulate traffic by vehicles, vessels and pedestrians on the beach, and to restrict certain activities from occurring on a beach. Penalties for offences under this Act range from a minimum of $50 to a maximum of $2000.

In accordance with Part VIII Section 212 of the Municipal Government Act (Appendix 3) of the province of Nova Scotia, the Municipality of the County of Kings has developed a Municipal Planning Strategy (MPS) (Appendix 4D). The MPS consists of policy statements with respect to the use of the lands within the county, the provision of municipal services, and any other matter related to the physical, social or economic development of the county. The MPS, developed in 1979, recognizes the need to accommodate growth and preserve the agricultural resource base. It was amended in 1992, recognizing that each growth centre within the county has a unique character, and provides a selection of policies and options suitable for the unique character of individual growth centres. With respect to the nominated property, there are no areas considered “growth centres.”

The Municipal Government Act of Nova Scotia permits a municipality to establish committees to undertake research and public consultation and to provide recommendations to a municipal council with respect to the adoption of planning policies and bylaws. In 2008, the Municipality of the County of Kings, in concert with Nomination Grand Pré’s Advisory Board, began the process of amending the MPS further to include specific visions and policies for the communities of Lower Wolfville, Hortonville, North Grand Pré and Grand Pré. These approved amendments are identified in the Grand Pré and Area Community Plan (Appendix 2J).

In developing the Grand Pré and Area Community Plan, the Municipality of the County of Kings worked with the Grand Pré and Area Community Association and the wider community to develop a plan that reflects the needs and desires of the community, with the objective to develop the “vision that the community has for its future in a landscape of great environmental, cultural, and historical significance” (Terms of Reference, 2008). The general policy that comes out of the Grand Pré and Area Community Plan is that Council shall be guided by the policies and vision that are identified in the Grand Pré and Area Community Plan when making decisions that impact the lands within the Grand Pré and Area Community Plan boundary. The vision statement for the Grand Pré and Area Community Plan is:

The Grand Pré and Area communities work together with a shared interest in sustaining a healthy rural setting by conserving our culture, environment, and agricultural landscape. In defined areas, the larger community provides opportunities for community growth, agriculture, the recreational use of shared open space, and local business.
5.c. Means of implementing protective measures

Three levels of government and various other authorities manage various components that make up the nominated property. Each authority has mechanisms and resources in place to review proposals, plan for them, implement activities, and monitor changes. These mechanisms will be used to ensure the conservation of the property’s outstanding universal value if it is successfully inscribed on the World Heritage List. The Grand Pré World Heritage Site Stewardship Board will play an essential role in implementing measures to manage the nominated property. Whenever it is consulted by one of the authorities, the Board will provide an overall analysis of impacts on the outstanding universal value of the property to ensure coordination among the various authorities’ mechanisms and resources.

5.c.i. Federal jurisdiction

Parks Canada Agency

National historic sites administered by Parks Canada are managed with a long-term vision through management plans. These plans are mandated by law and are required to be reviewed every five years. Management plans are approved by the Minister responsible for Parks Canada and provide the framework for decision-making on the site on issues relating to the protection of resources, education, and visitor experience. The Grand-Pré National Historic Site of Canada Management Plan (Appendix 21) is expected to be tabled in Parliament in 2011.

In addition, everyday activities and special projects are designed and carried out in accordance with Parks Canada’s Cultural Resource Management Policy (Appendix 4B) to ensure the respect and maintenance of historic values. These activities and projects are implemented with various directives, manuals, and guidelines related to archaeological resource management, impact assessments, and conservation. Interventions on cultural resources are planned and implemented by internal and contracted resources in accordance with the Cultural Resource Management Policy and the Standards and Guidelines for the Conservation of Historic Places in Canada (Appendix 4G). Impact assessments are implemented in accordance with internal directives and the Canadian Environmental Assessment Act (Appendix 3B).

The Government of Canada’s Treasury Board Policy Framework for the Management of Assets and Acquired Services (Appendix 4A) governs the management of federal assets, such as buildings. This Framework applies to the Memorial Church at Grand-Pré National Historic Site of Canada and lays out principles for managing such assets.

Parks Canada monitors and reports on the condition of its national historic sites in various ways. The Commemorative Integrity Evaluation assesses the condition of cultural resources, the effectiveness of communicating related messages, and the implementation of appropriate practices for managing cultural resources. The Visitor Experience Assessment provides insight into the different aspects of a visitor’s experience, from trip planning to onsite services and programs. Annual stakeholder reports on management-plan implementation are also prepared. Starting in 2009, and every five years after that, a State of the Site Report compiles all the available information on the site’s condition and is made available to the public.

Expert resources in archaeology, history, architecture, and planning are available internally or through Public Works and Government Services Canada to ensure the proper design and implementation of activities and structures.

5.c.ii. Provincial jurisdiction

Department of Agriculture

The Department of Agriculture’s Resource Stewardship Division has the expertise to implement the provisions of the Agricultural Marshland Conservation Act (Appendix 3F). The Division’s Land Protection Section is responsible for maintenance work on the system of tidal dykes in Nova Scotia. This Section also provides advice to dyke landowners on improving drainage systems on the dykeland (see Figure 5–2). The Department of Agriculture manages the planning for all work on dykes, aboiteaux, and drainage. The department also implements and supervises the work.
The Department of Agriculture works with landowners to improve drainage on the dykelands. Drainage is maintained by both the Department of Agriculture and the Grand Pré Marsh Body. The department oversees the maintenance of main outlet drainage. In certain circumstances, costs are shared with the Grand Pré Marsh Body through the Main Outlet Drainage Program, which has been renewed annually for the past four years. Costs can also be shared for the maintenance of roads.

The Aboiteau Superintendent for Grand Pré, one of four Aboiteau Superintendents employed by the Nova Scotia Department of Agriculture, is responsible for assessing the work that needs to be performed based on his annual site visits or following major storm events. Based on the superintendent’s verbal report, the departmental engineer allocates resources to perform the work. The engineering staff provides the department with design capacity; however, most work is contracted to private contractors. As of 2009, the departmental budget for the maintenance of all dykes in Nova Scotia is approximately $1.1 M, with $500,000 directly allocated to maintenance and repairs.

Other activities or building of infrastructure on the dykeland require a variance permit. Variances for development in a dykeland may be authorized by permit by the Marshland Administrator. However, these are rare. Permits are not issued if the development substantially interferes with drainage or other work in a way that negatively affects the existing agricultural activity or the agricultural potential of the dykeland section, or is contrary to any applicable municipal land-use bylaw or rules of a marsh body. If a variance is authorized, notice is given to the marsh body and to the municipality.

Coastal erosion is not monitored formally other than through the Aboiteau Superintendent’s annual visual assessment.

Department of Tourism, Culture and Heritage

Planning for archaeological and non-federal heritage resources falls under the authority of the Province of Nova Scotia’s Department of Tourism, Culture and Heritage. It is carried out by the Special Places Program, which is responsible for maintaining the inventory of archaeological resources, issuing heritage research permits, and providing advice on the management of archaeological and historical sites and remains. The curatorial staff of the Nova Scotia Museum provides support for these functions.

Currently, the Special Places Program relies on a variety of triggers to identify potential impacts to archaeological sites. As the Special Places Protection Act (Appendix 3K) specifies that no person shall knowingly destroy an archaeological site, the Special Places Program is responsible for developing and implementing policies, guidelines and procedures to manage that aspect of the Act. A manager for the Special Places Program is responsible for this.

Department of Transportation and Infrastructure Renewal

Planning for public road maintenance and upgrades is carried out by the Department of Transportation and Infrastructure Renewal. For major projects, an environmental-impact assessment is required and provides a mechanism for stakeholders to express concerns and provide input.
5.c.iii. Municipal jurisdiction

Development and land use in the nominated property, excluding federal and provincial land, are managed through the municipal zoning and bylaws of the Municipality of the County of Kings. The municipality’s planning department maintains planning capacity to review proposals, develop policies, and assist project proponents (see Figure 5–3). The municipality maintains the staff to review projects as they relate to the municipal heritage conservation district.

Development is managed to support community needs while recognizing the intrinsic value of the nominated property. Thus the municipality focuses on maintaining the integrity of the resources and protecting the agricultural identity of the community. Control over development is assured, as most of the area is zoned as an agricultural district. This sets the framework to determine acceptable development. The Grand Pré and Area Community Plan (Appendix 2J) does not allow large-scale wind turbines within the Grand Pré and Area Plan Boundary. Municipal Council has consistently demonstrated its commitment to protecting agricultural land; the current Grand Pré and Area Community Plan reinforces this commitment. The Municipal Planning Strategy (Appendix 4D) exemplifies that long-term commitment.

5.c.iv. Grand Pré Marsh Body

The Grand Pré Marsh Body typically plans work around major drainage and ditches. It also plans work on roads that are not managed by the Department of Transportation and Infrastructure Renewal.

5.c.v. Grand Pré World Heritage Site Stewardship Board

The Grand Pré World Heritage Site Stewardship Board will be the site manager of the nominated property. As such, it will be accountable, along with the other authorities, for managing the nominated property. This Board will come into existence in the event of a successful inscription of the nominated property by the World Heritage Committee. It will be supported by two committees: a Technical Advice Committee, and an Education and Marketing Committee, both of which will be formed upon successful inscription. The Board will include representatives from communities of interest – Acadians and local representatives – and will ensure that these groups are engaged in the protection of the World Heritage Site.

The Strategy for the Management and Conservation of Archaeological Heritage in the Landscape of Grand Pré (Appendix 2B) is a document for the management of the nominated property that ensures a holistic approach to managing its archaeological heritage with a focus on its outstanding universal value. Both the federal and the provincial authorities have endorsed it.
5.d. Existing plans related to the municipality and region in which the nominated property is located

Various plans and guiding documents from the Parks Canada Agency, the Société Promotion Grand-Pré, the Nova Scotia Department of Agriculture, the Municipality of the County of Kings, and Nomination Grand Pré provide direction and management for various aspects concerning the nominated property. The plans are summarized below, and full copies are appended.

**Grand-Pré National Historic Site of Canada Management Plan (2011)**

Grand-Pré National Historic Site of Canada Management Plan (Appendix 2I) was prepared by the Parks Canada Agency and complies with the Parks Canada Guide to Management Planning. It provides an integrated approach to implementing Parks Canada’s mandate for protecting heritage resources, facilitating opportunities for visitor experience, and fostering public appreciation and understanding of this historic place.

The management plan provides guidance for the site for the next 10 to 15 years. The plan’s key objectives are (1) to enhance visitors’ experience through direct contact with relics from the past and interaction with the services and activities of the present; (2) to enhance the shared stewardship of Grand-Pré National Historic Site of Canada through partnering opportunities; and (3) to change the perception of what Grand-Pré National Historic Site of Canada is to local communities and the greater Annapolis Valley residents, reconnecting it to their everyday lives and thereby increasing its relevance.

The Grand-Pré National Historic Site of Canada and the Parks Canada administered property at Horton Landing are managed by the Northern New Brunswick Field Unit of Parks Canada. The Field Unit manages Parks Canada’s relations with the Acadian community in Atlantic Canada. The Northern New Brunswick Field Unit Business Plan (Appendix 5B), valid from 2010/2011 to 2014/2015, outlines the total annual operating budget for the Grand-Pré National Historic Site at $512,300 with annual revenue of $117,000.

In conjunction with the business plan, the Field Unit identified performance expectations with targets for various site-specific program activities at Grand-Pré National Historic Site of Canada. These include meeting a target of 40,017 visitors during the 2011–2012 period and improving commemorative integrity by 2013.

**Société Promotion Grand-Pré Business Plan (2010)**

The Société Promotion Grand-Pré Business Plan (Appendix 5D) serves as a guiding document for managing the not-for-profit organization and its work at Grand-Pré National Historic Site of Canada. Its objectives include working with Parks Canada to deliver visitor services at the national historic site, supporting the Grand Pré World Heritage Site nomination, creating partnerships with other historic sites that are significant to Acadians, developing projects with corporate sponsors, establishing a governance system, improving tourist and media promotion strategies, and supporting other endeavours of the Acadian community.

**Nova Scotia Department of Agriculture Business Plan (2009–2010)**

The Nova Scotia Department of Agriculture’s mandate is to promote, support and develop the agriculture and food industries in the province. The department’s Business Plan (Appendix 5C) identifies four core business areas in which it will work with industry and other government partners to achieve the objectives of each core business area. These four core business areas are sustainable resource management, industry growth and development, responsible governance, and education and lifelong learning.

**Nova Scotia Department of Agriculture: Emergency Preparedness Plan**

The Emergency Preparedness Plan (Appendix 4C) is a province-wide plan that provides a detailed list of Department contacts, dyke locations, and heavy-equipment contractors throughout the province. The Department of Agriculture maintains all dykes to an elevation that will prevent overtopping during normal tide conditions. However,
during extreme storm events, the dykes have a risk of breaching or overtopping. The Plan directs that dyke inspections, performed by Aboiteau Superintendents, other Department staff or the Department Engineer, be carried out a minimum of twice a year. Assessments are performed in the spring and in the fall, with additional inspections performed during or after all extreme storm events. As part of regular condition assessment but also for the purposes of emergency preparedness planning, the condition of the dykes and aboiteaux are observed by staff while performing annual maintenance work (see Figure 5–4). Any significant changes are noted, and protection plans are completed and assessed. Rock-protection requirements and estimates are performed at least once a year.

5–4 Breakwaters and rock facing on dykes mitigate the impact of storm surges.

Grand Pré and Area Community Plan (2010)
The *Grand Pré and Area Community Plan* (Appendix 2J) is a municipal planning document prepared by the Municipality of the County of Kings. It is intended to provide a long-term plan for the four communities of the Grand Pré area: Grand Pré, Hortonville, North Grand Pré and Lower Wolfville. Developed in concert with the Grand Pré World Heritage Site nomination proposal, the plan has three objectives: to support the initiatives of the Grand Pré and area community; to protect Grand Pré and area as a unique cultural resource; and to provide opportunities for tourism development. Additional goals include sustaining the agricultural and business community, providing opportunities for recreation and residential growth where appropriate, and ensuring the conservation of healthy environmentally sensitive areas.

The *Grand Pré Heritage Conservation District: Plan, Bylaw and Guidelines* (Appendix 4E) was adopted by the Municipality of the County of Kings in 1992, and amended in 1995, to establish statutory protection of historic buildings. It was adopted to ensure the conservation of the pastoral setting and scenic character of the Grand Pré village and of the Historic Sites and Monuments Board of Canada (HSMBC) commemorated Grand-Pré Rural Historic District. The Grand Pré Heritage Conservation District: Plan, Bylaw and Guidelines contains administrative procedures as well as policy guidelines to encourage developers to make any new developments architecturally compatible with existing buildings, to enhance the attractiveness of Grand Pré as a tourist destination, and to help develop economic opportunities based on cultural tourism.

Map 16: HSMBC Grand-Pré Rural Historic District Boundary illustrates the boundary of the Rural Historic District.
Kings Regional Emergency Readiness Plan
The Municipality of the County of Kings has an the Kings Emergency Readiness Plan (Appendix 4F) developed in accordance with the Emergency Management Act (Appendix 3I) of the Province of Nova Scotia. The plan is managed by the Emergency Management Coordinator, who is responsible for its review and implementation. First response relies on 13 volunteer fire departments that service the county. It is assisted through mutual aid agreements, if needed, by 16 neighbouring fire departments.

Tourism Strategy and Interpretation Framework (2010)
The Tourism Strategy and Interpretation Framework for the Landscape of Grand Pré (Appendix 2E) was developed by Nomination Grand Pré to provide an analysis of current tourism opportunities and a framework for tourism management and promotion in the Grand Pré area. It includes a tourism plan to manage visitors and a framework to guide the development of future tourism in the region if inscription is successful. It also assesses the overall effects and opportunities that an increase in tourism could have on the local community. The direction in this strategy complements and builds on existing tourism infrastructure in the area. This framework will serve as the foundation for an interpretation plan in the event of a successful inscription.

5.e. Property management plan or other management systems
Each regulatory authority has a management plan or policies that guide its activities and decision-making. These documents focus on the implementation of their respective mandates and apply only to the areas of the nominated property under their authority. To ensure the effective protection of the entire nominated property, the regulatory authorities jointly developed a management plan in cooperation with stakeholders.

The goal of the Management Plan for the Landscape of Grand Pré (Appendix 2A) is to ensure that the outstanding universal value of the nominated property and the attributes that support it are preserved for present and future generations. The Management Plan serves as an overarching management framework to guide the protection, conservation and presentation of the nominated property in a cohesive way, both for the Grand Pré World Heritage Site Stewardship Board and for the responsible authorities. It places great importance on maintaining a vibrant agricultural community anchored in an agricultural tradition that has evolved over 300 years, and on maintaining the intrinsic values that make this place significant for the Acadian community.

The Management Plan provides shared principles, goals and objectives for the regulatory authorities and the stakeholders involved in the protection and interpretation of the property. It also builds on each authority’s responsibilities, processes, and policies to ensure a collaborative approach for sharing information and decision-making for the property’s long-term conservation. The management plan is implemented through the plans and policies of each regulatory authority and through the strategic plan guiding the work of the Grand Pré World Heritage Site Stewardship Board. The Management Plan for the Landscape of Grand Pré (Appendix 2A) is appended as a separate document. Listed below are the Management Plan’s Principles, Goals and Objectives.

Principles, Goals and Objectives

Principles for managing the proposed property:
- **Principle 1:** Management of the nominated property will meet or exceed World Heritage standards regardless of inscription.
- **Principle 2:** The primary focus of the Management Plan is to address issues directly related to the management and conservation of the site’s outstanding universal value and attributes by providing a framework for advice from the Stewardship Board and for decision-making for the regulatory authorities.
- **Principle 3:** The Management Plan recognizes that the nominated property is set within an active agricultural community where people continue to live and work. People have created, lived and worked on this land for generations and have been responsible stewards of the land. The Management Plan
also recognizes that this is an area of great importance for the Acadians, who have a strong emotional attachment to it.

**Principle 4:** Management of the nominated property in relation to World Heritage guidelines will be a shared responsibility between the different owners, communities, and government agencies with regulatory responsibilities for the nominated property. The *Management Plan* recognizes that actions undertaken by an owner, community, or government agency with regulatory responsibilities may have a detrimental impact on the nominated property, and that communication, coordination, and collaboration are essential to its long-term protection.

**Principle 5:** Management and protection will be delivered through existing boards, bodies, and government authorities, supplemented by technical advice, interpretation, and education from the Stewardship Board and procedures developed to accommodate a designated World Heritage Site.

The *Management Plan* requires regular review by the Grand Pré World Heritage Site Stewardship Board, as experience and other factors may influence the future direction of site management of the property. Once implemented, the Management Plan review will be on a six-year cycle, starting five years after the inscription.

**Goals and objectives for managing the property:**

**Goal 1:** To provide for the protection, continuing community and agricultural use and appreciation of the nominated property by:

a. ensuring that agriculture remains a vibrant economic activity of the community;
b. dedicating resources to the monitoring and maintenance of the dykes;
c. preserving and enhancing the memorials reflecting the enduring importance of the area for the Acadians;
d. nurturing ongoing research and filling the gaps in knowledge about the landscape and the people that inhabited it over the years;
e. ensuring that the Grand Pré Marsh Body, as long-term steward of the marshlands, continues to play a significant role in the maintenance, use and protection of the marshlands;
f. informing visitors to the community, through signage and brochures, of the need to be mindful that they are entering an active agricultural community; and
g. working with the Grand Pré Marsh Body to ensure that visitors have access to the values of the site without interfering with the ongoing agricultural use of the marshland.

**Goal 2:** To enrich the existing tourism destination by promoting wide recognition, understanding and appreciation of the educational and cultural values represented by the nominated property by:

a. developing programs, activities, tools, and interpretation that raise awareness of the importance of the landscape for the different communities, including the Mi’kmaw, the Acadians, and the descendants of the New England Planters;
b. promoting visitation through regional, national and international media;
c. ensuring that promotion of the site is managed responsibly in all aspects of publicity in relation to the nominated property in accordance with UNESCO guidelines;
d. developing tools and interpretation on the history and importance of agriculture;
e. continuing to raise awareness about the Acadian people and the way they overcame their forced migrations of the 18th century; and
f. developing partnerships with existing World Heritage Sites.

**Goal 3:** To instil a strong sense of shared community pride and stewardship in the protection, interpretation and promotion of the nominated property by:

a. providing for community input and encouraging community participation;
b. engaging Acadian, local and other stakeholder communities in activities that celebrate the importance of the Grand Pré landscape;
The Landscape of Grand Pré

C. employing a governance model to ensure that the interests and concerns of local residents and the Acadian community are heard, discussed, and reflected in the advice to the different regulatory authorities; and

D. ensuring that local and Acadian schools are provided sufficient information and opportunities to incorporate the experience at Grand Pré into their curriculum.

The following documents are management tools developed specifically for the management of the nominated property and involving more than one regulatory authority.

The Archaeological Heritage Task Force prepared this strategy (Appendix 2B) as a framework for the collaboration among the three levels of government and stakeholders in managing the archaeological heritage of the Landscape of Grand Pré. The strategy relies on provincial and federal legislation and policies, but it outlines roles and responsibilities for implementing effective management of archaeological heritage for the Landscape of Grand Pré. It also acts as a framework for engaging municipal authorities, academic and research institutions, residents and other stakeholders in protecting the area’s archaeological heritage.

**Overview of Coastal Change Influences on the the Landscape of Grand Pré (2010)**

This study (Appendix 6E) was carried out to improve understanding of how the area’s coast is changing. The objectives of the study were to review coastal-management literature, coastal-change observations, and mitigation measures. The information reviewed was compiled from several sources, each with its own means for data collection and analysis. Sources include aerial photos and academic material (Acadia University, Dalhousie University), as well as municipal (Municipality of the County of Kings), provincial (Coastal Coalition for Nova Scotia, Nova Scotia Department of Agriculture) and federal reports (Environment Canada, Canadian Wildlife Services, Natural Resources Canada, Parks Canada Agency). Results from this study are discussed at length in section 4.b.ii Environmental pressures.

**Coastal Change Monitoring Plan for the Landscape of Grand Pré (2010)**

This plan (Appendix 2D) outlines the monitoring program that will be implemented to track coastal changes taking place in the nominated property and buffer zone. It outlines the responsibility of various authorities, and sets up a monitoring program for measuring future coastal change in the area.

This framework (Appendix 2C) addresses preparedness, emergency, and post-disaster measures to protect the cultural heritage of the nominated property from natural disasters. It serves to articulate the mechanisms in place at the nominated property at the federal, provincial, and municipal levels to deal with these kinds of emergencies. It does not replace or supersede existing plans where those are in place.

**Implementation**

The Management Plan for the Landscape of Grand Pré (Appendix 2A) is implemented by the regulatory authorities through two management plans, a number of policies, and by the Grand Pré World Heritage Site Stewardship Board through a strategic plan. The Grand Pré National Historic Site of Canada Management Plan (Appendix 2I) applies to the lands owned and administered by the Parks Canada Agency and commemorated as Grand-Pré National Historic Site of Canada. The Grand Pré and Area Community Plan (Appendix 2J) is a plan of the Municipality of the County of Kings and regulates activities under municipal responsibility in the communities of Grand Pré, North Grand Pré, Hortonville, and Lower Wolfville. The regulations and policies of the Nova Scotia Department of Agriculture, Department of Tourism, Culture and Heritage, as well as the Department of Transportation and Infrastructure Renewal apply to the activities and plans they undertake. These documents reflect the goals of the
Management Plan for the Landscape of Grand Pré. The Strategic Plan – Grand Pré World Heritage Site Stewardship Board (Appendix 5A) applies to the coordination of management of the nominated property and to non-regulatory activities such as interpretation.

Grand-Pré National Historic Site of Canada Management Plan
The direction of the national historic site Management Plan (Appendix 2I) is compatible with the goals of the Management Plan for the Landscape of Grand Pré. It provides for the protection of memorials (Goal 1), plans for the management of tourism (Goal 2), and focuses on the need for partnership, stewardship and community pride in the management of the site (Goal 3).

Grand Pré and Area Community Plan (2010)
The Grand Pré and Area Community Plan (Appendix 2J) supports the goals of the Management Plan for the Landscape of Grand Pré. It recognizes the need to protect the continuing agricultural land and uses (Goal 1), celebrate and conserve local history (Goal 2), allow for the provision of tourism amenities (Goal 2), and to reflect the needs and desires of the community (Goal 3).

Nova Scotia Department of Agriculture
The Department of Agriculture has jurisdiction over the dykes, aboiteaux, dykelands and drainage at Grand Pré. Its policies ensure that the dykelands will continue to be used as farmland in accordance with the Agricultural Marshland Conservation Act (Appendix 3F). Along with the Grand Pré Marsh Body, they protect and maintain the agricultural land for future use (Goal 1).

Nova Scotia Department of Tourism, Culture and Heritage (Heritage Division)
The Heritage Division is responsible for archaeological sites outside of Parks Canada land. It administers the Special Places Protection Act (Appendix 3K), which requires that a person obtain a heritage research permit before excavating a site, and protects unknown or known archaeological resources. Protecting archaeological resources raises awareness of Acadian and local history (Goal 2), enriches the area as a tourist destination (Goal 2), and encourages ongoing research into the history of the area (Goal 1). The Special Places Program also encourages educating members of the public about the potential for archaeological finds on their property (Goal 3).

Strategic Plan – Grand Pré World Heritage Site Stewardship Board (2010) (Appendix 5A)
The Grand Pré World Heritage Stewardship Board will be responsible for coordinating the management of the nominated property and implementing non-regulatory activities. Its mission is to “work cooperatively with each government authority and engage the communities to protect, promote, interpret, and foster the sustainable development of this outstanding area for present and future generations [on behalf of people of the world and of the communities that care for the Grand Pré and area landscape].” It relies on five key strategies to achieve its mission. The first three are to achieve the goals of the Management Plan, which are: 1) providing for the protection, continuing community and agricultural use and appreciation of the nominated property; 2) enriching the existing tourism destination by promoting wide recognition, understanding and appreciation of the educational and cultural values represented by the nominated property; and 3) instilling a strong sense of shared community pride and stewardship in the protection, interpretation and promotion of the nominated property. The two remaining strategies aim to foster economic, tourism, and agricultural opportunities for the stakeholder communities and to ensure the long-term sustainability of the Board itself.

5. Sources and levels of finance

Various sources of funding support the management of the nominated property, reflecting the range of expertise and responsibilities involved. These budgets cover principally the maintenance of the dykes, the aboiteaux, the drainage ditches, and the roads; the operations of the national historic site and other Parks Canada administered lands, including the conservation of the cultural resources,
visitor services, and interpretation; and the promotion of the key assets of the area.

Parks Canada is funded through allocations of the Parliament of Canada. Funds for the management of Grand-Pré National Historic Site of Canada, Horton Landing, and the commemoration of the Attack at Grand Pré are managed at the New Brunswick North Field Unit, which has an operating budget of $512,300. Funds are directed towards staffing the maintenance group, protecting cultural resources, and maintaining assets. Non-operational activities and projects are funded through internal project-based funding and partnerships including with the Société Promotion Grand-Pré.

The Société Promotion Grand-Pré is responsible for visitor services, marketing and promotion. It receives funding from various government sources. Its basic operating budget from Parks Canada stands at $220,000 to cover interpretation staff as well as marketing and promotional activities. In addition, the Société applies for funding from other government sources for various projects. In 2009–2010, the Société secured $440,000 in supplementary funding.

The Department of Agriculture of the Province of Nova Scotia is funded through allocations from the Nova Scotia Legislature as reflected in the Province of Nova Scotia’s budget. The Department allocates approximately $1 M to the dykeland infrastructure program annually. These funds are dedicated to the maintenance and repair of dykes across the province based on urgency and priorities. In addition, a cost-sharing program is in place with marsh bodies for maintaining dyke roads and drainage. Costs are shared up to a total project value of $20,000. There are various programs and funds that help support the agricultural industry through training, industry and business development, and marketing.

The Department of Transportation and Infrastructure Renewal is funded through allocations from the Nova Scotia Legislature as reflected in the Province of Nova Scotia’s budget. Funds are invested in public road infrastructure according to priorities.

The Grand Pré Marsh Body collects a fee from individual landowners to contribute to the maintenance of the dykelands. The fee was increased in 2010 from $5 to $7 an acre (about half a hectare), generating about $20,000 in revenue which is then, for the most part, reinvested into the maintenance of the ditches and the roads.

Finally, the Grand Pré World Heritage Site Stewardship Board will be supported by the three levels of government. This financial support, along with the expert resources provided by the three levels of government and partners, and the revenues from product sales, will adequately cover the needs of the Stewardship Board and ensure stable governance of the nominated property. Funding for special initiatives will be supported through applicable federal and provincial government programs as well as through private donations. Letters of funding support can be found in Appendix 10A.

### Sources of expertise and training in conservation and management techniques

The Stewardship Board, in order to fulfill the responsibilities of site manager, will rely on the expertise of the Parks Canada Agency, the Heritage Division of the Nova Scotia Department of Tourism, Culture and Heritage, the Department of Agriculture, and the Grand Pré Marsh Body.

The Parks Canada Agency has a wide array of expertise available. Front-line professionals at the New Brunswick North Field Unit are supported by the technical expertise at the Atlantic Service Centre in Halifax, Nova Scotia. These specialists include planners, archaeologists, landscape architects, architects, interpreters, historians, ecologists, curators, and engineers. Field Unit staff also can call on conservation expertise from the federal Department of Public Works and Government Services. Staff from Parks Canada’s National Office in Gatineau (Québec), and from the Atlantic Service Centre, provide training to the Field Unit staff to ensure that they can carry out their responsibilities according to internationally accepted standards.

The Heritage Division of the Department of Tourism, Culture and Heritage includes expertise in conservation, archaeology, and heritage management. That expertise is drawn from the Nova Scotia Museum and the Special Places Program. Regular training is available to ensure knowledge and practice of the latest techniques and principles.

The conservation expertise from both these agencies is available to the nominated property in support of its ongoing management.
and of its governance structure. Both agencies are guided by a number of standards, guides, and guidelines that apply the highest standards recognized internationally.

Finally, both these agencies complement their expertise by drawing upon the in-depth knowledge of local farming landowners in maintaining the nominated property. An essential part of the management process is to ensure the development and implementation of proper management techniques for Grand Pré. The Department of Agriculture has expertise in dyke building, aboiteaux, drainage maintenance, and agricultural land use. The Marsh Body has expertise in dyke building, aboiteaux and traditional knowledge of how to work the land.

In the event of a successful inscription, the Grand Pré World Heritage Site Stewardship Board will be supported by a Technical Advisory Committee. This committee will be composed of experts from various disciplines and will be knowledgeable in the principles of the international charters on cultural heritage conservation. The objective of the committee will be to provide analysis and recommendations on matters pertaining to the protection of cultural heritage in the nominated property.

5.h. Visitor facilities and statistics

5.h.i. Visitor statistics

In 2009, visitors to the Grand-Pré National Historic Site of Canada numbered approximately 30,535. Visitor numbers are down from approximately 62,000 in the late 1990s. This represents a 51 per cent decrease over the last decade. In general, this downward trend is noticed throughout Nova Scotia, due in part to the recession and the rise of the Canadian dollar relative to the American dollar. A recent study, entitled Grand-Pré: An Economic Impact Assessment of a UNESCO World Heritage Designation (Appendix 6B), carried out by Acadia University for Nomination Grand Pré in 2009, indicates that a projected 6.2 per cent increase in visitation to the Grand-Pré National Historic Site of Canada will likely occur by 2012 if the Landscape of Grand Pré is inscribed on the World Heritage list. This projected increase does not include visitors from Nova Scotia.

A recent Visitor Information Program (VIP) survey performed by the Parks Canada Agency in the summer of 2007 indicated that 31 per cent of visitors to the Grand-Pré National Historic Site of Canada are from Nova Scotia and 68 per cent of visitors are from outside the province. Of the visitors from outside Nova Scotia, 53 per cent are from non-Atlantic Canadian provinces, and 41 per cent are from the United States. Seniors and adults make up the majority of visitors to the site, at 89 per cent. Of these, 62 per cent are over the age of 50. Additionally, the survey indicated that 20 per cent of visitors identify themselves as Acadians or Cajuns.

Grand-Pré National Historic Site of Canada was also included in Parks Canada’s National Historic Sites Marketing Initiative (2008) (Phase II) and was awarded $75,000 to develop a long-term marketing plan for the site, work on new product development, and implement sustainable actions in efforts to increase visitation to the site.

5.h.ii. Visitor facilities

The nominated property, buffer zone, and surrounding areas have a variety of services for visitors. These are summarized in Map 17: Facilities and Services in the Nominated Property, Buffer Zone and Surrounding Area. Overnight accommodations include a campground in North Grand Pré, a motel, and several Bed and Breakfasts and cottages. There are restaurants, a gas station, a corner store, wineries, a few museums, and some antique shops and other specialty shops. Visitors also enjoy the area for bird watching, going to the beach at Evangeline Beach, and enjoying the scenery. Most of these services are located in the buffer zone.
5–5 The visitor reception and interpretation centre at Grand-Pré National Historic Site of Canada, constructed in 2003, is a key feature of the tourism management strategy for the nominated property.

5–6 Interpretive exhibits at Grand-Pré National Historic Site of Canada provide visitors with information about Grand Pré’s past and present.

5–7 A film explains Acadian history at Grand-Pré National Historic Site of Canada.

The Grand-Pré National Historic Site of Canada visitor centre will serve as the starting point for a visit to the nominated property (see Figure 5–5). It includes interpretive exhibits explaining the natural and cultural history of the area (see Figure 5–6), an interpretive film about Acadian history in the area (see Figure 5–7), washrooms, a gift shop, and a parking lot for personal vehicles, recreational vehicles (motor homes) and coach buses. The site grounds offer a blacksmith shop, the Memorial Church, sculptures and interpretive panels, well-manicured lawns and gardens, and several walking trails originating from the site.

The nominated property falls within the Municipality of the County of Kings. In the County of Kings, and within a short drive of the nominated property, are several towns that offer a full range of services to the visitor: Wolfville, Kentville, Berwick, New Minas, and Hantsport. Wolfville, the closest town to the nominated property, has a visitor information centre, operated by the Province of Nova Scotia, as do Kentville, Berwick and Kingston. Services outside the towns include wineries, farms and farmers’ markets, U-pick (pick your own) fruits and vegetables, golf courses, accommodations, museums and service stations. Numerous events and festivals take place in the
Municipality, including music festivals, the Apple Blossom Festival, the Harvest Festival, and Berwick Gala Days.

Halifax Regional Municipality is approximately 85 km away. The city has numerous facilities for visitors, including accommodations, restaurants, attractions, churches, libraries, parks, shopping locations and full-scale health-care facilities and emergency departments. The Halifax Stanfield International Airport is 90 km from the nominated property and serves as the gateway to Atlantic Canada. It has daily or regular flights across Canada, to major destinations in the United States including daily service to New York, and daily service to London, UK.

The Hamlet of Grand Pré and its surrounding area have a long history of accommodating tourism, with visitor numbers that have sometimes exceeded 90,000. The area’s tourism history indicates that it can accommodate large numbers of visitors without any detrimental effect on the nominated property.

5.h.iii. Access within the nominated property

Circulation patterns in the nominated property are characterized by two main entry points located on Highway 1. Traffic flowing west originates from exit 10 at Highway 101, and traffic flowing east comes from Wolfville. Within the nominated property, public roads, including Grand Pré Road, Old Post Road, and roads within Hortonville, facilitate vehicle movement to and from the national historic site, Horton Landing and North Grand Pré. Access is restricted on the dykelands by signs posted at the beginnings of roads indicating private property.

5.h.iv. Public safety and risk management

The main staging area for visitors is provided by the infrastructure at the Grand-Pré National Historic Site of Canada visitor centre. The visitor centre has policies in place to ensure the safety of visitors on the national historic site grounds. Off the national historic site property is private property. Accessing the dykelands and aboiteaux presents several risks to the visitor, including high tides, uneven terrain for walking, encounters with cattle or other farm animals, and encounters with farm equipment. The Grand Pré Marsh Body posts signs to discourage visitor access (see Figure 5–8). Besides wanting to minimize safety risks to visitors, farmers in the area prefer that visitors stay off the dykelands because vehicles and people can interrupt their day-to-day working activities. It is recognized, however, that visitors will want to view the dykelands and aboiteaux, so a viewing deck in a suitable location is being built. This viewing deck will allow visitors to appreciate the expanse and vista of the site. This area will provide parking spaces, interpretive panels and washroom facilities.
5.i. Policies and programs related to the presentation and promotion of the property

5.i.i. Presentation of the property

No single infrastructure is currently in place to allow visitors to experience the nominated property as a whole; however, the Grand-Pré National Historic Site of Canada offers a significant interpretive element of the experience. Visitors to the area now experience heritage in the community by visiting the national historic site, observing heritage properties along Old Post Road and Grand Pré Road, and visiting the Deportation Cross at Horton Landing and the Historic Sites and Monuments Board of Canada plaques commemorating the arrival of the New England Planters, the Attack at Grand Pré, and Sir Robert Borden. The Municipality of the County of Kings recognizes in its Grand Pré and Area Community Plan (Appendix 2J) that protecting public views is important for ensuring that residents and visitors can fully experience the area.

Presentation of local history is done through an exhibit on the New England Planters in Kentville, a few kilometres from Grand Pré; at the national historic site in Grand Pré; and at the Wolfville Historical Society–Randall House Museum in Wolfville. Several events are organized by the Historical Society each year to share knowledge about local history in the area.

The Nomination Grand Pré website (www.nominationgrandpre.ca), in French and English, provides readers with information about the nominated property and highlights its extraordinary significance and potential outstanding universal value. It also presents information regarding news and events, has numerous documents related to the nominated property for further reading, compiles testimonials from people who live in Grand Pré and those who have a connection to it, and provides several external links intended to provide a more thorough, in-depth explanation about organizations related to Grand Pré. The Nomination Grand Pré website will remain active and up-to-date should the nominated property be inscribed on the World Heritage List.

Grand-Pré National Historic Site of Canada Presentation

Grand-Pré National Historic Site of Canada is a significant cultural tourism attraction in Kings County and the main tourism-related infrastructure in the nominated property. To fulfill the Parks Canada Agency mandate, the site is required to present the reasons for its designation as a site of national significance. The Parks Canada Agency has invested in the site’s redevelopment by acquiring new properties and building a visitor centre that opened in 2003. Exhibits in the visitor centre include the history of the region through interpretive panels, photographs, and a film. All information presented in the visitor centre is bilingual (French and English). On the grounds of the national historic site and inside the Memorial Church and the blacksmith’s shop, interpretive panels and directional signage are featured in French and English. The visitor centre is expected to serve as an entry point to the World Heritage Site by welcoming visitors and providing interpretation and learning opportunities on the outstanding universal value of the property.

5.i.ii. Promotion of the property

The Nomination Grand Pré logo is used on all official documentation for the nomination proposal and is becoming a familiar image to many people. The logo may continue to be used on all promotional material. The colours and shapes used in the logo illustrate the many important aspects of the Grand Pré landscape and culture.

Grand-Pré National Historic Site of Canada Promotion

The Grand-Pré National Historic Site of Canada Management Plan (Appendix 2I) identifies partnership opportunities for increasing tourism at the site. Partnerships and programs range from archaeological and historical research to agricultural tours, local businesses, special events promotion such as festivals and exhibits on the site, multicultural activities, hands-on and interactive programming, volunteer opportunities, and greater interpretation of cultural resources.
Promoting the nominated property will be achieved through partnerships with government agencies and not-for-profit organizations that provide a voice for the tourism industry in the area, and various tourism operators in the province. Several opportunities exist in the region to market Grand Pré as part of a wider experience. The Tourism Strategy and Interpretation Framework for the Landscape of Grand Pré (Appendix 2E) prepared for Nomination Grand Pré provides a foundation for partners to cooperate to manage tourism in the area. The Framework suggests building tourism experiences in the area around four themes: Adventures in Taste; Touch the Land; Festival; and the Bay of Fundy.

The first theme, Adventures in Taste, features the Annapolis Valley as a food and wine destination. Various activities under this theme include winery tours, traditional cooking classes, berry picking and jam making, and food festivals, most notably the Apple Blossom Festival in late May.

The Touch the Land theme is about getting back to nature. Several opportunities in the area exist for hiking, walking, biking, and bird watching. Hiking trails originating at Grand-Pré National Historic Site of Canada are a highlight for this theme.

The Festivals theme is an opportunity for organizations across the Annapolis Valley to team up and promote the various festivals that make the region unique, thus introducing tourists to the Grand Pré area and increasing visitation.

The fourth theme, Bay of Fundy, can draw attention to different communities along the Bay of Fundy, including the nominated property.

The Strategic Plan – Grand Pré World Heritage Site Stewardship Board (Appendix 5A) states that the development of a communication plan and interpretation plan will be a priority if the nominated property is inscribed. These plans will engage the partners in building on the foundation set by the Tourism Strategy and Interpretation Framework for the Landscape of Grand Pré (Appendix 2E).

Specific strategies will be developed to promote the Landscape of Grand Pré as a World Heritage Site. These will include promotional and directional signage along Highway 101; brochures and other print material in tourism information centres; involvement of tourism operators and partner organizations in the maritime provinces; local radio and TV public service announcements; and email and print newsletters to members and supporters. The Grand Pré World Heritage Site Stewardship Board will set up an Education and Marketing Committee to coordinate educational and marketing efforts between partners.

5.j. Staffing levels

Staffing is provided by the different authorities responsible for the protection and promotion of the nominated property. Principally, these are Parks Canada; the Province of Nova Scotia’s Department of Tourism, Culture and Heritage; The province’s Department of Agriculture; the Municipality of the County of Kings; the Société Promotion Grand-Pré; the Grand Pré Marsh Body; and the Grand Pré World Heritage Site Stewardship Board.

Parks Canada employs one full-time permanent staff member at Grand-Pré National Historic Site who is exclusively dedicated to maintenance. Term maintenance employees are added during the busiest times of the year. In addition, the New Brunswick North Field Unit provides professional expertise in managing assets, cultural resources, visitor experiences and services, interpretation programs, and ecological protection programs. Finally, the Atlantic Service Centre provides a complete array of technical services in planning, archaeology, curation and conservation, historical research, environmental impact assessments, landscape architecture, social sciences, design, geographic information systems (GIS), cartography, and asset management. Professional and technical staff receive training through university and college programs and are hired because of their skills and capacities. A significant amount of training takes place on the job, where skilled staff share their unique knowledge and techniques with one another.

The Heritage Division of the Department of Tourism, Culture and Heritage employs archaeologists, conservators, curators and
heritage managers who can provide the required professional and technical expertise.

The Department of Agriculture employs an Aboiteau Superintendent, engineers, and asset managers to help protect the dykes. Other divisions include staff who can provide support for marketing, business sustainability, and product promotion.

The Municipality of the County of Kings employs planners, GIS specialists, engineers, and emergency management officers. These employees have various responsibilities in managing and providing information for reporting purposes.

The Société Promotion Grand-Pré has a staff of three people responsible for ongoing operations of the Société, whose primary mandate is to promote Grand Pré and operate the visitor services. It is complemented during the summer by seasonal staff: two interpreters, seven actors, two sales clerks for the gift shop, and one project coordinator.

While the Grand Pré Marsh Body does not employ professional staff, the approximately 30 landowners who are its members are the best experts available for understanding and managing the dyke-lands. Many farmers are from families who have lived and worked on the dykes for close to 10 generations. They are reliable sources of knowledge for taking care of the agricultural dimension of the landscape.

The Grand Pré World Heritage Site Stewardship Board will employ a Site Management Coordinator to implement the Board’s strategic plan and the management plan for the nominated property. The Board will also be supported by staff from the Kings Regional Development Agency to manage the administrative and financial operations.
Chapter 6

Grand Pré is a meeting place where we can all come as cultures, separately and individually but also together, so we can share what we all have in common, the feelings for this place. We all have a heritage here.

Johanna Trenholm, County of Kings resident
6.0 Monitoring

6.a. Key indicators for measuring the state of conservation

The Operational Guidelines for the Implementation of the World Heritage Convention require State Parties to report on the state of conservation of World Heritage properties under their administration on a six-year cycle. If the nominated property is inscribed on the World Heritage List, the Grand Pré World Heritage Site Stewardship Board will prepare a report with its key partners on the state of conservation of the property and contribute to Canada’s report to the World Heritage Committee.

Various agencies, with authority over different components of the nominated property, monitor the resources for which they are responsible. Parks Canada monitors the condition of cultural resources, visitor experience, and public understanding and appreciation at Grand-Pré National Historic Site of Canada. At the provincial level, the Department of Agriculture monitors the condition of the dykes, aboi-teaux, and drainage on the dykes. The Department of Transportation and Infrastructure Renewal monitors the condition of the public road network and associated infrastructure. Finally, the Municipality of the County of Kings monitors the activities that are permitted in and around the nominated property.

All the jurisdictions will take a coordinated approach to monitoring. To ensure that this happens, they will report in a similar way. When reporting on the condition of the nominated property, each jurisdiction will focus on the performance measures of the goals in the Management Plan for the Landscape of Grand Pré (Appendix 2A). These goals are:

1. to provide for the protection, continuing community and agricultural use and appreciation of the nominated property;
2. to enrich the existing tourism destination by promoting wide recognition, understanding and appreciation of the educational and cultural values represented by the nominated property;
3. to instil a strong sense of shared community pride and stewardship in the protection, interpretation and promotion of the nominated property.

The specific indicators to be measured for each goal are set out in Table 6–1.

Some indicators will be measured through a coordinated monitoring program. These include:

- monitoring coastal change: as outlined in the Coastal Change Monitoring Plan for the Landscape of Grand Pré (Appendix 2D), this involves the Department of Agriculture, the Municipality of the County of Kings, and the Canadian Wildlife Service. This will contribute to providing information on the Integrity of the dykelands, the dykes, the main drainage patterns, and the salt marsh/coastline indicator.
- monitoring the condition of archaeological sites: as outlined in the Strategy for the Management and Conservation of Archaeological Heritage in the Landscape of Grand Pré (Appendix 2B), this involves Parks Canada and the Department of Tourism, Culture and Heritage (Heritage Division). This will contribute to providing information on the Integrity of archaeological heritage and Impact of development on archaeological heritage and other heritage attributes indicators.
- monitoring visitors and visitor satisfaction: this involves Department of Tourism, Culture and Heritage, Société Promotion Grand-Pré, and Parks Canada. This will contribute to providing information on a number of indicators.
Table 6–1 outlines the indicators that will be reported on by the Grand Pré World Heritage Site Stewardship Board to describe the condition of the nominated property. The table also shows the periodicity of monitoring and the location of records:

*Table 6–1: Indicators and reporting*
6.b. Administrative arrangements for monitoring property

The responsibility for coordinating the monitoring of the nominated property will be undertaken by the Grand Pré World Heritage Site Stewardship Board. Monitoring data is available from the site management coordinator at:

Grand Pré World Heritage Site Stewardship Board
35 Webster Street
Kentville, Nova Scotia
Canada B4N 1H4
TEL: (902) 678-2298
FAX: (902) 678-2324

The frequency of monitoring the various indicators and the responsibility for doing so are indicated in Section 6.a. An annual status report will be prepared and made publicly available on the website.

6.c. Results of previous reporting exercises

No single report currently exists for the entire nominated property. However, a number of reports cover individual components of the nominated property. These include the areas under the jurisdiction of the Parks Canada Agency. The Department of Agriculture has also prepared internal reports on the condition of the dykes.

In addition, reports are available on archaeological research conducted under Heritage Research Permits issued by the Nova Scotia Museum. Reports are also available for research under Archaeological Permits issued by Parks Canada for lands it administers. Finally, there are reports on other research initiatives. A complete list of these various research reports is available in the Strategy for the Management and Conservation of Archaeological Heritage in the Landscape of Grand Pré (Appendix 2B).

6.c.i. Parks Canada administered properties

State of the Parks 1997 Report (Parks Canada Agency)

The State of the Parks 1997 Report (Appendix 6G) was an early approach to reporting and provides cursory information on the condition of specific assets at Grand Pré. It highlighted that many new activities had improved the condition of cultural resources and their interpretation. The overall assessment of the condition of the cultural resources was deemed to be good, but the report projected a downward trend. This was because a proposed off-site development constituted a potential threat to the integrity of the national historic site. In response, Parks Canada, with the assistance of partners, acquired the lands on which the development was being considered and eliminated the potential threat.

The 1997 report also mentions trends in attendance between 1993–94 and 1996–97. During that period annual visitation numbered 95,000 on average.

Parks Canada Agency State of the Protected Heritage Areas Report 1999 (Parks Canada Agency)

In this national report prepared by Parks Canada, the evaluation of the state of Grand-Pré National Historic Site indicated that the condition of the cultural resources was good and on an upward trend as a result of actions taken since the previous evaluation in 1997. Monitoring and remedial actions were deemed to be fair to good and improving. The report expressed concerns about the condition of archaeological records. The most significant challenges were tied to interpretation and communication. These were deemed to be fair and improving.
As a result of that evaluation, Parks Canada and its partners developed a plan to overhaul the interpretation and visitor services at Grand-Pré National Historic Site. This was the cornerstone of the 2001 management plan and led to the building of a multi-million-dollar visitor centre. The new centre opened in 2003. In addition, a partnership with Saint Mary’s University, Halifax, led to the establishment of an archaeological field school. This field school celebrated its 10th anniversary in 2010.

Grand-Pré National Historic Site of Canada State of the Site Report 1999 (Parks Canada Agency)

The State of the Site Report for Grand Pré Report 2009 (Appendix 6C) is the first report of this type that captures all aspects of the condition of the national historic site. This report will be updated every five years, prior to reviewing the management plan for Grand-Pré National Historic Site.

Overall, the commemorative integrity of the national historic site is rated at 7 out of 10, indicating a slight decline from the previous evaluation. The overall condition of cultural resources is fair (for archaeological resources) to good (for all other resources). The main threats to the site come from vegetation encroachment and potential off-site development. The former threat was corrected in the spring of 2010, when a vegetation-management plan was implemented in sensitive archaeological areas. The inventory of the site’s cultural resources is not up to date; however, decision-making on activities at the site have been respectful of the presence, or potential presence, of cultural resources.

The construction of the visitor centre in 2003 has improved the site’s capacity to convey site messages. The centre has also significantly improved visitors’ satisfaction with interpretive programming, site services and facilities. The 2007 visitor information profile revealed that an overwhelming majority of visitors are satisfied to very satisfied with the site’s interpretive programs, visitor services and facilities (see Figure 6–1). Even so, attendance has decreased significantly in the past decade. However, a higher percentage of Canadians from outside Atlantic Canada arrived in 2007 as compared to 2000.

Outside the visitor centre, visitors have the opportunity to learn about the site’s key messages. In particular, the site conveys all the reasons for its designation as a national historic site – including an understanding of the Acadian settlement and the related archaeological resources on the site. In the spring of 2010, new interpretation panels were added (see Figure 6–2). They detail the presence of archaeological resources and their relationship to the site’s history and landscape.
Ça nous montre qu’on s’en souvient encore de la tragédie qui marque l’Acadie et qui nous rassemble comme un peuple.

Hayley Lombard, Acadian high school student

Canada B4N 3W3

7.d.vii. Acadia University

Wolfville, Nova Scotia
Canada B4P 2R6

7.e. Bibliography

A complete bibliography on the history of the Acadians and the New England Planters would be too long for inclusion in this document, thus those sections of the bibliography include only those books, articles or studies that were most helpful in preparing this submission. The bibliography also includes references on Grand Pré as a lieu de mémoire, Grand Pré as a Rural Historic District, Grand Pré as a source of literary inspiration, information used to provide historical context and inform the comparative analysis, dyking information, information on lieux de mémoire, and site management and conservation. Sources used to create the maps in the nomination proposal can be found at the end of the bibliography.

List of Contributors

Thanks go out to the following individuals and organizations who contributed to the preparation of the Grand Pré World Heritage Nomination Proposal:

Nomination Grand Pré Advisory Board

Co-chair: Peter Herbin, Grand Pré resident
Co-chair: Dr. Gérald C. Boudreau PhD., Société nationale de l’Acadie
Erin Beaudin / Stephen Kerr, Executive Director,
Kings Regional Development Agency
Chief Shirley Clarke, Glooscap First Nation
Mike Ennis, Councillor district 12, Municipality of the County of Kings
R. John Fuller, Councillor district 12, Municipality of the County of Kings †2009
Barbara Kaiser, Community Member at large
Beth Keech, member, Kings Hants Heritage Connection
Jim Laceby, member of the Board of Directors,
Kings Regional Development Agency
Liz Morine, Destination Southwest Nova Scotia
Robert Palmeter, Chair, Grand Pré Marsh Body
Hanspeter Stutz, Community Member at large
Stan Surrette, President, Société Promotion Grand-Pré
Greg Young, President, Eastern Kings Chamber of Commerce

Ex-Officio

Brian Banks/ Paul Richards, Program officer,
Atlantic Canada Opportunities Agency (ACOA)
Neal Conrad, Executive Director, Nova Scotia Economic and
Rural Development
Claude DeGrâce, Manager, Parks Canada
Bill Greenlaw, Executive Director, Heritage Division,
NS Department of Tourism, Culture and Heritage
Carole Loiselle/ Robert Sheldon, Field Unit Superintendent, Parks Canada
Vaughne Madden, Director General, NS Office of Acadian Affairs (OAA)
Christophe Rivet, Project Manager, Parks Canada

Alternates

John Curry, member, Grand Pré Marsh Body
Marianne Gates, Development Officer, Kings Regional Development Agency
Mary-Jo MacKay, Policy Advisor, NS Department of Tourism,
Culture and Heritage
Madonna Spinazola, Destination Southwest Nova Scotia
Victor Tétrault, Executive Director, Société promotion Grand-Pré
Louise Watson, Program Officer, Nova Scotia Department of Economic and
Rural Development

Resources Members

Chrystel Fuller, Manager, Planning division,
Municipality of the County of Kings
Seamus McGreal, Planner, Municipality of the County of Kings
Dawn Sutherland, Planner, Municipality of the County of Kings

Members of the Working Group on Outstanding Universal Value

Dr. SamuelArseneault, Université de Moncton
Naomi Blanchard, Grand Pré resident
Dr. Sherman Bleakney, Acadia University (ret.)
Dr. Neil Boucher, Université de Moncton
Dr. Gérald C. Boudreau, Université Sainte-Anne (ret.)
Dr. Margaret Conrad, University of New Brunswick
Dr. Graham Daborn, Acadia University
Dr. Jonathan Fowler, St. Mary’s University
Dr. Stephen Henderson, Acadia University
Dr. Marc Lavoie, Université Sainte-Anne
Dr. Barbara LeBlanc, Université Sainte-Anne
Dr. Phyllis LeBlanc, Université de Moncton
Debra McNabb, Nova Scotia Museum
Dr. Daniel N. Paul, Mi’kmaq author
Dr. Henri-Dominique Paratte, Acadia University, Grand Pré resident
Dr. John Reid, St. Mary’s University
Dr. John Shaw, Bedford Institute of Oceanography
The Management Plan Working Group

Kevin Barrett, Nova Scotia Department of Tourism, Culture and Heritage
Roy Bishop, North Grand Pré Community Association
Bob Book, Nova Scotia Department of Tourism, Culture and Heritage
David Christianson, Nova Scotia Department of Tourism, Culture and Heritage
Charles Curry, Grand Pré Community Association
John Curry, Grand Pré Marsh Body
Claude DeGrâce, Parks Canada Agency
Mike Ennis, Councillor
Chrystal Fuller, Committee Chair
Marianne Gates, Kings Regional Development Agency
Wanda George, Mount St. Vincent
Jennifer Graham, Ecology Action Centre
Dr. A. John B. Johnston, Parks Canada Agency
Owen Jordan, community resident
Elisabeth Kosters, community resident
Edie Lloyd, community resident
Brian MacCulloch, Nova Scotia Department of Agriculture
Vaughn Marriot, community resident
Seamus McGreal, Municipality of the County of Kings
Peter Newbould, community resident
Suzanne Pelham, community resident
David Smith, Nova Scotia Department of Agriculture
Dawn Sutherland, Municipality of the County of Kings

Strategy for the Management and Conservation of Archaeological Heritage in Grand Pré and Area Task Force

Laura Bennett, Special Places Program, Department of Tourism, Culture and Heritage
Katie Cottreau-Robins, Nova Scotia Museum, Department of Tourism, Culture and Heritage
Jenneth Curtis, Parks Canada Agency
Rob Ferguson, Parks Canada Agency
Jonathan Fowler, St. Mary’s University

Robert Ogilvie, Special Places Program, Department of Tourism, Culture and Heritage

Coastal Change Monitoring Program

Colin MacKinnon, Wildlife Biologist, Environment Canada-Canadian Wildlife Services
Robert Palmeter, Chair, Marsh Body
David Poole, Municipality of the County of Kings
David Smith, Aboiteau Superintendent, Nova Scotia Department of Agriculture

Risk Preparedness Framework

Brigitte Cooney, Head Guide, Grand-Pré National Historic Site of Canada, Société Promotion Grand-Pré Inc.
Wayne Kelly, Maintenance Supervisor, Grand-Pré National Historic Site of Canada, Parks Canada
Robert Palmeter, Chair, Grand Pré Marsh Body
Robert Sheldon, Field Unit Superintendent, Northern New Brunswick Field Unit, Parks Canada
Gary Smith, Emergency Management Coordinator, Municipality of the County of Kings
David Smith, Aboiteau Superintendent, Nova Scotia Department of Agriculture

Other Management Plan Issues

Allan Grant, Executive Director, Nova Scotia Department of Agriculture
Rick Harley, Nova Scotia Department of Natural Resources
Jennifer Lonergan, Nova Scotia Department of the Environment
Mark Mclean, Department of Oceans and Fisheries
Gerald Post, Nova Scotia Department of Agriculture, Resource Stewardship Division
Frederick Whynot, Nova Scotia Department of Transportation and Infrastructure Renewal
Technical expertise

Dawn Allen, Ecosystem Data/Geomatics Specialist, Parks Canada
Géraldine Arsenault, Manager for External Relations, Parks Canada
Alain Boudreau, Social Science Specialist, Parks Canada
Yves Bossé, Aboriginal Liaison, Parks Canada
Lary Brown, Biologist, Parks Canada
David Christianson, Curator of Archaeology, Nova Scotia Museum
Cynthia Chute, GIS Technician, Parks Canada
Rachel Cooper, Editor
Katie Cottreau-Robins, Archaeologist, Nova Scotia Museum
Jenneth Curtis, Archaeologist, Parks Canada
Rob Ferguson, Archaeologist, Parks Canada
Marie Fernandes, Planner, Parks Canada
Dr. Jonathan Fowler, St. Mary’s University
Chrystal Fuller, Manager, Planning division, Municipality of the County of Kings
Emily Gregus, Environmental assessment scientist, Parks Canada
Philip Greyson, GIS Technician, Parks Canada
Dr. A. John B. Johnston, Historian, Parks Canada
Wayne Kelly, Ground maintenance manager, Parks Canada
Dr. Ronnie-Gilles LeBlanc, Historian, Parks Canada
Jean Léger, Director General, Fédération acadienne de la Nouvelle-Écosse
Roger Lewis, Nova Scotia Museum
Dr. Barry Moody, Acadia University
Jean Palmeter, resident
Muriel K. Roy, Comité consultative acadien de Parcs Canada
Trudy Sable
Gary Shutlak, Nova Scotia Archives and Records Management
Pat Townsend, Acadia University
Bria Stokesbury, Kings County Museum, Kentville
Duncan McNeill, geophysical survey specialist
Stephen A. White, Genealogist

External Contributors (Nova Scotia)

The residents of Grand Pré, Hortonville, North Grand Pré, Lower Wolville
Jenna Boon, Director, Joggins Fossil Cliffs Institute
Fred and Betty Curry, Grand Pré residents
Paul Delaney, Genealogist
Gerald Gloade, Mi’kmaq researcher
Dr. Julian Gwyn, University of Ottawa (ret.)
Gordon Halliburton, Kings Hants Heritage Connection, resident
Eileen Harris, resident
Beth Keech, resident
Lucie LeBouthillier, Société nationale de l’Acadie

Forward

The Landscape of Grand Pré is nominated by Canada for inscription on UNESCO’s World Heritage List, the highest possible international recognition for cultural and natural heritage. It is a distinction that, if successful, would bring attention to an extraordinary place, one that is already celebrated by various provincial and national designations.

Grand Pré is a place that is cherished by local residents, Acadians, farmers, and visitors alike for its history, beauty, emotional attachment, fertility, and many more personal connections. The following management plan aims to guide the management of activities and plans towards the goal of protecting what is of outstanding universal value. While there are many parallel visions to guide the future of the Grand Pré area reflecting the various plans and groups involved, this management plan focuses on the common elements, those that together form a shared vision.

This plan is the result of the work of the management plan working group, feedback from stakeholders, feedback from experts, and reviews by the jurisdictions. It also reflects input from consultation on the management plan for the Grand-Pré national historic site of Canada as well as for the Grand Pré and Area Community Plan. We are grateful to all those who have participated in its development for their generosity in giving time, sharing ideas, and providing leadership. We are confident that this will ensure the strength and relevance to the direction articulated in this document.

With this management plan, we aim collectively to be good and responsible stewards of the Landscape of Grand Pré, to celebrate the many stories it embodies, and to pass on to future generations the shared legacy we inherited.

Gérald C. Boudreau, PhD.
Co-Chair, Nomination Grand Pré

Peter Herbin,
Co-Chair, Nomination Grand Pré
List of Management Plan Working Group members

The draft management plan is the result of the work of the Management Plan working group. This working group met in May 2009, June 2009, and April 2010 to discuss the pressures faced by the property and to provide direction on approaches to manage and protect it.

The working group members include:

- **Bob Book**  
  Director of Development and Planning, Tourism Division, Tourism, Culture and Heritage

- **Roy Bishop**  
  President, North Grand Pré Community Association

- **Andrew Cameron**  
  Director, Resource Stewardship, Department of Agriculture

- **David Christianson**  
  Curator of archaeology, Nova Scotia Museum

- **Charles Curry**  
  Chair, Grand Pré Community Association

- **John Curry**  
  Member, Grand Pré Marsh Body

- **Claude DeGrâce**  
  Manager, External Relations, New Brunswick North Field Unit, Parks Canada

- **Mike Ennis**  
  Councillor, District 12, Municipality of the County of Kings

- **Chrystal Fuller**  
  Committee Chair, Municipality of the County of Kings

- **Marianne Gates**  
  Kings RDA

- **Wanda George**  
  Mount St. Vincent University

- **Jennifer Graham**  
  Coastal Coordinator, Ecology Action Centre

- **John Johnston**  
  Historian, Parks Canada

- **Owen Jordan**  
  Community member

- **Elisabeth Kosters**  
  Community member

- **Edie Lloyd**  
  Community member

- **Brian MacCulloch**  
  Agricultural Regional Coordinator, Department of Agriculture

- **Vaughn Marriott**  
  Community member

- **Seamus McGreal**  
  Planner, Municipality of the County of Kings

- **Peter Newbould**  
  Community member

- **Suzanne Pelham**  
  Community member

- **Simeon Roberts**  
  Resource Consultant

- **Christophe Rivet**  
  Project Manager, Nomination Grand Pré

- **Dawn Sutherland**  
  Planner, Municipality of the County of Kings
1.0 Introduction and Role of this Management Plan

Grand Pré has a long and rich history. Both natural and cultural features have been commemorated by various authorities over the years. Amongst these are a national wildlife sanctuary on Boot Island, a wetland that is recognized under the UNESCO international Ramsar Convention, the first rural district of national significance, a national historic site, a municipal and provincial heritage conservation district, provincially designated heritage properties and many others. Many of these heritage places have plans or frameworks to guide their management and long-term conservation.

The goal of this management plan is to ensure that the outstanding universal value of the Landscape of Grand Pré (hereafter referred to as the Landscape of Grand Pré) and the attributes that support it are preserved for present and future generations. In doing so it fulfills the requirements of paragraph 108 of the Operational Guidelines for the Implementation of the World Heritage Convention (2005), and supports the nomination and subsequent management of the proposed Landscape of Grand Pré as a World Heritage Site.

This management plan serves as an overarching management framework to cohesively guide the protection, conservation and presentation of the nominated property, both for the proposed site’s governance structure and the responsible authorities.

This plan identifies the proposed outstanding universal value, the main characteristics of this site, the legislative and policy framework for the management of the property, and the management system in place to protect, present and monitor the site. This plan builds on the Municipality of the County of Kings’ commitment to support the development of the communities of Grand Pré, North Grand Pré, Hortonville, and Lower Wolfville through a community plan, the province of Nova Scotia’s commitment to protect marshlands through the Agricultural Marshland Conservation Act and associated regulations and archaeological heritage through the Special Places Protection Act, and the government of Canada’s commitment to protect places of national historic significance that it administers.

The management approach places great importance on the maintenance of a vibrant agricultural community anchored in an agricultural tradition that has evolved over 300 years and on the maintenance of the intrinsic values that make this place significant for the Acadian community.
2.0 Description of Property

2.1 Description

The nominated property consists of 1323 hectares of dykelands, known elsewhere as polders, and uplands on the southern edge of the Minas Basin, an eastern arm of the Bay of Fundy in western mainland Nova Scotia. It is bordered by the Gaspereau River to the east, the Cornwallis River to the west, Long Island to the north, and parts of the communities of Grand Pré, Hortonville, and Lower Wolfville to the south. Dominating the distant background, beyond the nominated property, Cape Blomidon extends into the basin as an instantly recognizable landmark.

The nominated property includes the dykeland area that the Acadians created in the 17th century, which successive generations of farmers have expanded. It also includes distinctive representative sections of the Acadian settlement and of the current agricultural community, as well as the entire planned settlement for the New England Planters, a British town grid.

Since the time of the first Acadian settlement in the 17th century, people have continuously worked these dykelands. The nominated property also includes parts of the hamlet of Grand Pré, which hosts provincially and municipally designated heritage properties and some local services, plus farms on the hills and an expanse of fields and pastures. At the heart of both the nominated property and the Acadian settlement lies Grand-Pré National Historic Site of Canada. The national historic site consists of the commemorative gardens, the Memorial Church, cemeteries, and many other memorials to the Acadian Deportation.

The entirety of the nominated property can be seen in the following aerial photo.
2.2 Location and Boundary

The geographical coordinates (to the nearest second) for the approximate centre of the property are:

LATITUDE 45° 7' 6" North  
LONGITUDE 64° 18' 26" West

The nominated property is situated in eastern Canada in Nova Scotia. The property comprises 1323.24 hectares of land. It is protected from the waters of the Minas Basin in the Bay of Fundy by 5.53 kilometres of dykes. It extends 4.4 kilometres East – West along Highway 1 in the north-eastern corner of the County of Kings, east of the Town of Wolfville.

The boundary was assigned to include the area that has been dyked from the 1680s up to the present day, that is under the stewardship of the Grand Pré Marsh Body, and that continues to support exclusive agricultural use. It
also includes the heart of the traditional settlement on the uplands and the lands that host the memorials associated with the Acadian Deportation.

The boundary of the proposed property (shown in Figure 1 and 2) follows on the north side the boundary of the marshland as defined in the designation under the Agricultural Marshland Conservation Act.

The boundary of the nominated property follows, on the north side, the boundary of the marshland as defined in the designation under the Nova Scotia Agricultural Marshland Conservation Act. Counterclockwise, it continues southward following the line of dykes in their middle and again follows the boundary of the designated marshland up to the point where the dykes make a westward right angle (Point1) (the corresponding geo-coordinates for each point are illustrated in the following map). The boundary then continues straight towards the uplands, turns east and follows the Dyke Road, including the entire right-of-way. As it reaches Miner Lane, the boundary follows Miner Lane southward in the middle of the road and turns east on Old Post Road, including the right-of-way. The boundary follows Old Post Road until it reaches Horton Cross Road. It then turns south, including the right-of-way, and turns immediately east on Middle Street including the right-of-way. It continues in a straight line towards the Gaspereau River. When the boundary meets the river, it turns north and follows the coastline up to the place called Horton Landing, where the dyke resumes (Point 2). The boundary then follows the line of dykes in their middle and the boundary of the designated marshland until it meets with the north boundary.

The boundary is defined by legal descriptions within the Agricultural Marshland Conservation Act, as well as by topographic features that ensure it is clearly identifiable on the ground. The boundary guides appropriate management.

2.3 Buffer Area
The buffer zone is an area surrounding the nominated property. It has complementary legal requirements placed on its use and development to give an added layer of protection to the property. The nominated property of Grand Pré requires a buffer zone to ensure that the integrity of the dykelands and the continuity of its agricultural use are maintained. The buffer zone includes a land component and a marine component.

The land component includes Long Island, Boot Island and the lands surrounding the nominated property to the south, up to the boundary of the Grand Pré and Area Community Plan. The buffer zone is managed through legislation and policies that add to the protection of the nominated property. The legislation and policies are described in Chapter 5. The boundary of the Grand Pré and Area Community Plan encompasses four communities: the hamlet of Grand Pré at the centre, and the communities of North Grand Pré to the north, Hortonville to the east, and Lower Wolfville to the west. Starting at the southern tip of Grand Pré Road as it meets the Gaspereau River (Point 3, see Figure 2 for the location of points, and Table 1 for their coordinates), the boundary follows the river counter-clockwise in the middle up to its mouth where it meets the Minas Basin at the former railway bridge. Then the boundary continues northward and follows the coastline, turns westward along Long Island and continues to follow the coastline. As it reaches the western tip of Long Island, it continues southward, still following the coastline. It then makes a sharp turn westward (Point 1) as it meets the corner of the dyke and continues westward until it meets the legal boundary of the town of Wolfville (Point 4). It turns southward following that boundary to the southern limit of the right-of-way of Highway 101. It follows this right-of-way until it intersects the western right-of-way of Martin Cross Road. It continues south on Martin Cross Road 0.07 kilometres until it meets a point opposite the southwest corner of a property, PID #55222947 (Point 5). It then continues westward along the southern limit of several properties to the southeast corner of property PID #55222897 (Point 6). The boundary turns southward on Biggs Road by the middle to Hamilton Road (Point 7), continues eastward on Hamilton Road, in the middle, to Grand Pré Road, finally continuing southward on Grand Pré Road, in the middle, ending at the Gaspereau River.
The marine component of the buffer zone extends 500 metres from the water-facing boundary of the property and, where relevant, from the land buffer zone. On the eastern side of the property, the marine component of the buffer zone begins at Point 8 and extends north along the property extending from the edge of the nominated property. It then continues eastward around Boot Island following the coastline. At Point 9, the boundary for the buffer zone follows the edge of the coastline of Long Island westward until Point 10, where it then follows the coastline of the nominated property. At Point 11 it turns westward following the edge of the area covered by the Grand Pré and Area Community Plan. At Point 12, the marine component of the buffer zone ends with a straight line southward, meeting with the land buffer zone. The marine component of the buffer zone includes salt marsh, beaches and mudflats.

Figure 2: Boundary of the Nominated Property and Buffer Zone
2.4 Status

Three levels of government have jurisdiction over various parts of the nominated property. At the federal level, national historic sites owned by the Government of Canada through the Parks Canada Agency are established under the Canada National Parks Act and protected under the Parks Canada Agency Act’s National Historic Sites Order and its regulations. At the provincial level, archaeological sites are protected under the Special Places Protection Act, administered by the Nova Scotia Department of Tourism, Culture and Heritage. The dykelands are protected under the Agricultural Marshland Conservation Act and its regulations, as well as by municipal zoning that prevents permanent structures. The municipal zoning bylaws, as defined in the Grand Pré and Area Community Plan, regulate activities and development on the land not covered by the Agricultural Marshland Conservation Act. The uplands are managed under the municipal bylaws, as defined in the Grand Pré and Area Community Plan. Additional provincial acts protect regions within the buffer zone, including the Beaches Act and the Cemeteries Protection Act.

Figure 3: Iconic view of the property taken from the Old Post Road. In the foreground, the memorial church and the visitor centre at the national historic site; in the middle ground the dykeland up to the line of trees that indicate Long Island and the edge of the property and; in the background, Cape Blomidon and the waters of the Minas Basin.

2.5 Shared Stewardship and Governance Structure

Three levels of government and various other authorities manage various components that make up the nominated property. Each authority has mechanisms and resources in place to review proposals, plan for them, implement activities, and monitor changes. These mechanisms will be used to ensure the conservation of the property’s outstanding universal value if it is successfully inscribed on the World Heritage List. The Grand Pré
Management Plan for the Landscape of Grand Pré

World Heritage Site Stewardship Board will play an essential role in implementing measures to manage the nominated property. Whenever it is consulted by one of the authorities, the Board will provide an overall analysis of impacts on the outstanding universal value of the property to ensure coordination among the various authorities’ mechanisms and resources.

2.5.1 Jurisdictional Responsibilities

There are five main authorities that have legal responsibility for the protection and management of the proposed property and its buffer.

The municipal government is responsible for the management of land use and activities in the proposed area, with the exception of the federal and provincial lands. It plays an essential role in preserving the agricultural use of the area.

The provincial government through the Department of Tourism, Culture and Heritage has authority over the protection and management of archaeological resources. The province’s Department of Agriculture has authority over the protection of the marshland.

The Grand Pré Marsh Body, in accordance with the Agricultural Marshland Conservation Act, has limited authority over the activities and projects taking place on the marshland. The Marsh Body is an important element of the site’s stewardship. It has existed since at least the 1770s as a group of landowners who have continuously played an essential role in maintaining agricultural activities.

The federal government, through the Parks Canada Agency, owns properties that include Grand-Pré National Historic Site of Canada, the location of the Historic Sites and Monuments Board of Canada plaque for the commemoration of the Attack at Grand-Pré at Grand Pré, and the location for the plaque commemorating the arrival of the Planters at Horton Landing. The agency’s mandate is to protect, present, and foster public understanding, appreciation and enjoyment of these cultural sites of national significance.

While each jurisdiction will continue to manage their properties and responsibilities, by approving the management plan for the Landscape of Grand Pré, the jurisdictions commit to being responsible stewards of the property and to working together through the Grand Pré World Heritage Site Stewardship Board and otherwise to ensure that their own actions are respectful of the property’s outstanding universal value.

2.5.2 The Grand Pré World Heritage Site Stewardship Board

The property will be managed through the Grand Pré World Heritage Site Stewardship Board under agreements with the Municipality of the County of Kings, the Province of Nova Scotia, Parks Canada, the Kings Regional Development Agency, the Société Promotion Grand-Pré Inc., the Grand Pré Marsh Body, and the Grand Pré and Area Community Association. The Stewardship Board’s mandate is to ensure the implementation of the management plan through a coordinated management approach between all jurisdictions, promotion of the property’s outstanding universal value, engagement of the stakeholders in the stewardship of the property, and reporting on the condition of the property.

The mandate of the Stewardship Board, as described in the Terms of Reference - Grand Pré World Heritage Site Stewardship Board, is to ensure a coordinated management approach between all jurisdictions, provide technical advice on the protection of the property’s outstanding universal value, promote the property’s outstanding universal value, engage the stakeholders in the stewardship of the property, and coordinate the reporting on the property’s condition. The regulatory authorities agree, through the terms of the Memorandum of Understanding which creates the Stewardship Board, to provide mechanisms to consult and receive recommendations from the
Board on issues pertaining to the management of the World Heritage Site and on means to protect its outstanding universal value. The Stewardship Board will be composed of residents, Acadian representatives, representatives from the three levels of government, and other representatives of stakeholders or communities of interest.

The Stewardship Board will be assisted in its work by a Secretariat and a Site Management Coordinator whose mandate is to coordinate the management of the nominated property. The Stewardship Board will rely on three sources of expertise to provide advice on matters of protection, promotion, and education. The first is a Technical Advisory Committee, which will provide professional advice on matters pertaining to the protection of the dykelands and of the memorials. The second is the Education and Marketing Committee, which will provide direction and coordination between partners for matters relating to interpretation, promotion, marketing, and education. The third will be a variety of outside sources of expertise in government agencies, non-governmental organizations, and consultancies when required.

Between the time of submission of the nomination proposal and the decision by the World Heritage Committee, the Nomination Grand Pré Advisory Board will work to implement this management plan as relevant to ensure the protection of the nominated property.
Figure 4 Composition of the Stewardship Board
2.5.3 Process for Effective Management of the Property

The objective for effectively managing the nominated property is to ensure the coordination of the multiple jurisdictions involved in the area. Managing the property relies on federal, provincial, and municipal authorities implementing actions that are essential for the protection of the nominated property within the powers afforded to them by legislation.

The Stewardship Board provides an overarching strategic view of the actions necessary for the protection of the nominated property and ensures the coordination of the legislated authorities. In order to accomplish this, the authorities agree to consult the Stewardship Board on matters of planning or activity implementation and to receive its recommendation for consideration in good faith. Those recommendations will result from thoroughly investigated issues and options based on its mandate of protecting the OUV of the nominated property.
Figure 6 Process for consultation and management
3.0 Outstanding Universal Value of the Landscape of Grand Pré (proposed)

The following section identifies why the nominated property is considered to have outstanding universal value and the tangible evidence that support that value. It aims to guide decision-making to maintain the property’s integrity and authenticity.

The detailed statement of outstanding universal value that identifies the criteria under which the property is nominated, the attributes, their integrity and authenticity is included as an appendix and reflects UNESCO’s World Heritage Committee’s decision.

The Landscape of Grand Pré has evolved in many ways over the years. These changes included different methods of farming, various crops and agricultural uses, changes in landownership, evolution of materials for dyking, evolving field shapes and new drainage patterns. However, at its essence, the Landscape of Grand Pré has maintained its integrity because the different layers of history and settlement are still visible in the landscape and because the way the marsh is worked as agricultural farmland has been consistent over the years with people living in the vicinity and maintaining a community-based approach to their work. The intangible value of the landscape has also evolved from a place that is deeply meaningful to the collective memory of the Acadian people, to a place that Acadians are proud to share with the world as a symbol of perseverance and hope.

Values

The Landscape of Grand Pré is a dynamic agricultural landscape claimed from the sea. It is also a powerful symbolic landscape for the Acadians. The Landscape of Grand Pré is the most intact agricultural polder in the world that uses an ingenious vernacular system for transforming salt marsh into fertile agricultural farmland. This system of earthen dykes, ditches, aboiteaux, and community-based management was first implemented at Grand Pré in the late 17th century by French (Acadian) settlers. The location they chose was subject to the most extreme tides in the world, which presented great challenges but also great opportunities in the extraordinary fertility of the land they transformed. Today, the agricultural landscape is still protected and drained by the same system, still exhibits distinctive field patterns, and is still managed through the same community approach, a testimony to the original Acadian settlers, the New England Planters who succeeded them, and the farmers who work the land today. Symbolically, the Landscape of Grand Pré is the single most important lieu de mémoire for the Acadian people, one of the first people of European descent to call North America their homeland.

The Landscape of Grand Pré is directly associated with the emergence of their new identity in this new land, but also with their tragic forced removal from it, their subsequent migration, and their renaissance. Today, this lieu de mémoire embodies the cultural consciousness of a widely scattered people. It is a landscape that has been peacefully and symbolically reclaimed by the Acadians, and it is their emotional and spiritual centre. It illustrates the importance of the connection between people and places in defining collective identity.

Criterion (v): Grand Pré is a vibrant agricultural landscape, carved out of its harsh coastal environment three centuries ago by Acadian settlers. Working collectively, they applied an ingenious system of dyking and drainage to hold back the highest tides in the world, created extraordinarily fertile farmland, and began a tradition of collective management. This land reclamation system and this management tradition continue to ensure the livelihood of the local community today. The Landscape of Grand Pré is an outstanding example of a thriving farming community that interacts with its environment by using a successful land reclamation system and management tradition that predate the introduction of engineered drainage systems.

Criterion (vi): Owing to the imposing presence of the dykelands, the Memorial Church and other memorials, and its enduring use by the Acadian people, the Landscape of Grand Pré is the most important lieu de mémoire for the Acadians, an evocative example of a homeland symbolically and peacefully reclaimed by a diaspora that has
triumphed over hardships. The legacy of the Acadian people overcoming the tragedy of a forced removal, the Grand Dérangement, their renaissance, and the ongoing efforts of reconciliation are embodied in the Landscape of Grand Pré. Here, Acadians share their common heritage, reaffirm their identity, and continue to build their sense of community in a spirit of peaceful reconciliation with history. The Landscape of Grand Pré provides a poignant and powerful living example of the universal human aspirations to belong to a community, to connect with one’s homeland, and to seek reconciliation.

Integrity and Authenticity

The nominated property has integrity because its clearly defined boundaries encompass all the elements relevant both to the agricultural landscape, created from the transformation of salt marsh into farmland over several centuries, and to the symbolically reclaimed landscape. These elements include earthen dykes, ditches, aboiteaux, and field patterns, as well as the memorials, archaeological evidence of the village, and commemorations related to the forced removal and subsequent renaissance of the Acadians. The nominated property comprehensively represents the past and present agricultural settlements as defined by dykeland farmland, upland farmland, and the heart of the community. It includes the dykeland managed collectively by the Grand Pré Marsh Body and the entire area of symbolic importance to the Acadians. The integrity is enhanced by the farmland included in the buffer zone. The nominated property’s attributes are in good condition. Policies and mechanisms are in place to reduce or eliminate pressures on the agricultural use and the archaeological sites.

The nominated property has authenticity because the archaeological and historical evidence confirms the locations of the original Acadian and Planter settlements, the enduring agricultural use, and the location of the memorials. That evidence also confirms that the dykelands are maintained in the 21st century using the same principles and techniques originally implemented by the Acadians in the 17th century and that they have been managed collectively for over 300 years. The Acadians’ continuing use of Grand Pré for individual and collective events attests to the profound value of this landscape to their community.

Requirements for Protection Management

The legal protection of the nominated property is enforced provincially on lands under provincial jurisdiction by the Nova Scotia Agricultural Marshland Conservation Act and the Nova Scotia Special Places Protection Act, and federally on lands administered by the Parks Canada Agency under the Parks Canada Agency Act, and the Canada National Parks Act. The protective measures are appropriate to safeguard the dykeland, its agricultural use, and the archaeological sites from undue development and environmental pressures. A buffer zone around the nominated property, encompassing both land and water, was defined through community engagement leading to the adoption of the Grand Pré and Area Community Plan to ensure that zoning remains compatible with the aims of protecting the nominated property. All of these mechanisms are sufficient to control development, ensure agricultural land capacity, and monitor the effects of coastal erosion that could otherwise threaten the value of the nominated property.

The overall management system for the nominated property is exemplary. It involves community management through the Grand Pré Marsh Body, municipal zoning, and federal and provincial government legislation for protection of the site. The Management Plan for the Landscape of Grand Pré is a strong framework document that ensures the coordination of multiple jurisdictions and stakeholders inside the boundary of the nominated property and its buffer zone. Parks Canada, as a federal government agency, is responsible for managing Grand-Pré National Historic Site of Canada and Horton Landing. The Province of Nova Scotia, mainly through its departments of Agriculture and of Tourism, Culture and Heritage, is responsible for protecting the dykelands and archaeological sites not located on federal lands. Finally, the Municipality of the County of Kings is responsible for implementing the Grand Pré and Area Community Plan and the zoning regulations contained in it. The Management Plan depends on the Community Plan, the Grand-Pré National Historic Site of Canada Management Plan, provincial
departmental policies, and the Grand Pré Marsh Body for its effective implementation. The management system is coordinated by the Grand Pré World Heritage Site Stewardship Board and involves the local community, the Acadian community, and government administrative bodies in its decision-making process. Local residents are proud and effective stewards of the land.
4.0 Management Context

4.1 Socio-Economic Information

The total population of the nominated property and buffer zone varies according to the season (see summary in Table 4–5). Cottagers who reside in the buffer zone during the summer, especially around Evangeline Beach, will increase the population by about 60 per cent. Population estimates for the buffer zone are based on persons per dwelling: 2.4 persons per dwelling for year-round residents and 2.0 persons per dwelling for seasonal residents. Within the nominated property, residents are considered year-round, and the estimate of 2.4 persons per dwelling is applied. The population for the nominated property and buffer zone is only an estimate, because Canadian privacy laws prohibit the collection of actual population numbers for a community of this size. The persons-per-dwelling estimate came from trends within the 2006 Statistics Canada census data.

The nominated property has an estimated 64 year-round occupied dwellings with approximately 154 inhabitants. The buffer zone has an estimated 296 year-round occupied dwellings with an estimated 710 residents. Additionally, 67 seasonally-occupied dwellings and 130 seasonal trailers are within the buffer zone, increasing the seasonal population by an estimated 394 inhabitants. In total, the population for the nominated property and buffer zone is approximately 1258.

Table 2: Population details for the nominated property, for the year 2006

| Area of the nominated property | 1323 hectares |
| Area of land component of the buffer zone | 1248 hectares |
| Estimated number of inhabitants in the nominated property | 154 |
| Estimated number of year-round inhabitants in the buffer zone | 710 |
| Estimated number of seasonal inhabitants in the buffer zone | 394 |
| Total | 1258 |

The community has increased by about 20% over the past 30 years, from 485 in 1981 to 585 in 2008. As illustrated in Figures 7 and 8, Grand Pré has an aging population. This is evident when comparing the largest percentage cohorts from 1996 and 2006. In 1996, the largest cohort was for 30 to 49 years of age, or approximately 17% of the population; however, in 2006, the largest cohort was for 40 to 59, or 18% of the population. Additionally, household size has decreased over the years to approximately 2.4 people per household. This trend also suggests a change in the population profile that may represent a challenge to maintaining a vibrant agricultural community.

4.2 Activities and Uses In and Around the Nominated Property

The predominant activity and land use both inside and outside the property is agricultural. There are currently areas in the hamlet and at the exit of Highway 101 that allow businesses and services. Municipal policies aim to continue locating businesses and services in those areas.

Inside the boundary, Grand-Pré National Historic Site of Canada is a significant tourist attraction in the heart of the hamlet. It offers opportunities for visitors to learn about the Acadian way of life. The marshland is exclusively dedicated to farming and growing crops. Other properties along the uplands and within the boundary are also dedicated to farming, mostly corn and pasture. The rest is essentially residential.

Outside the boundary, the prevalent activity is also agricultural. Most businesses and tourism related services and activities are concentrated at the crossroads of Highway 1 and Grand Pré Road, around the campground in North Grand Pré, and at exit 10 of Highway 101. These businesses include bed and breakfasts, a motel, campgrounds, a gas station, a convenience store, crafts and local products shops, wineries, and a coffee roasting company.

Zoning and municipal policies promote the agricultural use of the area and discourage rural residential subdivision development. Currently, the majority of the area is zoned as agricultural land by the Municipality of the County of Kings and is included as part of an agricultural district where 60 percent of the land is class 2, 3, or active class 4. Arable land varies in quality within the site. On the marshland, almost 100% of land is considered class 3, meaning that these soils have moderately severe limitations that restrict the range of crops or require special conservation practices. On the uplands, farmland is generally classified as class 2 and 3; however, improvement practices are feasible throughout this class range. Grand Pré and Area has a much higher proportion of Class 2 and 3 soils than other parts of the County.

Certain commercial recreation uses, and development agreements are allowed in the agricultural district. Urban growth is also controlled to avoid expansion toward agricultural areas. There are very limited opportunities for residential development due to current zoning.

4.3 Factors Affecting the Property

The nominated property may experience different factors that can affect the property’s outstanding value. These factors are related to development pressures, environmental pressures, and visitor and tourism pressures. Natural disasters are addressed in Section 8: Natural Disasters and Risk Preparedness.

4.3.1 Development pressures

4.3.1.1 Sustainability of agriculture

The nominated property is a living agricultural landscape, expressed by the enduring agricultural relationship of local communities with the dykeland, and the maintenance of the fertile farmland created from transformed wetlands. The maintenance of an agricultural economy is key to the conservation of the property. For the agricultural landscape of Grand Pré to be preserved and to survive, there must be farmers, and there must be continuing possibilities for agriculture to develop in step with the times. At the same time, agricultural development must proceed hand in hand with conservation of the unique natural and cultural values existing within the nominated property. Grand Pré and its surrounding communities are a vibrant agricultural community where modern agriculture is practised. However, like many agricultural communities, it is under pressure from changing demographics, loss of agricultural land to development, and economic realities. Agricultural land in Grand Pré is valuable for its scenery and its importance to
tourists and tourism-related businesses, such as farmers’ markets and wineries. Agriculture also supports the local economy through food production, value-added processing and agri-tourism.

As a result of changes in the agricultural economy over the years, some farm buildings have been abandoned or are being reused. In general, though, farmers have adapted their buildings to their needs. Local demographics indicate that most residents are between 40 and 60 years of age and that households are getting smaller. This information supports anecdotal information provided by local farmers about the future of their industry. They are concerned that younger generations are not interested in pursuing farming activities, which puts the agricultural economy’s future at risk. Moreover, most new residents are individuals who retire in Grand Pré to enjoy the rural setting while being close to amenities provided by the Wolfville–Coldbrook Development Corridor or even Halifax. Few of the new arrivals actively participate in the agricultural economy.

The number of landowners on the dykeland has decreased over the years, although no land has been left unattended. For the remaining landowners, the burden of responsibilities in maintaining the dykeland increases. This may create an issue of long term capacity to provide the financial and human resources to maintain an effective Grand Pré Marsh Body and implement its role in maintaining the dykeland, thus altering the relationship between the Department of Agriculture and the Marsh Body.

Although most of the land is part of an agricultural district, some exceptions allow for the development of structures that are not related to farming. While the conditions in Grand Pré are ideal for farming, certain pressures make the future of farming in Grand Pré, as in other parts of Nova Scotia, uncertain. In addition to concerns about where the next generation of farmers will come from, farmers are under pressure from land-use conflicts between agricultural and residential uses. Farmers are also subject to the whims of the market: fluctuating agricultural prices make it difficult for them to ensure a stable income. These problems are not unique to Grand Pré.

The County of Kings has the most agriculturally based economy in Nova Scotia. As reported in the 2001 census, the county’s agricultural labour force numbers 2100, with an additional 2200 employed in agriculture-related activities. This local industry represents 30 per cent of the agriculture and 50 per cent of the agriculture-related manufacturing for Nova Scotia. The overall farming capability of the County of Kings is large relative to its modest agricultural land base. The total farm production per capita is 2 ½ times the national average.

Grand Pré’s agricultural economy revolves mainly around the production of milk, meat, and fruits. Crops grown in recent years on the dykeland include corn, salt hay, soy, alfalfa, oats, and winter and spring wheat. In the past, the area was renowned for its orchards, mainly apple, but over the past two decades, that industry has decreased in importance. Current expanding industries include grape growing for wine making (in the buffer zone), and cattle raising, mainly for milk production. Profitability in these crops, in milk production, or in value-added products, is essential to maintaining the dykeland and the whole of this unique agricultural landscape.

Although no specific data exists for farmers working in and around Grand Pré, they may be faring better than others in the province, since much of their production relies on supply and demand quotas, ensuring stability.
Densification (the increase in building density) and use encroachment of private property on the uplands are pressures that affect the integrity and authenticity of the nominated property’s distinctive settlement pattern. This settlement pattern is characterized by particular field patterns, roads, a dispersed settlement, and an active agricultural system. Use encroachment is the intrusion of one type of land use onto land that is zoned for a different use. Since the majority of the nominated property is part of an agricultural district, densification and use encroachment affect the dykeland, the uplands, the national historic site and the archaeological resources. Fortunately, the Agricultural Marshland Conservation Act and its Grand Pré Marsh Body Land Use Regulations minimize the pressure of densification and use encroachment on the dykeland. According to the Act and Regulations, no development can be accommodated on the designated marshland unless a variance permit, or an exemption, is granted by the government of Nova Scotia to allow for the construction of roads, the installation of utility poles or the installation or construction of structures used for the generation of power. In addition, the dykelands are zoned O1 Environmental Open Space, allowing agricultural activities but no permanent structures unless a provincial variance is granted. Densification can also result from permitted smaller lot sizes.

On the dykelands lot sizes vary depending on location and ability to drain. Development is not permitted unless a municipal re-designation and rezoning is approved. In Grand Pré Hamlet, zoned as Hamlet Historic Residential (R9), lot size requirements are a minimum of 50 000 square feet (4645 square metres), whereas in the Agricultural (A1) zone, which includes Hortonville, lot size requirements are a minimum of 20 000 square feet (1858 square metres). However, the Grand Pré and Area Community Plan requires a minimum lot size of 50 000 square feet for all new non-farm dwellings in the A1 Zone. The current Municipality of the County of Kings Municipal Planning Strategy,
amended in 2009, does not allow for nonfarm-related structures to be built on agricultural land unless the lot was created prior to August 1994, is designated as an agricultural infill or abandoned resource-extraction site, or has poorer quality soils subject to an agrologist’s report. Agricultural infill sites are defined as lots with existing dwellings on both sides and within 400 feet (122 metres) of each other or within 400 feet of a road right-of-way. Although these lands are permitted as agricultural infill, they have limited potential for agriculture production. Approximately 64 permanent residences lie within the nominated property: 20 in Grand Pré Hamlet and the remainder in Hortonville. An estimated 14 lots fall within the parameters of a pre-1994 or infill lot, representing a total potential increase in densification of 22 per cent. This percentage excludes any potential to build additional structures in areas zoned agriculture.

Densification could put pressure on archaeological sites in an area that is historically known to have been heavily populated and used in the 17th, 18th, and 19th centuries. However, community members have collaborated with archaeologists for many years in reporting, locating and identifying archaeological sites. Many have been instrumental in protecting key attributes of the nominated property, such as above-ground remains of an old Acadian dyke, Acadian and Planter cellars, Aboriginal artifacts, and old aboiteaux. Most of these discoveries were accidental and were found on privately owned land. To ensure that all archaeological evidence is identified, clear guidelines have been developed for the reporting of all archaeological finds on private property. These guidelines, found within the Strategy for the Management and Conservation of Archaeological Heritage in the Landscape of Grand Pré, have been endorsed by the provincial and municipal authorities and Parks Canada Agency. Information will be provided to local residents on reporting and protecting archaeological evidence.

Use encroachment mainly takes the form of agricultural uses encroaching on road rights-of-way that are no longer in use. This is particularly apparent in Hortonville’s town grid. Maintained roads are protected, however, because they are public. Agricultural zoning now prevents any future densification that might result from use encroachment.
Figure 10: ‘Horton’ town grid as planned by the British military surveyors. This is from a 1760’s map.

Figure 11: Close up of Hortonville town grid as defined in grey by Railway Street, King Street, Middle Street, and Horton Cross Road, Patterson Street. Notice the streets that end abruptly without meeting up with a crossroad indicating sections that have now fallen into disuse. An example is Middle Street. The LIDAR view clearly locates those streets that have now disappeared.
4.3.1.3 Alternative energy sources

The flat dykelands of the Landscape of Grand Pré, coupled with winds coming off the Minas Basin, create a desirable location for wind turbines. Alternative energy sources could put increased pressure on the authenticity and integrity of the nominated property. The area is identified on Nova Scotia’s wind-resource map as having moderate potential for the installation of utility-sized wind turbines. At 80 metres (262 feet) above ground level (AGL), the average wind speed is calculated at approximately 6.5–7.0 metres per second (m/s) (21.3–23.0 feet/second); at 50 metres (164 feet) AGL, the average wind speed is approximately 6.0–6.5 m/s (19.7–21.3 feet/second); and at 30 metres (98.4 feet) AGL, the average wind speed is approximately 5.5–6.5 m/s (18.0–21.3 feet/second). Large utility-sized wind turbines are between 40 and 80 metres (131–262 feet) in diameter, with tower heights of up to 100 metres (328 feet). To create a viable operation, a wind farm would require a large number and concentration of turbines. At present, the Grand Pré and Area Community Plan (Appendix 2J), allows only small-scale wind turbines in the nominated property, forbidding the construction of large-scale wind turbines. Small-scale turbines are less than 52 metres (170 ft) in height and produce less than 100 kW.

While this may be an attractive location for energy companies to generate alternative energy, no such proposals are currently being considered.

The use of tidal power is another major alternative source of energy being explored in the area. Nova Scotia Power and the government of Nova Scotia have been testing the tidal power potential of the Minas Basin by placing turbines at the bottom of the basin in an area close to Parrsboro, about 20 kilometres north of the Landscape of Grand Pré. Increased siltation in the region may be an impact from the turbines; however, the extent of siltation and other impacts are unknown and require further study.
4.3.2 Environmental pressure

4.3.2.1 Coastal change and rising sea level

Coastal change and rising sea levels are constant environmental pressures exerted on the nominated property, affecting mainly the dykes and shoreline along the east and west sides of the nominated property, as well as the north shore in the buffer zone. A coastal change study completed in 2010, *Overview of Coastal Change Influences on the Landscape of Grand Pré*, confirmed that coastal change, including coastal erosion and coastal regeneration, is occurring around the nominated property and buffer zone.

The nearly 13 kilometres of coastline, composed of geological materials that erode easily, such as sand, shale and gravel, are subjected twice a day to the highest tides in the world. Because of the range of the tides and the height of waves during storms, coastal change is a continuing concern and presents a significant risk to the local economy and cultural resources on the nominated property. Various mitigation strategies have been used to minimize the effects of coastal change, particularly erosion; however, the effects cannot be completely eliminated. Dykes have been maintained to ensure their stability and integrity, and shorelines, in some cases, have been protected by building rock faces.

Archaeological evidence indicates that many of the original dyke walls are buried under 1.5 to 1.8 metres of sediment, a testament to the steady rise in sea levels and alteration to the coastline. An average of 15 metres (50 feet) of shoreline erosion occurred along the North Grand Pré coastline between 1961 and 2002 according to aerial comparisons, with coastal erosion ranging from 0.3 to 68.4 metres (0.97 to 224.34 feet). Furthermore, on Boot Island, an average annual decrease of shoreline over two-year intervals was recorded from 1990 to 2008 at a rate of 0.34 to 0.85 metres per year (1.11 to 2.79 feet per year). Although coastal erosion is taking place along the east and west sides of the marsh, there is evidence of salt marsh regeneration. Salt marsh regeneration is a natural occurrence, but scientists do not fully understand the process.

With sea levels anticipated to rise 70 to 140 centimetres over the next century, and with more intense storm surges expected, it is anticipated that the dykes bordering the Grand Pré region will need consistent maintenance to minimize the hazard of dam breaches and to ensure that the dykelands contribute to the economic and cultural climate of the Grand Pré region. However, topping up the dykes increases their weight, and the added weight makes them slowly sink over time.

Coastal change is not fully understood. Additional studies are underway on the effects of coastal change in the area and on the effects of the various protection mechanisms in place. Continual monitoring and maintenance of the dykes are expected to reduce the negative effects of coastal change.
4.3.3 Tourism and visitor pressure

4.3.3.1 Tourism trends

In 2009, visitors to the Grand-Pré National Historic Site of Canada numbered approximately 30,535. Visitor numbers are down from approximately 62,000 in the late 1990s. This represents a 51 per cent decrease over the last decade. In general, this downward trend is noticed throughout Nova Scotia, due in part to the recession and the rise of the Canadian dollar relative to the American dollar. A recent study, entitled *Grand Pré: An Economic Impact Assessment of a UNESCO World Heritage Designation*, carried out by Acadia University for Nomination Grand Pré in 2009, indicates that a projected 6.2 per cent increase in visitation to the Grand-Pré National Historic Site of Canada will likely occur by 2012 if the Landscape of Grand Pré is inscribed on the World Heritage list. This projected increase does not include visitors from Nova Scotia. A recent Visitor Information Program (VIP) survey performed by the Parks Canada Agency in the summer of 2007 indicated that 31 per cent of visitors to the Grand-Pré National Historic Site of Canada are from Nova Scotia and 68 per cent of visitors are from outside the province. Of the visitors from outside Nova Scotia, 53 per cent are from non-Atlantic Canadian provinces, and 41 per cent are from the United States. Seniors and adults make up the majority of visitors to the site, at 89 per cent. Of these, 62 per cent are over the age of 50. Additionally, the survey indicated that 20 per cent of visitors identify themselves as Acadians or Cajuns.
Grand-Pré National Historic Site of Canada was also included in Parks Canada’s National Historic Sites Marketing Initiative (2008) (Phase II) and was awarded $75 000 to develop a long-term marketing plan for the site, work on new product development, and implement sustainable actions in efforts to increase visitation to the site.

4.3.3.2 Tourism infrastructure and attractions

The nominated property and buffer area have several services for visitors, including overnight accommodations, restaurants, speciality retail, activities, a coffee shop, and a service station. These services are summarized in Map 17 Facilities and Services in the Nominated Property, Buffer Zone, and Surrounding Area (see Appendices). Overnight accommodations include a campground in North Grand Pré, a motel, and several Bed and Breakfasts and cottages. There are restaurants, a gas station, a corner store, wineries, a few museums, and some antique shops and other specialty shops. Visitors also enjoy the area for bird watching, going to the beach at Evangeline Beach, and enjoying the scenery. Most of these services are located in the buffer zone.

The Grand-Pré National Historic Site of Canada visitor centre will serve as the starting point for a visit to the nominated property. It includes interpretive exhibits explaining the natural and cultural history of the area, an interpretive film about Acadian history in the area, washrooms, a gift shop, and a parking lot for personal vehicles, recreational vehicles (motor homes) and coach buses. The site grounds offer a blacksmith shop, the Memorial Church, sculptures and interpretive panels, well manicured lawns and gardens, and several walking trails originating from the site.

The nominated property falls within the Municipality of the County of Kings. In the County of Kings, and within a short drive of the nominated property, are several towns that offer a full range of services to the visitor: Wolfville, Kentville, Berwick, New Minas, and Hantsport. Wolfville, the closest town to the nominated property, has a visitor information centre, operated by the Province of Nova Scotia, as do Kentville, Berwick and Kingston. Services outside the towns include wineries, farms and farmers’ markets, U-pick (pick your own) fruits and vegetables, golf courses, accommodations, museums and service stations. Numerous events and festivals take place in the Municipality, including music festivals, the Apple Blossom Festival, the Harvest Festival, and Berwick Gala Days.

Halifax Regional Municipality is approximately 85 km away. The city has numerous facilities for visitors, including accommodations, restaurants, attractions, churches, libraries, parks, shopping locations and full-scale health-care facilities and emergency departments. The Halifax Stanfield International Airport is 90 km from the nominated property and serves as the gateway to Atlantic Canada. It has daily or regular flights across Canada, to major destinations in the United States including daily service to New York, and daily service to London, UK.

The Hamlet of Grand Pré and its surrounding area have a long history of accommodating tourism, with visitor numbers that have sometimes exceeded 90 000. The area’s tourism history indicates that it can accommodate large numbers of visitors without any detrimental effect on the nominated property.

4.3.3.3 Property’s carrying capacity

The nominated property’s carrying capacity is defined as its ability to sustain the pressure from visitors and tourism-related activities. This includes limits of acceptable change and the ability for the visitor to experience the nominated property’s important attributes without harming them, or without the tourism-related services affecting them. Based on the 2010 Tourism Strategy and Interpretation Framework for the Landscape of Grand Pré, an increase in tourism at the nominated property would have both positive and negative impacts. These impacts suggest that the area has the capacity to adapt to increased tourism activity without harming the nominated property. The 2010 Strategy suggests that there are significantly more potential positive impacts than potential negative impacts resulting from a World Heritage inscription and concludes that the nominated property is able to sustain the consequences of inscription on the World Heritage list.
Potential positive economic and social-cultural impacts resulting from inscription on the World Heritage List were assessed as follows:

<table>
<thead>
<tr>
<th>Category</th>
<th>Impact Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>Increase in visitation</td>
<td>A conservative estimate of non-resident visitation suggests an increase of 6.2% resulting from a UNESCO designation. Although modest, the additional destination area awareness resulting from a designation is seen as a positive.</td>
</tr>
<tr>
<td>Incremental spending onsite and offsite</td>
<td>As the site becomes a distinctive attraction, an analysis of trends projects a 20% increase in the average length of stay, a 15% increase in visitor expenditure as a result of additional opportunities, and an additional 3000 regional visitors annually as a result of the designation with an incremental impact of another $450,000 annually. The total tourism expenditure impacts in the region as projected to be close to $1 million annually, directly and indirectly.</td>
</tr>
<tr>
<td>Employment</td>
<td>Any new infrastructure, interpretation programs, or tourism services would lead to additional employment.</td>
</tr>
<tr>
<td>Local businesses</td>
<td>Although it is not likely that significant new business activity would result from the designation based on the modest visitation increase, nevertheless the marketing cache for the region will help local and regional tourism-oriented businesses in their marketing efforts.</td>
</tr>
<tr>
<td>Cultural preservation</td>
<td>The designation and the interpretation of the area’s heritage will contribute to the preservation of cultural heritage.</td>
</tr>
<tr>
<td>Educational opportunities</td>
<td>Onsite interpretive programs and outreach activities will provide specific educational opportunities for the general public.</td>
</tr>
<tr>
<td>Environmental conservation</td>
<td>The designation and expansion of protected areas through additional land acquisition and site management controls will help preserve the natural environment.</td>
</tr>
<tr>
<td>Community pride</td>
<td>The designation will boost community pride which spills over into community enhancements and beautification activities.</td>
</tr>
</tbody>
</table>

Potential negative impacts were identified related to visitor experience, the agricultural economy, the relationship of residents to the local setting and community, and resource protection and property values. The 2009 assessment concluded that these negative impacts are unlikely to occur, because the current infrastructure is capable of handling projected increases in tourism.
Figure 14: Aerial view of Grand-Pré National Historic Site of Canada. The visitor centre (large red building) was completed in 2003 and offers visitor services and interpretation programs to tens of thousands of visitors annually. It is the primary cultural attraction in the community.
5.0 Management Strategy

The goal of the Management Plan is to ensure that the Outstanding Universal Value of the nominated property of Grand Pré and the attributes that support it are preserved for present and future generations. The Management Plan serves as an overarching management framework to cohesively guide the protection, conservation and presentation of the nominated property, both for the proposed site’s governance structure and the responsible authorities.

The Management Plan provides shared principles, goals and objectives for the regulatory authorities and the stakeholders involved in the protection and interpretation of the property. It also builds on each authority’s responsibilities, processes, and policies to ensure a collaborative approach for sharing information and decision making for the property’s long-term conservation. The management plan is implemented through the plans and policies of each regulatory authority and through the strategic plan guiding the work of the Grand Pré World Heritage Site Stewardship Board. Listed below are the Principles, Goals and Objectives of the Management Plan.

5.1 Principles, Goals and Objectives

The principles of this management plan are:

Principle 1: Management of the nominated property will meet or exceed World Heritage standards regardless of inscription.

Principle 2: The primary focus of the Management Plan is to address issues directly related to the management and conservation of the site’s outstanding universal value and attributes by providing a framework for advice from the Stewardship Board and for decision-making for the regulatory authorities.

Principle 3: The Management Plan recognizes that the nominated property is set within an active agricultural community where people continue to live and work. People have created, lived and worked on this land for generations and have been responsible stewards of the land. The Management Plan also recognizes that this is an area of great importance for the Acadians, who have a strong emotional attachment to it.

Principle 4: Management of the nominated property in relation to World Heritage guidelines will be a shared responsibility between the different owners, communities, and government agencies with regulatory responsibilities for the nominated property. The Management Plan recognizes that actions undertaken by an owner, community, or government agency with regulatory responsibilities may have a detrimental impact on the nominated property, and that communication, coordination, and collaboration are essential to its long-term protection.

Principle 5: Management and protection will be delivered through existing boards, bodies, and government authorities, supplemented by technical advice, interpretation, and education from the Stewardship Board and procedures developed to accommodate a designated World Heritage Site.

This Management Plan requires regular review by the Grand Pré World Heritage Site Stewardship Board, as experience and other factors may influence the future direction of site management. Once implemented, the Management Plan review will be on a six-year cycle, starting five years after the designation.

The goals and objectives of the management plan are:

Goal 1: To provide for the protection, continuing community and agricultural use and appreciation of the nominated property by:
a. ensuring that agriculture remains a vibrant economic activity of the community;

b. dedicating resources to the monitoring and maintenance of the dykes;

c. preserving and enhancing the memorials reflecting the enduring importance of the area for the Acadians;

d. nurturing ongoing research and filling the gaps in knowledge about the landscape and the people that inhabited it over the years;

e. ensuring that the Grand Pré Marsh Body, as long-term steward of the marshlands, continues to play a significant role in the maintenance, use and protection of the marshlands;

f. informing visitors to the community, through signage and brochures, of the need to be mindful that they are entering an active agricultural community; and

g. working with the Grand Pré Marsh Body to ensure that visitors have access to the values of the site without interfering with the ongoing agricultural use of the marshland.

Goal 2: To enrich the existing tourism destination by promoting wide recognition, understanding and appreciation of the educational and cultural values represented by the nominated property by:

a. developing programs, activities, tools, and interpretation that raise awareness of the importance of the landscape for the different communities, including the Mi’kmaq, the Acadians, and the descendants of the New England Planters;

b. promoting visitation through regional, national and international media;

c. ensuring that promotion of the site is managed responsibly in all aspects of publicity in relation to the nominated property in accordance with UNESCO guidelines;

d. developing tools and interpretation on the history and importance of agriculture;

e. continuing to raise awareness about the Acadian people and the way they overcame their forced migrations of the 18th century; and

f. developing partnerships with existing World Heritage Sites.

Goal 3: To instil a strong sense of shared community pride and stewardship in the protection, interpretation and promotion of the nominated property by:

a. providing for community input and encouraging community participation;

b. engaging Acadian, local and other stakeholder communities in activities that celebrate the importance of the Grand Pré.

c. employing a governance model to ensure that the interests and concerns of local residents and the Acadian community are heard, discussed, and reflected in the advice to the different regulatory authorities; and
d. ensuring that local and Acadian schools are provided sufficient information and opportunities to incorporate the experience at Grand Pré into their curriculum.

5.2 Policies and Strategies

The priority of this management plan is to ensure the conservation and protection of the nominated property’s features of outstanding universal value. These include the marshland, the archaeological sites, the agricultural land, and the memorials to the Acadian Deportation.

The Landscape of Grand Pré is currently protected by provincial and federal acts and municipal bylaws, depending on jurisdiction.

5.2.1 Legislation, policies and regulatory measures for the protection of the property

This section outlines the municipal, provincial and federal legislation and policies that directly apply to the protection of the nominated property.

a) Municipal Planning Strategy, Grand Pré and Area Community Plan (municipal)

In accordance with Part VIII Section 212 of the Municipal Government Act of the province of Nova Scotia, the Municipality of the County of Kings has developed a Municipal Planning Strategy (MPS). The MPS consists of policy statements with respect to the use of the lands within the county, the provision of municipal services, and any other matter related to the physical, social or economic development of the county. The MPS, developed in 1979, recognizes the need to accommodate growth and preserve the agricultural resource base. It was amended in 1992, recognizing that each growth centre within the county has a unique character, and provides a selection of policies and options suitable for the unique character of individual growth centres. With respect to the nominated property, there are no areas considered “growth centres.”

The Municipal Government Act of Nova Scotia permits a municipality to establish committees to undertake research and public consultation and to provide recommendations to a municipal council with respect to the adoption of planning policies and bylaws. In 2008, the Municipality of the County of Kings, in concert with Nomination Grand Pré’s Advisory Board, began the process of amending the MPS further to include specific visions and policies for the communities of Lower Wolfville, Hortonville, North Grand Pré and Grand Pré. These approved amendments are identified in the Grand Pré and Area Community Plan.

In developing the Grand Pré and Area Community Plan, the Municipality of the County of Kings worked with the Grand Pré and Area Community Association and the wider community to develop a plan that reflects the needs and desires of the community, with the objective to develop the “vision that the community has for its future in a landscape of great environmental, cultural, and historical significance” (Terms of Reference, 2008). The general policy that comes out of the Grand Pré and Area Community Plan is that Council shall be guided by the policies and vision that are identified in the Grand Pré and Area Community Plan when making decisions that impact the lands within the Grand Pré and Area Community Plan boundary.
The following is the vision statement for the Community Plan and the goals for key aspects of the community:

<table>
<thead>
<tr>
<th>Vision statement</th>
</tr>
</thead>
<tbody>
<tr>
<td>The Grand Pré and Area communities work together with a shared interest in sustaining a healthy rural setting by conserving our culture, environment, and agricultural landscape. In defined areas, the larger community provides opportunities for community growth, agriculture, the recreational use of shared open space, and local business.</td>
</tr>
</tbody>
</table>

<table>
<thead>
<tr>
<th>Goals</th>
</tr>
</thead>
<tbody>
<tr>
<td><strong>Agriculture Goal</strong>: To sustain the agricultural community within its rural setting</td>
</tr>
<tr>
<td><strong>Residence and Recreation Goal</strong>: To provide opportunities for recreation and residential growth where appropriate to the needs of each of the four communities</td>
</tr>
<tr>
<td><strong>Heritage Goal</strong>: To celebrate and conserve our local history and built heritage</td>
</tr>
<tr>
<td><strong>Business Goal</strong>: To create a business community that complements the rural setting and meets the needs of visitors and the local community</td>
</tr>
<tr>
<td><strong>Infrastructure Goal</strong>: To ensure that sustainable infrastructure supports the rural context and enhances community health and safety</td>
</tr>
<tr>
<td><strong>Environment and Open Space Goal</strong>: To ensure a healthy and accessible environment while recognizing and conserving environmentally sensitive areas</td>
</tr>
</tbody>
</table>

This vision and these goals emphasize the community’s desire to preserve its heritage and its values while managing change.

b) **Special Places Protection Act (provincial)**

The *Special Places Protection Act* (Appendix 3K) aims to provide for the preservation, protection, regulation, exploration, excavation, acquisition and study of important archaeological, historical and paleontological sites and remains, including those underwater throughout Nova Scotia. The Heritage Division of the Nova Scotia Department of Tourism, Culture and Heritage administers and enforces the Act by overseeing the protection of all sites and remains in the Province, managing the Heritage Research Permit system, and designating outstanding heritage sites as “Protected Sites.”

No part of the nominated property is designated a Protected Site under the Act. Nevertheless, the Act applies to the nominated property in terms of the protection of all archaeological and historical resources found within it, except those on federal lands. The Act states that no person shall knowingly destroy, desecrate, deface or alter archaeological or historical remains whether designated or not, unless he or she holds a heritage research permit to excavate the site. Should new construction or any modern intervention put pressure on an archaeological site, the Act requires that mitigation measures be carried out. The Act indicates that the developer may be required to cover the costs of any mitigation measures. Penalties are considered for anyone who contravenes the Act.

c) **Agricultural Marshland Conservation Act**

The Nova Scotia Department of Agriculture is responsible for the application of the *Agricultural Marshland Conservation Act*. The purpose of the Act is to identify and protect those lands that “are subject to periodic
flooding.” The Minister responsible for the Act may construct works described in the Act as “dykes, aboiteaux, breakwaters, canals, ditches, drains, roads and other structures, excavations and facilities for the conservation, development, improvement or protection of marshland to a standard appropriate for agricultural purposes.” The Act protects approximately 1220 hectares of the dykelands at Grand Pré.

The Agricultural Marshland Conservation Act sets out the responsibilities to create, maintain, operate, rebuild, and repair the dykes and other works. The Act establishes a Commission that advises the Minister on matters related to the conservation and protection of marshland and its development and maintenance. The Act also allows for the creation of marsh bodies whose authority and responsibilities consist of (a) acquiring, using, selling and leasing real and personal property, (b) constructing, reconstructing, reconditioning, repairing, maintaining, conducting and operating works, (c) entering into agreements with the Minister or other persons for the construction, reconstruction, reconditioning, repairing, maintenance, conduct or operation of works, (d) subject to the approval of the Commission, making rules respecting works and land within or affecting the marshland section, and (e) raising money for its purposes by borrowing or by the levying of rates pursuant to the Act.

d) Beaches Act (provincial)

The Parks Division of the Nova Scotia Department of Natural Resources administers the Beaches Act. The Act aims to protect beaches and associated dunes as sensitive environmental and recreational resources, as well as to provide regulations and enforcement of land-use activities on beaches.

No beaches lie within the nominated property; however, the Evangeline Beach, in North Grand Pré, is within the buffer zone, as are other smaller beaches along North Grand Pré and Boot Island. This Act applies to all beaches along the coast.

The Act prohibits the removal or deliberate displacement of any aggregate material from the beach including sand, gravel, stone or other material; however, the Governor in Council may make regulations granting the leases, licences and permits for the removal of any aggregate material. The Act further permits the Governor in Council to make regulations regarding the protection of flora and fauna located on the beach, to restrict or regulate traffic by vehicles, vessels and pedestrians on the beach, and to restrict certain activities from occurring on a beach. Penalties for offences under this Act range from a minimum of $50 to a maximum of $2000.

e) Cemeteries Protection Act (provincial)

The Cemeteries Protection Act is administered by the Nova Scotia Department of Tourism, Culture and Heritage. It refers to any land that is set apart for the burial of human remains and includes all active and non-active cemeteries.

The purpose of the Cemeteries Protection Act is to prohibit the use of burial lands for any purpose other than burial or placement of human remains or memorialization. Pursuant to the Act, it is considered an offence for anyone to desecrate, damage, or destroy a cemetery. The Act applies only to known cemeteries; however, if remains are found outside of a known cemetery, this Act then applies. For example, if the mass grave of the British soldiers who died during the 1747 attack at Grand Pré, or the graves of the British officers, Colonel Noble and his brother, are found, then the Cemeteries Protection Act will apply to those sites.

The nominated property has one known non-active cemetery to which this Act applies. The Lower Horton Cemetery, located on the north side of Old Post Road, has approximately 25 gravestones from 1793 to 1943 inclusive. In the buffer zone, there is one active and one non-active cemetery to which this Act applies. The active cemetery is located on the south side of Old Post Road across from the Lower Horton Cemetery, and the non-active cemetery is located next to the Covenanter Church on Grand Pré Road.
f) Parks Canada Agency Act (federal)

The Government of Canada, through the Parks Canada Agency, owns a selected number of parcels of land within the nominated property, including Grand-Pré National Historic Site of Canada (NHSC), the site of the commemoration of the Attack at Grand Pré, and Horton Landing. The Parks Canada Agency administers these properties under the authority of the Parks Canada Agency Act (Appendix 3D). Since these properties are owned by the Government of Canada and commemorated as national historic sites, all their elements of national historic significance, including those related to the outstanding universal value of the nominated property, are protected under federal legislation and policy. As stated, the purpose of this Act that applies to the outstanding universal value of Grand Pré is:

- To protect the nationally significant examples of Canada’s natural and cultural heritage in national parks, national historic sites, national marine conservation areas and related heritage areas in view of their special role in the lives of Canadians and the fabric of the nation.
- To present that heritage through interpretive and educational programs for public understanding, appreciation and enjoyment, both for international visitors and the Canadian public, thereby enhancing pride, encouraging stewardship and giving expression to our identity as Canadians.
- To carry out Canada’s international obligations and agreements to protect, conserve and present that heritage and to contribute towards the protection and presentation of the global heritage and biodiversity.
- To ensure the commemorative integrity of national historic sites.
- To commemorate places, people and events of national historic significance.
- To manage visitor use and tourism to ensure both the maintenance of ecological and commemorative integrity and a quality experience in such heritage and natural areas for this and future generations.

Pursuant to the Parks Canada Agency Act (Appendix 3D), the agency’s Guiding Principles and Operational Policies (Appendix 4B) provide detailed direction for the national program of natural and cultural heritage protection. The Cultural Resource Management Policy and the National Historic Sites Policy are part of the Guiding Principles and Operational Policies. The Parks Canada Agency Act requires the agency to implement them as they relate to the protection and management of protected heritage areas, including those that are included in the nominated property.

g) Canada National Parks Act (federal)

The Canada National Parks Act enables the establishment of National Historic Sites of Canada (NHSC) under the National Historic Sites Order, in order to “(a) commemorate a historic event of national importance; or (b) preserve a historic landmark, or any object of historic, prehistoric or scientific interest, that is of national importance” (42).

The Parks Canada Agency is responsible for administering 158 NHSC. Of these 158 sites, 51 are included under the National Historic Sites Order, pursuant to subsections 42(1) and (3) of the Canada National Parks Act. This is the highest level of protection afforded to a national historic site. Grand-Pré NHSC is included under that Order, meaning that it is regulated under the National Historic Parks General Regulations part of that Act, the National Historic Parks Wildlife and Domestic Animal Regulations, and other relevant federal and provincial legislation. The Regulations allow for the management of various activities within the national historic site including the removal of historic objects, building and maintenance of services and facilities, use of vehicles within the park, and authorizations to enter the park.

h) Historic Sites and Monuments Act (federal)

Within the boundaries of the nominated property, four historic places of national historic significance commemorated under the authority of the Historic Sites and Monuments Act are administered by the Parks
Canada Agency. Within the buffer zone, there are two historic places of national historic significance commemorated under the same Act. As stated in the Act, a historic place includes “a site, building or other place of national historic interest or significance, and includes buildings or structures that are of national interest by reason of age or architectural design.” The Grand-Pré National Historic Site of Canada and the Grand-Pré Rural Historic District National Historic Site of Canada are sites of national historic significance within the nominated property. The Covenanter Church is the only site of national significance within the buffer zone.

The Historic Sites and Monuments Board of Canada’s plaque commemorating the Arrival of the Planters at Horton Landing and the plaque commemorating the Attack at Grand Pré are locations of the commemoration of events of national historic significance. These historic places are owned by the Parks Canada Agency, but, because they are not sites as defined by the Act, only the policies relating to cultural resource management apply and not policies that apply to national historic sites.

i) Standards and Guidelines for the Conservation of Historic Places in Canada (federal, provincial, municipal)

The Standards and Guidelines for the Conservation of Historic Places in Canada is a pan-Canadian document that provides guidance for the conservation of buildings, archaeological sites, landscapes, and engineering works in Canada. Federally, it was adopted by the Federal Heritage Building Review Office and the Parks Canada Agency as policies guiding conservation actions in their areas of jurisdiction. Provincially, Nova Scotia endorsed the document, with some departments, such as the department of Transportation and Infrastructure Renewal, adopting it as policy. The Municipality of the County of Kings used the Standards and Guidelines for the Conservation of Historic Places in Canada as a guideline to develop the Grand Pré and Area Community Plan.

This document is a tool that allows for the proper management of heritage and facilitates a coordinated effort between jurisdictions to conserve heritage.

5.2.2 Management for the protection, conservation, and interpretation of the property’s Outstanding Universal Value

As a historic place and in compliance with the guidance provided in sections 111, 112, and 117 of the Operational Guidelines, the management objectives for the property’s conservation aim to ensure that its outstanding universal value is preserved through a cycle of understanding, planning, implementation, monitoring, and evaluation. In light of the number of owners and the different jurisdictions, management of this property is ensured through the collaboration and participation of all stakeholders.

This section explains how each jurisdiction collects information and manages activities, and explains how managing the property will be coordinated between different jurisdictions.

5.2.2.1 Understanding the Property: Inventories, Evaluations, Condition Assessments

An ongoing understanding of the property’s attributes and of their condition is essential to inform decision-making. Mechanisms exist within each jurisdiction to maintain inventories and condition assessments for key attributes of the property and for collecting information about the pressures the property may face.

a) Municipal jurisdiction

The Municipality of the County of Kings maintains up-to-date information about planning policy, zoning, and land uses. It also keeps track of development proposals, approved permits, and makes decisions about infrastructure construction. Finally, it compiles socio-economic information about the community to help in developing planning
policies that reflect changes in demographics and supports the local economy. The information that the Municipality of the County of Kings collects will be shared.

b) Provincial jurisdiction

Heritage resources under the authority of the Province of Nova Scotia are managed under the provisions of the Heritage Property Act for designated heritage structures and of the Special Places Protection Act for archaeological and historical sites. As there are no designated heritage structures linked to the outstanding universal value, only the Special Places Protection Act applies to the property.

The inventory of archaeological sites is maintained by the Department of Tourism, Culture and Heritage. That inventory is comprised largely of archaeological sites that have been assigned a Borden number as a result of an archaeologist’s field recording of a site. The inventory also contains many sites which were given a Borden number to support the Nova Scotia Museum’s artefact cataloguing system, even though these sites were poorly described or located. The program also relies on individuals notifying it of the discovery of potential sites. The Archaeological Strategy for the Proposed World Heritage Site prepared in 2010, outlines the program to inventory, evaluate, or assess the condition of sites in the area. The Special Places Protection Act provides the basis for the Heritage Division to act as repository for all archaeological reports and artefacts gathered through its Heritage Research Permit system. This repository is used extensively to support the various resource management, research, and outreach activities of the Special Places Program and the Nova Scotia museum.

The Department of Agriculture is responsible for keeping up to date information about the location, evaluation and condition assessment of aboiteaux, drainage systems, and dykes. The department’s surveyor maintains up to date information about dyke location, height, and land elevation of the dykes. Surveys are performed every 3 years. Aboiteau superintendents are the field staffs who monitor the condition of aboiteaux, dykes, and drainage systems. There is at least one site visit a year usually in the spring to monitor conditions following winter storms. Assessments are visual and rely on the superintendent’s experience. Reports are made verbally to the department’s engineer. There is no systematic collection of data regarding coastal change.

The Department of Transportation and Infrastructure Renewal is responsible for maintenance and upgrade of the public road networks and associated infrastructure under their jurisdiction. Inventories, inspections, assessments, and ongoing initiatives are valuable mechanisms for the planning of repairs and upgrades.

c) Federal jurisdiction

Cultural resources on federal lands administered by Parks Canada are managed according to its Cultural Resource Management Policy which sets a cycle of inventorying cultural resources, evaluating them, considering their historic value in planning, and monitoring. In compliance with that policy, Parks Canada maintains an inventory of all cultural resources found on its property. It provides resources and maintains capacity to carry out archaeological surveys and evaluation of cultural resources which allows for ongoing updates to that inventory. Condition assessments are carried out at national historic sites every five years through Commemorative Integrity evaluations and are reported publicly in States of the Site reports. In addition, the Archaeological Heritage Strategy for the Proposed World Heritage Site (2010) outlines Parks Canada’s role in inventorying resources and evaluating them in relation to the values of the nominated property.

d) Grand Pré Marsh Body

The Grand Pré Marsh Body’s jurisdiction is defined by the Agricultural Marshland Conservation Act. It plays a role in maintaining the dykes, drainage, and private roads. Landowners work on the land on a daily basis and are able to make important visual assessments of the condition of dykes, creeks, ditches, and aboiteaux. There is no
process or record of this kind of information. Informal reports are made at the Marsh Body’s meetings and through discussions with the dyke superintendent.

e) **Coordinated Stewardship**

The Stewardship Board ensures that information is shared between jurisdictions by implementing the data sharing agreements and facilitating the provision and transfer of information.

5.2.2.2 Managing Activities: Planning, Implementation and Monitoring

Three levels of government and various other authorities manage various components that make up the nominated property. Each authority has mechanisms and resources in place to review proposals, plan for them, implement activities, and monitor changes. These mechanisms will be used to ensure the conservation of the property’s outstanding universal value if it is successfully inscribed on the World Heritage List. The Grand Pré World Heritage Site Stewardship Board will play an essential role in implementing measures to manage the nominated property. Whenever it is consulted by one of the authorities, the Board will provide an overall analysis of impacts on the outstanding universal value of the property to ensure coordination among the various authorities’ mechanisms and resources.

a) **Municipal jurisdiction**

Development and land use in the nominated property, excluding federal and provincial land, are managed through the municipal zoning and bylaws of the Municipality of the County of Kings. The municipality’s planning department maintains planning capacity to review proposals, develop policies, and assist project proponents. The municipality maintains the staff to review projects as they relate to the municipal heritage conservation district.

Development is managed to support community needs while recognizing the intrinsic value of the nominated property. Thus the municipality focuses on maintaining the integrity of the resources and protecting the agricultural identity of the community. Control over development is assured, as most of the area is zoned as an agricultural district. This sets the framework to determine acceptable development. The *Grand Pré and Area Community Plan* does not allow large-scale wind turbines within the Grand Pré and Area Plan Boundary. Municipal Council has consistently demonstrated its commitment to protecting agricultural land; the current *Grand Pré and Area Community Plan* reinforces this commitment. The *Municipal Planning Strategy* exemplifies that long-term commitment.

b) **Provincial jurisdiction**

*Department of Tourism, Culture and Heritage*

Planning for archaeological and non-federal heritage resources falls under the authority of the Province of Nova Scotia’s Department of Tourism, Culture and Heritage. It is carried out by the Special Places Program, which is responsible for maintaining the inventory of archaeological resources, issuing heritage research permits, and providing advice on the management of archaeological and historical sites and remains. The curatorial staff of the Nova Scotia Museum provides support for these functions. Currently, the Special Places Program relies on a variety of triggers to identify potential impacts to archaeological sites. As the *Special Places Protection Act* (Appendix 3K) specifies that no person shall knowingly destroy an archaeological site, the Special Places Program is responsible for developing and implementing policies, guidelines and procedures to manage that aspect of the Act. A manager for the Special Places Program is responsible for this.
**Department of Transportation and Infrastructure Renewal**

Planning for public road maintenance and upgrades is carried out by the Department of Transportation and Infrastructure Renewal. For major projects, an environmental-impact assessment is required and provides a mechanism for stakeholders to express concerns and provide input.

**Department of Agriculture**

The Department of Agriculture’s Resource Stewardship Division has the expertise to implement the provisions of the *Agricultural Marshland Conservation Act* (Appendix 3F). The Division’s Land Protection Section is responsible for maintenance work on the system of tidal dykes in Nova Scotia. This Section also provides advice to dyke landowners on improving drainage systems on the dykeland (see Figure 5–2). The Department of Agriculture manages the planning for all work on dykes, *aboiteaux*, and drainage. The department also implements and supervises the work.

Drainage is maintained by both the Department of Agriculture and the Grand Pré Marsh Body. The department oversees the maintenance of main outlet drainage. In certain circumstances, costs are shared with the Grand Pré Marsh Body through the Main Outlet Drainage Program, which has been renewed annually for the past four years. Costs can also be shared for the maintenance of roads.

The Aboiteau Superintendent for Grand Pré, one of four Aboiteau Superintendents employed by the Nova Scotia Department of Agriculture, is responsible for assessing the work that needs to be performed based on his annual site visits or following major storm events. Based on the superintendent’s verbal report, the departmental engineer allocates resources to perform the work. The engineering staff provides the department with design capacity; however, most work is contracted to private contractors. As of 2009, the departmental budget for the maintenance of all dykes in Nova Scotia is approximately $1.1 M, with $500 000 directly allocated to maintenance and repairs.

Other activities or building of infrastructure on the dykeland require a variance permit. Variances for development in a dykeland may be authorized by permit by the Marshland Administrator. However, these are rare. Permits are not issued if the development substantially interferes with drainage or other work in a way that negatively affects the existing agricultural activity or the agricultural potential of the dykeland section, or is contrary to any applicable municipal land-use bylaw or rules of a marsh body. If a variance is authorized, notice is given to the marsh body and to the municipality. Coastal erosion is not monitored formally other than through the Aboiteau Superintendent’s annual visual assessment.

c) **Federal jurisdiction**

National historic sites administered by Parks Canada are managed with a long-term vision through management plans. These plans are mandated by law and are required to be reviewed every five years. Management plans are approved by the Minister responsible for Parks Canada and provide the framework for decision-making on the site on issues relating to the protection of resources, education, and visitor experience. The *Grand-Pré National Historic Site of Canada Management Plan* (Appendix 2I) is expected to be tabled in Parliament in 2011.

In addition, everyday activities and special projects are designed and carried out in accordance with Parks Canada’s *Cultural Resource Management Policy* (Appendix 4B) to ensure the respect and maintenance of historic values. These activities and projects are implemented with various directives, manuals, and guidelines related to archaeological resource management, impact assessments, and conservation. Interventions on cultural resources are planned and implemented by internal and contracted resources in accordance with the *Cultural Resource Management Policy* and the *Standards and Guidelines for the Conservation of Historic Places in Canada* (Appendix
Management Plan for the Landscape of Grand Pré

4G). Impact assessments are implemented in accordance with internal directives and the Canadian Environmental Assessment Act (Appendix 3B).

The Government of Canada’s Treasury Board Policy Framework for the Management of Assets and Acquired Services (Appendix 4A) governs the management of federal assets, such as buildings. This Framework applies to the Memorial Church at Grand-Pré National Historic Site of Canada and lays out principles for managing such assets. Parks Canada monitors and reports on the condition of its national historic sites in various ways. The Commemorative Integrity Evaluation assesses the condition of cultural resources, the effectiveness of communicating related messages, and the implementation of appropriate practices for managing cultural resources. The Visitor Experience Assessment provides insight into the different aspects of a visitor’s experience, from trip planning to onsite services and programs. Annual stakeholder reports on management-plan implementation are also prepared. Starting in 2009, and every five years after that, a State of the Site Report compiles all the available information on the site’s condition and is made available to the public. Expert resources in archaeology, history, architecture, and planning are available internally or through Public Works and Government Services Canada to ensure the proper design and implementation of activities and structures.

d) Grand Pré Marsh Body

The Grand Pré Marsh Body typically plans work around major drainage and ditches. It also plans work on roads that are not managed by the Department of Transportation and Infrastructure Renewal. See Figure 15 for an example of drainage work.

Figure 15: Drainage work on a field in Hortonville.
e) Coordinated Stewardship

The Stewardship Board coordinates the resources and activities of the different jurisdictions by providing the overall strategic direction necessary for the protection of the World Heritage Site. The structure of the Board and its reliance on expert committees ensure a focus on the protection of the outstanding universal value, quality advice to the jurisdictions, and consideration of the many diverse issues and responsibilities at play in this complex regulatory environment. In addition, it is responsible for the implementation of this management plan and of all other management documents for the nominated property.

5.2.2.3 Sustainable Tourism: Presentation, Interpretation, Services

Promotion and presentation of tourism in the Grand Pré area is a shared responsibility. Destination Southwest Nova Scotia is a not-for-profit organization that provides a voice for the tourism industry in the area. It focuses on facilitating an integrated approach to marketing, promotion, product development, and visitor services for businesses. The municipality of the County of Kings is supportive of the tourism industry in the area and permits land uses for businesses that are related to tourism. Parks Canada, at the national historic site, provides a key tourism experience in the region.

Tourism has been a staple activity of the area. Past visitors numbers were significantly higher with approximately 62 000 visitors per year in the late 1990s. Since then, those numbers have declined to approximately 30 500 visitors per year. Those numbers from the 1990s suggest that the property can accommodate a higher number of visitors without causing negative impacts on the physical environment or decreasing the quality of the visitor’s experience. With an expected growth in visitor numbers of 6% from existing numbers as a result of a potential designation, tourism services and infrastructure are expected to accommodate that growth.

The national historic site is the main tourism attraction in Grand Pré. Parks Canada has invested in the site’s redevelopment by acquiring new properties and building a visitor centre which opened its doors in 2003. The focus of the exhibit in the visitor centre is on the messages of national significance.

Visitors to the area currently can experience heritage in the community by visiting the national historic site, observing heritage properties along Old Post Road and Grand Pré Road, visiting the Deportation Cross and seeing the Historic Sites and Monuments Board of Canada plaques commemorating the arrival of the New England Planters, the Battle of Grand Pré, and Sir Robert Borden.

Within the boundary, there are a few bed and breakfasts and some shops. Most other attractions, such as the winery, the Covenant Church, the campground, and most tourism services are located outside the boundary. As most attractions are located along Highway 1 and Grand Pré Road, these are the ones that concentrate traffic. Services are currently located in the hamlet of Grand Pré and at the exit of highway 101.

Local history is presented through an exhibit on the New England Planters in Kentville, a few kilometres from Grand Pré; at the National Historic Site in Grand Pré; and at the Grand Pré Heritage Society, Randall House Museum in Wolfville. The heritage society organizes local events to share knowledge on history in the area.

Access to the dykes is discouraged through signage due to the operation of farming equipment and to protect private property. Visitors are encouraged to appreciate the marshland from a distance, in particular at the national historic site where there are opportunities to view the entire dyke system at dedicated locations.

A tourism strategy and interpretation framework was prepared by Hockin Cronin associates in 2010 for Nomination Grand Pré. It identifies key opportunities to interpret the values of the site, facilitate visitor experiences, and manage visitor traffic while protecting the integrity of the site and the local residents’ quality of life. It clearly articulates that the Landscape of Grand Pré already benefits from key tourism infrastructure and
services, as well as appropriate regulation that limit the potential for conflict between tourism and agriculture. Finally, it highlights that the projected increase in visitation will not negatively affect the site or provide significant new business opportunities. As such, the current tourism related infrastructure and services are sustainable and are able to take advantage of the designation to increase revenues and enhance tourists’ experience.

This document serves as a starting point to discuss interpretation and marketing once the site is designated.

5.2.2.4 Sustainable Agriculture

Ensuring agricultural sustainability is a responsibility shared by multiple partners, including the Department of Agriculture, the Municipality of the County of Kings, and the Grand Pré Marsh Body. Despite a vibrant agricultural economy at Grand Pré, the aging population and socio-economic data suggests concerns around the long-term sustainability of agriculture. These concerns are mainly around profitability, encouraging the next generation of farmers, and maintaining agricultural land.

Profitability is an indication of market value and is defined by supply and demand. Adaptation to those realities is key to ensuring profitability and allowing farmers to actively work on the land, thus protecting the dykelands. The Department of Agriculture is committed to the development of a competitive, sustainable and profitable agricultural industry. It provides land protection, industry development programs, business risk management and crop and livestock insurance, including emergency and disaster relief. Furthermore, the Department of Agriculture integrates marketing, product and quality development, and business development into their services in order to ensure agricultural sustainability.

The Municipality of the County of Kings has a history of commitment to the protection of agriculture in the county, starting with the 1979 Municipal Planning Strategy. That strategy, still in effect, includes a number of tools, some yet to be implemented, including land banking which aims to support intergenerational transfer of land by making more affordable for young farmers to acquire land. The objective of land banking is to protect, preserve and restore agricultural land for use in agriculture.

The municipality also has a series of initiatives aimed at promoting local products and reinforcing the ties with the agricultural community, including an active ‘buy local’ campaign and partnerships with the Federation of Agriculture.

The municipality has been a strong advocate of maintaining a federal research facility because of its role in sustaining local agriculture. The government of Canada has committed to maintaining that facility and providing resources for it to operate. A baseline study on agricultural activities and value-added agricultural activities in the county is currently underway, supported by the municipality, the provincial and federal governments, and the Kings Regional Development Agency.

The Municipality of the County of Kings is focusing its community plan on maintaining an agricultural district, which in effect provides land to the industry to sustain itself and thrive. The Community Plan for Grand Pré and Area maintains the agricultural district and encourages the agricultural industry.
The community of Grand Pré and area has a vibrant agricultural economy that is essential to the maintenance of the dykes and the marshland.

6.0 Buffer Zone

6.1 Purpose of the Buffer Zone

The purpose of the buffer zone is threefold:

• To provide long-term capacity to maintain the agricultural economy: most of the area within and outside the boundary is currently part of the agricultural district. As farmers and dyke landowners don’t all live within the boundary, but most live in close proximity, the buffer would identify an area to focus attention to support the agricultural industry.

• To identify areas to manage tourism access and services: although the current main heritage attraction in the community is the national historic site which is located inside the property boundary, most of the services are located in North Grand Pré, in the hamlet outside the boundary and at exit 10 of highway 101. The existing infrastructure and services allows managing visitor traffic and tourism pressure inside the property. The concentration at the highway exit and in the hamlet focuses traffic along highway 1 and Grand Pré road and directs visitors towards the main tourism node at the national historic site.

• To identify areas where activities may have an impact on the integrity of the dykes: dykes are most vulnerable to coastal erosion. Activities to mitigate that impact have been left to the initiative of different departments and individuals. A holistic approach to monitoring and mitigating the effects of coastal erosion is required.
buffer would identify sensitive areas outside of the boundary that need to be included in the coordinated approach.

6.2 Policies and Strategies

The buffer includes a number of controls that support and complement the policies and legislation in place inside the boundary of the proposed property.

These include:

- Municipal policies through the *Community Plan for Grand Pré and Area*;
- Provincial policies through the Department of Agriculture’s policies regarding agricultural activities, the Department of Tourism, Culture, and Heritage through the *Special Places Protection Act* for archaeological sites, the Department of Natural Resources through the *Beaches Act*, and the Department of the Environment for the management of salt marshes;
- Federal policies and legislation concerning natural water management through the Department of Fisheries and Oceans; and,
- A number of other provincial and federal policies regarding protected natural heritage areas and heritage properties.

6.2.1 Municipal policies

Current policies in the buffer zone emphasize the protection of agricultural land and identify commercial areas. The policies to protect agricultural land in the buffer area are identical to those regarding the protection of agricultural land inside the property. This is due to the agricultural district covering an area that includes the communities of North Grand Pré, Grand Pré, Hortonville, and Lower Wolfville. The policies are aimed at promoting the agricultural use of the land.

Commercial areas are identified along highway 1 and Grand Pré Road, in nodes close to the exit from highway 101 and to the crossroads at highway 1 and Grand Pré Road. These areas focus on providing basic conveniences to surrounding rural residents, commercial uses, service resource industry and tourist oriented uses. North Grand Pré provides services for recreational purposes, such as a campground. The community plan will continue to permit small scale commercial activity in these existing commercial nodes, so long as it keeps with the rural setting and way of life, and does not negatively impact agricultural activities in the area.

The municipality has building restrictions in North Grand Pré along the coast. Those restrictions are in place to ensure the protection of property. Monitoring of shore erosion and mitigation measures are implemented on an individual basis.

The municipal policies ensure that there is long term capacity in the area to maintain the agricultural use of the marshland by protecting land and favouring the agricultural industry. It also addresses the protection of the nominated property’s setting by encouraging a controlled densification of the area and maintaining the primarily agricultural character of the community.
6.2.2 Provincial policies

The Department of Agriculture has policies in place to support agricultural activities.

It maintains dykes by monitoring their condition and implementing mitigation measures, such as stabilizing dykes by facing them with stone to reduce the impact of waves and tides on more vulnerable areas.

Archaeological resources are managed under the *Special Places Protection Act*.

The provisions of the *Beaches Act* apply where beaches exist, as defined in the Act. This limits the extraction of material from beaches, helping to protect the dykes.

The Nova Scotia Department of the Environment is responsible for the protection of salt marshes. Approval from the Department is required to alter a salt marsh, with the exception of the maintenance of lands and structures incorporated by marsh bodies under the *Marshland Conservation Act*.

Policies applying to the salt marshes outside the Grand Pré dykes support the protection of the Grand Pré marsh.

6.2.3 Federal policies

Policies and legislation that relate to the management of aquatic ecosystems and water management apply in the area outside the dykes. These policies are enforced by the federal department of Fisheries and Oceans. Activities allowed under these policies support the protection of the nominated property. The Department of Fisheries and Oceans is currently working with the Nova Scotia Department of Agriculture on a policy to ensure that departmental mandates are addressed harmoniously and that salt marsh extraction and drainage cleaning do not interfere with the protection of fish habitats.

6.2.4 Other Significant Heritage Areas

The buffer includes other significant heritage areas such as:

- The National Wildlife Area on Boot Island: managed by the Canadian Wildlife Service, the federal agency responsible for national wildlife sanctuaries and areas, it is protected under the Wildlife Area Regulations of the *Canada Wildlife Act*. The Service monitors the condition of wildlife, ecosystems, and coastal erosion on the Island. The management of Boot Island supports the protection of the nominated property.
- The municipal heritage conservation district: the district is located in the hamlet of Grand Pré. It is managed under municipal bylaws and focuses on architectural preservation.
- Provincially designated properties: a number of properties are designated on the province of Nova Scotia’s *Heritage Properties Act*. These properties are privately owned.
- The Southern Bight – Minas Basin Wetland of International Importance (or Ramsar Site): the responsible authority is the Canadian Wildlife Service. It monitors the condition of the wetland.
- The Grand-Pré Rural Historic District National Historic Site of Canada: designated by the Government of Canada under the *Historic Sites and Monuments Act*, the area includes private and government property. The site is a commemoration and does not require a management plan. Properties located within the designated area and that are of significant importance for the designation as a national historic site may benefit from federal government financial assistance for conservation and interpretation.
- The Covenantter Church National Historic Site of Canada: the site is privately owned and is an important landmark in the history of the region.
Management Plan for the Landscape of Grand Pré

Each heritage area, and each jurisdiction and land owner’s actions contribute to protecting the Landscape of Grand Pré’s integrity and its setting. Together these policies and controls ensure that:

- Tourism activities and development are controlled in order to minimize land use conflicts and manage potential negative impacts on the property;
- Agriculture remains an essential part of the community’s economy and identity by protecting land and implementing policies that favour agricultural use of the area.

Figure 17: Vineyard in the buffer zone. This type of agricultural activity is expanding significantly in the area and is fast becoming a prime tourism attraction.
7.0 Protecting Outstanding Universal Value

The nominated property is protected from development, environmental, and tourism pressures inside the boundaries and in the buffer as follows:

- The dykelands are managed through the application of the Agricultural Marshland Conservation Act and the zoning limitations as indicated in the Grand Pré and Area Community Plan by maintaining agricultural use and restricting construction of permanent structures. The act recognizes and provides authority to the Grand Pré Marsh Body to manage the dykelands collaboratively and ensure ongoing agricultural use.
- The dykes, aboiteaux, field patterns, drainage outlets are managed through the Agricultural Marshland Conservation Act, the policies of the Nova Scotia Department of Agriculture, and the stewardship of the Grand Pré Marsh Body by maintaining the dykes, aboiteaux, and drainage outlets based on the compatible materials, identical technology, and similar principles. These being maintained, the organically evolved design of field patterns on the dykelands is preserved. Finally, the coastal change monitoring programme will monitor the rate and severity of coastal erosion outside the nominated property and guide the definition of appropriate action.
- Agriculture on the uplands is managed through the Grand Pré and Area Community Plan, which maintains zoning that favours agriculture.
- The field patterns on the uplands are managed through the Grand Pré and Area Community Plan which maintains zoning favourable to agriculture, limits densification, and establishes minimum lot sizes. Field patterns on Parks Canada property is administered through the Cultural Resource Management Policy which respects the historic value of the fields.
- Archaeological heritage is managed on lands under provincial jurisdiction through the application of the Special Places Protection Act and the Strategy for the Management and Conservation of Archaeological Heritage. Both ensure that proper archaeological principles and practices are applied in investigating, mitigating impacts, and conserving archaeological heritage. On land administered by Parks Canada, archaeological heritage is protected under the Cultural Resource Management Policy; various guidelines, policies, and directives as applicable; and the Strategy for the Management and Conservation of Archaeological Heritage.
- Historic roads are protected from densification by agricultural zoning. The Grand Pré and Area Community Plan encourages the protection of these roads. On lands administered by Parks Canada, historic roads are managed under the Cultural Resource Management Policy which protects them.
- Cemeteries and burials under provincial jurisdiction are managed according to the Cemeteries Protection Act. On lands administered by Parks Canada, cemeteries and burials are managed according to the appropriate directives.
- Tourism pressure is managed cooperatively between Parks Canada, the Société Promotion Grand-Pré, the Grand Pré Marsh Body, the Municipality of the County of Kings, and the local community to ensure that visitors have access to interpretation and services at the national historic site, visitor have access to information about local destinations, and signage is installed to reduce potential conflicts.
- The memorials are managed under the Parks Canada Agency Act, the Cultural Resource Management Policy, and the Standards and Guidelines for the Conservation of Historic Places that ensure their protection and conservation.
- The overall protection of the nominated property is ensured under the terms of the memorandum of understanding between the different partners to establish a governance body for the nominated property and define the requirement to consult that body prior to developing and implementing actions.
8.0 Natural Disaster and Risk Preparedness

8.1 Risks

The Nominated Property is vulnerable to strong storms throughout the year. During hurricane season, which typically extends from June to November, it sometimes is in the path of tropical storms.

The main risk is for the area to flood due to a combination of exceptionally high tides and strong winds or as a result of dyke failure.

Fire is another risk due to natural events. This would mainly affect the memorial church.

8.2 Roles, responsibilities, and coordination in the event of a natural disaster

Risk preparedness is a shared responsibility between jurisdictions.

The Municipality of the County of Kings has an Emergency Preparedness Plan managed by its Emergency Management Coordinator (EMC), in accordance with the Province of Nova Scotia’s Emergency Management Act. The municipality may request assistance from the provincial Emergency Management Office if the severity of the emergency requires it. The EMC focuses on protecting lives and personal property.

In case of dyke rupture or flooding of the dykelands, the Department of Agriculture implements its own emergency preparedness plan that addresses the main priorities and resources for consideration during an event. The Municipality of the County of Kings’ EMC is the first responder and would coordinate with the Department of Agriculture to consolidate the dykes. The priority of the Department of Agriculture is to protect the dykes and the farmland.

Financial assistance is available to those farmers whose fields were affected. Depending on the severity of the damage, financial assistance may come from the Province of Nova Scotia or from the federal government.

Parks Canada is responsible for the protection of the memorials. The agency has protocols and tools in place to react to fires. These include a direct line to the fire department, fire alarms, and fire suppressant mechanisms in the visitor centre and in the memorial church. In addition, the memorials have been recorded to provide information in case there should be a need to repair or rebuild. The fire department is responsible for coordinating the response.

8.3 Principles for mitigating risk

In order to mitigate impacts a natural disaster management framework was prepared that outline roles and responsibilities and procedures to address natural disasters.

As there are multiple jurisdictions that have authority to manage the consequences of a natural disaster depending on its severity, principles were prepared to help guide their preparation, intervention and recovery actions.

These principles include:

- Preparedness will focus on providing additional protection against the main risks to the key attributes that support the outstanding universal value and integrates relevant heritage considerations within the overall disaster prevention strategy;
- Training on the nominated property’s outstanding universal value, key attributes, and conservation considerations will be provided to jurisdictional managers and emergency management officers;
During responses, every effort will be made to maintain the integrity of the key attributes;

- Recovery actions and mitigation activities will maintain the integrity and authenticity of the key attributes linked to the outstanding universal value;
- Regular review and update of response plans will ensure that adequate strategies are in place;
- The response plan is conceived in terms of the whole property, and provides integrated concern for the structures, the archaeological sites, and the landscape features;

8.4 Key elements of risk preparedness

Emergency management focuses on the before, during and after of particular events. Therefore, risk preparedness is one aspect of emergency management.

In the case of the nominated property, the natural disaster management framework provides the broad strokes of preparedness, response, and recovery actions. It focuses strictly on managing these with relation to protecting the nominated property’s outstanding universal value and key attributes, and addresses some elements of visitor management.

9.0 Monitoring and Reporting

9.1 Monitoring of condition of archaeological heritage

A monitoring programme was developed to coordinate the work of the Heritage Division of the Nova Scotia Department of Tourism, Culture and Heritage, and of Parks Canada as both have authority within their jurisdiction to protect archaeological heritage.

The programme focuses on setting indicators and timelines for monitoring condition. In addition, it outlines the role of partners. Details of that programme are included in the *Strategy for the Management and Conservation of Archaeological Heritage*. Information is provided to the site manager for reporting on the condition of the nominated property.

9.2 Monitoring of coastal change

Monitoring of coastal change requires a concerted effort to ensure that there is a comprehensive understanding of coastline movements as a result of erosion and salt marsh regeneration. An overview of coastal changes is included in the *Overview of Coastal Change Influences on the Landscape of Grand Pré* report, it provides details observed through a comparison of aerial photographs between the 1960s and the early 2000s, use of LiDAR imagery, and data from Boot Island compiled over the past two decades.

The jurisdictions that have authority in areas along the coastline included in the buffer zone are:

- The Nova Scotia Department of Agriculture: as the department responsible for the maintenance of the dykes, it monitors the condition of the dykes themselves, the *aboiteaux*, and the salt marsh outside the dykes. The latter is the main source of building material for the dykes. Grasses and sod are extracted directly next to a dyke when they need to be topped or repaired.
- The Nova Scotia Department of Environment: the department has authority over the salt marsh.
- The Nova Scotia Department of Natural Resources: the department is responsible for the implementation of the *Beaches Act* and is responsible for permitting coastline mitigation measures.
- The Canadian Wildlife Service: the federal service is responsible for the Boot Island National Wildlife Area and has had a coastal erosion program in place for years.
- The Parks Canada Agency: the federal agency owns property at Horton Landing which extends to the mean high tide watermark.
- The Municipality of the County of Kings: the municipality has zoned an area along the north side of Long Island as coastal and allows for a rolling setback to be implemented. The municipality is also responsible for reviewing coastal erosion mitigation measures.

A coastal change monitoring programme is being established to collect data on coastline movements around the property. That data will be primarily collected by the Nova Scotia Department of Agriculture, the Canadian Wildlife Service, the Parks Canada Agency, and the Municipality of the County of Kings.

For the purposes of reporting on the condition of the nominated property, data will be collected at set points along the coastline within the buffer zone every two years using global positioning systems. This information will be shared with the property’s site manager. Data may be collected more regularly by individual departments.

In addition, best practices are being explored by the Department of Agriculture and its partners to improve saltmarsh extraction for dyke maintenance, to allow for fast recovery of the ecosystem.

9.3 Indicators

Each agency has its own reporting mechanism and condition indicators that are in compliance with its individual legislated mandate regulating its activities. These provide an overview of the condition of the entire area proposed for designation.

The following indicators are for the Landscape of Grand Pré and provide a measure of performance for the three goals set in this management plan as they relate to its protection, interpretation and promotion, and the sense of connection to the place.

<table>
<thead>
<tr>
<th>Objective</th>

9.4 Reporting

This section provides information on the agencies responsible for monitoring the condition of the property.

Parks Canada is the agency responsible for monitoring and reporting on the condition of cultural resources on lands it administers. It also reports on visitation numbers, origin, and trends, as well as visitor satisfaction. Finally, it may report on the number of research projects it has permitted on the land it administers.

The Department of Tourism, Culture and Heritage is the provincial agency responsible for monitoring and reporting on the condition of archaeological sites on non federal lands. It may report on the number of research projects is has permitted.

The Department of Agriculture is the provincial agency responsible for monitoring and reporting on the condition of the dykes, drainage patterns, and aboiteaux. The Grand Pré Marsh Body may also provide some of this information.

The Municipality of the County of Kings is responsible for monitoring and reporting on the condition of land use and the historic roads.

The Grand Pré World Heritage Site Stewardship Board, as the site manager, is responsible for reporting to the World Heritage Committee and to stakeholders on the condition of the property. It will prepare the periodic report based on the information provided by the different responsible authorities.
10.0 Implementation and Review

10.1 Resources

In order to manage the property, numerous organizations provide expert and financial resources.

The Parks Canada Agency, as the federal agency with expertise in protected heritage areas and as a significant landowner within the boundaries of the property, invests in the protection and the interpretation and tourism infrastructure of the national historic site, and provides expertise as needed in such areas as archaeology, history, protected heritage area planning, and conservation.

The province of Nova Scotia provides resources for the maintenance of the dykes through the Department of Agriculture. It maintains staff, including an aboiteau superintendent, an engineer, a manager of land protection, whose role is to assess condition, monitor, and protect the marshlands. Annual expenditures in dyke maintenance are about $1.1 M per year. Budget is allocated based on operational priorities. In addition, a cost sharing program for drainage and road maintenance provides resources for the farmers to carry out their work. The costs are shared between the province (75%) and the Marsh Body (25%) for work on drainage and ditches, and divided equally between both the province and the Marsh Body for work on the roads.

The provincial department of Tourism, Culture and Heritage provides resources for the management of archaeological heritage in the province, except on federal lands. It currently has one permanent staff member responsible for the implementation of the Special Places Act, under which archaeological permitting is regulated. The Heritage Division of the department has staff with expertise in archaeology, curation, conservation, and heritage building conservation. The Strategy for the Management and Conservation of Archaeological Heritage in Grand Pré and Area prepared in 2010 outlines the use of those resources. Furthermore, the province unveiled its heritage strategy in 2008 which outlines key priorities for the province, including the protection of World Heritage sites.

The Municipality of the County of Kings has resources on staff in planning, geographical information system analysis, and cartography. These are essential to the ongoing management of land use and activities, and for ongoing reporting.

10.2 Roles and Responsibilities

Each regulatory authority retains the authority to manage and determine policies for the lands under its jurisdiction. As such, the federal government, through the Parks Canada Agency, is responsible for the management and the protection of resources on lands it administers. The Municipality of the County of Kings is responsible for land use and activities on lands on and off the marshland, with the exception of provincial and federal land. The Marsh Body and the Department of Agriculture have management authority under the Agricultural Marshland Conservation Act. The Department of Tourism, Culture and Heritage has authority to protect archaeological sites under the Special Places Protection Act. These roles remain in force in the event of the nomination of a World Heritage Site.

These authorities and key stakeholders agree to form a board to act as site manager named the Grand Pré World Heritage Site Stewardship Board. The mandate of this board is to manage programming activities relating to the property and to provide advice to regulators.

The authorities will work with the board to provide the necessary information to complete periodic reports on the condition of the property to the World Heritage Committee. The chair and the site management coordinator of the Grand Pré World Heritage Site Stewardship Board will sit on the Canadian network of World Heritage Sites and
liaise with the Canadian Delegation to the World Heritage Committee. The Committee may take action to facilitate the implementation of recommendations relating to interpretation, tourism and economic development.

10.3 Duration of this plan

This plan is valid for twelve years and is to be reviewed five years following the designation. The Grand Pré World Heritage Site Stewardship Board is responsible for reviewing this plan in collaboration with the regulatory authorities and key stakeholders. The review shall focus on the protection of the outstanding universal value as stated at the time of designation and shall be in accordance with the Operational Guidelines for the Implementation of the World Heritage Convention as well as the legislation and policies in force at the federal, provincial, and municipal levels.
11.0 Priority Actions

The following actions are those that are deemed to be a priority for the life of this management plan and will be led by the Grand Pré World Heritage Site Stewardship Board or the Nomination Grand Pré Advisory Board in the interim:

- Establish a technical advisory committee to provide advice on the protection of the nominated property;
- Establish an education and marketing committee to coordinate the promotion and development of educational material;
- Work with partners to implement the tourism management framework, with particular focus on mitigating the negative impacts related to an increase in visitation. This includes identifying and installing proper signage to direct visitors to key services and infrastructure and limiting access to private property. It also includes implementing educational tools to raise awareness about the importance of respecting the site.
- Work with partners to identify key interpretation messages, approaches, and tools to communicate the importance of the nominated property.
- Work with regulatory authorities to develop training for decision makers and stakeholders on the value, attributes and management of the nominated property.
- Work with partners to promote the nominated property, including preparing promotional material and creating strategic partnerships.
- Implement the coastal monitoring programme for the nominated property in partnership with the municipal and relevant provincial and federal authorities.
- Work with academic institutions, Parks Canada, and the Department of Tourism, Culture and Heritage to identify research priorities and foster research at the site.
- Establish an annual forum to discuss the protection of the nominated property.
- Work with Parks Canada and the Department of Tourism, Culture and Heritage to implement the Strategy for the Management and Conservation of Archaeological Heritage in Grand Pré and Area.

The Grand Pré World Heritage Stewardship Board Strategic Plan outlines the key strategies and objectives in greater details. A long term plan as well as annual workplans will be prepared if the site is successfully inscribed.

Coastal Change Monitoring Programme for the Landscape of Grand Pré

Overview of Coastal Change Influences on the Landscape of Grand Pré
STRATEGY FOR THE MANAGEMENT
AND CONSERVATION
OF ARCHAEOLOGICAL HERITAGE IN THE LANDSCAPE OF GRAND PRÉ

January 2011
FOREWORD

The archaeological heritage of Grand Pré and area is a key element of its significance and of its reasons for being recognized locally and nationally. Since the late 19th century and actively in the early 20th century, both amateur archaeologists and professionals located and recorded information about their finds, including arrowheads, remains of houses, or various domestic objects. Today, that heritage is protected and managed by the provincial and the federal governments on lands under their jurisdiction.

The purpose of this strategy is to create a framework for the collaboration between the three levels of government, the Mi’kmaq of Nova Scotia and communities of interest, in particular the Heritage Division of the Nova Scotia Department of Tourism, Culture and Heritage and Parks Canada, to manage the archaeological heritage of Grand Pré and area. This collaboration aims to ensure the effective protection, conservation, and monitoring of archaeological heritage of the nominated property.

This strategy relies on existing provincial and federal legislation and policies. It outlines roles and responsibilities within that legislative context to implement effective management approaches. It also aims to provide a framework for the engagement of the municipal authorities, academic and research institutions, residents, and other communities of interest in protecting the area’s archaeological heritage. It relies on the principle that meaningful protection is accomplished through engaged stewardship of a variety of groups.

The members of the task force include:

Laura Bennett, coordinator, Special Places Program, Department of Tourism, Culture, and Heritage
Katie Cottreau-Robins, archaeologist, Nova Scotia Museum, Department of Tourism, Culture, and Heritage
Jenneth Curtis, archaeologist, Parks Canada
Rob Ferguson, archaeologist, Parks Canada
Jonathan Fowler, archaeologist, Saint Mary’s University
Heather MacLeod-Leslie, archaeologist, KMKNO
Robert Ogilvie, coordinator, Special Places Program, Department of Tourism, Culture, and Heritage
Christophe Rivet, project manager, Nomination Grand Pré / Parks Canada

KMKNOMM - Kwilmu'kw Maw-klusuaq Negotiation Office is focussed on addressing imbalances in the relationship between Mi’kmaq and non-Mi’kmaq people in Nova Scotia
1. Background

1.1 Description of the nominated property

The Landscape of Grand Pré consists of 1323 hectares of dykelands, known elsewhere as polders, and uplands on the southern edge of the Minas Basin, an eastern arm of the Bay of Fundy in western mainland Nova Scotia. It is bordered by the Gaspereau River to the east, the Cornwallis River to the west, Long Island to the north, and parts of the communities of Grand Pré, Hortonville, and Lower Wolfville to the south. (See Map 1: Boundary of the Nominated Property and Buffer Zone) Dominating the distant background, beyond the nominated property, Cape Blomidon extends into the basin as an instantly recognizable landmark.

The nominated property includes the dykeland area that the Acadians created in the 17th century, which successive generations of farmers have expanded. It also includes distinctive representative sections of the Acadian settlement and of the current agricultural community, as well as the entire planned settlement for the New England Planters, a British town grid.

Records attest to the presence of the Acadian settlement on the uplands portion of the nominated property. The heart of the Acadian settlement is defined by a concentration of archaeological remains of houses, field patterns, the cemetery, the traditional location of the remains of the parish church of Saint-Charles-des-Mines, and the intersection of main roads. The southeast corner of the nominated property includes the surviving evidence of the planned British town grid in Hortonville. The grid is defined by Railway Street, King Street, and Middle Street running east–west and by Horton Cross Road, Wharf Road, and Patterson Street running north–south.

The property also includes parts of the hamlet of Grand Pré, which hosts provincially and municipally designated heritage properties and some local services, plus farms on the hills and an expanse of fields and pastures. At the heart of both the nominated property and the Acadian settlement lies Grand-Pré National Historic Site of Canada. The national historic site consists of the commemorative gardens, the Memorial Church, cemeteries, and many other memorials to the Acadian Deportation.

The nominated property falls within a cultural landscape of the Mi’kmaq. Archaeological sites along the Gaspereau River and at its headwaters attest to the long-term importance of the waterway and the landscape through which it flows to upwards of 10,000 years of Mi’kmaq cultural history. There continues to be Mi’kmaq traditional use of the resources of the broader landscape, adjacent to and within the proposed boundary. Mi’kmaq burial sites exist within 2-3 km of the nominated property in all directions and an archaeological site has been recorded within the proposed World Heritage Site boundary.

The buffer zone includes a land component and a marine component. The land component includes Long Island, Boot Island and the lands surrounding the nominated property to the south, up to the boundary of the Grand Pré and Area Community Plan. The marine component of the buffer zone extends 500 metres from the water-facing boundary of the property and, where relevant, from the land buffer zone.
1.2 Jurisdictions

The nominated property falls under the jurisdiction of the municipality of the County of Kings, the provincial government, the Grand Pré Marsh Body, the Assembly of Nova Scotia Mi’kmaq Chiefs, and some levels of the federal government. Most lands are privately owned.

Federal Crown land consists of the lands owned and administered by the Parks Canada agency. Non-federal land consists of lands owned and administered by the Department of Agriculture. This is limited to the top of the dykes. Roads on the marsh are almost all private. Roads elsewhere are for the most part public and under the jurisdiction of the Department of Transportation and Infrastructure Renewal or the Municipality of the County of Kings.

In this context, the management of archaeological heritage is legislated by federal legislation on federally owned lands and provincial legislation for the rest, including privately owned lands. Each jurisdiction applies its own policies and follows individual reporting mechanisms.

Development activities are permitted on federal land by the Parks Canada Agency. On the marsh, development activities are reviewed and permitted by the Grand Pré Marsh Body, the Department of Agriculture, and the Municipality of the County of Kings. Elsewhere in the nominated property, development activities are reviewed and permitted by the Municipality of the County of Kings. Infrastructure development may be subject to either the provincial or the federal environmental assessment processes, depending on the project’s criteria. In certain instances, both would apply.
1.3 Grand Pré World Heritage Site Stewardship Board

The Grand Pré World Heritage Site Stewardship Board (hereafter referred to as the Board) is the site manager of the World Heritage Site. As such, it is accountable, along with the jurisdictions, for the management of the nominated property. The Board will come into existence in the event of a successful inscription by the World Heritage Committee.

In the interim, the Nomination Grand Pré Board provides leadership around the management of the nominated property. Details of the role and responsibilities of the Board can be found in its Terms of Reference.

The Board includes representatives of Acadian and local key communities of interest and the Mi’kmaq of Nova Scotia and ensures that these groups are engaged in the protection of the future World Heritage site.

1.4 Consultation

As the Stewardship Board is neither a federal nor provincial government body, it has no legal duty to consult with the Mi’kmaq of Nova Scotia. However, activities either proposed or supported by the Stewardship Board may be subject to the duty to consult.

Provincial and federal governments have a legal duty to consult with the Mi’kmaq of Nova Scotia where there is a possibility that a government activity might adversely affect a potential aboriginal or treaty right. The Mi’kmaq of Nova Scotia, Nova Scotia and Canada formally ratified the Consultation Terms of Reference on August 31, 2010.

1.5 Archaeological Heritage in Grand Pré and Area

The archaeological heritage of Grand Pré and its surrounding area is a rich and exceptional sample of Nova Scotia’s and Canada’s history. It is also one that although researched for decades, retains a high potential for providing additional information on the various cultures that lived in the area.

Mi’kmaq Near Grand Pré

The first human presence in the area is linked to the Mi’kmaq and their ancestors. L’nu’k have long travelled and lived in the area as the shores of the Minas Basin and the whole of the proposed World Heritage site are part of the Mi’kmâ’ki district of Sipekni’katik. There is archaeological evidence of repeatedly occupied settlements over thousands of years along the Gaspereau River and on Long Island (North Grand Pré), and archaeological evidence and traditional knowledge of burial grounds on Oak Island, Boot Island and in and near Wolfville. Mi’kmaq typically harvested a wide range of resources in estuarine environments like the one that existed at Grand Pré: waterfowl, fish, shellfish, sea mammals, and medicinal plants for food, social and ceremonial purposes that continue today. Mi’kmaq harvested the resources they needed from the area on a seasonal basis continuously over thousands of years, such as when certain fish species migrated through adjacent waters, when huge flocks of migratory birds came to the area to rest and fatten up and as certain plants came into their various seasons. The earliest record
of their presence in the proposed World Heritage Site boundary comes from the discovery in 2009 of a Mu Aawsami Saqewe’k L’n’u’k (Middle Archaic Period), full-channelled ground-stone gouge from circa 9000-6000 BP, though occupation of the area from at least the time of Saqewe’k L’n’u’k (Late Palaeoindian Period 11 000 – 9 500 BP) has been recorded at the headwaters of the Gaspereau River. Material evidence such as tools, palaeoethnobotanical samples, faunal remains, hearths, caches pits, habitation sites and processing sites, including that from the nearby Scots Bay quarries, suggests that the Grand Pré area was at the nexus of an important trading network for the Mi’kmaq.

The Minas Basin figures prominently in the history, legends and spirituality of the Mi’kmaq, especially Cape Blomidon, which was and is the most dominant feature on the landscape in the overall Grand Pré area. This is the setting for the stories of Kluskap (Glooscap) and the Whale, Kluskap battle with the Beaver, and Kluskap and Lazy Rabbit. These stories and more confirm the spiritual and cultural importance of the area for the Mi’kmaq.

All this material and oral tradition evidence and more suggest that the Grand Pré and area is archaeologically important for Mi’kmaw heritage.

When the first Europeans arrived at the area that is now Nova Scotia in the 16th century, they found willing trading partners in the Mi’kmaq who had developed sophisticated trading networks over the millennia. During the succeeding centuries, Mi’kmaw territory, including the rich coastline, was gradually impacted by European settlements and intense competition for the region’s resources ensued. The relationship between the French authorities and the Mi’kmaq was positive and led to alliances, one of the first resulting from the historic baptism of Kji Saqamaw (Grand Chief Henri) Membertou in 1610, the first indigenous person to be baptized in what would later become Canada. There are no known treaties between the French and the Mi’kmaq.

European Settlers
The first permanent European settlement on the nominated property dates back to the early 1680s with the foundation of Grand Pré / Les Mines by Acadian settlers. These were assigned land by the seigneur of Port Royal and settled according to the usual French settlement pattern of long strips of land drawn uphill perpendicular to the closest body of water. Progressively, the Acadians adapted to the environmental conditions and expanded their settlements in a dispersed fashion and started creating farmland from the intertidal lands adjacent to the uplands. The entire Acadian period lasted from about 1680 to 1755 resulting in substantial land transformation with the creation of close to 3000 hectares of farmland and the clearing of uplands. Archaeological evidence of that period includes house cellars, structural features, field patterns, roads, aboiteaux, and dykes.

Following the Deportation of the Acadians by the British authorities in 1755, New England Planters were attracted to Grand Pré and first landed in the area in 1760. The authorities distributed marshland parcels and divided the uplands into parcels concentrated in a typical grid pattern which formed the town of Horton. The Planter time period is difficult to define, due to a lack of clear archaeological evidence. However, archaeological remains from the Planters include house features, roads, dykes, mills, smithies, field patterns, aboiteaux, dykes, and middens.
The 19th century witnessed an expansion of industry, farming, and railroad activities in the area. Archaeological proof of that expansion lies in remains of those activities, including wharves, railroad related structures, warehouses, and other evidence of industrial activities.

There is a great diversity of sites representing the multiple phases of occupations as well as the identities of the different cultural groups that have lived in the area. Sites include settlement features, structures, harvesting and processing sites, and cemeteries and burials.

1.6 Overview of Archaeological Investigations

Ever since Longfellow’s poem acquired international popularity, the Grand Pré area has been the target of artefact collectors and amateur archaeologists. Throughout the late 19th century, evidence of Evangeline’s village and life were sought to add to the story and entertain visitors. These include domestic objects, farm activity related artefacts, structural remains, and even coffins. While not the result of professional archaeological work, these objects nevertheless demonstrated the richness of the area and its potential for research.

The earliest archaeological observations were carried out by amateur historians/ archaeologists and included the founder of the Grand-Pré National Historic Site, John Frederic Herbin. Like many before and after him, he was interested in identifying the exact location of the Acadian village. Acadians left behind many detailed pages of observations that are useful in recreating a 19th century landscape that is now lost and replaced by the ornate commemorative garden. In addition, local residents have reported finds on their properties ranging from coins and military objects, to evidence of aboiteaux, agricultural objects and Mi’kmaw artefacts and sites.

Since the 1950s, professional archaeologists have had the opportunity to investigate the area and expand their interest to non-Acadian related heritage. Parks Canada has carried out work since the late 1960s, primarily on and around the national historic site. The Nova Scotia Museum has recorded artefacts that were collected in the area. Various academic institutions have carried out work over the years. Saint Mary’s University in particular has carried out work since the late 1990s.

Since most of the land included in the nominated property is private, the main challenge to managing the area’s archaeological heritage is ensuring the support and cooperation of local residents. They have a primary role in protecting archaeological heritage.

1.7 Current State of Knowledge

The current state of knowledge is based both on information from archaeological investigations and the historical record, as well as from anecdotal evidence shared by local residents. Without the active participation of residents, there are significant challenges to understanding and managing archaeological heritage in Grand Pré and area.

Archaeologists have an overall understanding of the types of resources based on previous discoveries and historical records. The Grand Pré marsh and the surrounding community is one of the most well researched areas for historic period resources in Nova Scotia. The best documented resources in the
marsh include field patterns, dyke remnants, aboiteaux, sluices, and roads. On the uplands, where the Acadian and later settlements were located, the landscape has maintained its agricultural nature. The best documented types of resources there include field patterns, cellars from the Acadian and later periods, structural remains associated with agricultural, military, and community activities, roads, settlement patterns from the New England Planter period, an Acadian cemetery, an early 19th century cemetery, and features associated with railway activities. Most Mi'kmaq and earlier evidence of human activity have been recorded outside of the nominated property. However, surface discoveries of artefacts, from sites of those periods, were made inside the boundary during a surface reconnaissance survey and their importance and potential need to be assessed further.

Mapping this information allows managers to: identify areas of interest based on information yielded by previous work and accidental discoveries, target areas for additional research, and manage resources accordingly. It also helps identify priority areas for discovery, and amount of activity (such as development or dyke maintenance).

Key artefacts have been recovered and studied over the years. More recently, in 2006 and 2009, these include three aboiteaux found by farmers as they were cleaning the drainage creeks. These were brought to the national historic site, stabilized (one was preserved), and studied using dendrochronology. Archaeologists were able to investigate the area where the aboiteaux were found.

2. **Scope and Definitions**

The scope of this strategy extends primarily to the management and conservation of archaeological heritage located within the nominated property.

Archaeological heritage is understood in this strategy as being the form of cultural heritage covered by the *Special Places Protection Act* in Nova Scotia and by the *Guidelines for the Management of Archaeological Resources* at Parks Canada.

Management, in this document, means actions that aim to protect and preserve archaeological remains from natural and human impacts. Management requires an inventory of known sites, protocols for discovering and reporting new finds, processes to develop conservation options, and a process to assess, monitor and report on the condition of sites.

Conservation in this strategy carries the same meaning as in the *Standards and Guidelines for the Conservation of Historic Places in Canada*.

This Strategy will recognize and aim to protect the OUV as defined by the World Heritage Committee at the time of a successful inscription.

3. **Objectives and Outcomes**

The aim of this strategy is to provide a common framework for the management and conservation of archaeological heritage, for the area nominated for inscription, in accordance with federal and provincial legislation and policies.
The outcomes are to facilitate the sharing of information between the federal, provincial, and municipal jurisdictions, and the Mi’kmaq of Nova Scotia, and establish common protocols to identify sites and report on condition, set up mechanisms to effectively conserve archaeological heritage, and engage communities of interest in reaching that goal.

This sharing of information takes place through the mechanisms outlined in the MOU for the Grand Pré Stewardship Board.

4. Legislation, policies, guidelines to protect archaeological heritage in the nominated property

4.1 Archaeological Responsibility and the Mi’kmaq

KMKNO was mandated by the Assembly of Nova Scotia Mi’kmaq Chiefs (ANSMC) for the protection of archaeological resources and burials on behalf of the Mi’kmaq of Nova Scotia. As the KMKNO serves to support the ANSMC in its role as the elected leadership for the Mi’kmaq of Nova Scotia, its responsibilities include the collection of information, including through archaeological research and management activities, necessary for ANSMC decision-making. KMKNO will work in partnership with statutory authorities, the Stewardship Board and communities of interest to ensure that development, research, monitoring, and conservation practices are consistent with the needs of the ANSMC in these and through the consultation process.

4.2 Acts, policies, and guidelines applied on federally owned lands: list and implementation

Federal land in the nominated property is owned and administered by the Parks Canada Agency. The agency’s mandate, as described in the Parks Canada Agency Act is to protect and present nationally significant examples of natural and cultural heritage. The Agency is also responsible for the implementation of the Canada National Parks Act and the Historic Sites and Monuments Act.

In order to achieve its mandate, the Agency developed a series of policies, guidelines, management directives and guides.

Other federal legislation may have an impact on archaeological heritage management, such as the Canadian Environmental Assessment Act. This act applies only in the case of a development project that is triggered or funded by a federal agency, including outside federal property. In the case of any licence or approval that federal government may grant, or in the event that any activity within their jurisdiction may impact established or potential Mi’kmaq rights or title, the consultation process will be triggered and the Consultation Terms of Reference will come into effect.

**4.3 Act, policies, and guidelines applied on lands under provincial authority: list and implementation**

The *Special Places Protection Act* provides for the preservation, regulation and study of archaeological and historical remains in Nova Scotia. Its mandate covers all non-federal lands, including those underwater, to the limit of provincial jurisdiction. The Special Places Program maintains the provincial site inventory, oversees research through its heritage research permit system, and uses a variety of tools to encourage site protection and pre-development assessment for projects throughout the province.
The Special Places Program does not directly own or manage archaeological sites. Proactive site management is undertaken only in those instances where external agents take an active interest a site. The Province’s management interest is then provided through cooperative development of site-specific policies and strategies.

The legislation requires that anyone exploring for or excavating archaeological and historical remains have a heritage research permit. The applicant must be qualified to do the work they propose to do, and three permit categories cover the areas of non-disturbance reconnaissance, problem-based research, and impact assessment.

The legislation does not require pre-development assessments for archaeological remains, so these are encouraged through a variety of methods and triggers – environmental assessments, pre-development screenings, and focussed outreach. Implementation of the act is ensured by the resources provided to the Special Places Program.

In the case of any licence or approval that provincial government may grant, or in the event that any activity within their jurisdiction may impact established or potential Mi’kmaq rights or title, including through Nova Scotia’s Environmental Assessment Act, the consultation process will be triggered and the Consultation Terms of Reference will come into effect.

5. Challenges and Opportunities in Current Situation

5.1 Understanding the Archaeological Heritage

While much work has been done in the area, the information remains incomplete. This is due in part to the multiple groups working in the area who do not share information on a systematic basis. It is also the result of a lack of active investigation or monitoring programme underway to improve the understanding of the area’s archaeological heritage.

Parks Canada’s policies provide guidance on building inventories but the national historic site currently does not elaborate on its research priorities. Inventories are built as a result of broad archaeological surveys on the property administered by the Agency or as a result of impact assessments. When carrying out archaeological work, Parks Canada does not automatically assign a Borden number to the sites. This results in the sites on federal land not being included in the national system. Instead, Parks Canada applies its own provenience system which records all archaeological activities whether they yield results or not. Records are currently only available in paper format.

The Special Places Program maintains records of archaeological activity and reports in the area, as well as the detailed site inventory records. The Maritime Archaeological Resource Inventory (MARI) keeps a record of assigned Borden numbers, tracks permitted activities, and location of sites. Archaeologists are required to provide the necessary information on the site they are investigating as part of their archaeological report which is then included in the MARI. In addition, optional feature forms provide more detailed information on key features of the site.
The Special Places Program has recently made these detailed records available to researchers through a restricted website, and has begun work to do the same with research reports. Reports from such activity on adjacent Federal lands are not widely available, though a ‘Notice of Intent’ process was established to encourage the dissemination of information about archaeological work on federal lands. The Special Places Program does not employ an archaeologist so is unable to undertake archaeological investigations to support research or site management.

The Nova Scotia Museum does not have a specific research program, but has recently led or participated in archaeological investigations in the area. The Museum holds the collection of artefacts recovered during archaeological work on non-Federal lands.

Saint Mary’s University has been active in the area primarily by holding its annual field school at the national historic site in partnership with Parks Canada and the Société Promotion Grand-Pré. It has also carried out reconnaissance work. Saint Mary’s work has focused on historical material.

There is an opportunity for collaboration between institutions already active in the area as well new ones to coordinate research objectives, field work, sharing of information, and reporting. There is the opportunity and need to sustain and seek new partnerships to explore pre-contact and historical Mi’kmaw archaeological resources.

Finally, landowners have traditionally been instrumental in locating and reporting finds. Through their intimate knowledge and ongoing work of the land, they are the first to know about past and new discoveries and are thus important partners in identifying and protecting archaeological heritage.

5.2 Managing Development

As the nominated area is a living cultural landscape, development is authorized and managed according to policies in the municipal plan and the *Agricultural Marshland Conservation Act*. Development on the marsh is limited to non permanent structures and, in some circumstances, alternative energy generating structures. Development in the area, under municipal policies, needs to be in accordance with zoning policies related to maintaining the agricultural district.

Development and other human activities in the area, has mainly been tied to maintaining and sustaining agricultural activities. These include, on the marsh, work to clean the creeks, maintain aboiteaux and dykes, maintain dirt roads, and farm the land. On the uplands, these may include building or disposing of farm structures (barns, houses, and silos), farming the land, and maintaining roads. All these activities can have a varying degree of impact on archaeological resources. Activities on the marsh need to be permitted by the Grand Pré Marsh Body, the Department of Agriculture, and the Municipality of the County of Kings. Elsewhere, the Municipality of the County of Kings reviews proposals. Any process of development or disturbance governed by the Crown that may impact established or potential Mi’kmaq rights or title are subject to the consultation process. The mandate to protect archaeological and burial sites related to Mi’kmaw cultural heritage has been given by the Assembly of Nova Scotia Mi’kmaq Chiefs (ANSMC) to the KMKNO which also supports the ANSMC in the consultation process.
The provincial act protecting archaeological sites (the Special Places Protection Act) states that archaeological sites are provided a level of protection, whether designated or not. Specifically, if the sites are threatened by destruction from human activity or development, the Minister may order that these cease until the site is surveyed, investigated or salvaged under the direction of the Nova Scotia Museum. The province may require that funds be provided by the developer to cover the costs of the archaeological work. The Act continues by specifying that the archaeological work will not cause undue hardship on the developer. Currently, the provincial authorities are alerted to potential impacts by permit applications or external triggers like environmental assessments or complaints from the general public.

The section of the nominated property that is administered by Parks Canada is protected from any development other than site management related activities. Those activities are managed in particular under the cultural resource management policy and the impact assessment management directive, both emphasising the need to protect archaeological sites and mitigate impacts.

In summary, development occurs in this living landscape and has typically supported the local agricultural economy. Archaeological sites need to be protected according to the law, but the multiple authorities, the absence of coordination between them, the varying levels of resources available to do the work, the partial information available, the lack of statutory requirements for archaeological research and the lack of standards for archaeological methods, represent a challenge for their overall management.

### 5.3 Roles and Responsibilities of Authorities and Landowners at Grand Pré

The roles and responsibilities of authorities and landowners with regards to the management of archaeological sites are described in the following table. Included as well, are the roles and responsibilities of authorities that manage other aspects of Grand Pré and the area.

<table>
<thead>
<tr>
<th>Agent</th>
<th>Scope of authority</th>
<th>Role with regards to archaeology</th>
<th>Resources</th>

</tr>
</tbody>
</table>

The table illustrates that although two agencies have statutory responsibility for the management of archaeological heritage, there are a number of other agents that have a role in protecting sites. These roles need to be communicated, understood by the agents, and supported to achieve effective management.

### 5.4 Reporting

Each agency responsible for the protection of archaeological sites is required to report to their respective legislature (the Parliament of Canada for the federal authority, the Nova Scotia Legislature for the provincial authority and the Assembly of Nova Scotia Mi’kmaw Chiefs for KMKNO) on the status of their programmes. However, there is no notification process in Nova Scotia.

The reporting mechanism at the Parks Canada Agency begins at the field evaluation level through the commemorative integrity evaluation which reviews the condition of sites, condition of inventories, and overall pressures to the sites. That evaluation is carried out every 5 years and the results are published in the individual national historic site’s State of the Site Report. In addition, an Agency wide report, the
State of the Protected Heritage Areas Report, is produced every 2 to 4 years and tabled in Parliament. That report may or may not contain specific information relative to an individual site.

In parallel to this process, the Agency is responsible for permitting archaeological work on federal lands. The monitoring of those permits and the reporting requirements tied to them enable the Agency to track the condition of individual sites and of inventories.

There is no parallel mechanism at the provincial level.

The Special Places Program report mechanism at the provincial level relies on two primary triggers. One is from researchers through the heritage research permit system which allows the programme to maintain an inventory of sites and reports. The other is direct reporting of accidental discoveries. These discoveries have been reported directly to provincial authorities but in many instances local researchers and staff at the national historic site were first alerted and they in turn conveyed the information to the provincial authorities.

There are challenges with reporting because of limited resources to prepare the reports. In addition, the separate reporting mechanisms result in an incomplete picture of the archaeological heritage of the area and make it difficult to assess the overall condition of the archaeological heritage.

Despite these challenges, the positive relationship between the different authorities and with the communities of interest provides the backbone to develop and implement effective reporting mechanisms.

6. Archaeological Heritage Strategy

This archaeological heritage strategy relies on existing legislation and policies in place for archaeological heritage management and for developments, at the federal, provincial, and municipal level.

Its focus is to ensure an effective, collaborative, and informed approach to management based on the site’s heritage values.

6.1 Heritage Values

The nominated property is part of and includes a number of national, provincial, and municipal inscriptions.

National inscriptions include the Grand-Pré National Historic Site of Canada which commemorates the Acadian settlement between 1682 and 1755 and the Deportation of the Acadians in 1755. The second site of national significance is a much larger area forming the Grand-Pré Rural Historic District National Historic Site of Canada. That inscription commemorates the agricultural landscape created by the Acadians and maintained by the Planters and successive generations of farmers. Three events of national historic significance are commemorated in the area: the Attack at Grand Pré in 1747, the deportation of the Acadians in 1755, and the arrival of the New England Planters in 1760.
Provincial inscriptions include houses designated under the *Heritage Property Act* for their architectural value. All archaeological and historical sites on non-Federal lands are subject to the provisions of the *Special Places Protection Act*.

The municipal inscription includes a number of houses which form a heritage district under the *Heritage Property Act*.

In addition to values previously recognized in formal inscription processes, the Mi’kmaq value all archaeological heritage pertaining to their past. The Mi’kmaq of Nova Scotia also recognize the importance of context to archaeological heritage resources’ value and, to that end, greatly value their continuous cultural landscape, millennia old, in which the proposed World Heritage site is situated. The land and the spirituality interwoven with it are of outstanding heritage value to the Mi’kmaq of Nova Scotia.

Of particular relevance to this strategy are the Statement of Outstanding Universal Value and the attributes associated to it. These are the primary focus for protecting the nominated property.

While the outstanding universal value and its attributes are core, all these inscriptions and their associated heritage values need to be respected in the management of the area’s archaeological heritage.

**6.2 Principles**

The following are the principles guiding the management of archaeological heritage in the nominated property:

- The management and conservation of archaeological heritage in Grand Pré and area protects and preserves the values of the World Heritage site while respecting the values of other historic places;
- Archaeological heritage at Grand Pré and area is managed as a whole as well as through the individual sites that compose it;
- Collaboration between the different authorities and with the landowners is essential for effective management;
- Archaeological heritage is preserved in-situ except when faced by imminent and irreversible Archaeological research should aim to preserve in-situ a representative portion of each cultural feature, in order to protect the integrity of the nominated property
- The conservation of archaeological sites is a requirement for maintaining the integrity and authenticity of the nominated property
- Archaeological heritage is conserved according to the *Standards and Guidelines for the Conservation of Historic Places in Canada*;
- Grand Pré and area is a living and active agricultural community. Changes to the landscape need to be accommodated while protecting archaeological heritage and the integrity of the World Heritage site;
- The objective of managing and conserving archaeological heritage is to study, protect and preserve that heritage for present and future generations to enjoy and learn about;
The knowledge resulting from managing the archaeological heritage of Grand Pré and area is shared with the communities of interest and the broader public.

6.3 Management and Research

Research is an essential aspect of effective management. It is driven by the needs of those whose heritage is present in this area and communities of interest to protect their cultural interests and heritage. While research may have its own goals in investigating a site, management of that site needs the information generated from research activities to inform its conservation. In addition, research activities can be enhanced by the ability of authorities to conserve sites in the long term.

As such, an effective archaeological heritage strategy includes a framework to guide the relationship between research and management. This framework is defined by a set of research objectives for management purposes with the aim to continue to develop the inventory:

1. Understand the year round patterns of use and occupancy from the different periods;
2. Refine our understanding of the development of the dykelands;

These research objectives aim to both foster research interest from third parties and guide the development of the tools to inform decision-making by site managers.

These research objectives are adopted by the managing agencies to guide research work in areas under their authority. The purpose is to tie research work permitted in Grand Pré and area to at least one of these objectives and thus improve knowledge of the resources and the attributes of outstanding universal value. Archaeological reports submitted as part of the permitting process need to clearly articulate the relationship between the outcome of the research and the research objectives for management purposes.

Reports will be filed with the permitting agency as well as with the Heritage Division of the Department of Tourism, Culture, and Heritage as keeper of the inventory for Grand Pré and area.

The governing body of the Grand Pré World Heritage Site will receive an annual report on research activities and their contribution to management of the site.

6.4 Management and Conservation

Managing and conserving archaeological heritage is a process that involves understanding both the known and potential resource and the pressures affecting it, determining its present condition, monitoring its condition through time, developing conservation options based on these assessments, and monitoring the results. The following describes that process as it applies specifically to the heritage and reality of Grand Pré and area.

6.4.1 Inventory

Parks Canada and the Heritage Division of the Department of Tourism, Culture and Heritage will each maintain an inventory of sites and activities in areas under their jurisdiction, according to their own procedures.
An inventory of archaeological investigations and sites of the Grand Pré area will be maintained by the Heritage Division, Department of Tourism, Culture, and Heritage. That inventory will include information from both the federal and provincial jurisdictions. It may include such information as past archaeological investigations, the results they yielded, the extent of the recorded sites, types of resources, and sensitive areas.

A Borden number will be assigned to sites on federal land. An agreement between Parks Canada and the Heritage Division of the Department of Tourism, Culture, and Heritage will allow these sites to be entered into the Maritime Archaeological Resource Inventory (MARI). In addition, for both sites under federal and provincial jurisdictions, a feature form will be required to record information about significant features. Reports will be accessible in digital format. The information generated from work permitted in the Grand Pré area prior to the implementation of MARI will be added to MARI.

The inventory is a dynamic record of information resulting from research, permitted work, and accidental discoveries. It serves both a management and research purpose. It aims to support managers in protecting archaeological heritage, mitigating impacts, and monitoring the results of research work in improving the understanding of the site. In addition, it serves an important purpose in facilitating research by providing up to date and detailed information about the area. Access to the inventory may be authorized for researchers by the permitting authorities.

The inventory will benefit from the results of other types of research that may impact the land, such as geological research or environment studies. The Board will be notified by the permitting authority of the nature and intent of the work.

Key actions to improve inventory

The current inventory requires additional information to enrich it and support decision-making. In order to achieve that goal, a number of key activities will be undertaken:

- Compilation and digitization of historical maps and air photos;
- Inclusion of ‘non-site’ data, i.e. record of tests and surveys that yielded no results;
- Prioritize the areas which may be subject to short and mid-term development proposals. This requires engaging the municipality in identifying those areas;
- Improve the LiDAR imagery;
- Encourage partnerships with academic institutions to achieve the goal; and,
- Work with the Grand Pré Marsh Body to allow and schedule for archaeologists’ time to monitor work undertaken on the marsh.
- Partnership with Mi’kmaq of Nova Scotia to determine historic cultural resources in the area through traditional use studies, Mi’kmaq Ecological Knowledge Study and archaeological survey designed to identify ancient and buried archaeological data pertaining to the long term relationship between the Mi’kmaq, their ancestors and the landscapes.

Academic institutions are encouraged to support the work of the authorities by addressing the research objectives for management purposes and provide additional information to help fill some of the gaps in knowledge that affect decision-making about conservation.
6.4.2 Evaluation

Evaluating its relationship to one or more of the area’s inscriptions is one of the primary tasks when describing a site, i.e. is it an attribute of the national historic site, the rural historic district, the World Heritage Site or/and other inscriptions? This aspect also includes determining whether the site has value on its own, which may lead to its individual inscription.

This evaluation is necessary for decision-making and is required whether as part of a research project, as a result of development monitoring activities, or in response to an accidental discovery. An evaluation sheet needs to be filled for each individual site. Depending on the nature of a particular site, consultation and notification of the Mi’kmaq community may be appropriate.

6.4.3 Assessment

An assessment of the site will be carried out simultaneously with the evaluation. It will serve as a baseline for monitoring site conditions in the future. That assessment will include:

- Assessing site condition, which requires an assessment of its contribution to the historic site’s integrity;
- Assessing the pressures that affect it; and,
- Proposing preservation options should the assessment warrant it.

This assessment is necessary for decision-making and is required whether as part of a research project, as a result of development monitoring activities, or in response to an accidental discovery. An assessment sheet needs to be filled for each individual site.

6.4.4 Consideration of value in management decisions

Effective protection of archaeological heritage is the result of the decision-makers’ ability to take into consideration accurate information about the archaeological site and its values. As such, having a proper inventory and accurate information on value, condition, and pressures are essential steps towards reaching that goal. While the decision on the measures to be taken to conserve the site rests with the authorities, successful decision-making is enhanced by engaging the different communities of interest and the Mi’kmaq of Nova Scotia in developing those measures.

Consideration of value occurs as soon as a development project or an activity is planned or proposed, however the archaeological value of the resource does not change based on the reason for its impact or disturbance. The primary objective is to preserve the values, the condition, and the overall integrity of the historic place. Additional information on reviewing proposed interventions can be found under section 6.5.4 Review of activities and development proposals.

In planning processes, the value, condition, and existing pressures should inform decision-making about appropriate use, function, and development. In reviewing proposals, these should trigger a review of impacts and a discussion on conservation measures. These two scenarios are guided by the direction provided by provincial and federal legislation and policies where appropriate and the Standards and
Guidelines for the Conservation of Historic Places in Canada, with particular attention to the Standards and Guidelines for the Conservation of Archaeological Sites section.

Expert advice from qualified archaeologists and the legislative authorities combined with the input of the project proponent are necessary to develop appropriate conservation measures.

Prior to authorizing a project or completing a planning process, the Board for the World Heritage site will be consulted by the permitting authority on the proposals, who will in turn provide recommendations to ensure that the site’s values are fully taken into account.

When the project has the potential to impact established or potential Mi’kmaq rights or title, including archaeological or other cultural resources, the Mi’kmaq community will be informed and consulted in accordance with the Consultation Terms of Reference.

Training should be prepared and delivered to departmental agents at the municipal, provincial, and federal levels that have the responsibility to plan, review or permit activities in the nominated property.  

6.4.5 Education and Training

Educational material and workshops will be prepared by the Grand Pré World Heritage Site Stewardship Board in partnership with provincial authorities to raise awareness about the area’s archaeological heritage, and the process to follow to report discoveries.

6.4.6 Condition of sites

As the aim of archaeological heritage management in Grand Pré and area is to maintain integrity, sites that are excavated will not be left exposed to the elements. Sites will be stabilized or conserved during and immediately following excavation. A site stabilisation approach that will include the preferred technique and a timeline for implementation will be developed prior to beginning excavations. For sites in danger from development pressures or the elements immediate conservation will be of utmost importance. In those cases, a short term method may be developed to allow time for a longer term conservation solution to be elaborated. The Standards and Guidelines for the Conservation of Historic Places in Canada will serve as the guiding document to elaborate those solutions. Finally, they should be developed in partnership between the authorities, the communities of interest and the Mi’kmaq of Nova Scotia and in consultation with the Board for the nominated property.

6.4.7 Monitoring

The purpose of monitoring is to assess the overall health and wholeness of the nominated property and of its values. Monitoring applies to individual archaeological sites as well as to the property as a whole and is both event sensitive (e.g. after a particularly strong storm or in the course of an infrastructure project) and long-term.

Effective monitoring relies on the information provided in state of condition reports (such as Parks Canada’s state of the site report, or the World Heritage nomination proposal section on condition) and on data collected during the archaeological site’s assessment (see section 6.4.3 Assessment).
The implementation and accuracy of monitoring is of primary concern to the Board of the nominated property. Monitoring is the primary responsibility of the legislative authorities. They may seek the support of third parties to carry out preliminary observations, in particular in the case of specific natural events such as storms. Event monitoring reports will be prepared that will indicate the date of the event, the date of the observations, the author of the report, and basic observations on condition, and may include photographs. This report may be followed by a more thorough assessment carried out by a qualified archaeologist carrying a valid provincial and/or federal research permit.

Monitoring the condition of the overall site, and of key attributes, will be performed every six years, starting five years after inscription, by qualified archaeologists carrying a valid provincial and/or federal research permit. Monitoring reports will be prepared in accordance with requirements specified in the permits and using the condition indicators included in this strategy.

6.4.8 Artefact repository, conservation, and presentation

By law, artefacts found on private or non-federal land are the property of the province of Nova Scotia. Officials of the Nova Scotia Museum take possession of the artefacts and are responsible for their long term conservation and curation. The provincial repository is located in Halifax.

Artefacts found on land administered by Parks Canada are the property of the Government of Canada. Parks Canada is responsible for the long-term conservation and curation of these artefacts. The Parks Canada repository is located in Halifax.

In both cases, collections are accessible to researchers in accordance with the terms and conditions of the applicable provincial and federal policies.

The Mi’kmaq of Nova Scotia will be informed and consulted when Mi’kmaw artefacts or other cultural resources are involved.

The exhibit in the community of Grand Pré and elsewhere, of collections of artefacts pertinent to the local, national, and international significance of Grand Pré and area should be encouraged and supported by the Nova Scotia Museum, Parks Canada and the Mi’kmaq of Nova Scotia.

Collaboration between jurisdictions, and with communities of interest, to conserve, take care, and exhibit artefacts found in the area is encouraged particularly to ensure that key artefacts are preserved and enjoyed by present and future generations.

6.4.9 Risk preparedness

The primary natural threat to archaeological heritage is from storm surges and flooding. The sites most susceptible to the impact of these threats will be a priority for monitoring purposes.

In the case of extraordinary natural events, an event monitoring report will be filled. Authorities will attempt to investigate the site within 48 hours following that event. For additional information, consult the section on reports.
6.4.10 Reports

There are two types of reports:

- **Reports on activities** which include archaeological reports: these are filed as a result of the permitting requirements. Their primary purpose is to improve the inventory and the understanding of the World Heritage site. These reports are located in the offices of the permitting authority. Copies should be made available to the Board and to the other permitting authority. A summary of the information will be provided by the permitting authority to the keeper of the inventory.

- **Reports on condition** which include event monitoring reports and monitoring reports: these are filed following specific natural events for event monitoring reports and every six years starting five years after inscription for monitoring reports. Their primary purpose is to monitor change in condition and overall integrity of the site. These reports are located in the offices of the permitting authority. Notice will be given to the Board and to the other permitting authority of event reports. Monitoring reports will be coordinated between authorities to ensure consistency, accuracy, and timely delivery.

Monitoring reports are required as part of the World Heritage periodic review which takes place every six years following a inscription and reports on overall condition and threats to the property. While each jurisdiction may have its own reporting templates, a single template is used by both jurisdictions to report to the World Heritage Committee. That template uses the condition indicators and the format included in this strategy.

Copies of all reports will be made available to KMKNO on behalf of the Mi’kmaq of Nova Scotia. However, if a monitoring report is in the format of a Heritage Research Permit (HRP) report proponents may request the report remain confidential.

**6.5 Implementation: Roles, Responsibilities, and Process**

There are two types of responsibilities in managing the archaeological heritage of Grand Pré and area: one is the legal responsibility and the other is the stewardship responsibility. The second type recognizes the important role of community members, communities of interest, local governments and non-government bodies in having a stake in protecting archaeological heritage.

Legal responsibility on non federal land rests with the Special Places Program in the Department of Tourism, Culture and Heritage. The roles and responsibilities of the program are to ensure that legislation is enacted with regards to managing access to archaeological heritage through permitting, monitoring impacts as a result of development or natural events, and reporting.

Legal responsibility on land administered by Parks Canada rests with Parks Canada. Its role and responsibility include building an inventory, evaluating resources, monitoring, reporting, and managing research permits.
Stewardship responsibilities lie primarily with the Board for the World Heritage site. This structure, acting as the site manager, has a responsibility to facilitate the coordination of activities from the different authorities, monitor conditions, coordinate research and its outcome, provide advice on projects and conservation measures, and report on condition and activities to UNESCO and communities of interest. It may delegate parts of these responsibilities to a specialised task force with the required technical expertise.

Stewardship responsibilities also lie with landowners and other government agencies. The municipal authorities, as a local planning authority, have a role in advising and in consulting with the provincial authority to make decisions, consulting the Board, and trigger the review of potential impacts from a proposed project or planning direction.

Individual landowners have a role in working with agencies to identify sites, evaluate them, and implementing conservation measures. By law, archaeological research cannot be carried out on private land without the consent of the landowner. Landowners are encouraged to continue the long-standing collaboration with authorities and with researchers to discover and protect sites.

The Mi’kmaq of Nova Scotia have a role in working with agencies to evaluate sites, provide information on cultural resources and make decisions regarding resources pertaining to their culture and heritage.

Finally, other provincial and federal government agencies have a role and responsibility under legislation to protect archaeological heritage and a role in consulting with the Board to ensure that potential impacts are assessed and appropriate measures are taken to conserve heritage. The Board, together with the responsible authorities, provide the resources to identify and develop appropriate measures to conserve archaeological sites, in accordance with jurisdictional policies and with the Standards and Guidelines for the Conservation of Historic Places in Canada.

6.5.1 Process to undertake archaeological research and other investigation

Archaeological research is a permitted activity. If carried out on Parks Canada administered land, a permit must be acquired through Parks Canada and researchers must comply with its terms of references. Notification by the permitting authority of the issuance of a permit will be given to the Grand Pré World Heritage Site Stewardship Board. Copies of the results will be provided to the Board upon request. A summary of the results will be provided to the keeper of the inventory by the permitting authority.

If carried out on non federal land, a permit must be acquired through the Special Places Program and researchers must comply with its terms of references. Notification by the permitting authority of the issuance of a permit will be given to the Grand Pré World Heritage Site Stewardship Board. Copies of the results will be provided to the Board.

If carried out on private land, permission from the landowner must be obtained. The landowner needs to be engaged in the process of developing an investigation strategy and implementing it. Following that, a permit must be acquired through the Special Places Program and researchers must comply with its terms of references. Notification by the permitting authority will be given to the Grand Pré World Heritage Site Stewardship Board of the issuance of a permit. Copies of the results will be provided to the Board. If work
is carried out on the marsh, in addition to notifying the landowner, the Grand Pré Marsh Body will receive notice for information and be engaged as appropriate.

Should artefacts and sites that have the potential to be considered to be culturally associated with the Mi’kmaq be uncovered, the KMKNO will be informed by the relevant jurisdiction. The KMKNO and the jurisdiction will work together to protect that heritage under the terms of the relevant legislation and policies. This will include involving the KMKNO, on behalf of the Mi’kmaq of Nova Scotia, in developing a work plan for the site.

6.5.2 Process for the discovery of human remains

On Parks Canada administered land, the protocol for human remains falls under the Parks Canada Management Directive concerning human remains (Directive 2.3.1). This directive applies to all agencies, organizations, groups and individuals, including Parks Canada personnel, on lands administered by Parks Canada. The directive includes methods and principles for the respectful treatment of human remains and guidelines for preserving associated cultural resources near the burial site.

On land under provincial jurisdiction the Nova Scotia Human Remains Protocol applies. The discovery of human remains triggers a five step process for the permit holding archaeologist: (1) cessation of excavation and securing the site, (2) informing authorities, (3) record the find, (4) respectful recovery, and (5) next steps, such as delivery to a cultural group or reburial with ceremony.

None of these protocols apply to recent human remains that may be subject to police investigation. If the remains are suspected to be of Mi’kmaq origin, Parks Canada, or the Special Places Program, will contact KMKNO, as the Mi’kmaq authority.

6.5.3 Process to report and investigate accidental discoveries

On Parks Canada administered land, accidental discoveries will be reported to the Field Unit Superintendent responsible for Grand-Pré National Historic Site of Canada. Parks Canada policies relevant to this kind of event will apply. Parks Canada will investigate the discovery as soon as possible. Artefacts found on Parks Canada administered land remain under the stewardship of Parks Canada. Notification will be given to the Grand Pré World Heritage Site Stewardship Board and summary information will be provided to the keeper of the inventory.

On non federal land, accidental discoveries will be reported to Parks Canada staff at the Grand-Pré National Historic Site of Canada who will in turn report it the Manager of the Special Places Program at the Department of Tourism, Culture and Heritage. Regulations governing the protection of archaeological sites will apply. The Nova Scotia Museum will investigate the discovery as soon as possible. Artefacts found on provincial and private land remain under the stewardship and are the responsibility of the Province of Nova Scotia. Notification will be given to the Grand Pré World Heritage Site Stewardship Board and summary information will be provided to the keeper of the inventory.

Should artefacts and sites that have the potential to be considered to be culturally associated with the Mi’kmaq be uncovered, the KMKNO will be informed by the relevant jurisdiction. The KMKNO and the jurisdiction will work together to protect that heritage under the terms of the relevant legislation and
policies. This will include involving the KMKNO, on behalf of the Mi’kmaq of Nova Scotia, in developing a work plan for the site.

6.5.4 Process to report on condition following a natural event

Following a natural event, such as a storm surge or a flood, every effort will be made to survey the property for possible disturbance to archaeological feature within the first 48 hours. The Grand Pré Marsh Body as the stewards of the dykelands will provide the support to perform the primary survey.

Upon arrival at a site and should damage need to be reported, the following information will be collected:

- Nature and time of the event;
- Time of observation;
- Type of site;
- Location;
- Broad description of damage;
- Identification of exposed artefacts;
- Pictures with summary captions;

In addition, no artefact will be collected by the observer unless permitted by the relevant provincial or federal authority.

Finally, if the damage occurred on land administered by Parks Canada, the Field Unit Superintendent will be advised and appropriate action will be taken to stabilize the site.

If the damage occurred on non-federal land, the Manager of the Special Places Program will be advised and appropriate action will be taken to stabilize the site. If the damage occurred on private land, the Manager of the Special Places Program will be advised who will then contact the landowner. Appropriate action will be taken to stabilize the site with the owner’s consent.

If the damage occurred on land known or suspected to contain Mi’kmaw artefacts, KMKNO will be immediately informed.

6.5.5 Process to review activities and development proposals

As the area is a living community, activities, infrastructure development and maintenance will occur.

Most development proposals and activities on lands other than those administered by Parks Canada will be reviewed by the Municipality of the County of Kings. The focus of that review is to ensure compliance with municipal zoning policies, by-laws and other regulations. In addition, the Municipality of the County of Kings will advise and consult with the Manager of the Special Places Program to trigger a review of potential archaeological impacts. The municipality will advise the Grand Pré World Heritage Site Stewardship Board of the proposal and will request comments.
Should potential impacts be identified, the provincial authorities will notify the Grand Pré World Heritage Site Stewardship Board and work with the committee and the individual landowner to identify the appropriate action to conserve the archaeological site.

The Manager of the Special Places Program is responsible for approving the conservation measures and monitoring the implementation of those measures.

The Manager of the Special Places Program will notify the Mi’kmaq when articles are found and encourage archaeologists who are granted HRPs to engage with the Mi’kmaq when working in areas of high potential for Mi’kmaq artefacts and contact the KMKNO when a discovery is made.

The Manager of the Special Places Program will immediately notify the Mi’kmaq of Nova Scotia of the potential for discovery of artefacts or other cultural resources or impacts that may be culturally associated.

The Municipality of the County of Kings will approve the proposal upon having satisfied the terms and conditions set by the Special Places Program to conserve the site.

Should a proposal be made for activities or development on lands administered by Parks Canada, impacts assessment will be carried out as per the Agency’s policies. Parks Canada will advise the Grand Pré World Heritage Site Stewardship Board of the proposal and will request comments. Approval of the proposed activity or development will be made following consultation with the Grand Pré World Heritage Site Stewardship Board and following accommodation of its recommendations. The Field Unit Superintendent responsible for Grand-Pré NHSC will immediately notify the Mi’kmaq of Nova Scotia of the potential for discovery of artefacts or other cultural resources or impacts that may be culturally associated.

</tbody>
</table>
In order to make the implementation of the strategy effective, key partners will require training to be aware of the importance of protecting heritage in the nominated property. This includes being aware of the richness of that heritage and its diversity, the importance of advising the Heritage Division of impending work, and the importance of conserving that heritage.

Key stakeholders include provincial departments that may carry out activities on a regular basis in the area, the municipality of the County of Kings, and the Grand Pré Marsh Body.

The Heritage Division will work with the Board of the nominated property to prepare and deliver that training.

Knowledge of the existence and function of the consultation process with the Mi’kmaq of Nova Scotia under the Made In Nova Scotia Process, in accordance with the Consultation Terms of Reference, should also be offered to partners and key stakeholders as part of the necessary training to support the management objectives and activities.

6.5.7 Priorities

Research:
- work with partners to define research priorities
- encourage research activities on sites in the nominated property and their collections
Management:
- develop tools for monitoring condition of the nominated property
- establish long-term partnerships for research and management of archaeological heritage in the nominated property
- develop training for jurisdictions, researchers and local residents
7. **Framework for Condition Assessment and Monitoring of the Nominated Property: Indicators and Process**

This section provides information on the agencies responsible for monitoring the condition of archaeological sites, the process for monitoring, and the indicators used for reporting on condition. These indicators are the ones used to report on the overall site and may be different from the ones used by each jurisdiction.

### 7.1 Agencies performing monitoring

Parks Canada is the agency responsible for monitoring and reporting on the condition of archaeological sites on lands it administers.

The Department of Tourism, Culture and Heritage is the provincial agency responsible for monitoring and reporting on the condition of archaeological sites on non federal lands.

The Grand Pré World Heritage Site Stewardship Board is responsible for reporting to the World Heritage Committee and to communities of interest on the condition of archaeological sites in the nominated property.

KMKNO is responsible to ensure that the protection of archaeological resources and burials pertaining to Mi’kmaq of Nova Scotia cultural heritage is adequate to the satisfaction of the Assembly of Nova Scotia Mi’kmaq Chiefs.

Partnerships may be sought to accomplish these tasks.

### 7.2 Agency-specific monitoring exercise

Each agency has its own reporting mechanism and condition indicators that are in compliance with its individually legislated mandate to protect archaeological heritage. These are maintained and serve to inform the condition report of the entire nominated property.

### 7.3 Reporting on the condition of the area nominated for World Heritage inscription

Once a site is designated a World Heritage site, the World Heritage Committee requires a periodic report on its condition every six years. That report is tabled by Canada and requires details about factors affecting the site, the monitoring programme, priority actions, means to mitigate threats, agencies responsible for monitoring, and the condition of the site based on the indicators identified at the time of inscription.

As such, a report on the condition of archaeological sites is an essential part of that overall report.
A standard table for reporting on the condition of archaeological sites, will be used. A sample of this table, indicating current site conditions, can be found in Appendix 4. The table was developed in the *State of Conservation of Cultural Resources Grand Pré* (Curtis, 2011) report, based off the *Condition Indicators for In Situ Archaeological Sites* (Brand, 2008). The tables will have to be accompanied by detailed instructions to ensure consistent monitoring results, this work remains to be done, as indicated by the priority of developing monitoring tools, previously stated.

The following table identifies the condition indicators and periodicity of monitoring for the management of archaeological heritage that are used for the purpose of reporting on the site’s overall condition.

RISK PREPAREDNESS FRAMEWORK
FOR THE LANDSCAPE OF GRAND PRÉ

January 2011
FOREWORD

A World Heritage Site requires mechanisms and resources to ensure the maintenance of its integrity and authenticity for generations to come. In addition to everyday management mechanisms, risk preparedness addresses those extraordinary natural events that may have a permanent impact on the nominated property. In many instances, those events happen with great speed causing a relative state of confusion which can lead to negative impacts to the cultural heritage.

Risk preparedness is the ability for authorities to anticipate those impacts by setting up the appropriate mechanisms to implement in case of emergency. These are outlined in the Nomination Proposal as the document articulates the approach to preparing for, responding to, and recovering from natural disasters with particular attention to protecting the attributes and outstanding universal value.

This document complies with the requirements for preparing a nomination proposal by presenting the framework within which risk preparedness is addressed at Grand Pré and by outlining the cooperation between the federal, provincial, and municipal authorities. Implementation is ensured by each authority according to the legislation, policies, and mandate guiding it.

This framework is the result of the collaborative work between those authorities and field staff as represented by:

- Wayne Kelly, Maintenance Supervisor, Grand-Pré National Historic Site of Canada, Parks Canada
- Robert Palmeter, Chair, Grand Pré Marsh Body
- Robert Sheldon, Field Unit Superintendent, Northern New Brunswick Field Unit, Parks Canada
- Gary Smith, Emergency Management Coordinator, Municipality of the County of Kings
- David Smith, Aboiteau Superintendent, Department of Agriculture, Province of Nova Scotia

APPENDICES ............................................................................................................................................. 17
1. Context

The *Operational Guidelines for the Implementation of the World Heritage Convention* require that in preparing a nomination proposal for a site, risk preparedness be addressed in relation to potential disasters to the nominated property. The requirements are “[...] to itemize those disasters which present a foreseeable threat to the property and what steps have been taken to draw up contingency plans for dealing with them, whether by physical protection measures or staff training”(*Operational Guidelines, Annex 5, section 4.b (iii))*.

Grand-Pré National Historic Site of Canada, and the surrounding area, is being proposed for World Heritage inscription, under the title the Landscape of Grand Pré. The area comprises over 1300 hectares of dykeland, hundreds of hectares of upland in the communities of Grand Pré and Hortonville, the National Historic Site, and other lands administered by Parks Canada. In that context, there are multiple plans in place to address various emergencies.

2. Purpose

The purpose of this framework is to provide an overview of the emergency measures in place to deal with the effects of natural disasters on the cultural heritage of the nominated property. It serves to articulate the mechanisms in place at the nominated property at the federal, provincial, and municipal levels to deal with these kinds of emergencies. It does not replace or supersede existing plans where those are in place.

3. Scope

This Risk Preparedness Framework addresses preparedness, emergency, and post-disaster measures resulting from natural events for the property nominated for World Heritage inscription. It does not apply to the area covered by its buffer zone.

The Municipality of the County of Kings’ *Emergency Response Plan* addresses accidental discharges of chemicals and other hazardous materials, vehicular accidents, and threats to human life. That plan applies in the nominated property for those matters.

4. Jurisdictions

Parks Canada has jurisdiction on lands it administers. Within the nominated property these include Grand-Pré National Historic Site of Canada, the land on which the Historic Sites and Monuments Board of Canada cairn with the plaque commemorating the Attack at Grand-Pré is located, and Horton Landing. The Field Unit Superintendent for the New Brunswick North Field Unit is responsible for these properties.

For emergency preparedness on the non-Parks Canada lands, the Protective and Emergency Services division of the Municipality of the County of Kings coordinates emergency responses in accordance with the Nova Scotia *Emergency Management Act*.

In specific circumstances, when the emergency response requires it, the municipality may request that the provincial Emergency Management Office (EMO) provide assistance. In addition to providing that support, EMO is responsible for the administration of Disaster Financial Assistance programs authorized by the Nova Scotia government. Through the Disaster Financial Assistance Arrangements, the federal government assists provinces in recovering uninsurable losses to provincial and municipal governments, businesses, non-profit organizations and citizens following significant natural disasters.
The Land Protection Division of the Department of Agriculture is responsible for addressing flooding as a result of possible dyke or aboiteau failure. The timing of a high tide that coincides with a large runoff of rain, or snow melt water, may cause excessive flooding.

The Grand Pré World Heritage Site Stewardship Board does not have a role in the implementation of this framework but will be kept informed by the responsible authorities on the impact of the event on the attributes.

5. Legal and Policy Environment

This framework brings together in one document the main principles and actions of emergency management relating to the protection of the assets that are attributes of the nominated property and of visitors as found in the Municipality of the County of Kings’ Kings Regional Emergency Readiness Plan, the Nova Scotia Department of Agriculture’s Emergency Preparedness Plan of the Land Protection Division, and Parks Canada’s policies regarding visitor safety and cultural resource protection. It relies on those existing emergency response plans and policies for its implementation.

6. Attributes and Value

The nominated property is being proposed for inscription because of its value as an agricultural landscape and its importance for the Acadian community.

The attributes that are the tangible evidence supporting the value are summarized as:
- The dykes and aboiteaux;
- The predominant agricultural use of the dykelands; and,
- The memorials to the Deportation and Renaissance of the Acadians, including the Memorial Church, the Evangeline statue, the Herbin Cross, the Deportation Cross, the commemorative gardens at Grand-Pré National Historic Site of Canada.

The integrity and authenticity of the nominated property, through its value and attributes, need to be maintained to effectively protect it. This framework refers to the Outstanding Universal Value and the attributes as described in chapters 2 and 3 of the Nomination Proposal and confirmed at the time of a successful inscription.

7. Phases of Risk Preparedness

Risk preparedness comprises three phases:
- Preparedness which addresses the level of readiness of a site include reducing the risk of the natural disasters having an impact, preparing the mitigation measures and identifying the guiding documents, strengthening the resistance of infrastructure, installing advance warning systems, and preparing a response plan.
- Response deals with the event itself including warning of event, coordination of response, implementation of the response plan, and identification of the emergency response team and of the conservation team.
- Recovery focuses on identifying the focus of the site treatment measures and the documents that will guide those measures, measures for preparedness re-instatement and enhancement.

8. Principles of Risk Preparedness for Cultural Heritage

The following are the principles of risk preparedness for the cultural heritage of the nominated area:
• The key to effective protection of cultural heritage is advance planning and preparation;
• Securing cultural heritage is a high priority during emergencies;
• Advance planning for the protection of cultural heritage in the area proposed for World Heritage designation against disasters integrates relevant heritage considerations within the overall disaster prevention strategy;
• Planning is conceived in terms of the whole property, and provides integrated concern for the structures, the archaeological sites, and the landscape features;
• Preparedness requirements should be met by means that have the least impact on heritage values;
• The Standards and Guidelines for the Conservation of Historic Places serves as the policy to guide interventions during preparedness, response, and recovery phases.

9. Risk Analysis

The main threats are related to fire, tropical storm surges, or excessive rain or snow melt events. Storm surges may result in dyke overtopping, dyke breaches, aboiteau failure, and flooding of the area.

Fire is a threat principally at the national historic site, where buildings of historic value may be adversely impacted.

The area is designated as low risk for earthquakes and tsunamis.

Tropical storms are somewhat rare but do occur with a frequency and strength that justifies mention as a potential risk. According to recent government studies, there is a northward shift of storm tracks which makes Nova Scotia in the path of those storms. Moreover, storms have increased in frequency over the past 30 years and have increased in strength and lifetime. As a low lying area, Grand Pré’s dyke is at risk of being affected by tropical storms, such as strong precipitations and storm surges.
The following map indicates a possible flooding scenario at Grand Pré in a storm surge situation where dykes are breached.

Map 1: Flooding Map of the Nominated Property and Buffer Zone

11. Coordinated Roles and Responsibilities

11.1. Preparedness

11.1.1. Parks Canada

Parks Canada’s role is to:
- Maintain buildings and vegetation;
- Maintain its advance warning mechanisms;
- Update its policies;
- Maintain archival information and detailed architectural recording of the memorials;
- Work with the Municipality of the County of Kings on means of mitigating impacts to memorials during response;
- Prepare for impact in cases of storm events.

11.1.2. Department of Agriculture

The Land Protection Division of Department of Agriculture’s role is to:
- Maintain the structural integrity of the dykes and aboiteaux;
- Maintain protective vegetation;
- Maintain protective erosion or rock facing protection;
- Perform monitoring of the condition of dykes and aboiteaux;
- Update its Emergency Preparedness Plan;
- Liaise with the Special Places Programme at the Department of Tourism, Culture and Heritage to monitor the condition and record significant archaeological sites as articulated in the *Strategy for the Management and Conservation of Archaeological Heritage in Grand Pré and Area*.

11.1.3. Municipality of the County of Kings

The Municipality of the County of Kings’ role is to:
- Maintain emergency services;
- Update its Kings Regional Emergency Readiness Plan;
- Maintain setback and no construction zone in areas at risk of flooding;

11.2. Response

- The Municipality of the County of Kings responds to emergencies in accordance with its Regional Emergency Readiness Plan. The Municipality has contracted police services to the Royal Canadian Mounted Police. Paramedic services are the responsibility of the Province.
- In the event of dyke failure, the Department of Agriculture through the Aboiteau Superintendent is responsible to implement its Emergency Preparedness Plan and the Risk Preparedness Framework for the nominated property.
- In the event of a fire at the national historic site, Parks Canada is responsible to implement its policies and the Risk Preparedness Framework, including contacting local emergency services.

11.3. Recovery

- Dyke stabilization and rebuilding is the responsibility of the Department of Agriculture.
- The recording and stabilization of archaeological sites and other forms of cultural heritage on non-federal lands is the responsibility of the Special Places Programme of the Department of Tourism, Culture, and Heritage.
- The stabilization and recovery of the memorials and the recording of archaeological sites on land administered by Parks Canada are the responsibility of Parks Canada.
- Financial assistance is coordinated by the Nova Scotia Emergency Management Office.
12. Notification Procedure in Case of Emergency

**In case of fire at the national historic site:** lead: Grand-Pré National Historic Site of Canada
- Contact emergency services;
- Contact Northern New Brunswick North Field Unit Superintendent.

**In case of dyke failure, dyke overtopping, flooding, storm surge:** lead: Emergency Management Coordinator, Municipality of the County of Kings
- Contact emergency services;
- Contact Aboiteau Superintendent;
- Contact Chair of the Grand Pré Marsh Body;
- If appropriate, contact manager for visitor services at Grand-Pré National Historic Site of Canada.

**In case of any other type of significant emergency:** lead: Emergency Management Coordinator, Municipality of the County of Kings

13. Additional Guidance on Risk Preparedness for the Nominated Property’s Cultural Heritage

13.1.1. Documentation
- The architectural recording of those attributes that are buildings and structures is the single most important action in guiding proper response and recovery actions by providing detailed information on the building techniques and materials.
- The archaeological recording of remains and features allows some information to be retained in the event that a natural disaster destroys the site.
- The maintenance of those archives is essential in making that information available when needed.

13.1.2. Strengthening measures
- The planning, design, and implementation of strengthening measures need to protect the integrity and authenticity of the attributes and the nominated property’s value.
- Expert cultural heritage advice will be sought through the Grand Pré World Heritage Site Stewardship Board in designing and implementing strengthening measures, where that expertise is unavailable.
- The Standards and Guidelines for the Conservation of Historic Places in Canada provide the guidance to determine the most appropriate recognized treatment to strengthen the resistance of the attribute.

13.1.3. Training and Awareness
- The training of emergency response employees and of site managers on the nominated property’s values and attributes is a priority.
- Training and response plans are best developed collaboratively between conservation and emergency response experts to ensure the most effective integration of strategies to address interventions on cultural heritage.
- Training will include the preparation of material to allow fire fighters to be familiar with the building materials and structures they are called to intervene on.

13.1.4. Monitoring Condition
Ongoing monitoring of condition provides an opportunity to review the preparedness measures including strengthening and advance warning measures.

13.2. **Guidance for Response**

- Minimal intervention during an emergency response is the best course of action, meaning that first responders should always seek to minimize the permanent negative impacts of their actions on the structures.
- Expert advice from cultural heritage experts should be sought if possible during a response.
- Record details of response during and after the event, including type and location of intervention.

13.3. **Guidance for Recovery**

13.3.1. Site treatment

- Integrity and authenticity of the nominated property is a high priority for all agencies involved in site remediation. This means being concerned with maintaining the dykes, aboiteaux, dykelands, archaeological sites, and memorials as described in the nomination proposal.
- Expert cultural heritage advice will be sought through the Grand Pré World Heritage Site Stewardship Board in planning recovery interventions, where that expertise is unavailable.
- The *Standards and Guidelines for the Conservation of Historic Places in Canada* provide the guidance to determine the most appropriate recognized treatment for the site following a natural disaster.

13.3.2. Debriefing and monitoring of impacts

- Individual response plans will be reviewed and amended as needed following an intervention.
- This framework will be reviewed and amended by the agencies as needed following an intervention.
- Expert cultural heritage advice should be sought in monitoring impacts of the interventions.
- Notify the Grand Pré World Heritage Site Stewardship Board regarding the condition of the attributes affected by a disaster.

14. **Implementation and Duration of this Framework**

- The implementation of this framework relies on the agencies responsible for risk preparedness.
- Agencies will work together to develop a training module within a year of the successful inscription of the nominated property.
- This framework is to be reviewed jointly with the Management Plan for the nominated property and the *Strategy for the Conservation and Management of Archaeological Heritage*.

1.0 Background

1.1 Description

The dykelands and other lands of the Grand Pré peninsula are an important economic and cultural resource to the residents of the area. They are of special heritage significance due to their construction by the Acadian people in the 17th Century, and because of their enduring significant cultural use and meaning. The area comprising the Grand Pré peninsula, including Grand Pré, North Grand Pré, Hortonville and Lower Wolfville, as well as the Grand-Pré National Historic Site is nominated for UNESCO World Heritage Site status, owing to it being a dynamic agricultural landscape claimed from the sea, and a powerful symbolic landscape for the Acadians. The nominated property requires a buffer zone to ensure that the integrity of the marshland and the continuity of its agricultural use are maintained. The buffer area includes a land component and a marine component. The land component is defined by the boundaries of the Grand Pré and Area Community Plan excluding the nominated property. In addition, Boot Island National Wildlife Area is included in the buffer area. The marine component extends 500 metres from land.

The near 13 kilometres of coastline of the nominated property is consistently under the threat of coastal change, which presents significant risk to the local economy and to the cultural resources held within the dykelands. The continued rise in sea level, combined with increasingly variable and intense storm events in our changing climate, increase the hazard of erosion on the Grand Pré peninsula. Erosion of the North Grand Pré shoreline, combined with potential breaches of the dykes that separate the interior of the Grand Pré region from the Minas Basin, represents substantial risk to the cultural and economic property of the area. Therefore, appropriate coastal management of the area needs to be considered in order to minimize the risks of erosion on the local economy and the cultural resources contained on the Grand Pré peninsula.

The coastal area is located within the marine component of the buffer area of the nominated property, which extends 500 metres past the shoreline. The buffer area has complementary legal requirements placed on its use and development to give an added layer of protection to the property. The nominated property requires a buffer area to ensure that the integrity of the marshland and the continuity of its agricultural use are maintained. The buffer area provides long-term capacity to maintain the agricultural economy, identifies areas to manage tourism access and services, and identifies areas where activities may have an impact on the integrity of the dykes.

The dykes and dykelands are most vulnerable to coastal erosion. Activities to mitigate their impact have been left to different departments and individuals. A holistic approach to monitoring and mitigating the effects of coastal erosion is required.

1.2 Legal Authorities

Federal Crown land consists of the lands owned and administered by the Parks Canada agency, and Environment Canada- Canadian Wildlife Services. Non-federal land consists of lands owned and administered by the Department of Agriculture. This is limited to the top of the dykes.

Monitoring coastal change requires a collaborative effort to ensure there is a comprehensive understanding of coastline movements as a result of erosion and saltmarsh regeneration. Five authorities have legal jurisdiction over the coastline for the nominated property and its buffer: the Municipality of the County of Kings, the Nova Scotia Department of Agriculture, the Grand Pré Marsh Body, the Parks Canada Agency and Environment Canada-Canadian Wildlife Services. Through the Coastal Change Monitoring Program, these jurisdictions commit to being responsible stewards of the property and to working together, through the regularly scheduled monitoring activities, to ensure that the property’s outstanding universal value is protected. This section provides information on the agencies responsible for monitoring coastal change along the nominated property’s coastline.
The Municipality of the County of Kings
The Municipality of the County of Kings is responsible for the management of land use and activities on the nominated property and buffer area, with the exception of federal and provincial lands. It zoned the north side of Long Island as coastal and allows for the implementation of a rolling setback. The rolling setback prohibits development within 13.7 metres (45’) of the coastline. The Municipality is also responsible for reviewing coastal erosion mitigation measures.

Nova Scotia Department of Agriculture
The Nova Scotia Department of Agriculture has authority over the protection of the marshland and its development and maintenance for agricultural purposes. It is responsible for carrying out maintenance work on the system of tidal dykes in Nova Scotia, including the Grand Pré marsh. Through maintenance of the dykes and aboiteaux, the department also monitors the saltmarsh outside the dykes for erosion or regeneration. The Department is responsible for assessing the condition of dykes following tropical and winter storm events, and carrying out any required maintenance.

Grand Pré Marsh Body
The Grand Pré Marsh Body, in accordance with the Agricultural Marshland Conservation Act, has limited authority over the activities and projects taking place on the marshland. However, the Marsh Body is an important element of the site’s stewardship as the group of landowners, existing since at least the 1770s, and has continuously played an essential role in maintaining agricultural activities in the dykelands.

Parks Canada Agency
The federal government, through the Parks Canada Agency, owns coastal land on the nominated property at the site of the arrival of the Planters at Horton Landing. The Agency’s mandate is to protect, present, and foster public understanding, appreciation and enjoyment of cultural sites of national significance; thereby ensuring the effects of coastal change do not interfere with visitor’s enjoyment of the place.

Environment Canada - Canadian Wildlife Services
The federal government, through Environment Canada - Canadian Wildlife Services, owns Boot Island National Wildlife Area and actively records coastal change on the island on a biannual basis.

1.3 Grand Pré World Heritage Site Stewardship Board
The Grand Pré World Heritage Site Stewardship Board is the site manager of the World Heritage Site. As such, it is accountable, along with the legislated authorities, for the management of the nominated property. The Board will come into existence in the event of a successful inscription by the World Heritage Committee.

In the interim, the Nomination Grand Pré Board provides leadership around the management of the nominated property. The Board includes the key members of local communities of interest—Acadians, local representatives, Mi’kmaq—and ensures that these groups are engaged in the protection of the future World Heritage site.

1.4 Current situation and state of knowledge
A 2010 study, Overview of Coastal Change Influences on the Landscape of Grand Pré, compiled known information about coastal change in the Grand Pré area to get a better understanding of the current situation.

The coastline around Grand Pré is under pressure and subject to increased coastal change. The occurrence of coastal change in Nova Scotia, and more specifically Grand Pré, is prevalent due to several factors: the coastline
being subjected twice-daily to the highest tides in the world; the rising sea levels; and the increased frequency and intensity of storm surges as a result of the changing climate.

Archaeological evidence indicates that many of the original dyke walls are currently buried under 1.5 to 1.8 m of sediment; a testament to the steady rise in sea levels and subsequent alteration to the coastline. An average of 15m (50') of shoreline erosion has occurred along the North Grand Pré coastline between 1961 and 2002 according to aerial comparisons, with coastal erosion ranging from 0.3m and 68.4m (0.97’ to 224.34’). Furthermore, on Boot Island, an average annual decrease of shoreline over two year intervals was recorded from 1990 to 2008 at a rate of 0.34 to 0.85 m/yr (1.11 to 2.79'/yr). Though coastal erosion is taking place along the east and west sides of the marsh, there is evidence of saltmarsh regeneration. Saltmarsh regeneration is a natural occurrence, but scientists do not fully understand the process.

2.0 Scope

The scope of the Coastal Change Monitoring Program extends to the marine component of the buffer area of the nominated property as described at the time of inscription as a UNESCO World Heritage Site. The marine component extends 500 metres from the shore and includes the coastal area around Boot Island.

3.0 Objectives

- To monitor coastal change, particularly coastal erosion and saltmarsh regeneration
- To coordinate data collection and reporting of coastal change between legislated authorities

4.0 Legislation and Policies

4.1 Beaches Act

The Parks Division of the Nova Scotia Department of Natural Resources administers the Beaches Act. This Act aims to protect the beaches and associated dunes as sensitive environmental and recreational resources, as well as provide regulations and enforcement of land use activities on beaches.

4.2 Special Places Protection Act

The Province of Nova Scotia administers the Special Places Protection Act, which aims to provide for the preservation, protection, regulation, exploration, excavation, acquisition and study of important archaeological, historical and paleontological sites and remains, including those underwater. In the event that archaeological discoveries are exposed due to coastal erosion, the Special Places Protection Act will apply.

4.3 Parks Canada Agency Act

The Government of Canada, through the Parks Canada Agency, is the owner of the parcel of land at the National Historic Site commemorating the arrival of the Planters at Horton Landing. The purpose of the Parks Canada Agency Act, as it applies to the Coastal Change Monitoring Program, is to protect nationally significant examples of Canada’s natural and cultural heritage resources in national parks, national historic sites, national marine conservation areas and related heritage areas, in view of their special role in the lives of Canadians and the fabric of a nation.

4.4 Marshland Conservation Act
The Nova Scotia Department of Agriculture is responsible for the application of the Agricultural Marshland Conservation Act. The Resource Stewardship Division includes the expertise to implement the provisions of the Act. The Division’s Land Protection Section carries the responsibility for maintenance work on the system of the tidal dykes in Nova Scotia, as well as providing advice to dyke landowners on improving drainage systems on the dykeland. Should the dykes require maintenance and repair work due to coastal erosion or storm surge events, this Act becomes applicable.

5.0 Monitoring Program

The purpose of this monitoring program is to collect data related to coastal change around the nominated property and buffer area. Currently, there is no coordinated system for monitoring coastal erosion, with the exception of the Canadian Wildlife Service, who regularly monitors coastal change at the Boot Island National Wildlife Area.

5.1 Principles

The following principles guide the implementation of the monitoring programme:

- Collaboration between authorities allows coordinated data collection and the implementation of mitigation measures that protect the entire nominated property;
- Data collection will minimize impacts to the nominated property;
- The discovery of archaeological and other cultural resources is the concern of all those involved in this programme; they will record and protect any discoveries, in accordance with the Special Places Protection Act; and,
- Detailed and accurate records will be maintained for regular reporting purposes.

5.2 Implementation

5.2.1 Monitoring Locations

Twelve locations around the nominated property and buffer area are to be used as locations for monitoring coastal change. These sites were selected for several reasons, such that they are known to be affected by coastal erosion, are known to have saltmarsh regeneration, they contain culturally sensitive resources such as aboiteaux, or are arbitrary points. The following map identifies these locations.

Points were chosen for the following reasons:

Point 1: cultural resources exist at Horton Landing
Point 2: the curve of the Gaspereau River exerts force on the land
Point 3: an aboiteau is located here
Point 4: evidence of salt marsh regeneration exists here
Point 5: known coastal erosion and salt marsh regeneration has occurred here (280 feet of land lost to coastal erosion)
Point 6: a beach and an archaeological site – 19th century dyke – exist here
Point 7: rock facing
Point 8: the area with the least amount of land lost
Point 9: an arbitrary point
Point 10: an aboiteau is located here
Point 11: an arbitrary point
Point 12: an arbitrary point
Map 1: Grand Pré and Area Proposed Erosion Monitoring Sites
5.2.2 Procedure to Collect Data
The Municipality of Kings has committed to developing a standardized methodology to monitor coastal change. The monitoring program is part of a larger project being developed for the entire Kings County coast of the Minas Basin. This area is composed of sandstone, shale and clays and is often referred to as a soft coast. It is especially susceptible to erosion. Data collection will be conducted every two years, and more frequently in years where there are significant weather events. Data collection will employ highly accurate sub-metre global positioning equipment. The program, scheduled to be initiated in 2011, will be regularly examined to ensure that the highest and best measurement and equipment standards are met. Points will be mapped and erosion rates will be calculated as multiyear data is acquired. The information collected will be shared with the property’s site manager.

Should any archaeological sites be discovered due to coastal erosion, the Nova Scotia Department of Tourism, Culture and Heritage will be contacted and they will take necessary steps to protect the artefacts and the site.

5.2.3 Reporting
Monitoring is the primary responsibility of the legislated authorities and key players. Authorities may seek support of third parties to carry out preliminary observations, in particular in the case of specific natural events such as storms. Regular interval monitoring reports will indicate the date of the observations, measurements of coastal change, the author of the report and basic observations on condition, including photographs and maps. Following major storm events, reports will include the above, as well as information about the storm: such as the date, intensity, and length of the storm.

Reports on coastal change will be prepared by the Municipality of the County of Kings, based on the data provided by the legislated authorities. Those reports will be prepared every 2 years and be made public.

As required for reporting to the World Heritage Committee, the Municipality of the County of Kings will prepare the information to submit to the Stewardship Board.

5.2.4 Encouragement of Partnerships
The Nomination Grand Pré Board, followed by the Grand Pré Stewardship Board in the event of successful inscription as a UNESCO World Heritage Site, are encouraged to seek out partnerships with academic institutions, such as Acadia University, Dalhousie University and St. Mary’s University, as well as with research units, to better understand the process and long-term impacts of coastal change due to erosion and saltmarsh regeneration.

1 EXECUTIVE SUMMARY

1.1 Introduction

Grand Pré is a small hamlet in rural Nova Scotia with an exceptional cultural landscape. The intact dykelands at Grand Pré are an example of the Acadian tradition of turning wetlands into highly fertile farmland. Grand Pré and its neighbouring communities respect and appreciate their heritage, they understand the dynamics that support a contemporary agricultural culture and they believe in their future. The initiative to secure World Heritage status for the Grand Pré dykeland is a vast opportunity. It is the natural evolution to the true and coveted destination status of an area which has been a choice of visitors for more than a century.

World Heritage designation offers a refreshed raison d’être for Grand Pré and area - not only a renewed visitor focus but also to support and sustain the agricultural industry that thrives on this land. It offers the opportunity for new economic development and new views on the historic tale of Grand Pré.

This report aims to contribute valuable information to the development of the Grand Pré dossier for World Heritage status and to this end it outlines:

- A Tourism Management Plan - a scalable plan to manage visitors
- An Interpretive Framework - options for interpretation of the values of the designated site
- Legacy Options - that will benefit Grand Pré with or without World Heritage designation
- A Tourism Development Framework – to guide tourism development throughout the “region”
- Overall impact analysis – impact on the community with designation.

The recommendations presented in this report build upon the strong base of tourism infrastructure that currently exists in the area. We feel that the recommendations are achievable and would benefit the community with or without UNESCO World Heritage designation.

The Statement of Outstanding Universal Value (OUV) which serves as the underpinning of the proposal for World Heritage designation outlines the exceptional nature of the landscape. For tourism, it articulates the unique selling proposition of Grand Pré and area for the visitor.
“Grand Pré is an enduring and inspirational cultural landscape, an outstanding example of a distinctive community-based approach to farming in 17th and 18th-century North America and through its 20th-century memorials an exceptional example of a place of tragedy that has become a symbol for all humanity of hope, perseverance and pride.”

1.2 Tourism Management Plan

To build an appropriate and sustainable Tourism Management Plan for the World Heritage Site in Grand Pré and area we have described the future in terms of the opportunities that are presented by World Heritage designation.

We recommend the following elements to help manage visitor flow around the site:

**A view plane of the landscape**

The impact and scope of the exceptional story of a living landscape is diminished without the opportunity to view the expanse of the land and the scope of the achievement. Parks Canada has purchased a strategic piece of land above the National Historic Site. This viewing opportunity supports the OUV by providing an unobstructed view of contemporary farming activities using the dykes, the roads and the plot plans which supported past generations.

**Controlled visitor movement**

Visitors will travel to Grand Pré expecting to interact with key features of the designation. They will want to view the dykes and working aboiteaux. We understand that any access to the dykelands will have to be negotiated with the Marsh Body by the Advisory Board. We recommend that these discussions begin in order to develop controlled access and interpreted and guided tours for groups of visitors. These tours would be opportunities for individuals, cruise and convention goers, school groups and clubs to experience the marshlands outside the National Historic Site for a high-quality experience.

It is not recommended at this time that priority effort be invested in developing tour product for the motor coach market. However, there are segments of niche interest that continue to travel as groups.

Depending upon the outcome of negotiations among stakeholders we recommend the following experiential tour opportunities:
Physically connect the “stories” of the dykelands with the key features of the site: the National Historic Site; Horton Landing; the view plane area above the National Historic Site; and the dykelands themselves. A variety of tours has proven successful at the UNESCO site in Joggins, Nova Scotia.

The Acadian story is well-described, but the stories of the Mi'kmaq First Nations people and the Planters could be told. Local “storytellers” and farmers could be engaged as interpreters.

A tour with an archeologist - the archeological digs underway at the National Historic Site.

A group tour designed to host cruise ship visitors while in port in Halifax.

A visitor experience that would feature the natural marshland outside the dykes in the buffer area - including the bird sanctuary, the grasses and the natural features of the salt marsh and tides.

A tour to include a tidal interpretation of the Minas Basin at high and low tide every day that could be “moon permitting”,

The tours could be revenue generating. You may consider test-driving three tours in year one with careful attention to impact measurement. Additional tours could be added to the inventory with adjustments as required.

**Interpretive walking trail**

We recommend that the World Heritage site management team undertake the organization and development of a controlled walking trail around the perimeter of the site. It could be used by visitors and residents and, based on land use negotiation, could meander through the site on traditional roadways and Acadian roads. It could be developed in stages and eventually consist of a number of “loops” of varying lengths. The trail could connect the National Historic Site with Horton Landing and the proposed view plane. The trail could be punctuated at points of interest and significance with non-invasive visitor directional signage, interpretative information and rest areas. A “map” describing the trail, its distance and skill-level, and an abbreviated history of the roadways could be developed and offered to walkers as they begin their self-guided trek. Over time, this trail could be extended beyond the dykeland into neighbouring communities and become a significant trail way for the area.

**Signage within the designated area**

We recommend that non-invasive, environmentally sustainable and informative signage be established in key areas to support the touring experience. We understand that directional signage is regulated by the County and any new directional signage on the site would require a change in the zoning regulations. We therefore recommend that the
Municipality and the Stewardship and Technical Advisory Committee work together to identify and solve any potential barriers to directional signage.

**Visitor information**

Specific information profiling the UNESCO designation will be required for complete visitor information. This information could outline details of the OUV on a map of the overall site with key visitor locations identified, e.g. Horton Landing and the view plane area as well as information on tours, the walking trail and visitor amenities available onsite and within the Grand Pré area. A map of the walking trail should be developed. Visitor information will reinforce the inventory of agriculturally themed activities and experiences available in Kings County. All information could be housed and updated on a relevant, ease-of-access and interactive website. It is recommended that the website www.grandpre.com be expanded to house all information related to the World Heritage designation. In order to participate in a group tours, visitors would be directed to a new visitor staging area, a *Tour Kiosk*.

**Tour Kiosk**

The Tour Kiosk proposed at the UNESCO World Heritage Site could serve as the companion staging area to the National Historic Site’s interpretation centre and, located across the road, encourages visitation to the National Historic Site where the exhibit gallery, gift shop and functional facilities are located. There should be no attempt to duplicate services.

Over time, as the visitation to the site stabilizes and the Tourism Development Framework for the region takes root, this Tour Kiosk could evolve into a major Gateway Centre for the World Heritage Site, interpreting the evolution of the landscape and offering incremental local crafts and items available for sale. This Gateway Centre could eventually be a location for incremental community events in all seasons and become a welcome centre for the World Heritage Site. The Gateway Centre, located at a gateway location to Grand Pré and Kings County would offer a “sense of arrival” to the World Heritage Site and to the county.

**An identified leadership team is required**

The DRAFT Management Plan for the World Heritage site proposes a permanent management team, the Grand Pré Stewardship and Technical Advisory Committee, to oversee operations at the site and to provide advice to regulators and partners. Responsibilities of the Stewardship and Technical Advisory Committee would include implementation of the site Management Plan including:

- Developing a timeline and prioritization for implementation
- Budgeting for implementation
• Identifying and sourcing appropriate partners to contribute to the successful
development of the World Heritage Site

• Developing the guidelines and principles under which World Heritage related
tours / onsite activities incremental to those at the National Historic Site would operate

• Contracting as required

• Measuring and evaluating the results of the management efforts.

Collaborations and partnerships are essential
Partnerships with existing and new partners will contribute to planning, enhancing and funding the site’s management, to developing experiences and tours for the site, and for marketing. Collaborative thinking will ensure the opportunities associated with, and community expectations for, development of the Walking Trail and the Tour Kiosk are met.

Market with focus and intent
The new tours, viewing areas and interpretation of the World Heritage Site should be promoted along with the current and enhanced services available at the National Historic Site.

This marketing effort should align with complementary marketing plans and partners:

• In cooperation with Parks Canada and the Société

• In partnership with Nova Scotia Tourism and with the marketing efforts of Destination Southwest Nova Scotia

• In cooperation with World Heritage Sites in Lunenburg and Joggins, Nova Scotia regarding opportunities for cooperative marketing. We recommend the sites meet regularly to share best practices, databases and marketing opportunities. An Atlantic Canadian World Heritage Site collaboration could be supported by the power of Nova Scotia’s and Newfoundland’s marketing efforts

• In cooperation with tourism organizations, tourism operators, businesses and residents throughout Kings County. This is addressed in the Tourism Development Framework in this report

• In cooperation with inbound tour operators and Nova Scotia receptive tour operators with a long history of assisting in product development.
1.3 Interpretation Framework

Our interpretive plan recommendations are a “broad brush” overview using the OUV for the Grand Pré World Heritage Nomination as a guideline. The Interpretation framework focuses on three areas:

- National Historic Site: unlimited access and largest interpretive concentration
- Horton Landing: smaller site with some controlled access.

While some of the issues and recommendations in this report are for the longer term, we offer these action items to be considered for the near future:

**Horton Landing upgrades**

A. Discuss on-going access to the site via an easement or other legal agreement

B. Plan and prepare basic landscaping upgrades and seating (with Parks Canada) for 2010 season.

**Pathway to cornfield/look-off**

Discuss potential development (with Parks Canada) of pathway to top of cornfield to at least provide a path to the delineated look-off area in time for the tourist season.

**Investigate Podcasting**

Review feasibility of podcasting several foreign language tours of external grounds around the National Historic Site. Suggest German, Spanish, and Japanese, for example.

**Blacksmith’s shed re-purpose**

Discuss the potential development (with Parks Canada) of re-purposing the blacksmith’s shed area as an Acadian homestead, for completion prior to the 2011 season.

1.4 Legacy Options

**Panoramic Viewing Deck**

A panoramic viewing deck received the overwhelming support of a community town hall meeting in January 2010 and it is the recommendation of the consulting team as a Legacy Project. The Viewing Deck will be a legacy for the community with or without World Heritage designation.
We recommend the viewing platform be developed at the top of the cornfield upland above the National Historic Site. This location provides the quintessential “bird’s eye view” of the marshland, dykes, National Historic Site, the Bay of Fundy and tides. The panoramic view of the agricultural landscape has remained virtually unchanged for over 300 years.

This look-off area can be developed in stages: first (Stage 1) as a raised wooden view-deck, then developed, enhanced or enlarged (Stage 2) as a gathering place with roof structure, removable seating, wheelchair access, podium, mounted binocular stations, tidal clock and interpretive panels.

1.5 Tourism Development Framework

The Tourism Development Framework provides structure to guide the work of many organizations within the region and to provide a basis for discussion among many stakeholders.

Four development themes

We recommend that four themes guide future tourism development in the region. The supporting themes were chosen because they represent areas of experience that are in high demand and play to the strengths of the region. Many visitor experiences and activities will find a home under these themes:

- Adventures in Taste – the food and wine experience
  - There are options for all seasons, for all ages and for varying lengths of time
- Touch the Land – getting back to nature
  - The recommended trails and tours at the Grand Pre site will be a key feature of this theme
- Festivals – working together
  - Opportunities exist for greater synergy among festival organizers on planning, marketing and project execution
- Bay of Fundy – natural wonder
  - The region should position itself as an important on-ramp to the Bay of Fundy.

The themes have development potential with or without the designation and should be the focus of collective tourism development over the years to come. Each of these four themes has the potential for cross pollution at the packaging level. Business and tour operators should be encouraged to mix and match elements. In the initial stages, Kings
Regional Development Agency and Destination South West Nova Tourism Association could coordinate implementation and monitor activities.

The table below provides a high level view of the themes, key activities and potential partners and organizations that could be involved in this regional work.

<table>
<thead>
<tr>
<th>Theme</th>
<th>Key Activities</th>
<th>Partners</th>
</tr>
</thead>
</table>
| **Adventures in Taste – the food and wine experience** | • Use the Experience Inventory for detailed opportunities  
• Develop one NEW experience for each season  
• Market to Atlantic Canada in winter  
• Develop a Plant-A-Seed schools program for spring | • Taste of Nova Scotia  
• Nova Scotia Tourism  
• Non-traditional tourism partners  
• Sponsorship from Vesey's Seeds |
| **Touch the Land - getting back to nature** | • Use the Experience Inventory to source farms as sites for participation in programs  
• Work with hike/bike operators to generate offers in all seasons  
• Work with DNR to action the Cape Split Management Plan  
• Provide way-finding/interpretive signage on existing trails | • DNR  
• Bicycle Nova Scotia  
• Nova Scotia Trails Assn  
• Local festival organizers |
| **Festivals – working together** | • Develop a committee of local festivals  
• Share successes and bloopers  
• Coordinate dates and activities among festivals  
• Develop a “festival info” resource of details to feed online, phone-in requests for information | • NS Tourism festivals” coordinator  
• DSWNS |
| **Bay of Fundy – natural wonder** | • Engage in Bay of Fundy Planning efforts  
• Document UNIQUE regional features and leverage them  
• Secure public beach access  
• Embed Blue Beach in the Fundy “fossil messaging” | • Bay of Fundy Tourism Partnership  
• Nova Scotia Tourism  
• Museum of Natural History |

The themes include more than just touring, interpretive or culinary experiences. They have potential to drive themed enhancements of other tourism facilities and services such as accommodations and retail.
**An Experience Inventory across all four themes**

Weaving together experiences will make Kings County and region a “must visit” area and worth the trip for an extended or multiple stay. The tourism industry should build an inventory of year-round tourism products, an Experience Inventory that relates to the central theme of the area. To build a profitable Experience Inventory tourism leaders must:

- Establish benchmarks for experiences
- Gather and present existing products in marketable and accessible clusters
- Enhance existing experiences and refresh them with new dimensions and appeal
- Generate incremental experiences

**Keep the Experience Inventory current**

Commit the Experience Inventory to a database that is readily accessible, customer-friendly, easy to update and regularly maintained. Understand the technical requirements of key partners, such as Nova Scotia Tourism, with whom you will share this information in advance of developing the database. Ensure that details such as hours of operation, seasonality and contact information is complete with each entry.

**Tap into available resources**

The Grand Pré area and surrounding region can access a number of experience-enhancement programs designed to equip communities with creative insights into experience development and market readiness.

**Regional tourism marketing issues**

The Kings County region should work to consolidate marketing efforts and focus on building the destination by harnessing individual marketing efforts for collective benefit. The Experience Inventory should be offered consistently in all marketing efforts emanating from the region and at every point of customer contact throughout the region.

With its powerful themes, growing identity, authentic experiences, and strong products the region can maximize tourism results by making every marketing dollar count. The region should:

- Ensure that core images are selected to represent the Experience Inventory
- Ensure that the Experience Inventory is linked to every local business, tourism, and government website in the region and is available at every point of customer contact
Ensure that the core theme and the Experience Inventory are central in all provincial, national and international partnership marketing efforts and all travel trade and travel media relationships.

**Intercept - keep them here!**
The Experience Inventory should be the central source of information and available to all business and tourism operators, museum staff, and residents. From accommodation operators and breakfast servers to jewelry store salespeople – all businesses and residents throughout the region can be influential tourism ambassadors by intercepting visitors, offering experience suggestions, and passing customers from location to location throughout the county. Programs could be developed along the lines of “The Valley Today”.

**Engage non-traditional tourism partners**
Among these non-traditional resources are:

- Commercial fruit and vegetable production plants who could offer tours of their operations
- Scientists, archeologists and birding enthusiasts whose expertise could enhance tours of the World Heritage Site
- First Nations leaders and spiritual guides
- Community organizations with hosting capabilities
- Acadia University and NSCC for extended learning opportunities
- Retired farmers, local historians and beekeepers and many others - who are the community’s storytellers.

**Gateway Centre**
A “gateway” to the attractions and experiences of the region could offer visitors the satisfaction of “having arrived” at a destination of value and quality. This Gateway Centre should be strategically located at the entrance to the region rather than at the World Heritage Site. It could serve as a visitor centre for information and accommodations, a location for ticket sales for festivals, a departure point for tours, a referral point for trip-planning, a service centre for functional needs from washrooms to an internet hotspot, and perhaps a performance venue. This Gateway Centre could evolve into a location for community events in all seasons and could become a welcome centre for the World Heritage Site and the multi-dimensional agricultural experience of Kings County and region.
**General implementation recommendations**

Communicating the tourism development themes to as many organizations as possible will help more people and groups become engaged and leverage their power. The development activity can and should begin immediately and be a focus for regional development with or without World Heritage designation.

In the initial stages we recommend that a leadership team:

- Host a workshop in 2010 which would assemble the broadest possible cross-section of tourism operators and organizations interested in the themes
- Engage this group in initial implementation planning and organize a steering committee from across the region
- Support this regional committee with secretariat support for the first year
- Host an annual symposium where all interested parties gather to share information and successes around the projects that align with the four development themes. This should be broad based and include regional members and groups and businesses from afar. Organizations and partnerships exist elsewhere that will bring energy, resources contacts and ideas to the initiative.

**1.6 Overall Impact Analysis**

It is anticipated that the UNESCO World Heritage Site designation at Grand Pré will have a number of significant positive impacts in relation to overall site visitation, tourism visitation to the immediate region, various economic impacts associated with the increased tourism activity, and some positive social-cultural impacts. At the same time there is potential for some negative impacts, which really depend on the extent to which tourism activity increases. Given that overall tourism visitation levels have declined significantly over a number of years, any potential negative impacts of increased tourism visitation are expected to be minimal given that the Grand Pré National Historic Site and the surrounding region have hosted many more visitors annually in the past than at present.

Our view is that the overall impact in terms of community change will be positive in that it will provide a much needed boost to the sagging tourism revenues experienced over the past several years. Over the foreseeable future visitation levels are likely to remain well below what they have been in the past going back to the 1990s and 1980s.
**Recommendations from Impact Analysis Section**

- Implement a systematic visitor tracking and monitoring system that will track visitation numbers not only at Grand Pré National Historic Site and the UNESCO World Heritage Site, but also at other local tourist attractions and facilities.

- Combined with the monitoring of visitation numbers there should be an annual visitors’ survey process that could measure the following:
  - Geographic origins of visitors
  - Visitor expenditures on-site and off-site by major expenditure category (e.g. accommodations, food & beverage, retail, transportation, etc.)
  - Length of stay on-site and in the area
  - On-site activities and features participated in at Grand Pré
  - Other area attractions visited and activities visitors participate in
  - Visitor demographics
  - Visitor satisfaction levels with facilities/services offered on-site and off-site.

This survey process will be helpful for measuring ongoing economic impacts, monitoring the impacts of implementation of the Tourism Management Plan and Tourism Development Framework, as well as for ongoing marketing and management of the on-site and off-site visitor experience.

- Implement site management protocols that would help to ease any possible congestion pressures of increased tourism visitation, as well as avoiding impacts on existing agricultural lands and local communities, including the following:
  - Site access controls
  - Signage
  - Fencing
  - Requirement to use guides to access various locations where congestion or impacts on existing residents and agricultural land could occur.
2 INTRODUCTION/OVERVIEW

This section of the report includes background information on this project, an outline of existing tourism and heritage resources, the SWOT analysis, and all elements that provide a departure point for the chapters that follow.

2.1 Introduction

Grand Pré is a small hamlet in rural Nova Scotia with an exceptional cultural landscape. The intact dykelands at Grand Pré are an example of the Acadian tradition of turning wetlands into highly fertile farmland. The initiative to secure World Heritage status is a vast opportunity. It is the natural evolution to the true and coveted destination status of an area which has been a choice of visitors for more than a century.

Grand Pré, Hortonville, North Grand Pré and Lower Wolfville have drawn generations of visitors to the epic story of the Acadian people and the landscape created by inhabitants of the dyked marshlands. Henry Wadsworth Longfellow’s poem *Evangeline: A Tale of Acadie*, published in 1847, moved Grand Pré to celebrity status. With the creation of a historic park at Grand Pré, which began in the 1920s, the location became a spiritual centre for Acadians from around the world. Its reputation as the agricultural heartland of the Maritimes has nurtured many recognized festivals and reasons to visit. Recently, the growing prominence of the “highest tides in the world” along the shores of the Bay of Fundy at Grand Pré, the “soft adventure” potential of the region, and the developing wine and culinary industry have fueled fresh interest in its tourism potential. The corridor from Grand Pré to Wolfville is unfolding as a recognized destination.

Tourism revenues declining – time for action

Tourism revenues in Kings County have fallen about 5 percent (from $61-million to $58-million) from 2004 to 2008. Visitation has room to grow. The National Historic Site at Grand Pré has experienced a 56 percent decline in visitation over the past decade and there are empty hotel rooms even in the traditionally strongest tourism months. The tourism season in pockets of Kings County and the Annapolis Valley has extended into the fall and episodically into the winter months. There is room for tourism growth in the area without putting undue pressure on existing resources. World Heritage designation for Grand Pré and area will help to re-energize tourism in Kings County.

Grand Pré and its neighbouring communities are rich with the important natural resources that will help build tourism success. The “stories of this land” have many layers and the resources to describe them exist – both tangible and intangible. The
communities are authentic and value their collective heritage as evidenced by the three historic designations in Grand Pré alone. Stakeholders recognize the area as a “living landscape” searching to find the delicate balance that will ensure the integrity of the heritage, the realities of dynamic agriculture, and the promise of business growth. There are real opportunities for synergies, within and outside the communities, which will create compelling reasons to visit the area and stimulate tourism growth.

This project was contracted to describe the tourism potential and future for Grand Pré and area and the surrounding region. For the purposes of this report the “region” is defined as the area from and including the Town of Windsor, and all of Kings County.

Within this report we outline:

- A Tourism Management Plan - a plan to manage visitors
- An Interpretive Framework - options for interpretation of the values of the designated site
- Legacy Options - that could be left in Grand Pré with or without World Heritage designation
- A Tourism Development Framework – to guide tourism development throughout the “region”
- Overall impact analysis – impact on the community with designation.

The figure below visually describes the “Tourism Management Plan” and “Tourism Development Framework”. The inner circle represents the designated area and the outer circle represents the region. The Interpretive framework and Legacy Options will impact on the inner circle.
2.2 The work plan

In order to provide the recommendations outlined in this report, we have:

- Reviewed existing studies and materials associated with:
  - World Heritage designation
  - The area - its regulations and governance
  - Tourism information and trends

- Interviewed many key informants and derived community input from reports of community consultations

- Toured the site

- Connected with pivotal partners and stakeholders including those working on complementary plans for the National Historic Site, the overall management of the World Heritage Site and the Community Development Plan

- Worked closely with a Steering Committee of the Advisory Board

- Developed Strategic Tourism Principles that have guided our thinking throughout the process. These principles are:
  - Collaboration and partnerships
  - Enhance existing resources and add incrementally
  - Community commitment
  - Stewardship of and support for the integrity of the OUV – an authentic, living, working and exceptional cultural landscape
  - Exceed customer and UNESCO expectations.

2.3 Profile of tourism/heritage resources

The communities in the region are well-positioned to optimize the opportunities that will present themselves with World Heritage designation. In order to build a Tourism Management Plan for the World Heritage Site and a Tourism Development Framework for the region, we have created a resource profile for the region - the tourism, heritage and cultural resources that exist to create rewarding experiences and service visitors.

Some of the resources are tangible, i.e. hotels, museums, exhibits, etc. Some are intangible - “thought starters” such as storytellers and scientists - who can refresh and enhance a visitor’s experience. The table below provides an overview of the resources / tools in Kings County. Details of the resources are outlined in the Appendices.
2.4 SWOT assessment

A SWOT assessment is a review of Strengths, Weaknesses, Opportunities and Threats. This process of critical thinking was undertaken to better understand the area. Who and what will influence recommendations in relation to the Tourism Management Plan and Tourism Development Framework? What are the winning features of the area? What can enhance or hamper progress? What is on the horizon? And, most importantly, what are the opportunities?

This SWOT assessment integrated information gathered from interviews, relevant documents and materials, review of tourism trends, historical information and the consulting team’s collective experience in tourism in Canada. The recommendations that are outlined in this report were developed from the Opportunities identified during the SWOT.

**Strengths**

- This is an authentic and storied area – “the stories of the land” continue to be written
- Since the 1920s, relatively high visitor awareness, primarily around the Acadian story, dykes and apples
- Concentrated pockets of well-developed infrastructure:
  - Grand Pré National Historic Site
  - Acadia University
  - Kentville Research Station
  - Theatres
  - Signature Festivals
- An active, working area with focus: agriculture
- Indications that productivity of the land is exemplary - crop rotations
- Product clusters unique to Nova Scotia and Atlantic Canada:
  - Wineries and vineyards
  - Farm markets and u-picks
  - Fruit juice plants
- A community committed to heritage
- The tradition of collaboration in decision-making is centuries old
- Mature and knowledgeable tourism industry
- “Champions for Tourism” exist in the tourism industry, business community and among residents
- Close proximity, within 60 minutes drive of Halifax:
  - Halifax International Airport
  - Port of Halifax
- Three season tourism base of experiences now exists with recognized winter product in development
- Proven partnerships working in the area:
  - Parks Canada
  - Société Promotion Grand-Pré
  - Acadia University
  - Chambers of Commerce
  - Kings Regional Development Agency
o Destination Southwest Nova Association
  o The Valley Pumpkin Festival - a collaboration of effort

• Climate is advantageous
• Growing awareness and prominence of the Bay of Fundy
• Growing recognition of Grand-Pre - Wolfville as a developing “destination”
• Many natural advantages - primarily Cape Split.

Weaknesses

• Tourism industry neighbors throughout Kings County competing for customer “airtime”
• Many festivals and events sharing the same or similar themes are “competing” with each other for media profile, visitation and volunteers
• It is difficult for visitors to find out what is available to see and do throughout the region
• Limited information on First Nation and Planters’ stories of the area
• No coordinated way to “see” the dykes and aboiteaux
• No organized means to view the expanse of the dykelands and the Bay of Fundy
• Many on-ramps to the tourism experiences of Kings County without the focus of a “sense of arrival”
• Some community resistance to designation
• Some community resistance to tourism development and growth
• Declining visitation at the National Historic Site - from 100,000 in the 1990s to less than 30,000 in 2009
• Marketing of area lacks a focused effort
• Few tourism and festival websites are linked.

Opportunities

• Coordinate tourism management and development around the core theme: 
  Stories of the Land
• Develop tourism visitor experiences using available resources in:
  o History and heritage
  o Planting
  o Harvest
- Farming stories
  - Cuisine/culinary and wine
  - The arts
  - Science
- Develop a view plane for the dykelands
- New, sustainable and non-invasive tourism opportunities for businesses in Grand Pré and area
- Central inventory of information for visitors for trip planning
- A “sense of arrival” to something special
- Legacy project with benefits with or without designation
- Potential for cruise tours
- Potential to manage more people at the UNESCO site by generating special interest group tours
- Opportunities for connecting underutilized community resources for tourism:
  - Story-telling
  - Suppers at community centers
  - Genealogical/museum tours
- The archeological “dig” onsite and on the dykelands is a potential experience
- Enhanced experiences will result in new visitor movement patterns onsite requiring different visitor “staging”
- Heightened profile with designation could enable collaborative/cluster marketing of three UNESCO sites in Nova Scotia, six in Atlantic Canada and sharing of best practices
- Strongly connect the region to growing profile of the Bay of Fundy and highest tides integrating the opportunities at Blue Beach
- Developing interest and momentum of Grand Pré - Wolfville as a true “destination”
- Reinforce robust efforts to develop unique-to-Atlantic Canada product clusters spanning four seasons:
  - Wine festivals, adventures and tours
  - Culinary experiences
Opportunities for scientific and academic symposiums

- Expand local festivals and events
- Collaborate with Acadia’s University’s professionals and alumni for product enhancement and training
- Coordinate among members of a mature industry on theme and experience development and marketing
- Nova Scotia archives – Acadian resources
- Bay of Fundy highest tides partnership/marketing opportunity – leverage the asset - Blue Beach, growing awareness of the tides, dykes, fossils.

Threats

- Private land ownership makes tourism efforts complex
- Fear of development encroachment
- Conflicting economic agendas: tourism / agriculture
- Cancellation of the CAT ferry from the US to SWNS.
3 TOURISM MANAGEMENT ANALYSIS/ASSESSMENT

This section of the report covers:

- Setting the stage – background for visitor movement in the designated area
- What will UNESCO designation mean?
- A focus for motivated visitors
- International awareness for Grand Pré and the region
- Opportunities to develop a menu of refreshed and enhanced tourism experiences
- Opportunities to better manage and protect the dykelands
- Leveraging opportunities
- Recommendations for managing visitor movement in the designated area
- Implementation of the Tourism Management Plan – key principles.

3.1 Setting the stage – background for visitor movement in the designated area

Grand Pré and area has been recognized as a choice location to visit for many decades. The stories of the Acadian people - accomplished, tragic and heroic - are written here. Longfellow’s poem *Evangeline* gave Grand Pré epic and celebrity status and the creation of a historic park at Grand Pré has enabled the location to become a spiritual centre for Acadians around the world. The extreme tidal power of the Bay of Fundy is observable here. The Annapolis Valley’s reputation as the bread-basket of Nova Scotia begins in Grand Pré and Hortonville. In recent years, fueled by a blossoming wine industry, the pastoral corridor from Grand Pré through to Wolfville is gaining momentum as a growing and recognized “destination”. And there are the stories which are not as well known, but equally as compelling: stories of reclaiming salt marshland from the forces of the highest tides in the world and ensuring agricultural productivity for hundreds of years; stories of protected birds; First Nations legends; and a living cultural landscape - an agricultural story that is still being written.
World Heritage designation offers a refreshed raison d'être for Grand Pré and area - not only a renewed visitor focus but also to support and sustain the agricultural industry that thrives on this land. It offers the opportunity for new economic development and new views on the historic tale of Grand Pré.

Numerous reports helped influence this plan

To describe the future tourism management needs for the area with World Heritage Designation, the consulting team referred to the *DRAFT Management Plan for the Proposed Grand Pré World Heritage Site* (September 2009), *Grand Pré: An Economic Impact Assessment of a UNESCO World Heritage Designation* (April 2009), the inventory of tourism and heritage resources, and the SWOT assessment to develop the Tourism Management Plan Recommendations for the site.

Key informant interviews and current momentum

We conducted key informant interviews within the community and had discussions with the Joggins Fossil Cliffs World Heritage Site in Nova Scotia. All of the research has been viewed through the lens of the Strategic Tourism Principles outlined in the introductory section of this report. Parks Canada’s Management Plan for the National Historic Site for the next five to fifteen years has been factored into the recommendations as well as the Community Plan being led by the Municipality of the County of Kings to incorporate the development wishes of residents.

Outstanding Universal Value

The Statement of Outstanding Universal Value (OUV) which serves as the underpinning of the proposal for World Heritage designation outlines the exceptional nature of the landscape. For tourism, it articulates the unique selling proposition of Grand Pré and area for the visitor.

> “Grand Pré is an enduring and inspirational cultural landscape, an outstanding example of a distinctive community-based approach to farming in 17th and 18th-century North America and through its 20th-century memorials an exceptional example of a place of tragedy that has become a symbol for all humanity of hope, perseverance and pride.”

To build an appropriate and sustainable Tourism Management Plan for the World Heritage Site in Grand Pré and area, we have described the future in terms of the opportunities that are presented by World Heritage Designation. The *Draft Management Plan for the Proposed Grand Pré World Heritage Site* helped provide valuable context.
3.2 What UNESCO designation will mean

*Increased visitation and visitor spending*

In the study entitled *Grand Pré: An Economic Impact Assessment of a World Heritage Designation*, April 2009, Dr. Brian VanBlarcom and his team at Acadia University assessed the impact of non-resident visitation - anyone travelling to this province from outside Nova Scotia - on the designated site offering the *same products and services* that are available today. This picture of non-resident traffic, although valid, is not a total picture of potential visitation to this area as a World Heritage Site.

The Economic Impact Report used Lunenburg before and after World Heritage designation as its model. The 2009 Economic Impact Report anticipates:

- Visitation to Grand Pré will increase by 6.2% net per year – between 1,000 and 4,000 additional visitors per year
- Visitors will each spend an average of $69 onsite. Incremental spending from the additional visitors would be between $50,000 and $300,000 per year.

The study however does not factor into its estimates:

- Any *increase in length of stay* by resident or non-resident visitors stimulated by enhanced/new visitor experiences and positive tourism development
- Any *increase in spending* by resident or non-resident visitors stimulated by new tourism development and higher revenue products.

Leveraged appropriately and marketed properly, the designated site at Grand Pré and area will experience an increase in non-resident visitation of *at least* 6.2 percent, an increase in Nova Scotia visitation over an extended season, and increased visitor spending.

3.3 A focus for motivated visitors

The visitor who chooses to visit Grand Pré and area to experience the UNESCO World Heritage Site is the same visitor currently being targeted by Nova Scotia Tourism to visit the province in its 2010 Tourism Plan¹. The plan targets visitors who value authentic experiences and choose to participate in activities and events with a focus on personal satisfaction and learning. The plan also specifically identifies visiting World Heritage Sites, the Bay of Fundy and culinary tourism as key travel motivators and marketing features of the province – all potentially available in Kings County.

The visitor to Grand Pré will make the trip to explore the authentic experiences and stories of the area and to learn about the history of the dykelands. This visitor will

---

respect the principles of environmental and tourism sustainability so important to the area and be interested in the cultural and outdoor adventure experiences offered in Kings County. This visitor will expect quality and satisfying experiences within the World Heritage Site and the region. The Grand Pré experience will be one of the quality products that will fulfill the "promise" Nova Scotia Tourism is making to visitors in its provincial marketing.

3.4 International awareness for Grand Pré and the region

UNESCO focuses its energies on effective preservation of World Heritage Sites and offers marketing tools such as high-quality photography, publications and travel books. UNESCO also encourages partnerships. It is unclear if UNESCO maintains a database of World Heritage Sites aficionados, but UNESCO designation will most certainly place the area in an elite group. The UNESCO brand is recognized as "exceptional in the world" and, if carefully nurtured, can be leveraged for economic growth through tourism. Project managers at Joggins were emphatic that there are "keenly interested people" who travel the world to view new World Heritage Sites.

The designation will create new marketing opportunities through many channels for Grand Pré and area, and for the National Historic Site. Collaborative marketing efforts with new partners such as the UNESCO sites at Lunenburg and Joggins in Nova Scotia, the other UNESCO sites in Atlantic Canada, and with cruise ship lines should be considered. The area will have a fresh and "outstanding message" with which to vie for the attention of major agricultural, culinary, archeological, cultural and travel media in key markets and around the world.

3.5 Opportunities to develop refreshed and enhanced tourism experiences

In its 2010 Tourism Plan\(^2\), Nova Scotia Tourism expresses the benefits when tourism products and experiences are generated to meet visitors’ needs.

“….Today’s consumers want more than just a trip or a hotel stay… they want an experience… an experience that engages the senses, connects them with our communities and cultures, and enriches lifelong learning…to be competitive in today’s marketplace, we must ensure our offerings meet the changing needs of consumers.”

Grand Pré and area partners who are working to achieve World Heritage status have an extraordinary opportunity “to get it right”, using the platform of designation to enhance existing tourism experiences and products - and to create new, compelling experiences.

\(^2\) http://www.gov.ns.ca/tch/tourism/tourism-plan.aspx
3.6 Opportunities to better manage and protect the dykelands

Currently, aside from the outstanding visitor interpretation opportunities of the Acadian story at the Grand Pré National Historic Site and the Horton Landing commemorative area, there is little in the way of signage to prevent visitors from moving relatively freely throughout the dykelands and working farmland, most of which is private property. Public roads travel through and around the dykelands and are often used by area residents and visitors. There are few fences, gates, signs or trails to manage visitor movements. Trespassing, although inadvertent, could prove damaging to crops and heritage resources. Safety for those traveling through the dykelands may be a concern with farm machinery operating there. There is limited way-finding throughout the area of Grand Pré, North Grand Pré, Hortonville and Lower Wolfville. The curious and interested are left to fend for themselves to explore productive and private farmland and to find key historic locations and vistas.

For the visitor who wants to pursue the stories of the dykelands, touring outside the National Historic Site is incomplete and disconnected. The aboiteaux locations are known almost exclusively to the local residents. There is no central repository for information on the history, business, tourism opportunities and activities of the area. Importantly, the comprehensive impact of the site and its significance, beyond the profound story of the Acadians, is almost invisible to a visitor who has come to the area with limited or no knowledge of its history.

Using the National Historic Site as a “staging area”, sustainable tourism management of people and activities will enhance not only the Shared Legacy of the designated area, but also the dynamic operation of existing farms and tourism operations.

Supporting the integrity of the OUV will establish that the marshland continues as prime agricultural land. A community plan is in development to support the protection of the OUV. Conscious and careful management of visitors to the site and their movement patterns will mitigate trespassing and potential safety issues while enhancing visitor experiences.

3.7 Leveraging opportunities

There is considerable high-quality infrastructure in place in Grand Pré and the region as reflected in the Resource Profile and the SWOT. There is demonstrated local commitment to and knowledge of heritage, and a culture of collaboration that is the hallmark of community decision-making. With appropriate planning, marketing and management of the designated area, the number of visitors will increase significantly and visitor spending will increase measurably.
**Important realities**

The tourism management recommendations we propose for the site offer scalable plans to manage increasing numbers of visitors within the designated area. We feel that the recommendations will enhance visitor experiences on the site whether or not World Heritage designation is achieved. They have been developed recognizing:

- The integrity of maintaining the Statement of OUV
- The Strategic Tourism Principles
- The fact that the dykeland is extensively privately owned and used for active, dynamic and productive farming
- Significant resources for successful tourism management already exist within the designated area
- Partnerships are a modus operandi for Grand Pré
- A sensitive balance between all these elements is essential.

**Principles for effective implementation of the Tourism Management Plan**

- Tourism goals are clearly articulated and everyone involved understands roles, responsibilities and expectations
- Visitor needs are understood
- Appropriate services are in place to satisfy functional needs
- Well developed and themed products and experiences are:
  - Developed by partners with creativity and resources
  - Offered to an appropriate group size
- Communications among stakeholders and with visitors is effective and consistent
- Relevant marketing and partnerships achieve results
- Project evaluation, measurement and a mechanism for adjustment is in place
- Onsite interpretation plan supports “flow” goals.

**A solid base of services**

The Grand Pré effort to achieve World Heritage designation benefits from high quality infrastructure for interpretation purposes - the Grand Pré National Historic Site, the Horton Landing commemorative site, and the support of Parks Canada.

The National Historic site is under-utilized. In 2009 fewer than 30,000 visitors were recorded compared to the 1990s when the park, with fewer services onsite, welcomed 100,000 visitors per year. Visitation has diminished with the exception of the visitation of
70,000 people during Congres Mondial Acadian in 2004. The site offers sufficient parking for passenger vehicles, recreational vehicles and tour motor coaches. Washroom capacity exceeds current use. Although limited accommodation and dining opportunities exist within the designated area; they are close at hand. There is available capacity in the key tourism months and functional services exist.

The partnership association, Société Promotion Grand-Pré, employs an interpretation staff to offer programming including a film, a daily dramatic presentation, an art exhibit, blacksmith shop and special events at the National Historic Site to interpret the Acadian story. The Memorial Church is a central focus and evocative experience. Sculptures and information panels exist to describe the Acadian story and their agriculture accomplishments.

Within the Interpretation Centre the Société operates a gift shop and an exhibit hall interpreting the Acadian history and the history of the dykes. The dioramas in the exhibit hall describe the natural pressures of the world’s highest tides and the ingenuity of generations of landowners who used centuries-old technology of dyking against the tides to reclaim fertile farmland. An impressive, centuries-old original aboiteau is central to this exhibit. An impressive base of services exists to interpret a World Heritage Site!

3.8 Recommendations for managing visitor movement in the designated area

The visitor attracted to the site by World Heritage designation will expect to “experience the OUV” and learn in a personal way from the stories of Grand Pré. The cultural enthusiast will find the experience outside the National Historic Site incomplete. The aboiteaux locations and view planes are known almost exclusively to the local residents and exist on private land. The Horton Landing site is disconnected and difficult to find.

We offer the following recommendations to address these issues:

3.8.1 A view plane of the landscape

The impact and scope of the exceptional story of a living landscape is diminished without the opportunity to view the expanse of the land and the scope of the achievement. Parks Canada has purchased a strategic piece of land above the National Historic Site with the vision of collaborating to develop a viewing area / platform to appreciate the expanse and vista of the site. The area can be reached by foot from the National Historic Site or along a public roadway. Parking would need to be planned.

This viewing opportunity supports the OUV, providing an unobstructed view of the contemporary farming activities, as they operate today, using the dykes, the roads and
the plot plans which have supported past generations. The potential for a viewing area on this site is consistent with the Parks Canada Management Plan for the site and is a project that Parks Canada has indicated it will consider. An interpretation approach will be identified in the Interpretation Framework section of this report.

### 3.8.2 Controlled visitor movement

World Heritage designation will encourage increased visitation to the National Historic Site and interest in the dykelands and the aboiteaux. It is anticipated that, at a minimum, an additional 1,000 to 4,000 people per year will visit the site. We anticipate more. We recognize that effective and non-invasive visitor movement in the designated area is important to success for tourism and is essential to local landowners, residents and agricultural businesses. Visitors will want to view the dykes and working aboiteaux that exist within working farmland and to “experience” the spirit by meeting with local interpreters and those who passionately relate the stories of the site. Grand Pré promoters will want visitors to appreciate the complete experience of the shared legacy. A sustainable balance between prime agricultural use of the dykelands and visitor satisfaction will be critical. All land-owners and groups involved with managing movement on the dykelands need to participate in negotiations on visitor access which would be very controlled and guided.

### 3.8.3 Group touring of the designated site

Currently, trained interpreters encourage enjoyable self-guided experiences at the National Historic Site. There are, however, no guided and interpreted tours available at either the National Historic Site or to the marshland.

Visitors will travel to Grand Pré expecting to interact with key features of the designation. They will want to view the dykes and working aboiteaux. We understand that any access to the dykelands will have to be negotiated with the Marsh Body by the Advisory Board. We recommend that these discussions begin in order to develop controlled access and interpreted and guided tours for groups of visitors. These tours would be opportunities for individuals, cruise and convention goers, school groups and clubs to experience the marshlands outside the National Historic Site for a high-quality experience. There is a market for tours; it is up to the stakeholders to decide the nature of the tours or if they are developed.

The traditional motor coach tour business was once an important segment of the visitation to the Grand Pré National Historic Site and to Nova Scotia. Over the past 10 years the nature of the business has changed dramatically and has decreased significantly. It is not recommended at this time that priority effort be invested in developing tour product for the motor coach market. However, there are segments of
niche interest that continue to travel as groups. Several operators, including Smithsonian, National Geographic and Tauck World Discovery (formerly Tauck Tours), are concentrating on developing experiential opportunities which would fit with World Heritage designation.

Depending upon the outcome of negotiations among stakeholders, we recommend the following experiential tour opportunities:

- Physically connect the “stories” of the dykelands with the key features of the site: the National Historic Site; Horton Landing; the view plane area above the National Historic Site; and the dykelands themselves. These tours could offer a visitor an opportunity to view a working aboiteau and the dykes. Tours could extend for various lengths of time and with various levels of guided expertise. A 60 to 90 minute tour with a guide would provide a “quick” tour and an overview story. A four hour tour with a scientist or historian could be developed to satisfy a visitor’s deep interest. A variety of tours have proven successful in the UNESCO site in Joggins, Nova Scotia

- The Acadian story is well-described, but the stories of the Mi'kmaq First Nations people and the Planters could be told. Local “storytellers” and farmers could be engaged as interpreters

- A tour with an archeologist - the archeological digs underway at the National Historic Site

- A group tour designed to host cruise ship visitors while in port in Halifax. This would require working in partnership with an established shore-excursion provider such as Ambassatours Gray Line in Halifax. Preliminary discussions indicate that with careful time management, there is potential in this opportunity

- A visitor experience that would feature the natural marshland outside the dykes in the buffer area - including the bird sanctuary, the grasses and the natural features of the salt marsh and tides

- A tour to include a tidal interpretation of the Minas Basin at high and low tide every day that could be “moon permitting”

- The tours could be offered for a variety of durations and with various levels of expertise in guides - from trained interpreters for short tours to scientists and specialists for longer, more involved activities. The tours could be revenue generating.
Negotiations among stakeholders will determine the nature of tours. If undertaken, we suggest that they would be guided and offered on a schedule that is negotiated with landowners and farmers based upon seasons and weather conditions.

3.8.4 Interpretive walking trail
The routes used by Grand Pré farmers and inhabitants for hundreds of years exist today throughout the proposed World Heritage site. They are in various stages of repair. Some are public and some privately owned. Importantly, they are authentic in origin and naturally connect some of the key features of the site and can provide upland vistas and lowland views of the dykeland and landscape. For instance, an old Acadian road, used primarily by local farmers, runs across the dykeland from just behind the Memorial Church to historic Horton Landing.

We recommend that the World Heritage site management team undertake the organization and development of a controlled walking trail around the perimeter of the site. It could be used by visitors and residents and, based on land use negotiation, could meander through the site on traditional roadways and Acadian roads. It could be developed in stages and eventually consist of a number of “loops” of varying lengths. The trail could connect the National Historic Site with Horton Landing and the proposed view plane. The trail could be punctuated at points of interest and significance with non-invasive visitor directional signage, interpretative information and rest areas. A “map” describing the trail, its distance and skill-level, and an abbreviated history of the roadways could be developed and offered to walkers as they begin their self-guided trek.

We anticipate that the visitor who travels to the UNESCO site will be a visitor who respects the protocols of the trail and “packs in-packs out” garbage and water bottles.

Around the world the challenge of public/private use of land at tourism sites is managed to a common end. There is every reason to expect that at Grand Pré, with its culture of collaboration in decision-making, land use discussions could be fruitful. Trail development could also require appropriate surfacing and rest stops. There are a number of opportunities for sponsorships and partnership in development. Parks Canada has indicated its willingness to discuss the development of such a trail as it pertains to land under its ownership and management. Over time, this trail could be extended beyond the dykeland into neighbouring communities and become a significant trail way for the area.

3.8.5 Signage within the designated area
Currently there is little signage aside from the National Historic Site. Wayfinding to link the key elements of the National Historic Site, Horton Landing and the dykeland, or any signage that directs visitors is lacking and may leave visitors to roam the marshland
unattended. We recommend that non-invasive, environmentally sustainable and informative signage be established in key areas to support the touring experience. We understand that directional signage is regulated by the County and any new directional signage on the site would require a change in the zoning regulations. We therefore recommend that the Municipality and the Stewardship and Technical Advisory Committee work together to identify and solve any potential barriers to directional signage.

The mandate of the Grand Pré National Historic Site is to honour and interpret the Acadian story of Grand Pré including the story of the dykelands. It accomplishes this mandate impressively. The Interpretation Centre includes a gift shop and an area for information. Parks Canada officials, supportive of the World Heritage designation effort, have indicated that will offer space onsite for additional UNESCO information and have space available for incremental services at the Interpretation Centre. Their focus, however, remains the Acadian story.

3.8.6 Visitor information

Visitors coming to the World Heritage Site will have been exposed to experiences, services and opportunities prior to their arrival in Grand Pré. Specific information profiling the UNESCO designation will be required for complete visitor information. This information could outline details of the OUV on a map of the overall site with key visitor locations identified, e.g. Horton Landing and the view plane area, as well as information on tours, the walking trail and visitor amenities available onsite and within the Grand Pré area. A map of the walking trail should be developed. Visitor information will reinforce the inventory of agriculturally themed activities and experiences available in Kings County. It should encourage an extended stay and participation in activities throughout Kings County and offer activities that will encourage a return visit. All information could be housed and updated on a relevant, ease-of-access and interactive website. It is recommended that the website www.grandpre.com be expanded to house all information related to the World Heritage designation.

The visitor information available would direct the UNESCO motivated visitor to the National Historic Site for access to the Acadian experience and to the exhibit hall for interpretation of the dykes and the aboiteaux. In order to participate in a group tour, visitors would be directed to a new visitor staging area, a Tour Kiosk.

3.8.7 Tour Kiosk

Parks Canada has indicated that the parking lot adjacent to the National Historic Site and the lands on which the “old apple barn” was once located could be utilized for a visitor staging area. There is sufficient parking available for cars, motor coaches and
recreation vehicles, and room for a picnic and rest area. The Tour Kiosk proposed at the UNESCO World Heritage Site could serve as the companion staging area to the National Historic Site’s interpretation Centre and, located across the road, encourages visitation to the National Historic Site where the exhibit gallery, gift shop and functional facilities are located. There should be no attempt to duplicate services.

At the outset, the Tour Kiosk could be a small event-tent or permanent kiosk with ticketing and information services required by tour operators. Over time, as the visitation to the site stabilizes and the Tourism Development Framework for the region takes root, the Tour Kiosk could evolve into a major Gateway Centre for the World Heritage Site, interpreting the evolution of the landscape and offering incremental local crafts and items available for sale. This Gateway Centre could eventually be a location for incremental community events in all seasons and become a welcome centre for the World Heritage Site - a multi-dimensional agricultural experience of Kings County as described in the Tourism Development Framework. The Gateway Centre, located at a gateway location to Grand Pré and Kings County, would offer a “sense of arrival” to the World Heritage Site and to the county.

3.9 Implementation of the Tourism Management Plan – key principles

An identified Leadership Team is required

The DRAFT Management Plan for the World Heritage site proposes a permanent management team, the Grand Pré Stewardship and Technical Advisory Committee, to oversee operations at the site and to provide advice to regulators and partners. Responsibilities of the Stewardship and Technical Advisory Committee would include implementation of the site Management Plan including:

- Developing a timeline and prioritization for implementation of Tourism Management Recommendations and Interpretation Framework recommendations
- Budgeting for implementation of Tourism Management recommendations
- Identifying and sourcing appropriate partners to contribute to the successful development of the World Heritage Site. Partners will be required as sponsors and funding supporters, cooperative and collaborative marketers, to help develop and implement tours and activities onsite and to offer ongoing advice and insights
- Developing the guidelines and principles under which World Heritage related tours / onsite activities incremental to those at the National Historic Site would operate
- Contracting as required tour operators / guides / specialists and scientists including specialists in evaluating programs
• Measuring and evaluating the results of the management efforts.

**Quality is paramount**

In the implementation of the Tourism Management Plan, top-quality services and products, authentic and consistent with the OUV and the integrity of the site, must be the benchmark. It will be important to have best practice sites in mind to use as guidelines and never to compromise on the caliber of a service or activity offered onsite.

**Measurement is Essential**

If an effort cannot be measured, it cannot be managed. Measuring and evaluating the results of the tourism management efforts outlined is critical to overall success. It is very important that plans for the site have evaluation and measurement tools built into their DNA. The results should be reviewed objectively on a regular basis and adjustments made to tactics and efforts. Programs, visitors, revenues and visitation, environmental and community impact and visitor services are areas to measure and review.

**Collaborations and partnerships are essential**

Cooperation and collaboration to achieve common goals are hallmarks of the culture of Grand Pré and area. For generations area inhabitants, community groups, jurisdictions and governments have shared in the operation and management of this land. Common understanding of goals and objectives, roles and responsibilities and expectations associated with World Heritage Designation and the opportunities it presents are crucial to ensuring that Tourism Management Plans are implemented in a timely and efficient manner.

Partnerships with existing and new partners will contribute to planning, enhancing and funding the site’s management, to developing experiences and tours for the site, and for marketing. Collaborative thinking will ensure the opportunities associated with, and community expectations for, development of the Walking Trail and the Tour Kiosk are met. Partnering with experienced tours operators will harness a wealth of tourism experience and will contribute ongoing advice and insights.

**Market with focus and intent**

World Heritage designation will put Grand Pré and area “on the map” in a profound and significant way as an exceptional piece of world history. Effective marketing will ensure that visitors who will appreciate what the area has to offer, and will spend their travel dollars while they are visiting, know that it is available, are motivated to visit, and to extend their stay. The new tours, viewing areas and interpretation of the World Heritage Site should be promoted along with the current and enhanced services available at the National Historic site.
This marketing effort should align with complementary marketing plans and partners:

- In cooperation with Parks Canada and the Société through their existing channels and marketing efforts primarily on a revamped, interactive version of the website www.grandpre.com.

- In partnership with Nova Scotia Tourism and with the marketing efforts of Destination Southwest Nova Scotia. Nova Scotia Tourism identifies World Heritage Sites as key messages to potential visitors. Both organizations have established networks to carry a Grand Pré marketing message and to mobilize international travel media and to the travel trade.

- In cooperation with World Heritage Sites in Lunenburg and Joggins, Nova Scotia. We recommend the sites meet regularly to share best practices, databases and marketing opportunities. They should also consider working with the two sites in Newfoundland and Labrador. An Atlantic Canadian World Heritage Site collaboration could be supported by the power of Nova Scotia’s and Newfoundland’s marketing efforts.

- As a core message in a Kings County-wide marketing effort to focus tourism messaging and product theming around the comprehensive “stories of the land” in all seasons. Cooperation to focus marketing efforts among tourism organizations, tourism operators, businesses and residents throughout Kings County is addressed in the Tourism Development Framework in this report.

- In cooperation with inbound tour operators and Nova Scotia receptive tour operators with a long history of assisting in product development and in putting new products such as guided tours into the marketing channel.
4 INTERPRETATION FRAMEWORK

4.1 Introduction

On November 27, 2009 the Sperry Design interpretive team took an informative and engaging 6-hour tour of Grand Pré with Christophe Rivet and our colleagues from Hockin Cronin and Broad Reach. The tour gave us a first-hand view of the area and appreciation of the opportunities and constraints vis-à-vis the UNESCO World Heritage Site Nomination initiative. Our tour included:

- National Historic Site
- Horton Landing
- North Grand Pré
- Dykelands / marshlands
- View plane locations
- Selected buffer areas

Our interpretive plan recommendations are a “broad brush” overview using the OUV for the Grand Pré World Heritage Nomination as a guideline.

We also reviewed the general and specific parameters set out in the Management Plan for the Proposed Grand Pré World Heritage Site; overview maps of the dykelands, Parks Canada properties, proposed UNESCO boundaries and buffers; as well as brand attributes of the nomination logo as a conceptual reference.

4.2 Interpretive goals

Our interpretive recommendations and concepts are intended to:

- Complement the Tourism Management and Development recommendations set out elsewhere in this report
- Complement existing interpretive messages and applicable sites
- Complement Parks Canada initiatives
- Minimize impact to the current way of life in Grand Pré, and the natural and agricultural environment
- Be subject to all applicable local, municipal, provincial and federal jurisdictional regulations and by-laws
4.3 Major theme

The main overarching theme is a living cultural landscape, an agricultural story that is still being written; the Acadian story is woven throughout. The Grand Pré site comprises a centuries-old agricultural approach that is still “alive and well”. This resonated with our group as we toured the area and we were almost overwhelmed with the ingenuity and engineering feat of the dyked marshlands. The history and personal struggles of those who populated the lands over the centuries is already well interpreted and, while important in interpretive sub themes, does not need to be extensively revisited. Suggested sub-themes are noted in Interpretive Overview Recommendations.

4.4 Proposed Interpretive Area

We recommend two linked interpretive areas that focus on the overarching agricultural story.

Illustration 1:

Area 1 National Historic Site: unlimited access and largest interpretive concentration
Area 2 Horton Landing: smaller site with controlled access
Area 1: National Historic Site

Interpretive Centre

The Centre does an excellent job of telling Acadian story from the 1680s, when dykes were built, through to the Deportation, and through first-hand accounts and the Lt. Colonel John Winslow story. The interpretive story is presented with perspectives from the Mi'kmaq, the Acadians and the British, and focuses on these people as real human beings that modern-day visitors can relate to. In addition, there is an underlying theme that Grand Pré is an “enduring and inspirational” community and “an exceptional example of a place of tragedy” but more importantly “a symbol for all humanity of hope, perseverance and pride.”

The poignant AV presentation fairly portrays the history of the Deportation, and provides visitors with a very real and emotional story using actual historical figures, representing Acadian and British perspectives.

Illustration 2: Interpretive Centre and surrounding area.
4.5 Exterior grounds – a review

Exterior grounds behind Centre

Behind the Centre and the Deportation Commemorative Statues, records indicate that an old Acadian road existed through the meadow/cornfield up to the Old Post Road. Evidence indicates that the general landscape (field divisions / patterns) have not changed since Acadian times.

Cornfield / upland

Parks Canada owns and has direct access to the cornfield property - part of the uplands. This upland area provides an iconic and panoramic view of the heart of Grand Pré and the dykelands. The integrity of the field patterns has remained over the years and is still visible. On a clear day, Cornwallis River, Cape Blomidon, Minas Basin, and the mouth of Gaspereau River are visible from this viewpoint.

Illustration 3: The upland portion of the cornfield provides a panoramic view.

Exterior grounds

A wooden walkway / hedge leads to the „core“ of the Grand Pré village. The old willow trees around the orchards were referenced in Longfellow’s Evangeline. In an archaeological site next to Memorial Church, relics such as coins, a cross, blacksmith tools, and wine bottles that probably date back to the Acadian period have been uncovered. A stone cross marks the location of the cemetery of Saint-Charles-des-Mines, an unmarked Acadian burial ground and resting place of several generations of Acadian families.

Illustration 4: A stone cross marks the location of a burial ground on the site.
**Memorial Church**

Originally opened as a museum, the Memorial Church was built on what was believed to be the site of the original Acadian church of Saint-Charles-des-Mines, destroyed in the late 18th century. The interior displays paintings and exhibits that reference the Acadian way life prior to Deportation and the Deportation itself.

*Illustration 5:* The Memorial Church was believed to have been built on the site of the original Acadian church.

*Illustration 6:* Interior displays and paintings.

**Blacksmith shed / garden**

This triangle of land, owned by Parks Canada, offers a view of the dykelands, but is not readily accessible and apparent to visitors. Currently on the site are a 19th century blacksmith shop and kitchen garden. There are also two recently discovered 17th century aboiteaux stored in the yard, but not as artifacts on display.

*Illustration 7:* Current blacksmith shop and kitchen garden area.
Marsh Road behind Memorial Church
Behind the Memorial Church there is a dirt access road used primarily by local farmers – the old Acadian road. It leads to Horton Landing in one direction and Lower Wolfville in the other. Visitors are not encouraged to walk the road although there appeared to be no restrictive signage. Behind the church, overlooking the road, is a small, unused wooden platform meant as an observation deck, but was found to be unsafe (slippery).

Illustration 8: The dirt road behind the National Historic Site is private, leading to Lower Wolfville in one direction and Horton Landing in the other.
Area 2: Horton Landing

Accessibility to the site is not readily apparent, although there is a simple arrow labeled “Historic Site” at the approach of the driveway, a single lane public road. The site itself is a small triangle of property owned by Parks Canada and features a Deportation cross and a Historic Sites and Monuments Board of Canada monument, commemorating the arrival of the New England Planters.

The current landscaping and overall “sense of place” does not provide the visitor with any cohesive story or feelings (sense of tragic departure or arrival of new settlers). Commemorative services are held at the site each September 5 to mark the anniversary of the Deportation.

Illustration 9: Horton Landing conveys a conflict of place.
**Special Note: Dykelands (West Long Island Road)**

The dykelands are not only the *raison d’être* of Acadie, they are the living, beating heart of the continuing agricultural story of Grand Pré. As visitors, we got a true sense of the vastness of this area, and the incredible feat of engineering, ingenuity and perseverance it represents, as well as the profound relationship of the people with the land and sea that endures. It is an environmentally and agriculturally sensitive area where any uncontrolled access is devastating and a potential liability for the landowners/Marsh Body. This is a living, working agricultural area that continues as a sustainable and necessary livelihood for the community.

**Illustration 10:** A creek channel on the dykelands – the *raison d’être* of Grand Pré and Acadia.
4.6 Interpretive overview recommendations

**Area 1: National Historic Site**
The former welcome centre grounds could be developed as an appropriate starting point for interpretive tour groups. In addition, this report references the potential development of the site as a staging or launch area as well as a potential Legacy Project. The site also provides additional parking space.

*Illustration 11: The National Historic Site provides an enhanced interpretive experience.*
The existing Interpretive Centre focuses on the whole Grand Pré story, from the Mi’kmaq to the Acadians and Planters. The interpretive story is effectively and fairly presented.

The path behind the Interpretive Centre leads past the Deportation Sculptures through a short path and bridge towards the (newly acquired) cornfield and path leading to the Memorial Church. Interpretive and directional signage should be revisited (see General communication approaches 5.0)

The intersection at the end of the short path leads to the Memorial Church on the right. It is recommended that a suitable and appropriate pathway be built from this point uphill to the top of the cornfield. While visitors will be encouraged to walk uphill to the left, those unable or not wishing to do so can continue on the right towards the Church.

This pathway will require further review by a qualified landscape architect to determine the most feasible and accessible approach. Initial discussions with our in-house landscape architect suggest that the path could be finished with a highly compacted crusher screening that would accommodate visitors with mobility issues – kids in strollers, seniors, etc. Wheelchair accessibility could be addressed with a paved surface and a series of inclines.

The pathway could be defined with a border treatment – for example, trees, hedges, roots, a stone wall, post and rail fencing. A boardwalk/ramp approach would also provide accessibility, but might be the most expensive to execute. Alternatively, accessibility could be achieved at the property entrance off the Old Post Road at the top of the hill. This would also require appropriate parking facilities.

The final details and plans for this concept will require consultation and mutual agreement with Parks Canada. We understand that Parks Canada is open to suggestions for this area. This concept may also be considered as a potential Legacy Project discussed elsewhere in this report.

At the top of the cornfield (via the proposed pathway), we recommend a look-off site as this area provides the quintessential “bird’s eye view” of the marshland, dykes, National Historic Site, etc. The panoramic view of the agricultural landscape has remained virtually unchanged for over 300 years. This look-off area can be developed in stages first as a raised wooden view-deck, then developed, enhanced or enlarged as a gathering place with roof structure, removable seating, podium, mounted binocular stations, interpretive panels, etc. This concept may also be considered as a potential Legacy Project discussed elsewhere in this report.
We also understand that there is a view plane study being considered at the County level. We recommend that further work should be completed to ensure that other important Grand Pré view plane areas are identified and protected.

Interpretive sub-themes for look-off:

- The patterns of the agricultural landscape you see has remained virtually unchanged since the Acadian farmed these lands
- Points of interest: National Historic Site, dykelands, Cape Blomidon, etc
- Crops were grown to sustain the community and for trade/export. We recommend that the cornfield be kept and maintained as a functional agricultural field to grow and harvest appropriate crops in season, thus maintaining the authentic agricultural landscape/theme
- Crops such as corn, oats, wheat and barley, were grown in this field by the Acadians, Planters and subsequent generations of farmers
- This field is still used for agricultural purposes with an emphasis on shallow rooted crops i.e., clover, that will not disrupt archaeological areas.

We recommend that the pathway continue across the top of the cornfield and downhill to the existing blacksmith shed site.

The blacksmith's shed area could be repurposed as a traditional Acadian homestead, recreating some aspects of everyday domestic life with adults and children. (There are also several other archeological structures in the immediate vicinity, related to the Acadian period, that could also incorporated into the interpretation). This Acadian homestead concept would entail authentically dressed interpreters depicting pre-Deportation Acadian life.

Illustration 12: The blacksmith building would be repurposed as typical Acadian homestead with dwelling, community oven (nearby), animal petting area, kitchen garden, orchard, etc.

It is understood that an outdoor communal oven was commonly used to bake bread.
This concept might be recreated on, or near, this site, providing visitors with an opportunity to see, smell, touch, and taste a piece of Acadian daily life. The kitchen garden and orchard area could be expanded to reflect more of the traditional fruits, vegetables and herbs. A small pen of animals such as pigs, sheep and chickens might also be feasible – perhaps a petting zoo approach would bring the area to life, especially for families with children.

**Interpretive sub-themes for blacksmith/kitchen garden area:**
- Life was hard, but the Acadians made the most of their environment and were self-sufficient
- A typical Acadian homestead had a small garden of vegetables and herbs that were used to prepare meals
- Animals such as chicken pigs, sheep, and cattle were also kept for food and trade

The walking trail would continue, from the homestead through the walking gardens, to the Memorial Church, the statue of Evangeline, the willows, and the cemetery area.

**Interpretive sub-themes for Evangeline/willows/cemetery area:**
- The story of Evangeline – fiction versus history (i.e., willow trees, Evangeline’s Well)
- The immediate area is believed to be the original heart of the Acadian community.

**Area 2: Horton Landing**

It is beyond the scope of this assignment to determine the overall interpretive parameters of this thematically and culturally sensitive place, as further consideration and discussion needs to take place among the community stakeholders. Further consideration needs to be given to the overall intent, message, and feeling the site should convey to visitors.

While there can be a link made to the overall agricultural story of Grand Pré (exporting goods to other areas from the landing), we recommend that the overriding Deportation/Arrival story be maintained. We recommend that this site requires, at minimum, landscape consideration and seating for reflection and commemoration.

**Interpretive sub-themes for Horton Landing:**
- The general area was originally part of the “port” used by the Acadians for exporting goods for trade (the actual port was further upriver)
- The site is a deeply spiritual and powerful place for Acadians
- It is also the arrival point of the New England Planters
Today it is a place of reflection for Acadian, Planter and Mi'kmaw descendents

4.7 General communication approaches

Various communication approaches should be considered in order to make the visitor experience a rich, varied and memorable visit. Recommendations for communication approaches are as follows:

The main approach to interpretive communications will be self-guided tours using updated interpretive panels and informational brochures and orientation map(s). The story and text of the existing interpretive panels should be revisited and re-written to accommodate updated themes and storylines. The panels themselves could be more text driven and less visually driven, considering them as descriptive or explanatory text to the scene. We also felt that the existing interpretive support structures – galvanized metal tubing – was oversized and out of character with the historic nature and vernacular of the site.

Illustration 14: Existing interpretive panel

As well, simple directional signage should also be considered and incorporated cohesively with the interpretive signage and throughout the proposed interpretative area as applicable.

Guided tours could be optional to take larger tour groups around the site by experienced, bilingual tour guides – either in uniform or period clothing. This might be managed on “per appointment” basis. In addition, the option of other language interpretation would provide a more international appeal to the site – i.e., German, Spanish and Japanese.

An audio „pod casting“ approach would allow visitors to download Grand Pré interpretive tours (from your website) in various languages. Pod casting is online audio content delivered via the Internet to applicable hand-held devices such as iPod, iPhone, Blackberry, etc. A large demographic of younger visitors use this technology on a daily basis. Essentially audio tours would be written, translated and recorded in various languages, converted to an appropriate digital audio file, and made available on a website.
While the tech-savvy have endorsed podcasting as a new audio medium, the process is not overly complex and has much merit and potential. This option assumes a functional / operational website would be available.

It is recommended that there be more seating and rest areas provided for visitors along the path, necessitated by the considerable expansion of the interpretive walking trail around the National Historic Site.

4.8 Overall access

The overriding challenge will be to successfully welcome visitation and, at the same time, restrict access to private property. It is recommended that all applicable private roadways are signed with authoritative, but „softer” bilingual messaging.

If restrictive signage does not discourage or deter visitor trespassing, specific roadways or entrance points may also need to be gated in addition to applicable signage.
4.9 Sustainability

In the case of managing groups of people in the areas as mentioned in this document, environmental and agricultural impact will be the prime consideration before any construction or changes to the landscape can occur. Initial recommendations for general sustainability include:

- All construction materials and fabricators/labour will be locally sourced, as applicable
- Benches or other types of exterior seating could be fabricated using recycled materials, as applicable
- A Farmers’ Market-type venue on the site should be explored to provide visitors with:
  - An awareness of the continuing agricultural significance of the area
  - A tangible „take away“ for the visitor as a reminder of their experience
  - Visitor connection with the community and the land
  - Visitor connection with story of Grand Pré
  - Potential revenue stream.

4.10 General implementation recommendations

While some of the issues and recommendations in this report are for the longer term, we offer these action items to be considered for the near future:

<table>
<thead>
<tr>
<th>Item</th>
<th>Time frame</th>
</tr>
</thead>
<tbody>
<tr>
<td><strong>Horton Landing upgrades</strong></td>
<td>Immediately</td>
</tr>
<tr>
<td>A. Discuss on-going access to the site via an easement or other legal agreement</td>
<td></td>
</tr>
<tr>
<td>B. Plan and prepare basic landscaping upgrades and seating (with Parks Canada) for 2010 season.</td>
<td>February - June</td>
</tr>
<tr>
<td><strong>Pathway to cornfield/look-off</strong></td>
<td>March - June</td>
</tr>
<tr>
<td>Discuss potential development (with Parks Canada) of pathway to top of cornfield to at least provide a path to the delineated look-off area in time for the tourist season.</td>
<td></td>
</tr>
<tr>
<td><strong>Investigate Podcasting</strong></td>
<td>February - March</td>
</tr>
<tr>
<td>Review feasibility of podcasting several foreign language tours of external grounds around the National Historic Site.</td>
<td></td>
</tr>
</tbody>
</table>
Suggest German, Spanish, and Japanese, for example.

**Blacksmith’s shed re-purpose**
Discuss the potential development (with Parks Canada) of re-purposing the blacksmith’s shed area as an Acadian homestead, for completion prior to the 2011 season.

February 2010 - June 2011
5 Legacy Options

Part of this project involves developing recommendations for legacy projects that could be developed within a $20,000 budget, or by leveraging that amount, in 2010. A number of ideas have been developed and are recorded here.

5.1 Legacy option criteria filters

Filters were developed and sanctioned by the Steering Committee to guide our thinking in development of these ideas and to help with an initial short-listing if concepts. The following five filters support the Strategic Tourism Principles of the project and the OUV. Several of the legacy options have been deemed appropriate and significant enough to become recommendations in the Management Plan, the Interpretation Framework and the Tourism Development Framework.

Filter 1: Appropriate (to heritage and site)

- Project’s contribution to the principles of the OUV
- Project supports ongoing story cultural/agricultural landscape with or without World Heritage designation
- Project “honours” the community of Grand Pré and Area for its commitment to collaborating toward World Heritage designation.

Filter 2: Appropriate (to future development)

Filter 3: Financial feasibility

- Project is achievable within the prescribed budget ($20,000)

Filter 4: Logistical feasibility

- Land/resources/partners are available to achieve the project

Filter 5: Sustainable

- Project can be maintained / sustained over time.
5.2 Legacy project options

At a community town hall session on January 21, 2010 a straw poll was taken. Nine concepts for a community legacy project were posted and people had the chance to write in other ideas. The first idea listed below - the Panoramic Viewing Deck - received the overwhelming support of the group and is the recommendation of the Consulting Team as a Legacy Project. The shortlist of legacy options is shown below:

**Panoramic viewing deck**
- To be located above the cornfield and National Historic Site on Old Post Road
- Wheelchair access and parking, perhaps off Old Post Road. Walk up from National Historic Site
- Could incorporate a Declaration of Shared Legacy (option #2) as a „plaque“
- Deck could be initiated at a „ground breaking“ ceremony
- Parks Canada must be onside with the project
- Could use local workers and resources. Built to last (cedar/treated), but reflect some of the traditional building methods as applicable
- May qualify for funding under the provincial product development program¹
- Could start out as a raised path or simple platform and evolve into a sheltered area with seating, interpretive panels, binocular look-off stations, etc.

**Declaration of shared legacy**
- Based on the OUV of shared history and legacy, this would be a plaque commemorating the community’s commitment to shared stewardship
- Could include the family names of all who live(d) on the designated site and reference their descent and centuries of residency
- Could be located at Horton Landing, on the dykeland along the walking trail or at the view plane site and could be incorporated into any option.

**Tour Kiosk**
- A staging area for group tours close to parking and washrooms, where tours would begin, bicycles could be rented, etc
  - Located across from National Historic Site
  - Built to last, with expansion into additional purposes. Basic healthy concessions – water, milk, coffee, tea, juice, fruit and home-baked goods.

The Kiosk is referenced in Tourism Management Assessment and Interpretation Framework sections of this report.

**Walking Trail**

- A controlled walking trail around the perimeter of the site for use by visitors and residents may over time become a series of “loops”
- Based on land use negotiation, the trail could travel along traditional roadways and Acadian roads
- Would include non-invasive visitor directional signage, interpretative information and rest areas

**Shared Legacy Spirit Award**

- Given annually to a person or business/organization that fostered / demonstrated the spirit of shared legacy.

**5.3 Legacy Recommendation: Panoramic Viewing Deck**

We recommend a panoramic viewing platform be developed at the top of the cornfield upland above the National Historic Site. The Viewing Deck is located at a look-off site which provides the quintessential “bird’s eye view” of the marshland, dykes, National Historic Site, the Bay of Fundy and tides. The panoramic view of the agricultural landscape has remained virtually unchanged for over 300 years. The Viewing Deck will be a legacy for the community with or without World Heritage designation.

This look-off area can be developed in stages: first (Stage 1) as a raised wooden viewing deck, then developed, enhanced or enlarged (Stage 2) as a gathering place with roof structure, removable seating, wheelchair access, podium, mounted binocular stations and interpretive panels. Parking must also be considered.

**Implementation/ Next Steps**

- Organize a Legacy Project Committee
- Discuss potential development with Parks Canada
- Introduce the legacy project to the community
- Assess possibilities of funding partners for Stage 1 and Stage 2
- Approach provincial and federal funding sources and possible sponsors
- Announce funding partners/sponsors as required
- Assess parking and path access requirements for Stage 1 and Stage 2
- Ensure all regulations and requirements are reviewed
- Survey land ensuring space allocation for enhancements
- Develop drawings of the viewing deck in Stage 1 and Stage 2
- Call for tenders
- Develop Stage 1
- Time frame: April to August 2010

**Estimate of probable costs (Class D Estimate: +/- 20%)**

Based on known information and general assumptions

**Stage 1: Panoramic Viewing Deck**
Grade level, approx 20" x 15", (300 ft²), railing, steps
Pressure-treated structure, 2" x 6", cedar decking

$21,500

**Stage 2: Expanded Viewing Deck/ Gathering Place**
Existing deck expanded to approx 40" x 15" (600 ft²),
with roof structure

$50,000

*Allowance for removable seating, podium, binoculars* $8,500 - $12,500

*Interpretive panels TBA*
6 TOURISM DEVELOPMENT FRAMEWORK

In this section of the report we cover:
- Regional tourism development – a strong start
- Growing momentum in the region
- Tourism Development Framework
- Product development – an Experience Inventory
- Regional tourism marketing issues
- Four development themes
- Gateway Centre – a sense of arrival

6.1 Regional tourism development - a strong start

The Kings County area has an enviable jumpstart in efforts to take its tourism industry to a new and exciting level in the wake of World Heritage designation at Grand Pré. The area is rich in resources that can be used to further develop tourism.

Since the early 20th century the area has been recognized as a Mecca for visitors. The high awareness of Grand Pré as the “the spiritual center” for the Acadian people and Parks Canada infrastructure have fueled the recognition. Festivals of significance, in all seasons, operate annually in Kings County and the area is recognized for its adventure opportunities, primarily outstanding hiking and biking. Today, the travel corridor from Grand Pré through to and including Wolfville is moving toward “destination” prominence due to the growth of unique and motivating product clusters, culinary and wine experiences.

Local tourism operators are creative and the industry is mature. Capacity exists in a diverse accommodation and food and beverage base to service increased visitation year-round. The business community and local governments understand and appreciate the value of tourism as business. With close attention paid to priority industry growth initiatives, this region can offer world-class tourism product to new visitors.
6.2 Growing momentum in the region

The Management Plan for Cape Split, a major pristine and untapped adventure resource for this area, is complete and in the hands of the Department of Natural Resources. The land assembly to support the plan is organized and the plan identifies viable and sustainable experiences for Cape Split that require market readiness efforts.

A major study that is currently underway, the *Bay of Fundy Attraction and Interpretation Plan*, identifies product and experience enhancements and will be in the hands of its funding partners, including Kings Regional Development Agency, by late spring of 2010. This study promises to establish a new benchmark for developing Nova Scotia attractions and destinations along the bay. Grand Pré - Wolfville is anticipated to be an important point of focus for attraction development along the Bay of Fundy, along with the Parrsboro - Joggins area. UNESCO designation for the cultural landscape of Grand Pré will mean that two World Heritage Sites and a World Biosphere site will exist within a relatively small area. As well, Grand Pré - Wolfville is moving in the direction of becoming the “Napa Valley” of Atlantic Canada; a unique and appealing area that provides quality and a satisfying experience over a number of seasons. The visitor attracted to a destination like Grand Pré - Wolfville is also interested in hiking, biking, history, meeting unique people in authentic situations, and “learning from the visit”.

*UNESCO designation reinforces tourism momentum for the region*

The OUV embodies the powerful identity for which this region of Nova Scotia is recognized: *stories of an exceptional land are written and told here*. Nova Scotians and visitors alike will visit to participate in the “stories of the land” – from the passionate history of the people who live here to experiences in food and wine, berry picking and pumpkin festivals, eagles in winter and tides year-round. UNESCO designation is the platform around which the region can rally to develop themed product and experiences for all visitors.

The international profile of UNESCO can open doors to lucrative marketing partnership opportunities within the region, within Nova Scotia, and further afield.

*UNESCO designation - renewed pride of place for Kings County*

The international profile offered by UNESCO World Heritage designation along with new partnerships and collaborations will work to knit a close fabric of appreciation among towns and communities throughout the region. Working toward a region-wide program of tourism development based on core themes will result in a renewed pride of place for the people of the region.
World Heritage designation will provide a fresh proposition upon which to recruit investment, especially in the agricultural sector, and to encourage immigration to the area.

6.3 Tourism Development Framework

The Tourism Development Framework was developed to provide structure to guide the work of many organizations within the region and to provide a basis for discussion among many stakeholders.

Visitors buy experiences not individual hotel rooms or sightseeing tours. They seek out a destination of interest and then look for activities and experiences that are packaged or bundled together in captivating ways and are aligned with their interests.

We recommend that four themes guide future tourism development in the region:

- Adventures in Taste – the food and wine experience
- Touch the Land – getting back to nature
- Festivals – working together
- Bay of Fundy – natural wonder

6.4 Product development – an Experience Inventory

The “stories of the land” can be experienced in many ways; as high quality culinary and wine experiences; as the joy of the harvest through festivals, community suppers or the whimsy of pumpkin-people; as a tour of the highest tides in the world; or a family picnic at an apple or blueberry u-pick. Weaving together experiences will make Kings County and region a “must visit” area and worth the trip for an extended or multiple stay.

**Developing experiences across all four themes**

The magic is in weaving the experiences together. The tourism industry should build an inventory of year-round tourism products, an Experience Inventory that relates to the central theme of the area. To build a profitable Experience Inventory tourism leaders must:

- **Establish benchmarks** for experiences to ensure that they satisfy the core theme and support the principle of sustainability inherent in the UNESCO Statement of OUV

- **Gather and present existing products in marketable and accessible clusters** ensuring that the specialties and unique features of each are documented. For instance, the critical mass of u-picks when presented collectively as a travel
opportunity reinforces a core tourism theme of the area AND makes the visit “worth the trip”

- **Enhance existing experiences and refresh them with new dimensions and appeal** by adding new or non-traditional, under-utilized and intriguing resources. Perhaps a farmer could demonstrate the use of farm equipment and explain harvest methods at a farm market. Or, perhaps slices of apple pie with the recipe and glasses of locally-produced juice could be sold in a picnic area at an apple u-pick.

- **Generate incremental experiences** that support the theme and complement existing experiences in strategic locations throughout the region. There may be opportunities for scientific symposiums at Acadia University or on the shores of the Minas Basin. Fruit and vegetable processing plants could offer visitor tours.

**Keep the Experience Inventory current**

Commit the Experience Inventory to a database that is readily accessible, customer-friendly, easy to update and regularly maintained. Understand the technical requirements of key partners, such as Nova Scotia Tourism, with whom you will share this information in advance of developing the database. Ensure that details such as hours of operation, seasonality and contact information is complete with each entry. This inventory will be the root material from which dynamic and comprehensive visitor information is built and presented.

**Tap into available resources**

The Grand Pré area and surrounding region can access a number of experience-enhancement programs designed to equip communities with creative insights into experience development and market readiness. The Department of Tourism, Culture and Heritage has information to connect eligible communities and destinations with:

- International destination development expertise and mentoring
- The resources of the Gros Morne Institute for Sustainable Tourism (GMIST) and its leading programs for successful experience development and management
- Community Market Readiness Assessment program offered by the Department.

**6.5 Regional tourism marketing issues**

Over time the Kings County region should work to consolidate marketing efforts and focus on building the destination by harnessing individual marketing efforts for collective benefit. The Experience Inventory should be offered consistently in all marketing efforts emanating from the region and at every point of customer contact throughout the region.
The towns and communities and festivals and events in the region tend to promote themselves independently with few marketing collaborations such as web links and cross-marketing. The potential visitor who doesn’t understand local jurisdictions, associations or organizations must visit a number of websites and read many local publications to find the experiences awaiting him in Kings County and region. The experiences and activities which encourage a prolonged and engaged stay in Kings County are awkward to locate.

With its powerful themes, growing identity, authentic experiences, and strong products to offer, the region can maximize tourism results by making every marketing dollar count in a collective effort to generate business to the region. The region should:

- Ensure that core images are selected to represent the Experience Inventory
- Ensure that the Experience Inventory is linked to every local business, tourism, and government website in the region, is central to all marketing communications, and is available at every point of customer contact
- Ensure that the core theme and the Experience Inventory are central in all provincial, national and international partnership marketing efforts and all travel trade and travel media relationships

Whether the target visitor is in Halifax or Helsinki the Experience Inventory is the gateway to outstanding tourism opportunities in the region and, if communicated effectively, will result in increased visitation and expenditures.

**Intercept - keep them here!**

Every tourism and business operator and resident in Kings County is a potential ambassador for tourism. Each has a role to play in actively encouraging visitors to stay in the region. A visitor will be motivated by the endorsement by a local to visit a farm market if informed that “the first of the blueberries are available for picking today”….or “you just can’t miss the play at the National Historic Site”…and “don’t forget the tide changes at 4pm!” The Experience Inventory should be the central source of information and available to all business and tourism operators, museum staff, and residents. From accommodation operators and breakfast servers to jewelry store salespeople – all businesses and residents throughout the region can be influential tourism ambassadors by intercepting visitors, offering experience suggestions, and passing customers from location to location throughout the county. Programs could be developed along the lines of “The Valley Today”.

**Engage non-traditional tourism partners**

The Resource Inventory and SWOT Assessment included in this report list resources that can be put to work to support tourism development. Some have recognized their
roles in tourism. Others, however, may not have considered themselves contributors to tourism experiences and will need to be engaged. Among these non-traditional resources are:

- Commercial fruit and vegetable production plants who could offer tours of their operations
- Scientists, archeologists and birding enthusiasts whose expertise could enhance tours of the World Heritage Site
- First Nations leaders and spiritual guides
- Community organizations with hosting capabilities
- Acadia University and NSCC for extended learning opportunities
- Retired farmers, local historians and beekeepers and many others - who are the community’s storytellers.

Incorporating non-traditional partners in programming not only expands the scope of an experience but adds intrigue and a new level of authenticity and credibility.

6.6 Four development themes

Tourism development in the region can be effectively structured into categories under the core theme of “stories of the land”. The supporting themes were chosen because they represent areas of experience that are in high demand and play to the strengths of the region. Many visitor experiences and activities will find a home under these themes:

- Adventures in Taste – the food and wine experience
- Touch the Land – getting back to nature
- Festivals – working together
- Bay of Fundy – natural wonder.

Although the UNESCO designation is the focus of this report, the themes have development potential with or without the designation and should be the focus of collective tourism development over the years to come. The themes have the potential to engage many public and private sector organizations in collective planning and implementation.

Adventures in Taste – Nova Scotia’s food and wine experience

The region is developing and delivering experiences with this theme now - a fertile base on which to build a reputation for memorable food and wine offerings. With close proximity to metropolitan Halifax, the region can become the “Napa Valley” of Atlantic Canada - a must visit excursion. Winery tours, traditional cooking classes, berry picking / jam making weekends, food festivals, themed dinners, and community suppers could be included on the menu of events and activities offering “adventures in taste”. There are options for all seasons, for all ages and for varying lengths of time.
**Touch the Land – getting back to nature**

With a landscape that includes Cape Split, rolling farmlands and the vista of the Bay of Fundy, regional experiences can incorporate soft adventures activities. Hiking and walking trails can be mapped for self-directed tours or offered with knowledgeable guides. The region is recognized as a prime biking destination and multi-day routes can be packaged with wine tours and accommodations for a diverse Kings County experience. The intricacies of haying and harvesting apples or a tour of a juice-making plant will capture the attention of visitors. The recommended trails and tours at the Grand Pré site will be a key feature of this theme.

**Festivals – working together**

Festivals and special events are valuable tourism assets and deserve attention in a Tourism Development Framework. They give visitors specific reasons to travel. They reflect the character and style of a destination and offer opportunities to sell local products and build relationships. Many of the signature festivals and events in the region celebrate the rural character, the true personality and culture of the area. To operate and survive, local festivals and events compete for money, attention, support and volunteers. Opportunities exist for greater synergy among festival organizers on planning, marketing and project execution. Festivals within the region can share information, planning timetables, cross-marketing and perhaps even coordination of staffing and volunteers. An outstanding example of festival growth through cooperation is the annual event now billed as the Valley Pumpkin Festival where independent harvest-related celebrations pool marketing resources to generate a festival with depth and variety throughout September and October. Opportunities exist in this region for string festivals in all seasons.

**Bay of Fundy – natural wonder**

The magnetic qualities of the Bay of Fundy are drawing increasing attention and marketing commitment. The region should position itself as an important on-ramp to the Bay of Fundy. Tours to and along the water’s edge will give the visitor access to the mud and the ocean bottom. Historic interpretations, scientific and tidal programs and birding activities are possible, again in all seasons.

Each of these four themes has the potential for cross pollination at the packaging level. Business and tour operators should be encouraged to mix and match elements. Two key disciplines that will support the development of these themes are product development and marketing. A highly skilled private business or marketing organization could lead these support efforts and, in the initial stages, Kings Regional Development Agency and Destination South West Nova tourism association could coordinate implementation and monitor activities.
The themes include more than just touring, interpretive or culinary experiences. They have potential to drive themed enhancements of other tourism facilities and services such as accommodations and retail, which tie-in nicely to these themes (e.g. farm B & Bs, arts and crafts shops focusing on specific traditional crafts, etc.).

The table below provides a high level view of the themes, key activities and potential partners and organizations that could be involved in this regional work.

<table>
<thead>
<tr>
<th>Theme</th>
<th>Key Activities</th>
<th>Partners</th>
</tr>
</thead>
<tbody>
<tr>
<td><strong>Adventures in Taste – the food and wine experience</strong></td>
<td>• Use the Experience Inventory for detailed opportunities&lt;br&gt;• Develop one NEW experience for each season&lt;br&gt;• Market to Atlantic Canada in winter&lt;br&gt;• Develop a Plant-A-Seed schools program for spring</td>
<td>• Taste of Nova Scotia&lt;br&gt;• Nova Scotia Tourism&lt;br&gt;• Non-traditional tourism partners&lt;br&gt;• Sponsorship from Vesey’s Seeds</td>
</tr>
<tr>
<td><strong>Touch the Land - getting back to nature</strong></td>
<td>• Use the Experience Inventory to source farms as sites for participation in programs&lt;br&gt;• Work with hike/bike operators to generate offers in all seasons&lt;br&gt;• Work with DNR to action the Cape Split Management Plan&lt;br&gt;• Provide way-finding /interpretive signage on existing trails</td>
<td>• DNR&lt;br&gt;• Bicycle Nova Scotia&lt;br&gt;• Nova Scotia Trails Assn&lt;br&gt;• Local festival organizers</td>
</tr>
<tr>
<td><strong>Festivals – working together</strong></td>
<td>• Develop a committee of local festivals&lt;br&gt;• Share successes and bloopers&lt;br&gt;• Coordinate dates and activities among festivals&lt;br&gt;• Develop a “festival info” resource of details to feed online, phone-in requests for information</td>
<td>• NS Tourism festivals” coordinator&lt;br&gt;• DSWNS</td>
</tr>
<tr>
<td><strong>Bay of Fundy – natural wonder</strong></td>
<td>• Engage in Bay of Fundy Planning efforts&lt;br&gt;• Document UNIQUE regional features and leverage them&lt;br&gt;• Secure public beach access&lt;br&gt;• Embed Blue Beach in the Fundy “fossil messaging”</td>
<td>• Bay of Fundy Tourism Partnership&lt;br&gt;• Nova Scotia Tourism&lt;br&gt;• Museum of Natural History</td>
</tr>
</tbody>
</table>
6.7 Gateway Centre – a sense of arrival

A “gateway” to the attractions and experiences of the region would offer visitors the satisfaction of “having arrived” at a destination of value and quality. The Gateway Centre would interpret the evolution of the landscape, offer visitors a comprehensive overview of activities in the region, and efficiently move people to their chosen destinations throughout Kings County and the Annapolis Valley.

This Gateway Centre should be strategically located at the entrance to the region rather than at the World Heritage Site. It could serve as a visitor centre for information and accommodations, a location for ticket sales for festivals, a departure point for tours, a referral point for trip-planning, a service center for functional needs from washrooms to an internet hotspot, and perhaps a performance venue. This Gateway Centre could evolve into a location for community events in all seasons and could become a welcome centre for the World Heritage Site and the multi-dimensional agricultural experience of Kings County and region. Depending upon the size, scope and priorities of community planning, the Gateway Centre could include appropriate retail opportunities. The Gateway Centre would offer the visitor the continuity of a departure point from which to begin a Grand Pré / Wolfville / Kings County experience. The tourism themes for Grand Pré and region should have a strong presence in the Gateway Centre.

6.8 General implementation recommendations

The Tourism Development Framework provides focus for the activity of many organizations – development agencies, marketing organizations, tourism associations, business partnerships and individual businesses.

We have structured it around four development themes that can be used for everything from pan regional product development initiatives to packaging at the individual hotel or restaurant level. Communicating these themes to as many organizations as possible will help more people and groups get engaged and leverage the power of the themes. The themes are market driven, powerful and aligned with regional strengths and momentum.

The development activity can and should begin immediately and be a focus for regional development regardless of the results of designation.

In the initial stages we recommend that a leadership team:

- Communicate the themes to as many interested organizations as possible
- Host a workshop in 2010 which would assemble the broadest possible cross-section of tourism operators and organizations interested in the themes
• Focus the workshop on engaging this group’s initial implementation planning and organize a steering committee from across the region. Ensure that the partners and members of this committee include organizations from the tourism industry, Parks Canada and local municipalities plus non traditional partners like agriculture, natural resources, education, the food and beverage industry, and the arts.

• Encourage them to develop their own high level implementation plan and meeting schedule. Then organize sub committees around the individual development themes.

• Support this regional committee with secretariat support for the first year. This should include coordination support, development of a database and communication support for their efforts.

• Kings RDA can be this group’s conduit for external partnership development with municipalities, the agencies of the provincial federal governments and even foreign tour operators, interest groups, media and investors.

• Host an annual symposium where all interested parties can gather to share information and successes around their various projects that align with the four development themes. This should be broad based and include, not only regional members, but groups and businesses from afar.

• Do not restrict participation strictly to those in the region. Organizations and partnerships exist elsewhere that will bring energy, resources contacts and ideas to the initiative.
7 Overall Impact Analysis

It is anticipated that the UNESCO World Heritage Site designation at Grand Pré will have a number of significant positive impacts in relation to overall site visitation, tourism visitation to the immediate region, various economic impacts associated with the increased tourism activity, and some positive social-cultural impacts. At the same time there is potential for some negative impacts, which really depend on the extent to which tourism activity increases. Given that overall tourism visitation levels have declined significantly over a number of years, any potential negative impacts of increased tourism visitation are expected to be minimal, given that the Grand Pré National Historic Site and the surrounding region have hosted many more visitors annually in the past than at present. The various components of impacts are reviewed and analyzed in this section of the report.

7.1 Overall economic impacts

Because of the significant decline in tourism activity at Grand Pré over the past two decades, the potential economic impacts of the UNESCO designation are viewed as being positive. These economic impacts include increases in tourism visitation to the Grande Pré site itself and visitation to the surrounding region, incremental tourism spending, both onsite and offsite, incremental employment, both onsite and offsite, and other positive impacts on local businesses.

Increases in tourism visitation

Two previous examinations of economic impacts associated with the designation of Grande Pré as a UNESCO World Heritage Site have already been undertaken. In April 2009, an economic impact study was completed for Nomination Grand Pré by professors at Acadia University entitled: Grand Pré: An Economic Impact Assessment of a UNESCO World Heritage Designation. This study undertook the following:

- It examined visitation patterns to the Grand Pré National Historic Site for the period 1998-2008 and projected future visitation with and without the UNESCO designation
- By examining the experience of Lunenburg’s designation as a UNESCO World Heritage Site it estimated the proportion by which visitation to Lunenburg increased after its designation as a World Heritage Site
- The study also conducted a survey of 278 visitors at Grand Pré and locations around the historic site. The focus of the survey was to determine current visitor spending by tourists that visit Grand Pré. This was done in an effort to quantify current and future economic impacts.
A second study of the UNESCO designation impacts was prepared for the Nomination Grand Pré Committee in October 2009 by KELCO Consulting Ltd. This analysis reviewed the various impacts of the UNESCO World Heritage Site designation in three comparison communities including Lunenburg, as well as New Lanark in Scotland (an industrial heritage community) and the Bend of the Boyne (Bru na Boinne) in Ireland (Europe’s largest and most important concentration of prehistoric megalithic art). Using this comparative analysis various types of impacts were examined including potential benefits of the UNESCO designation, business impacts, economic impacts, property value impacts, property tax impacts and infrastructure impacts.

The general conclusion in both studies was that the positive economic impacts could be significant, although would not be on a scale that would result in corresponding negative impacts such as having too much tourism activity, disruptions to local communities or the necessity for additional infrastructure.

Based on the findings and conclusions of the above-noted impact studies prepared for Nomination Grand Pré, as well as previous similar work undertaken by the consultants at Economic Growth Solutions Inc., it is very likely that the result of a UNESCO World Heritage Site Designation for Grand Pré will be increased visitation to the site. In the April 2009 Acadia University study, it was concluded that a 6.2% increase in visitation would likely occur as a result of the UNESCO designation.

- As the designation would occur in 2012, it is necessary to project the Grand Pré National Historic Site visitation levels for 2012, based on examination of trends over the past two decades
- As noted earlier in the study, there has been a steady decline in visitation to the site over the years and the Acadia University Economic Impact Analysis concluded that there may be a possibility that visitor numbers would return to an overall average of visitation over the past 10 years or so, approximately 45,000 or, more likely, visitation levels would be a continuation of the declining trend which would result in a total visitation of 24,650 by 2012
- Our view is that the most likely scenario is in between these two estimates, although closer to the lower estimate. As of 2009 site visitation was approximately 29,000, but this occurred in the depth of the recession and with the maximum negative impacts in terms of attracting U.S. visitation
- It is likely by 2012 that even if a slight decline occurs again in 2010, in 2011 and 2012 there is likely to be slight upturn so we are projecting 2012 visitation conservatively at 30,000 for Grand Pré National Historic Site, without a UNESCO designation.
The Acadia University study projects a low and high visitor increase scenario with the low being an increase of 2.75% as a result of UNESCO World Heritage Site designation and the high being 9.8%. The remainder of our analysis is based on the medium scenario of 6.2% increase in visitation, which we feel would be the most likely outcome in terms of incremental visitation impacts associated with the UNESCO designation alone. It is quite possible that if the economic recovery and the recovery of U.S. visitation to Nova Scotia occur at a faster rate than expected, the visitation numbers will be somewhat higher, but not specifically because of the UNESCO designation.

With a base visitation to the Grand Pré National Historic Site of 30,000 estimated for 2012, the 6.2% increase would mean an additional 1,860 visitors. It should be noted that this is strictly the increase in number of visitors to the Grand Pré National Historic Site and immediate area as a result of the UNESCO designation.

- It is likely, however, that additional visitation to the region may be stimulated as a result of the increased awareness of the region as a result of the UNESCO Designation
- The designation helps to put the region “on the map” in a broader international context than may be the case at present. Clearly, many of the incremental visitors to the region may visit the site itself, but not likely all of them, so it is reasonable to assume that in addition to the incremental 1,860 visitors to the site, at least a few thousand additional visitors may visit the area as a result of the increased awareness caused by the UNESCO designation
- It is difficult to back-up this assertion with quantitative data, but additional destination area awareness in the marketplace normally results in higher visitation levels, unless there are counteracting factors (e.g. - a bad economy) at the time.

**Incremental tourism spending onsite and offsite**

The increases in visitation noted in the preceding section will clearly result in incremental tourism spending at Grand Pré National Historic Site and off-site in the immediate vicinity. The Acadia University study did a detailed survey of visitors during 2008, which enabled them to assess expenditure patterns, as shown in Figure 7.1.
Figure 7.1: Average Expenditures of Visitors to Grand Pré National Historic Site, 2008

<table>
<thead>
<tr>
<th>Expenditure Category</th>
<th>Amount Spent ($ CDN)</th>
</tr>
</thead>
<tbody>
<tr>
<td>Accommodation</td>
<td>$22.39</td>
</tr>
<tr>
<td>Meals and beverages in restaurants</td>
<td>$17.34</td>
</tr>
<tr>
<td>Groceries/liquor at stores</td>

<td>$0.07</td>
</tr>
<tr>
<td>Other</td>
<td>$0.28</td>
</tr>
<tr>
<td><strong>Total Average Expenditures</strong></td>
<td><strong>$68.72</strong></td>
</tr>
</tbody>
</table>

As shown, the survey accounted for various types of expenditures, the largest of which were for overnight accommodations and for meals and beverages in restaurants. The survey takes into account that some visitors will have stayed with friends and relatives.

In Figure 7.2, based on incremental visitation to the Site of 1,860 visitors, the total direct spending impacts are shown along with the indirect and induced impacts which take into account a multiplier effect.

Figure 7.2: Direct, Indirect and Induced Spending Impacts of Visitors to Grand Pré National Historic Site, 2008

<table>
<thead>
<tr>

<td>$542</td>
</tr>
<tr>
<td><strong>Total average spending</strong></td>
<td><strong>$127,836</strong></td>
<td><strong>$132,950</strong></td>
</tr>
</tbody>
</table>

It should be noted that the total spending impacts include incremental expenditures of visitors from all geographic markets, since the 6.2% factor was applied to total visitation to Grand Pré National Historic Site. However, this understates the total potential incremental tourism expenditure impacts as the following aspects need to be factored in:

- Increased average length of stay, as a result of additional attractions and features associated with the UNESCO Designation
- Additional on-site and off-site spending, as a result of additional opportunities for visitor spending in relation to additional interpretive programs offered, tours and excursions, and additional retail and food and beverage opportunities that may arise as a result of the designation
- Visitor expenditure impacts of additional visitors attracted to King’s County as a result of the increased awareness of the region caused by the UNESCO designation.

These additional incremental impacts are more difficult to quantify based on any existing survey data. However, we project the following as being possible scenarios:

- A 20% increase in the average length of stay
- A 15% increase in overall visitor expenditures as a result of additional expenditure opportunities
- 3,000 additional visitors annually to the region as a result of the UNESCO designation who do not actually visit the Site, resulting in an incremental impact of another $450,000 annually.

This results in total tourism expenditure impacts in the region of close to $1 million annually, directly and indirectly, as a result of the UNESCO Designation.

**Employment impacts**

There are a variety of employment impacts that are likely to occur as a result of the UNESCO designation. These include one-time construction and development impacts as a result of any new infrastructure that is put in place as a result of the UNESCO designation. Examples include the Legacy Projects noted in the preceding chapter, as well as other possible infrastructure developments including additional trails, site buildings, roadways and parking areas and signage, among other things.

In addition to the one-time construction and development impacts, which can be expressed in person-years, there will likely be additional on-site permanent employment impacts, as a result of the broader mandate of the Grand Pré Historic Site to include
management and interpretation of the areas encompassed within the UNESCO designation.

- This would likely generate an additional 10 full-time and seasonal positions on-site, as well as an equivalent number off-site as a result of additional tours and excursions that would be stimulated by the expanded site interpretation programs.
- Another dimension of on-going employment impacts would be associated with tourism-oriented businesses in the immediate region including accommodation establishments, food and beverage operations, and retail outlets that cater to visitors.

Sufficient data is not currently available to project these employment impacts in any reliable way. Therefore, it will be important to implement a systematic visitor tracking and monitoring system that will track visitation numbers not only at Grand Pré National Historic Site and the UNESCO World Heritage Site, but also at other local tourist attractions and facilities. Combined with the monitoring of visitation numbers should be an annual visitors’ survey process that could measure the following:

- Geographic origins of visitors
- Visitor expenditures on-site and off-site by major expenditure category (e.g. accommodations, food & beverage, retail, transportation, etc.)
- Length of stay on-site and in the area
- On-site activities and features participated in at Grand Pré
- Other area attractions visited and activities visitors participate in
- Visitor demographics
- Visitor satisfaction levels with facilities/services offered on-site and off-site.

This survey process will be helpful for measuring ongoing economic impacts, monitoring the impacts of implementation of the Tourism Management Plan and Tourism Development Framework, as well as for ongoing marketing and management of the on-site and off-site visitor experience.

**Impacts on local businesses**

The additional tourism activity and the resulting expenditures and economic impacts are likely to have a positive impact on local businesses in the Grand Pré area. It should be noted that the projected increase in the number of visitors is fairly modest and well below visitation levels that have been achieved in the region previously. Therefore, it is not likely that significant new business activity will be stimulated by the designation itself, although it should help to enhance the viability and profitability of existing enterprises.
that cater to visitors. Incremental business should occur for the following types of businesses:

- Accommodation establishments
- Food and beverage operations
- Tourist oriented retail outlets
- Tours and excursions
- Transportation services

Sometimes the increased tourism activity can stimulate the attraction of new tourism-oriented businesses to the region which, if they are more effective at catering to visitor needs than existing businesses, may result in some business displacement. Again, the projected visitation increases are relatively modest, so such business displacement is unlikely to occur simply as a result of the UNESCO designation. It is more likely to occur as a result of an improving economic situation and increasing visitation numbers because of economic factors rather than the UNESCO designation.

It should also be noted that the UNESCO designation is unlikely to increase the demand for labour in a significant way (although it will likely result in some additional jobs, as noted in the previous section), nor will it result in the bidding-up of wage rates.

In a very positive way the additional marketing cache for the region, as a result of the UNESCO designation, will help local and regional tourism-oriented businesses in their marketing efforts as there will be greater awareness of the region.

### 7.2 Other positive social-cultural impacts

Previous studies have demonstrated a variety of positive social-cultural impacts of UNESCO World Heritage Site designation, partly as a result of the economic impacts stimulated, as well as the addition of new facilities and amenities, educational opportunities, cultural preservation, and environmental conservation. These impacts are summarized below and are likely to occur at Grand Pré as a result of a UNESCO designation:

- **Cultural preservation.** The comprehensive interpretive program that would be developed in concert with the UNESCO designation, as described earlier in this report, will contribute to preservation of the cultural heritage of the region by presenting and interpreting this culture to the world.
• **Educational opportunities.** Presentation of the culture and the heritage landscape in on-site interpretive programs and other outreach activities will help to educate local and regional residents, as well as visitors, about this cultural legacy of the past few centuries. The interpretive programs and other programming associated with outreach activities will provide specific educational opportunities for the general public.

• **Environmental conservation.** The interpretive framework that has been developed in this study has been carefully designed to ensure conservation of the natural environment and the unique heritage landscape as it has existed for the past few hundred years. The UNESCO designation and expansion of protected areas through any additional land acquisition and site management controls will help to preserve the natural environment and cultural landscape of the region.

• **Community pride.** The international significance of the UNESCO designation is typically a great mechanism for boosting community pride. The area is then acknowledged to have a site which is on the same listing of internationally significant sites as some of the Great Wonders of the World, such as the Pyramids in Egypt, India’s Taj Mahal, and the Acropolis in Athens, Greece. Frequently this boost in community pride spills over into community enhancements and beautification activities, which further enhance the attractiveness of local communities to visitors with resulting tourism economic impacts.

• **Community enhancements.** There are normally additional community enhancements that result from the UNESCO World Heritage Site designation including additional amenities and services at the Heritage Site itself, as well as improved amenities and services in local communities stimulated by the increase in visitor activity and corresponding economic impacts. These improved amenities can range from additional retail, food and beverage and cultural facilities to improved streetscapes, signage and access.

7.3 **Possible negative impacts of increased visitation**

Both previous economic impact studies of the Grand Pré UNESCO designation have concluded that there are unlikely to be any significant negative impacts at the Site or in local communities as a result of the increased visitation. This is because the projected increase in visitation is relatively modest, as noted earlier, perhaps amounting to an additional few thousand visitors annually, well within the number of visitors that has been catered to over the past few decades. In fact, significant growth would have to occur in order to reach the levels experienced ten or twenty years ago. However, it is worth
commenting on the types of visitation impacts that could possibly occur if the increase in visitation as a result of the UNESCO designation is substantially in excess of what has been projected.

**Effects on the visitor experience**

The main possible negative impact on visitor experience would be as a result of any site congestion that could occur because of an increased number of visitors. As noted, this is unlikely because the actual visitation to the site is unlikely to increase by more than a few thousand visitors annually, directly as a result of the UNESCO designation. In fact, there may be a positive impact on the visitor experience in that the site would appear to be more active and vibrant than has been the case for the past few years when there have been significant declines in visitation.

**Effects on circulation patterns between attraction points**

This would be a concern if visitation levels increased to the point where any type of congestion could occur on roadways, walkways or pathways that connect the various attraction points in and around the National Historic Site and other protected areas that may be designated as a result of the UNESCO designation. These kinds of impacts can be carefully managed through signage, controlled access points and the requirement to use guides to access various locations in and around the designated sites.

**Potential community change**

Clearly this could be a positive or negative impact. Our view is that the overall impact in terms of community change will be positive in that it will provide a much needed boost to the sagging tourism revenues experienced over the past several years. This boost will not likely be so much that there would be a negative impact on the community from too much tourism or too many visitors. Over the foreseeable future visitation levels are likely to remain well below what they have been in the past going back to the 1990s and 1980s.

**Tourism impacts on agricultural economy**

Should tourism activity increase substantially over time, local residents may have a concern regarding possible negative impacts on the agricultural economy. This is unlikely to occur as long as there are systematic land use planning controls in place to protect existing agricultural lands from other uses. The projected increases in tourism visitation as a result of the UNESCO designation are expected to be modest and over the next decade or more visitation levels to Grand Pré are unlikely to return to the levels experienced 10-20 years ago, so tourism impacts are unlikely to change the nature of the community to a point where agriculture is not predominant. Should tourism impacts become much more significant at some point in the distant future, it should be possible
to control any possible negative impacts with good on-site and off-site management protocols and effective land use planning as noted below in section 7.4.

**Relationship of residents to local setting/community**

Another possible concern, fairly similar to that noted for agriculture is the extent to which increased tourism activity in the area might affect the relationship that residents have with their setting/community, such as access to the marshlands, access to public spaces, and overall ability to enjoy their community. As has already been noted and discussed above, the projected visitation increases as a result of the UNESCO designation are relatively modest and can easily be accommodated with the existing infrastructure and services that already exist within the local communities. Therefore, we do not believe that local residents will be impacted significantly in terms of their access to the marshlands, access to public spaces, or other aspects of enjoying their community. In fact, their enjoyment of their community may indeed be enhanced as additional tourism activity may improve the viability of local food and beverage and retail establishments, as well as arts and cultural activities and other community amenities.

**Pressures on resource protection, property values**

The previous economic impact studies for the Grand Pré UNESCO designation have concluded that these pressures are unlikely to occur, particularly any impact on property values. In the Kelco Consulting Impact Study of October 2009 it was concluded that, based on the examination of comparable UNESCO Sites (Lunenburg, New Lanark, Scotland, and Bru Na Boinne, Ireland) pressure on property values did not occur as a result of the designation.

The most relevant example would be Lunenburg itself.

- While there have been significant property value increases in Lunenburg, this is as a result of other real estate factors including interest by Americans, as well as by empty nesters and retirees who look at the community as an ideal location to get away from the pressures of larger cities.
- This kind of real estate phenomenon is already occurring in the Annapolis Valley and the area around Grand Pré and there is already upward pressure on housing prices, as a result of insufficient land available for housing development.
- Therefore, while pressure on property values is a reality already, it is unlikely to be influenced to any significant degree by the UNESCO designation.

**7.4 Recommendations to mitigate negative impacts**

As concluded above, there are unlikely to be any significant negative impacts from the UNESCO designation at Grand Pré. As times goes on, however, and growth occurs at
the site, especially if tourism visitation levels return to what they were 20 years ago, there may be some pressures that need to be addressed. These can easily be handled with well-designed site management protocols and careful planning and development within local communities. Possible site management protocols that would help to ease any possible congestion pressures of increased tourism visitation, as well as avoiding impacts on existing agricultural lands and local communities, include the following:

- Site access controls
- Signage
- Fencing
- Requirement to use guides to access various locations where congestion or impacts on existing residents and agricultural land could occur.

8.2 Key Informant Interviews – Community Input

General

- Grand Pre is about living agriculture and respect for private land is important. It is also a living site with tourism opportunities. This is about an agricultural lifestyle and agricultural character
- Farmers do not want to be seen in the community as being defensive about movement on the dykelands but are concerned about liability
- This is a community committed to heritage
- Biggest challenge is to tell the whole story of many centuries and many peoples
- A unique focus – this a working agricultural area. The residents and agriculture have lived in harmony for 300 years. Tolerance and working together has gone on forever. No conflict issues re traffic or farm smells that often occur in other agricultural areas
- The whole story is not told. There is interpretation for parts of the story. It must be subtly done and appropriate to the landscape - weaving the story without putting emphasis on one people - but on the landscape. The story is the landscape and how the people have interacted over time.
• The whole story is not told – the natural history piece, important vistas, beach, mud flats
• The collective will is to protect the farmland – not develop
• Emphasis is on the 4 communities but the greater area will benefit
• The interpretation needs to be subtle and in keeping with rural Nova Scotia values. Nothing brash. Has to be smaller scale, in keeping with the nature of the community – appropriate and respectful of the humility.
• If we create infrastructure – has to weave the story – follow walking paths, biking, horse and cart.
• Evangeline Beach – people come to see the birds and can’t help but notice Blomidon – beauty.

**Requirements for a quality visitor experience:**

• There will have to be some place to direct tourists – to tell them what is here is and what there is to see. Perhaps a viewpoint – at the National Historic Site
• We have a great OUV, but if somebody went there today, they wouldn’t understand the value of the area
• A tourist plan for the community so that a tourist can come and find out what the points of interest are in Grand Pré - start here and go there. If that is carried out, it will enhance the tourist experience but also keep the tourist movement away from agriculture
• The road down to the iron cross might be used – perhaps a horse and cart ride
• Opportunities exist for archaeological interpretation/ tours
• How about a farm market?
• Wayfinding – map, walking trail, driving map
• View points – there is a good one above the park
• People would probably like to see a working aboiteau
• Visitor information - one of the best in the province – but it is in Wolfville. People need help to plan their experience and have sites identified.
• Do up a booklet – or use internet – to promote. UNESCO designation will bring people into the whole area.
• Access to food and washrooms, resting places
• Perhaps a ring route walking – accessible, clear and quick – orienting information for people – or network of shorter or longer loops with interesting viewing or vantage points – but dykeland must be protected
• Broader perspective than Acadian focus would be welcomed

**Signage**

• Signage is important
• More signage
• Need better signage on the routes – work with Department of Transportation
• The highway signs are very good
• More signs in Kings County would be like trying to rezone farmland
• There is signage at the beach re the birds but on private land. No real public access to see the beach and the movement of tide.
• If you compare to the US and Europe – Kings County is very strict about signage. Different businesses (new) if not on the main road or in the main core, may put a sign up and they are outlawed by the municipality
• Need clear signage and information about what they are seeing, what they have arrived at – could be brochure, a sign, like at the Wolfville waterfront – interpretive signs

**Accommodation**

• Accommodation - not critical here, but perhaps in the region there may be a need for more
• We're fine right now
• Lots of accommodation in Wolfville. If only 6% increase in tourism we will be fine.
• B & B's come and go. More will come if the increase is greater than 6%. If it is 20%, that is another issue.
• Old Orchard Inn and the Wandlyn in Coldbrook – this was not a good summer for them. Better to have 2 that are doing ok than 4 that are struggling

**Legacy Projects**

• Something that is important with or without designation
• Something that will honour community contribution that is practical and usable
• Walking path that would connect National Historic Site to Horton Landing
• Maybe the view plane
• Viewpoint – the one above the park would be the best
• How about something like New Ross or Louisbourg – university students dressed up in red uniforms who re-enact the expulsion – could provide employment for students.
• More pictures and paintings from the time – walk on the road that the planters walked on
• Access down to the beach to see the tide - this is where it started. These are the salt marshes and mud flats that were dyked to create the farmland. Could be something most appreciated by the community. People have complained for years that they don't have access to the beach. This is for the community – the view plane is for the tourists. Perhaps purchase of piece of beach that would offer public access to the beach.
Walking trail – be there indefinitely and something the local people would enjoy.
When the highway department redesigned the crossroad they left a little bit of the highway’s public land. It is not clear what to do with it – could be a planting or a tree (between the filling station and the corner)
Two bits of land where ownership is disputed – lost records – lost clarity of deeds, some way to resolve one or both of the ownership – would be precious as public land. There is no place for a little park or playground. Try to designate areas as public.

**Tourism Development**

- We need a tourist plan for the area. Create a real theme for tourism
- Infrastructure collaboration from provincial government, not only tourism but transportation re roads lighting and safety
- Exit 10 – there is some discussion about putting businesses there with an agricultural theme. May or not go
- People from afar need information about what exactly there is in the valley, e.g. Hall’s Harbour, Harbourville, etc. Important for people to know that these things exist – perhaps a map on the back of a brochure.
- Lots of people come for fall weekends so more advertising/promotion for agriculture - Noggins Farm is a good example
- Tourism infrastructure isn’t bad for the size of Grand Pré - and Wolfville is nearby
- Pick our spots and advertise – important and can help direct people.
- Need a comprehensive plan by the local group so that they all support each other
- Could do more advertising on provincial and federal scene – agriculture goes hand in hand with tourism. Provincial environment department has sanctioned spreading of bio solids on farmland, there is concern that these are in fact safe – need to market that the veggies grown in the area do not use biosolids.
- There is a disconnect between all of the players Destination Southwest Nova, Kings RDA, Municipality – who does what? Who will be carrying out our plan? DSWN should have a stronger role.
- Mayor of Lunenburg talks about the triad of World Heritage sites that could be exploited therefore regional partnerships
- Regional promotion piece – triad of World Heritage sites
- Somebody needs to do something within the local community – a capacity building exercise. We see the opportunity to provide services, but who wants to do it, e.g. horse and buggy and bike tours? How do we spur the private sector to do these things that we suggest? Perhaps a community meeting to see if anybody is interested. Perhaps business planning assistance. How do we
partner with the private sector on these new ideas? Who does that – maybe Kings RDA?

- Opportunity to partner with Blue Beach – could become another UNESCO site – 15 minutes away
- Blue Beach – tremendous - come to Grand Pré first. It is a gold mine – should be developed along with the dykelands.
- UNESCO will have to be promoted big time – promotion is everything and continue to promote it.
- Absolutely critical to have people who live in the area and have a vested interest involved in the decision-making roles. There must be a partnership between locals and other organizations e.g. Kings RDA, DSWN

**Community sensitivities**

- The public is not something the famers want on the dyke, so there must be designated areas for the tourists – but that’s not to say they don’t want people to see the dyke
- You’ll never get 100% to support it – there are a few that don’t want to change anything
- Sensitivities are being dealt with within the community – Christophe has handled this well
- Some are very supportive – but they do not want the community to change
- Do not want any damage to the dykes
- Do not want any encroachment to the farming community – sacred
- How is it going to be protected?
- Twenty old homes from late 1700-1800’s in heritage society – therefore restrictions in Grand Pré - but the homeowners are supportive
- Planter/Acadian issue. How do we approach that? The Planters feel that their story has been ignored
- Agricultural land – protection of it. The area is under a land use review right now. It is a natural area for development. Community does not want change or big scale development
- But, if the numbers are up – they will use local services/products
- It has been unclear about where concerns should be best addressed
- Does designation mean you can or cannot do things to your property – a very real and legitimate concern – not necessarily a problem; people will want to know specifically.
- Will it affect taxes?
- Will it affect property values? If they are raised drastically – could have an impact and become only viable for tourists and less viable as a living community.
• No community forum discussions for a number of months to discuss these issues. People are frustrated because the talk is too general – what exactly is going to happen – “we don’t know” is an answer – we are working to get answers, etc.
Nomination Grand Pré
Draft Terms of Reference (“ToR”) for the
Grand Pré World Heritage Site Stewardship Board (“Board”)

1.0 DEFINITIONS

In these ToR,

“Buffer Zone” means the area surrounding the Nominated Property as described in sections 1.e and 1.f of the Nomination Proposal.

“Canadian Delegation to the World Heritage Committee” means the Parks Canada officials responsible for leading implementation of the World Heritage Convention in Canada, on behalf of the Government of Canada, as a State Party to the Convention. The Canadian Delegation is led by the Director General, National Historic Sites, Parks Canada and speaks on behalf of Canada with respect to official positions related to implementation of the Convention. Communications between the World Heritage Centre and Canada’s World Heritage sites are coordinated by the Canadian Delegation.

“Commemorative Integrity” refers to the condition or state of a national historic site when the site is healthy and whole. A national historic site possesses commemorative integrity when:

- the resources directly related to the reasons for designation as a national historic site are not impaired or under threat,
- the reasons for designation as a national historic site are effectively communicated to the public, and
- the site's heritage values (including those not related to the reasons for designation as a national historic site) are respected in all decisions and actions affecting the site.

“Communication” means all activities related to the public transmission of information through print radio, television, web and any other media, as well as in public events and advertising.

“Consultation” means the process by which the input of a stakeholder or the Mi’kmaq on matters affecting them is sought.

“Education and Marketing Committee” means the committee created by the Board as described in these Terms of Reference for the purpose of coordinating the efforts of the partners involved in raising awareness and promoting the World Heritage Site.
“Grand-Pré National Historic Site of Canada (NHSC)” means the federal land administered by Parks Canada and designated by the Minister responsible for the Historic Sites and Monuments Act as Grand-Pré NHSC.

“Jurisdiction” refers to the area under the authority of federal, provincial, and municipal governments and of the Grand Pré Marsh Body.

“Management Plan” means the document prepared by the Nomination Board in accordance with the sections of the Operational Guidelines regarding management of Nominated Properties and submitted as part of the Nomination Proposal.

“Nomination Board” means the Nomination Grand Pré Advisory Board, the organization that prepares the Nomination Proposal.

“Nominated Property” means the area proposed for World Heritage inscription as described in sections 1.e and 1.f of the Nomination Proposal, known as “The Landscape of Grand Pré”.

“Nomination Proposal” means the formal documentation prepared by the Nomination Board and submitted by the Canadian Delegation to the World Heritage Committee for the purpose of inscribing the Nominated Property on the World Heritage List.

“Operational Guidelines” means the document prepared by the World Heritage Committee officially known as The Operational Guidelines for the Implementation of the World Heritage Convention. Among other things the Operational Guidelines provide guidance on the requirements for the preparation of Nomination Proposals and outline the Committee’s expectations with respect to management of World Heritage sites.

“Outstanding Universal Value (OUV)” means the “cultural and/or natural significance which is so exceptional as to transcend national boundaries and to be of common importance for present and future generations of all humanity. As such, the permanent protection of this heritage is of the highest importance to the international community as a whole” (The Operational Guidelines for the Implementation of the World Heritage Convention, UNESCO 2008, paragraph 49). Demonstrating to the World Heritage Committee that the Nominated Property has Outstanding Universal Value is the main purpose of the Nomination Proposal, in particular through sections 3.a and 3.b. If the World Heritage Committee confirms that the Nominated Property has Outstanding Universal Value and inscribes it on the World Heritage List, the Committee will adopt a formal Statement of Outstanding Universal Value for the property and will hold Canada, as a State Party to the World Heritage Convention, through the Board, accountable for conserving, protecting and presenting this Outstanding Universal Value and transmitting it to future generations.

“Partners” means the organizations that decide in the course of managing the Nominated Property to collaborate and share resource to achieve the mandate of the Board.
“Regulatory Authorities” means the federal and provincial departments with authority under a specific Act governing an activity within the boundaries of the Nominated Property and of its Buffer Zone.

“Requests For Input” means any form of request for advice, opinion, recommendation, obtained through consultation or other form of notification to the Board by a Regulatory Authority or a stakeholder.

“Site Management Coordinator” means the person responsible for implementing the direction of the Board and for coordinating the Regulatory Authorities and other partners to implement the Management Plan.

“State Party” means a member state of UNESCO that has ratified the World Heritage Convention.

“Stewardship Board” (the Board) means the Grand Pré World Heritage Site Stewardship Board, the organization identified as the site manager in the Nomination Proposal.

“Technical Advisory Committee” means the committee created by the Board as described in these Terms of Reference for the purpose of providing expert advice to the Board on the protection and management of the World Heritage Site.

“World Heritage Centre” means the Secretariat to the World Heritage Committee, provided by the Director General of the United Nations Educational, Scientific and Cultural Organization (UNESCO), located in Paris, France.

“World Heritage Committee” means the Intergovernmental Committee for the Protection of the World Cultural and Natural Heritage, as established by the World Heritage Convention. The Committee consists of 21 States Parties to the Convention, duly elected by all States Parties to the Convention to guide implementation of the Convention, including by establishing and maintaining the World Heritage List. Amongst its functions is to review nomination proposals submitted by States Parties to determine whether the nominated properties meet the requirements for inscription on the World Heritage List, in particular whether the nominated properties have OUV. When the Committee inscribes a nominated property on the World Heritage List, it expects the relevant State Party and site manager to conserve, protect, and present this OUV and to transmit it to future generations. It becomes a stakeholder in the management of the property, with a duty to take an interest in the property’s state of conservation. The World Heritage Committee may delete a site from the World Heritage List if it determines that the property has deteriorated to the extent that it has lost those characteristics that justified its inclusion on the World Heritage List.

“World Heritage Convention” means the international agreement formally known as the Convention Concerning the Protection of World Cultural and Natural Heritage. Canada is a State Party to the Convention, and recognizes that the protection of World Heritage Sites is the duty of the international community as a whole.
“World Heritage List” means the list of cultural and natural heritage properties created by the World Heritage Convention which consists of properties that the World Heritage Committee considers to have OUV.

“World Heritage Site” (WHS) means the site which has been deemed by the World Heritage Committee to have OUV and is inscribed on the World Heritage List.

1.0 Title

The Board acting as site manager for the Landscape of Grand Pré World Heritage Site shall be named the *Grand Pré World Heritage Site Stewardship Board – Comité d’intendance du site du patrimoine mondial de Grand-Pré*.

2.0 Purpose

In the event of a successful inscription of the Nominated Property on UNESCO’s World Heritage List, the Nomination Board will cease to exist. A Board will be created to replace it and act as the site manager in accordance with the Operational Guidelines and the Nomination Proposal.

3.0 Status of the Board

3.1 The Board is a permanent committee of the Kings Regional Development Agency (Kings RDA). It abides by the rules and regulations regulating similar committees of the Kings RDA.

3.2 Should the mandate or the terms of reference of the Stewardship Board change, the relationship with the Kings RDA will be reviewed by the Stewardship Board and actions will be taken as appropriate to ensure the sustainability of the WHS’s governance

4.0 Responsibilities

4.1 The responsibilities of the Board will be to:
   a) Act as the manager of the WHS;
   b) Implement the Management Plan through a coordinated management approach between all Regulatory Authorities;
   c) Engage the stakeholders in the stewardship of the WHS;
   d) Consult its members on key issues;
   e) Promote the WHS’s Outstanding Universal Value;
   f) Foster and facilitate research and information sharing for the benefit of the WHS;
   g) Report on the condition of the property, including, as necessary, to the World Heritage Centre through the Canadian Delegation to the World Heritage Committee;
   h) Appoint a Site Management Coordinator;
   i) Obtain the support of relevant authorities;
   j) Oversee the management of the finances of the WHS, including adopting business plans, receiving financial reports, and approve spending; and,
Review and approve contracts and other forms of agreements.

4.2 The Board may establish sub-committees to provide advice or to assist in the performance of its responsibilities.

4.3 At least one member of the Board will be part of such sub-committees.

4.4 The Board may seek outside expertise to achieve its objectives.

4.5 The Board may establish formal rules of procedure and policies that are necessary for the performance of its responsibilities.

4.6 The Board will respond within six weeks to requests for input received from the different jurisdictions regarding development projects proposed for the area within the boundary and Buffer Zone of the WHS. It is understood that the Co-Chairs of the Board will make representations to various government bodies regarding issues identified by the Board. While the Board may consult stakeholders and the residents of the WHS as it carries out its mandate, the Board will not undertake formal public consultations regarding a development project as this would duplicate the work of other jurisdictions.

5.0 Membership

5.1 The members of the Board are the following organizations:

As voting members
- Councillor of District 12, Municipality of the County of Kings ("County of Kings");
- Kings Regional Development Agency ("Kings RDA");
- Grand Pré Marsh Body ("Marsh Body");
- Société nationale de l’Acadie ("SNA");
- Société Promotion Grand-Pré ("SPGP");
- Glooscap First Nation ("Glooscap");
- Destination Southwest Nova ("DSWN");
- Grand-Pré and Area Community Association ("Community Association"); and,
- Parks Canada Agency ("Parks Canada").

As ex-officio and non voting members
- Staff, the Municipality of the County of Kings ("County of Kings");
- Atlantic Canada Opportunity Agency ("ACOA");
- Department of Tourism, Culture and Heritage of the Province of Nova Scotia ("DTCH");
- Office of Acadian Affairs of the Province of Nova Scotia ("OAA");
- Department of Agriculture of the Province of Nova Scotia ("Agriculture"); and,
- Nova Scotia Economic and Rural Development ("NSERD").

5.2 Each organization shall delegate one representative and one alternate.
5.3 Delegates and alternates shall have authority to make decisions on the Board.

5.4 The terms of office of representatives are at the discretion of the appointing voting member organization.

5.5 New members can be added to join by the Board to ensure the balance and representation necessary to achieve its mandate. There will be no more than 12 voting members.

5.6 The Site Management Coordinator will sit on the Board, without voting rights, to report and advise the Board as necessary.

5.7 Resource people may be invited to attend the meetings upon request from the Co-chairpersons on behalf of the Board to provide advice and assistance as necessary. Resource people will not have a right to vote.

5.8 Board members who no longer represent the organization for which they were nominated will cease to be members of the Board.

5.9 Experts can be added as ex-officio members of the Board as required.

6.0 Co-Chairpersons

6.1 The positions of Co-chairperson of the Board will be held by (1) a member of the local community and (2) a member of the Acadian community. Co-chairs will serve for three year terms. The local community representative will be delegated by the Community Association. The Acadian community representative will be delegated by the SNA. Both positions are from the membership of the Board.

6.2 The responsibilities of the Co-chairpersons include:
- Scheduling meetings and approving agendas;
- Inviting resource people to attend meetings when required by the Board;
- Chairing meetings;
- Ensuring that all agenda items end with a decision, action or definite outcome;
- Reviewing the draft minutes prior to their distribution;
- Approving media statements;
- Representing the WHS in an official capacity; and,
- Serving as the official spokespersons of the WHS.

6.3 Co-chairs are by default members of the committees created by the Board.

7.0 Secretariat

7.1 The Secretariat will be operated by Kings RDA.
7.2 The position of Secretary of the Board will be held by an employee of Kings RDA.

7.3 The responsibilities of the Secretariat are to:
- Support the operations of the Board and its committees;
- Manage correspondence on behalf of the Board;
- Manage the website for the WHS;
- Manage the budget;
- Prepare funding applications;
- Manage contracts;
- Report on financial matters;
- Prepare and update policies for the Board; and,
- Provide coordination for media, public, and stakeholder relations.

7.4 The responsibilities of the Secretary are to:
- Prepare meeting agendas and issue notices of meetings 10 days prior to the meeting date, and ensuring that all documents required for discussion or comment are attached to the agenda;
- Take notes and prepare minutes of Board meetings within 10 days after the meeting;
- Provide draft minutes to the Co-chairpersons for their review prior to distribution to the Board;
- Ensure that the minutes of the previous meeting are approved at the beginning of the following meeting; and
- Organize the logistics of the meetings of the Board and other meetings relating to the operations of the Board.

7.5 The Secretary will provide quarterly reports on the operations of the Secretariat, including reports on correspondence, budget, contracting, and media, public, and stakeholder relations.

8.0 Management of the World Heritage Site

8.1 The Board will manage the WHS according to the highest standards in cultural and natural heritage management, to the requirements of the Operational Guidelines, and to the Management Plan submitted at the time of the Nomination Proposal and its subsequent updates.

8.2 The Management Plan will be reviewed five years after inscription on the World Heritage List and every six years following that.

8.3 The Board will engage, work with, and report to the Regulatory Authorities with Jurisdiction in the Buffer Zone.

8.4 Public Consultation is solely the responsibility of the Regulatory Authorities. Consultation of the Mi’kmaw is the responsibility of the Regulatory Authorities representing the Federal Crown and the Province of Nova Scotia.
8.5 In order to ensure the effective implementation of the Management Plan, the Board will appoint a Site Management Coordinator and set up a Technical Advisory Committee and an Education and Marketing Committee. It may set up any other committee it deems necessary to achieve its mandate.

9.0 Site Management Coordinator

9.1 The Site Management Coordinator will report to the Board.

9.2 The responsibilities of the Site Management Coordinator are to:
   - Coordinate the implementation of the Management Plan for the WHS;
   - Coordinate the implementation of the decisions of the Board;
   - Coordinate the review of Requests For Input;
   - Chair the Technical Advisory Committee;
   - Chair the Education and Marketing Committee;
   - Chair any other committees created by the Board;
   - Prepare a five-year business plan for the Board with annual statements of implementation;
   - Prepare reports, position papers and recommendations to the Board;
   - Coordinate media, public, and stakeholder relations with key partners;
   - Seek and facilitate partnerships to pursue the goals of implementing the Management Plan, particularly for activities relating to research, protection, promotion, and sustainability;
   - Report annually on the implementation of the Management Plan and on the condition of the World Heritage Site;
   - Coordinate and prepare the report on the condition of the WHS for Canada’s Periodic Report under the guidance of the Canadian Delegation to the World Heritage Committee;
   - Review the Management Plan and any other management related document;
   - Represent the WHS on the Canadian Network of World Heritage Sites;
   - Liaise with the Canadian Delegation to the World Heritage Committee, in particular on matters relating to media relations, project reviews, pressures on the WHS, and, as necessary, communication with the World Heritage Centre.

9.3 The Site Management Coordinator will provide quarterly reports on the partnerships, condition of the site, activities, and any other matter pertaining to the management of the WHS.

9.4 The business plan will identify a funding strategy, resources required, priorities, and positive outcomes for the protection, promotion and interpretation of the WHS.

10.0 Process to Review Requests for Input

10.1 The Site Management Coordinator will advise the Board of any Request For Input received and will provide a short summary of the proposal.
10.2 The Board will acknowledge receipt of the Request For Input directly to the Regulatory Authority and will direct the Site Management Coordinator to solicit advice from the Technical Advisory Committee and other experts as needed.

10.3 The review process will take no more than six weeks between acknowledgement of receipt and the Board’s submission of a statement on the proposal.

11.0 Technical Advisory Committee

11.1 The Board will establish a Technical Advisory Committee to advise the Board regarding issues which could have an impact on the OUV of the WHS.

11.2 The Committee will provide technical advice on the protection of the property’s OUV and assist in reporting on the condition of the WHS.

11.3 The membership of the Technical Advisory Committee may include representatives of the federal, provincial and municipal governments, ICOMOS Canada, outside experts and stakeholders.

11.4 The Technical Advisory Committee will meet at least twice a year or as required to provide support to the Board.

11.5 The Technical Advisory Committee will review Requests For Input within a time frame of no longer than four weeks. It will provide comprehensive, accurate, and objective information to the Board through the Site Management Coordinator in the form of reports.

11.6 Should the Technical Advisory Committee require more time to proceed with the review, the Chair of the Technical Advisory Committee will make a written request to the Board no later than two weeks after receipt of the Request For Input that will include a justification, a detailed timeline, and resources required to complete the review. The Board will then contact the Regulatory Authority to seek accommodation.

11.7 The Technical Advisory Committee will provide an annual report on its activities for the May meeting of the Board.

12.0 Education and Marketing Committee

12.1 The Board will establish an Education and Marketing Committee to advise the Board on issues relating to promotion, interpretation, and education, as well as to coordinate the development of products, activities and messages related to the WHS.

12.2 The membership of the Education and Promotion Committee will include representatives of the government and non government agencies responsible for
tourism, interpretation, and regional economic development, outside experts and local area stakeholders.

12.3 The Education and Promotion Committee will meet at least twice a year or as needed.

12.4 The Education and Promotion Committee will provide an annual report on its activities for the May meeting of the Board.

13.0 Meetings

13.1 Meetings shall be held quarterly in February, May, August, and November.

13.2 Special or extraordinary meetings shall be called by the Co-chairpersons upon the request in writing specifying the reasons justifying the meeting, of two or more members of the Board.

13.3 A quorum of members must be present before a meeting can proceed. Fifty percent plus 1 of voting members of the Board must be present before the meeting can proceed.

13.4 Decisions will be made by consensus and will be approved unanimously. A vote will be conducted with a majority determining the decision should consensus not be possible.

13.5 Each voting member will have an opportunity at each meeting to provide a summary of concerns, issues, and opportunities that affect the stakeholder group they represent and discuss these as appropriate.

13.6 The language of meetings will be usually English.

13.7 Agendas, minutes and other documents relevant will be made available in English and French.

13.8 Meetings are public and minutes will be made available, following approval of the Board.

13.9 Invitations will be sent to the Regulatory Authorities within the Buffer Zone prior to a meeting of the Board. Minutes will be provided following the meeting to those Regulatory Authorities.

13.10 The Board will call a public meeting once a year no later than June 30th to provide a report on the management of the WHS and discuss issues, challenges, and opportunities.
14.0 Funding

14.1 The Board is responsible to approve and review the budget and business plans.

14.2 The finances of the Board are to be managed by Kings RDA. The Kings RDA will enter into contracts and agreements on behalf of the Board subject to the Board’s approval. Staff of the Board will be hired and managed by the Kings RDA.

14.3 The Board will develop a policy to manage the funds from its budget related to the protection of historical and archaeological features no later than in the first year following a successful inscription.

14.4 A five-year operational budget will be included within the business plan.

14.5 Special projects will be funded from project-based funding applications.

14.6 The organizations represented on the Board will cover the travel costs and other costs associated with the participation of their representative on the Board.

15.0 Communications and Media Relations

15.1 Communications and Media Relations are managed by the Secretariat and the Site Management Coordinator.

15.2 The spokespeople of the Board are the Co-chairpersons or their delegates.

15.3 Media issues relating to the WHS will be managed by the Board in conjunction with Parks Canada, the Province of Nova Scotia and the Canadian Delegation to the World Heritage Committee. In advance of communications with the media, proactive discussion between the Board and the Canadian Delegation to the World Heritage Committee is particularly important if the media issue relates to a policy question with respect to implementation of the World Heritage Convention rather than a specific management issue at the WHS or if it relates to a management issue that may also be relevant to another WHS in Canada.

16.0 Amendments or Revisions

The terms of reference will be reviewed at least every three years and may be reviewed and altered in writing to meet the requirements of the Board, by at least two thirds (2/3) agreement.

MEMORANDUM OF UNDERSTANDING (MOU)

between

GRAND PRÉ AND AREA COMMUNITY ASSOCIATION ("Community Association"),
and
GRAND PRÉ MARSH BODY ("Marsh Body"),
and
KINGS REGIONAL DEVELOPMENT AGENCY ("Kings RDA"),
and
MUNICIPALITY OF THE COUNTY OF KINGS ("County of Kings"),
and
PARKS CANADA AGENCY ("Parks Canada"),
and
PROVINCE OF NOVA SCOTIA ("Nova Scotia") as represented by the Minister of
Tourism, Culture, and Heritage,
and
THE SOCIÉTÉ PROMOTION GRAND-PRÉ INC. ("Société"),
and
THE SOCIÉTÉ NATIONALE DE L’ACADIE ("SNA")

(hereinafter referred to collectively as the “Parties” and individually as the “Party”)

1.0   DEFINITIONS

In this MOU,

“Buffer Zone” means the area surrounding the Nominated Property as described in
sections 1.e and 1.f of the Nomination Proposal.

“Canadian Delegation to the World Heritage Committee” means the Parks Canada
officials responsible for leading implementation of the World Heritage Convention in
Canada, on behalf of the Government of Canada, as a State Party to the Convention. The
Canadian Delegation is led by the Director General, National Historic Sites, Parks
Canada and speaks on behalf of Canada with respect to official positions related to
implementation of the Convention. Communications between the World Heritage Centre
and Canada’s World Heritage sites are coordinated by the Canadian Delegation.

“Commemorative Integrity” refers to the condition or state of a national historic site
when the site is healthy and whole. A national historic site possesses commemorative
integrity when:
• the resources directly related to the reasons for designation as a national historic
  site are not impaired or under threat,
• the reasons for designation as a national historic site are effectively communicated
to the public, and
• the site’s heritage values (including those not related to the reasons for designation
  as a national historic site) are respected in all decisions and actions affecting the
  site.

“Communication” means all activities related to the public transmission of information
through print, radio, television, web and any other media, as well as in public events and
advertising.

“Consultation” means the process by which the input of a stakeholder or the Mi’kmaq
on matters affecting them is sought.
“Education and Marketing Committee” means the committee created by the Stewardship Board as described in its Terms of Reference for the purpose of coordinating the efforts of the partners involved in raising awareness and promoting the World Heritage Site.

“Grand-Pré National Historic Site of Canada (NHSC)” means the federal land administered by Parks Canada and designated by the Minister responsible for the Historic Sites and Monuments Act as Grand-Pré NHSC.

“ICOMOS” means the International Council of Monuments and Sites, the World Heritage Committee’s official Advisory Body with respect to cultural heritage matters.

“ICOMOS Canada” means the Canadian national committee of the International Council of Monuments and Sites.

“Jurisdiction” refers to the area under the authority of federal, provincial, and municipal governments and of the Grand Pré Marsh Body.

“Management Plan” means the document prepared by the Nomination Board in accordance with the sections of the Operational Guidelines regarding management of Nominated Properties and submitted as part of the Nomination Proposal.

“Nomination Board” means the Nomination Grand Pré Advisory Board, the organization that prepares the Nomination Proposal.

“Nominated Property” means the area proposed for World Heritage inscription as described in sections 1.e and 1.f of the Nomination Proposal, known as “The Landscape of Grand Pré”.

“Nomination Proposal” means the formal documentation prepared by the Nomination Board and submitted by the Canadian Delegation to the World Heritage Committee for the purpose of inscribing the Nominated Property on the World Heritage List.

“Operational Guidelines” means the document prepared by the World Heritage Committee officially known as The Operational Guidelines for the Implementation of the World Heritage Convention. Among other things the Operational Guidelines provide guidance on the requirements for the preparation of Nomination Proposals and outline the Committee’s expectations with respect to management of World Heritage sites.

“Outstanding Universal Value (OUV)” means “cultural and/or natural significance which is so exceptional as to transcend national boundaries and to be of common importance for present and future generations of all humanity. As such, the permanent protection of this heritage is of the highest importance to the international community as a whole” (The Operational Guidelines for the Implementation of the World Heritage Convention, UNESCO 2008, paragraph 49). Demonstrating to the World Heritage Committee that the Nominated Property has Outstanding Universal Value is the main purpose of the Nomination Proposal, in particular through sections 3.a and 3.b of that document. If the World Heritage Committee confirms that the Nominated Property has Outstanding Universal Value and inscribes it on the World Heritage List, the Committee will adopt a formal Statement of Outstanding Universal Value for the property and will hold Canada, as a State Party to the World Heritage Convention, through the Stewardship Board, accountable for conserving, protecting and presenting this Outstanding Universal Value and transmitting it to future generations.

“Partners” means the organizations that decide in the course of managing the Nominated Property to collaborate and share resources to achieve the mandate of the Stewardship Board and may include the Parties as well as non-Parties to this MOU.
“Regulatory Authorities” means the federal and provincial departments with authority under a specific Act governing an activity within the boundaries of the Nominated Property and of its Buffer Zone.

“Site Management Coordinator” means the person responsible for implementing the direction of the Stewardship Board and for coordinating the Regulatory Authorities and other partners to implement the Management Plan.

“State Party” means a member state of UNESCO that has ratified the World Heritage Convention.

“Stewardship Board” means the Grand Pré World Heritage Site Stewardship Board, the organization identified as the site manager in the Nomination Proposal.

“Terms of Reference” means the terms of reference of the Stewardship Board as agreed upon by the Parties at the time of the signing of this MOU.

“Technical Advisory Committee” means the committee created by the Stewardship Board as described in its Terms of Reference for the purpose of providing expert advice to the Stewardship Board on the protection and management of the World Heritage Site.

“World Heritage Centre” means the Secretariat to the World Heritage Committee, provided by the Director General of the United Nations Educational, Scientific and Cultural Organization (UNESCO), located in Paris, France.

“World Heritage Committee” means the Intergovernmental Committee for the Protection of the World Cultural and Natural Heritage, as established by the World Heritage Convention. The Committee consists of 21 States Parties to the Convention, duly elected by all States Parties to the Convention to guide implementation of the Convention, including by establishing and maintaining the World Heritage List. Amongst its functions is to review nomination proposals submitted by States Parties to determine whether the nominated properties meet the requirements for inscription on the World Heritage List, in particular whether the nominated properties have OUV. When the Committee inscribes a nominated property on the World Heritage List, it expects the relevant State Party and site manager to conserve, protect, and present this OUV and to transmit it to future generations. It becomes a stakeholder in the management of the property, with a duty to take an interest in the property’s state of conservation. The World Heritage Committee may delete a site from the World Heritage List if it determines that the property has deteriorated to the extent that it has lost those characteristics that justified its inclusion on the World Heritage List.

“World Heritage Convention” means the international agreement formally known as the Convention Concerning the Protection of World Cultural and Natural Heritage. Canada is a State Party to the Convention, and recognizes that the protection of World Heritage Sites is the duty of the international community as a whole.

“World Heritage List” means the list of cultural and natural heritage properties created by the World Heritage Convention which consists of properties that the World Heritage Committee considers to have OUV.

“World Heritage Site” means the site which has been deemed by the World Heritage Committee to have OUV and is inscribed on the World Heritage List.

2.0 PURPOSE
The purpose of this MOU is to set to the means by which the Parties agree to collaborate through mutual understanding and assistance to manage the Nominated Property.

3.0 SCOPE

The scope covers the relationship between the Parties both during the period following the submission of a Nomination Proposal to UNESCO and a decision by the World Heritage Committee on that Nomination Proposal, and after that decision in the event of a successful inscription.

Any reference in this MOU to a WHS at Grand Pré is conditional to a successful inscription by the World Heritage Committee.

4.0 BACKGROUND

Grand Pré has been on Canada’s Tentative List for potential World Heritage inscription by UNESCO since 2004. As such, it is proposed by Canada as a candidate for inscription on the World Heritage List, the highest possible international recognition for cultural and natural heritage sites. It is a distinction that if achieved would bring greater international attention to an extraordinary place, one that is already celebrated by various provincial and national designations.

The Nomination Board has been actively working since 2007 at developing a nomination dossier for submission to UNESCO. The Nomination Board has been conducting research, public engagement activities, and Management Planning exercises to prepare a solid proposal. The support of the local area communities and stakeholders and that of government departments and agencies at the federal, provincial and municipal levels has been instrumental in the completion of the Nomination Proposal.

Following the submission of a Nomination Proposal to UNESCO, a review process is led by ICOMOS which lasts 18 months. A decision is made by the World Heritage Committee once a year.

There are multiple Regulatory Authorities active in the Grand Pré area. Consequently, and in line with the requirement outlined in the Operational Guidelines to develop a management plan and identify an entity responsible for the management of the World Heritage Site, the Parties have developed jointly a Management Plan and are setting up a governance structure for the World Heritage Site. The Management Plan relies on the Regulatory Authorities for its implementation.

5.0 STATEMENT OF COMMITMENT

5.1 The Parties agree to continue supporting the Nomination Proposal and the Nomination Board up until a decision by the World Heritage Committee is made.

5.2 The Parties agree to establish a framework which will govern their actions in the implementation of the Management Plan to ensure the integrity of the Nominated Property and of the WHS.

5.3 The Regulatory Authorities agree to provide mechanisms, including timetables, to consult and receive recommendations from the Nomination Board on issues pertaining to the management of the Nominated Property and from the Stewardship Board on issues pertaining to the management of the WHS, including on means to protect its OUV.

5.4 The Parties agree to protect the Nominated Property as described in the Nomination Proposal until a decision is made by the World Heritage Committee.
5.5 The Parties agree to protect the OUV of the WHS, and the resources and attributes of the WHS that are recognized as the basis for its OUV, as recognized by the World Heritage Committee at the time of the inscription of Grand Pré on the World Heritage List.

5.6 The Parties agree to apply the following principles to guide their actions during the term of this MOU:

Principle 1: Management of the Nominated Property will meet or exceed World Heritage standards regardless of inscription.

Principle 2: The primary focus of the Management Plan is to address issues directly related to the management and conservation of the WHS’s OUV and attributes by providing a framework for advice from the Stewardship Board and for decision-making for the Regulatory Authorities.

Principle 3: The Management Plan recognizes that the Nominated Property is set within an active agricultural community where people continue to live and work. People have created, lived and worked on this land for generations and have been responsible stewards of the land. The Management Plan also recognizes that this is an area of great importance for the Acadians who have a strong emotional attachment to it.

Principle 4: Management of the Nominated Property in relation to World Heritage guidelines will be a shared responsibility among the different owners, communities, and government entities with regulatory responsibilities for the Nominated Property. The Management Plan recognizes that actions undertaken by an owner, community, or government entity with regulatory responsibilities may have a detrimental impact on the Nominated Property and that communication, coordination, and collaboration are essential to its long-term protection.

Principle 5: Management and protection will be delivered through existing boards, bodies, and government authorities, supplemented by technical advice, interpretation, and education from the Stewardship Board and procedures developed to accommodate a designated World Heritage Site.

5.7 In addition, the Parties agree to pursue the following goals and objectives in relation to the management of the Nominated Property during the term of this MOU:

Goal 1: To provide for the protection, continuing community and agricultural use and appreciation of the Nominated Property by:

a) Ensuring that agriculture remains a vibrant economic activity of the community;
b) Dedicating resources to the monitoring and maintenance of the dykes;
c) Preserving and enhancing the memorials reflecting the enduring importance of the area for the Acadians;
d) Nurturing ongoing research and filling the gaps in knowledge about the landscape and the people that inhabited it over the years;
e) Ensuring that the Marsh Body, as long term steward of the marshland, continues to play a significant role in the maintenance, use and protection of the marshlands;
f) Informing visitors to the community, through signage and brochures, of the need to be mindful that they are entering an active agricultural community; and,
g) Working with the Marsh Body to ensure that visitors have access to the values of the WHS without interfering with the ongoing agricultural use of the marshland.

Goal 2: To enrich the existing tourism destination by promoting wide recognition, understanding and appreciation of the educational and cultural values represented by the Nominated Property by:
   a) Developing programs, activities, tools, and interpretation that raise awareness of the importance of the landscape for the different communities, including the Mi'kmaw, the Acadians, and the descendants of the New England Planters;
   b) Promoting visitation through regional, national and international media;
   c) Ensuring that promotion is managed responsibly in all aspects of publicity in relation to the Nominated Property in accordance with UNESCO guidelines.
   d) Developing tools and interpretation on the history and importance of agriculture;
   e) Continuing to raise awareness about the Acadian people and the way they overcame their forced migrations of the 18th century; and,
   f) Developing partnerships with existing World Heritage Sites.

Goal 3: To instill a strong sense of shared community pride and stewardship in the protection, interpretation and promotion of the Nominated Property by:
   a) Providing for community input and encouraging community participation;
   b) Engaging Acadian, local and other stakeholder communities in activities that celebrate the importance of the Grand Pré landscape;
   c) Employing a governance model to ensure that the interests and concerns of local residents and the Acadian community are heard, discussed, and reflected in the advice to the different Regulatory Authorities;
   d) Ensuring the local and Acadian schools are provided sufficient information and opportunities to incorporate the experience at Grand Pré into their curriculum.

6.0 ROLES AND RESPONSIBILITIES

6.1 Nomination Board

   6.1.1 The Nomination Board, as the organization responsible for preparing a Nomination Proposal, has the mandate to define the first terms of reference for the Stewardship Board.

   6.1.2 After the Nomination Proposal has been submitted, the Nomination Board will continue to lead the proposal up until a decision by the World Heritage Committee. It will maintain stakeholder support, continue to communicate with stakeholders and government bodies and proceed with key commitments. In cooperation with the Canadian Delegation to the World Heritage Committee, it will coordinate preparations for the ICOMOS evaluation mission and provide, as necessary, any further information requested by ICOMOS subsequent to the mission.

   6.1.3 If the Nominated Property is inscribed on the World Heritage List by the World Heritage Committee, the Nomination Board will cease to exist.

   6.1.4 If the Nominated Property is inscribed on the World Heritage List, the Parties agree to create the Grand Pré World Heritage Site Stewardship Board.

6.2 Stewardship Board
6.2.1 If the World Heritage Committee inscribes the Nominated Property on the World Heritage List, the Stewardship Board will act as the WHS manager in accordance with the Operational Guidelines and as described in its terms of reference.

6.2.2 If the World Heritage Committee inscribes the Nominated Property on the World Heritage List, it will expect Canada, as a State Party to the Convention and the Stewardship Board, as site manager, to conserve, protect, and present this OUV and to transmit it to future generations.

6.2.3 The Stewardship Board will stand as a committee of the Kings RDA.

6.2.4 The mandate of the Stewardship Board is to ensure the conservation, protection, presentation and transmission to future generations of the property’s OUV through implementation of the Management Plan through a coordinated management approach between all Regulatory Authorities, advice to ensure the integrity of the WHS, promotion of the WHS’s OUV, engagement of the stakeholders in the stewardship of the WHS, and reporting on the condition of the WHS. If it is necessary to report to the World Heritage Centre about the condition of the WHS, the Canadian Delegation to the World Heritage Committee will work cooperatively with the Stewardship Board to provide the necessary information.

6.2.5 Should the mandate or the terms of reference of the Stewardship Board change, the relationship with the Kings RDA will be reviewed by the Stewardship Board and actions will be taken as appropriate to ensure the sustainability of the WHS’s governance.

6.2.6 The structure of the Stewardship Board as described in its terms of reference will include representation from the local area communities, the Acadian community, the Mi’kmaq, the Regulatory Authorities with Jurisdiction for the area included within the boundary of the Nominated Property, key stakeholders and other government bodies.

6.2.7 In order to support the operations of the Stewardship Board, resources will be provided by Parks Canada, Nova Scotia, the County of Kings, Kings RDA, and other Partners, which will include staff for logistical support, a site management coordinator, and an operational budget.

6.2.8 The Stewardship Board has the authority to Consult its membership. Public Consultation is solely the responsibility of the Regulatory Authorities. Consultation of the Mi’kmaq is the responsibility of the Regulatory Authorities representing the Federal Crown and Nova Scotia.

6.2.9 The Stewardship Board will foster and facilitate research and information sharing for the benefit of the WHS and may seek outside expertise to achieve its objectives. The Stewardship Board may also engage other stakeholders, and the Regulatory Authorities for the areas included in the Nominated Property’s Buffer Zone who are not specifically identified in this MOU.

6.2.10 The Stewardship Board will establish a Technical Advisory Committee, an Education and Marketing Committee, and any other committee it deems necessary to achieve its mandate in accordance with its terms of reference. These committees will advise the Stewardship Board regarding issues which could have an impact on the OUV of the WHS, including on...
its protection, interpretation, and promotion.

6.3 The County of Kings

6.3.1 The County of Kings is a voting member of the Nomination Board and of the Stewardship Board through the County councillor representing District 12.

6.3.2 The County of Kings will Consult with the Nomination Board and the Stewardship Board on development projects, zoning issues and other matters that could have an impact on the Nominated Property and the WHS.

6.3.3 The County of Kings will notify Nova Scotia of projects and activities that may occur within the boundary of the Nominated Property and that may have an impact on the protection of archaeological heritage.

6.3.4 The County of Kings will provide support and advice to the Nomination Board and the Stewardship Board on a when and as required basis, subject to the availability of funds and personnel and in accordance with applicable regulations.

6.3.5 The County of Kings will establish a data sharing agreement and monitoring agreement with Parks Canada and Nova Scotia.

6.3.6 The County of Kings will provide the necessary information to report on the condition of the WHS.

6.4 Community Association

6.4.1 The Community Association will be a voting member of the Stewardship Board.

6.4.2 It will serve as the co-chair representing the local residents and will fulfill this role according to the terms of reference for the Stewardship Board.

6.4.3 The Community Association will ensure that the interests and concerns of the residents of the communities of Grand Pré, Hortonville, North Grand Pré and Lower Wolfville are expressed and taken into consideration in all matters pertaining to the management of the WHS.

6.4.4 The Community Association will provide support and advice to the Stewardship Board on engaging, raising awareness, and working with the residents to manage the WHS effectively.

6.5 Kings RDA

6.5.1 Kings RDA is a voting member of the Nomination Board and the Stewardship Board.

6.5.2 Kings RDA will continue to provide administrative support for the Nomination Board and the Stewardship Board ensuring that minutes of meetings are recorded and distributed.

6.5.3 Kings RDA will continue to host the Nomination Board as one of its committees.
6.5.4 Kings RDA will host the Stewardship Board as one of its committees if the Nominated Property is successfully inscribed on the World Heritage List.

6.5.5 Kings RDA will provide financial management capacity for the Nomination Board and the Stewardship Board by preparing financial statements.

6.5.6 Kings RDA will enter into contracts and agreements on behalf of the Stewardship Board as needed to support its mandate.

6.5.7 Kings RDA will prepare submissions to other government bodies for resources required to undertake projects deemed necessary by the Nomination Board and Stewardship Board.

6.6 Marsh Body

6.6.1 The Marsh Body is a voting member of the Nomination Board and of the Stewardship Board.

6.6.2 It will provide support and advice to ensure monitoring and reporting requirements for the WHS are achieved.

6.6.3 The Marsh Body will inform the Nomination Board and the Stewardship Board one month prior to work commencing, about impending work on dykes, drainage, and roads, for the site management coordinator to determine the potential presence of archaeological sites and preserve historical features. This will allow the planning and coordination of resources to monitor potential impacts to historical and archaeological features to avoid undue delays.

6.6.4 The site management coordinator will work with the Marsh Body and with Nova Scotia to determine the best course of action to protect key features of the Nominated Property, including archaeological and historical features, with limited impact on ongoing agricultural activities.

6.6.5 The Marsh Body will assist the Nomination Board, Stewardship Board, and Regulatory Authorities in carrying out necessary monitoring work to ensure the protection of the Nominated Property and of the WHS.

6.6.6 In the event that the Stewardship Board manages funds to protect archaeological and historical features in the Nominated Property, the Site Management Coordinator will work with the Marsh Body and Nova Scotia to allocate resources based on agreed priorities and the Stewardship Board’s policy regarding the provision of resources for the protection of archaeological and historical features in the Nominated Property.

6.6.7 The Marsh Body will provide support to engage its membership in protecting the Nominated Property as well as to gather the necessary information to report on the condition of the WHS.

6.7 Parks Canada

6.7.1 Parks Canada is an ex-officio member of the Nomination Board.

6.7.2 Parks Canada as a custodian of Grand-Pré NHSC is a voting member of the Stewardship Board.
6.7.3 Parks Canada will achieve its legislated mandate to protect the Commemorative Integrity of Grand-Pré NHSC. It will manage the cultural resources located under its Jurisdiction according to its policies in order to protect the OUV of the WHS.

6.7.4 Parks Canada will ensure that all its management activities related to land under its Jurisdiction are supportive of the values and objectives of the WHS.

6.7.5 Parks Canada will provide support to welcome visitors to the WHS and to interpret the values and importance of the WHS, subject to the availability of funds and personnel. Its priority will remain the maintenance of Grand-Pré NHSC’s Commemorative Integrity, including the protection and interpretation of the cultural resources directly related to the reasons for designation as a national historic site.

6.7.6 Parks Canada provides the Canadian Delegation to the World Heritage Convention under the leadership of the Director General, National Historic Sites, Parks Canada. Any communications between the World Heritage Centre and the World Heritage Site will be coordinated by the Canadian Delegation.

6.7.7 With the support of Nova Scotia and the County of Kings and other relevant organizations, Parks Canada will take a leadership role, on behalf of the Stewardship Board, in providing technical expertise to monitor and report on activities at the WHS in accordance with UNESCO requirements.

6.7.8 Parks Canada will implement a data sharing agreement with the County of Kings and Nova Scotia.

6.7.9 In the spirit of collaboration guiding the protection of the Nominated Property, Parks Canada will request a Borden number from Nova Scotia for archaeological sites found in its Jurisdiction. It will provide summary information reports from archaeological investigations carried out in its Jurisdiction to Nova Scotia in order to maintain an up-to-date inventory of the Nominated Property’s archaeological heritage.

6.7.10 As the Nominated Property is part of the Grand-Pré Rural Historic District NHSC, Parks Canada will provide expertise necessary for the protection of the Nominated Property and of the WHS, subject to the availability of funds and personnel.

6.7.11 Working in cooperation with the Stewardship Board, the Société and local area communities and stakeholders, Parks Canada will support the promotion, marketing, and organization of events and activities related to the WHS, subject to the availability of funds and personnel.

6.7.12 Parks Canada will consult the Nomination Board and the Stewardship Board prior to developing and implementing plans and activities in areas under its Jurisdiction.

6.8 Nova Scotia

6.8.1 Nova Scotia, the Department of Economic and Rural Development and the
Office of Acadian Affairs are ex officio members of the Nomination Board.

6.8.2 Nova Scotia, the Department of Economic and Rural Development, the Office of Acadian Affairs and the Department of Agriculture are ex officio members of the Stewardship Board.

6.8.3 Nova Scotia, the Department of Economic and Rural Development, the Office of Acadian Affairs and the Department of Agriculture will provide support to Parks Canada and the County of Kings for the monitoring and reporting activities required for the WHS.

6.8.4 Nova Scotia, the Department of Economic and Rural Development, the Office of Acadian Affairs and the Department of Agriculture will help promote the WHS and provide support for projects undertaken by the Stewardship Board, subject to the availability of funds and personnel.

6.8.5 Nova Scotia and the Department of Agriculture will implement a data sharing agreement with Parks Canada and the County of Kings.

6.8.6 In the spirit of collaboration guiding the protection of the Nominated Property, Nova Scotia will provide summary information reports from archaeological investigations carried out in its Jurisdiction to Parks Canada in order to share the result of research and inform future direction for the protection of the Nominated Property’s archaeological heritage.

6.8.7 Nova Scotia, the Department of Economic and Rural Development, the Office of Acadian Affairs and the Department of Agriculture will provide expertise and resources necessary for the protection of the Nominated Property and of the WHS, subject to the availability of funds and personnel.

6.8.8 Nova Scotia, the Department of Economic and Rural Development, the Office of Acadian Affairs and the Department of Agriculture will consult the Nomination Board and the Stewardship Board prior to the development and implementation of plans, policies and activities which could have an impact on the Nominated Property and the WHS, including in its Buffer Zone.

6.9 Société

6.9.1 The Société is a voting member of the Nomination Board and of the Stewardship Board.

6.9.2 The Société will support promotional activities in relation to the WHS.

6.9.3 The Société will be a member of the Education and Marketing Committee to ensure the values and importance of the WHS are communicated to target audiences.

6.9.4 The Société will support and contribute to the development, distribution and display of educational products related to the WHS, subject to the availability of funds and personnel.

6.9.5 The Société will Consult the Nomination Board and Stewardship Board prior to developing and implementing plans and activities related to the Grand-Pré NHSC and other areas of interest as they relate to the World
Heritage Site. Of particular importance are plans and activities that are related to the OUV in the Nomination Proposal and at the time of inscription by the World Heritage Committee.

6.10 SNA

6.10.1 The SNA will be a voting member of the Stewardship Board.

6.10.2 The SNA will serve as the co-chair representing the Acadian community and will fulfill this role according to the terms of reference for the Stewardship Board.

6.10.3 The SNA will provide support to engage the Acadian community at large in the governance of the WHS.

6.10.4 The SNA will actively participate in the WHS’s protection by raising awareness about its OUV.

6.10.5 The SNA will be a member of the Technical Advisory Committee.

7.0 COMMUNICATIONS

7.1 The use of the Nomination Grand Pré logo is restricted to the Nomination Board’s use and to the period preceding the decision by the World Heritage Committee unless otherwise specified.

7.2 A Party will not use the marks, including organizational identifiers, of another Party without that other Party’s written consent.

7.3 Communication, such as media relations, advertising, and public events, regarding the Nomination Proposal is managed by the Nomination Board in cooperation with and with the support of Parks Canada, Nova Scotia and the Canadian Delegation to the World Heritage Committee. Following submission of the Nomination Proposal and throughout the evaluation process leading to a World Heritage Committee decision, a coordinated communications approach will be developed by the Nomination Board, Parks Canada, Nova Scotia and the Canadian Delegation.

7.4 Communication on behalf of the Nomination Board is strictly restricted to the co-chairs or their delegate as required.

7.5 None of the Parties will engage in Communication relating to the Nomination Proposal without providing appropriate advance notice to the Nomination Board and to the Canadian Delegation to the World Heritage Committee. If Communication with respect to World Heritage matters (for example, policies, procedures and processes related the evaluation of nomination proposals and inscription of properties on the World Heritage List) is necessary, clause 7.6 will apply.

7.6 Communication regarding World Heritage matters (for example, policies, procedures and processes related to the evaluation of nomination proposals and inscription of properties on the World Heritage List) as they relate to the Nomination Proposal is managed by Parks Canada and the Canadian Delegation to the World Heritage Committee.

7.7 In the event of a successful inscription, a communication strategy will be developed by the Stewardship Board.
8.0 AMENDMENTS AND TERMINATION

8.1 This MOU will take effect upon signing by the Parties and shall remain in effect until terminated with the mutual written consent of all Parties.

8.2 This MOU may be amended by the mutual written consent of the Parties.

8.3 Notwithstanding section 8.1 any Party may terminate its participation in this MOU by providing ninety (90) days notice in writing of such termination and the reasons therefore. Upon expiration of such period of notice that Party’s participation shall be terminated.

8.4 Notwithstanding section 8.1, 8.2 and 8.3 if the Nomination Proposal is unsuccessful this MOU shall terminate within ninety days (90) of the decision by the World Heritage Committee.

8.5 In the event that the Stewardship Board ceases to operate for whatever reason, the Regulatory Authorities will continue to be responsible for activities in their Jurisdiction and in discharging their authority protect the OUV of the WHS.

9.0 GENERAL MATTERS

9.1 Any reference in this MOU to a statute, regulation, by-law, declaration, directive, policy, approval, requirement, standard or order means the statute, regulation, by-law, declaration, directive, policy, approval, requirement, standard or order now in force, as it may be amended, revised, consolidated or substituted from time to time.

9.2 The Stewardship Board will develop policies and procedures for decision-making and its operations as necessary.

9.3 It is recognized that this MOU constitutes a statement of mutual understanding between the Parties. However, it is not intended to be and shall not be interpreted or construed as a legally enforceable agreement or as creating any legal rights or obligations between the Parties.

9.4 It is also recognized that nothing in the MOU, or in the work the parties undertake together, is intended to be or shall be interpreted or construed as creating an agency, partnership or joint venture relationship of any kind between the Parties or as imposing on either Party any partnership, joint venture or agency duties, obligations or liabilities to the other Party or to any other person.

9.5 In dealings with other persons, the Parties will endeavour to ensure that all such persons are aware that the parties are not acting in partnership, joint venture or as an agent for each other.

10.0 NOTICE

10.1 The Parties agree that any notice required to be given pursuant to this MOU shall be sufficiently given if personally delivered or mailed by prepaid registered mail addressed to the Parties as follows:

a) To the Community Association:
   Secretary,
b) To the County of Kings:

Warden,
Municipality of the County of Kings
PO Box 100
87 Cornwallis Street
Kentville, Nova Scotia
B4N 3W3

c) To Kings RDA:

Executive Director,
Kings Regional Development Agency
35 Webster Street
Kentville, Nova Scotia
B4N 1H4

d) To the Marsh Body:

Grand Pre Marsh Body,
661 East Long Island Road
Grand Pré, Nova Scotia
B0P 1M0

e) To Nova Scotia:

Minister,
Department of Tourism, Culture, and Heritage
6th Floor, World Trade and Convention Centre
1800 Argyle Street
P.O. Box 456
Halifax, Nova Scotia
B3J 2R5

f) To Parks Canada:

Field Unit Superintendent,
Northern New Brunswick Field Unit
186, Route 117
Kouchibouguac National Park, New Brunswick
E4X 2P1

f) To the SNA:

Président,
Société nationale de l’Acadie
307, rue Amirault
Dieppe (Nouveau-Brunswick)
E1A 1G1

g) To the Société:
10.2 In addition, notice will be given to the Nomination Board if given prior to successful inscription, and to the Stewardship Board if following a successful inscription, as follows:

a) To the Nomination Board:

Co-Chairs
Nomination Grand Pré Advisory Board
Kings RDA
35 Webster Street
Kentville, Nova Scotia
B4N 1H4

b) To the Stewardship Board:

Co-Chairs
Grand Pré World Heritage Site Stewardship Board
Kings RDA
35 Webster Street
Kentville, Nova Scotia
B4N 1H4

On behalf of the Community Association, the chair:

Signature                                                 Date

On behalf of the Municipality of the County of Kings, the Warden:

Signature                                                 Date

On behalf of the Kings Regional Development Agency, the Executive Director:

Signature                                                 Date

1.0 Introduction

1.1 Overview

In May 1955 the Historic Sites and Monuments Board of Canada (HSMBC) responded to a question posed to it by the Department of Northern Affairs and National Resources with the Board’s opinion that Grand Pré Memorial Park possesses historical features which would make it eminently suitable as a National Historic Park.

The federal government acquired Grand Pré Memorial Park, located in the Annapolis Valley of Nova Scotia, from the Dominion Atlantic Railway (DAR) and the Memorial Church from the Société Nationale l’Assomption (SNA) in 1957 – today called the Société nationale de l’Acadie (SNA). With the creation of the national historic park in 1961, the name of the site changed to Grand-Pré National Historic Park.

The national historic significance of the national historic park was clarified by the HSMBC in 1982, recommending that Grand-Pré National Historic Site of Canada (NHSC) was of national historic significance because:

- it was a centre of Acadian activity from 1682 to 1755;
- it commemorates the Deportation of the Acadians, which occurred at Grand-Pré in 1755; and
- it commemorates the strong attachment that remains to this day among Acadians throughout the world to this area, the heart of their ancestral homeland and symbol of the ties which unite them.

Grand-Pré National Historic Site includes the commemorative gardens created by the DAR, the Memorial Church built by the Acadians in 1922 as a symbolic reclamation of their ancestral homeland, a number of other memorials and sculptures, the cemetery of the Acadian parish of Saint-Charles-des-Mines and part of the agricultural landscape, including archaeological resources, located at the heart of the former Acadian settlement. The site is owned by Parks Canada which shares management operational responsibilities with the Société Promotion Grand-Pré.

1.2 National Historic Sites Program Objectives

The objectives of the Government of Canada for the national historic sites program are:

- to foster knowledge and appreciation of Canada’s past through a national program of historical commemoration;
- to ensure the commemorative integrity of national historic sites by protecting and presenting them for the benefit, education and enjoyment of this and future generations, in a manner that respects the significant and irreplaceable legacy represented by these places and their associated resources; and
- to encourage and support owners of national historic sites in their efforts to ensure commemorative integrity.

1.3 Commemorative Integrity

1.3.1 Definition of Commemorative Integrity

Commemorative integrity describes the health and wholeness of a national historic site. A national historic site possesses commemorative integrity when:

- the resources directly related to the reasons for designation as a national historic site are not impaired or under threat;
• the reasons for designation as a national historic site are effectively communicated to the public; and,
• the site’s heritage values (including those not related to designation as a national historic site) are respected in all decisions and actions affecting the site.

1.3.2 Definition and Purpose of the Commemorative Integrity Statement
A Commemorative Integrity Statement (CIS) is a document which identifies what is meant by commemorative integrity at a particular national historic site. It provides a baseline for planning, managing, operating, reporting and taking remedial action.

The document is divided into six parts:

1. Introduction
2. Designation and Context
3. Resources Directly Related to the Reasons for Designation as a National Historic Site
   This section of the CIS identifies the resources that relate directly to the reasons for designation. It also describes the historic values of these resources, which can by physical as well as associative or symbolic. These values must be safeguarded and communicated. The CIS provides guidance, through objectives, about the meaning of “not impaired or under threat” in the context of the site.
4. Effective Communication of the Reasons for Designation as a National Historic Site
   This section of the CIS identifies reasons for designation as a national historic site, as well as any additional, essential information required to ensure their understanding. It provides guidance, through objectives, on integrity in presentation and effective communication of messages with audiences.
5. Resources, Values and Messages Not Related to the Reasons for Designation as a National Historic Site
   This section of the CIS covers resources, values and messages that are not related to reasons for designation as a national historic site.
6. Appendices

1.3.3 Uses of the Commemorative Integrity Statement
A CIS is required for each national historic site which falls under Parks Canada’s administration. The CIS is also used as the primary basis for planning under the National Historic Sites of Canada Cost-Sharing Program.

A CIS guides site management by:
• identifying what is most important about a site relative to the national historic designation and, for Parks Canada sites, ensuring that matters relating to national significance, including resources and messaging, are the highest management priority;
• ensuring that there is focus on the “whole”, and not just the individual resources;
• providing the fundamental document to guide management planning and preparation of a conservation and presentation plan (for the National Historic Sites of Canada Cost-Sharing Program), which detail specific actions to be carried out;
• enunciating a set of heritage values and objectives which can be used in analysing and evaluating the impact of development and adaptive re-use proposals on a site or nearby property;
• providing the basis for design guidelines for development which may take place within or nearby and which may have an impact on the national historic site; and,
• giving direction on heritage messages for marketing plans and programs.

1.4 Cultural Resource Management (CRM) Policy

Cultural resource management is an integrated and holistic approach to the management of cultural resources. It applies to all activities that affect cultural resources, including the care taken of these resources and the promotion of public understanding and enjoyment of them. The objective is to manage cultural resources in accordance with the principles of value, public benefit, understanding, respect and integrity.

Parks Canada’s CRM Policy defines cultural resources as places or human works that have been determined to have historic value. Cultural resources include those directly related to the reasons for the site’s national significance and those not related but which possess historic value.

The Policy is the basis for management of cultural resources by Parks Canada. Effective cultural resource management practice is based on:

1. an up-to-date inventory of resources;
2. an evaluation of resources to determine which are to be considered as cultural resources and what it is that constitutes their historic value;
3. consideration of historic value in actions affecting conservation and presentation. Most, if not all, operational activities have an impact on conservation or presentation; and,
4. monitoring and review to ensure that conservation and presentation objectives continue to be met effectively.

The objectives in a CIS specify that the site should be managed in accordance with the principles and practice of the CRM Policy. In addition to the principles and practice, management under the CRM Policy means:

• cultural resources and their values are inventoried and evaluated, and these records are kept up to date;
• there are no uses or threats that reduce the potential for long-term conservation and future understanding and appreciation of the cultural resources;
• any modification to the site or its cultural resources is based on sound knowledge and respect for the historic values of the resources and is preceded by adequate research, recording, and investigation;
• conservation measures are based on direct, rather than indirect evidence, follow the path of least intrusive action, and are clearly recorded;
• any new work at or adjacent to the site is sensitive in form and scale to the site and its associated resources;
• monitoring and review systems are in place to ensure the continued survival of the cultural resources with minimum deterioration;
• reproductions and reconstructions are marked in such a way as not to be confused with the original they are intended to represent; and,
• the historic value of the resources is fully considered and integrated into the planning, conservation, presentation and operational programs.
2.0 Designation and Context

2.1 Designation
Designation refers to the establishment of a national historic site. It occurs when the responsible federal Minister, currently the Minister of the Environment, approves a recommendation for national historic significance from the Historic Sites and Monuments Board of Canada.

2.2 Commemorative Intent

2.2.1 Definition
Commemorative intent refers to the reasons for a site’s designation as a national historic site, as determined by the Ministerially-approved recommendations of the Historic Sites and Monuments Board of Canada. A CIS contains a Statement of Commemorative Intent (SOCI) which provides the answer to the question “When and for what reason was this site designated by the Minister responsible for the Historic Sites and Monuments Act as a national historic site?”

2.2.2 Statement of Commemorative Intent (SOCI) for Grand-Pré National Historic Site of Canada
On 31 May 1955, the year marking the 200th anniversary of the Deportation, the HSMBC made the general statement that Grand Pré Memorial Park possessed historical features which made it suitable as a National Historic Park. On June 1, 1955, the Board declared the national historic importance of the expulsion of the Acadians and their return to Nova Scotia and New Brunswick, which was to be commemorated with a plaque at Grand-Pré. In June 1982, the Board clarified the national historic significance of the national historic park in a statement that forms the basis for the statement of commemorative intent. The reasons for its designation, as derived from the 1982 HSMBC minutes, are that:

- it was a centre of Acadian activity from 1682 to 1755;
- it commemorates the Deportation of the Acadians, which occurred at Grand-Pré in 1755; and
- it commemorates the strong attachment that remains to this day among Acadians throughout the world to this area, the heart of their ancestral homeland and symbol of the ties which unite them.

2.3 Designated Place

2.3.1 Definition
Designated Place refers to the place designated by the responsible federal Minister on the recommendation of the Historic Sites and Monuments Board of Canada. Information on what constitutes the Designated Place for a particular historic site is drawn from the minutes of the HSMBC.

2.3.2 Description of Designated Place for Grand-Pré NHSC
The designated place consists of the initial site transferred to Parks Canada in 1957, the triangular property, the site of the former visitor centre and parking area, and the lands acquired in 1999 south of the original property (see Site Plan). The land acquired in 1999 was formally added to the designated place by the HSMBC in 2007. The designated place includes, the Memorial Church, the Statue of Evangeline, Herbin Cross, well, cemetery, memorial gardens, significant archaeological resources, visitor centre and other...
features. The land that comprises the designated place represents only a small portion of what would have been the historical Acadian village of Grand-Pré, which existed until the fall of 1755. That original village extended about 4 km along the ridge between present-day Wolfville and Hortonville.

As noted on the site plan, Parks Canada administers two additional parcels of land outside the designated place. These lands were acquired in 2009 as part of the Agency’s efforts to protect significant cultural resources and viewscapes at Grand-Pré NHSC.

2.4 Historic and Geographic Context

2.4.1 Historic Context

While the early 1600s witnessed several French attempts at colonization in what is now Atlantic Canada, it was not until the 1630s that the first French families settled permanently in Acadie (referring in this case to today’s mainland Nova Scotia). By the 1750s there would be slightly more than 14,000 Acadians living in different parts of what today are the Maritime Provinces of Canada.

The Acadian settlement at Grand-Pré and in the overall district of Les Mines began in the early 1680s. The first Acadians were drawn by the huge 3,000-acre salt marsh or meadow (the grand pré) that over a period of several decades they reclaimed from the sea by dyking and desalination. Over time, Grand-Pré became the most populous settlement in Acadie, extending for several kilometres along the upland bordering the large reclaimed marshland. The spread-out community included houses, farm buildings, storehouses, windmills, and the parish church of Saint-Charles-des-Mines.

Unfortunately for the Acadians, their settlements at Grand-Pré and elsewhere in what are today the Maritime Provinces of Canada did not occur in a political and military vacuum. France and England (after 1707, Great Britain) had competing imperial visions for the eastern coastline of North America, which led to numerous conflicts and several full-scale wars. In 1704, for instance, an expedition from New England, led by Benjamin Church, arrived at Grand-Pré and burned houses, destroyed dykes and carried off prisoners. After the New Englanders left, the Acadians rebuilt what had been damaged or destroyed.

Though the Treaty of Utrecht (1713) transferred Acadie to Britain, most Acadians stayed in their traditional communities. For the next three decades, life at Grand-Pré and in the other Acadian districts was peaceful; a period that historian Naomi Griffiths describes as a “golden age”. The Acadian birth rate was among the highest recorded in North American history.

The steady growth in the size of the Acadian population was a worry for the British administration, based at Annapolis Royal until 1749 and at Halifax from mid-1749 onward. British officials feared they could not rely on the neutrality of the Acadians because of their Roman Catholic religion and their ties with nearby French colonies. The British wanted the “neutral French” to swear the standard oaths of allegiance and become full British subjects. The Acadians, on the other hand, pointed out that they had sworn a loyalty oath in 1729-30 acknowledging their neutrality in case of conflict between Great Britain and France and its Aboriginal allies and insisted that they were, and would remain neutral.

Between 1744 and 1747 there were numerous developments that greatly complicated the situation in the region. In 1744, for instance, a French expedition from Louisbourg made its way through many Acadian communities, including Grand-Pré, on its way to attack Annapolis Royal. In late 1746, the British sent roughly 500 New England soldiers to establish a post at Grand-Pré, with the soldiers taking over a large
number of Acadian houses. In the middle of a February night, while a snowstorm was raging, a French force from Canada (250 French soldiers and 50 Amerindian warriors) caught the New Englanders totally by surprise. Known to history as the Battle of Grand-Pré (also commemorated as a National Historic Event of Canada as the Attack at Grand Pré), the encounter left at least 80 New Englanders dead, including their commander. In 1924 the HSMBC found the 1747 attack to be an event of national significance.

From the British perspective, the events of 1744-1747 demonstrated the vulnerability of Nova Scotia to French and Amerindian attacks. In 1749-1750 Governor Edward Cornwallis, based in the newly founded stronghold of Halifax, pressed the Acadians to swear the standard oath and become regular British subjects. The Acadians refused, affirming their neutrality and claiming they feared reprisals from the French and the Mi’kmaq. Moreover, their position remained essentially the same when in the summer of 1755, only a few weeks after the fall of Fort Beauséjour, the new governor, Charles Lawrence, and his Council demanded that they take the oath. Faced with the Acadians’ refusal, the British authorities decided, on July 28, 1775, to proceed with the deportation of the entire Acadian population to the Anglo-American colonies.

Historians sometimes differ in their interpretations of the Acadian Deportation, which began in 1755 and lasted seven years, though there is no disagreement over the tragic impact that the deportation had on the Acadians and their communities. The first Acadian area to feel the impact of the removal policy was the Chignecto region, beginning in mid-August 1755. Grand-Pré and Pigiguit (Windsor) were the next districts to be affected, beginning on September 5, 1755.

The removal of the entire population living at Grand-Pré and in neighbouring villages did not proceed quickly or smoothly. There was a shortage of British transport ships and a lack of sufficient provisions. It was not until late October 1755 that the entire population was aboard the transport ships. The vessels sailed out of the Minas Basin bound for Pennsylvania, Virginia, Maryland, Connecticut, and Massachusetts. At the same time, transport ships carrying Acadian deportees from the nearby Pigiguit area also sailed south to the Anglo-American colonies. In total, approximately 2,200 Acadians were deported from the Minas area in 1755. That was roughly one-third of the 6,000 Acadians deported from Nova Scotia during the first year of forcible removals.

With the removal of the Acadians, British officials expected land-hungry Anglo-American colonists would move north to take over the highly fertile lands at Grand-Pré and elsewhere. At the time, New Englanders were unable to migrate westward because of unsettled frontier conditions and hostility from Amerindians and French in that region. The expected migration began in 1760 when the first major wave of settlers from New England arrived in Nova Scotia. Between 1760 and 1768, roughly 8,000 men, women and children from New England came to settle in Nova Scotia. One of the places the Planters settled was Grand-Pré, renamed Horton.

The Planters who came to Grand-Pré/Horton wanted to take advantage of the highly fertile dyked lands and so had to repair the damage done to the dykes during a 1759 storm. The Planters turned to the displaced Acadians, some of whom were imprisoned in Halifax, to learn the intricacies of dyke construction and repair. The Planters and their descendants eventually became master dyke builders of their own, maintaining what the Acadians had built and eventually adding new dykes and reclaiming additional marshland from the sea.

In 1847 the American poet Henry Wadsworth Longfellow published Evangeline: A Tale of Acadie, a long narrative poem that became an international bestseller. Longfellow chose Grand-Pré as the setting for the early parts of the poem, a choice that was to lead many tourists to come to Grand-Pré, beginning in the late
19th century. By the turn of the 20th century, Grand-Pré had become a well-known tourist destination, and the Annapolis Valley was often described as the “Land of Evangeline”. The Dominion Atlantic Railway (DAR) responded to the phenomenon by creating a park-like landscape at Grand-Pré, within which one found a statue of Evangeline, an old well and other features. The DAR had obtained the land for this park from Wolfville jeweller John Frederic Herbin, who had purchased the land to protect it because of its Acadian history and on behalf of the contemporary and future Acadian community.

In the 1880s, contemporaneous with Grand-Pré’s emergence as a tourism destination, the descendants of Acadians who had settled in the Maritimes in the aftermath of the Deportation underwent a major cultural renaissance. There were many manifestations of the newfound pride and identity: such as a “national” Acadian flag, anthem and feast day. One project that Acadians embarked on was to mark their earlier presence at Grand-Pré, which they did most conspicuously through the construction of a memorial church for which they had raised funds.

In 1956, an agreement was signed between the federal government and the Société Nationale l’Assomption, acting on behalf of the Acadian people, which acknowledged that “the Grand-Pré Park is considered the most important historic site by the Acadian people, that it recalls their saddest and most heroic moments and must remain for future generations the example of courageous people whose culture and actions shall enrich more and more the Canadian nation.”

2.4.2 Geographic Context

Grand-Pré National Historic Site is located in the village of Grand Pré, within the Municipality of the County of Kings, Nova Scotia. The character of the overall area is one of intensive agricultural uses, as it has been since the late 17th and early 18th centuries when Acadians first reclaimed the salt marshes from the sea. Aside from the marshes, the “upland” area near Grand-Pré NHSC is characterized by gently rolling hills, farm properties and/or well-dispersed houses, a vineyard and many well-established trees. The overall area, stretching from North Grand Pré on Long Island then coming across the marsh and into Hortonville, Horton Landing, Grand Pré village and beyond and part of lower Wolfville, falls within the Grand Pré Rural Historic District National Historic Site of Canada, designated in 1995.

The closest urban community is Wolfville, a small town about 10 km away. The Halifax Regional Municipality is located approximately one hour’s drive away.

There are many national historic designations in the immediate region with close links or associations with Grand-Pré NHSC. Other national commemorations within the broader region include: Beaubassin NHSC, Port-Royal NHSC, Fort Edward NHSC, Fort Anne NHSC and Charles Fort NHSC, Melanson Settlement NHSC, the sites comprising the Halifax Defence Complex, the Attack at Grand Pré National Historic Event of Canada (NHEC), and the Coming of the New England Planters NHEC.
3.0 Resources Directly Related to the Reasons for Designation as a National Historic Site

This section contains details on the resources – the whole and the parts of the whole – that are directly related to the reasons for designation (see Appendix 6.3 – Inventory of Resources). These resources usually include:

- the Designated Place;
- in situ cultural resources within the administered place that have direct relationship with the reasons for designation;
- cultural resources identified in the HSMBC minutes as contributing to the Designated Place including resources that may lie outside the Designated Place; and
- objects that have a direct relationship to the commemorative intent and to the site. These may be located either within or outside the Designated Place.

3.1 Designated Place

3.1.1 Description

The designated place consists of the initial site transferred to Parks Canada in 1957, including the triangular property (see Site Plan), the former visitor centre and parking area and the property acquired in 1999 south of the original property. Found on this land are extensive archaeological resources dating to the Acadian settlement (circa 1682-1755), a large burial ground or cemetery, an 18th-century well, remnant willow trees, and the features erected in the early 20th century to mark the earlier Acadian presence: a Memorial Church, a statue of Evangeline, the Herbin Cross, Longfellow bust and the memorial flower beds and pathways.

While not part of the designated place, but part of the administered land (see Appendix 6.2), two additional parcels of land were acquired by Parks Canada in 2009 as part of the Agency’s efforts to protect significant cultural resources and viewscapes at Grand-Pré NHSC. One of the properties is known from historical records to have a high potential for cultural resources directly related to Grand-Pré NHSC and the Grand-Pré Rural Historic District NHSC.

3.1.2 Historic Values

Historic value is a value or values assigned to a resource, whereby it is recognized as a cultural resource. The values can be physical and/or associative.

The designated place has historic values related to its reasons for designation as a national historic site as follows:

- The site has been confirmed to lie at the “heart” of the original Acadian village; it is where the church and burial ground were located and the zone in which the British and New Englanders established their camp at the time of the Deportation in 1755.
- Grand-Pré NHSC is the Acadians’ most important place of memory. A small portion of their ancestral homeland, symbolically and peacefully reclaimed, has found a place at the heart of Acadian identity.
- Grand-Pré’s evocative memorials, such as the Memorial Church and Herbin Cross, erected by Acadians early in the 20th century, are powerful, tangible symbols of the impact of the Deportation on the Acadians and are testimony to a people’s struggle for survival, to their strength and perseverance.
• For about a century, Grand-Pré has been a pilgrimage destination for Acadians from the diaspora, most notably on Acadian Days (held in July), on August 15, (the fête nationale de l’Acadie) and on the anniversaries most closely associated with the Deportation (July 28 and September 5).
• Located next to the vast dykelands created by the Acadians, the site offers a sense of place which has evolved, but which has maintained much of its original agricultural character.
• The site offers unimpeded views of both the adjacent dyked marshland and the adjacent uplands upon which the Acadians built most of their houses and farm buildings.
• The site contains the pathways, flower beds and Statue of Evangeline statue erected early in the 20th century by the DAR in order to both mark the history of the site and to attract tourists.
• The site is located about two kilometres away from Horton Landing (marked by the evocative Deportation Cross) where the Acadians were put into small boats and transported to the ships which would take them to Anglo-American colonies.

3.2 Landscapes and Landscape features

3.2.1 Description

The designated place contains a rural landscape that has changed little since the area was first settled by the Acadians.

The rural landscape includes some of the original roads and agricultural land settlement patterns created by the Acadians and which have been maintained by the New England Planters and successive generations of farmers.

The view planes to the historic landscape beyond the national historic site offer important opportunities for experiencing the setting of Grand-Pré NHSC.

There are prominent willow trees at Grand-Pré NHSC and they represent an amalgam of two landscapes, the historical landscape created by the Acadians, and the more recent and commemorative landscape dating to the early 20th century. Oral tradition traces the oldest trees back to the Acadian era. As dendrochronological testing is a complicated matter with willows, their origins cannot be easily verified. New willows were planted as part of the creation of the commemorative gardens offering therefore a deliberate blend of two different landscape approaches.

See Section 6.3 for an Inventory of Resources for the site.

3.2.2 Historic Values

The landscape and landscape features have the following values:

• the rural landscape includes valued field and farming patterns that have remained mainly intact for over 300 years. Its serene agricultural setting helps visitors imagine what the heart of the Acadian village of Grand-Pré would have been like with its farmers busily harvesting abundant crops;
• the absence of standing buildings dating back to the 18th century and earlier underlines that this was an area that has witnessed great upheaval over the intervening years, with the disappearance of one entire population and the settlement of a different group;
• the rural landscape adjacent to the modern visitor centre evokes the land as it likely appeared, more or less unchanged, during both the Acadian and Planter periods; and
3.3 Buildings and Structures

The only building within the designated place that is related to the reasons for designation is the Memorial Church. The Memorial Church was erected by the Acadian community in 1922 as a memorial to their deported ancestors.

A number of monuments and structures, such as the Herbin Cross, Statue of Evangeline, Bust of Longfellow and old well located in the commemorative gardens evoke the sense of attachment of the Acadians to Grand-Pré and are representative of the evolution of the site as a lieu de mémoire.

3.3.1 Description

The Memorial Church was designated Classified by FHBRO (Federal Heritage Buildings Review Office) in 1991 for its association with the commemoration of Canadian history and the promotion of tourism through the construction of monuments; for the French Regime architectural antecedents in its design; and for its importance as a national symbol of Acadian history and culture.

The Memorial Church, intended to evoke the original Acadian church, was designed by Moncton architect René Fréchet in close collaboration with Montréal architect Percy Nobbs. Construction of the exterior of the building was completed in 1922 after a fund-raising campaign for its construction among Acadians and sympathetic non-Acadians who lived in Canada and the United States.

The heritage character of the Memorial Church resides in its evocation of vernacular design, as evidenced in its massing, materials, and interior detailing; and by its historic setting.

The architect represented the original Acadian parish church with a design based on eighteenth-century French Regime churches from Québec. This design aesthetic is expressed in the rectangular plan, steeply-pitched bell-cast roof, simple steeple, ocular window in the gable, and round-headed multi-paned windows.

Similarly, the use of traditional building materials, such as the rough-cut fieldstone cladding and copper trim, emulated French Regime design. Removal of copper from the gutters and belfry has reduced this design relationship.

The unobstructed interior of the church was designed to function as a museum, as reflected in its open barrel-vaulted space, wide double doors, side windows, and large lunette over the entrance, while the "sacristy" served as a meeting room. These historic volumetric relationships should be retained. A stained glass window, installed in the lunette in 1986, is in keeping with the original intentions of the architects. Renovations to the interior in 1957 involved the removal of the original quarry-tile floor and marble dado, possibly for structural reasons. The remaining original interior finishes, including vault and wall mouldings, denticulated cornice and window surrounds are typical of French Renaissance style as
interpreted by Fréchet, and should be carefully preserved.

One of the most striking elements within the church is the statue of the Acadian patron saint, Notre-Dame de l’Assomption.

There are four other prominent structures located within the designated place. Rivalling the Memorial Church for prominence and for people’s affection and attachment is the Statue of Evangeline, commissioned by the DAR and created by renowned Québec sculptor Henri Hébert. It was unveiled to the public in 1920.

Close to the Memorial Church is an old well (above ground portion) that since the 19th century has been called alternately the Acadian well and Evangeline’s well. Although the upper courses of this well were reconstructed in the 20th century, they are considered Level One because the resource relates directly to the third reason for designation.

A short distance down one of the paths from the Memorial Church and the well is a stone cross, erected by John Frederic Herbin early in the 20th century with stones found in the area, which were thought to have come from the original church or other buildings. The cross marks the burial area of the original Saint-Charles-des-Mines parish.

The fourth and final noteworthy feature is a bust of Henry Wadsworth Longfellow, unveiled in 1955 by the Nova Scotia government to honour the creator of Evangeline and to mark the 200th anniversary of the Deportation.

See Section 6.3 for an Inventory of Resources for the site.

3.3.2 Historic Values

The Memorial Church, built by and for the Acadians as a result of an extensive fund-raising campaign, reflects the community’s Roman Catholic religious tradition, and in a larger sense, the Acadians’ emotional and spiritual attachment to Grand-Pré as the best-known place from which their ancestors were forcibly removed in 1755.

The Evangeline statue, though originally commissioned by the Dominion Atlantic Railway when it owned the site, has long since become an iconic element on the site. For many visitors, Acadian descendants and others, the statue symbolizes not so much the specific poem by Longfellow, but rather the indomitable spirit with which an entire population overcame the hardships imposed on it.

Since the early 20th century, the old well provides a direct link to the Acadian settlement at Grand-Pré and is representative of the evolution of the site – as a site of great tragedy to a pilgrimage destination for Acadians and a place of memory.

The Herbin Cross marks the location of the large burial area, and reflects the attachment that Acadians feel toward the populous historical community that existed there between the 1682 and 1755.

The Longfellow bust provides a tangible link to the well-known American poet who wrote Evangeline – A Tale of Acadie, which eventually inspired the creation of Grand Pré Memorial Park.
3.4 Archaeological Sites

3.4.1 Description
In the late 19th century, curiosity seekers pulled a coffin from the cemetery, dug up parts of an Acadian house site, and emptied the adjacent well. More systematic and limited testing was done on a house site in 1958 by Dr. Harcourt L. Cameron, a professor of geology at Acadia University. Controlled excavation under Parks Canada’s jurisdiction began in 1972, with work by Frank Korvemaker on two house sites. Saint Mary’s University has run an archaeological field school at the site annually since 2001.

Identifiable features relating to the Acadian occupation include:
- six house features; three of these have been excavated almost completely, with the remains of cellar foundations left intact in the ground; two of the cellars had extensive drains which are also intact;
- traces of the old Acadian road from the uplands to the dyked fields, including a causeway of brush and stone across a swampy area on the southern edge of the gardens and which corresponds to the original entrance to the Grand Pre Commemorative Park;
- the cemetery (excluding human remains), limits of which have not yet been defined; and
- a possible hearth feature close to the cemetery, consisting of at least two slabs of blue slate, which may indicate use of the site by Lieut.-Colonel Winslow’s troops in 1755; associated artifacts include lead musket balls, bone fragments and food utensils; no substantial structural remains of the church have been found to date.

Soil strata (layers) within the designated place may contain Level 1 undisturbed deposits. In addition, there may also be disturbed deposits that contain Level 1 objects relating to the Acadian occupation.

See Section 6.3 for an Inventory of Resources for the site.

3.4.2 Historic Values

The archaeological sites are valued because:
- they represent tangible evidence of the Acadian community at Grand-Pré;
- they provide a picture of Acadian life in 17th-18th-century Grand-Pré;
- they provide a link to the British occupation of the church and vicinity in 1755; and
- the unexcavated resources represent a potential for increasing knowledge and understanding of the period.

3.5 Objects

3.5.1 Description
A substantial number of objects have been collected over a forty-year period of intermittent excavations.

Materials relating to the Acadian period include household items of ceramics, glass and metal; animal bones relating to the diet; soil samples for future faunal and botanical analyses; personal objects, including shoe buckles, buttons and a silver cross; weaponry items, particularly lead musket balls and gunflints; bale seals and coins from commercial activities; and architectural hardware.
Acadian objects from Grand-Pré are on exhibit in the Visitor Centre – 13 in the permanent exhibit and 146 in a temporary archaeology exhibit. In addition, approximately 100,000 Acadian objects, faunal remains and soil samples are held in the Parks Canada archaeology lab and at the Department of Anthropology, Saint Mary’s University.

Over the past few years, sluices which were part of aboiteaux constructed by the Acadians have been excavated from the Grand Pré dykelands within the boundary of the Grand-Pré Rural Historic District. These objects are located at the national historic site.

A statue of Notre-Dame de l’Assomption was commissioned specifically for the Memorial Church by the Acadian community. A condition of the sale of the building to the federal government stipulates that the statue was to remain on display in the Memorial Church.

See Section 6.3 for an Inventory of Resources for the site.

3.5.2 Historic Values

The objects are valued because:

- they provide a tangible link to the Acadian era, and testify to the daily lives of the Acadians at Grand-Pré;
- they attest to the rich and diverse nature of a prosperous Acadian settlement;
- they inform us of architectural styles; and
- they provide a connection to the brief military occupation of 1755.

The four sluices are valued because they are linked to the Acadian farming practice of transforming marshland into rich agricultural lands.

The statue of Notre-Dame de l’Assomption is valued because it is an expression of the strong attachment felt by Acadians to Grand-Pré. As a national symbol of the Acadians, it speaks to the symbolic reclamation of their ancestral homeland in the early 1920s.

3.6 Objectives

The resources at Grand-Pré NHSC – its designated place, landscape and landscape features, buildings and structures, archaeological sites and objects – will not be impaired or under threat when:

- the resources and their associated values are respected;
- management decisions are based on adequate and sound information and are made in accordance with the principles and practice of the CRM Policy;
- the resources and their associated values are not lost, impaired or threatened from natural processes, for example erosion and decay, within or outside of the site;
- the resources and their associated values are not lost, impaired or threatened from human actions, for example vandalism and theft; and,
- the historical values of the resources are communicated to visitors and stakeholders.
4.0 Effective Communication of the Reasons for Designation as a National Historic Site

4.1 Reasons for Designation as a National Historic Site

4.1.1 Definition
The reasons for designation express, in the form of messages, why the site was designated a national historic site. They derive directly from the Statement of Commemorative Intent.

4.1.2 Reasons for Designation
The reasons for designation of Grand-Pré National Historic Site of Canada are:

- it was a centre of Acadian activity from 1682 to 1755;
- it is the site most closely associated with the Deportation of the Acadians; and
- it commemorates the strong attachment that remains to this day among Acadians throughout the world for this area, the heart of their ancestral homeland, making Grand-Pré a symbol of the ties that unite them.

4.2 Context Messages

4.2.1 Definition
Context messages are those messages that are essential to an understanding of the reasons for the national significance of the site.

4.2.2 Context Messages

Message One:
Grand-Pré is a national historic site, a place designated by the Government of Canada as a site of importance for all Canadians because of its national historic significance.

The activities of the Acadians at Grand-Pré and the tragic events of the deportation that took place between 1682 and 1755 gave rise to the present-day site containing a wide array of important cultural resources that are highly valued.

This context message supports the first reason for designation of Grand-Pré NHSC.

Message Two:
The Acadians were colonists of mostly French descent in what are now the Maritimes who developed their own distinct identity during the 17th and 18th centuries. They became renowned as dyke-builders who reclaimed large areas of salt marsh from the sea, most famously at Grand-Pré, their largest single achievement in the period up to 1755. The reclaimed areas were part of a set of fields and farming patterns that have remained basically intact for over 300 years.

This context message supports the first reason for designation of Grand-Pré NHSC.

Message Three:
The Deportation, or mass population removal, took place during a period of intense imperial rivalry between Great Britain and France, just before the official beginning of the Seven Years’ War.
This context message supports the second reason for designation of Grand-Pré NHSC.

**Message Four:**
The experiences of loss, deprivation and death endured by Acadians during the Deportation reinforced the sense of common identity felt by Acadians, as well as their attachment to places where they or their ancestors formerly lived, such as Grand-Pré.

This context message supports the second and third reasons for designation of Grand-Pré NHSC.

**Message Five:**
As a result of the creation and evolution of a park at Grand-Pré throughout the first half of the 20th century – thanks in large part to the influence of Longfellow’s poem Evangeline and the actions undertaken by John Frederic Herbin, the Dominion Atlantic Railway, and the Société Nationale l’Assomption prior to 1957 and by Parks Canada since that date – Grand-Pré National Historic Site has emerged as a place of emotional pilgrimage for Acadian descendants, and for a growing number of non-Acadians who also regard the Deportation as a tragic event that touches them deeply.

This context message supports the second and third reasons for designation of Grand-Pré NHSC.

**Message Six:**
Since 1998, Parks Canada and the Société Promotion Grand-Pré (a non-profit organization representing the Acadian communities of the Maritime Provinces) have shared management responsibility for the site. The Société Promotion Grand-Pré plays a major role in engaging the Acadian community regarding Grand-Pré NHSC and has generated significant funds to develop complementary interpretive resources such as a new mural and sculpture related to the Deportation.

This context message supports the third reason for designation of Grand-Pré NHSC.

### 4.3 Objectives for Messages of Reasons for Designation

The reasons for the designation of Grand-Pré National Historic Site of Canada are effectively communicated to the public when:

- the overall heritage presentation experience conveys the reasons for designation as a national historic site;
- visitors and site stewards understand the reasons for designation, as well as the relationship and differences between the cultural resources of the historic site and the artistic interpretations that have been added as layers to the site; and
- management decisions are based on adequate and sound information and are made in accordance with the principles and practice of the CRM Policy.
5.0 Resources, Values and Messages Not Related to the Reasons for Designation as a National Historic Site

Some resources, values and messages are not related to the reasons for designation of Grand-Pré National Historic Site of Canada. In applying the first element of commemorative integrity, emphasis is clearly on resources directly related to the reasons for designation as a national historic site and their values. However, the Cultural Resource Management Policy applies to all cultural resources, as well as significant ecosystem features.

A Commemorative Integrity Statement is developed to assist managers or owners in managing all the resources for which they have responsibility. The overall stewardship of a national historic site is called into question and commemorative integrity is threatened if resources not related to the reasons for designation are not managed in accordance with the Cultural Resource Management Policy.

5.1 Resources Not Related to the Reasons for Designation at a National Historic Site

A resource not directly related to national significance is any other resource, usually within the administered entity, which has historical value but is not related to the reasons for the site’s designation. A resource may be included within this category because of its historical, aesthetic or environmental qualities. It is also given to such factors as regional and local associations or provincial or municipal designations.

The resources not related to the reasons for designation as a national historic site are:

**Landscape and Landscape Features:**
- The commemorative gardens designed on behalf of the Dominion Atlantic Railway by architect Percy Nobbs, who was inspired in part by Herbin’s idea of a memorial for his Acadian ancestors. The gardens which feature numerous memorials and landscape features, such as the paths, gardens, ponds and trees, were initially created by the DAR to encourage tourism.

**Buildings and Structures:**
- The Blacksmith’s Shop located just outside of the commemorative gardens in the triangular property. The building dates back to the 19th century and was owned by an Acadian. It was moved to Grand-Pré from Wedgeport, Nova Scotia in 1967.
- The Original Railway Entrance was built by the Dominion Atlantic Railway during the development of the site as a tourism destination.
- Two Historic Sites and Monuments Board of Canada plaques.

**Archaeological Sites:**
- In-situ resources that post-date 1755, including one possible New England Planter site by the southwest corner of the Memorial Church. Historical evidence suggests that there is Acadian and Planter material in this location. Recent archaeological research in this area has located a drain constructed during the Planter period, likely linked to a house site. Further research is required.
- A well, adjacent to a house site located beside the Memorial Church; only the stone courses below ground are original. Until additional archaeological research is performed to determine the direct linkage to the Acadian period, this below-ground portion of the well is rated as Level Two.
Recent archaeological work indicates a probable well located at the northwest corner of the Memorial Church. Its cultural association has not yet been determined.

**Objects:**

- Archaeological objects from periods beyond 1755 which have direct and meaningful relationship to the New England Planter-period and later objects relating to the tourism period, located in the Parks Canada archaeology lab, and the lab at Saint Mary’s University.
- Archaeological objects from areas other than the designated place on display in the Visitor Centre including 25 objects from the Melanson Settlement NHSC and one sluice excavated at Melanson Settlement.
- Curatorial collection, including books, artwork and 19th century objects collected from Acadian communities in the 1930s and after.

**5.2 Values Not Related to the Reasons for Designation as a National Historic Site**

The relevant values for this category are:

- the heritage value of the commemorative gardens lies in the reflective character they impart to the site as a whole. The gardens evoke the spirit of the place, and offer the visitor a sense of contemplation;
- the blacksmith shop is a valued 19th-century heritage Acadian structure, a representative type of structure constructed by the Acadians which provides a symbolic link between the Deportation and the re-settlement of Acadians;
- as the original entrance to Grand Pré Memorial Park, the Original Railway Entrance provides a sense of place that was created by the DAR. Re-instated in 2003, it offers the traditional perspective of the site with the Evangeline statue in the foreground and the Memorial Church as a classic backdrop, located at the edge of the vast dykelands of Grand-Pré;
- the HSMBC plaques commemorate the national historic significance of the Expulsion of the Acadians and the Grand-Pré Rural Historic District;
- the post 1755 period artefacts and possible New England Planter site provides evidence of the settlement of the lands at Grand Pré following the Deportation of the Acadians;
- the sluice excavated at Melanson Settlement provides a link with other pre-deportation Acadian villages; and
- the curatorial collection is related to the history and evolution of Grand-Pré NHSC.

**5.3 Objectives for Resources and Values**

The resources and heritage values not related to the reasons for designation will not be impaired when:

- the resources and their associated values are respected;
- management decisions are based on adequate and sound information and are made in accordance with the principles and practice of the Cultural Resource Management Policy;
- the resources and their associated values are not lost, impaired or threatened from natural processes, for example, erosion and decay, within or outside of the site;
- the resources and their associated values are not lost, impaired or threatened from human actions within or outside of the site; and,
- the historic values of the resources are communicated to visitors and stakeholders.
5.4 Messages Not Related to the Reasons for Designation as a National Historic Site

The messages under this heading include:

- the subsequent settlement and use of the Grand-Pré area by the New England Planters, beginning in 1760, and by their descendants up to the present day;
- the fact that Grand-Pré NHSC forms part of the Grand-Pré Rural Historic District NHSC;
- the links that exist between Grand-Pré NHSC and other Acadian and/or Seven Years’ War national historic sites in Atlantic Canada;
- the close relationship that exists between Grand-Pré NHSC and the Deportation Cross, located at Horton Landing since 2005; and
- the presence of several other nearby designations of national, provincial and municipal significance, such as the 1747 Attack at Grand-Pré NHEC, Covenanters Church NHSC, and Sir Robert Borden NHP.

5.5 Objectives for the Messages

The messages not related to the reasons for designation as a national historic site are effectively communicated to the public when:

- part of the heritage presentation experience conveys the messages not related to the reasons for designation as a national historic site;
- the presentation of the messages not related to the reasons for designation as a national historic site do not overwhelm or detract from the presentation and understanding of the site’s national significance;
- visitors understand the messages not related to the reasons for designation as a national historic site; and
- management decisions are based on adequate and sound information and are made in accordance with the principles and practice of the CRM Policy.

6.1 HSMBC Minutes and Plaque Texts

Discussion and Recommendations

In the spring of 1955, the Dominion Atlantic Railway (DAR) offered to sell Grand Pré Memorial Park to the federal government. This year marked the 200th anniversary of the Deportation, which thousands of Acadians and other people observed in special ceremonies at Grand Pré Memorial Park. The DAR was no longer interested in operating the site which it had owned since 1917.

The Minister responsible for national historic parks referred the matter to the Historic Sites and Monuments Board of Canada for advice on the historical features of the park. At the same time, he sought clarification from the DAR on the museum that was situated in the park, but owned and operated by the Société Mutuelle l’Assomption.

The agenda paper prepared for the May-June 1955 meeting of the Board gave a brief description of the park. It acknowledged the role of the DAR in landscaping and developing the site to make it “one of the most beautiful small parks to be found anywhere” and to attract visitors on the Dominion Atlantic Railway’s rail line. The paper also dealt with the museum and valuable museum collection. Of particular interest were the questions of whether the building stood on the site of the Acadian church of Saint-Charles-des-Mines and whether it was an exact replica of that church. The first question could not be answered and the second was deemed to be unimportant. The Board was advised that the museum, with its collection, seemed to be of value and the Department could not permit the Société Mutuelle l’Assomption to operate the museum if the Department took over the site.

An internal departmental memo seems to have served as the basis for the paper (7 April 1955, Director, Historic Sites, to the Deputy Minister of Northern Affairs and National Resources). The memo stated that Grand Pré Memorial Park was on the site of the historic village of Grand-Pré and that the memorial church was thought to be on the site of the Acadian church, the headquarters for the Deportation from the area. The memo also assessed the resources and facilities on the site - the memorial church and its museum collection, the reconstructed well, the willows, the Herbin Cross and the tea room. At its May 1955 meeting, the Board responded directly to the Department’s question about the historical features at Grand Pré Memorial Park with the opinion that "Grand Pré Memorial Park possesses historical features which would make it eminently suitable as a National Historic Park.” What exactly was meant by “historical features”, is unclear. The Board paper did not mention the memorial aspect of the park. In fact, the word “memorial” did not appear in the text, not even for the Memorial Church, which was treated strictly as a museum building. The only historical feature from the Acadian village addressed in the paper was the church of Saint-Charles-des-Mines, whose location had not been confirmed.

The federal government acquired Grand Pre Memorial Park from the DAR and the memorial church from the Société Nationale l’Assomption (SNA) in 1957. The SNA had previously acquired it from the Société Mutuelle l’Assomption. A 1956 agreement signed by the SNA and the government acknowledged the special significance of Grand-Pré Park and the church site to the Acadian people. With the creation of the national historic park in 1961, the name of the site changed to Grand-Pré National Historic Park. Concurrent with, but apart from, its 1955 discussions of the Grand Pré Memorial Park, the Board looked at the Deportation, in response to a request from the organizing committee for the 1955 “Acadian Reunion”. The committee suggested the erection of several memorials, including one at Grand-Pré “to mark the bicentenary of the dispersal of the Acadians.”
The Board considered the suggestions at its June 1, 1955 meeting and declared that:

In the opinion of the Board the expulsion of the Acadians and their return to Nova Scotia and New Brunswick is an event of national historical importance and should be suitably commemorated.

The location of the “proposed memorial” was left for the Nova Scotia member, Dr. Ferguson, to investigate. Neither Grand-Pré nor Grand Pré Memorial Park was specifically mentioned in the recommendation and in the body of minutes, but the item was entitled “Dispersal of the Acadians, Grand Pre, N.S.” Minutes in later years used the same heading while the November 1958 minutes specifically stated that the commemoration would be at Grand-Pré.

In 1956, the Board deferred the commemoration until a decision had been reached about “Grand Pré proper”, presumably meaning the acquisition of the Memorial Park. In 1957, the commemoration was deferred again and Dr. Ferguson was asked to prepare a draft plaque text. In May 1958, the Board approved the English plaque text, which members agreed would be bilingual. At its November meeting, the Board approved another text and decided that the French version would use the term “grand dérangement”.

The approved May 1958 text read:

THE ACADIANS

In 1755 (sic) because of the vicissitudes of War, over six thousand Acadians were evicted from their lands and deported from Nova Scotia. About two thousand others escaped deportation. These, joined by a like number returning from exile, subsequently accepted the rights and responsibilities of citizenship.

The approved November 1958 text read:

THE ACADIANS

In 1755 at the onset of the Seven Years’ War, over six thousand Acadians were deported from these parts of Nova Scotia mostly to the American colonies. About two thousand escaped deportation, others returned from exile. Their descendants form an important segment of the people of the Maritime Provinces.

The plaque was finally erected and unveiled at Grand-Pré NHSC in 2005 as part of the 250th anniversary commemoration of the Deportation. The “Return of the Acadians” was commemorated with a plaque at Caraquet, New Brunswick, in 1956.

During management planning in 1982, the Atlantic Regional Office asked the Board to clarify the national historic significance of Grand-Pré National Historic Park. By this time, the site had expanded beyond the 1955 boundaries of the former Grand Pré Memorial Park. The 1982 park also included land developed as a parking lot on the east side of the Grand Pré road and a triangular property, which included Acadian house sites, on the west side of the original park. At its June 1982 meeting, the Board clarified the significance of the park with the statement that:
Grand-Pré National Historic Park is of national significance by virtue of the fact that the area was a centre of Acadian activity from 1682 through to the expulsion and that there remains to this day a strong attachment among Acadians to this, the heart of their ancestral homeland, and further that the interpretive program at the Park deal exclusively with the life of the Acadian community, in the Minas Basin, up to the expulsion and be supported through additional historical and archaeological research, as required. In addition the Board encouraged the Atlantic Region, Parks Canada, to undertake to interpret these themes, on site, at a location other than the Memorial Chapel.”

In 1994, the HSMBC discussed the definition and criteria for “rural historic districts”, with the Grand Pré area used as one possible example. In 1995 the Board recommended that the Grand-Pré rural historic district is a rural historic district of national historic and architectural significance. The specific recommendation was as follows:

that the Grand-Pré rural historic district be commemorated on grounds of national historic and architectural significance because the area contains one of the oldest land occupation and use patterns of European origin in Canada, created by two cultural groups of significance and embodying distinctive characteristics of successive periods and methods of land occupation, which illustrate the dynamics of human interaction with the landscape. Further, through the continued use of dykelands and the survival of a land-use pattern influenced by the associated agricultural practice, the area represents an outstanding example of a landscape of technological and social importance, created by the Acadians and modified by subsequent cultural groups. Finally, these cultural landscape qualities exist within a definable area which exhibits a high level of integrity and a minimum of urban encroachments or incompatible land uses.

In 1995 the HSMBC recommended to revoke the Board’s 1982 recommendation that the site "deal exclusively with the life of the Acadian community in the Minas Basin up to the expulsion." Recommendation was to return to the Board’s earlier formulation of national significance, because the 1982 determination made it impossible to convey the "strong attachment among Acadians to this [Grand-Pré], the heart of their ancestral homeland".

In 1997, during a discussion about the designation of Acadian tidal gates (aboiteaux) at Memramcook, the Board recommended:

that the critical role played by the “aboiteaux” in Acadian agriculture be interpreted at Grand-Pré National Historic Site in Nova Scotia.

In 1997, the HSMBC approved by full Board, a bilingual plaque inscription for Grand-Pré Rural Historic District. The plaque was later mounted beside the new visitor centre, on the land acquired by Parks Canada in 1999.

In 2004 the Board approved the plaque inscription for “The Expulsion of the Acadians (1755-1762), Grand-Pré, Nova Scotia”, which was mounted in front of the new visitor centre, on the land acquired by Parks Canada in 1999.
Final approved plaque text:

LA DÉPORTATION DES ACADIENS
THE EXPULSION OF THE ACADIANS
(1755-1762)

En 1755, à la veille de la guerre de Sept Ans, débute la déportation des Acadiens. Contrariées par la neutralité des Acadiens qui refusent de prêter serment sans conditions à la Couronne, les forces britanniques enclenchent le « grand dérangement ». Pendant huit ans, plus de 10 000 Acadiens sont dispersés par petits groupes dans les colonies américaines, en Angleterre et en France. Après la fin de la guerre en 1763, ils sont nombreux à reprendre le chemin du retour. Ils se joignent alors au peu d’Acadiens ayant échappé à l’exil et construisent, avec force et courage, une communauté fière et dynamique.

The expulsion of the Acadians began in 1755, on the eve of the Seven Years’ War. Frustrated with the neutrality of Acadians who refused to swear an unconditional oath of allegiance to the Crown, British forces began the “grand dérangement.” Over the next eight years, more than 10,000 Acadians were dispersed throughout the American colonies, England and France. After the end of the war in 1763, many returned. They joined the small number of Acadians who had narrowly escaped exile and, with strength and courage, they forged a proud and vibrant community.

At the December 2007 HSMBC meeting, consideration was given to a proposed extension to Grand-Pré National Historic Site of Canada in order to include important cultural resources that speak to the existing reasons for designation of the national historic site, and to implement a coherent management direction for cultural resources and messages of national historic significance on the entire property administered by Parks Canada. The Board was presented with the following background:

…the proposed extension is the property that was purchased in 1999. It is located south of the existing national historic site, on the other side of a railway line. This property includes significant archaeological resources (four known Acadian cellars), a visitor centre built in 2003, a parking lot for that centre, and two Board plaques, one for Grand-Pré Rural Historic District National Historic Site of Canada, designated 1995, and the other for the Dispersal [sic] of the Acadians National Historic Event, designated 1955. Like the existing national historic site, this property is located in a rural setting. Farmers’ fields and orchards form the boundary along the entire length of its southern and western edges. The railway line delineates the northern boundary of the property and the Grand Pré Road forms the eastern boundary. The existing national historic site and the proposed extension are, as an entity, surrounded by cornfields, orchards and rural residential properties.

The Full Board agreed with the findings of the Submission Report 2007-85 (Ref. 2007-85, “Grand-Pré National Historic Site of Canada: Proposal to Extend the Designated Place”) before it and recommended that:

The designated place of Grand-Pré National Historic Site of Canada is defined by property boundaries of the site currently administered by Parks Canada and acquired in a number of different stages between 1956 and 1999.
6.2 Administered Place of Grand-Pré National Historic Site of Canada
6.3 Inventory of Resources Related to the Commemoration of Grand-Pré NHSC

The table below indicates the current cultural resource rating (Level) and the previous rating as found in the May 1997 CIS (found in brackets). Items marked “(new)” are resources not known to exist at the time of the 1997 CIS.

The letters (a), (b) and (c) referred to in the ‘Explanation’ column of the table correspond to the first, second and third reasons respectively for the designation of Grand-Pré NHS:

(a) it was a centre of Acadian activity from 1682 to 1755;
(b) it is the site most closely associated with the Deportation of the Acadians; and,
(c) it commemorates the strong attachment that remains to this day among Acadians throughout the world for this area, the heart of their ancestral homeland, making Grand-Pré a symbol of the ties that unite them.

Other:

- Dating back to the Acadian settlement they are linked to (a) it was a centre of Acadian activity from 1682 to 1755.
- Level One cultural resource for Melanson Settlement NHSC.
- The Statue of Notre-Dame de l’Assomption is (c) directly linked to the strong attachment to this day among Acadians to the heart of their ancestral homeland.
- Directly related to creation and evolution of the site.
- Commissioned through the cooperative efforts of the Fédération acadienne de la Nouvelle-Écosse and Parks Canada in 1985. The stained glass window was part of the original design feature of the Memorial Church, but was not completed when the building was constructed.
- Installed inside the Memorial Church in the 1980s, the list has become an important element of the visitor experience, especially for Acadians making a pilgrimage to Grand-Pré.
- Commissioned by Parks Canada during the renewal of the exhibits in the Memorial Church in the 1980s.
- Commissioned by Parks Canada during the renewal of the exhibits in the Memorial Church in the early 1980s.
- Commissioned in 1979.
- The mural was commissioned by the Société Promotion Grand-Pré and installed in the new Visitor Centre following a fund-raising initiative in 2004.
- This painting of the Deportation Cross before it was relocated to Horton Landing, is displayed in the Visitor Centre.
- The paintings were produced as a result of artist-in-residence initiative of the Société Promotion Grand-Pré.

Executive Summary

This plan replaces the management plan tabled in parliament for Grand-Pré National Historic Site of Canada in April 2001 and reflects the direction provided by the Parks Canada Guide to Management Planning (2008). This new management plan provides an integrated approach to implementing Parks Canada’s mandate for protecting heritage resources, facilitating opportunities for visitor experience, and fostering public appreciation and understanding of Parks Canada’s heritage places.

During the process to update the management plan for Grand-Pré NHSC, Parks Canada consulted with the Mi’kmaq of Nova Scotia, the public, partners and stakeholders to identify the challenges facing the national historic site, to work towards refining a vision for the site and to identify opportunities that would assist the Agency in meeting its mandate. A State of the Site Report (SoSR) for Grand-Pré NHSC was completed in 2009 and identified the major management issues and challenges for the site. The following are the key issues and challenges which are addressed in this management plan:

- significant decline in visitation;
- elements of visitor experience such as trip planning, on-site communication of messages, and way finding;
- limited public outreach education activities;
- maintenance of the administered place once the acquisition of additional properties that include significant cultural resources;
- need to increase programming and interpretation of, and sense of connection with, the archaeological remains of the 17th- and 18th-century Acadian settlement;
- increasing disconnect from local residents; and
- contribution to a possible UNESCO World Heritage designation.

Parks Canada will work to strengthen existing collaborative relationships with the Mi’kmaq of Nova Scotia and undertake projects of mutual interest. Parks Canada will work with representatives of Mi’kmaq communities in Nova Scotia to identify opportunities for Mi’kmaq involvement within advisory committees.

Presented in this plan is a vision for Grand-Pré NHSC that is expected to guide the national historic site into the next 10 to 15 years. Three key strategies support achieving this vision. Each of these strategies and associated objectives, targets and action items address the issues identified in the 2009 Grand-Pré State of the Site Report (SoSR). Two area-specific strategies for the “Triangular Property” and the “Fields” and the “Commemorative Gardens” are also presented in this plan.

Parks Canada remains committed to facilitating opportunities for visitors to experience the site, partner and stakeholder engagement and cultural resource protection however the strategic directions in this plan focus on areas that are new. The following are the three key strategies developed for this management plan:

**KEY STRATEGY 1: FROM SETTLING THE MARSHLANDS TO FEELING THE “HEART OF ACADIE”**

The main objective of this key strategy is to enhance the visitor’s experience through direct contact with the remains from the past, and interaction with the services and activities of the present site. The intent of this key strategy...
is to expand on the experiences available to reach not only a broader audience in ways that stimulate personal connections. The site as a whole will require attention to identify the areas and themes that can offer new opportunities without significant investments in infrastructure. This will be accomplished in collaboration with partners and stakeholders through an increased understanding and identification of the site’s markets, and developing opportunities for experiences based on the interests and needs of market segments.

The archaeological remains of the Acadian settlement will be understood, preserved and presented in a way that allows visitors to get a glimpse of the village, the stratification of houses, the streets, and the activities that took place. The Deputation will remain an important element of the site’s interpretation, but greater efforts will be invested in presenting life in the Acadian settlement of Grand-Pré. The site and cultural resources that speak to it. This work will be possible in part by building partnering opportunities with universities in Nova Scotia and New Brunswick to research and interpret the resources at Grand-Pré NHSC. Visitors will be able to reflect on the site’s meaning, contemplate its rural setting, and to connect with that setting, for leisure and learning.

The foundation of this key strategy is an understanding of visitors’ interests. This information is used to develop new products that will provide the means to convey Canadians with the site’s stories and cultural resources on the website, attract more local visitors, promote the site to broader audiences and newly identified markets, develop new products, market the site’s offer, encourage repeat visitation and thereby address declining visitation.

KEY STRATEGY 2: SHARED STEWARDSHIP THROUGH PARTNERING OPPORTUNITIES

The main focus of this key strategy is to enhance the shared stewardship of Grand-Pré NHSC through partnering opportunities. Grand-Pré NHSC is an important landmark in the community of Grand-Pré, the County of Kings, and the Annapolis Valley. It is also, traditionally, a site of great spiritual and cultural significance for the Acadians, resulting in a unique sense of stewardship. This sense is mirrored in the operation of the visitor services by the Société Promotion Grand-Pré, an organization created by the Société nationale de l’Acadie and the Fédération académique de la Nouvelle-Écosse.

With the proposal for the Grand Pré area to become a World Heritage Site, there is the potential to attract an international audience, beyond the Acadians and their descendants. This key strategy will focus on nurturing or redefining existing partnering arrangements to capitalize on this opportunity. Parks Canada will develop new networks and contacts to reach new audiences and offer a diversified range of visitor experience opportunities. Parks Canada will increase its on-site presence at the national historic site to deliver the Agency’s corporate direction in the areas of visitor experience, external relations, public outreach education and protection of cultural resources in cooperation with the Société Promotion Grand-Pré, local communities and other strategic partners.

This key strategy will also focus on strengthening the sense of stewardship on the part of local residents and Nova Scotians living within easy driving distance of the Annapolis Valley, which has in part been lost due to the introduction of entry fees. Parks Canada will increase opportunities for stakeholders and partners to influence and contribute to the national historic site by collaborating with community associations to strengthen the bond between the site and the surrounding communities. The Société Promotion Grand-Pré, with the assistance of Parks Canada, has taken action to understand their market and has since carried out a market research study that has helped the Société Promotion Grand-Pré identify new markets, develop new products and promote the site.

Grand-Pré NHSC has attracted researchers that have studied the archaeological remains, Acadian genealogy, and historical objects and archives. More consistent collaboration between Parks Canada and research organizations, within the framework of research priorities identified for the site, would also build a sense of stewardship by those researchers.
KEY STRATEGY 3: ANCHORING THE “PARK” IN THE COMMUNITIES

The main objective of this key strategy is to change the perception of what Grand-Pré NHSC is to local communities and the greater Annapolis Valley residents, reconnecting it to their everyday lives and thereby increasing its relevance. Some of the community character that once was at the heart of visiting Grand-Pré NHSC seems to have been lost since the introduction of entry fees. In the past, the site’s larger community encompassed a greater percentage of residents of the Annapolis Valley and the Halifax Regional Municipality (HRM) who came to Grand-Pré NHSC simply to enjoy its natural beauty and historic setting. The perception of Grand-Pré NHSC by some market segments has changed – once a place you simply visited to enjoy and appreciate, it is now identified as a “museum type” attraction where “visitors” go. As such, the national historic site has lost some important community support and a valuable market.

This strategy will focus on reconnecting local and Annapolis Valley residents to the national historic site by having the site play a more central role as a valuable community resource and gathering place for local and regional events. By promoting the site as a destination to “rediscover”, Parks Canada will try to reinvigorate visitation by this market. In addition, the UNESCO nomination process has provided greater media exposure for Grand-Pré NHSC, and more importantly, it has been a vehicle for Parks Canada to work collaboratively with the local community to reconnect Grand-Pré NHSC to their everyday lives and thereby increase its relevance to them. Parks Canada will increase its presence at the national historic site to ensure the integrated delivery of its mandate elements.

Parks Canada will enhance its collaboration with the tourism industry and interested local businesses in the region to enter into or strengthen existing markets, and become a key destination in the region. The site is part of the social and economic fabric of the region and the Parks Canada Agency will work with communities to maintain positive relationships. To reach those Canadians who will not have an opportunity to visit the site, Parks Canada will increase awareness of the national historic site and its reasons for designation through various learning opportunities including an improved website presence.

1.0 Introduction

1.1 PURPOSE OF THE MANAGEMENT PLAN

Parks Canada has the important responsibility of managing Canada's system of national historic sites, national parks and national marine conservation areas—a responsibility to the government and to the people of Canada. Parks Canada's mandate, which underpins all management planning, consists of three elements: protecting heritage resources, facilitating opportunities for visitor experience, and fostering public appreciation and understanding of Parks Canada's heritage places. In order for Canadians to have a strong sense of connection to their heritage places, Parks Canada facilitates opportunities to discover, appreciate and understand these special places in ways that ensure they are available for future generations.

Management plans provide an integrated approach to implementing Parks Canada's mandate. In order to achieve integration within the planning process, each aspect of the mandate is simultaneously addressed in a holistic fashion and through the engagement of different perspectives.

The purpose of a management plan is to develop clear direction for the management and operations of a park or site for a 10 to 15 year period. These plans reflect the legislation and policies of the Agency, and are developed with public involvement. A management plan is the key instrument to ensure the delivery of commitments communicated through Parks Canada's Corporate Plan and is the key accountability document for the site. They are approved by the Minister and are tabled in Parliament.

Management plans are the main engagement processes to ensure that Aboriginal peoples, the public, partners and stakeholders can be involved in meaningful dialogue about the management of the site where each has a voice in shaping the future of our heritage places. These plans set a clear, long-term vision and key strategies that include
achievable objectives and actions to achieve those objectives.

1.2 LEGISLATIVE AND POLICY BASIS FOR MANAGEMENT PLANNING

A common legislative and policy context influences the management of all protected heritage places owned and/or administered by Parks Canada.

The Parks Canada Agency Act (1998) confers on Parks Canada the responsibility to implement the Canada National Parks Act (2000) and ensure the commemorative integrity of national historic sites. In accordance with this Act, a management plan is prepared for national parks and historic sites owned and/or administered by Parks Canada. Such plans are reviewed and updated every five years.

The current management plan was approved in 2001 and has been reviewed in accordance with Section 32 of the Parks Canada Agency Act (1998). Since the majority of the management actions contained in the plan have been completed, a new management plan was required. This new plan provides important direction for the management of lands acquired at the site since 1999.

Parks Canada has a duty to consult with Aboriginal peoples regarding activities that may adversely affect asserted Aboriginal or Treaty rights. Parks Canada also places a high priority on developing mutually beneficial relationships with Aboriginal peoples. To these ends, Parks Canada entered into a process of consultation on this management plan with representatives of the thirteen Mi'kmaq First Nations in Nova Scotia and the Native Council of Nova Scotia. These consultations provide a good opportunity to share information and build on the collaborative relationship that exists between Parks Canada and the Mi'kmaq of Nova Scotia.

1.3 PLANNING ACCORDING TO PARKS CANADA’S MANDATE

There are three mutually supportive areas within the Parks Canada mandate:

- protection of heritage resources;
- facilitation of opportunities for meaningful visitor experiences; and
- fostering public appreciation and understanding about Canada’s heritage places.

Protection of Heritage Resources
Protection of Heritage Resources relates to the principle of commemorative integrity which ensures the health or wholeness of the National Historic Sites of Canada.

Meaningful Visitor Experience
Visitor experience is defined as the sum total of a visitor’s personal interaction with protected heritage places and people, an interaction that awakens the senses, affects the emotions, stimulates the mind, and helps the visitor create a sense of connection to these places.

Public Appreciation and Understanding
Parks Canada aims to reach Canadians at home, at leisure, at school and in their communities through communication and education opportunities designed to increase awareness, understanding, appreciation,
support and engagement towards the natural and historical heritage of Parks Canada to foster appreciation among Canadians of the significance of the national heritage places protected on their behalf. Parks Canada provides public education outreach opportunities for Canadians to discover and learn about these places while at home, at leisure, at school and in their communities. The Agency also strives to engage stakeholders and partners in the protection and presentation of Parks Canada’s administered places.

1.4 REGIONAL CONTEXT AND GEOGRAPHIC LOCATION

Grand-Pré National Historic Site is located in the picturesque Annapolis Valley, in Nova Scotia. The site sits on the edge of the village of Grand Pré, about 10 km east of Wolfville, within the Municipality of Kings County and is approximately a one hour drive from the city of Halifax (Map 1). The administered area of the Parks Canada property is a small portion of what in the first half of the 18th century was a large, widely-dispersed settlement area for the Acadians, but to this day still stands as an iconic location for Acadians around the world and who return to the site year after year.

The overall area in which Grand-Pré NHSC is located is one of intensive agricultural use, as it has been since the late 17th and early 18th centuries when Acadians first reclaimed the salt marshes from the sea. The most prominent agricultural feature in the area, then as now, is the Grand Pré marsh, approximately 1,200 hectares that was once wetland, but which was converted to dykedland by the Acadians and later taken over and maintained by the New England Planters. The marsh lies along the entire north boundary of Grand-Pré NHSC. The other three boundaries of the national historic site are on the “uplands”. They are characterized by gently rolling hills, farm and residential properties, and vineyards and orchards. The entirety of Grand-Pré NHSC and the adjacent areas of North Grand Pré/Long Island, the Grand Pré marsh, Hortenseville, Horton Landing, Grand Pré village and all the area down to the Gaspereau River all fall within the Grand-Pré Rural Historic District National Historic Site of Canada.

The site, when acquired by Parks Canada in 1957, covered 10.2 hectares. It has since more than doubled in size to cover 24.06 hectares with the acquisition of properties south of the original park. The designation initially included only the property transferred to the Parks Canada Agency in 1957. However a recommendation to the Historic Sites and Monuments Board of Canada (HSMB) to extend the designated place to the entire administered property (at the time, the administered property included the parcel acquired in 1957 and the parcel acquired in 1991) made in late 2007 was supported by the HSMB and confirmed by the Minister. This decision was made on the basis that the lands acquired in 1999 included significant cultural resources that were directly related to the reasons for designation. Lands acquired by Parks Canada in 2009, are not included in the designated area, however are part of the overall administered property.

1.5 FORMAL THIRD-PARTY INVOLVEMENT

Though Grand-Pré NHSC is administered by Parks Canada, services to the public are provided under contract by the Société Promotion Grand-Pré. The efforts of the Société Promotion Grand-Pré have been to promote the site in particular to the Acadian community and to organize cultural events and other activities that enhance the site’s use for various occasions. Currently, Parks Canada staff on-site is limited to one permanent and four seasonal maintenance employees.

*The name of the present-day village of Grand Pré does not include a hyphen within the name of the village, however, references to the historic village of “Grand Pré” and the national historic site include a hyphen in the spelling of the name.*
1.6 PLANNING PROCESS AND PUBLIC ENGAGEMENT

Management planning occurs on a five-year cycle, starting with an assessment of the state of the site, a review of accomplishments from the last management plan, and casting forward through a vision exercise to develop current management direction for the site.

The State of the Site Report for Grand-Pré NHSC provided a synopsis of the current condition of protection, visitor experience and education at the site and helped to determine the issues and challenges facing the site.

An important aspect of the management plan process is public engagement. During the months of June and July 2009, staff, stakeholders and partners from a cross-section of organizations and interests met through workshops, meetings and an open house to actively contribute to the development of the management plan.

Discussions during the workshops, meetings and open house focused on how Grand-Pré NHSC can actively be part of the life of surrounding communities and how partnering opportunities can enrich the experiences of visitors to the site. Participants gave their time to share their ideas and to help develop a vision for the future. Through these discussions Parks Canada was able to draft a new vision statement, clarify the issues and develop key strategies to achieve Parks Canada’s mandate.

The Mi'kmaq of Nova Scotia claim unextinguished Aboriginal title and treaty rights throughout Nova Scotia. The Made-in-Nova Scotia Process is the forum for the Mi’kmaq, Nova Scotia and Canada to resolve issues related to Mi’kmaq treaty rights, Aboriginal rights, including Aboriginal title, and Mi’kmaq governance. The participants are the Mi'kmaq of Nova Scotia as represented by the Assembly of Nova Scotia Mi'kmaq Chiefs, the provincial government and the federal government. Issues of resource harvesting within National Parks and National Historic Sites, and the exercise of other Aboriginal or treaty rights are currently under discussion at the Made-in-Nova Scotia Negotiation Table.

Parks Canada has a duty to consult with Aboriginal peoples regarding matters that may affect asserted Aboriginal or treaty rights. Parks Canada also places a high priority on developing mutually beneficial relationships with Aboriginal people. To these ends, Parks Canada will continue to work with the Mi'kmaq of Nova Scotia on issues related to management planning and other matters of interest to the Mi'kmaq of Nova Scotia.

The Mi'kmaq of Nova Scotia were consulted through a formal process. The accommodations requested during this consultation have been reflected in this management plan.
2.0 Importance of the Protected Heritage Place

The administered area of the Parks Canada property is a small portion of what in the first half of the 18th century was a large, widely-dispersed settlement area for the Acadians. That historical Grand-Pré extended into what today are the separate communities of North Grand Pré (on Long Island), Hortonville, Horton Landing, Lower Wolfville, and the afore-mentioned village of Grand Pré (Map 2).

There are many national historic designations in Nova Scotia that have close links or associations with Grand-Pré NHSC. They include all the other Acadian history sites in the Maritimes (such as Beaubassin, Fort Beauséjour-Fort Cumberland, the Melanson Settlement, Port-la-Joye-Fort Amherst, and the Monument—Lefebvre) and many of the predominantly British historic sites (such as Fort Edward, Fort Anne, and the Halifax Defence Complex) that are intimately linked to the Deportation of the Acadians in 1755.

There are three primary reasons why Grand-Pré NHSC is a site of national historic significance in Canada:

- it was a centre of Acadian activity from 1682 to 1755;
- it commemorates the Deportation of the Acadians, which occurred at Grand-Pré in 1755; and
- it commemorates the strong attachment that remains to this day among Acadians throughout the world to this area, the heart of their ancestral homeland and symbol of the ties which unite them.
Acadians first began to settle at Grand-Pré and in the overall district of Les Mines in the early 1680s. They were drawn by the huge 1,200-hectare salt marsh or meadow (le grand pré) that over a period of several decades they claimed from the sea by dyking and desalination. Grand-Pré eventually became the most populous settlement in Acadie, extending for several kilometres along the upland bordering the large reclaimed marshland. The spread out community included houses, farm buildings, storehouses, windmills, and the parish church of Saint-Charles-des-Mines.

Though the Treaty of Utrecht (1713) transferred Acadie to Britain, most Acadians stayed in their traditional communities, including those at Grand-Pré. Until the mid-1740s, life there and in other Acadia districts was peaceful; a period sometimes described as a "golden age". The steady growth in the size of the Acadian population in different areas, however, was a worry for the British administration, based at Annapolis Royal until 1749 and at Halifax from mid-1749 onward. British officials feared they could not rely on the neutrality of the Acadians because of their Roman Catholic religion and their ties with nearby French colonies on today’s Cape Breton and Prince Edward Islands. The British wanted the "neutral French" to become full British subjects; the Acadians, on the other hand, insisted they were and would remain neutral.

Between 1744 and 1747 there were numerous developments that greatly complicated the situation in the region. In late 1746 the British sent roughly 500 New England soldiers to establish a post at Grand-Pré, with the soldiers taking over 24 Acadian houses. In the middle of a February 1747 night, with a snowstorm raging, a French force from Canada (350 French soldiers and 50 Amerindian warriors) caught the New Englanders totally by surprise. Known to history as the Battle of Grand-Pré, the encounter left at least 80 New Englanders dead, including their commander. In 1924 the HSMBC found the 1747 attack to be an event of national significance. The plaques for that commemoration are located a few hundred metres from Grand-Pré NHS.

Historians sometimes differ in their interpretations of the Acadian Departure, which began in 1755 and lasted until 1762. There is no disagreement, however, over the tragic impact that the Departation had on the Acadians and their communities. The first Acadian area to feel the impact of the removal policy was the Chignecto region, beginning in August 1755. Grand-Pré and Pisiquid (Windsor) were the next to be affected, beginning on September 5, 1755.

The removal of the entire population living at Grand-Pré and in neighbouring villages was not completed until late October 1755, when the local inhabitants were put aboard ships bound for Pennsylvania, Virginia, Maryland, Connecticut, and Massachusetts. In total, approximately 2,200 Acadians were deported from the Minas area in 1755. That was roughly one-third of the 6,000 Acadians deported from Nova Scotia during the first year of forcible removals.

With the removal of the Acadians, British officials expected settlers from New England, referred to as Planters (old word for "settler"), to migrate north. This began in 1760 when the first major wave of settlers from New England arrived in Nova Scotia. Between 1760 and 1768, roughly 8,000 men, women and children from New England came to settle in Nova Scotia. One of the places the Planters settled was Grand-Pré, which they renamed Horton.

The Planters who came to Grand-Pré/ Horton turned to some of the displaced Acadians, imprisoned in Halifax and at Fort Edward, to learn about dyke construction and repair. The Planters and their descendants eventually became master dyke builders themselves, maintaining what the Acadians had built and eventually adding new dykes and reclaiming additional marshland from the sea.
In 1847 the American poet Henry Wadsworth Longfellow published *Evangeline: A Tale of Acadie*, a long narrative poem about the Acadian tragedy that became an international bestseller. Grand Pré was the setting for the early parts of the poem, a choice that encouraged many tourists to come to Grand Pré in the late 19th century and throughout the 20th century. Grand Pré became a major tourist destination and the Annapolis Valley was often described as the "Land of Evangeline".

The Dominion Atlantic Railway (DAR) commissioned architect Percy Nobbs to design a park-like landscape at Grand-Pré, where the DAR erected a statue of Evangeline and presented an old Acadian well and other features. The DAR had obtained the land for the park from Wolfville jeweller John Frederic Herbin, who had purchased the land to protect it on behalf of the contemporary and future Acadian community. Soon after, Acadians across the Maritimes undertook a project to build a memorial church on the grounds of the park at Grand-Pré. That church was designed by architect René A. Fréchet and erected in 1922 and since that time, the church has been one of best illustrations of the Acadians' attachment to the site and a symbol of their identity.

In 1956, an agreement was signed between the federal government and the Société mutuelle l'Assomption, acting on behalf of the Acadian people, which acknowledged that "the Grand-Pré Park is considered the most important historic site by the Acadian people, that it recalls their saddest and most heroic moments and must remain for future generations the example of a courageous people whose culture and actions shall enrich more and more the Canadian nation."

3.1 PLANNING CONTEXT / CURRENT SITUATION

Despite broader reasons for designation, the site has traditionally been associated with the commemoration of the Deportation and with Evangeline, the main character in a poem by 19th century American author Henry Wadsworth Longfellow. Those traditional associations are cornerstones of the site's branding. The site's offer, until the acquisition of new properties in 1999 and 2003, focused primarily on the commemorative gardens designed for the Dominion Atlantic Railway to enhance the discovery of the Land of Evangeline.

The 2001 Grand-Pré National Historic Site management plan focused on its redevelopment and the building of a Visitor Centre. This included completing the acquisition of the land south of the original property in 1999, developing an interpretation plan, and working with the Acadian community, through the Société Promotion Grand-Pré, to implement the plan. Its implementation was completed in 2003 with the inauguration of the new Visitor Centre which all but completed the objectives and the major improvements to the visitor facilities at the site, as set out in the 2001 management plan.

The acquisition of properties south of the original park in 1999 and 2003 more than doubled the administered property's size to cover 24.06 hectares (Map 3). The designation initially included only the property transferred to Parks Canada in 1957. However a recommendation to the Historic Sites and Monuments Board of Canada (HSMBC) to extend the designated place to the entire administered property made in late 2007 was supported by the HSMBC and confirmed by the Minister. This decision was made on the basis that the site acquired in 1999 included significant cultural resources that were directly related to the reasons for designation.

In 2009, Parks Canada acquired two additional parcels of land as part of the Agency's efforts to protect significant cultural resources.
and viewpoints. The acquisition of these properties will allow the Agency to protect cultural resources, protect the site from potential incompatible development, and offer potential possibilities for future visitor experience opportunities in relation to the national rural historic district and possible future World Heritage Site designation.

In the spring of 2010, the former visitor centre building (located in the original 1957 parcel acquisition to the east of Grand Pré Road) was dismantled and moved off the site. The parking lot associated with the former visitor centre has remained to serve as overflow parking for the national historic site.

Interpretation and visitor services at the site have been delivered under contract by the Société Promotion Grand-Pré with whom Parks Canada has collaborated with for over 10 years. The efforts of the Société Promotion Grand-Pré have been to promote the site, in particular to the Acadian community, and to organize cultural events and other activities. Parks Canada staff on-site is limited to maintenance activities.

The national historic site is a component of the property that is included on Canada’s Tentative List for potential UNESCO World Heritage Site designations. If the designation is successful, Grand-Pré National Historic Site will play a very important role in showcasing and supporting the UNESCO designation. As the core protected area for an eventual World Heritage site, Grand-Pré NHSC could become the main service point location and staging area for visitors coming to experience the Grand Pré World Heritage Site.

3.2 ENGAGEMENT OF THE MI'KMAG OF NOVA SCOTIA, STAKEHOLDERS, PARTNERS AND LOCAL RESIDENTS

Although local residents have a connection to the site, it has been challenged over the years by actions that some have interpreted as obstacles, notably the moving of the New England Planter and other non-Acadian objects off the site and the introduction of entrance fees. Moreover, for the past ten years there has been reduced Parks Canada presence on site which has, over time, presented a challenge to maintain a level of engagement with the local community.

Stakeholder and partner meetings have revealed that there are a number of opportunities for Parks Canada to collaborate to improve visitor experience opportunities and activities that can reconnect local residents with the site.

In response to stakeholder, partner and local resident feedback during the public engagement process, entry fees are now only being charged for access to the Visitor Centre and the Memorial Church.

Over the years, Parks Canada has developed a very positive and enriching relationship with the Acadian community which has resulted in renewed interest and support for the site. Many events and activities important to the Acadian community have taken place at the national historic site. Most notable was the hosting of the Congrès mondial acadien in 2004 and the 250th anniversary of the Deportation in 2005, which together attracted large numbers of visitors from Acadian communities throughout the world to events held at Grand-Pré NHSC.

Through the support of the local community and stakeholders, Parks Canada also successfully commemorated the Grand-Pré Rural Historic District National Historic Site of Canada in 2004 and relocated the Deportation
Cross to Horton Landing in 2005. More recently, Parks Canada provided and continues to provide, considerable support for the development of a UNESCO nomination for the Grand Pré area.

The relationship with the local area residents is overall positive, in particular with heritage associations and marketing bodies. The national historic site is recognized for heritage preservation and was called upon to assist in the preservation of artefacts including a sluice "aboiteau" discovered in the dykelands. Parks Canada and the local community have worked collaboratively on a number of initiatives including the preservation of view planes from the site; land-use planning; promoting heritage tourism; marketing; and special events. Parks Canada continues to support the local community by providing a venue to host some local activities at the site.

The national historic site is situated within an area that has traditionally been used by the Mi'kmaq of Nova Scotia. Traditional Mi'kmaq knowledge for the area indicates that the region is of spiritual or sacred significance. Due to their long history in the Grand Pré area, the Mi'kmaq of Nova Scotia have a vested interest in management actions undertaken at the national historic site. The Mi'kmaq have been instrumental in developing the Visitor Centre exhibits and multimedia presentation in a way that reflected their perspective, lending their voices to the accounts from their ancestors that interacted with the Acadians and witnessed the Deportation. This collaboration between Parks Canada and the Mi'kmaq has resulted in enhanced opportunities for visitors and in building a positive relationship.

The Mi'kmaq were invited by Parks Canada and the Société Promotion Grand-Pré to the Congrès mondial acadien in 2004, and to the commemoration of the Deportation in 2005. The participation of the Mi'kmaq provided an enriching perspective to these events, further strengthening the positive relationship between Parks Canada and the Mi'kmaq of Nova Scotia.

Grand-Pré NHSC has in the past, and continues today, to attract many researchers from the fields of genealogy, history, and archaeology. This has led to the organization of conferences, events, and archaeological field schools in collaboration with associations, universities, and individual researchers that have contributed to the site's visibility and recognition as a unique location to research and discuss Acadian history.

3.3 SUMMARY OF KEY ISSUES AND CHALLENGES FACING GRAND-PRÉ NATIONAL HISTORIC SITE

The following is a summary of the key management issues and challenges which were identified for Grand-Pré NHSC. These key issues identified in the State of the Site Report (2009), combined with the comments and recommendations received during the public engagement and Aboriginal consultation in 2009 and the Parks Canada mandate and corporate priorities, provided the direction for the development of this management plan.

• significant decline in visitation;
• elements of visitor experience such as trip planning, on-site communication of messages, and way finding;
• limited public outreach education activities;
• maintenance of the administered place since the acquisition of additional properties that include significant cultural resources;
• need to increase programming and interpretation and sense of connection with the archaeological remains of the 17th- and 18th-century Acadian settlement;
• increasing disconnection from local residents; and
• contribution to a possible UNESCO World Heritage Site designation.
4.0 Vision Statement

The vision is a critical component of the management plan, providing a focus for future management directions for the park. This vision articulates the special character of Grand-Pré NHSC and paints a picture of the park 15 years from now, and conveys a sense of place to Canadians who may never be able to visit the site.

As we approach Grand-Pré NHSC from the Annapolis Valley’s Harvest Highway, we can imagine how, under the watchful gaze of the legendary Mi’kmaq figure Kluscap (Glooscap), from his lodge on Cape Blomidon, a thriving Acadian community grew on the shores of the Bassin des Mines. Walking the grounds, we are surrounded by the sights, sounds and smells of a vibrant working agricultural landscape – a centuries-old shared heritage.

The essence of this place is revealed in the memorial gardens, where the spirits of Acadie still mourn the loss of their homeland. The sense of connection to Grand-Pré is as strong now as it was when first settled. Parks staff and partners work to reveal snapshots of the past, as the layers of history are peeled back, bringing to light the stories of this special place – remnants of cellars that once stored food during the harsh winters, foundations of homes that housed members of this tight-knit community, roads that connected their expanded settlement, and the cemetery where their relatives are buried.
In this scenic agricultural setting, our concern but imagine what the heart of Grand-Pré would have been like in the early 1750s, with its farmers busily harvesting yet another abundant crop while listening to the distant laughter of children playing in the orchards. Ask our knowledgeable and engaging guides to tell you how to build an aboiteau and about the Acadians' large farms with their countless flocks of sheep, dozens of cattle and pigs, as well as horses. Through these rich stories, we learn about the strength and resilience of a people that will forever be close to the hearts of Acadians around the world. A visit to Grand-Pré NHSC inspires Canadians to discover Parks Canada's national network of Canadian treasures.

Pause and enjoy the romantic, park-like setting of the gardens in full bloom in the summer. Take in the sweeping views of this picturesque and historic landscape. Experience the dykelands created by the ingenuity and hard labour of 17th- and 18th-century Acadians, maintained by the New England Planters and subsequent generations of farmers. The views are breathtaking, and on clear days, one feels a sense of awe admiring the vast dykelands and the beauty of Cape Blomidon rising majestically from the Minas Basin.

In the fall, the smell of apples from the orchard fills the crisp air and fruit from the harvest overflows the apple bins, ready for visitors to help themselves. Festivals and events throughout the autumn and winter entice people of the area to take part in activities at Grand-Pré NHSC. In the spring, schoolchildren fill the Visitor Centre with their laughter and inquisitive questions about the lives of the Acadians, Mi'kmaq, and New England Planters. They are absorbed by the multi-media presentation that poignantly captures the days leading up to the Deportation—the Acadians' sense of confusion, loss, and anguish as they were removed from their homeland.

Grand-Pré NHSC sets the stage for visitors to discover other national historic sites and the rich heritage of the Annapolis Valley. The site invites visitors to make connections between 18th-century Acadie and the modern and dynamic Acadie of today. Discover why Grand-Pré NHSC is such an important part of this beautiful and outstanding cultural landscape—a recognized partner who helps maintain the Annapolis Valley as a vibrant destination for visitors, and a place where the community has a strong connection to its valued heritage in their daily lives. Long recognized for the universal appeal of its story, the essence of Grand-Pré NHSC continues to inspire all who journey to this cherished historic place.
5.0 Key Strategies

This section provides an outline of the key strategies which will guide the management of Grand-Pré NHSC over the next ten to fifteen years. The key strategies translate the vision into more concrete strategic directions and focuses on the broad management approaches that are needed to address major issues for heritage resource protection, visitor experience, and public outreach education in an integrated fashion. The strategies provide the framework to set objectives, targets and actions for the site as a whole and for specific geographic areas that were identified on-site.

5.1 KEY STRATEGY 1: FROM SETTLING THE MARSHLANDS TO FEELING THE "HEART OF ACADIE"

The main objective of this strategy is to enhance the visitor’s experience through direct contact with the remains from the past, and interaction with the services and activities of the present.

Description of the Key Strategy
Grand-Pré NHSC stirs strong emotions in visitors. For Acadians, the sense of place is defined by the knowledge that a significant event in their people’s history occurred in that location, an event that has been a key element of their identity. For other visitors, the site is a unique opportunity to learn about the way of life of the Acadians, understand the meaning of the Deportation, and witness the strength and vibrancy of the modern Acadian community. For some, Grand-Pré NHSC is still the “Land of Evangeline”, where it is an opportunity to walk the grounds and read Henry Wadsworth Longfellow’s poem. For the local residents, “Grand-Pré Park” remains an important part of the community, despite the changes in access and use.

The intent of this key strategy is to expand on the experiences available to reach out to broader audiences and in ways that stimulate personal connections. The site as a whole will require attention to identify the areas and themes that can offer new opportunities without significant investments in infrastructure.
In order to accomplish this, there is a need to understand and identify our markets, and to develop opportunities for visitor experiences based on interests and needs.

The archaeological remains of the Acadian settlement will be understood, preserved, and presented in ways that respond to visitor interests. Visitors can get a glimpse of the village, the distribution of houses, the roads, and the activities that took place (Map 4). The Deportation will remain an important element of the site's interpretation, but greater efforts will be invested in presenting life in the Acadian settlement of Grand-Pré before 1755 and the cultural resources that speak to it. A conservation framework that will identify the state of the resources and the type of activities that will respect their integrity and value is an essential component of a successful key strategy. This work will be possible in part by building partnering opportunities with universities in Nova Scotia and New Brunswick to research and interpret the resources at Grand-Pré NHSC.

The idyllic setting at Grand-Pré NHSC has inspired and attracted countless writers and artists. This aspect will be explored further as an opportunity to allow visitors to reflect on the site's meaning, to contemplate its rural setting, and to connect with that setting, for leisure and learning. Finally, the site embodies stories that are universal in meaning, stories of good times and bad times, of communities and individuals building their own wealth and losing everything to ideologies/visions of empire, and stories of courage, survival, and determination in the face of adversity. These stories are intimately connected to those experienced by many recent immigrants and presents an opportunity to engage new Canadians.

This key strategy will address this situation by enhancing the means to connect with the site's stories and cultural resources on the website, and by attracting more local visitors and encouraging repeat visitation. This last point will focus on joining marketing initiatives that inviteHaligonians and other markets to visit the Annapolis Valley and partake in such activities as spending the day at the beach, at the farmer's markets, various cultural events either hosted by the site or in the area, or at the wineries.

Visitor experience opportunities will use social science as a foundation to develop new initiatives. The site will offer activities that will satisfy the expectations of those audiences. The Société Promotion Grand-Pré, with the assistance of Parks Canada, has taken action to understand their market and has since carried out a market research study that has helped identify new markets, market the site's offer, develop new products and promote the site. The site will develop a visitor experience concept and use the Explorer Quotient to develop new products and enhance existing products.

**Objective 1.1: Opportunities for visitors to enjoy, understand, and appreciate the site in ways that are meaningful to them are provided.**

**Target(s)**

- Maintain or exceed the national target that 90% of visitors surveyed are satisfied overall with the site, and 50% are very satisfied with their visit.
- On average, 85% of visitors surveyed consider Grand-Pré NHSC meaningful to them.
- On average, 90% of visitors surveyed enjoyed their visit.
- Update content on the Parks Canada and the Société Promotion Grand-Pré websites by March 2011, and ensure regular maintenance of the sites.
Actions
- Explore creative initiatives such as the use of self-guided visitor tools, improved interpretation of archaeological resources through various techniques, and communication tools to allow visitors the opportunity to touch, feel and interact with the site.
- Develop visitor experience concept which will incorporate Explorer Quotient (EQ) into programming and create a menu of opportunities to best suit the needs and interests of visitors based on EQ profiles.
- Improve way finding (both to the site and on-site), circulation patterns, on-site communication of messages, and incorporate into site programming.
- Work with the Société Promotion Grand-Pré to develop a consistent promotional strategy that meets Parks Canada’s mandate.
- Explore partnering opportunities with the Province of Nova Scotia and other organizations to facilitate opportunities to display artifacts, including those being stored at the Atlantic Service Centre, to increase public awareness of the rich Acadian, New England Planter and Mi'kmaq heritage.
- Working with the Société Promotion Grand-Pré, explore opportunities for Grand-Pré NHSC to host events that are of interest to local communities and would promote the site.
- Together with partners and stakeholders, investigate visitor experience opportunities for the lands acquired in 2009 to the south and east of the designated national historic site.
- Enhance trip planning information on the Parks Canada website and provide a link to the Société Promotion Grand-Pré for more detailed site information.
- Develop better connections to Destination Marketing Organization (DMO) websites.

Objective 1.2: Increase the level of visitation, with an emphasis on Acadians, new Canadians, Halifax Regional Municipality (HRM) residents, local valley residents, Maritime residents, and visitors from outside Nova Scotia already in the province as target audiences.

Target(s)
- Increase visitation of target market segments such as Acadians, new Canadians, Halifax Regional Municipality residents, local valley residents, Maritime residents, visitors from outside of Nova Scotia (who are already in Nova Scotia from other Canadian provinces or from the United States) and local residents over the next 5 years (a target of 40,000 visitors by 2011-2012 has been set).
- Increase the number of on-site activities to two annual events that target new Canadians. Increase by 5%, the market share in the following market segments: group tours, van tours, and cruise ship passengers.

Actions
- Participate in events and festivals which reach cultural associations and new Canadians.
- Participate in the Commission du tourisme acadien du Canada atlantique (CTACA) as an active member.
- Collaborate with provincial and regional DMOs and tourism groups to capture markets related to Acadians, new Canadians, Halifax Regional Municipality (HRM) residents, local valley residents, Maritime residents, and visitors from outside Nova Scotia already in the province.
- Maintain the school market as a priority for Grand-Pré NHSC.
• Convey messages related to the historic Acadian settlement and the subsequent landscape surrounding the site, through engaging public outreach education initiatives in ways that respond to audience interests.

• Work closely with the Société Promotion Grand-Pré to revise and establish a marketing plan over a longer five-year period to review market segments, positioning, products and partnering options.

• Position Grand-Pré NHSC as a “must see” destination with universal appeal.

• Showcase Acadian art, music festivals, regular special speaker presentations and the availability of local crafts from Acadian artisans at the gift shop.

• Target cruise ship markets at port destination in Halifax with a focus on smaller group tours and van tours leaving the Halifax port. Have an on-site contact person available at the Halifax port.

• Develop products based on interests and needs of specific market segments using the Explorer Quotient and social science data.

• Evaluate current destination marketing packages that partner with local businesses in order to address the interests and needs of identified market segments.

• Conduct an Explorer Quotient workshop for Parks Canada staff, Société Promotion Grand-Pré staff and partners and stakeholders.

• Explore opportunities with genealogical societies that might provide greater links to the Acadian settlers during their time in the area between 1682 and 1755 and the Acadian diaspora.

Objective 1.3: Visitors are able to experience and appreciate Grand-Pré NHSC within its regional context including the dykelands, Horton Landing and the local agricultural community.

Targets
• Increase the number of visitors that visit Horton Landing in conjunction with their visit to Grand-Pré NHSC from 20% to 40% (baseline 2007 VIP).

Actions
• Improve opportunities to experience the historic landscape from the “triangular property” by managing vegetation to restore sight lines to the dykelands that make connections with the historic landscape and agricultural community and maintain an active maintenance program to preserve the integrity of the archaeological resources.

• Improve the communication of Level II messages to respond to the interests of the local community.

• Develop a site plan to orientate visitors to the full range of opportunities at the site, provide connections to the surrounding landscape including the dykelands and local communities and links to other visitor opportunities in the area.

• Work with local agricultural and preservation groups such as the Grand-Pré Marsh Body to communicate efforts to preserve the marshes and agricultural ways of life in the Grand Pré area through information sessions, presentations and/or displays at the site.

• Develop a working partnership with local groups to create destination experiences and packages to connect to the broader story between Grand-Pré NHSC, the National Rural Historic District and the Acadian experience.

• Continue to provide opportunities for visitors to experience the agricultural setting of the site and experience agricultural practices especially on the land acquired in 2009. Develop goals and objectives for interpreting the stories associated with the lands south of the national historic site acquired in 2009.
• Actively promote Horton Landing at Grand-Pré NIHSC, its connection to the national historic site and provide information on the site's website.

• In collaboration with partners and stakeholders, review the needs for way-finding between the national historic site and Horton Landing to guide visitors within the surrounding working landscape.

• Create baselines for the number of visitors that go to Horton Landing in conjunction with their visit to Grand-Pré NIHSC.

Objective 1.4: The effectiveness of public outreach education tools and programs is improved in cooperation with the Société Promotion Grand-Pré and other partners.

Target(s)
• By March 2011, update the Grand-Pré NIHSC public website to highlight programming, current projects on-site, links to associated research and Acadian organizations and notifications of special events.

• By 2011, evaluate the effectiveness and gaps of the current public outreach education offers with partners and stakeholders.

Actions
• Work with stakeholders and partners to ensure the Grand-Pré NIHSC website is relevant to what target audiences want, regularly updated, and creates links to sites of interest that complement the efforts of the Société Promotion Grand-Pré.

• In conjunction with the Société Promotion Grand-Pré, develop public outreach education materials that can be incorporated into school curriculum.

• Update information regarding each phase of the visitor trip cycle and create links and cross-marketing opportunities to other national historic sites within the area on the Grand-Pré NIHSC website.

Objective 1.5: Develop and promote programming that encourages repeat visitation to the site.

Target(s)
• Increase repeat visitation to the site by 10% [baseline 2007 VIP] over the next 5 years.

• Conduct another Visitor Experience Assessment by 2012.

Actions
• Review current programming offers to determine gaps in market segments.

• Work with stakeholders and partners to offer new seasonal programs and/or events for visitors to promote repeat visitation and develop innovative products and programs that respond to visitor interests.

• Promote and encourage the use of the ambassador program both on-site and through the Parks Canada website.

• Maintain a rotating display of current historical and archaeological research occurring at Grand-Pré NIHSC that is regularly updated featuring research findings in a prominent location within the Visitor Centre.

• Facilitate public access to the grounds of the site on a year-round basis.

• Maintain active media relations to promote the site.

Objective 1.6: The property as a whole is effectively managed to protect significant cultural resources and the historic values of the site.

Target(s)
• Improve the Commemorative Integrity rating around cultural resources from yellow to green by 2012.

• Reduce by 75% the garlic mustard plant (Alliaria petiolata) infestation on the site by 2011 (using current years as baseline).

Actions
• Develop a maintenance plan that is efficient and adequately protects cultural resources on-site, specifically the existing archaeological resources in the "triangular property" and the "fields", and the view planes to the historic landscape beyond the national historic site.

• Continue to collaborate with stakeholders and partners to seek their assistance to eradicate the mustard plant infestation (Alliaria petiolata) from the site.
• Reallocate field unit maintenance resources to focus on the maintenance and protection of the existing cultural resources.
• Maintain the lands acquired in 2009 to the south of the designated national historic site property for agricultural purposes in the short-term to protect and to continue to provide opportunities for visitors to experience the agricultural setting of the site.
• Explore innovative, low-cost solutions for maintaining the lands acquired in 2009 to the south of the designated national historic site property that protect cultural resources not yet identified.
• Identify, assess and remediate all suspected contaminated sites.

5.2 KEY STRATEGY 2: SHARED STEWARDSHIP THROUGH PARTNERING OPPORTUNITIES

The main objective of this strategy is to enhance the shared stewardship of Grand-Pré NHSC through partnering opportunities.

Grand-Pré NHSC is an important landmark in the community of Grand Pré, the County of Kings, and the Annapolis Valley. It is also, traditionally, a site of great spiritual and cultural significance for the Acadians, resulting in a unique sense of stewardship. This sense of stewardship is embodied in the operation of the visitor services by the Société Promotion Grand-Pré, an organisation created by the Société nationale de l’Acadie and the Fédération acadiaenne de la Nouvelle-Écosse. Finally, with the proposal for the Grand Pré area to become a World Heritage Site, there is the potential to attract an international audience, beyond the Acadians and their descendants.

This key strategy will focus on nurturing or redefining existing partnering opportunities, and creating new networks and contacts to reach new audiences and offer a diversity of experiences. Parks Canada will increase its on-site presence at the national historic site to deliver the Agency’s corporate direction in the areas of visitor experience, external relations, public outreach education and protection of cultural resources in cooperation with the Société Promotion Grand-Pré, local communities and other strategic partners.

The site has, in the past, been a significant driver for the local economy and provincial tourism industry when it was known as the “Land of Evangeline”. Currently, it remains an important landmark, but its role is not as prominent as it once was, competing with other important attractions such as the wineries. This is also due to the story of Evangeline not being as popular as it was a few decades ago.

Finally, local residents feel that they should not have to pay for access to the historic site. This perception has led to a change in the sense of stewardship on the part of local residents and Nova Scotians living within easy driving distance of the Annapolis Valley. Collaboration with community associations may lead to opportunities to strengthen the bond. The Société Promotion Grand-Pré, with the assistance of Parks Canada, has taken action to understand their market and has since carried out a market research study that has helped the Société Promotion Grand-Pré identify new markets, promote the site and develop new products.

Grand-Pré NHSC has attracted researchers who have studied the archaeological remains, Acadian genealogy, and historical objects and archives. Often invited under the auspices of an
Acadian organisation, these researchers have benefited from the opportunity to access the unique resources found at Grand-Pré NHSC. More consistent collaboration between Parks Canada, research organizations, visitors and locals conducting research within the framework of research priorities identified for the site, particularly in cultural resource management activities, would be beneficial in building a sense of stewardship by those researchers.

Objective 2.1: Partners and stakeholders feel a sense of stewardship and connection with Grand-Pré NHSC that ensures their continued support of the site.

**Target(s)**
- Stakeholder participation continues to increase at open houses, meetings and workshops.
- 60% of stakeholders and partners see Parks Canada as a receptive and respected partner that facilitates opportunities at the site for new projects, activities and events.
- Our partners and stakeholders hold activities on the site or off-site about Grand-Pré NHSC.

**Actions**
- Review current stakeholder and partner relations to determine gaps and build new partnerships to reach out to a wider range of target audiences.
- Provide opportunities for stakeholders and partners to influence and contribute to the national historic site. Develop relationships with partners and stakeholders that are defined by them and reflect how they would like to contribute and be involved with the site.
- Develop a governance model for Grand-Pré NHSC that delivers Parks Canada’s mandate and that of the Société Promotion Grand-Pré while providing for the involvement and support of interested stakeholders.
- Foster partnering opportunities, with potential economic benefits, with the Mi’kmaw of Nova Scotia, the community of Grand Pré, and the Annapolis Valley that are mutually beneficial.
- Work with local and HRM cultural associations and immigrant serving organizations to gain an understanding of values, needs and interests to successfully reach audiences from diverse backgrounds.
- Develop long-term, strategic research goals and partnering opportunities with research organizations.
- Explore genealogical opportunities at Grand-Pré NHSC for Acadians to reconnect to the site through the Université Saint-Anne and the Université de Moncton genealogical centres.

Objective 2.2: With our Acadian partners, programming is expanded at Grand-Pré NHSC to reach out beyond the existing target markets and to improve visitation levels.

**Target(s)**
- By 2011, become an active member in the CTACA.
- By 2011, develop a Stakeholder Advisory Committee.
Actions

- Participate actively in cooperative promotional efforts with other Acadian organizations marketing the brand “Acadie” such as the Commission du tourisme acadien du Canada atlantique (CTACA) to take advantage of tourism opportunities, create natural links to existing and new markets and develop other partnerships.
- Develop a stakeholder advisory committee and meet regularly to review partnering opportunities with Parks Canada at the site.
- Work with partners to develop new partnership opportunities and promote tourism opportunities which: (1) link historic sites (Parks Canada sites and those administered by others that have an Acadian connection within the area so that visitors can appreciate the settlement patterns of Acadians following the 1755 Departration) relating to the Acadian history; (2) target new markets; and (3) position Grand Pré NHSC as a destination for local, regional and international visitors.
- Explore the potential to attract an international audience, beyond the Acadians and their descendants through the opportunity for the Grand Pré area to become a future World Heritage Site. Work with local communities, regional and international organizations to bring special events to Grand Pré NHSC to improve its visibility and relevance.
- Provide increased opportunities for Acadian and local artists, artist organizations and musicians to promote their work on-site through “art gallery showings”, guest lectures, and hands-on art sessions.

Objective 2.3: Achieve a collaborative working relationship with partners and stakeholders to complete and support the UNESCO World Heritage Site nomination proposal for the greater Grand Pré area.

Target(s)

- Provide a representative on the Nomination Grand Pré Advisory Board to assist in meeting the submission deadline of February 2011 to UNESCO.

Actions

- Work with the Nomination Grand Pré Advisory Board leading up to the UNESCO World Heritage Site (WHS) nomination.
- Review the current Site services to determine the opportunities for the national historic site in the event that Grand Pré is designated a World Heritage Site.

Objective 2.4: In the event that Grand Pré is designated a WHS, Parks Canada to play an active role in the governance structure and supports the interpretation of the Outstanding Universal Value of the site.

Target(s)

- Assist the Nomination Grand Pré Advisory Board to establish a governance structure by the date of inscription of the site.

Actions

- Work with the Nomination Grand Pré Advisory Board to define the role of Parks Canada in the governance structure of the WHS.
- Work with the body responsible for the governance of the WHS to develop partnering opportunities and a working relationship to contribute to the vision for the WHS.
- Work with the body responsible for the governance of the WHS to support the interpretation of the Outstanding Universal Value of the WHS at Grand-Pré National Historic Site.

Objective 2.5: Explore partnering and research opportunities to increase our layered understanding of the reasons for national significance that would enrich visitor experiences at Grand Pré NHSC.

Target(s)

- Set research priorities for Grand-Pré NHSC by 2011 in the area of history, archaeology and social sciences with the assistance of research organizations.
- Obtain a complete archaeological inventory and reports for the archaeological work completed by the field school and Atlantic Service Centre by March 31, 2011.
Complete an archaeological assessment of the land at Grand-Pré NHSC by 2013.

**Actions**

- Hold a workshop with research organizations and interested stakeholders to develop long-term, strategic research and partnership goals for Grand-Pré NHSC.
- Obtain completed archaeological inventory and reports for the archaeological work conducted between 2000 and 2009.
- Work with partners and stakeholders to complete the inventory of archaeological resources.
- Work with partners and stakeholders to determine the most appropriate techniques to facilitate opportunities for visitors to experience the archaeological remains of the 17th- and 18th-century Acadian settlement on-site — such as the creation of a thematic artifact inventory.
- Create regularly rotating displays of current historical and archaeological research occurring at Grand-Pré NHSC that feature research findings in a prominent location in the Visitor Centre.
- Increase third-party delivery of public outreach education products in cooperation with partners and stakeholders.
- Collaborate with partners and stakeholders to undertake research to improve archaeological knowledge of Acadian, New England Planter and Mi'kmaq of Nova Scotia life within the greater Minas Basin area.
- Explore opportunities for archaeology education programs open to public/school group participation to create an authentic hands-on experience at the site in cooperation with partners and stakeholders.
- Work with Saint Mary’s University field school to establish a formalized agreement for research goals at the Grand-Pré NHSC.
- Continue to collaborate with research institutions such as Saint Mary’s University and Acadia University Planter Studies Department to research and interpret the site and artifacts found at the site and in the surrounding area including Mi’kmaq cultural resources.

**Objective 2.6: Seek further partnering opportunities with the Mi’kmaq of Nova Scotia to increase their involvement as defined by them.**

**Target(s)**

- Work collaboratively with the Mi'kmaq of Nova Scotia to establish by 2014 a Parks Canada Aboriginal Advisory Committee for Mainland Nova Scotia.
- Meet annually with the Mi'kmaq of Nova Scotia.

**Actions**

- Meet with local Mi'kmaq of Nova Scotia to understand their level of interest in the site and maintain open communication/dialogue.
- Work with the Mi'kmaq to present relevant Mi'kmaq history as it relates to the historic value of the national historic site including the relationship that existed between the Mi'kmaq of Nova Scotia and the Acadians.
- Facilitate partnering opportunities including economic opportunities with the Mi'kmaq of Nova Scotia, the community of Grand Pré, and the Annapolis Valley that are mutually beneficial.
- Work with representatives of the Mi'kmaq communities to identify opportunities for Mi'kmaq involvement in advisory committees to provide input and technical advice to Parks Canada on matters related to national parks and national historic sites. This process will respect the Made in Nova Scotia negotiations and the relationship will be defined in collaboration with the Mi’kmaq of Nova Scotia.
- Work collaboratively with the Mi'kmaq of Nova Scotia to create a Parks Canada Aboriginal Advisory Committee for Mainland Nova Scotia to accurately reflect how the Mi'kmaq of Nova Scotia would like to be engaged with Parks Canada.
- Share archaeological information with the Mi'kmaq of Nova Scotia, identify research gaps and carry out additional archaeological surveys, as considered mutually appropriate in collaboration with the archaeologist representing the Mi’kmaq of Nova Scotia.
5.3 KEY STRATEGY 3: ANCHORING THE “PARK” IN THE COMMUNITIES

The main objective of this strategy is to change the perception of what Grand-Pré NHSC is to local communities and the greater Annapolis Valley residents, reconnecting it to their everyday lives and thereby increasing its relevance.

Some of the community character that once was at the heart of visiting Grand-Pré NHSC seems to have been lost since the introduction of entry fees. In the past, the larger community of Grand-Pré NHSC encompassed a greater percentage of residents of the Annapolis Valley and the Halifax Regional Municipality who came to Grand-Pré NHSC to simply enjoy its natural beauty and historic setting. The perception of Grand-Pré NHSC by some market segments has changed—once a place you simply visited to appreciate, it is now identified as a “museum type” attraction where “visitors” go. As such, the national historic site has lost some important community support and a valuable market.

This strategy will focus on reconnecting local and Valley residents to the national historic site by having the site play a more central role as a valuable community resource and gathering place for local and regional events. Marketing the site as a destination to “rediscover” and re-establish a personal sense of connection to the site, may be a way to reinvigorate visitation by this market.

The UNESCO nomination process has provided greater media exposure for Grand-Pré NHSC, but more importantly, it has been a vehicle for Parks Canada to work collaboratively with the local community to reconnect Grand-Pré NHSC to their everyday lives and thereby increase its relevance to them. Parks Canada will increase its presence at the national historic site to ensure the integrated delivery of its mandate elements.

The site is part of the attractions of the Annapolis Valley. Along with Fort Anne NHSC and Fort Royal NHSC, it is one of the most visited historic and cultural sites in the region. Grand-Pré NHSC is located in the heart of the Valley’s wine country, a fact that attracts a new type of visitor that may be interested in the stories and the service offers at Grand-Pré NHSC. Parks Canada will enhance its collaboration with the tourism industry and interested local businesses in the region to enter into or strengthen existing markets, and become a key destination in the region. The site is part of the social and economic fabric of the region and Parks Canada will work with communities to maintain positive relationships. To reach those Canadians who will not have an opportunity to visit the site, Parks Canada will increase awareness of the NHS and its reasons for designation through various learning opportunities including an improved website presence.

Objective 3.1: Re-establish the site in the local community.

Targets:
- Increase the sales of the Parks Canada Ambassador Pass by 10% by 2012.
- Increase by 30%, local visitor numbers by 2011 (baseline VIP 2007).

Actions:
- Allow access to the grounds of Grand-Pré NHSC free of charge to visitors on a year-round basis. Entry fees will only be charged to access the Visitor Centre and Memorial Church at the site.
• Create and participate in opportunities to engage and dialogue with local communities. Hold “community days” at the site which could profile individual communities while offering activities that are relevant and meet their needs and interests.

Determining level of interest to hold a “New England Planter Day” celebration, similar to the “Acadian Day” held at the site.

• Depending on the level of interest of local area residents, consider the creation of volunteer programs at Grand-Pré NHSC focusing on such areas as archaeology, traditional agricultural practices, collections, etc.

• Collaborate with local communities and groups on activities that will affect future development in the area.

• Work with local farmers and businesses to promote local products.

• Explore new programming opportunities targeting audiences such as seniors, to provide educational activities on-site in a variety of areas (geology, history, music, life-long learning and language).

• Work with stakeholders and partners to improve the promotion of events at the site within the local community through various communication tools, such as: local newspaper and radio announcements; mailbox solicitation; website updates; and email notifications.

• Actively promote the Parks Canada Ambassador Pass and explore an “early bird” pass option for local residents.

• Further develop public outreach education opportunities with institutions especially in the Annapolis Valley (e.g., Acadia University).

Objective 3.2: Contribute to making the Annapolis Valley a tourism destination.

Target(s)
• Maintain or increase the level of Parks Canada participation in networks with partners and stakeholders [based on 2019 levels].

Actions
• Increase partnerships with regional attractions and tourism operations [based on 2019 levels].

Objective 3.3: Improve shoulder season activities as a way of increasing visitation to the site.

Target(s)
• Increase visitation in the shoulder season by 10% [2019 levels].

Actions
• Expand educational winter program offers at the site for elementary, highschool and post-secondary levels to increase shoulder season use of the site.

• Explore expanding shoulder season activities aimed at local or regional audiences, such as events, fairs, Harvest Festival and Christmas celebrations.

• Research and develop links to institutions outside of the province to connect the site to a more global story.
6.0 Area Management Approach

While the key strategies focus on addressing issues and challenges that affect the site as a whole, certain areas within Grand-Pré NHSC require specific management focus. The area management approaches describe an integrated set of objectives for resource protection, visitor experience opportunities and public outreach education to be achieved over time in two distinct areas: (1) the "Triangular Property", the lands acquired by Parks Canada in 1999 as well as the large field acquired in 2009, called the "Fields"; and (2) the limits of the commemorative gardens. The small parcel of land acquired by Parks Canada to the east of the designated place in 2009 is not included in this area management approach.

6.1 THE TRIANGULAR PROPERTY AND THE FIELDS

The "Triangular Property" was added later in the development of the park and for a time was the location used to interpret life in an Acadian settlement. It currently hosts the blacksmith shop, a vegetable garden, remains of Acadian structures. Until recently this location offered an unimpeded view of the dyklands. Failure to keep vegetation growth in check during the past few years has resulted in much reduced viewplanes. The area requires attention since it is outside of the regular circulation pattern of most visitors and yet offers opportunities for an enhanced experience of the site and its values.
The “Fields” includes lands acquired by Parks Canada in 1990 and 2009. They consist of an open and un-obstructed area containing remains of historic structures and until recently a statue representing an Acadian family at the time of the Deportation was located there. In the fall of 2009 this structure was moved to its new location behind the Visitor Centre.

Together, the “Triangular Property” and the “Fields” (Map 5) offer opportunities for experiencing the setting of Grand-Pré NHSC as well as learning about Acadian villages, agricultural practices and ways of life in the 18th century. The process of unearthing cultural resources on-site offer opportunities for visitors to experience the site in ways which foster a personal sense of connection with this special place. Such opportunities could also foster understanding and appreciation of the greater agricultural setting, and build support for the protection of these resources.

**Objective 6.1.1: Increase on-site programming within the “Triangular Property” and the “Fields” with the assistance of partners and stakeholders.**

**Target(s)**
- Hold a meeting with partners and stakeholders to review suggestions for new programming provided during the public engagement process by end of March 2011.

**Actions**
- Review with archaeology research partners how archaeology work can be further incorporated into the programming for the site.
- Develop and implement a vegetation management plan for the “Triangular Property”.
- Provide a broader contextual interpretation of the cultural landscape from the “Triangular Property” that includes the site’s association with the marsh, encompassing the influences on the marsh by the Acadians, New England Planters and subsequent generations of farmers who have dyked and farmed the marsh.
- Explore opportunities for visitors to safely experience the natural beauty of the area and observe the agricultural practices within the actively farmed lands adjacent to the national historic site.

**Objective 6.1.2: Create opportunities within the “Triangular Property” and the “Fields” for visitors to experience the site as it was prior to the Acadian Deportation and bring them in contact with the landscape and agricultural village that once thrived on the site.**

**Target(s)**
- Complete an archaeological assessment of the “Triangular Property” and the “Fields” by 2013.

**Actions**
- Collaborate with research partners and stakeholders to develop new programming that has direct links and tangible connections to the Acadian settlement period from the early 1680s to 1755 to facilitate visitor experience opportunities.
- Explore the use of self-guided visitor tools, improved interpretation of archaeological resources through various techniques, and communication tools for visitors to interact with the site.
• Incorporate the Explorer Quotient into programming (on-site and web-based) to create a menu of experiences that will enhance visitor experiences and create opportunities that best suit the needs of visitors.
• Review recommendations from the cultural landscape visitor experience concept plan prepared in 2009 related to way-finding, on-site communication of messages and circulation patterns, and incorporate as appropriate into site programming for the “Triangular Property” and the “Fields”.
• Further test and assess the archaeological features in the “Fields” to identify the time period and function of the cultural resources.
• Continue to use the area of the “Fields” acquired in 2009 for agricultural purposes.
• Review option to return parts of the lands acquired in 1999 to active farming to reduce maintenance costs and provide a direct connection to the agricultural practices that have evolved at Grand Pré for more than three centuries.

Objective 8.1.3: Access within the “Triangular Property” and the “Fields” is improved.

Target(s)
• By 2011, circulation patterns within the “Triangular Property” and the “Fields” are reviewed.
• Increase visitor participation in interpretive activities at the “Triangular Property” (based on 2007 VIP figures) and the “Fields”.

Actions
• Review circulation patterns within the “Triangular Property” and the “Fields” to improve access to these areas and incorporate into an overall vision for the property acquired in 2009 to the south of the national historic site.
• Work with partners and stakeholders to understand potential needs for circulation paths for the site including potential universal access needs.
• Establish baseline for visitor participation in interpretive activities within the “Fields”.

8.2 THE COMMEMORATIVE GARDENS

The second area corresponds to the original property developed by the Dominion Atlantic Railway and encompasses the gardens, the Memorial Church, Evangeline’s well, the Evangeline statue and a variety of monuments (Map 6). This area has a strong identity resulting from the formal design of the gardens that provides for a contemplative experience, and one based on the story of Evangeline. The area is also considered to be the historic “heart” of the village of Grand Pré containing the remains of the cemetery, cellars, roads, and the church (although some of these still remain elusive). As this important dimension of the site is not currently fully interpreted, additional opportunities will be explored to enrich the current experience through diverse interpretation tools.

Objective 6.2.1: The “Commemorative Gardens” area becomes a gathering place for the community to contemplate, relax and experience.

Target(s)
• By 2015, new on-site programming within the “Commemorative Gardens” area is developed to meet the needs and interests of visitors.

Actions
• Work with interested partners and stakeholders to develop new on-site programming that maintain the historic value of the “Commemorative Gardens” and protect cultural resources within this area.
• Develop an interpretation node that communicates the historic values of the "Commemorative Gardens".
• Explore the use of various interpretation tools to enrich the current visitor experience opportunities in the "Commemorative Gardens" area.
• Collaborate with other historic sites in the region that have an Acadian connection, such as Fort Anne NHS and Acadian cemeteries, to provide greater links to Acadians that settled in the Grand Pré area during 1682 and 1755 and to the Acadian diaspora.

Objective 6.2.2: The "Commemorative Gardens" protects existing, significant cultural resources, and the historic value and strong identity of the gardens.

Target(s)
• Improve the commemorative integrity rating around cultural resources from yellow to green by 2012.

Actions
• Relocate the maintenance facility to an appropriate location within the national historic site that increases the efficiencies of maintenance staff and addresses the safety and storage concerns of the current aging facility.
• Continue to collaborate with stakeholders and partners to eradicate the garlic mustard plant (Alliaria petiolata) infestation from the site.
• Allow the old French Willow trees (a level one cultural resource), to fall and regenerate. When necessary, Parks Canada will propagate the trees in their traditional area.
• Collaborate with research partners and stakeholders to ensure that activities surrounding the protection of the cultural resources in the "Commemorative Gardens" complement the protection of the historic value and strong identity of the gardens and allow unimpeded access for visitors to enjoy and experience this contemplative area.

A summary of the planned actions for the Grand-Pré National Historic Site is presented in Appendix 3.
7.0 Partnership and Public Engagement

7.1 POSITIVE RELATIONS WITH THE ACADIAN COMMUNITY

Parks Canada has worked very closely with the Acadian community since the establishment of Grand-Pré as a national historic site in 1961 to create a place that Acadians around the world consider an iconic site. This partnership has continued to grow and become stronger with the establishment of the Société Promotion Grand-Pré in 1998. Today, Parks Canada considers the Acadian community a privileged partner, essential to achieving the full potential of Grand-Pré NHSC. Working with committed partners such as the Société Promotion Grand-Pré has allowed the Agency to achieve a number of successes at the site, including the development of the Visitor Centre which was completed in 2003 and hosting the third Congrès mondial acadien events in 2004 which attracted over 15,000 people to the site.

7.2 ENCOURAGING PUBLIC PARTICIPATION AT GRAND-PRÉ NHSC

Parks Canada has always benefited from the support and cooperation of Canadians. Grand-Pré NHSC staff have established beneficial cooperative arrangements through which stakeholders and partners contribute to the development of visitor programs and the organization of cultural events or ceremonies. Parks Canada, in partnership with the Société Promotion Grand-Pré has enjoyed a very positive relationship with Les Amis de Grand-Pré who offer special programs at the site, and the Conseil culturel acadien, which in association with the Fédération acadienne de la Nouvelle-Ecosse is the principal organizer of "La Journée acadienne." Parks Canada will provide opportunities for stakeholders and partners to influence and contribute to Grand-Pré NHSC in ways that are meaningful to them.
Other benefits to the site have included working in association with local stakeholders to control and eradicate the garlic mustard plant (Alliaria petiolata) infestation that has been affecting the Grand Pré area.

7.3 LIAISING WITH THE COMMUNITY

Over the course of developing this management plan, a stakeholder and partner workshop, various meetings and an open house were held with local and regional stakeholders and partners to actively contribute to the development of the management plan, including: Aradian organizations; community members; businesses; tourism industry representatives; local historical societies; universities and affiliated research groups; municipal government; agricultural groups; and regional immigrant serving organizations.

Parks Canada will continue to develop strong relationships with stakeholders and partners who share a common interest in Grand-Pré NHSC to develop opportunities for improved visitor experience opportunities, integrating into regional tourism offers and reaching Canadians within urban centres.

Parks Canada continues to build on its relationships with the Mi'kmaq of Nova Scotia, who have demonstrated an interest in Grand-Pré NHSC. Regular meetings and dialogue with the Mi'kmaq of Nova Scotia will continue to ensure that there are opportunities to provide meaningful contributions to site management that are beneficial to them.

Parks Canada staff and the Société Promotion Grand-Pré will continue to participate in local community activities, particularly in heritage tourism and cultural resource management.

7.4 COOPERATION WITH RESEARCH INSTITUTIONS

Parks Canada and the Société Promotion Grand-Pré have partnered with Saint Mary's University's Department of Anthropology since 2001 to host the department's archaeological field school at Grand-Pré NHSC. This work is initiated each year by the university and has become an established part of its curriculum. A formal agreement between Saint Mary's University and Parks Canada for the continuation and support of the project is under development.

To date, the research has focused on the goal of the field school director to locate the original site of the church of Saint-Charles-des-Mines. This work has contributed significantly to the understanding of the site, uncovering remains of one structure within the gardens, locating other potential building sites, and further defining the limits of the cemetery. It has also allowed the site to begin an inventory of cultural resources in lands acquired to the south of the gardens since 1999. Although primarily focused on offering field experience to student archaeologists, the program attracts attention from visitors and the media.

7.5 GRAND PRÉ UNESCO WORLD HERITAGE SITE

Should the Grand Pré UNESCO World Heritage Site (WHIS) submission be successful and the site designated, Parks Canada Agency will work with the body responsible for the governance of the World Heritage Site
in support of the designated site. The Agency will work with the governance body to develop partnering opportunities and a working relationship that contributes to the vision for the World Heritage Site while meeting the UNESCO requirements for such a designation.

7.6 INVOLVEMENT WITH TOURISM INDUSTRY

Parks Canada will continue to work closely with the Société Promotion Grand-Pré to develop a revised marketing strategy that will identify gaps in market segments and provide direction to increase visitation and play an important role in Nova Scotia’s Tourism Industry. Key partnering opportunities with the Province of Nova Scotia, Commission du tourisme acadien du Canada atlantique, Kings County Tourism, Destination Southwest Nova Association and regional DMOs, and tourism groups will be pursued to create natural links to existing and new markets. The Agency will partner with regional attractions and tourism operators to contribute to making the Annapolis Valley a “must see” tourism destination.

The Agency will evaluate current destination marketing packages that partner with local businesses in order to address the interests and needs of identified market segments. For example, the cruise ship market at port in Halifax will be targeted with a focus on smaller group tours to Grand-Pré NHSC and Annapolis Valley attractions such as the growing wine industry. Finally, with the possibility of the Grand Pré area having its own World Heritage Site, Parks Canada will explore the potential to attract an international audience, beyond the Acadians and their descendants.

7.7 STRATEGIES FOR MONITORING THE EFFECTIVENESS OF PARTNERSHIPS AND PUBLIC ENGAGEMENT INITIATIVES

Parks Canada recognizes that its success in ensuring that Canadians are connected to its heritage places, today and in the future is dependent on the working relationships it has with its stakeholders and partners and feedback from them is critical to ensuring healthy and productive relationships. Stakeholder and partner engagement is part of the performance framework for Parks Canada, in line with the Government of Canada’s direction on federal accountability and engagement of citizens.

As part of this accountability, Parks Canada has conducted a national study to establish a baseline value with respect to the quality of stakeholder and partner engagement so that the Agency can assess and report on its ongoing performance in this area to measure changes over time. Through this study Parks Canada will be able to gauge the extent to which its stakeholders and partners support its activities, how they perceive the Agency with respect to its engagement practices and opportunities and to develop engagement opportunities that meet their needs.

The results of the stakeholder and partner engagement study will be used by Grand-Pré NHSC to monitor and assess the effectiveness of stakeholder and partner engagement.
8.0 Administration and Operations

The property administered by Parks Canada is bordered on the north side by a gravel road along the marsh. Agricultural fields and orchards form the boundary along the entire length of its western edges and part of the eastern edge of the newly acquired Fuller property (Map 7). The property is divided by a rail line that runs east-west through the site and the Grand Pré Road forms part of the other eastern boundary. A portion of the property, which includes the parking area of the former visitor centre and a recently acquired parcel of land is located on the east side of Grand Pré Road and is surrounded by fields.

The two parcels of land that Parks Canada acquired in September 2009 as part of the Agency's efforts to protect significant cultural resources and viewscapes at Grand-Pré National Historic Site include the 4.037 square metre former apple warehouse property located directly across from the new Visitor Centre at 2208 Grand Pré Road and the 6.08 hectare Fuller property with access on Old Post Road.

The property acquired in 1999 south of the railway line contains significant archaeological resources and has been a challenge for grounds staff to maintain. The newly acquired parcel to the south of the designated property will be leased and operated as a working agricultural landscape at least over the next two to three years. Parks Canada will also consider returning part of the lands acquired in 1999 to active farming to reduce maintenance costs and, more importantly, to provide a direct connection to the agricultural practices that have evolved at Grand Pré for more than three centuries.

The designated place includes the commemorative gardens designed by Percy Nobbs,
the Memorial Church, the bronze statue of Evangeline that reflects the site's importance as a symbol of Acadian identity, archaeological resources (including three known Acadian cellars and a burial ground), a Visitor Centre built in 2003, a parking lot for that centre, and two HSMBC plaques – one for Grand-Pré Rural Historic District National Historic Site of Canada, designated in 1995, and the other for the Dispersal of the Acadians National Historic Event, designated in 1955.

The Société Promotion Grand-Pré has delivered through a contract with Parks Canada, the site's interpretation and visitor services since 1999. The current role of the Société Promotion Grand-Pré at Grand-Pré NHSC has been to promote the site particularly to the Acadian community and to organize cultural events and other activities that enhance the site's use for various occasions. Prior to the expiry of this contract, Parks Canada and the Société Promotion Grand-Pré will engage in negotiations to find a mutually beneficial arrangement for providing services on-site.

Within the next planning cycle, the outdated maintenance facilities currently located to the northwest of the Memorial Church will need replacement. Parks Canada is pursuing cost-effective options to find a suitable location and design for an upgraded maintenance facility within the administered site.
9.0 Monitoring and Reporting

The Parks Canada Corporate Plan provides the strategic direction for all program activities for the Agency. Management priorities developed by the field units for each protected heritage place reflect the Agency’s corporate priorities through the key strategies, objectives and actions, which ensures that the management plan is comprehensive, addresses the Agency’s three mandate areas and will meet the corporate targets set out by the Agency.

Monitoring and reporting are important aspects of the overall management planning cycle (Figure 1). Ongoing monitoring provides an evaluation of the field unit’s management decisions during the course of the management plan to determine that they are effective in achieving the identified key strategies and in turn, that the key strategies support the achievement of the Agency’s corporate performance expectations. The role of the annual implementation report is to record performance and put the management plan into action.

The State of the Site Report (SoSR) is based upon the best available information on the current state and trends of national historic sites and provides an assessment of the site’s condition and trends relative to the Agency’s three mandate areas and reports on progress to meet corporate performance expectations. “State of” reports also give an account of what has been done to maintain or improve the state of the site, by assessing performance in achieving desired results identified in the management plan. State of the Site Reports form the basis of Grand-Pré National Historic Site’s five-year management plan review, and determines major issues and challenges to be addressed in the next management planning cycle.

The 2009 Grand-Pré Site Report provided a snapshot of the long-term trends that served to determine if the site’s commemorative integrity, visitor experience offers, public outreach education programs and relationships with stakeholder and

![Figure 1: Overall management plan process.](image-url)
partners are improving, stable or declining. Due to the timing of the SoSR and the new reporting requirements that were developed by the Agency, there were gaps in monitoring information related to visitor experience, public outreach education programs and stakeholder and partner engagement as the targets were not fully developed to meet the new corporate direction. The site will be working to ensure monitoring for these areas will be reported on in the next planning cycle.

Monitoring of the condition and trends of visitor experience for Grand-Pré NHSC will be fulfilled through social science research. Baselines for the site will be developed based on corporate performance expectations for visitor experience and the field unit will use these baselines to improve upon or meet corporate targets. As the corporate performance expectations for public appreciation and understanding are further developed by the Agency, monitoring of condition and trends for this mandate area will be refined.

In addition to the SoSR, a Commemorative Integrity evaluation was conducted in 2007 and indicated that overall there were opportunities for improvement. There were gaps with the inventory of cultural resources, both of in-situ and moveable resources, a lack of up-to-date records, and challenges in implementing a maintenance program in all areas of the site. Monitoring for these gaps will be better reflected in the next management plan.

The field unit will continue to use other monitoring tools to assist with the monitoring of its programs such as the Visitor Origio Monitoring Program conducted during the summer of 2007 as part of a national initiative to learn more about the site’s visitor profile.

The site has also conducted vegetation monitoring as a result of the Commemorative Integrity evaluation and a survey of plant species conducted in 2007. The survey identified the presence of the garlic mustard plant, an invasive species that has the potential of negatively impacting vegetation on and off-site. Parks Canada is currently collaborating with partners to contribute to its eradication in the Grand Pré area and to continue to monitor this progress.
10.0 Summary of Strategic Environmental Assessment

A Strategic Environmental Assessment (SEA) was completed on this management plan in accordance with the 2004 Cabinet Directive on the Environmental Assessment of Policy, Plan and Program Proposals, which requires an environmental assessment of all plans and policies submitted to the federal Cabinet or a Minister for approval, including management plans for national historic sites. The report documents a Strategic Environmental Assessment of the draft management plan for Grand-Pré National Historic Site that meets the requirements of this cabinet directive.

This SEA identifies both positive and adverse potential environmental effects, including cumulative effects with existing conditions, of the proposed direction in the management plan. The assessment considers current understanding of the stresses affecting the commemorative integrity of the site when coupled with the proposed new strategic direction and the cumulative effects from the management plan. The assessment includes existing and potential impacts from inside and outside the site.

A review of the proposed strategic direction and specific actions proposed in the draft management plan for Grand-Pré National Historic Site indicates that the management plan is fully consistent with federal policy and legislation governing national historic sites administered by Parks Canada. The management plan recognizes Parks Canada’s commitment to identifying, protecting, and presenting the cultural resources at Grand-Pré NHTSC and working with stakeholders, the Acadian community, and the Mi’kmaq of Nova Scotia to protect the cultural heritage of the site.

The SEA reviewed each of the actions proposed, potential interactions between each action and each key component along with comments about the nature of the interaction within the document. The management plan proposes some management actions that could result in some adverse environmental impact. However, it is expected that these impacts can be mitigated once they are examined more closely during project-specific environmental assessments required under the Canadian Environmental Assessment Act or under the Cabinet Directive on the Environmental Assessment of the Policy, Plan and Program Proposals. The following initiatives may be subject to project-specific environmental assessments:

- Management of vegetation at the site to restore and protect historic viewpoints;
- Vegetation removal for the purpose of eradicating the mustard plant infestation on site;
- Vegetation management on the triangular property;
- Implementation of a vegetation plan that includes provisions for public safety;
- Plan for the regeneration of old French Willow trees;
- Vegetation removal for the purposes of rediscovering sight lines;
- Inventory of archaeological resources that involves excavation;
- Archaeology work that involves excavation;
- Testing and assessment of archaeological features in the “Fields”;
- Relocation of the maintenance facility; and
- Special events taking place on site.

In addition, a specific strategic environmental assessment may be required for the following plans:

- Vegetation Management Plan; and
- Plan for the regeneration of the old French Willow trees.

Recommendations from the SEA report have been reflected in the management plan as action items.
Collectively, the strategic direction and management actions outlined in the management plan will contribute to an overall improvement in the commemorative integrity of Grand-Pré National Historic Site of Canada.

APPENDIX 1

Glossary of Terms

**Area Management Approach:** An approach to ensure the integrated delivery of the Agency mandate in a specific geographic area. The area can be based on the complexity of issues; the size of the heritage place; the logical grouping of resources; the special attachment to the area by local residents or visitors; or simply lends itself to a distinct management approach.

**Commemorative Integrity:** A historic place may be said to possess commemorative integrity when the resources that symbolize or represent its importance are not impaired or under threat, when the reasons for its significance are effectively communicated to the public, and when the heritage value of the place is respected.

**Connection to Place:** A concept that reflects the relevance and importance of protected heritage places to Canadians. It expresses the emotional, intellectual, and spiritual attachment Canadians and visitors feel toward natural and cultural heritage places. Parks Canada works to foster this sense of attachment through meaningful opportunities for enjoyment and learning provided on-site and through public outreach education. Respecting, understanding, and facilitating the relationship between heritage places and Canadians, including Aboriginal peoples, visitors, partners and stakeholders help promote a shared sense of responsibility for heritage places and engage minds and hearts to support their protection and presentation now and for future generations.

**Cultural Landscape:** Any geographic area that has been modified, influenced, or given special cultural meaning by people.

**Cultural Resource:** A human work or a place, which gives evidence of human activity or has spiritual or cultural meaning, and which has been determined to have historic value.

**Cultural Resource Management:** Generally accepted practices for the conservation and presentation of cultural resources, founded on principles and carried out in a practice that integrates professional, technical and administrative activities so that the historic value of cultural resources is taken into account in actions that might affect them. In Parks Canada, Cultural Resource Management encompasses the presentation and use, as well as the conservation of cultural resources.
**Explorer Quotient (EQ):** A way to understand and segment travellers based on their social values and travel motivations.

**Exotic Invasive Species:** Introduced, non-indigenous species that can establish and proliferate within natural or semi-natural habitats, successfully competing with and displacing at least some of the native flora and fauna, imparting biodiversity and altering the natural structure and function of the ecosystem.

**Field Unit:** An administrative division developed by Parks Canada, combining the management and administration of one or more national park(s), national historic site(s), marine conservation area(s) or historic canal(s). There are 32 Field Units across Canada.

**Indicator:** A nationally or bio-regionally consistent summary reporting statement that provides a comprehensive synopsis of each component of the Agency’s mandate. It is based on a combination of data, measures, and critical success factors that provide a clear message about current conditions and the change since the last measurement.

**Historic Object:** A generic term used to refer to any movable cultural property acquired by Parks Canada curatorial services for interpretive or reference purposes. Historic objects are subject to the directive, Management of Historic Objects and Reproductions.

**Historic Value:** Historic value is a value or values assigned to a resource, whereby it is recognized as a cultural resource. These values can be physical and/or associative.

**Key Strategy:** Concrete expression of the vision statement that provides heritage place-wide direction. Must give a clear overview of how the protected heritage place will be managed and how the three mandate elements will be achieved in a mutually supportive manner.

**Level I Cultural Resource:** A cultural resource that is of national historic significance. It directly relates to the reasons for a site’s national significance.

**Level II Cultural Resource:** A resource that is not of national historic significance may have historic value and thus be considered a cultural resource.

**National Historic Site:** Any place declared to be of national historic interest or significance by the Minister responsible for Parks Canada. The name is commonly used to refer to the area administered by Parks Canada, or another owner, as a national historic site.
**Partner:** A partner refers to an organization that is in a collaborative working relationship with Parks Canada. This working relationship is based on mutual benefit and a formalized arrangement that sets out shared goals and objectives and the terms of the arrangement. Partners can be from the not-for-profit sector (such as NGOs, academia, cooperative associations etc.), other governmental organizations and the for-profit sector.

**Partnering:** Working relationship between two or more organizations with separate identities and independent accountabilities, based on mutual benefit and a clear agreement that sets out the shared goals and objectives and the terms of the arrangement. At Parks Canada, we refer to partnering with the for-profit sector as Corporate Engagement.

**Public Outreach Education:** Public outreach education is reaching Canadians at home, at leisure, at school and in their communities through effective and relevant learning opportunities designed to increase understanding and appreciation of the natural and historical heritage of Parks Canada places, and to encourage individuals and communities to support and become engaged in their protection and presentation.

**Stakeholder:** Refers to individuals or groups representing all sectors of Canadian society that have an interest in, or influence upon the Agency’s actions and directions. Stakeholders self-select their level of involvement. Stakeholders may have a geographic sphere of influence or they may have a virtual constituency, with no actual geographic locations.

**State of the Site Report:** This report provides a synopsis of the current condition of a national historic site and assesses performance in meeting established goals and objectives for indicators associated with the Agency’s mandate. These reports are produced on a five-year cycle, and are the basis for the five-year management plan review.

**Target:** Established to facilitate measuring and reporting on progress in achieving results.

**Vision Statement:** A passionate, inspirational, unique, picture of the heritage place at its desired future. It must portray the integrated relationship between the mandate components and be prepared with the involvement of the public, Aboriginal communities, stakeholders and partners.

**Visitor Experience:** Visitor experience is the sum total of a visitor's personal interaction with heritage places and/or people that awakens their senses, affects their emotions, stimulates their mind and leaves them with a sense of attachment to these places.
APPENDIX 2

Public Engagement – Key Messages

Valuable input was provided by stakeholders and partners through the public engagement process. Parks Canada staff partners and stakeholders met to discuss the challenges and opportunities related to cultural resource protection, public outreach education, facilitating visitor experiences at the site, and to scope out partnering opportunities for the future management of Grand-Pré NHSC. During the engagement period, a meeting was set up with the Mikmaq community of Glooscap First Nation, however, due to unforeseen circumstances this meeting was postponed, and a further meeting could not be scheduled.

Key messages heard from participants during the stakeholder and partner workshop included:

- the site needs to be accessible, inclusive and meaningful to connect to the day-to-day lives of communities;
- participants confirmed that some community members feel a sense of disconnect to the site in part due to the establishment of entrance fees;
- local residents have a long history with Grand-Pré NHSC that is not reflected on the site;
- on-site messaging needs to be more cohesive;
- declining visitation can be addressed through an expanded and innovative suite of programs and by creating new partnering opportunities related to: research (archaeological, historical); tourism; agri-tourism; local businesses; special events promotion such as festivals and exhibits on-site; multicultural activities; hands-on and interactive programming; volunteer opportunities; and greater interpretation of cultural resources;
- Parks Canada is seen as an absentee landlord at the site;
- Parks Canada needs to work with provincial and local organizations to ensure the on-going maintenance of the dyklands and to protect the valuable connection to the surrounding landscape;
- communication needs to improve between Parks Canada and communities when promoting on-site activities, Agency promotions such as the Ambassador Pass, or other opportunities;
- improve website and develop links to educational opportunities to improve public outreach education;
- connect the site to a more global story with institutions outside of the province;
- the site is seen as a “gateway” to Acadian, local community, and hamlet culture;
- Grand-Pré NHSC is seen as a spiritual place;
- additional archaeological research should be carried out at the site to identify significant cultural resources including the church of Saint-Charles-des-Mines;
- artifacts found at Grand-Pré should be displayed at the site;
• the site cannot be everything to everyone – Parks Canada cannot forget its obligations to focus on the reasons for designation; and
• there is a role for Grand-Pré NHSC to play where one can learn about the various cultures of Nova Scotia – may need to partner with the Province of Nova Scotia.

The discussions carried out during the workshops, meetings and open house provided opportunities for partners and stakeholders who have an interest in Grand-Pré NHSC to come together and discuss matters of common interest, and to talk about working collaboratively. They were valuable discussions and they helped guide Parks Canada in its efforts to better connect the national historic site to communities and to develop partnering opportunities to help achieve this goal. It is hoped that these insightful discussions can continue as a way of building on existing relationships and developing new ones to provide local economic opportunities and enrich experiences at Grand-Pré NHSC.
APPENDIX 3

Summary of Actions – Implementation Strategy

Implementation of this management plan is the responsibility of the Northern New Brunswick Field Unit Superintendent. The management actions proposed in this plan will be carried out through the Field Unit's annual Sustainable Business Plan, which identifies the management plan actions to be implemented annually along with the costs and specific timing.

A summary of the priority planned actions is presented in the table below. The table does not include ongoing, routine management activities. Priorities have been assigned to indicate which actions will proceed immediately (by 2011), which will be implemented during the first planning cycle (2010-2015), and which are assigned to the longer term. Some actions will be ongoing and thus implemented in more than one time period.

Reporting on progress will occur through the annual management plan implementation reports and within the State of the Site Report, after which the management plan will be reviewed. Both the State of the Site Report and the management plan review process will occur by 2015.

</tr>
</thead>
<tbody>
<tr>
<td>2010-2012</td>
<td></td>
<td>2015-2018</td>
<td></td>
</tr>
</tbody>
</table>

#### National Historic Sites Interpretation

- Develop an interpretation node that communicates the historic values of the "Commemorative Gardens".
- Review with archaeology research partners how archaeology work can be incorporated into the programming for the site.
- Provide a broader contextual interpretation of the cultural landscape from the "Triangular Property" that includes the site's association with the marsh, encompassing the influences on the marsh by the Acadians, New England Planters and subsequent generations of farmers who have dyked and farmed the marsh.
- Work with the Mi'kmaq to present relevant Mi'kmaq history as it relates to the historic value of the national historic site including the relationship that existed between Mi'kmaq of Nova Scotia and the Acadians.
- Collaborate with other historic sites in the region that have an Acadian connection, such as Fort Anne NHS and Acadian cemeteries, to provide greater links to Acadians that settled in the Grand Pré area during 1682 and 1755 and to the Acadian diaspora.

### Outreach Education and External Communications

<table>
<thead>
<tr>
<th>Water Experience</th>

<th>First Planning</th>
<th>Longer-Term</th>
</tr>
</thead>
<tbody>
<tr>
<td>2010-2012</td>
<td></td>
<td>2015-2018</td>
<td></td>
</tr>
</tbody>
</table>

- In conjunction with the Société Promotion Grand-Pré, develop public outreach educational materials that could be incorporated into school curriculum.
- Convey messages related to the historic Acadian settlement and the subsequent landscape surrounding the site, through engaging public outreach education initiatives in ways that respond to audience interests.
- Work with stakeholders and partners to ensure the PCA website for Grand-Pré NHS is relevant to what target audiences want, regularly updated, and creates links to sites of interest that complement the efforts of the Société Promotion Grand-Pré.
- Further develop public outreach education opportunities with institutions especially in the Valley (e.g., Acadia University).
- Research and develop links to institutions outside of the province to connect the site to a more global story.
<table>
<thead>
<tr>
<th>Outreach Education and External Communications</th>
</tr>
</thead>
<tbody>
<tr>
<td>Increase third-party delivery of public outreach education products in cooperation with partners and stakeholders.</td>
</tr>
<tr>
<td>Participate in events and festivals which reach cultural associations and new Canadians.</td>

Acknowledgements

The preparation of this management plan involved many people. The plan was guided by the input from a number of individuals and organizations who contributed to the development of this plan. They include interested members of the general public, partners and stakeholders, local communities and business operators, non-governmental organizations, tourism organizations, heritage groups, educational institutions, government organizations and field unit staff. The input from this diverse group of individuals has resulted in a plan that will guide the management of Grand-Pré National Historic Site for many years.

Parks Canada appreciates and thanks all those who took the time to share their ideas with the planning team through their attendance at the workshop and open house events.

Special thanks are due to the Acadian community especially the Société Promotion Grand-Pré and the Comité Consultatif Acadien, and the M'Kmaq of Nova Scotia, represented by the Kwilm'k kw Maw'Khusuaqn Negotiation Office (KMK), who provided important feedback on the draft management plan.
APPENDIX ‘A’

THE MUNICIPALITY OF THE COUNTY OF KINGS

AMENDMENTS TO BYLAW 56
MUNICIPAL PLANNING STRATEGY

and

AMENDMENTS TO BYLAW 75
LAND USE BYLAW

Grand Pré and Area Community Plan

Reading the Amendments

Directions for inserting, replacing or deleting Municipal Planning Strategy and Land Use Bylaw amendments are highlighted in black.

If applicable, the portions of existing Policies and Land Use Bylaws that are not being changed are temporarily shown in grey text, while new or changed text is shown in black.

“BE IT RESOLVED that Municipal Council gives Second Reading to amending Bylaw 56, the Municipal Planning Strategy, and Bylaw 75, the Land Use Bylaw for the Municipality of the County of Kings, as attached in APPENDIX “A”:
BYLAW 56 – MUNICIPAL PLANNING STRATEGY

General MPS Amendments
(needed to cross reference and implement policies contained in the Grand Pré and Area Community Plan)

1. Delete Section 4.4, Heritage and Cultural Preservation and Tourism Development, and replace it with the following.

4.4 HERITAGE AND CULTURAL PRESERVATION AND TOURISM DEVELOPMENT

It is fortunate that physical evidence of the many centuries of human heritage can still be found in Kings County. This evidence is reflected in the rural landscape, particularly the reclaimed tidal marshes (the dykelands) which illustrate the beginning of farming activity in Nova Scotia. In addition, many sites and buildings are significant to the history of the peoples of Kings County from the Mi’kmaq, through the times of the Acadians, followed by the New England Planters, and the United Empire Loyalists settlement and development to the present day.

Clearly the presence of heritage sites and buildings and the scenic qualities of the countryside are an asset to the community for its own pleasure and identity as well as a strong attraction to visitors. The aesthetic qualities of the resource areas and the significance of some sites to Nova Scotians, indeed Canadians, suggests that Tourism Development and Historic Preservation must go hand in hand to ensure that the development of the tourism industry is sensitive to the fragile resource upon which it is largely based.

The Grand Pré area includes some of the County’s most recognized cultural heritage assets, such as the Grand-Pré National Historic Site. The area is a symbol of hope, perseverance, and pride to Acadians who overcame a forced migration in 1755. The Planters, the people who migrated to the area after the Acadian deportation, also have a special connection to this land as do the Mi’kmaq community who used the area for seasonal camps. North Grand Pré, Hortonville and Grand Pré are also extraordinary for their natural heritage. The Minas Basin has some of the highest recorded tides in the world. Its salt marshes provide important feeding grounds for migrating shorebirds and they have traditionally been converted into highly fertile dykeland for agriculture. The views of the Minas Basin, the dykeland, and Cape Blomidon are spectacular and distinctive. The area is rich in culture and history, an attractive tourist and recreational destination.

Kings County's natural heritage provides additional points of interest to tourists and enhances the scenic quality of the County. Such areas include Blomidon Provincial Park, natural areas such as Cape Split and the Kentville Ravine, the Look Off, Cape Blomidon, the Fundy coastline, the Minas Basin and the Gaspereau Valley. Long traditions such as the Apple Blossom festival and new traditions such as the Valley Pumpkin Festival and tours of local wineries are attracting larger audiences annually. Support for these activities, and the many other community events spread throughout the season will continue.
Council recognizes that adaptive reuse of heritage resources is vital to their continued preservation. Policies for the development of unique historic places possessing heritage value involving the provision for uses not normally permitted in a zone and allowing alternate subdivision and lot standards are contained in Section 5.2.

2. Insert Section 4.4.9, Grand Pré and Area, as follows, and renumber subsequent sections accordingly.

4.4.9 Grand Pré and Area

Agriculture and agricultural activities have shaped Grand Pré and the surrounding communities over the centuries. While perhaps best known internationally for the 1755 Deportation of the Acadian people through Henry Wadsworth Longfellow’s poem of *Evangeline, A Tale of Acadie*, the area also has a rich Planter and Mi’kmaw history. Farming is still the predominant land use. The Grand Pré dykeland contains some of the most fertile and active agriculture in Nova Scotia. As such, Council recognizes the importance of maintaining the strong agricultural land protection measures for this area by limiting non-farm industrial and residential development.

Agriculture not only contributes to the local economy, but also serves as a tourist attraction. The dyke system provides a unique opportunity to see the traditional farming technology of the original Acadian settlers in use today. The area has been a tourist destination for over 100 years due to a number of local attractions including the Grand Pré National Historic Site, Evangeline Beach and all its amenities, the seasonal migratory birds, and the cottages in North Grand Pré. There are also a number of provincially registered heritage properties, the Grand Pré Heritage Conservation District, the Federal Rural Historic District, and many commemorative plaques and monuments throughout the area. Local businesses have capitalized on this tourist traffic and a robust tourist-oriented economy continues to develop with wineries, a motel, bed and breakfasts, a coffee roaster and shop, and other agritourism activities.

Grand Pré and Area consists of four distinct communities. The communities are Grand Pré, Hortonville, North Grand Pré and Lower Wolfville. Grand Pré is the historic hamlet that provides services to the surrounding communities and to tourists visiting the area. Hortonville is to the east of Grand Pré. Its streets were originally designed in a grid pattern in the 1760s. This settlement pattern is still apparent in the small agricultural community. Most of the residences in North Grand Pré are seasonal dwellings but some residents choose to live on Long Island all year. It continues to be called Long Island despite it not being an island since the time of the Acadians. When the Acadians built the dykes to convert salt marsh into dykeland, a land connection was established between the island and...
mainland. North Grand Pré is a tourist destination in its own right with impressive views of Cape Blomidon and the Minas Basin and of the National Wildlife Refuge’s migrating shorebirds in the months of July and August. Lower Wolfville is an agricultural community located between Grand Pré and Wolfville.

In 2008, the County engaged in a planning exercise to develop a long term plan for these four communities. The Grand Pré and Area Community Plan is a Municipal Planning document intended to promote a vision for these four communities. Council wishes to protect the unique aspects of the area for future generation and to foster tourism development for the entire County. The Community Plan was developed in concert with the UNESCO Nomination Advisory Board’s bid for inscription for a part of the Grand Pré area as a World Heritage Site. While the Community Plan’s boundaries somewhat differ from the proposed UNESCO World Heritage Site boundaries, the Community Plan is a valuable contribution to the UNESCO Nomination Bid as supporting documentation.

To develop the policies related to Grand Pré and Area, Council consulted widely with local community representatives and the community as a whole to develop the Grand Pré and Area Community Plan that reflects the needs and desires of the community. Council believes that although a part of the community may become an international heritage site, the plan must reflect the needs and desire of local community members throughout Grand Pré, Hortonville, North Grand Pré and Lower Wolfville.
Figure 1: Grand Pré and Area Plan Boundary
4.4.9.1  Grand Pré and Area - Objectives

- To support the initiatives of the Grand Pré and Area Community Plan, contained in Section 4.4.9.4.

- To support and plan for the protection of Grand Pré and Area as a unique cultural resource.

- To provide opportunities for tourism development in Grand Pré and Area.

4.4.9.2  Grand Pré and Area – General Policy

Council shall have regard to the policies contained in Section 4.4.9.4, the Grand Pré and Area Community Plan, when considering MPS and LUB amendments or any other initiative that may impact the Grand Pré and Area Plan Boundary, identified in Figure 1 in Section 4.4.9. Further, Council shall review the Grand Pré and Area Community Plan every five years so that the Plan may remain current and responsive to the needs of the communities over time.
Community Vision Statement

The vision statement addresses the current issues facing the community and serves to provide direction for the future. It sets the central goal that the community will aspire to reach. The vision statement describes what the community hopes to become.

Council shall have regard to the following community vision statement for the communities in the Grand Pré and Area plan boundary when considering MPS and LUB amendments or any other initiative that may impact the Grand Pré and Area, identified in Figure 1 in Section 4.4.9.

The Grand Pré and Area communities work together with a shared interest in sustaining a healthy rural setting by conserving our culture, environment, and agricultural landscape. In defined areas, the larger community provides opportunities for community growth, agriculture, the recreational use of shared open space, and local business.
A - Agriculture

Grand Pré and Area is an agricultural community. The surrounding agricultural land and the dykeland in the Grand Pré area are some of the most fertile in Nova Scotia. By working the land, farmers support the local economy and maintain the agricultural landscape that is essential to the rural setting of the area. Through their work with the Grand Pré Marsh Body, farmers are also stewards of the dykeland that has become a celebrated cultural artefact and a world-renowned tourist attraction. Farmers must continue to adjust to changes in methods and technology. Local business can provide support to agriculture by accommodating an agritourism industry. Council recognizes that there are non-farm residential and commercial interests in the community that may come into conflict with agricultural practices. One of the goals of this land use planning initiative is to reduce the potential for land use conflicts in the agricultural community.

Goal

To sustain the agricultural community within its rural setting

Objectives

- To recognize the significant role of agriculture and of the Grand Pré Marsh Body in preserving agricultural land in the area
- To reduce land use conflicts by controlling and limiting land uses and establishing requirements for agricultural land within Grand Pré and Area
- To promote the education of the public regarding the functions and ownership of the dykes and dykeland roads and about the effects of accessing them.
- To encourage the agricultural industry and appropriate related business

Policies

A1 Council shall recognize the importance of existing Agricultural District policies in preserving agricultural land for agricultural use while reducing the potential for land use conflicts with controls on non-farm uses.

A2 Council shall recognize the Grand Pré Marsh Body as stewards of the dykes and dykeland and inform and consult with them when considering MPS and LUB amendments or any other initiative that may have a significant impact on the dykes and dykeland.

A3 Council shall provide more stringent lot requirements within the Agricultural District in Grand Pré and Area to preserve a density consistent with the rural character of the area.

A4 Council shall not rezone to the Agricultural Industrial (M3) Zone within Grand Pré and Area.
A5  Council shall not consider proposals by development agreement to establish construction and demolition debris disposal sites in the Agricultural District within Grand Pré and Area.

A6  Council shall encourage the exploration of methods to facilitate access to public spaces that showcase the dyke system and to educate the public on the fragility of the privately owned dykes and dykeland. These public spaces are identified as views on the Historic Sites, Monuments, and Views Map.

A7  Council shall allow for a tourist centre on lands in the Agriculture (A1) zone within the Grand Pré and Area Plan boundary through the development agreement approval process.

In considering entering into a Development Agreement, Council shall have regard to criteria as set out in Policy 3.6.8.3 (Hamlet Historic Residential policy to allow for a tourist centre on lands in the Hamlet Historic Residential (R9) zone in Grand Pré and Area).
R - Residence and Recreation

Between 1981 and 2001, residential growth had increased by 20 per cent with an average annual trend of four new units built each year. The older population is increasing as the baby boom generation is approaching retirement years. The density of development within the current Historic Hamlet of Grand Pré is quite high, at approximately 2.5 units per acre. A diverse housing base, especially within the Historic Hamlet, can provide options for young families and senior citizens who wish to move to or remain in the community. The Historic Hamlet is surrounded by agricultural lands. These lands with Grand Pré and Area Plan boundary are one of the most productive and actively farmed areas in Kings County. As such, there is less residential development density on the surrounding agricultural land, ranging from 0.2 to 0.5 units per acre.

The Grand Pré area has been an attractive area to live and play for generations. Parks and trails provide opportunities for people to get out and experience their natural and cultural heritage. Views and monuments provide context to the community through leisure activities such as walking and cycling. Scenic views of the surrounding landscape preserve the rural setting and include vistas of Cape Blomidon, Minas Basin, and the dykeland.

Goal

To provide opportunities for recreation and residential growth where appropriate to the needs of each of the four communities

Objectives

- To develop design requirements for an active transportation and recreation trails network that connects with significant views and historic sites and links the community to surrounding trail systems.
- To foster community, County and Provincial partnerships in acquiring, developing and maintaining parks and trails.
- To encourage the provision of suitable housing options within the Historic Hamlet of Grand Pré to encourage young individuals and families to live in the community and to enable senior residents to remain within the community.

Policies

R1 Council shall seek opportunities to develop County Parks, identified in Section 4.3.6.6, and a public trail network. The following criteria and the Historic Sites and Monuments Map shall provide guidance in the design of County Parks and a trail network.

a. The design of a trail network shall facilitate access to County Parks, areas zoned as Parkland (P1), and other public places.

b. The design of County parks and a trail network shall aid in the interpretation of the natural and cultural heritage of the area by facilitating access to views
and historic monuments.

c. The design of a trail network shall use existing rights of way and explore the potential of including the railway bed, if available.

d. The design of a trail network shall explore the potential of including existing rights of way including the entire lengths of Station Street and Middle Street to preserve the historic grid in Hortonville.

e. The design of a trail network shall facilitate access to community and commercial facilities throughout the area and be in keeping with the Vision and Strategic Plan for Trails for the County of Kings (2009).

Additional policies contained in Section 3.6.8, Hamlet Historic Residential Policies, aim to achieve objectives of the Residence and Recreation goal.
H - Heritage

Grand Pré and Area has a rich heritage. Commemorative monuments are found throughout the area and a number of provincial heritage properties are located within the Hamlet of Grand Pré. Outstanding views of the surrounding landscape reveal the natural heritage and inherent beauty of the area. There are also several layers of formal designation that are particular to Grand Pré and Area.

The Grand Pré Heritage Conservation District encompasses the Hamlet of Grand Pré. The Heritage Conservation District Plan and Bylaw expresses the policies of Council with respect to the architectural heritage conservation and development in the hamlet. The Federal Rural Historic District of Grand Pré was established to commemorate the cultural significance of the landscape. The Grand Pré National Historic Site pays tribute to the Acadian settlers to the area who originally built the dykes to convert marshland into dykeland for agricultural use. There is also a commemorative interest in the cultural landscape of Grand Pré and Area as a proposed World Heritage Site. There is no doubt that the area will change over time; however, land use planning is a tool to manage change with the aim of maintaining the heritage value of the area for past, present, and future generations.

Goal

To celebrate and conserve our local history and built heritage

Objectives

- To continue to support and conserve the local history, cultural landscape, and built heritage
- To endeavour to facilitate the best possible quality of life for residents and manage appropriate development through land use planning that respects the heritage value.
- To provide clear and consistent guidelines in evaluating proposed conservation interventions, alterations or new development within the Grand Pré Heritage Conservation District
- To provide residents and businesses with incentives to join and remain within the Grand Pré Heritage Conservation District.

Policies

H1 Council shall continue to support the Heritage Advisory Committee in their advisory role and in their efforts to conserve and/or protect the natural, cultural and built heritage value of the Grand Pré area.

H2 Council shall use the *Standards and Guidelines for the Conservation of Historic Places in Canada* as a guide in the evaluation of proposals or alterations for properties within the Grand Pré Heritage Conservation District in parallel with the applicable provisions of this Municipal Planning Strategy.
H3 Council shall prepare a Statement of Significance that clearly describes the heritage value and character defining elements of properties in the Grand Pré Heritage Conservation District. With the appropriate approval(s), the Statement of Significance shall be submitted for inclusion on the *Nova Scotia Register of Historic Places* and the *Canadian Register of Historic Places*.

H4 Council shall create and distribute an educational package on the benefits and responsibilities associated with the proper maintenance of a heritage property and of a property within the area eligible for inclusion in the Grand Pré Heritage Conservation District.

H5 Council shall aid in the preservation of the historic grid pattern of the streets in Hortonville, identified on the Historic Sites and Monuments Map as the Hortonville Historic Grid.

H6 Council shall explore the provision of incentives to properties that participate in the Grand Pré Heritage Conservation District.

H7 Council shall work with other governmental agencies and departments and land owners to identify and aid in the protection of archaeological, historical, and palaeontological sites.

Additional policies contained in Section 3.6.8, Hamlet Historic Residential Policies, aim to achieve objectives of the Heritage goal.
**B - Business**

Grand Pré and Area is a tourist destination as well as a community. It is well situated as the gateway to the neighbouring towns of Wolfville and Kentville and Village of New Minas, which collectively serve as a business and retail centre for the larger area. Council recognizes the business opportunities that the historic rural setting and the key location can afford. Local businesses must operate within the historic rural setting if they are to preserve the unique qualities that make the area so attractive. Council promotes pedestrian safety and street presence in commercial areas in the Historic Hamlet that cater to cars and trucks. Pedestrian links to neighbouring businesses and between businesses and historic monuments can encourage visitors to spend more time exploring the area.

Grand Pré and Area is easily accessible to the travelling public as it is located near a Highway 101 interchange within an hour’s commute of Metro Halifax. During the Community Planning process, much careful consideration and thought was given to the impact of commercial development along Highway 1 in the Agricultural District on the community, rural setting and way of life. The Community Planning Committee felt that small scale commercial activity that is in keeping with the area and that does not negatively impact agricultural activities should continue to be permitted. The Community Planning Committee recognized that lands along Highway 1, especially those in close proximity to the Exit 10 interchange, have been and in the future will be under increasing pressure for general and highway commercial type of development. It is important that the Grand Pré and Area Plan affirms agricultural policy that speaks to the protection and preservation of agricultural lands for farming, including the above mentioned area.

**Goal**

To foster and sustain a business community that complements the rural setting and meets the needs of visitors and the local community

**Objectives**

- To protect and preserve agricultural lands for farming
- To allow for small-scale commercial uses in the Grand Pré Hamlet
- To ensure that commercial activity serve the local community, as well as visitors to the area

**Policies**

B1 Council shall preserve and protect lands within the Agricultural District within the Grand Pré and Area Plan.

B2 Council shall encourage commercial development that is small in scale and promotes a pedestrian-friendly environment.
B3 Council shall ensure that community facilities are allowed to operate within commercial areas of the Historic Hamlet.

Additional policies contained in Section 3.6.8, Hamlet Historic Residential Policies, aim to achieve objectives of the Business goal.

I - Infrastructure

The National Historic Site and the Historic Hamlet of Grand Pré are serviced through a sewer line extending from Wolfville. Surrounding properties are serviced through septic systems and wells. Due to the historic development pattern in North Grand Pré, many cottages and residences are located on small lots that may not support existing septic systems.

The Grand Pré area is a tourist destination and Highway 101 Exit 10 at Hortonville is an access point to the Coldbrook –Wolfville Urban Corridor. In the area there is a mix of traffic types including local residents, tourist vehicles and farm machinery. Vehicles often come into conflict with farm vehicles travelling at reduced speeds. Large trucks frequently travel up and down Grand Pré Road to service local farms. Regular road maintenance is critical due to the intensive use. Pedestrians and cyclists also share public roads with traffic due to a lack of public trails and crosswalks. Crosswalks have been identified as a needed addition to any larger trail network and would provide safe access to key locations.

Goal

To ensure that sustainable infrastructure supports the rural context and enhances community health and safety

Objectives

- To ensure a consistent supply and quality of ground water for residents and businesses
- To ensure that there is capacity within the sewerage system to accommodate future growth in the Historic Hamlet for this important tourist destination
- To encourage property owners to ensure that private septic systems function safely and efficiently
- To support the design and management of a safe transportation network for both vehicular traffic and pedestrians.

Policies

I1 For rezoning and development agreements in the Plan Area, Council may require ground water quality and quantity studies, prepared by a qualified professional, to ensure a sustainable supply and quality of water for future needs throughout Grand Pré and Area.
I2 Council shall work with the cottage owners and residents in North Grand Pré and NS Environment to research best management practices and make recommendations for environmentally sustainable septic systems in North Grand Pré.

I3 Council shall work with the Provincial Department of Transportation and Infrastructure Renewal to address specific traffic concerns in consultation with the community.

I4 Council shall work with the Provincial Department of Transportation and Infrastructure Renewal to help ensure that public roads are maintained throughout the community on a regular basis.

I5 When considering Municipal investments in transportation infrastructure within and leading to Grand Pré and Area, Council shall have regard to the recreation policies contained in section R of this Community Plan. In particular, crosswalks should facilitate pedestrian access to a trail network.

I6 Council shall support a signage and way finding study for the Grand Pré and Area Plan area.

I7 Council shall not allow large scale wind turbine(s) within the Grand Pré and Area Plan boundary.
E - Environment and Open Space

Coastal erosion is a serious concern throughout the province and in North Grand Pré, in particular, due to the dynamic sandstone shoreline of Evangeline Beach where many property owners have built cottages. Sea levels along Nova Scotia have been rising for thousands of years and most shorelines are retreating and migrating landward. Responsible coastal development must account for natural rates and processes of shoreline change to avoid costly damage and adverse alteration to natural shoreline processes. Land owners in North Grand Pré have made significant investments in protecting the coast from erosion by placing and maintaining armour rock. As a result of the private effort of cottage and home owners, erosion along the northern coast has been greatly reduced or even halted in some areas.

The Municipality undertook an analysis of erosion along the coast of North Grand Pré by comparing aerial photographs, from 1961 and 2002, and by using a Geographic Positioning System to mark points along the coast in 2009. Over the forty-year period, erosion has claimed an average of 50 feet of shoreland along the coastline of Evangeline Beach. Some areas experienced 225 feet of erosion in this period. Council recognizes that pursuing a precautionary approach by responding to coastal erosion in the present in an effort to ensure that the coast is intact and accessible for future generations to enjoy. Dykes are also susceptible to erosion. If the dyke system is breached, the dykeland will flood and may cut off access between North Grand Pré and the mainland along Grand Pré Road. Council also recognizes that there is a public interest in mitigating the potential impacts of a flood on human life, property, and services.

Coastal areas include the coastline, dykes, mudflats, and marshes: both freshwater and saltwater. These environmentally sensitive areas along the coast and inland deserve protection. These areas, including the dykeland, provide important habitat for mammals and important winter habitat for the bald eagle. The mudflats of the Minas Basin include large populations of mud shrimp that support large flocks of migrating shorebirds. These migrating shorebirds travel from the arctic to the tropics each year. The consistent food supply in the mudflats along the coast of North Grand Pré is critical to their survival. All three levels of government have a role in the protection of these natural environments and Council shall work with other jurisdictions in preservation and protection efforts. The land owners play the greatest role in North Grand Pré in these efforts. They are true stewards of the land and are active in the protection of migrant shorebirds.

Goal

To ensure a healthy and accessible environment while recognizing and conserving environmentally sensitive areas

Municipal Objectives

- To work with the Province to restrict land uses in an effort to protect human life and to reduce the potential for damage to structures in coastal areas due to erosion.
- To work with the Province to protect the dykes and coastline by monitoring changes along the coast, educating residents and visitors, and transitioning land use.
To promote the education of land owners with respect to potential flooding and storm surge risks.
To ensure new development meets or exceeds appropriate drainage standards.
To protect environmentally sensitive areas throughout the community.
To preserve wildlife and its habitat.

Policies

E1 It is the intention of Council to participate in the development and support of an ongoing coastal monitoring program on the conditions of the Grand Pré Area coastline. Information collected, along with coastal management policies, will be reviewed regularly and shared with Provincial government departments.

E2 Council shall designate as Natural Environment, on the Grand Pré and Area Future Land Use Map, the following lands identified by the Provincial Department of Natural Resources:

a. freshwater wetland
b. saltwater wetland

E3 Council shall require site plan approval for any new development of seasonal dwellings or single detached dwellings on properties which abut the Minas Basin within the Coastal Shoreland (CS) Zone in Grand Pré and Area.

E4 Council shall allow for alternate lot standards for any new development subject to Policy E3 on properties which abut the Minas Basin within the Coastal Shoreland (CS) Zone in Grand Pré and Area.

E5 Council shall work with the Province to undertake a hazard, risk and vulnerability assessment for emergency planning purposes to target appropriate preventative and mitigation work in Grand Pré and Area. The information of this assessment shall be used to make recommendations specific to Grand Pré and Area in the Emergency Management Plan for the Municipality and for wider regional emergency management measures.

E6 Council shall partner with the Grand Pré Marsh Body, the Province and other organizations to provide educational opportunities and materials on topics relating to agricultural practices, coastal processes, flood risks, and natural and cultural heritage.
3. Delete Map 16a, Grand Pré, and replace it with the attached Map 16a, Grand Pré Hamlet Future Land Use contained in Appendix A.

4. Insert Section 7.4, GRAND PRÉ AND AREA, Map 25 Grand Pré and Area Future Land Use, contained in Appendix B, after Section 7.3 and renumber subsequent sections.

5. Insert in Section 7.4, GRAND PRÉ AND AREA, Map 26 Grand Pré and Area Historic Sites and Monuments, contained in Appendix C.

6. Delete Section 3.2.7.2, Non-farm Industrial Uses, and replace it with the following.

```
3.2.7.2 Non-farm Industrial Uses

3.2.7.2.1 It shall be the policy of Council to establish an Agricultural Industrial (M3) Zone in the Agricultural District.

3.2.7.2.2 Permitted uses in the Agricultural Industrial (M3) Zone shall include businesses that are involved with the processing, grading, packaging, storage, transportation of goods such as farm produce, and composting operations.

3.2.7.2.3 It shall be the policy of Council to consider rezoning lands in the Agricultural District to the Agricultural Industrial (M3) Zone, except in Grand Pré and Area (refer to Map in Section 4.4.9), and subject to the conditions in 3.2.14.

3.2.7.2.4 As an exception to 3.2.7.2.3, Council shall consider amendments to the Land Use Bylaw to permit composting operations on class 2, 3 or active class 4 soils as identified on the 2001 Generalized Soil Capability and Agricultural Land Use Maps of this Strategy.

3.2.7.2.5 It shall be the policy of Council to continue to apply the Agricultural Industrial (M3) Zone to
properties that were under this zone prior to the last Agricultural District Review.

7. Delete Section 3.2.7.3, Non-farm Industrial – Special Uses: Construction and Demolition Debris Disposal Sites, and replace it with the following.

3.2.7.3 Non-farm Industrial – Special Uses: Construction and Demolition Debris Disposal Sites

3.2.7.3.1 It shall be the policy of Council to consider proposals to establish construction and demolition debris disposal sites in the Agricultural District by development agreement, except in Grand Pré and Area and subject to the following:

a. the conditions in 3.2.14; and

b. the conditions in 3.7.12 and 3.7.13 (Rural Common Policies)

8. Delete Section 3.2.11, Grand Pré Heritage Conservation District, and replace it with Section 3.2.11, Grand Pré and Area Views Heritage Conservation, as follows.
3.2.11 Grand Pré and Area Heritage Conservation

The development density in the agricultural land surrounding Grand Pré, ranges from 0.2 to 0.5 units per acre; however, potential development risks compromising important public views throughout the area. Public views deserve protection from development that may interfere with their enjoyment in this historic rural community and tourist destination.

In 1999, Council adopted the Grand Pré Heritage Conservation District Plan, Bylaw, and Design Guidelines pursuant to the Heritage Property Act, affecting lands in and around the community of Grand Pré. Some properties that are located in the Agricultural District around Grand Pré are included in the Heritage Conservation District and others are eligible to be included.

Policies specific to development in Grand Pré are set out in the Hamlet Historic Residential District section of this Strategy.

3.2.11.1 Policies

It is the policy of Council that when considering policies affecting lands around Grand Pré, to have regard to the goals and policies for Heritage Conservation as outlined in the Heritage Conservation District Plan.

9. Delete Section 3.6.8, Hamlet Historic Residential Policies, and replace it with the following.

3.6.8 Hamlet Historic Residential Policies

3.6.8.1 Council shall establish a Hamlet Historic Residential (HH) sub-designation. This designation is intended to provide a planning framework for Hamlets that due to a unique history or development character warrant detailed and tailored planning policy.

Notwithstanding any land use policies in this Strategy pertaining to Hamlet Districts, Council shall not consider rezoning lands zoned Hamlet Historic Residential (R9), to any other zone without an amendment to this Strategy, except rezoning to the Environmental Open Space (O1) Zone may occur within lands designated Hamlet Historic Residential (HH).

3.6.8.2 Council shall establish a Hamlet Residential (R9) Zone for application within designated Hamlet Historic Residential Districts. Permitted uses within the R9 Zone shall include, but may not be limited to:
a. One and two unit residential uses and multi-sectional modular homes

b. Public parks

c. Residential care facilities as defined in Urban Policy 2.5.4.2

d. Tourist commercial facilities for lodging, food services and ancillary uses subject to the provisions of subsection 4.4.8 of this Strategy and subsection 10.1.5 of the Land Use Bylaw

e. Rural accessory residential uses as described in subsection 3.7.2

f. Non-profit camps and seasonal dwellings

3.6.8.3 Council shall allow for a tourist centre on lands in the Hamlet Historic Residential (R9) zone within the Grand Pré and Area Plan boundary through the development agreement approval process.

In considering entering into a Development Agreement, Council shall have regard to the following:

a. the tourist centre will not create compatibility problems with adjacent farming operations and agricultural activities that may be undertaken, such as the spraying of pesticides and the spreading of manure;
b. the tourist centre must be architecturally compatible with the historical and pastoral setting of the community in terms of design, scale, and building materials and does not interfere with the sunlight received by adjacent dwellings;
c. the privacy of adjacent dwellings will be maintained through the provision of natural or artificial buffering;
d. adequate on-site parking can be provided;
e. signage shall be constructed of wood or metal and no internally illuminated signage will be permitted;
f. there is an adequate and landscaped amenity area;
g. the landscaping is sensitive to the site characteristics and surrounding area;
h. the site must be capable of accommodating on-site sewage disposal and water supply where central services are not available; and
i. the proposal is consistent with all the applicable policies including those respecting the entering into of Development Agreements contained in Part 6 of this Strategy.

3.6.8.4 Council intends to permit the following additional uses and may include conditions and special site development standards to ensure they are
developed in a manner compatible with the surrounding uses.

a. Livestock operations

b. Farm market outlets

c. Farm tenement and bunkhouse accommodations

3.6.8.5 The Land Use Bylaw may be amended to allow additional uses where such uses are consistent with the policies of this Strategy.

3.6.8.6 Lot size requirements that are intended to maintain a density that is in keeping with the established development character shall be established in the Land Use Bylaw for the R9 Zone.

3.6.8.7 Within areas designated Hamlet Historic Residential (HH), Council may permit the following by Development Agreement subject to the policies of this Strategy and the provisions of the Municipal Government Act:

a. tourist oriented commercial in Grand Pré pursuant to clause 3.6.8.7

b. reuse of Heritage Buildings pursuant to subsection 4.4.4

c. expansion of non-conforming uses pursuant to subsection 3.7.9

d. expansion of "existing" uses (other than those permitted uses listed specifically in 14.3.1 of the Land Use Bylaw, in existence prior to August 6, 1992) pursuant to subsection 3.7.9

e. uses permitted under subsection 5.2.3, Unique Structures and Unique Site Characteristics Policies

3.6.8.8 Council shall recognize Grand Pré as a Hamlet Historic Residential District on the Future Land Use Map. Other Hamlet District policies notwithstanding, the following policies will apply to Grand Pré:

a. Council shall provide incentives for properties participating in the Grand Pré Heritage Conservation District (HCD). Incentives shall consist of the following:

i. special provisions for bed and breakfast operations.

ii. special provisions for rural home occupations.
b. Council shall encourage development of historical sites and historical restoration projects that relate to the cultural heritage of Grand Pré.

c. Council may permit tourist oriented commercial development by Development Agreement pursuant to the Municipal Government Act.

In considering entering a Development Agreement, Council shall have regard to the following:

i. the development must be intended to serve primarily tourists visiting Grand Pré on a casual basis.

ii. the development must relate to the cultural, historical or artisan aspects of the community.

iii. the development must be architecturally compatible with the historical and pastoral setting of the community in terms of design, scale, and building materials.

iv. the proposal is consistent with all applicable policies including those respecting the entering of Development Agreements contained in part 6 of this Strategy.

10. Delete Section 3.5, Shoreland Districts, and replace it with the following.

3.5 SHORELAND DISTRICTS

Lakes and coastlines are a natural resource which should be accessible to all residents. Although the Fundy coast offers a cool summer breeze, its rugged shoreline and the cold Fundy tides limit the scope of water recreational activities. Hence the freshwater lakes on the plateau of the South Mountain provide the greatest recreational potential.

Along the Fundy coast and the Minas Basin Council has designated additional seasonal residential areas as Shoreland Districts based on existing development trends. Erosion has reached serious proportions in some coastal Shoreland Districts, especially Kingsport and Evangeline Beach. In these cases only existing seasonal residential areas are designated in recognition of the high risks to development.

Erosion is a serious issue in North Grand Pré where it has claimed an average of 50 feet along the coastline of Evangeline Beach over the past four decades. Development along this coastal area can increase rates of erosion. Council recognizes that there is a public interest to mitigate the impacts of coastal erosion so that the safety of human life and property are not compromised.
Similarly, Council designated the shorelines around many freshwater lakes as Shoreland Districts. The growing demand for seasonal residential development in Kings County is illustrated by the municipal records which show a consistent increase in seasonal residential development since 1963. Between 30 to 40 new lots are being created each year and this is expected to continue, in fact it is expected to increase. As this demand increases, public access to lakes and beach areas may be significantly reduced by the concentration of private development on water frontage. In addition to concerns of public access, the capacity of the inland lakes to sustain development must be addressed.

Along the Fundy coast and the Minas Basin additional cottage areas are designated Shoreland Districts based on existing development trends.

The current approach to shoreland management involves two essential steps. The first step is to identify the high capability recreation lands and designate portions to accommodate public and private development and access. The second step is to recognize the sustainable limits to use and to protect the integrity of the natural features, processes, and wildlife habitats which all contribute to the high capability. The Kings County Lakeshore Capacity Model, completed in 1995 provided Council with a planning tool designed for predicting development impacts on freshwater lakes.

Up to 1996, Shoreland Districts were established around the larger, more accessible lakes on the South Mountain. Council excluded smaller lakes from designation given their physical limitations for both seasonal residential development and recreational activities such as boating, swimming, and fishing. However, the lakeshore capacity model’s ability to predict development impact on lake water is dependent on factors related to land uses and resource activities in the entire watershed. We now know that development around upstream lakes and streams, as well as the natural landscape and human settlement contribute to lake water quality. To maintain water quality in those lakes already recognized for high recreation potential, planning efforts need to consider not only the direct impacts on the immediate lakes undergoing development, but the surrounding watershed too.

Prior to opening up additional undeveloped lands for seasonal residential development however, an assessment of the effects of further development should be undertaken. Matters to consider include the effect on existing development in terms of the social, visual, and natural character, lakeshore biophysical capacity, and effects on lake water quality as well as consideration of the maintenance of future public access to the lakes.

For the most part, in terms of residential use, Shoreland Districts are intended for seasonal residential development. However, Council has conceded to permit year round residential development whether on public or private roads. However, in keeping with the general goal of this Strategy to concentrate development in Growth Centres where services can be provided economically, services to remote areas such
as the Shoreland Districts will be limited to basic garbage collection at central locations along public roads.

11. Insert section 3.5.3.4 following 3.5.3.3 within the Section 3.5.3, Shoreland Districts – Coastal Shoreland Policies, as follows.

3.5.3.4 Council shall require that new residential development of seasonal dwellings or single detached dwellings on properties which abut the Minas Basin within the Coastal Shoreland (CS) Zone in Grand Pré and Area obtain site plan approval as described in Policy 3.5.7 of this Strategy. New back-lots without water frontage may continue to be developed as-of-right according to the Land Use Bylaw requirements for the Coastal Shoreland (CS) Zone.

12. Delete Section 3.5.7, Site Plan Bylaw Alternatives, and replace it with the following.

3.5.7 Site Plan Bylaw Alternatives

Council recognizes the attraction and demand for residential dwellings around Kings County’s lakes on the South Mountain plateau. However, Council also wishes to ensure that new lakefront development does not negatively impact lake water quality or the natural environment.

Coastal erosion is an issue in areas along the east shore. Many areas including Kingsport, Evangeline Beach, and Blue Beach have shown evidence of significant erosion. Council also recognizes that coastal erosion rates are particularly high along the coastline of Evangeline Beach in North Grand Pré. Research carried out by the Municipality in 2009 found that between 1961 and 2002, the coastline retreated an average of 50 feet due to erosion. Council must also balance the demand for seasonal residential development with coastal erosion concerns so that residents can continue to enjoy a coastal recreational lifestyle well into the future.

In order to balance demand for residential development with environmental concerns, Policy 3.5.3.4, 3.5.4.7, and 3.5.4.9 of this Strategy require certain residential development proposals to receive site plan approvals pursuant to the enabling policies specified in Part 6.8 of this Strategy.

Residential development in the S1 and S2 Zones that require site plan approval must meet the site plan requirements contained in the Land Use Bylaw. The site plan requirements shall be geared towards protecting water quality and by restricting development. Vegetation is encouraged along the shorelines in Kings County; however, in Grand Pré the placement of armour rock appears to be the only truly effective measure that owners are able to use to protect their lands along this stretch of coastline.

13. Delete Section 6.8.1.2 and replace it with the following.
6.8.1.2 The following uses shall only be considered subject to site plan approval according to the provisions of 6.8.2 of the Municipal Planning Strategy.

a. Small-scale towers not regulated by the policies in Section 5.3 proposed within designated Tourist Destination Areas (TDAs) or registered historic sites.

b. Mini homes, single detached dwellings, or seasonal dwellings within the Seasonal Residential (S1) Zone on lakes where the carrying capacity has been exceeded, as provided for in Policy 3.5.4.7.

c. Mini homes, single detached dwellings, or seasonal dwellings within the Future Shoreland (S2) Zone on lots created after October 25, 2007 as provided for in Policy 3.5.4.9.

d. New seasonal dwellings or single detached dwellings on properties which abut the Minas Basin in the Coastal Shoreland (CS) Zone in Grand Pré and Area as provided for in Policy 3.5.3.4.

e. Non-farm dwellings in the Agricultural (A1) Zone as provided for in Policy 3.2.6.2 and 3.2.6.3.

14. Delete Section 6.3.2, Application of Policies for Development Agreements, and replace it with the following.

6.3.2 Application of Policies for Development Agreements

6.3.2.1 The following uses shall only be considered subject to the entering into of a Development Agreement according to the provisions of the Municipal Government Act:

- Expansion of Rural Non-Conforming Uses (Subsection 3.7.10)

- Expansion of "existing uses" in Grand Pré, where existing uses are other than those permitted uses listed specifically in 14.3 of the Land Use Bylaw (pursuant to subsection 3.7.9)

- Expansion of Urban Non-Conforming Uses (Subsection 2.7.2)

- Re-use of non-permitted structures and sites with unique post-development characteristics (Subsection 5.2.3)
• Day Care Facilities for more than 14 people in Residential Districts (Subsection 2.5.5)

• Re-use of Heritage Buildings registered under the Heritage Property Act (Subsection 4.4.4)

• Tourist Commercial Facilities for Lodging, Food Services and Ancillary Uses (Subsection 4.4.8)

• Tourist Commercial uses in Grand-Pre Hamlet Historic Residential District (Policies 3.6.8.6 and 3.6.8.7)

• Recreational - Commercial uses (Policy 3.7.8.6)

• Commercial uses at Tourist Destination Areas (Subsection 4.4.8)

• Mobile Home Parks in Rural Districts

• Multi-unit residential development in Hamlets

• Rural Day Care Facilities for more than 14 people in Rural Districts (Policy 3.7.2.4)

• Expansion of certain existing hamlet industrial uses beyond their initial zoned area (Policy 3.6.10.5)

• Construction and demolition debris disposal sites in the Forestry and Agricultural Districts (Subsection 3.7.13), except in Grand Pré and Area

• Tourist centres in the Agricultural (A1) zone with the Grand Pré and Area Plan Boundary (Policy 4.4.9 A7) and in the Residential Historic Hamlet (R9) zone of the Grand Pré Historic Hamlet (policy 3.6.8.3).
1. Delete Schedule 21h, Grand Pré Land Use Bylaw, and replace it with Schedule 21h, Grand Pré Hamlet Zoning, contained in Appendix D

2. In Part B Zoning Maps, insert after Schedule 11g, Waterville, title GRAND PRÉ AND AREA and Schedule 1c, Grand Pré, North Grand Pré, Hortonville, Lower Wolfville contained in Appendix E

3. Delete Section 14.3.1, Hamlet Historic Residential (R9) Zone, after section 14.3.5, as follows.

14.3 HAMLET HISTORIC RESIDENTIAL (R9) ZONE

14.3.1 Permitted Uses

No Development Permit shall be issued in a Hamlet Historic Residential (R9) Zone except for one or more of the following uses and subject to the following requirements:

Agricultural Uses
Commercial Livestock Operations subject to the requirements of the A1 Zone
Duplexes
Farm Market Outlets subject to the requirements of the A1 Zone
Farm Tenement Buildings and Bunkhouses subject to the requirements of the A1 Zone
Multi-Sectional Modular Homes
Non-Profit Camps
Nurseries
Residential Care Facilities
Seasonal Dwellings
Semi-Detached Dwellings
Single Detached Dwellings

14.3.2 Uses Subject to Conditions

Bed and Breakfast Operations
Existing Uses other than those specifically permitted uses listed in 14.3.1 may be expanded only by Development Agreement
Home Day Care
Rural Home Occupations
Tourist Commercial Facilities for Lodging, Food Services and Ancillary Uses

4. Insert Section 14.3.7, Incentives for properties that participate in the Grand Pré Heritage Conservation District Boundary, after section 14.3.7, as follows.

14.3.7 Incentives for properties that participate in the Grand Pré Heritage Conservation District

Properties that participate in the Grand Pré Heritage Conservation District boundary are eligible for the following incentives.

14.3.7.1 Rural Home Occupations are subject to the general provisions contained in Section 10.1 of this Bylaw. For Rural Home Occupations that participate in the Grand Pré Heritage Conservation District boundary, the following incentives shall apply:

Subsection 10.1.1.2 shall be changed to the following.

Not more than 5 employees who are not residents of the dwelling are employed in the business or profession.

Subsection 10.1.1.5 shall be changed to the following.

A minimum of 1 additional parking space for every 1,000 square feet of commercial floor area is provided in addition to the parking required for the dwelling.

14.3.7.2 Bed and Breakfast Operations are subject to the general provisions contained in Section 10.1 of this Bylaw. For Bed and Breakfast Operations that participate in the Grand Pré Heritage Conservation District boundary, the following incentives shall apply:

Subsection 10.1.3.3 shall be changed to the following.

There is no advertising on the property other than a business identification sign which is no greater than 10 square feet in sign area if a single faced sign or a combined
area of 15 square feet if a double faced sign.

Subsection 10.1.3.6 shall be changed to the following.

No more than 4 rooms are available for overnight accommodation.

5. Delete Section 10.1.1, Rural Home Occupations, and replace it with the following.

10.1.1 Rural Home Occupations

A home occupation shall be permitted in any dwelling or accessory structure in a rural zone in any of the Hamlets, Country Residential, Shoreland, Forestry and Agricultural Districts provided:

10.1.1.1 The external appearance of the dwelling is not changed by the business use.

10.1.1.2 Not more than 4 employees who are not residents of the dwelling are employed in the business or profession. No more than 5 employees who are not residents of the dwelling are employed in the business or profession for properties that participate in the Grand Pré Heritage Conservation District boundary.

10.1.1.3 There is no advertising other than a business identification sign in compliance with the sign regulations.

10.1.1.4 The floor area used for the home occupation is limited to the following sizes:

Lot size under 50,000 square feet: up to 750 square feet.

Lot size between 50,000 square feet to 100,000 square feet: up to 1,000 square feet.

Lot size over 100,000 square feet: up to 2,000 square feet.

10.1.1.5 A minimum of 1 additional parking space for every 500 square feet of commercial floor area is provided in addition to the parking required for the dwelling. For properties that participate in the Grand Pré Heritage Conservation District, a minimum of 1 additional parking space for every 1,000 square feet of commercial floor area is required for this provision.
10.1.6 One off-street parking space, other than that required for the dwelling, is provided for every 100 square feet of total floor space used in conjunction with a medical, dental or other health care related professional use.

10.1.7 The home occupation does not create noise, dust, vibration, smell, smoke, glare, electrical interference, fire hazard, radiation or any other hazard, or nuisance to any greater or more frequent extent than that usually experienced from a residential or farm use under normal circumstances.

6. Delete Section 10.1.3, Bed and Breakfast Operations, and replace it with the following.

10.1.3 Bed and Breakfast Operations

Bed and breakfast operations may be conducted provided:

10.1.3.1 The use is conducted wholly within the residence of the owner.

10.1.3.2 The external appearance of the dwelling is not changed by the use.

10.1.3.3 There is no advertising on the property other than business identification sign which is no greater than 6 square feet in sign area if a single faced sign or 12 square feet if a double faced sign. For properties that participate in the Grand Pré Heritage Conservation District, single faced signs shall be no greater than 10 square feet and double faced sign shall be no greater than 15 square feet.

10.1.3.4 Parking is located in the rear or side yards only and is provided at the rate of 1 space for every bedroom available for overnight accommodation.

10.1.3.5 No parking area shall be located within 10 feet of a lot line abutting an R6 Zone unless the abutting yard is fenced or screened so as to reduce visual nuisance.

10.1.3.6 No more than 3 rooms are available for overnight accommodation to the public. No more than 4 rooms are available for overnight accommodation for properties that participate in the Grand Pré Heritage Conservation District boundary.

7. Insert Section 11.1.22, Zone Requirements, as follows.

11.1.22 Zone Requirements
Any permitted use in any Agricultural (A1) Zone must comply with the following regulations:

<table>

</table>
8. Delete Section 14.6, Coastal Shoreland (CS) Zone, and replace it with the following.

14.6 COASTAL SHORELAND (CS) ZONE

14.6.1 Permitted Uses

No Development Permit shall be issued in a Coastal Shoreland (CS) Zone except for one or more of the following uses and subject to the following requirements:

Agricultural Uses
Fish Sheds
Forestry Uses
Parks and Recreation Uses
Seasonal Dwellings
Single Detached Dwellings
Small-Scale Wind Turbines conditional to same height and setback requirements as main building

**Existing commercial uses on PIDs 55220966, 55220891, 55329916, 55220883, 55329353, 55329403 in Grand Pré and Area on DATE (date that Notice of Adoption is advertised)**

14.6.2 General Provisions

14.6.2.1 Part 3 of this Bylaw contains provisions which apply to all zones in the Municipality and includes requirements for watercourse setbacks, swimming pools, signs, and accessory buildings.

14.6.2.2 Regulations for tourist commercial facilities for lodging, food services and ancillary uses are set out in section 10.1.5 of this Bylaw.

14.6.3 Minimum Building Setback from Shoreline

The minimum rear yard regulations shall be waived for boathouses and fish sheds.

14.6.4 Frontage on a Public Road

A development permit may be issued for a seasonal dwelling or single detached dwelling to be located on a lot which does not front on a public road.
14.6.5 Parking of Commercial Vehicles

A maximum of 1 commercial vehicles used for business purposes by the owner or occupant of the lot may be kept in a CS Zone.

14.6.6 Special Requirements: Development within the Coastal Shoreland (CS) Zone in Grand Pré and Area

14.6.6.1 Development Requiring Site Plan Approval within the Coastal Shoreland (CS) Zone in Grand Pré and Area:

New seasonal dwellings or single detached dwellings on properties which abut the Minas Basin are subject to site plan approval.

a. Site Plan Content and Criteria

No development permit shall be issued unless a clear and accurately scaled site plan showing the location and size of development on the property. A site plan shall accurately show the following features:

- Property Boundary and any shoreline
- Any watercourses, steep slopes and wetlands
- Driveway
- Building Envelope
- Area that may contain lawns, landscaping and accessory structures
- Location of wells, septic tanks, and septic fields.
- Location of easements
- Accurate measurements showing the locations of the above features on the property.

b. Proposed development shown in the site plan shall be in conformance with the following criteria:

- Any steep slopes or wetlands are maintained in a naturally vegetated state
- A minimum setback requirement of 50 feet from the top of the bank.
• Privacy barriers between neighbouring properties, including fences or trees.

• Where possible, septic fields shall be located in an area of the property furthest from the coast.

• Property owners shall supply written confirmation to the development officer stating that they are aware their property is prone to erosion and that they understand the risks associated with development.

14.6.6 Zone Requirements

Any permitted use in any Coastal Shoreland (CS) Zone must comply with the following regulations:

PART 11 – RURAL RESOURCE ZONES

11.1 AGRICULTURAL (A1) ZONE

11.1.1 Purpose

The purpose of the Agricultural (A1) Zone is to provide for agriculture as a dominant use which is to have priority over all other uses. Some rural or resource based residential, commercial, industrial, institutional, parkland and open space uses are provided for in the Agricultural (A1) Zone.

11.1.2 Permitted Uses

No development permit shall be issued in an Agricultural (A1) Zone except for one or more of the following uses and subject to the following requirements:

Agricultural Uses as part of the farm operation excluding commercial livestock operations
Existing Dwellings
Farm and Non-Farm Dwellings, including one and two unit dwellings, multi-sectional modular homes, mobile homes, double wide mobile homes, and mini homes – existing
Farm Supportive Uses including agricultural warehousing, processing, sorting, grading, packaging and transport facilities tied to the farm operation and located on the farm property
Fishing Uses
Forestry Uses
Greenhouses and Nurseries
Small-Scale Wind Turbines
Wildlife Rescue and Rehabilitation Centre

11.1.3 Uses Subject to Conditions

Bed and Breakfast Operations
Churches
Commercial Livestock Operations
Community Centres
Farm and Non-Farm Dwellings
Farm Museums
Farm Tenement and Bunkhouse Accommodations
Farm Market Outlets
Fire Stations
Home Day Care
Home Occupations
11.1.4 General Provisions

11.1.4.1 Part 3 of this Bylaw contains provisions which apply to all zones in the Municipality of the County of Kings, including sign regulations, swimming pools and other uses.

11.1.4.2 Regulations for rural home occupations, bed and breakfast operations and home day care, cemeteries and churches, and storage of dangerous goods are set out in Section 10.1 of this Bylaw. Alternate standards for rural home occupations and bed and breakfast operations within the Grand Pré Heritage Conservation District are set out in Section 10.1.

Canada National Parks Act

2000, c. 32

N-14.01

[Assented to October 20th, 2000]

An Act respecting the national parks of Canada

Her Majesty, by and with the advice and consent of the Senate and House of Commons of Canada, enacts as follows:

SHORT TITLE

Short title

1. This Act may be cited as the Canada National Parks Act.

INTERPRETATION

Definitions

2. (1) The definitions in this subsection apply in this Act. "community plan" «plan communautaire »

"community plan" means a land use plan for a park community.

"ecological integrity" «intégrité écologique »

"ecological integrity" means, with respect to a park, a condition that is determined to be characteristic of its natural region and likely to persist, including abiotic components and the composition and abundance of native species and biological communities, rates of change and supporting processes.

"enforcement officer" «agent de l’autorité »

"enforcement officer" means a person designated under section 19 or belonging to a class of persons so designated.

"Minister" «ministre »

"Minister" means the Minister responsible for the Parks Canada Agency.

"park" «parc »

"park" means a national park of Canada named and described in Schedule 1.
"park community"
«collectivité »

"park community" means any of the following communities:

(a) the visitor centre of Field in Yoho National Park of Canada;
(b) the town of Banff in Banff National Park of Canada;
(c) the visitor centre of Lake Louise in Banff National Park of Canada;
(d) the visitor centre of Waterton Lakes Park in Waterton Lakes National Park of Canada;
(e) the town of Jasper in Jasper National Park of Canada;
(f) the visitor centre of Waskesiu in Prince Albert National Park of Canada; or
(g) the visitor centre of Wasagaming in Riding Mountain National Park of Canada.

"park reserve"
«réserve »

"park reserve" means a national park reserve of Canada named and described in Schedule 2.

"park warden"
«garde de parc »

"park warden" means a person designated under section 18.

"public lands"
«terres domaniales »

"public lands" means lands, including submerged lands, that belong to Her Majesty in right of Canada or that the Government of Canada has the power to dispose of, whether or not such disposal is subject to the terms of any agreement between the Government of Canada and the government of a province.

"superintendent"
«directeur »

"superintendent" means an officer appointed under the Parks Canada Agency Act who holds the office of superintendent of a park or of a national historic site of Canada to which this Act applies, and includes any person appointed under that Act who is authorized by such an officer to act on the officer’s behalf.

Aboriginal rights

(2) For greater certainty, nothing in this Act shall be construed so as to abrogate or derogate from the protection provided for existing aboriginal or treaty rights of the aboriginal peoples of Canada by the recognition and affirmation of those rights in section 35 of the Constitution Act, 1982.

2000, c. 32, s. 2; 2002, c. 18, s. 30; 2005, c. 2, s. 7.

HER MAJESTY

Binding on Her Majesty

3. This Act is binding on Her Majesty in right of Canada or a province.

NATIONAL PARKS OF CANADA

Parks dedicated to public
4. (1) The national parks of Canada are hereby dedicated to the people of Canada for their benefit, education and enjoyment, subject to this Act and the regulations, and the parks shall be maintained and made use of so as to leave them unimpaired for the enjoyment of future generations.

Purpose of reserves

(2) Park reserves are established in accordance with this Act for the purpose referred to in subsection (1) where an area or a portion of an area proposed for a park is subject to a claim in respect of aboriginal rights that has been accepted for negotiation by the Government of Canada.

2000, c. 32, s. 4; 2002, c. 18, s. 31.

National parks of Canada

5. (1) Subject to section 7, the Governor in Council may, by order, for the purpose of establishing or enlarging a park, amend Schedule 1 by adding the name and a description of the park, or by altering the description of the park, if the Governor in Council is satisfied that

(a) Her Majesty in right of Canada has clear title to or an unencumbered right of ownership in the lands to be included in the park; and

(b) the government of the province in which those lands are situated has agreed to their use for that purpose.

Judicial finding as to title

(2) If a court of competent jurisdiction finds that Her Majesty in right of Canada does not have clear title to or an unencumbered right of ownership in lands within a park, the Governor in Council may, by order, amend Schedule 1 by removing the name and description of the park or by altering that description.

No reduction of park area

(3) Except as provided by subsection (2), no amendment may be made by the Governor in Council to Schedule 1 for the purpose of removing any portion of a park.

2000, c. 32, s. 5; 2002, c. 18, s. 31.1.

Reserves for parks

6. (1) Subject to section 7, the Governor in Council may, by order, for the purpose of establishing or enlarging a park reserve, amend Schedule 2 by adding the name and a description of the reserve, or by altering the description of the reserve, if the Governor in Council is satisfied that

the government of the province in which the lands to be included in the reserve are situated has agreed to their use for that purpose.

Reserve lands becoming park

(2) Where a claim referred to in subsection 4(2) is settled, the Governor in Council may, by order,

(a) amend Schedule 2 by removing the name and description of the park reserve or by altering that description; and

(b) if the settlement provides that the park reserve or part of it is to become a park or part of one, amend Schedule 1 by adding the name and a description of the park or by altering the description of the park, if the Governor in Council is satisfied that Her Majesty in right of Canada has clear title to or an unencumbered right of ownership in the lands to be included in the park.

Judicial finding as to title

(3) If a court of competent jurisdiction finds that Her Majesty in right of Canada does not have clear title to or an unencumbered right of ownership in lands within a park reserve, the Governor in Council may, by order, amend Schedule 2 by removing the name and description of the reserve or by altering that description.

No reduction of reserve area
(4) Except as provided by subsections (2) and (3), no amendment may be made by the Governor in Council to Schedule 2 for the purpose of removing any portion of a park reserve.

2000, c. 32, s. 6; 2002, c. 18, s. 31.2.

Amendment to be tabled and referred

7. (1) Before an amendment is made to Schedule 1 or 2 for a purpose referred to in subsection 5(1) or 6(1), respectively, the proposed amendment shall be tabled in each House of Parliament, together with a report on the proposed park or park reserve that includes information on consultations undertaken and any agreements reached with respect to its establishment, and an amendment so tabled stands referred to the standing committee of each House that normally considers matters relating to parks or to any other committee that that House may designate for the purposes of this section.

Disapproval by committee

(2) The committee of each House may, within 30 sitting days after the amendment is tabled, report to the House that it disapproves the amendment, in which case a motion to concur in the report shall be put to the House in accordance with its procedures.

Amendment allowed

(3) A proposed amendment to Schedule 1 or 2 may be made if 31 sitting days have elapsed after the tabling of the amendment in both Houses and no motion referred to in subsection (2) has been proposed in either House.

Amendment not allowed

(4) A proposed amendment to Schedule 1 or 2 may not be made if either House passes a motion referred to in subsection (2).

ADMINISTRATION

Management by Minister

8. (1) The Minister is responsible for the administration, management and control of parks, including the administration of public lands in parks and, for that purpose, the Minister may use and occupy those lands.

Ecological integrity

(2) Maintenance or restoration of ecological integrity, through the protection of natural resources and natural processes, shall be the first priority of the Minister when considering all aspects of the management of parks.

Park communities

9. Powers in relation to land use planning and development in park communities may not be exercised by a local government body, except as provided in the agreement referred to in section 35.

Agreements — general

10. (1) The Minister may enter into agreements with federal and provincial ministers and agencies, local and aboriginal governments, bodies established under land claims agreements and other persons and organizations for carrying out the purposes of this Act.

Agreements — particular

(2) The Minister may enter into agreements

(a) with any person for the development, operation and maintenance in a park of hydro-electric power pursuant to the *Dominion Water Power Act* for use in a park;

(b) with a local or aboriginal government having jurisdiction on lands adjacent to a park for the supply of water from the park to any place on those adjacent lands; and
(c) with any person located on lands in or adjacent to a park for the supply of water from the park to those lands for domestic purposes or for use in establishments providing services to park visitors.

Traditional water supply

(2.1) An agreement entered into pursuant to paragraph (2)(b) must take into account any traditional supply of water from the park.

Use of land

(3) An agreement entered into by the Minister with a provincial minister or agency may authorize the use of public lands in a park, but the Minister may terminate the agreement if those lands cease to be used as authorized.

Management plans

11. (1) The Minister shall, within five years after a park is established, prepare a management plan for the park containing a long-term ecological vision for the park, a set of ecological integrity objectives and indicators and provisions for resource protection and restoration, zoning, visitor use, public awareness and performance evaluation, which shall be tabled in each House of Parliament.

Review of plans

(2) The Minister shall review the management plan for each park every five years, and any amendments to a plan shall be tabled with the plan in each House of Parliament.

Public consultation

12. (1) The Minister shall, where applicable, provide opportunities for public participation at the national, regional and local levels, including participation by aboriginal organizations, bodies established under land claims agreements and representatives of park communities, in the development of parks policy and regulations, the establishment of parks, the formulation of management plans, land use planning and development in relation to park communities and any other matters that the Minister considers relevant.

Progress reports

(2) At least every two years, the Minister shall cause to be tabled in each House of Parliament a report on the state of the parks and on progress made towards the establishment of new parks.

PARK LANDS

No disposition or use without authority

13. Except as permitted by this Act or the regulations,

(a) no public lands or right or interest in public lands in a park may be disposed of; and

(b) no person shall use or occupy public lands in a park.

Wilderness areas

14. (1) The Governor in Council may, by regulation, declare any area of a park that exists in a natural state or that is capable of returning to a natural state to be a wilderness area.

Maintaining character

(2) The Minister may not authorize any activity to be carried on in a wilderness area that is likely to impair the wilderness character of the area.

Exceptions

(3) Notwithstanding subsection (2) but subject to any conditions that the Minister considers necessary, the
Minister may authorize activities to be carried on in a wilderness area for purposes of

(a) park administration;

(b) public safety;

(c) the provision of basic user facilities including trails and rudimentary campsites;

(d) the carrying on of activities in accordance with regulations made under section 17; or

(e) access by air to remote parts of the wilderness area.

Time limit for declaration

(4) Where a new or amended management plan sets out an area of a park for declaration as a wilderness area, the Minister shall recommend such declaration to the Governor in Council within one year after the plan or amendment is tabled under section 11.

Disposition of public lands

15. (1) The Minister may

(a) enter into leases of, and easements or servitudes over, public lands in a park that are used for

   (i) the right-of-way of an existing railway line or the site of a railway station,

   (ii) the right-of-way of an existing oil or gas pipeline or the site of a tank, reservoir, pump, rack, loading
       facility or other installation connected with such a pipeline, or

   (iii) the right-of-way of an existing telecommunication or electrical transmission line or the site of an
       exchange, office, substation or other installation connected with such a transmission line;

(b) enter into leases of, and easements or servitudes over, public lands in a park that are required for any
    alteration to or deviation from a right-of-way referred to in paragraph (a) or for the relocation of any station or
    installation referred to in that paragraph; or

(c) enter into leases or licences of occupation of, and easements or servitudes over, public lands in a park
    for the installation and operation of radio and television repeater stations, microwave towers, weather and
    telemetry stations and cosmic ray and other scientific monitoring stations.

Use of lands

(2) Public lands in a park in which a right or interest is held for any purpose under this section remain part of
the park and, if those lands cease to be used for that purpose, the right or interest reverts to the Crown.

Termination, etc.

(3) The Minister may terminate, or accept the surrender or resiliation of, a lease of public lands in a park and
may terminate, or accept the relinquishment of, a licence of occupation of such lands or an easement or
servitude over such lands.

Expropriation if interests

(4) The Expropriation Act applies in respect of the taking or acquisition of an interest in public lands in a park
for the purposes of this Act where the holder of the interest does not consent and there is no cause for
termination under subsection (3).

Meaning of terms

(5) For the purposes of subsection (4), the Minister is deemed to be a minister referred to in paragraph (b) of
the definition "Minister" in section 2 of that Act and the Parks Canada Agency is deemed to be a department
named in Schedule I to the Financial Administration Act.

No other expropriation
(6) Notwithstanding the *Expropriation Act*, Her Majesty in right of Canada may not acquire any interest in land by expropriation for the purpose of enlarging a park or establishing a new park.

**REGULATIONS**

**Regulations**

16. (1) The Governor in Council may make regulations respecting

(a) the preservation, control and management of parks;

(b) the protection of flora, soil, waters, fossils, natural features, air quality, and cultural, historical and archaeological resources;

(c) the protection of fauna, the taking of specimens of fauna for scientific or propagation purposes, and the destruction or removal of dangerous or superabundant fauna;

(d) the management and regulation of fishing;

(e) the prevention and remedying of any obstruction or pollution of waterways;

(f) the prevention and extinguishment of fire on park lands or threatening park lands;

(g) the issuance, amendment and termination of leases, licences of occupation and easements or servitudes, and the acceptance of the surrender or resiliation of leases and the relinquishment of licences of occupation and easements or servitudes, of or over public lands

(i) in park communities, for the purposes of residence, schools, churches, hospitals, trade, tourism and places of recreation or entertainment,

(ii) in existing resort subdivisions, for the purpose of residence,

(iii) outside park communities and existing resort subdivisions, for the purposes of schools, churches, hospitals, service stations, tourism and places for the accommodation, recreation or education of visitors to parks, and

(iv) in the town of Banff, for the purpose of the exercise by a local government body of functions specified in the agreement referred to in section 35;

(h) the restriction or prohibition of activities and the control of the use of park resources and facilities;

(i) the establishment, operation, maintenance and administration of works and services of a public character, such as water, sewage, electricity, telephone, gas, fire protection, garbage removal and disposal and cemeteries, including the designation, granting and maintenance of plots in cemeteries, and respecting the use of those works and services;

(j) the establishment, maintenance, administration and use of roads, streets, highways, parking areas, sidewalks, streetworks, trails, wharves, docks, bridges and other improvements, and the circumstances under which they must be open or may be closed to public traffic or use;

(k) the control of traffic on roads, streets and highways and elsewhere in parks, including the regulation of the speed, operation and parking of vehicles;

(l) the surveying of public lands, the making of plans of surveyed lands, the delimitation in such plans of the boundaries of park communities, existing resort subdivisions and cemeteries, their designation as towns, visitor centres, resort subdivisions or cemeteries and the subdividing of lands so designated;

(m) the control of the location, standards, design, materials, construction, maintenance, removal and demolition of buildings, structures, facilities, signs and other improvements and the establishment of zones governing uses of land and buildings;

(n) the control of businesses, trades, occupations, amusements, sports and other activities or undertakings,
including activities related to commercial ski facilities referred to in section 36, and the places where such activities and undertakings may be carried on;

(o) the preservation of public health and the prevention of disease;

(p) the inspection of buildings, structures, facilities and other improvements for the purpose of the enforcement of regulations made under paragraphs (m), (n) and (o);

(q) the abatement and prevention of nuisances;

(r) the determination of fees, rates, rents and other charges for the use of park resources and facilities, the provision of works and services referred to in paragraph (i) and improvements referred to in paragraph (j), and the issuance and amendment of permits, licences and other authorizing instruments pursuant to subsection (3);

(s) public safety, including the control of firearms;

(t) the use, transportation and temporary storage of pesticides and other toxic substances;

(u) the control of domestic animals, including the impounding or destruction of such animals found at large;

(v) the acquisition or disposition of prehistoric and historic objects and reproductions of them and the sale of souvenirs, consumer articles and publications;

(w) the authorization of the use of park lands, and the use or removal of flora and other natural objects, by aboriginal people for traditional spiritual and ceremonial purposes;

(x) the control of access to parks by air;

(y) maximum amounts of fines in respect of contraventions of provisions of the regulations or of permits, licences or other authorizing instruments issued pursuant to the regulations, for the purposes of paragraphs 24(3)(a) and (b); and

(z) the summary removal from a park, by park wardens or enforcement officers, of persons found contravening specified provisions of this Act, the regulations or the Criminal Code, and the exclusion from a park for prescribed periods of those persons or persons convicted of offences under those provisions.

Roads and other improvements

(2) The establishment or use of any improvement referred to in paragraph (1)(j) does not operate to withdraw lands from a park.

Powers of superintendents

(3) Regulations made under this section may authorize the superintendent of a park, in the circumstances and subject to the limits that may be specified in the regulations,

(a) to vary any requirement of the regulations for purposes of public safety or the conservation of natural resources in the park;

(b) to issue, amend, suspend and revoke permits, licences and other authorizations in relation to any matter that is the subject of regulations and to set their terms and conditions; and

(c) to order the taking of any action to counter any threat to public health or to remedy the consequences of any breach of the regulations in the park.

No new establishments

(4) No lease, licence of occupation, easement or servitude may be issued or amended pursuant to regulations made under subparagraph (1)(g)(iii) for the purpose of the establishment of a new park community,
resort subdivision, school, church or hospital.

Resource harvesting in certain parks

17. (1) The Governor in Council may make regulations respecting the exercise of traditional renewable resource harvesting activities in

(a) Wood Buffalo National Park of Canada;

(b) Wapusk National Park of Canada;

(c) Gros Morne National Park of Canada;

(d) any national park of Canada established in the District of Thunder Bay in the Province of Ontario;

(e) Mingan Archipelago National Park Reserve of Canada; and

(f) any national park of Canada established in an area where the continuation of such activities is provided for by an agreement between the Government of Canada and the government of a province respecting the establishment of the park.

Land claims agreements

(2) Where an agreement for the settlement of an aboriginal land claim that is given effect by an Act of Parliament makes provision for traditional renewable resource harvesting activities or stone removal activities for carving purposes within any area of a park, or where aboriginal people have existing aboriginal or treaty rights to traditional renewable resource harvesting activities within any area of a park, the Governor in Council may make regulations respecting the carrying on of those activities in that area.

Regulations respecting resource harvesting

(3) Regulations made under subsection (1) or (2) may

(a) specify what are traditional renewable resource harvesting activities;

(b) designate categories of persons authorized to engage in those activities and prescribe the conditions under which they may engage in them;

(c) prohibit the use of renewable resources harvested in parks for other than traditional purposes;

(d) control traditional renewable resource harvesting activities;

(e) authorize the removal and disposal of any equipment or harvested resources left in a park in contravention of the regulations, and provide for the recovery of expenses incurred in their removal and disposal; and

(f) notwithstanding anything in this subsection, authorize the superintendent of a park

(i) to close areas of the park to traditional renewable resource harvesting activities for purposes of park management, public safety or the conservation of natural resources,

(ii) to establish limits on the renewable resources that may be harvested in any period, or to vary any such limits established by the regulations, for purposes of conservation, and

(iii) to prohibit or restrict the use of equipment in the park for the purpose of protecting natural resources.

Removal of carving stone

(4) In regulations made under subsection (2), subsection (3) may be applied to the removal of stone for carving purposes.

Variations by superintendent
(5) Regulations made under this section may authorize the superintendent of a park, in the circumstances described and to the extent provided in the regulations, to vary any requirement of the regulations for purposes of public safety or the conservation of natural resources in the park.

ENFORCEMENT

Designation of park wardens

18. The Minister may designate persons appointed under the Parks Canada Agency Act, whose duties include the enforcement of this Act, to be park wardens for the enforcement of this Act and the regulations in any part of Canada and for the preservation and maintenance of the public peace in parks, and for those purposes park wardens are peace officers within the meaning of the Criminal Code.

Designation of enforcement officers

19. The Minister may designate persons or classes of persons employed in the federal public administration or by a provincial, municipal or local authority or an aboriginal government, whose duties include law enforcement, to be enforcement officers for the purpose of the enforcement of specified provisions of this Act or the regulations in relation to specified parks, and for that purpose enforcement officers have the powers and are entitled to the protection provided by law to peace officers within the meaning of the Criminal Code.

Certificate of designation and oath

20. (1) Every park warden and enforcement officer shall be provided with a certificate of designation in a form approved by the Minister and shall take and subscribe an oath prescribed by the Minister.

Limitation of powers

(2) A certificate of designation provided to an enforcement officer shall specify the provisions of this Act or the regulations that the enforcement officer has the power to enforce and the parks in which that power applies.

Crossing private property

(3) In the discharge of their duties, park wardens, enforcement officers and persons accompanying them may enter on and pass through or over private property.

Arrest by warden or officer

21. (1) A park warden or enforcement officer may, in accordance with and subject to the Criminal Code, arrest without warrant

(a) any person whom the warden or officer finds committing an offence under this Act; or

(b) any person who, on reasonable grounds, the warden or officer believes has committed or is about to commit an offence under section 26.

Arrest by warden

(2) A park warden may, in accordance with and subject to the Criminal Code, arrest without warrant any person whom the warden finds committing an offence under any other Act in a park.

Search and seizure

22. (1) A park warden or enforcement officer may

(a) enter and search any place and open and examine any package or receptacle in accordance with a warrant issued under subsection (2) at any time during the day or, if so specified in the warrant, during the night; and

(b) seize any thing that the warden or officer believes on reasonable grounds is a thing described in subsection (2).
Authority to issue warrant

(2) If a justice of the peace, on ex parte application, is satisfied by information on oath that there are reasonable grounds to believe that there is in any place, including any building or any vehicle, vessel or other conveyance, or in any package or receptacle,

(a) any thing in relation to which there are reasonable grounds to believe an offence under this Act or the regulations has been committed, or

(b) any thing that there are reasonable grounds to believe will afford evidence with respect to the commission of such an offence,

the justice of the peace may issue a warrant authorizing a park warden or enforcement officer named in the warrant to enter and search the place or to open and examine the package or receptacle, subject to any conditions specified in the warrant.

Where warrant not necessary

(3) A park warden or enforcement officer may exercise any powers under subsection (1) without a warrant if the conditions for obtaining a warrant exist but by reason of exigent circumstances it would not be practical to obtain one.

Custody of things seized

23. (1) Subject to subsections (2) and (3) and sections 28 and 29, where a park warden or enforcement officer seizes a thing under this Act or under a warrant issued pursuant to the Criminal Code,

(a) sections 489.1 and 490 of the Criminal Code apply; and

(b) the warden or officer, or any person that the warden or officer may designate, shall retain custody of the thing, subject to any order made under section 490 of the Criminal Code.

Forfeiture where ownership not ascertainable

(2) If the lawful ownership of or entitlement to a seized thing cannot be ascertained within 30 days after its seizure, the thing or any proceeds of its disposition are forfeited to Her Majesty in right of Canada, if the thing was seized by a park warden or by an enforcement officer employed in the federal public administration, or to Her Majesty in right of a province, if the thing was seized by an enforcement officer employed by a provincial, municipal or local authority or an aboriginal government.

Perishable things

(3) If a seized thing is perishable, the park warden or enforcement officer may dispose of it or destroy it, and any proceeds of its disposition shall be paid to the lawful owner or person lawfully entitled to possession of the thing, unless proceedings under this Act are commenced within 90 days after its seizure, or shall be retained by the warden or officer pending the outcome of those proceedings.

2000, c. 32, s. 23; 2002, c. 18, s. 31.4; 2003, c. 22, s. 224(E).

OFFENCES AND PUNISHMENT

Contravention of section 13

24. (1) Every person who contravenes section 13 is guilty of an offence and liable

(a) on summary conviction, to a fine not exceeding $2,000; or

(b) on conviction on indictment, to a fine not exceeding $5,000.

Contravention of subsection 32(1)

(2) Every person who contravenes subsection 32(1) is guilty of an offence and liable
(a) on summary conviction,
   (i) in the case of a corporation, to a fine not exceeding $10,000, and
   (ii) in the case of an individual, to a fine not exceeding $2,000; or

(b) on conviction on indictment,
   (i) in the case of a corporation, to a fine not exceeding $50,000, and
   (ii) in the case of an individual, to a fine not exceeding $5,000.

Contravention of regulations

(3) Every person who contravenes a provision of the regulations, or a condition of a permit, licence or other
   authorizing instrument issued under the regulations, is guilty of an offence and liable
   (a) on summary conviction, to a fine not exceeding $2,000, or
   (b) on conviction on indictment, to a fine not exceeding $5,000,

or any lesser maximum amount that may be prescribed by the regulations in respect of that provision or in
respect of that permit, licence or authorizing instrument.

Trafficking in wildlife, etc.

25. (1) Except as permitted by the regulations, no person shall traffic in any wild mammal, amphibian, reptile,
   bird, fish or invertebrate, any part or an egg or embryo thereof, any plant or part of a plant, or any other naturally
   occurring object or product of natural phenomena, taken in or from a park.

Offence

(2) Every person who contravenes subsection (1) is guilty of an offence and liable
   (a) on summary conviction, to a fine not exceeding $10,000 or to imprisonment for a term not exceeding six
       months or to both; or
   (b) on conviction on indictment, to a fine not exceeding $25,000 or to imprisonment for a term not exceeding
       one year or to both.

Definition of “traffic”

(3) In this section and section 26, “traffic” means to sell, offer for sale, expose for sale, buy, offer to buy,
   solicit, barter, exchange, give, send, transport or deliver.

Poaching and trafficking

26. (1) Except as permitted by the regulations, no person shall hunt, traffic in or possess, in a park, any
   wildlife of a species named in Part 1 of Schedule 3, or traffic in or possess such wildlife taken from a park.

Offence

(2) Every person who contravenes subsection (1) is guilty of an offence and liable
   (a) on summary conviction, to a fine not exceeding $150,000 or to imprisonment for a term not exceeding six
       months or to both; or
   (b) on conviction on indictment, to a fine not exceeding $250,000 or to imprisonment for a term not
       exceeding five years or to both.

Poaching and trafficking

(3) Except as permitted by the regulations, no person shall hunt, traffic in or possess, in a park, any wildlife
   of a species named in Part 2 of Schedule 3, or traffic in or possess such wildlife taken from a park.
Offence

(4) Every person who contravenes subsection (3) is guilty of an offence and liable
(a) on summary conviction, to a fine not exceeding $50,000 or to imprisonment for a term not exceeding six months or to both; or
(b) on conviction on indictment, to a fine not exceeding $100,000 or to imprisonment for a term not exceeding five years or to both.

Definitions

(5) The definitions in this subsection apply in this section. "hunt"
«chasser »
"hunt" means to kill, injure, seize, capture or trap, or to attempt to do so, and includes to pursue, stalk, track, search for, lie in wait for or shoot at for any of those purposes.

"possess"
«possession »
"possess", in relation to any person, includes knowingly having any thing in any place, whether or not that place belongs to or is occupied by the person, for his or her own use or benefit or for that of another person.

"wildlife"
«animal sauvage »
"wildlife", in relation to any species named in Schedule 3, includes any part of an individual of the species, and their eggs and embryos.

Amendments to Schedule 3

(6) The Governor in Council may, by regulation, amend Part 1 or 2 of Schedule 3 by adding the name of any species of wild mammal, amphibian, reptile, bird, fish or invertebrate or by deleting the name of any species.

Fines cumulative

27. (1) A fine imposed for an offence involving more than one animal, plant or object may be calculated in respect of each one as though it had been the subject of a separate information and the fine then imposed is the total of that calculation.

Continuing offences

(2) If a contravention of this Act or the regulations is committed or continued on more than one day, it constitutes a separate offence for each day on which it is committed or continued.

Subsequent offence

(3) Where a person is convicted of an offence under this Act a second or subsequent time, the amount of the fine for the subsequent offence may, notwithstanding subsection 24(1), (2) or (3), 25(2) or 26(2) or (4), be double the amount set out in that subsection.

Forfeiture

28. (1) When a person is convicted of an offence, the court may, in addition to any punishment imposed, order that any seized thing by means of or in relation to which the offence was committed, or any proceeds of its disposition, be forfeited to Her Majesty in right of Canada.

Return where no forfeiture ordered

(2) If the court does not order the forfeiture, the seized thing or the proceeds of its disposition shall be returned or paid to its lawful owner or the person lawfully entitled to it.

Retention or sale
(3) Where a fine is imposed on a person convicted of an offence, any seized thing, or any proceeds of its disposition, may be retained until the fine is paid or the thing may be sold in satisfaction of the fine and the proceeds applied, in whole or in part, in payment of the fine.

Disposition by Minister

29. Any seized thing that has been forfeited under this Act to Her Majesty in right of Canada or abandoned by its owner may be dealt with and disposed of as the Minister may direct.

Orders of court

30. (1) When a person is convicted of an offence under this Act, the court may, in addition to any punishment imposed and having regard to the nature of the offence and the circumstances surrounding its commission, make an order

(a) prohibiting the person from doing any act or engaging in any activity that may, in the opinion of the court, result in the continuation or repetition of the offence;

(b) directing the person to take any action that the court considers appropriate to remedy or avoid any harm to any resources of a park that resulted or may result from the commission of the offence;

(c) directing the person to pay the Minister an amount of money as compensation, in whole or in part, for the cost of any remedial or preventive action taken by the Minister as a result of the commission of the offence;

(d) directing the person to post a bond or pay into court an amount of money that the court considers appropriate for the purpose of ensuring compliance with any prohibition, direction or requirement mentioned in this section; or

(e) requiring the person to comply with any other conditions that the court considers appropriate.

Suspended sentence

(2) Where a person is convicted of an offence under this Act and the court suspends the passing of sentence under paragraph 731(1)(a) of the Criminal Code, the court may, in addition to any probation order made under that paragraph, make an order referred to in subsection (1).

Imposition of sentence

(3) If a person does not comply with an order made under subsection (2) or is convicted of another offence, the court may, within three years after the order was made, on the application of the prosecution, impose any sentence that could have been imposed if the passing of sentence had not been suspended.

Limitation or prescription

31. (1) Proceedings by way of summary conviction may be commenced not later than two years after the day on which the subject-matter of the proceedings becomes known to the Minister.

Minister’s certificate

(2) A document purporting to have been issued by the Minister, certifying the day on which the subject-matter of any proceedings became known to the Minister, is admissible in evidence without proof of the signature or official character of the person appearing to have signed the document and is evidence of the matters asserted in it.

MITIGATION OF ENVIRONMENTAL DAMAGE

Pollution clean-up

32. (1) Where a substance that is capable of degrading the natural environment, injuring fauna, flora or cultural resources or endangering human health is discharged or deposited in a park, any person who has charge, management or control of the substance shall take reasonable measures to prevent any degradation of the natural environment and any danger to the fauna, flora or cultural resources or to persons that may result from the discharge or deposit.
Powers of superintendent and Minister

(2) If the superintendent of a park is of the opinion that a person is not taking the measures required by subsection (1), the superintendent may direct the person to take those measures and, if the person fails to do so, the Minister may direct those measures to be taken on behalf of Her Majesty in right of Canada.

Expenses of clean-up

(3) A person who fails to comply with a direction given by a superintendent under subsection (2) is liable for the expenses reasonably incurred by Her Majesty in right of Canada in taking the measures directed, and those expenses may be recovered from that person, with costs, in proceedings brought in the name of Her Majesty in any court of competent jurisdiction.

PARK COMMUNITIES

Preparation of community plan

*33. (1) A community plan for each park community shall be tabled in each House of Parliament as soon as possible after this section comes into force, accompanied in the case of the town of Banff by any zoning by-laws made under the agreement referred to in section 35.

* [Note: Section 33 in force February 19, 2001, see SI/2001-29.]

Contents of community plan

(2) A community plan for a park community must

(a) be consistent with the management plan for the park in which the park community is located;

(b) accord with any guidelines established by the Minister for appropriate activities within the park community;

(c) provide a strategy for the management of growth within the park community; and

(d) be consistent with principles of

(i) no net negative environmental impact, and

(ii) responsible environmental stewardship and heritage conservation.

Elements to be included

(3) A community plan, or the zoning by-laws referred to in subsection (1) and tabled with it, must include

(a) a description of the lands comprising the park community;

(b) a description of the lands comprising the commercial zones of the park community; and

(c) a measure of the maximum floor area permitted within the commercial zones of the park community.

Amendment of Schedule 4

(4) Subject to section 34, the Governor in Council may, by order, add the description of a park community, the description of its commercial zones and a measure of their maximum floor area referred to in subsection (3) to columns 2, 3 and 4, respectively, of Schedule 4, opposite the name of the community set out in column 1 of that Schedule, but any description or measure so added is not subject to amendment by the Governor in Council.

Leases, licences, etc.

(5) No lease or licence of occupation may be granted, and no permit, licence or other authorization may be issued, authorizing a commercial use of lands within a commercial zone of a park community if the maximum
floor area for commercial zones specified for that park community in Schedule 4 would be exceeded as a result of that use.

**Additions to be tabled and referred**

34. (1) Before additions are made to Schedule 4 under subsection 33(4), the proposed additions shall be tabled in each House of Parliament, and on tabling they stand referred to the standing committee of each House that normally considers matters relating to parks or to any other committee that that House may designate for the purposes of this section.

**Disapproval by committee**

(2) The committee of each House may, within 30 sitting days after the proposed additions to Schedule 4 are tabled, report to the House that it disapproves the additions, in which case a motion to concur in the report shall be put to the House in accordance with its procedures.

**Disposition of motion for concurrence**

(3) The motion shall be debated for not more than three hours and disposed of in accordance with the procedures of the House.

**Additions allowed**

(4) Proposed additions to Schedule 4 may be made if 31 sitting days have elapsed after the tabling of the additions in both Houses and no motion referred to in subsection (2) has been proposed in either House.

**Additions not allowed**

(5) Proposed additions to Schedule 4 may not be made if either House passes a motion referred to in subsection (2).

**PROVISIONS FOR PARTICULAR PARKS**

**Banff local government**

35. The Governor in Council, having authorized the Minister to enter into the Town of Banff Incorporation Agreement dated December 12, 1989, being an agreement for the establishment of a local government body for the town of Banff in Banff National Park of Canada, and to entrust to that body the local government functions specified in the Agreement, may authorize the Minister to further amend the Agreement.

**Lands for ski facilities**

36. (1) No lease or licence of occupation may be granted for the purpose of commercial ski facilities on public lands in a park except within a commercial ski area described in Schedule 5.

**Designation of ski areas**

(2) The Governor in Council may, by order, add to Schedule 5 the name and a description of a commercial ski area in the vicinity of Sunshine Village in Banff National Park of Canada, but that Schedule is not otherwise subject to amendment by the Governor in Council.

**Wildlife Advisory Board**

37. (1) The Governor in Council may, by order, constitute a Wildlife Advisory Board for the traditional hunting grounds of Wood Buffalo National Park of Canada.

**Hunting, trapping and fishing permits**

(2) Notwithstanding any regulations made under section 17, permits for hunting, trapping and fishing by members of the Cree Band of Fort Chipewyan in the traditional hunting grounds of Wood Buffalo National Park of Canada shall be issued in accordance with regulations of the Wildlife Advisory Board.

**Regulations**

(3) The Wildlife Advisory Board may, subject to the approval of the Governor in Council, make regulations
respecting

(a) the issuance, amendment and revocation, by the superintendent of the Park, of permits for hunting, trapping and fishing by members of the Cree Band of Fort Chipewyan in the traditional hunting grounds of the Park;

(b) the qualifications for such permits; and

(c) the number of such permits that may be issued.

Traditional hunting grounds

(4) For the purposes of this section, the traditional hunting grounds of Wood Buffalo National Park of Canada consist of the lands shown on Plan 72702 in the Canada Lands Surveys Records at Ottawa, a copy of which is filed in the Land Titles Office at Edmonton under number 902-0325, which lands contain 8869 square kilometres (886 894 hectares).

Amendment of park descriptions

38. (1) Notwithstanding subsection 5(2) and section 13, the Governor in Council may, by order,

(a) amend or replace the description of Wood Buffalo National Park of Canada in Schedule 1 for the purpose of withdrawing from that Park any lands in the vicinity of Garden River in the province of Alberta that may be required for the establishment of an Indian reserve;

(b) amend or replace the description of Wood Buffalo National Park of Canada in Schedule 1, in accordance with an agreement between Canada and the Salt River First Nation or with any first nation formed from the division of that First Nation, for the purpose of withdrawing from that Park any lands that may be required for purposes of entitlement to land under Treaty Number Eight between Her Majesty the Queen and the Cree, Beaver, Chipewyan and other Indians;

(c) amend or replace the description of Riding Mountain National Park of Canada in Schedule 1 for the purpose of withdrawing from that Park the east half of Section 8 in Township 20, Range 19, for purposes of settling a claim of the Keeseekoowenin Band; or

(d) amend or replace the description of Wapusk National Park of Canada in Schedule 1, in accordance with the agreement between Canada and Manitoba respecting the establishment of that Park, for the purpose of withdrawing from the Park any lands that may be required for purposes of entitlement to land under

   (i) Treaty Number Five between Her Majesty the Queen and the Saulteaux and Swampy Cree Tribes of Indians at Berens River, or

   (ii) the Northern Flood Agreement concluded on December 16, 1977 between Canada, Manitoba, the Manitoba Hydro-Electric Board and the Northern Flood Committee, Inc.

Lands not required

(2) Lands withdrawn from Wood Buffalo National Park of Canada or Wapusk National Park of Canada pursuant to subsection (1) are declared to be no longer required for park purposes.

PARK RESERVES

Application of Act to reserves

39. Subject to sections 40 and 41, this Act applies to a park reserve as if it were a park.

Aboriginal resource harvesting

40. The application of this Act to a park reserve is subject to the carrying on of traditional renewable resource harvesting activities by aboriginal persons.

Agreement re Gwaii Haanas
41. (1) The Governor in Council may authorize the Minister to enter into an agreement with the Council of the Haida Nation respecting the management and operation of Gwaii Haanas National Park Reserve of Canada.

Resource harvesting and cultural activities

(2) For the purpose of implementing an agreement referred to in subsection (1), the Governor in Council may make regulations, applicable in the Gwaii Haanas National Park Reserve of Canada, respecting the continuance of traditional renewable resource harvesting activities and Haida cultural activities by people of the Haida Nation to whom subsection 35(1) of the Constitution Act, 1982 applies.

Additions to reserve

(3) Pending the resolution of the disputes outstanding between the Haida Nation and the Government of Canada respecting their rights, titles and interests in or to the Gwaii Haanas Archipelago, the Governor in Council may, by order, alter the description of Gwaii Haanas National Park Reserve of Canada in Schedule 2 for the purpose of adding to the Reserve any portion of the Gwaii Haanas Archipelago as described in Schedule VI to the National Parks Act, chapter N-14 of the Revised Statutes of Canada, 1985, as that Act read immediately before its repeal.

Non-application of section 7

(4) Section 7 does not apply in relation to the enlargement of Gwaii Haanas National Park Reserve of Canada in accordance with subsection (3).

NATIONAL HISTORIC SITES OF CANADA

Lands set apart

42. (1) The Governor in Council may set apart any land, the title to which is vested in Her Majesty in right of Canada, as a national historic site of Canada to which this Act applies in order to

(a) commemorate a historic event of national importance; or

(b) preserve a historic landmark, or any object of historic, prehistoric or scientific interest, that is of national importance.

Changes to boundaries

(2) The Governor in Council may make any changes that the Governor in Council considers appropriate in areas set apart under subsection (1).

Application of this Act

(3) The Governor in Council may, by order, extend the application of subsection 8(1), section 11, except as it relates to zoning, and sections 12 and 16 to 32 to national historic sites of Canada.

REPEALS

43. to 46. [Repeals]

CONSEQUENTIAL AMENDMENTS

47. to 56. [Amendments]

57. [Repealed, 2001, c. 34, s. 24. Repeal is deemed to have come into force on February 18, 2001.]

58. to 67. [Amendments]

CONDITIONAL AMENDMENTS
COMING INTO FORCE

Coming into force

71. (1) Subject to subsections (2) to (4), this Act, other than sections 68 to 70.1, comes into force on a day to be fixed by order of the Governor in Council.

Coming into force

(2) Paragraph 17(1)(b) and the description of Wapusk National Park of Canada in Part 4 of Schedule 1 come into force on a day to be fixed by order of the Governor in Council.

Coming into force

(3) Paragraph 17(1)(c) and the description of Gros Morne National Park of Canada in Part 10 of Schedule 1 come into force on a day to be fixed by order of the Governor in Council.

Coming into force

(4) The description of Aulavik National Park of Canada in Part 12 of Schedule 1 comes into force on a day to be fixed by order of the Governor in Council.

* [Note: Sections 68 to 70.1 in force on assent October 20, 2000; sections 1 to 16, section 17, other than paragraphs (1)(b) and (c), sections 18 to 67, Schedule 1, including the description of Aulavik National Park of Canada in Part 12, but excluding the descriptions of Wapusk National Park of Canada in Part 4 and Gros Morne National Park of Canada in Part 10 of Schedule 1, and Schedules 2 to 5 in force February 19, 2001, see SI/2001-29; paragraph 17(1)(c) and the description of Gros Morne National Park of Canada in Part 10 of Schedule 1 in force October 1, 2005, see SI/2005-63.]

SCHEDULE 1
(Sections 2, 5, 6, 7 and 38)

NATIONAL PARKS OF CANADA

PART 1 — BRITISH COLUMBIA

(1) GLACIER NATIONAL PARK OF CANADA

All latitudes and longitudes hereinafter are referred to the North American Datum of 1927; all topographic features hereinafter are according to Edition 1 of Map Compilation and Reproduction map sheet MCR 219 (Mount Revelstoke and Glacier National Parks) compiled from 1:50,000 National Topographic System Maps 82N/3, 82N/4, 82N/5, 82N/6, 82L/16 and 82M/1 and information supplied by Environment Canada Parks; said MCR map sheet produced at a scale of 1:70,000 by the Surveys and Mapping Branch, Energy, Mines and Resources Canada, 1987;

In the Province of British Columbia;

In Kootenay District;

All that parcel of land more particularly described as follows:

Commencing at the summit of Mount McNicoll at approximate latitude 51°27’ and approximate longitude 117°35’;

Thence northeasterly along the watershed boundary separating the watershed area of Alder Creek from that of Mountain Creek, to the D.L.S. rock post marked N.P.1 (at the end of the ridge); said post as shown on Plan 43227 recorded in the Canada Lands Surveys Records at Ottawa, a copy of which is filed in the Land Title Office at Nelson as D.F. 23534;
Thence on an approximate bearing of 84°18′18″, a distance of about 8494.6 metres (27,869.4 feet) along the consecutive courses of part of the boundary of Glacier National Park to D.L.S. old pattern iron post marked N.P.4 as shown on said Plan 43227 in said records; said post being at the northerly extremity of Prairie Hills;

Thence southerly, southeasterly, southerly and westerly along the sinuosities of the easterly boundary of the watershed area of Beaver River through the summits of Heather Mountain, Dauntless Mountain, Dawn Mountain and Moonraker Peak to Standard B.C. pipe post #1 at the summit of Copperstain Mountain as shown on Plan 76890 in said records, a copy of which is filed in said office as NEP 21973;

Thence generally westerly along the consecutive courses of part of the boundary of said park to Standard B.C. pipe post #43 at Busstop Ridge as shown on said Plan 76890 in said records;

Thence generally southerly along the consecutive courses of part of the boundary of said park as shown on Plans 76891, 76892, 76893, 76894, 76895 and 76896 respectively in said records, to Standard B.C. pipe post #290 at the summit of Caribou Peak as shown on Plan 76896 in said records, a copy of each of which plan is filed in said office as NEP 21974, NEP 21975, NEP 21976, NEP 21977, NEP 21978 and NEP 21979 respectively;

Thence southerly and westerly along the sinuosities of the boundary of the watershed area of Beaver River and through monuments placed on said boundary at stations 557, 534, 518, 508, 502, 580 and 593, to a Standard B.C. rock post at station 593; said stations as shown on Plan 66542 in said records, a copy of which is filed in said office as B101;

Thence continuing westerly and northerly along the sinuosities of the boundary of the watershed area of Beaver River around the head of said watershed area through the summits of Mount Duncan, Beaver Mountain, Sugarloaf Mountain and Grand Mountain to the summit of Mount Wheeler at approximate latitude 51°06′ and approximate longitude 117°23′;

Thence generally westerly along the sinuosities of the summit of the ridge running through the summits of Mount Kilpatrick, Pristine Mountain and Vestal Mountain to the summit of Purity Mountain at approximate latitude 51°06′ and approximate longitude 117°28′;

Thence continuing generally southerly, westerly and northwesterly along the sinuosities of the summit of the ridge leading to and along Van Horne Névé and through the summits of Findhorn Peak and Mount McBean to the Standard B.C. rock post at the summit of Tomatin Peak; said post as shown on Plan 74513 in said records, a copy of which is filed in said office as F383;

Thence on an approximate bearing of 252°27′00″ along the consecutive courses of part of the boundary of said park to the Standard B.C. rock post at the summit of Hope Peak as shown on said Plan 74513 in said records;

Thence westerly along the summit of the ridge running from Hope Peak to its intersection with the westerly boundary of the watershed area of Incomappleux River; said intersection situated at the summit of Charity Peak at approximate latitude 51°04′ and approximate longitude 117°39′;

Thence westerly and northerly along the sinuosities of the westerly boundary of the watershed area of Incomappleux River running through the summits of Faith Peak, Virtue Mountain, Patience Mountain and Fortitude Mountain to its intersection with the boundary separating the watershed area of Illecillewaet River from that of Incomappleux River; said intersection shown as “Summit 7631 Glacier Park Map 1923, 7641 Glacier Park Map 1934” on Plan 39230 in said records;

Thence on an approximate bearing of 353°24′27″ along the consecutive courses of part of the boundary of said park to the point shown as “Summit 7434 Donald Sheet, 7424 Glacier Park Map 1923” on said Plan 39230 in said records;

Thence generally northerly and northwesterly along the sinuosities of the easterly boundary of the watershed area of Tangier River running through the summits of Fidelity Mountain and Mount Carson to the summit of Sorcerer Mountain at approximate latitude 51°27′ and approximate longitude 117°55′;
Thence generally northeasterly, southeasterly and easterly along the sinuosities of the westerly and northerly boundaries of the watershed area of Mountain Creek running through the summit of Nordic Mountain to the point of commencement;

Said parcel containing about 1349 square kilometres.

(2) YOHO NATIONAL PARK OF CANADA

All that parcel of land in the Province of British Columbia more particularly described as follows:

Commencing at the summit of Neptuak Mountain in approximate latitude 51°18’29″ and approximate longitude 116°15’25″, said summit being on the easterly boundary of the Province of British Columbia;

Thence westerly in a straight line across the valley of Tokumm Creek to the summit of a peak in approximate latitude 51°18’02″ and approximate longitude 116°17’22″;

Thence southwesterly in a straight line across the valley of Misko Creek to the summit of a peak in approximate latitude 51°16’36″ and approximate longitude 116°20’43″;

Thence southerly in a straight line across the valley of Ottertail River to the summit of a peak in approximate latitude 51°14’37″ and approximate longitude 116°21’30″;

Thence southerly in a straight line to the summit of a peak in approximate latitude 51°12’49″ and approximate longitude 116°21’36″;

Thence southerly in a straight line to the summit of a peak on the height of land which divides the watershed area of Kicking Horse River from that of Vermilion River, the last aforesaid summit being in approximate latitude 51°12’10″ and approximate longitude 116°21’27″ as said summits and lines are shown on the Lake Louise and Mount Goodserie map sheets, numbers 82N/8W and 82N/1W respectively, of the National Topographical System, copies of which are of record numbers 51112 and 51113 respectively in the Canada Lands Surveys Records at Ottawa;

Thence in a general southwesterly direction and following the crest of the spur ridge which divides the watershed of Moose Creek from that of Ice River throughout all its sinuosities to the summit of a peak marked 9687;

Thence in a straight line to a point on the right bank of Ice River opposite the point at which the most southerly tributary shown on said map enters Ice River from the east side;

Thence following said right bank of Ice River downstream to its confluence with Beaverfoot River;

Thence following the right bank of said Beaverfoot River downstream to its intersection with the north boundary of Township twenty-five, Range nineteen West of the fifth Meridian or said boundary produced easterly;

Thence west along said north boundary and the production thereof to the southeast corner of Section four in Township twenty-six, Range nineteen;

Thence north along the east boundary of said Section four to its intersection with the left bank of Kicking Horse River;

Thence in a general northwesterly direction and following throughout the left bank of Kicking Horse River to its intersection with the east boundary of Township twenty-six, Range twenty, West of the fifth Meridian;

Thence north along said east boundary of Township twenty-six to its intersection with the summit of a well defined ridge dividing the watershed of Porcupine Creek from that part of Kicking Horse River which lies west of
Thence in a general northerly direction along the summit of the height of land which forms the westerly boundary of the watershed area of that part of Kicking Horse River which lies upstream from the east boundary of said Township twenty-six, and following all the sinuosities of said height of land to its intersection with the summit of Mount Rhondda which mountain is also a point of the summit of the Rocky Mountains forming the easterly boundary of the Province of British Columbia;

Thence in a general southeasterly direction and following the said summit of the Rocky Mountains throughout all its sinuosities to the point of commencement;

Said parcel containing an area of approximately 131 312.0685 hectares.

(3) MOUNT REVELSTOKE NATIONAL PARK OF CANADA

In British Columbia;

In Kootenay District;

In the former Railway Belt;

That parcel of land more particularly described as follows:

Firstly,

In accordance with a plan recorded in the Canada Lands Surveys Records at Ottawa under number 43402, a copy of which has been filed in the Land Title Office at Kamloops under number D.F. 23953:

Commencing at the northwest corner of Legal Subdivision 8, Section 34, Township 23, Range 2, West of the 6th Meridian;

Thence easterly following the northerly boundaries of the south halves of Sections 34, 35 and 36 in said Township 23 and Section 31, Township 23, Range 1, West of the 6th Meridian, to the northeast corner of the south half of said Section 31;

Thence northerly following the east boundaries of said Section 31 and Section 6, in Township 24, in said Range 1, to the northwest corner of Section 5, in said Township 24;

Thence easterly following the north boundaries of Sections 5, 4 and 3 in said Township 24, to the northeast corner of said Section 3;

Thence northerly following the west boundary of Section 11, in said Township 24 to the northwest corner of said Section 11;

Thence easterly following the north boundary of said Section 11 to the northeast corner of said Section;

Secondly,

In accordance with Plan of Lot 3643, recorded under number 63656 in said Records, being a copy of the Official Plan confirmed under Section 63, Land Act. at Victoria, B.C., November 30, 1977 and numbered as F.B. 18077:

Continuing from the northeast corner of said Section 11;

Thence easterly following the northerly boundaries of Legal Subdivisions 13, 14, 15 and 16 of Section 12 in said Township 24, to the northeast corner of said Section 12;

Thence easterly along said north boundary of Legal Subdivision 16 and its easterly production to its
intersection with the right bank of Clachnacudainn Creek;

Thirdly,

In accordance with said Plan 43402 in said Records:

Continuing from said intersection;

Thence southerly following the right bank of said Clachnacudainn Creek to the right bank of Illecillewaet River;

Thence northeasterly following the right bank of Illecillewaet River to the right bank of Woolsey Creek, formerly Silver Creek;

Thence northwesterly following the right bank of Woolsey Creek to the right bank of Maunder Creek;

Thence westerly and southwesterly following the right bank of Maunder Creek and its southwesterly production to the easterly limit of the watershed of La Forme Creek;

Thence southerly and westerly along the easterly and southerly limits of the watershed of La Forme Creek to and along the southerly limit of the watershed of Martha Creek to the north boundary of Section 13, Township 25, Range 2, West of the 6th Meridian;

Thence westerly following the north boundary of said Section 13 to its northwest corner;

Thence southerly following the west boundaries of Sections 13, 12 and 1 in said Township 25 and Section 36, 25 and 24, Township 24, in said Range 2 to the southwest corner of said Section 24;

Thence westerly following the north boundary of Section 14 in said Township 24 to the northwest corner of the northeast quarter of said Section 14;

Thence southerly following the west boundary of said northeast quarter Section to the southwest corner of said northeast quarter of said Section 14;

Fourthly,

In accordance with Plans 63417 and 67619 in said Records:

Continuing from the southwest corner of said northeast quarter of Section 14;

Thence on a bearing S45°13′10″W a distance of 1,149.83 metres to the southwest corner of said Section 14;

Thence on a bearing S45°13′50″W a distance of 1,148.94 metres to the southeast corner of Legal Subdivision 11 of Section 10, in said Township 24;

Thence on a bearing S45°23′30″W a distance of 575.98 metres to the northwest corner of Legal Subdivision 3 of said Section 10;

Fifthly,

In accordance with Plan 29235 in said records, being a copy of the plan of the southeast quarter Township 24, Range 2, West of the 6th Meridian:

Continuing from the northwest corner of said Legal Subdivision 3 of Section 10;

Thence southerly following the west boundary of said Legal Subdivision 3, and the west boundary of Legal Subdivision 14 of Section 3, to a point on said west boundary of Legal Subdivision 14 being the southeast
corner of the north half of Legal Subdivision 13 of Section 3;

Thence on a bearing of 270°01′20″ following the southerly boundary of said north half of Legal Subdivision 13, for a distance of about 254.69 metres to the northeast corner of Parcel A as shown on Plan 63325 in said records, a copy of which is deposited under number 10887 in said office;

Thence on a bearing of 200°58′45″ following the easterly boundary of said Parcel A, for a distance of about 51.55 metres to a point of deflection on said easterly boundary;

Thence on a bearing of 192°17′15″ following the easterly boundary of said Parcel A, for a distance of about 133.06 metres to a point of deflection on said easterly boundary;

Thence on a bearing of 203°48′30″ following the easterly boundary of said Parcel A, for a distance of about 137.24 metres to a point of deflection on said easterly boundary;

Thence on a bearing of 183°40′25″ following the easterly boundary of said Parcel A, for a distance of about 101.03 metres to a point of deflection on said easterly boundary;

Thence on a bearing of 179°50′40″ following the easterly boundary of said Parcel A, for a distance of about 101.40 metres to the southeast corner of said Parcel A, being a point on the southerly boundary of the north half of the south half of Legal Subdivision 12 of Section 3 as shown on said Plan 63325;

Thence on a bearing of 90°09′55″ following said southerly boundary of the north half of the south half of Legal Subdivision 12, for a distance of about 151.63 metres to a point on said southerly boundary being the northwest corner of the southeast quarter of said Legal Subdivision 12;

Thence on a bearing of 181°13′30″ following the westerly boundary of said south half of the southeast quarter of Legal Subdivision 12, for a distance of about 101.47 metres to the southwest corner of said south half of the southeast quarter of Legal Subdivision 12, as shown on Plan 41266 in said records, a copy of which is deposited under number DF20351 in said office;

Thence on a bearing of 89°58′00″ following the southerly boundary of said part of the southwest quarter of Section 3, for a distance of about 162.31 metres to a point on said southerly boundary as shown on Plan 43402 in said records, a copy of which is deposited under number DF23953 in said office;

Thence on a bearing of 177°40′00″, for a distance of about 604.02 metres to the southeasterly corner of Legal Subdivision 4 of Section 3, as shown on said Plan 43402;

Thence on a bearing of 270°04′00″ following the southerly boundary of Legal Subdivision 4, for a distance of about 151.24 metres to the northeasterly corner of Parcel B as shown on Plan 63326 in said records, a copy of which is deposited under number 10888 in said office;

Thence on a bearing of 169°30′10″ following the easterly boundary of said Parcel B, for a distance of about 128.02 metres, to a point of deflection in said easterly boundary;

Thence on a bearing of 111°20′00″ following the easterly boundary of said Parcel B, for a distance of about 124.97 metres to a point of deflection in said easterly boundary;
Thence on a bearing of 190°55'20" following the easterly boundary of said Parcel B, for a distance of about 30.48 metres to the southeasterly corner of said Parcel B, said point being on a curve of radius 695.25 metres as shown on said Plan 63326;

Thence southeasterly following said curve of radius 695.25 metres, to the right, a distance along the curve of about 100.88 metres to a point on the curve as shown on said Plan 63326;

Thence continuing southeasterly following said curve of radius 695.25 metres, to the right, a distance along the curve of about 128.29 metres to the tangential end of curve as shown on Plan 43405 in said records;

Thence on a bearing of 133°36'30", for a distance of about 397.85 metres as shown on said plan 43405, to the most northerly corner of Lot 100, as shown on Plan 765 deposited in said office, a copy of which is recorded as Plan 43208 in said records;

Thence on a bearing of 223°36'30", following the northwesterly boundary of said Lot 100, for a distance of about 70.71 metres to the most westerly corner of said Lot 100, as shown on said Plan 43405;

Thence on a bearing of 133°36'30", following the southwesterly boundary of said Lot 100 and the southwesterly boundary of Lot 99 on said Plan 43208, for a distance of about 99.06 metres to a point on said southwesterly boundary of Lot 99 being the most northerly corner of Lot 102 on said Plan 43208, as shown on said Plan 43405;

Thence on a bearing of 223°36'30", following the northwesterly boundary of said Lot 102, for a distance of about 11.01 metres to the most northerly corner of Parcel A as shown on Plan 67155 in said records, a copy of which is deposited as Plan P24400 in said office;

Thence on a bearing of 132°01'50", following the northeasterly boundary of said Parcel A to its intersection with the westerly production of the northerly boundaries of Lots 86 and 87 on said Plan 43208;

Thence easterly on the westerly production of the northerly boundaries of said Lots 86 and 87 to the most westerly corner of said Lot 86;

Thence southeasterly following the southwesterly boundaries of said Lots 86 and 87 as shown on said Plan 43208 to the most southerly corner of said Lot 87;

Thence northeasterly following the southeasterly boundary of said Lot 87 to the most easterly corner of Lot 87, said corner being on the northerly boundary of Lot 88 on said Plan 43208;

Thence on a bearing of 99°30'00" following the northerly boundary of said Lot 88, for a distance of about 9.94 metres to the northeasterly corner of said Lot 88, being a point on the easterly boundary of Legal Subdivision 7 of Section 34, Township 23, Range 2, West of the 6th Meridian as shown on Plan 43015 in said records;

Thence on a bearing of 0°35'00" following the easterly boundary of said Legal Subdivision 7, for a distance of about 136.12 metres, as shown on said Plan 43015, to the northeast corner of said Legal Subdivision 7, being the point of commencement.

(4) KOOTENAY NATIONAL PARK OF CANADA

All that parcel of land in the Province of British Columbia more particularly described as follows:

Commencing at the summit of Neptuak Mountain in approximate latitude 51°18'29" and approximate longitude 116°15'25", said summit being on the easterly boundary of the Province of British Columbia;

Thence southerly along the said Interprovincial boundary to monument numbered 14-C;
Thence in a general south-southeasterly direction along the height of land which divides the watershed area of Simpson River and Verdant Creek to the summit of Monarch Mountain;

Thence in a general southerly direction and following the sinuosities of the above described height of land to an outlying peak of Monarch Mountain distant approximately 1.609 kilometres from the summit of said Mountain;

Thence westerly along a sharply defined ridge an estimated distance of 502.92 metres to a stone cairn;

Thence in a straight line across the valley of Verdant Creek a distance of 2187.762 metres more or less on a bearing of 199°06′ to a stone cairn;

Thence in a general southwesterly direction along the line of local watershed to the summit of Mount Shanks on Hawk Ridge;

Thence in a general southeasterly direction along the crest of Hawk Ridge to a stone cairn;

Thence in a straight line a distance of 1214.793 metres more or less on a bearing of 191°20′ to a stone cairn on the right bank of Simpson River;

Thence in a straight line a distance of 1575.407 metres more or less on a bearing of 160°35′ to a stone cairn;

Thence southerly along a sharply defined line of watershed division to a camera station marked 8032 on the map of Kootenay Park, which camera station is on the point of a long ridge leading northwesterly from Octopus Mountain;

Thence in a straight line across the valley of Lachine Creek on a bearing of 229°34′ to a stone cairn, said cairn being about 891.174 metres west of Lachine Creek measured along said straight line;

Thence in a general southwesterly direction along a well-defined line of watershed division to intersect the crest of Mitchell Range;

Thence in a general southerly direction along the crest of Mitchell Range to its intersection with the production of a straight line as the same is surveyed part way across the valley of Daer Creek, said straight line being marked on the ground by three stone cairns and having a southerly bearing of 150°14′;

Thence in a straight line across the valley of Daer Creek on said bearing of 150°14′ and on said line produced to its intersection with the crest of Mitchell Range;

Thence in a general south-southeasterly direction along the crest of Mitchell Range and following always that ridge of said Range from which there is direct westerly drainage into Kootenay River to a point on the north boundary of Group Lot 12064, said point being distant 629.857 metres more or less west from the northeast corner of said Lot;

Thence easterly along the north boundary of said Lot to the northeast corner thereof;

Thence southerly along the east boundaries of Group Lots 12064, 12062 and 12061 to the southeast corner of said Lot 12061;

Thence westerly and following the south boundary of said Lot 12061 and said south boundary produced to the left, or easterly, bank of Kootenay River;

Thence southerly along the easterly bank of Kootenay River to its intersection with the north boundary of the south half of Group Lot 11837 produced easterly across Kootenay River;

Thence westerly in a straight line to the easterly extremity of the north boundary of the south half of Group
Lot 11837;

Thence continuing westerly in the same straight line and following the north boundaries of the south halves of Group Lots 11837 and 11838 respectively to the west boundary of said Lot 11838;

Thence southerly along said west boundary of Group Lot 11838 319.877 metres more or less to an iron bar in an earth mound;

Thence in a general westerly direction along a well-defined line of local watershed to a peak on the crest of Stanford Range, said peak being marked 8609 on the map of Kootenay Park;

Thence southwesterly across the summit of Kimpton Pass along the line of watershed between Kimpton and Shuswap Creek to a camera station marked 8335 on the map of Kootenay Park;

Thence southerly and westerly along the line of watershed between Stoddart and Shuswap Creeks to a wooden post in an earth mound planted at the intersection of said line of watershed with the north boundary of District Lot numbered 4596;

Thence west along the north boundary of said Lot 4596 to a stone cairn built at its intersection with the east boundary of Group Lot 9248, said point of intersection being distant 284.673 metres more or less north from the southeast corner of said Lot 9248;

Thence northerly along the east boundary of said Lot 9248 to the northeast corner of said Lot;

Thence westerly along the north boundary of said Lot 9248 to the southeast corner of Group Lot 8996;

Thence northerly along the east boundary of said Lot 8996 to the northeast corner of said Lot;

Thence westerly along the north boundary of said Lot 8996 to the northwest corner of said Lot;

Thence westerly along the north boundary of Group Lot 8208 to the southeast corner of Group Lot 8207;

Thence northerly along the east boundary of said Lot 8207 to the southwest corner of Group Lot 10114;

Thence easterly along the south boundary of said Lot 10114 to the southeast corner of said Lot;

Thence northerly along the east boundary of said Lot 10114 to the northwest corner of said Lot, which point is also the southeast corner of Group Lot 9010;

Thence northerly along the east boundaries of Group Lots 9010 and 9560 to the northeast corner of said Lot 9560;

Thence westerly along the north boundary of said Lot 9560 to the northwest corner of said Lot, which point is also a point on the south boundary of Group Lot 9011;

Thence continuing westerly along the south boundary of said Lot 9011 to the southwest corner of said Lot;

Thence northerly along the west boundary of said Lot 9011 and said west boundary produced to its intersection with the south boundary of Group Lot 10112;

Thence easterly along the south boundary of said Lot 10112 to the southeast corner of said Lot;

Thence northerly along the east boundary of said Lot 10112 to the southwest corner of Group Lot 9577;

Thence easterly along the south boundary of said Lot 9577 to the southeast corner of said Lot;
Thence northerly along the east boundary of said Lot 9577 to the northeast corner of said Lot, which corner is a point on the south boundary of Group Lot 10720;

Thence easterly along the south boundary of said Lot 10720 to the southeast corner of said Lot;

Thence northerly along the east boundary of said Lot 10720 to the northeast corner of said Lot;

Thence westerly along the north boundary of said Lot 10720 to the northwest corner of said Lot, which corner is a point on the east boundary of Group Lot 9042;

Thence northerly along the east boundaries of Group Lots 9042 and 9043 to the northeast corner of said Lot 9043;

Thence westerly along the north boundary of said Lots 9043 to a point which is the southeast corner of Group Lot 9044;

Thence northerly 640.921 metres more or less to the northerly extremity of the most easterly boundary of said Lot 9044;

Thence westerly along the boundary of said Lot 9044 to the interior corner of said Lot;

Thence northerly along the boundary of said Lot 9044 to the easterly extremity of the most northerly boundary of said Lot 9044;

Thence in a general northeasterly direction and following the line of local watershed to a camera station marked 8170 on the map of Kootenay Park;

Thence in a general east-northeasterly direction and following the height of land which divides the watershed areas of Sinclair and Kindersley Creeks to a camera station marked 8807 on the map of Kootenay Park, which camera station is a point on the crest of the Brisco Range;

Thence in a general north-northwesterly direction and following the crest of said Brisco Range to a camera station marked 8640 on the map of Kootenay Park;

Thence northerly and easterly along a well-defined ridge forming the southerly confine of the Boyce Creek watershed area to the point of intersection of said ridge with the southerly production of a straight line having a bearing of 218°49′ more or less from a stone cairn erected at a point on the west boundary of Group Lot 12053 distant 743.094 metres more or less south from the northwest corner of said Lot to a stone cairn distant 1102.22 metres more or less on said bearing from the first above mentioned cairn;

Thence in a straight line to said stone cairn on the west boundary of said Lot 12053;

Thence northerly along the west boundaries of Group Lots 12053 and 11165 to a point on the west boundary of said Lot 11165 which is also the southwest corner of Group 11187;

Thence easterly along the south boundary of said Lot 11187 to the southeast corner of said Lot;

Thence northerly along the east boundaries of Group Lots 11187, 11659 and 11390 to the northeast corner of said Lot 11390, which said corner is a point on the south boundary of Group Lot 11389;

Thence easterly along the south boundary of said Lot 11389 to the southeast corner of said Lot;

Thence northerly along the east boundary of said Lot 11389 to the northeast corner of said Lot;

Thence in a straight line on an approximate bearing of 33°01′ to a stone cairn on the north side of Whitetail Creek 746.132 metres more or less from said northeast corner of Lot 11389;
Thence continuing in the same straight line to intersect the crest of the height of land between the right and left forks of Whitetail Creek;

Thence in a general northeasterly direction and following along the crest of the above described height of land to the summit of Mount Verendrye which is a peak of Vermilion Range;

Thence in a general northwesterly direction along the crest of the Vermilion Range to the summit of a peak on the height of land which divides the watershed area of Kicking Horse River from that of Vermilion River, at approximate latitude 51°12′10″ and longitude 116°21′27″, the last aforementioned summit, and all summits hereinafter, being on the southeasterly boundary of Yoho National Park and being shown on map sheets 82N/8W and 82N/1W of the National Topographical System, copies of which are of record numbers 51112 and 51113 respectively in the Canada Lands Surveys Records at Ottawa;

Thence northerly in a straight line to the summit of a peak at approximate latitude 51°12′49″ and longitude 116°21′36″;

Thence northerly in a straight line to the summit of a peak at approximate latitude 51°14′37″ and longitude 116°21′30″;

Thence northerly in a straight line across the Valley of Ottertail River to the summit of a peak at an approximate latitude 51°16′36″ and longitude 116°20′43″;

Thence northeasterly in a straight line across the Valley of Misko Creek to the summit of a peak at an approximate latitude 51°18′02″ and longitude 116°17′22″;

Thence easterly in a straight line across the Valley of Tokumm Creek to the summit of Neptuak Mountain in approximate latitude 51°18′29″ and longitude 116°15′25″, the last aforesaid summit being the point of commencement.

The said parcel comprising an area of 140,636 hectares.

PART 2 — ALBERTA

(1) BANFF NATIONAL PARK OF CANADA

All and singular that certain parcel or tract of land situate, lying and being in the Province of Alberta and being more particularly described as follows:

Commencing at the point of junction of the Interprovincial Boundary between Alberta and British Columbia and the height of land that divides the watershed area of Spray River from that of Kananaskis River which said point occurs on Mount Sir Douglas in latitude 50°43′, and longitude 115°20′;

Thence in a general northerly direction and following throughout the said height of land to Mount Birdwood;

Thence continuing northerly along the height of land between the valley of Spray River and the valley of Smuts Creek through Mount Smuts and Mount Shark to a stone cairn on the summit of an isolated hill in latitude 50°51′30″, and longitude 115°25″, as said cairn is shown on Plan 42979 in the Canada Lands Surveys Records at Ottawa;

Thence on an astronomic bearing of 332°14′ to a point on the natural contour at elevation of 1707 metres above sea level, as said contour is shown on said plan;

Thence southwesterly following the said natural contour a distance of 2408 metres, more or less, to its intersection with the right bank of the Spray River;

Thence across Spray River and northerly following the said natural contour a distance 1100 metres, more or
less, to its intersection with the right bank of Bryant Creek;

Thence across Bryant Creek and northeasterly following the said natural contour a distance of 4900 metres approximately, to its intersection with a line having a bearing designated 9°48′ and passing through a standards survey post numbered 3 and stone mound, as said line and post are shown on said plan;

Thence northerly along said line a distance of 2988.17 metres to a standard survey post numbered 4, cairn and park standard, situated northerly from the right bank of Spray River, as the last aforesaid post is shown on said plan;

Thence easterly and southerly, at a constant distance from and following the sinuosities of the right bank of Spray River, a distance of 1400 metres approximately, to a point on a line having a bearing designated 279°14′ and passing through a cairn and park standard on the left canyon bank of Spray River, as the last aforesaid line cairn and standard are shown on said plan;

Thence easterly along the last aforesaid line to the most easterly cairn thereon, located on the crest of a sharply defined ridge of Mount Nestor, as the last aforesaid cairn is shown on said plan;

Thence northerly and following said crest to Mount Nestor;

Thence northerly and northwesterly following the crest of Goat Range to its intersection with a line having a bearing designated 197°24.5′ from the southernmost summit of Mount Rundle in latitude 51°04′50″ and longitude 115°25′15″, as the last aforesaid line is shown on Plan 42980 in said records;

Thence northerly along the last aforesaid line a distance of 6366.4 metres, more or less, to said southernmost summit which is on the height of land that divides the watershed area of Spray River from that of Bow River;

Thence northwesterly following the height of land that divides the watershed area of Spray River from that of Bow River to the summit of Mount Rundle in latitude 51°07′20″ and longitude 115°28″;

Thence toward the summit of Mount Charles Stewart on a line having a bearing designated 69°48.8′ to a standard post and stone mound on the south boundary of the northeast quarter of section 14 in township 25, range 11, west of the 5th Meridian, as the last aforesaid line and post are shown on Plan 38147 in said records;

Thence easterly along the south boundary of said quarter and the south boundaries of the northwest and northeast quarters of section 13, in said township, to a point on the east boundary of said section 13;

Thence northerly along said east boundary to a standard post, pits and mound on the last aforesaid line and 7.93 metres, more or less, south of the northeast corner of said section 13;

Thence northeasterly along the last aforesaid line to the summit of Mount Charles Stewart;

Thence northeasterly following the height of land which bounds the watershed area of Carrot Creek to the point at which it becomes the height of land that divides the watershed area of Lake Minnewanka from that of the South Fork of Ghost River;

Thence continuing along the last aforesaid height of land through Orient Point to a cairn in latitude 51°15′53″ and longitude 115°09′50″ as the last aforesaid cairn is shown on Plan 39223 in said records;

Thence northwesterly on a line having a bearing designated 347°37.8′ to Devil’s Fang Mountain on the height of land that forms part of the southerly limit of the watershed area of Ghost River, as the last aforesaid line is shown on the last aforesaid plan;

Thence westerly and northerly along the last aforesaid height of land through all its sinuosities to Mount Oliver;
Thence northerly along the height of land that forms the easterly limit of the watershed area of Dormer River to its intersection with a line having a bearing designated 135°00.7′ from a cairn and park standard on the apparent summit of Dormer Mountain, as the last aforesaid line, cairn and standard are shown on Plan 39225 in said records;

Thence northwesterly along the last aforesaid line a distance of 6612.94 metres, more or less, to the last aforesaid cairn on said Dormer Mountain;

Thence in a straight line to an auxiliary cairn near the summit of Dormer Mountain, as said auxiliary cairn is shown on Plan 39226 in said records;

Thence on a line having a bearing designated 326°05′ from said auxiliary cairn, to a cairn on Barrier Mountain, as the last aforesaid line and cairn are shown on the last aforesaid plan;

Thence northwesterly along a well defined height of land to a cairn and park standard on the summit of Warden Rock, as the last aforesaid cairn and standard are shown on Plan 39227 in said records;

Thence along a line having a bearing designated as 289°13.1′ a distance of 2728.7 metres, more or less, to a cairn and park standard, as the last aforesaid cairn and standard are shown on the last aforesaid plan;

Thence continuing westerly along the last aforesaid line to the summit of a mountain in latitude 51°42.5′ and longitude 115°44.9′, said line being shown on said Plan 39227;

Thence northwesterly following the height of land that forms the easterly and northerly limit of the watershed of Tyrrell Creek, the northerly limit of the watershed of Divide Creek and the easterly limit of the watershed of Peters Creek to the summit of Condor Peak;

Thence northerly along a well defined ridge to the junction of a creek with Peters Creek in latitude 51°49′ and longitude 115°57.5′;

Thence northerly along the right bank of Peters Creek to its confluence with Clearwater River;

Thence crossing Clearwater River to its left bank and following the said bank upstream to its intersection with a line having a bearing designated 329°23′ and passing through a cairn and park standard in latitude 51°50.48.2″ and longitude 115°59.00.8″, as the last aforesaid line, cairn and standard are shown on Plan 39228 in said records;

Thence northwesterly along the last aforesaid line to the last aforesaid cairn;

Thence continuing approximately on the last aforesaid bearing along a line to a camera station numbered 265A, said station being a point on the height of land forming the easterly limit of the watershed area of Indianhead Creek, as said station and the last aforesaid line are shown on the last aforesaid plan;

Thence northwesterly along the last aforesaid height of land to its junction with the height of land between the watershed area of Clearwater River and the watershed areas of Ram and Siffleur Rivers;

Thence southwesterly along the last aforesaid height of land to the summit of Mount Kentigern;

Thence northwesterly along a sharply defined ridge between Siffleur River and one of its tributaries through a camera station numbered 300 to its intersection with a line having a bearing designated 261°18.7′ and passing through a cairn and park standard on the east side of Siffleur River, as the last aforesaid station, line, cairn and standard are shown on Plan 39229 in said records;

Thence westerly along the last aforesaid line to a camera station numbered 305, as the last aforesaid station is shown on the last aforesaid plan;
Thence westerly following a high rocky height of land through camera stations 306, 303 and 304 to camera station 308, the last aforesaid station being on the height of land forming the easterly limit of the watershed area of Mistaya River;

Thence northwesterly along the last aforesaid height of land to camera station 425 situate at the junction to the last aforesaid height of land with the height of land enclosing the watershed area of Murchison Creek;

Thence following the last aforesaid height of land through camera stations 426, 422, 421 and 420 and along the crest of a precipitous rock escarpment to a point on a line having a bearing designated 334°57′30″ and passing through a cairn and park standard in latitude 51°59′21.8″ and longitude 116°39′35.4″, as the last aforesaid line, cairn and standard are shown on Plan 39224 in said records, and as said stations 306, 303, 304, 308, 425, 426, 422, 421 and 420 are shown on a map of Banff Park certified by A.O. Gorman for B.W. Waugh, Surveyor General of Dominion Lands, on February 9, 1949, and of record number 40427 in said records;

Thence along said line having a bearing of 334°57′30″ a distance of 2878.5 metres, more or less, to a cairn and park standard on the height of land forming the easterly limit of the watershed of Owen Creek, as the last aforesaid line, cairn and standard are shown on the last aforesaid plan;

Thence northerly following the last aforesaid height of land to its junction with the height of land forming the easterly limit of the watershed of North Saskatchewan River;

Thence northwesterly along the last aforesaid height of land to its junction with the heights of land between the headwaters of the Brazeau River and Cline River and between the Cline River and North Saskatchewan River, said junction being in the vicinity of Cataract Pass;

Thence southwesterly and northwesterly and continuing along the height of land forming the easterly limit of the watershed area of the North Saskatchewan River to a stone cairn erected by H.F. Lambert, Dominion Land Surveyor, in 1935, at the summit of Nigel Pass, as the last aforesaid cairn is shown on Plan 39221 in said records;

Thence westerly, southeasterly and southwesterly along the height of land between the watershed areas of North Saskatchewan and Athabasca Rivers to a cairn and park standard marking the northeasterly extremity of a line having a bearing designated as 58°42.2′, as the last aforesaid line, cairn and standard are shown on Plan 39222 in said records, the last aforesaid cairn and standard being on a well defined ridge overlooking Sunwapta Pass;

Thence southwesterly along the last aforesaid line a distance of 1130.7 metres, more or less, to a cairn and park standard, as the last aforesaid cairn and standard are shown on the last aforesaid plan;

Thence southwesterly along a line having a bearing designated as 218°48′ a distance of 654.5 metres, more or less, to a cairn and park standard, as the last aforesaid line, cairn and standard are shown on the last aforesaid plan;

Thence southwesterly along a line having a bearing designated as 235°06′ a distance of 813.2 metres, more or less, to a cairn and park standard, as the last aforesaid line, cairn and standard are shown on the last aforesaid Plan 39222, the last aforesaid cairn and standard being on a well defined ridge of said height of land between the watershed areas of North Saskatchewan and Athabasca Rivers on the westerly side of Sunwapta Pass;

Thence continuing southwesterly and northwesterly along the last aforesaid height of land to the Snow Dome being a point on the Interprovincial Boundary between Alberta and British Columbia;

Thence southerly following the Interprovincial Boundary to the point of commencement;

Said parcel containing an area of approximately 6641 square kilometres, the boundaries herein described being shown on said map 40427 in said records.
(2) WATERTON LAKES NATIONAL PARK OF CANADA

In the Province of Alberta, all those parcels of land more particularly described under Firstly and Secondly, as follows:

Firstly, commencing at the northeast corner of Blood Indian Reserve 148A (formerly Blood Indian Reserve Timber Limit A) according to plan no. 4513 in the Canada Lands Surveys Records at Ottawa, a copy of which has been deposited in the Land Titles Office for the South Alberta Land Registration District at Calgary under no. 1714 H.I., said corner being at the intersection of the northerly boundary of section 28, township 1, range 28, west of the 4th Meridian and the left bank of Belly River according to said plan;

Thence easterly along the northerly boundaries of sections 28 and 27, including the road allowance, in said township to the northeast corner of said section 27;

Thence southerly along the easterly boundaries of sections 27, 22, 15, 10 and 3, including the road allowances, in said township to the International boundary between Canada and the United States;

Thence westerly along said International boundary to its intersection with the Interprovincial boundary between Alberta and British Columbia;

Thence northerly along said Interprovincial boundary to its intersection with the height of land known as Avion Ridge which separates the waters flowing into Bauerman Brook from the waters flowing into Castle River according to the map of Waterton Lakes Park filed in said office under no. 7673 Book E.X. Folio 203, a copy of which has been recorded in said Records under no. 40398;

Thence generally easterly along said Avion Ridge, on which are located Newman Peak and Mount Glendowan, to its intersection with Cloudy Ridge according to said map;

Thence generally northeasterly along said Cloudy Ridge to the headwaters of an unnamed small creek that flows into Yarrow Creek immediately west of Yarrow Cabin according to said map;

Thence generally northerly along the right banks of said creeks to the easterly boundary of section 16, township 3, range 30, west of the 4th Meridian;

Thence southerly along the easterly boundary of said section 16 and across the road allowance to the northeast corner of section 9, in said township 3;

Thence easterly across the road allowance and along the northerly boundary of section 10, in said township 3, to the northeast corner of said section 10;

Thence southerly along the easterly boundary of said section 10 to its southeast corner;

Thence easterly across the road allowance and along the northerly boundary of section 2 in said township 3 to the northeast corner of the northwest quarter of said section 2;

Thence southerly along the easterly boundary of the west half of said section 2 to the southeast corner of said west half;

Thence on a bearing of 180°07′, a distance of 20.117 metres to a standard post on the northerly boundary of section 34, township 2, in said range 30;

Thence easterly along the northerly boundaries of sections 34, 35 and 36, including the road allowances, to the northeast corner of said section 36, in said township 2;

Thence southerly along the easterly boundaries of sections 36, 25 and 24, including the road allowance, to the southeast corner of section 24, in said township 2;

Thence easterly along the northerly boundaries of sections 18, 17 and 16, including the road allowances, to
the northeast corner of section 16, township 2, range 29;

Thence southerly along the easterly boundaries of sections 16, 9 and 4, including the road allowance, to the southeast corner of section 4, township 2, range 29;

Thence southerly across the road allowance to the northeast corner of section 33, township 1, in said range 29;

Thence easterly across the road allowance and along the northerly boundary of section 34, in said township 1, to its northeast corner;

Thence southerly along the easterly boundary of said section 34 to its southeast corner;

Thence easterly along the northerly boundaries of sections 26 and 25, including the road allowances, to the northeast corner of said section 25 in said township 1;

Thence easterly across the road allowance and along the northerly boundary of section 30, township 1, range 28, to the northwest corner of said Indian Reserve;

Thence southerly along the westerly boundary of said Indian Reserve to its southeast corner,

Thence easterly along the southerly boundary of said Indian Reserve to its southeast corner, said corner being at the intersection of said limit and the left bank of said Belly River according to said plan no. 4513;

Thence generally northerly along said left bank, according to said plan no. 4513 in said Records and to plan 55466 in said Records, a copy of which is registered as 6508 J.K. in said Office, to the point of commencement; as said parcel is shown on plan 50467 in said Records, a copy of which has been deposited under no. 171 J.K. in said Office;

Secondly, the whole of Parcel X and that part of Chief Mountain Highway right-of-way lying within the limits of said Indian Reserve according to plan RD 3817 in said Records, a copy of which has been filed under no. 2184 G.U. in said Office;

Said parcels containing together about 505 square kilometres (195 square miles).

(3) JASPER NATIONAL PARK OF CANADA

All and singular that certain parcel or tract of land situate, lying and being in the Province of Alberta and being more particularly described as follows:

Commencing at the Snow Dome, being a point at the intersection of the Interprovincial Boundary between Alberta and British Columbia and the height of land between the watershed areas of the North Saskatchewan and Athabasca Rivers, in latitude 52°11′ and longitude 117°19′;

Thence southeasterly and northeasterly along said height of land to a cairn and park standard being on a well defined ridge on the westerly side of Sunwapta Pass and marking the southwesterly extremity of a line having a bearing designated as 235°06′ as said line, cairn and standard are shown on a plan by H.F. Lambert, Dominion Land Surveyor, dated 1935 and of record number 39222 in the Canada Lands Surveys Records at Ottawa;

Thence northeasterly along said line a distance of 813.2 metres, more or less, to a cairn and park standard, as the last aforesaid cairn and standard are shown on said plan;

Thence northeasterly along a line having a bearing designated as 218°48′ a distance of 654.05 metres, more or less, to a cairn and park standard, as the last aforesaid line, cairn and standard are shown on said plan;

Thence northeasterly along a line having a bearing designated as 58°42.2′ a distance of 1130.7 metres,
more or less, to a cairn and park standard, as the last aforesaid line, cairn and standard are shown on said plan, the last aforesaid cairn and standard being on a well defined ridge of said height of land between the watershed areas of the North Saskatchewan and Athabasca Rivers, overlooking Sunwapta Pass;

Thence continuing northeasterly, northwesterly and easterly along said height of land to a stone cairn erected by H.F. Lambert, D.L.S., in 1935 at the summit of Nigel Pass, as the last aforesaid cairn is shown on a plan of record number 39221 in said Records;

Thence southeasterly and northeasterly along the height of land forming the easterly limit of the watershed area of the North Saskatchewan River to the junction of the last aforesaid height of land with the heights of land between the headwaters of the Brazeau River and Cline River and between the Cline River and North Saskatchewan River, said junction being in the vicinity of Cataract Pass;

Thence northerly along the height of land forming the easterly limit of the watershed area of the headwaters of the Brazeau River to a point distant 0.8 kilometre from the most easterly branch of the Brazeau River, said distance being measured at right angles to the general direction of said branch;

Thence in a general northeasterly direction and following a line drawn parallel to and being distant 0.8 kilometre in a perpendicular direction from the most easterly branch of the Brazeau River to the point at which the last aforesaid line intersects a straight line drawn on an azimuth of 135° from a point on the right bank of the Brazeau River immediately opposite the junction of the left bank of the stream which flows from Brazeau Lake with the left bank of the Brazeau River;

Thence northwesterly along the last aforesaid straight line to the last aforesaid point;

Thence in a general northeasterly direction and following the right bank of the Brazeau River to a point opposite the junction of the left bank of the Southesk River with the left bank of the Brazeau River;

Thence in a straight line across the Brazeau River to the last aforesaid junction;

Thence in a general southwesterly direction following the left bank of the Southesk River to the mouth of an unnamed creek flowing from Mount Dalhousie and joining the Southesk River at approximate latitude 52°39′ and longitude 116°54′;

Thence northwesterly across the Southesk River and along the crest of a well defined ridge to the summit of Saracen Head, which is a prominent landmark in latitude 52°41′ and longitude 116°56′;

Thence in a general northwesterly direction following the height of land forming the easterly limit of the watershed areas of the Cairn and Rocky Rivers to its junction with the height of land which enclosed the watershed area of Fiddle River;

Thence northeasterly and northwesterly following the last aforesaid height of land to the summit of Roche à Perdrix in latitude 53°13′ and longitude 117°48′;

Thence in a general northwesterly direction following a sharply defined ridge to a standard post, pits and mound marking the easterly extremity of a part of the boundary of Jasper Park, said part being surveyed by K.F. McCusker, D.L.S., in 1931, according to plan 38673 in said records;

Thence on a bearing of 281°58′ along the last aforesaid part of the boundary a distance of 2623.9 metres, more or less, to a stone mound on a rock point through which the Canadian National Railway passes in a tunnel, as said stone mound is shown on the last aforesaid plan;

Thence in a general northwesterly direction following the edge of a sharply defined escarpment to Ogre Canyon and continuing across the said canyon along an escarpment to Boule Roche which is a peak at the southeasterly extremity of Boule Range in latitude 53°17′ and longitude 117°54′;

Thence in a general northwesterly direction following the height of land which forms the northeasterly limit of the watershed areas of Ogre and Moosehorn Creeks along the Boule Range to the summit of Mount Kephala, which is a peak at the northwesterly extremity to Boule Range;
Thence in a general westerly direction following the height of land which forms the northerly limit of the watershed area of Moosehorn Creek to a standard post and stone mound marking the northeasterly extremity of a part of the northerly boundary of Jasper Park, the last aforesaid part being surveyed by said K.F. McCusker, D.L.S., in 1931, according to plan 43560 in said Records, a copy of which is entered in the Land Titles Offices for the North Alberta Land Registration District at Edmonton under number T470;

Thence southwesterly along the last aforesaid part of the northerly boundary a distance of 4021.7 metres, more or less, to a cairn at Triangulation Station No. 90 (Lambert 1927), as the last aforesaid cairn is shown on the last aforesaid plan;

Thence southwesterly, northwesterly, northeasterly and northwesterly along that height of land which divides the watershed areas of Moosehorn Creek, Snake Indian River and an unnamed creek flowing into Rock Creek from the southeast at approximate latitude 53°26′ and longitude 118°19′, from the watershed areas of those tributaries of the Wildhay River and Rock Creek northeasterly of said unnamed creek, to a stone mound and flag marking the southeasterly extremity of a part of the northerly boundary of Jasper Park, according to the last aforesaid plan;

Thence on a bearing of 322°42′ along the last aforesaid part of the northerly boundary a distance of 4746.7 metres, more or less, to a stone cairn at Triangulation Station No. 68 (Lambert 1927) which is a point on the height of land dividing the watershed area of Rock Creek from that of Wildhay River in latitude 53°27′ and longitude 118°21′;

Thence in a general westerly direction along the last aforesaid height of land to its point of intersection with a straight line on an azimuth of 45° from Triangulation Station No. 5 (Lambert 1927), of record in field book number 21691 in said Records, which is a point on the height of land dividing the watershed area of Rock Creek from that of Mowitch Creek;

Thence southwesterly along the last aforesaid straight line across the valley of Rock Creek to said Triangulation Station No. 5;

Thence in a general westerly direction along the last aforesaid height of land dividing the watershed area of Rock Creek from that of Mowitch Creek to its intersection with the height of land which divides the watershed area of Snake Indian River from that of Smoky River;

Thence generally southeasterly and northwesterly following the last aforesaid height of land to a point on the summit of the westerly extension of Sunset Peak, on the summit of which peak is situated Triangulation Station No. 33 (Lambert 1927), a record in said field book, the last aforesaid point being at the intersection of the last aforesaid height of land and a straight line on an azimuth of 329°28.8′ from a stone cairn on the crest of the height of land forming the southerly limit of the watershed area of Blue Lake, as the last aforesaid cairn is shown on plan 38704 in said Records;

Thence southeasterly along the last aforesaid straight line, across Blue Lake, to the last aforesaid cairn;

Thence in a general westerly direction along the height of land forming the southerly limit of the watershed area of Blue Lake to its intersection with the height of land dividing the watershed area of Twintree Creek from that of Rockslide Creek, both of which creeks are tributaries of Smoky River;

Thence in a general westerly direction along the last aforesaid height of land to its intersection with a straight line on an azimuth of 92°21.2′ from a post in a stone mound on the left bank of Smoky River, the last aforesaid post being in latitude 53°29′ and longitude 119°15′ as shown on plan 38705 in said Records;

Thence westerly along the last aforesaid straight line to the last aforesaid post and continuing in the same straight line produced westerly across the valley of Smoky River to intersect the height of land forming the northwesterly limit of the watershed area of those tributaries of the Smoky River flowing into said Smoky River south of said Rockslide Creek;

Thence in a general westerly direction along the last aforesaid height of land through the summit of Mount Resthaven to the summit of Mount Lucifer in latitude 53°26′ and longitude 119°33′;
Thence in a general southeasterly direction following the height of land which bounds the watershed area of Jackpine River through Barricade Mountain, to the point at which it intersects the Interprovincial Boundary between Alberta and British Columbia in latitude 53°22′ and longitude 119°24.7′;

Thence southerly following said Interprovincial Boundary to the point of commencement;

Said parcel containing about 10 878 square kilometres;

The natural features and boundaries herein described being shown on the north and south sheets of the map of Jasper Park, certified by Frederic Hathaway Peters, Surveyor General of Dominion Lands, on January 13, 1948, said map being approved on behalf of the Dominion of Canada by the Honourable J. Allison Glen, Minister of Mines and Resources, and on behalf of the Province of Alberta by the Honourable N.E. Tanner, Minister of Land and Mines, and filed on February 14, 1948, in the Land Titles Office for the North Alberta Land Registration District at Edmonton under numbers 3974 and 3975 in book E.U., folio 192, copies of which are of record in the Canada Lands Surveys Records at Ottawa under numbers 40396 and 40397 respectively.

(4) ELK ISLAND NATIONAL PARK OF CANADA

In the Province of Alberta:

In township 54, range 19, and in townships 52, 53 and 54, range 20, all west of the 4th Meridian;

All that parcel of land more particularly described as follows:

Commencing at the northwest corner of section 34, in said township 54, range 20;

Thence southerly along the east boundary of the statutory road allowance to the northwest corner of section 10, in said township 54, range 20;

Thence westerly along the south boundary of the statutory road allowance to the northwest corner of section 9, in said township 54, range 20;

Thence southerly along the east boundary of the statutory road allowance to the northwest corner of section 4, in said township 54, range 20;

Thence westerly in a straight line a distance of 20.1168 metres, more or less, to the northeast corner of section 5, in said township 54, range 20;

Thence continuing westerly along the north boundary of said section 5 to the northwest corner thereof;

Thence southerly along the east boundary of the statutory road allowance to the northwest corner of section 32, in said township 53;

Thence westerly along the south boundary of the statutory road allowance to the northwest corner of section 31, in said township 53;

Thence southerly along the east boundary of the statutory road allowance to its intersection in section 30, in said township 52, with the northerly limit of the surveyed Beaver Lake — Edmonton Trail, as said trail is shown on Plan 10065 in the Canada Lands Survey Records at Ottawa;

Thence easterly along said northerly limit of said trail to the east boundary of section 25, in said township 52;

Thence northerly along the west boundary of the statutory road allowance to the southeast corner of section 1, in said township 54, range 20;

Thence easterly along the north boundary of the statutory road allowance to the southeast corner of section 6, in said township 54, range 19;
Thence northerly along the west boundary of the statutory road allowance to the northeast corner of section 31, in said township 54, range 19;

Thence westerly along the south boundary of the statutory road allowance to the point of commencement;

Saving and excepting thereout and therefrom,

Firstly: all those parts lying within the main limits of a road through said township 53, according to plan number 55576 in the Canada Lands Surveys Records at Ottawa, a copy of which is filed in the Land Titles Office for the North Alberta Land Registration District, at Edmonton, under number 2194 R.S.;

Secondly: the mines and minerals within section 13, township 53, range 20, west of the 4th Meridian as described on the certificate of the title number 1364, book K.Q., folio 43, registered on January 29, 1957, in the North Alberta Land Registration District.

The remainder containing about 194 square kilometres;

The boundaries herein described being shown on a plan of Elk Island Park, certified by A.O. Gorman for the Surveyor General of Dominion Lands, on February 10, 1949, recorded as plan number 40428 in the Canada Lands Surveys Records at Ottawa; and also a plan showing the northerly and part of the westerly boundaries confirmed by R. Thistlethwaite, Surveyor General, on March 30, 1966, recorded as plan number 52860 in said Records, a copy of which is of record in the Land Titles Office for the North Alberta Land Registration District, at Edmonton, under number 3542 N.Y.

(5) WOOD BUFFALO NATIONAL PARK OF CANADA

All and singular that certain parcel or tract of land lying and being partly in the Northwest Territories and partly in the Province of Alberta, and more particularly described, as follows:

Commencing at the intersection of the boundary between the Province of Alberta and the Northwest Territories as surveyed and shown on sheet five of the twenty map-sheets entitled “Boundary between Alberta and Northwest Territories”, which map-sheets are on record as 42955 in the Canada Lands Surveys Records at Ottawa, with the centre of the main channel of Salt River;

Thence westerly along said boundary between the Province of Alberta and the Northwest Territories to its intersection with the centre of the main channel of Little Buffalo River;

Thence following downstream the centre of the main channel of the said Little Buffalo River to its junction with the centre of the main channel of Nyarling River;

Thence following upstream the centre of the main channel of the said Nyarling River to its intersection with the thirty-fourth (34) base line of the Dominion Lands Survey system, being the north boundary of township one hundred and thirty-two (132);

Thence westerly along the said thirty-fourth (34) base line to its intersection with the east boundary of range ten (10) west of the fifth (5) initial meridian of the Dominion Lands Survey system;

Thence southerly along the said east boundary of range ten (10) west of the said fifth (5) meridian to its intersection with the thirty-first (31) base line of the Dominion Lands Survey system, being the north boundary of township one hundred and twenty (120);

Thence easterly along the said thirty-first (31) base line to its intersection with the said fifth (5) meridian of the Dominion Lands Survey system;

Thence southerly along the said fifth (5) meridian to its intersection with the twenty-seventh (27) base line of the Dominion Lands Survey system, being the north boundary of township one hundred and four (104);

Thence easterly along the said twenty-seventh (27) base line to its intersection with the centre of the main channel of Athabaska River;
Thence following downstream the said centre of the main channel of Athabaska River to a point nearest the beginning or southern end of the main channel of Embarras River;

Thence in a direct line to the centre of the said main channel of Embarras River at its southern end;

Thence following downstream the centre of the main channel of the said Embarras River to its outlet into Lake Athabaska;

Thence westerly by a direct line to the nearest point on low water mark on the southerly or westerly shore of said Lake Athabaska;

Thence westerly and northerly following the said low water mark of the southerly and westerly shore of Lake Athabaska to a point nearest the beginning or southern end of the main channel of the stream known as Rivière des Rochers;

Thence easterly in a direct line of the centre of the said main channel of Rivière des Rochers at its southern end;

Thence following downstream the centre of the said main channel of Rivière des Rochers to a point nearest the centre of the main channel of Slave River;

Thence westerly in a direct line to the centre of the said main channel of Slave River;

Thence following downstream the said centre of the main channel of Slave River to its intersection with the thirty-second (32) base line of the Dominion Lands Survey system being the north boundary of township one hundred and twenty-four (124);

Thence westerly along the said thirty-second (32) base line to its intersection with the centre of the main channel of Salt River;

Thence following downstream the said centre of the main channel of Salt River to the point of commencement;

Excluding thereout and therefrom all islands in the Slave River within the above described boundary;

The whole containing by admeasurement an area of approximately 44,807 square kilometres, be the same more or less, and as the boundaries described herein are shown hachured in black upon the map of Wood Buffalo Park and which are subject to the “note” therein relating to the boundaries in certain rivers; which said map was issued by the Hydrographic and Map Service, Department of Mines and Resources at Ottawa in 1947, and whereof a copy is on record as 40393 in the Canada Lands Surveys Records at Ottawa;

Saving and excepting thereout and therefrom,

Firstly: all those lands lying within Peace Point Indian Reserve No. 222 as shown on Plan 71277 recorded in the Canada Lands Surveys Records at Ottawa, a copy of which is filed in the Land Titles Office at Edmonton under number 882-0308, said reserve containing 5.18 square kilometres (518 hectares), more or less, together with all mines and minerals;

Secondly: in Township 124, Range 10, west of the 4th Meridian, all those portions comprising Lot 6 (part of Thebathi Indian Reserve No. 196) as shown on a plan of survey recorded in the Canada Lands Surveys Records in Ottawa under number 85625 and registered at the Land Titles Office in Edmonton under number 0126326, the lands containing 1.81 square kilometres (181 hectares), more or less, together with all mines and minerals;

Thirdly: in Theoretical Township 121, Range 9, west of the 4th Meridian, all those portions comprising the Exterior Boundaries of Survey of Eejeré K’elni Kue Indian Reserve No. 196I (Hay Camp Site) as shown on a plan of survey recorded in the Canada Lands Surveys Records in Ottawa under number 84988 and registered at the Land Titles Office in Edmonton under number 0123033, the lands containing 2.13 square kilometres (213 hectares), more or less, together with all mines and minerals;
Fourthly: in Theoretical Township 121, Range 14 and Theoretical Township 122, Ranges 13 and 14, west of the 4th Meridian, all those portions comprising the Exterior Boundaries of Survey of Tsu Nedehe Tue Indian Reserve No. 196H (Pine Lake Site) as shown on a plan of survey recorded in the Canada Lands Surveys Records in Ottawa under number 85626 and registered at the Land Titles Office in Edmonton under number 0126334, the lands containing 5.86 square kilometres (586 hectares), more or less, together with all mines and minerals.

The remainder containing about 44 792 square kilometres (4,479,200 hectares).

PART 3 — SASKATCHEWAN

(1) PRINCE ALBERT NATIONAL PARK OF CANADA

All and singular that certain parcel or tract of land situated, lying and being in the Province of Saskatchewan which may be more particularly described as follows:

Section thirteen, the north halves of sections fourteen and fifteen, sections nineteen to thirty-six inclusive, all in township fifty-three, range one; all of townships fifty-four, fifty-five, fifty-six, fifty-seven, fifty-eight, fifty-nine, sixty and sixty-one, range one; the north half of township fifty-three, range two; townships fifty-four, fifty-five, fifty-six, fifty-seven, fifty-eight, fifty-nine, sixty and sixty-one, range two; the north half of township fifty-three, range three; townships fifty-four, fifty-five, fifty-six, fifty-seven, fifty-eight, fifty-nine, sixty and sixty-one, range three; the north half of township fifty-three, range four; laying east of the east bank of the Sturgeon River; that part of township fifty-four, range four, laying east of the east bank of Sturgeon River; townships fifty-five, fifty-six, fifty-seven, fifty-eight, fifty-nine, sixty and sixty-one, range four, and all that portion of township sixty-two, range four, covered by Lavallée Lake; that part of township fifty-four, range five, lying east of the east bank of Sturgeon River; that part of township fifty-five, range five, lying east of the east bank of Sturgeon River; townships fifty-six, fifty-seven, fifty-eight, fifty-nine, sixty and sixty-one, range five; those parts of sections twenty-four, twenty-five, twenty-six, thirty-five and thirty-six, township fifty-five, range six, lying east of the east bank of the Sturgeon River; those parts of sections one and twelve, township fifty-six, range six, lying east of the east bank of Sturgeon River, all west of the third meridian; said park containing an area of approximately one thousand four hundred and ninety-six square miles.

(2) GRASSLANDS NATIONAL PARK OF CANADA

In the Province of Saskatchewan;

All those lands more particularly described as follows:

EAST BLOCK

In Township 1, Range 4, West 3rd Meridian:

Legal Subdivisions 12 and 13 in Section 17;

The north half of Section 18;

Section 19, excepting out of the northwest quarter, all those lands covered by the waters of Rock Creek as shown on Township Plan dated October 31, 1990;

Legal Subdivisions 4, 5, 12 and 13 in Section 20;

Legal Subdivisions 4 and 5 in Section 29;

Section 30, excepting out of the northeast, northwest and southwest quarters, all those lands covered by the waters of Rock Creek and Hellfire Creek as shown on said township plan;

Section 31, excepting thereout all those lands covered by the waters of Rock Creek as shown on said township plan;
The north-south road allowances lying adjacent to and west of the west limits of the northwest quarter of Section 17, Sections 20, 30 and 31, and the southwest quarter of Section 29, including the intervening intersections, excepting out of the road allowance to and west of Section 30, the lands covered by Rock Creek as shown on said township plan;

The east-west road allowances lying adjacent to and north of the north limits of Section 19, Legal Subdivision 13 of Section 20, and Section 31, excepting thereout all those lands covered by the waters of Rock Creek as shown on said township plan.

In Township 1, Range 5, West 3rd Meridian:

Section 25, excepting out of the northeast, northwest, and southeast quarters, all those lands covered by the waters of Hellfire Creek as shown on Township Plan dated October 31, 1990;

Section 36, excepting out of the southwest quarter, all those lands covered by the waters of Hellfire Creek as shown on said township plan.

In Township 1, Range 6, West 3rd Meridian:

Section 1, excepting out of the northeast, northwest and southeast quarters, all those lands covered by the waters of Rock Creek as shown on Township Plan dated October 31, 1990.

Section 2, excepting out of the north half, all those lands covered by the waters of Rock Creek as shown on said township plan;

Section 3, excepting out of the northeast, northwest and southwest quarters, all those lands covered by the waters of Rock Creek as shown said township plan;

Section 4, excepting thereout all those lands covered by the waters of Rock Creek and Wetherall Creek as shown on said township plan;

Section 5, excepting thereout all those lands covered by the waters of Rock Creek as shown on said township plan;

Section 6;

Section 7, excepting out of the northwest quarter, all those lands covered by the waters of Horse Creek as shown on said township plan;

Section 8;

Section 9, excepting thereout all those lands covered by the waters of Wetherall Creek as shown on said township plan;

Section 10;

Section 11, excepting out of the southeast and southwest quarters, all those lands covered by the waters of Rock Creek as shown on said township plan;

Section 12, excepting thereout all those lands covered by the waters of Rock Creek and Butte Creek as shown on said township plan;

Sections 13 and 14;

The south half of Section 15, excepting out of the southwest quarter, all those lands covered by the waters of Wetherall Creek as shown on said township plan;

Section 16, excepting out of the southeast quarter, all those lands covered by the waters of Wetherall Creek
as shown on said township plan;

Section 17;

Section 18, excepting out of the northeast, northwest and southwest quarters, all those lands covered by the waters of Horse Creek as shown on said township plan;

Section 19, excepting out of the northeast, southeast and southwest quarters, all those lands covered by the waters of Horse Creek as shown on said township plan;

Sections 20 and 21;

Section 22, excepting out of the northeast, northwest and southwest quarters, all those lands covered by the waters of Wetherall Creek as shown on said township plan;

Section 27, excepting out of the northeast, southeast and southwest quarters, all those lands covered by the waters of Wetherall Creek as shown on said township plan;

Sections 28 and 29;

Section 32, excepting out of the northwest quarter, all those lands covered by the waters of Horse Creek as shown on said township plan;

Section 33;

Section 34, excepting thereout all those lands covered by the waters of Wetherall Creek as shown on said township plan;

The north-south road allowances lying adjacent to and west of the west limits of Sections 1, 12 and 13, Sections 2, 11 and the southwest quarter of Sections 14, Sections 3, 10, southwest quarter of Section 15, Sections 22, 27 and 34, Sections 4, 9, 16, 21, 28 and 33, Sections 5, 8, 17 and 20, and Sections 6, 7, 18 and 19, including the intervening intersections excepting thereout all those lands covered by the waters of Rock Creek, Wetherall Creek and Horse Creek as shown on said township plan;

The east-west road allowances lying adjacent to and north of the north limits of Sections 7 to 12 inclusive, Sections 20 to 22 inclusive, and 32 to 34 inclusive, including all intervening intersections excepting thereout all those lands covered by the waters of Wetherall Creek and Horse Creek as shown on said township plan.

In Township 1, Range 7, West 3rd Meridian:

Section 1, excepting out of the north half, all those lands covered by the waters of Horse Creek as shown on Township Plan dated October 31, 1990.

Section 12, excepting out of the northeast, southeast and southwest quarters, all those lands covered by the waters of Horse Creek as shown on said township plan;

Sections 13 and 24;

The east-west road allowances lying adjacent to and north of the north limit of Section 12.

In Township 2, Range 4, West 3rd Meridian:

The southwest quarter of Section 5;

The south half of Section 6, excepting thereout all those lands covered by the waters of Rock Creek as shown on Township Plan dated October 31, 1990;

The north-south road allowances lying adjacent to and west of the west limit of the southwest quarter of
Section 5.

In Township 2, Range 5, West 3rd Meridian:

Sections 4, 5, 6, 7, 8 and 9;

The north-south road allowances lying adjacent to and west of the west limits of Sections 4 and 9, and Sections 5 and 8.

In Township 2, Range 6, West 3rd Meridian:

The south half of Section 3;

Sections 4 and 5;

The southeast quarter of Section 6;

Sections 8, 9 and 30;

The north-south road allowances lying adjacent to and west of the west limits of the southwest quarter of Section 3, Sections 4 and 9, the southwest quarter of Section 5, and Section 30, including the intervening intersections.

In Township 2, Range 7, West 3rd Meridian:

Section 25.

In Township 3, Range 6, West 3rd Meridian:

The northeast quarter of Section 3;

Section 5, 8, 9, 10 and 11;

The north-south road allowances lying adjacent to and west of the west limits of Sections 9, 10 and 11.

WEST BLOCK

In Township 1, Range 10, West 3rd Meridian:

Sections 1 and 2;

Section 3, excepting out of the west half, all those lands covered by the waters of the Frenchman River as shown on Township Plan dated October 31, 1990;

Section 4, excepting out of the northwest, northeast and southeast quarters, all those lands covered by the waters of the Frenchman River as shown on said township plan, and excepting out of the southwest quarter, all those lands covered by the waters of the Frenchman River as shown on Township Plan dated February 15, 1918;

The northeast, northwest and southwest quarters of Section 9, excepting thereout all those lands covered by the waters of the Frenchman River as shown on Township Plan dated October 31, 1990;

That portion of the southeast quarter of Section 9 described as follows: Commencing at the northeast corner of said quarter section; thence southerly along the east limit to the south limit; thence westerly along the south limit to its intersection with the left bank of the Frenchman River; thence northeasterly and westerly following the sinuosities of the left bank to its intersection with the west limit; thence northerly along the west limit to its intersection with the left bank; thence northeasterly following the sinuosities of the left bank to its intersection with the north limit of the quarter section; thence easterly along the north limit to the point of commencement as
shown on Township Plan dated February 15, 1918. Also in the southeast quarter of Section 9, all those lands lying westerly of the right bank of the Frenchman River as shown on Township Plan dated February 15, 1918;

Sections 10, 11, 12, 13 and 14;

The north-south road allowances lying adjacent to and west of the west limits of Section 1, 12 and 13, Sections 2 and 11, and Sections 3 and 10, including the intervening intersections, excepting thereout all those lands covered by the waters of the Frenchman River as shown on Township Plan dated October 31, 1990;

The east-west road allowances lying adjacent to and north of the north limits of Sections 11 and 12.

In Township 2, Range 9, West 3rd Meridian:

Sections 6, 7 and 18.

In Township 2, Range 10, West 3rd Meridian:

Sections 1, 2, 3 and 4;

The east half of Section 8, excepting out of the northeast quarter, all those lands covered by the waters of Little Breed Creek as shown on Township Plan dated October 31, 1990;

Section 9, 10, 11, 12 and 13;

The south half of Section 14;

Section 15;

Section 16, excepting out of the west half, all those lands covered by the waters of Little Breed Creek as shown on said township plan;

The east half of Section 17, excepting out of the southeast quarter, all those lands covered by the waters of Little Breed Creek as shown on said township plan;

The north-south road allowances lying adjacent to and west of the west limits of Sections 1, 2, 11 and the southwest quarter of Section 14, Sections 3, 10 and 15, Sections 9 and 16, including the intervening intersections, excepting thereout all those lands covered by the waters of Little Breed Creek as shown on said township plan;

The east-west road allowances lying adjacent to and north of the north limits of the northeast quarter of Section 8, Sections 9, 10 and 11, excepting thereout all those lands covered by the waters of Little Breed Creek as shown on said township plan.

In Township 2, Range 11, West 3rd Meridian:

The north half of Section 19, excepting out of the northwest quarter, all those lands covered by the Frenchman River as shown on Township Plan dated August 16, 1918;

The northwest quarter of Section 20;

Sections 28 and 29;

Section 30, excepting out of the southwest quarter, all those lands covered by the waters of the Frenchman River as shown on said township plan;

Section 31, 32 and 33;
The northwest quarter of Section 34;

The north-south road allowances lying adjacent to and west of the west limits of the northwest quarter of Section 20 and Sections 29 and 32, the northwest quarter of Section 19 and Sections 30 and 31, Sections 28 and 33, the northwest quarter of Section 34, including the intervening intersections, excepting thereout all those lands covered by the waters of the Frenchman River as shown on Township Plan dated October 31, 1990;

The east-west road allowances lying adjacent to and north of the north limits of Section 19 and the northwest quarter of Section 20, all of Sections 31, 32 and 33, excepting thereout all those lands covered by the waters of the Frenchman River as shown on Township Plan dated October 31, 1990.

In Township 2, Range 12, West 3rd Meridian:

The north half of Section 1;

The northeast quarter of Section 2;

The northeast quarter of Section 9;

The north half of Section 10;

Sections 11, 12, 13, 14 and 15;

The east half Section 16;

The north half of Section 18;

Sections 19, 20, 21, 22 and 23;

Section 24, excepting out of the southwest quarter, about 1.23 acres (0.50 hectare), for Roadway as shown on Plan 66SC08847 and out of the northeast, northwest and southeast quarters, all those lands covered by the waters of the Frenchman River as shown on Township Plan dated December 23, 1918;

Section 25, excepting out of the northwest quarter, about 1.12 acres (0.45 hectare), and out of the southwest quarter, about 4.30 acres (1.74 hectares), for Roadway as shown on Plan 66SC08847 and excepting out of the northwest, southeast and southwest quarters, all those lands covered by the waters of the Frenchman River as shown on said township plan;

Section 26, excepting thereout all those lands covered by the waters of the Frenchman River;

Section 27, excepting out of the northeast quarter, about 2.54 acres (1.03 hectares), out of the northwest quarter, about 1.62 acres (0.66 hectare), and out of the southeast quarter, all that portion, for Roadway as shown on Plan AU 1365, and excepting all those lands covered by the waters of the Frenchman River as shown on said township plan;

Section 28, excepting out of the northwest quarter, all those lands covered by the waters of the Frenchman River as shown on said township plan;

Sections 29 and 30;

Section 31, excepting out of the northeast and northwest quarters, all those lands covered by the waters of the Frenchman River as shown on said township plan;

Section 32, excepting thereout, all those lands covered by the waters of the Frenchman River as shown on said township plan;

Section 33, excepting out of the northeast quarter, about 4.54 acres (1.84 hectares), and out of the northwest quarter, about 0.98 acre (0.40 hectare), for Roadway as shown on Plan AU 1365 and excepting out
of the southeast and southwest quarters, all those lands covered by the waters of the Frenchman River as shown on said township plan;

Section 34, excepting out of the northwest quarter, about 2.23 acres (0.90 hectare), out of the southeast quarter, about 1.42 acres (0.57 hectare), and out of the southwest quarter, about 4.06 acres (1.64 hectares), for Roadway as shown on Plan AU 1365;

Section 35;

Section 36, excepting out of the southwest quarter, all those lands covered by the waters of the Frenchman River;

The north-south road allowances lying adjacent to and west of the west limits of the northwest quarter of Section 1 and Sections 12, 13, 24, 25 and 36, the northwest quarter of Section 11 and Sections 14, 23, 26 and 35, the northwest quarter of Section 10 and Sections 15, 22, 27 and 34, Sections 21, 28 and 33, Sections 20, 29 and 32, the northwest quarter of Section 18 and Sections 19, 30 and 31, including the intervening intersections excepting thereout all those lands covered by the waters of the Frenchman River as shown on Township Plan dated October 31, 1990;

The east-west road allowances lying adjacent to and north of the north limits of the northeast quarter of Section 9 and Sections 10, 11 and 12, Sections 19 to 24 inclusive, Sections 31 to 36 inclusive excepting thereout all those lands covered by the waters of the Frenchman River as shown on Township Plan dated 31 October, 1990.

In Township 2, Range 13, West 3rd Meridian:

Section 13, excepting thereout of the southeast quarter about 1.581 acres (0.64 hectare), and out of the southwest quarter about 2.619 acres (1.06 hectares), taken for roadway as shown on a Plan of Record in the Land Titles Office for the Swift Current Land Registration District as No. 91SC00331;

The northeast quarter of Section 23;

Sections 24 and 25;

The northeast quarter and south half of Section 26, excepting out of the northeast quarter, all those lands covered by the waters of the Frenchman River as shown on Township Plan dated January 2, 1918;

Section 28;

The southeast quarter and north half of Section 32, excepting out of the northwest quarter about 1.779 acres (0.720 hectare), taken for roadway as shown on a Plan of Record in the Land Titles Office for the Swift Current Land Registration District as No. 91SC00331;

The west half and southeast quarter of Section 33, excepting out of the southeast quarter, all those lands covered by the waters of the Frenchman River;

Section 34, excepting out of the northwest, southwest and southeast quarters, all those lands covered by the waters of the Frenchman River as shown on Township Plan dated January 2, 1918;

Section 35, excepting out of the northeast, southeast and southwest quarters, all those lands covered by the waters of the Frenchman River as shown on said township plan;

Section 36, excepting out of the northeast and northwest quarters, all those lands covered by the waters of the Frenchman River as shown on said township plan;

The north-south road allowances lying adjacent to and west of the west limits of Sections 25 and 36, Section 35, the southwest quarter of Section 34 and Section 33, including the intervening intersections, excepting thereout all those lands covered by the waters of the Frenchman River as shown on Township Plan dated October 31, 1990;
The east-west road allowances lying adjacent to and north of the north limits of the northeast quarter of Section 23, Sections 24 and 32, the northwest quarter of Section 33 and Sections 34, 35 and 36, excepting thereout all those lands covered by the waters of the Frenchman River as shown on Township Plan dated October 31, 1990.

In Township 3, Range 11, West 3rd Meridian:

Legal Subdivisions 4 and 5 of the southwest quarter of Section 3;

Section 4, excepting out of the northeast quarter, about 3.77 acres (1.53 hectares), and out of the southeast quarter about 4.68 acres (1.89 hectares), for Roadway as shown on Plan CN 7048;

Sections 5, 6, 7 and 8;

Section 9, excepting out of the northeast quarter, about 4.48 acres (1.81 hectares), and out of the southeast quarter about 0.41 acre (0.17 hectare), for Roadway as shown on Plan CN 7048;

The south half of Section 16, excepting out of the southeast quarter, about 3.99 acres (1.61 hectares), for Roadway as shown on Plan CN 1001;

The south half of Section 17;

Section 18;

The north-south road allowances lying adjacent to and west of the west limits of the southwest quarter of Section 3, Sections 4 and 9, Sections 5 and 8, Sections 6, 7 and 18, including the intervening intersections;

The east-west road allowances lying adjacent to and north of the north limit of Sections 7, 8 and 9;

That portion of the original road allowance lying south from and adjacent to Section 6, lying between the northerly productions of the east limit of Section 36, Township 2, Range 12, West of the Third Meridian and the west limit of Section 31, Township 2, Range 11, West of the Third Meridian.

In Township 3, Range 12, West 3rd Meridian:

Sections 1, 2 and 3;

Section 4, excepting out of the northeast quarter, about 3.77 acres (1.53 hectares), out of the northwest quarter, about 0.67 acre (0.27 hectare), and out of the southeast quarter, about 4.27 acres (1.73 hectares), for Roadway as shown on Plan AU 1365;

Section 5;

Section 6, excepting out of the southeast and southwest quarters, all those lands covered by the waters of the Frenchman River as shown on Township Plan dated December 28, 1918;

Sections 7 and 8;

Section 9, excepting out of the northeast quarter, about 4.07 acres (1.65 hectares), out of the southeast quarter, about 1.61 acres (0.65 hectare), and out of the southwest quarter, about 2.49 acres (1.01 hectares), for Roadway as shown on Plan AU 1365;

Sections 10, 11, 12, 13, 14 and 15;

Section 16, excepting out of the northeast quarter, about 4.05 acres (1.64 hectares), and out of the southeast quarter, about 4.03 acres (1.63 hectares), for Roadway as shown on Plan AU 1365;

Section 17;
The east half of Section 18;

The north-south road allowances lying adjacent to and west of the west limits of Sections 1, 12 and 13, Sections 2, 11 and 14, Sections 3, 10 and 15, Sections 4, 9 and 16, Sections 5, 8 and 17, and Sections 6 and 7, including the intervening intersections, excepting thereout all those lands covered by the waters of the Frenchman River as shown on Township Plan dated October 31, 1990;

The east-west road allowances lying adjacent to and north of the north limits of the northeast quarter of Section 7 and Sections 8 to 12 inclusive;

That portion of the original road allowance lying south from and adjacent to Section 6, lying between the northerly productions of the east limit of Sections 36, Township 2, Range 13, West of the Third Meridian and the west limit of Sections 31, Township 2, Range 12, West of the Third Meridian.

In Township 3, Range 13, West 3rd Meridian:

Section 1, excepting out of the southeast quarter, all those lands covered by the waters of the Frenchman River as shown on the Township Plan dated December 19, 1917;

Section 2;

Section 3, excepting thereout all those lands covered by the waters of the Frenchman River as shown on said township plan;

The west half, southeast quarter and Legal Subdivisions 9, 10 and 15 of the northeast quarter of Section 4, excepting out of the southwest quarter, about 4.0 acres (1.62 hectares), and out of the southeast quarter, about 2.47 acres (1.00 hectare), as Parcel A, taken for roadway as shown on a Plan of Record in the Land Titles Office for the Swift Current Land Registration District as No. CG 5365;

The northeast quarter of Section 4, excepting thereout:

a) about 2.88 acres (1.17 hectares) for Roadway as shown on a Plan of Record in the Land Titles Office for the Swift Current Land Registration District as No. CG 5365;

b) That portion commencing at the northeast corner of said quarter section; thence southerly along the east limit 1320 feet (402.34 metres); thence westerly and parallel with the north limit 1320 feet (402.34 metres); thence northerly and parallel with the east limit to the north limit; thence easterly along the north limit to the point of commencement;

Section 5, excepting out of the northwest quarter about 1.30 acres (0.53 hectare), and out of the southwest quarter about 3.62 acres (1.47 hectares), both taken for roadway as shown on a Plan of Record in the Land Titles Office for the Swift Current Land Registration District as No. 71SC08602;

The southeast quarter of Section 8;

The southwest quarter of Section 9, excepting thereout about 0.07 hectares, for the Val Marie Irrigation Project as shown on Plan 77SC13199;

Sections 11, 12, 13 and 14;

The north-south road allowances lying adjacent to and west of the west limits of Sections 1, 2, 3 and 4, southwest quarter of Section 9, Sections 12 and 13, including the intervening intersections;

The east-west road allowances lying adjacent to and north of the north limits of Sections 11 and 12.

All lands described in the East and West blocks above include all mines and minerals.

PART 4 — MANITOBA
(1) RIDING MOUNTAIN NATIONAL PARK OF CANADA

In the Province of Manitoba;

West of the Principal Meridian;

All those lands more particularly described as follows:

(1) in Township 18, Range 16, all sections;

(2) in Township 18, Range 17, sections 1, 13, 24, 25, 26, 35, 36 and the east half of Section 12;

(3) in Township 19, Range 16, all sections;

(4) in Township 19, Range 17, all sections;

(5) in Township 19, Range 18:

(a) the northwest quarter of Section 19; excepting all that portion taken for a public road as shown on Plan 2642 filed in the Land Titles Office at Neepawa, a copy of which is recorded in the Canada Lands Surveys Records at Ottawa as 43180;

(b) sections 25, 26, 27, legal subdivisions 13 and 14 of Section 28, sections 29 to 36 inclusive;

(c) all that portion of the original Dominion Government Road Allowance adjoining the north boundary of Section 19, described as follows: commencing at a point on the north boundary of Section 19, a distance of 34 feet (10.36 metres) easterly from the northwest corner of Section 19; thence easterly along said north boundary 400 feet (121.92 metres); thence northerly at right angles with said north boundary 66 feet (20.12 metres) to the northerly limit of said original Dominion Government Road Allowance; thence westerly along the northerly limit of said road allowance 382 feet (116.43 metres); thence southwesterly in a straight line to the point of commencement;

(d) all that portion of the original Dominion Government Road Allowance between sections 29 and 30, lying north of the westerly production of the south boundary of southwest quarter Section 29;

(e) all that portion of the original Dominion Government Road Allowance between sections 31 and 32, lying south of the southerly shoreline of Clear Lake;

the last two mentioned road allowances are as shown on Plan 30750 in said records;

(6) in Township 19, Range 19, sections 25, 26, 34, 35 and 36, the east half of Section 33, the northeast quarter of Section 24 and legal subdivisions 13, 14, 15 and 16 of Section 27;

(7) in Township 20, Range 16, all sections; excepting the east half of section 25 and the north half and the southeast quarter of section 36;

(8) in Township 20, Range 17, all sections;

(9) in Township 20, Range 18, all sections;

(10) in Township 20, Range 19, all sections; excepting

(a) sections 5, 6, 7 and 8, the west half of section 4, the portion of the east half of section 4 lying west of Clear Lake Indian Reserve No. 61A and the southwest quarter of section 18;

(b) Clear Lake Indian Reserve No. 61A, comprising:

part fractional east half Section 4; fractional Section 9; fractional Section 10; fractional southwest quarter Section 15 and fractional southeast quarter Section 16;

said indian reserve as shown on Plan 76982 in said records, a copy of which is filed in the Land Titles Office at Neepawa as 32044;

(11) in Township 20, Range 20, sections 13 to 36 inclusive;

(12) in Township 20, Range 21, all sections; excepting sections 6, 7 and 18;
(13) in Township 20, Range 22, sections 19 to 36 inclusive;
(14) in Township 21, Range 16, all sections; excepting
   (a) sections 1, 12, 13, 22, 23, 24, 25, 26, 27, 32, 33, 34, 35 and 36;
   (b) the south half and northeast quarter of Section 14 and the northeast quarters of sections 11, 28 and 31;
(15) in Township 21, Range 17, all sections;
(16) in Township 21, Range 18, all sections;
(17) in Township 21, Range 19, all sections;
(18) in Township 21, Range 20, all sections;
(19) in Township 21, Range 21, all sections;
(20) in Township 21, Range 22, all sections;
(21) in Township 21, Range 23, all sections;
(22) in Township 22, Range 17, sections 2 to 11 inclusive, 16, 17 and 18, the west halves of sections 1 and 12, the south halves of sections 14 and 15, and the southwest quarter of Section 13;
(23) in Township 22, Range 18, all sections;
(24) in Township 22, Range 19, all sections;
(25) in Township 22, Range 20, all sections;
(26) in Township 22, Range 21, all sections;
(27) in Township 22, Range 22, all sections;
(28) in Township 22, Range 23, all sections;
(29) in Township 22, Range 24, all sections;
(30) in Township 22, Range 25, all sections;
(31) in Township 22, Range 26, all sections; excepting the west halves of sections 6 and 7;
(32) in Township 23, Range 18, all sections; excepting sections 13, 21 to 28 inclusive, 31 to 36 inclusive, the north half and southeast quarter of Section 12 and the northeast quarter of Section 1;
(33) in Township 23, Range 19, all sections; excepting sections 31 to 36 inclusive;
(34) in Township 23, Range 20, all sections and fractional sections lying east and south of the Vermilion River; excepting the west half of Section 25 and sections 26, 35 and 36;
(35) in Township 23, Range 21, all sections; excepting sections 12, 13, 23 to 36 inclusive, and the north halves of sections 1 and 22;
(36) in Township 23, Range 22, all sections; excepting sections 25 to 36 inclusive;
(37) in Township 23, Range 23, all sections; excepting sections 25, and 31 to 36 inclusive;
(38) in the south half of Township 23, Range 24, all sections;
(39) in the south half of Township 23, Range 25, all sections;
(40) in Township 23, Range 26, sections 1 to 5 inclusive, and 8 to 17 inclusive;

Said lands containing together about 2,969 square kilometres.

(2) WAPUSK NATIONAL PARK OF CANADA

All theoretical section and township corners hereinafter are based on the North American Datum of 1927. All bearings are grid and are referred to Zone 15 of the Universal Transverse Mercator Grid System.

In the Province of Manitoba;

East of the Second Meridian East;

All that parcel of land shown as Parcel A on a plan filed in the office of the Director of Surveys at Winnipeg
as Plan No. 19701, including the foreshore along the North East Coast of Manitoba, the lakes, the rivers, the
islands, the streams, all mines and minerals, and all other estates, rights and interests normally reserved to the
Road Allowances that lie within the boundaries more particularly described as follows:

Commencing at the theoretical North East corner of Township 94, Range 6;
Thence westerly in a straight line to the theoretical North East corner of Section 33 in Township 94, Range 1;
Thence northerly in a straight line to the theoretical North East corner of Section 33 in Township 104, Range 1;
Thence easterly in a straight line to the theoretical North East corner of Township 104, Range 1;
Thence northerly in a straight line to the theoretical North East corner of Township 107, Range 1;
Thence easterly in a straight line to the theoretical North East corner of Township 107, Range 2;
Thence northerly in a straight line to the theoretical North East corner of Township 109, Range 2;
Thence easterly in a straight line to the theoretical North East corner of Township 109, Range 3;
Thence northerly in a straight line to the theoretical North East corner of Township 111, Range 3;
Thence northerly in a straight line along the production of the last above described course to its first
intersection with the Mean High Tide Line of Hudson Bay;
Thence on a bearing of 50°00′00″ to its first intersection with the Ordinary Low Water Mark of Hudson Bay;
Thence easterly and southeasterly following the Ordinary Low Water Mark of Hudson Bay to its intersection
with a line having a bearing of 115°00′00″ drawn through the intersection of the right bank of Black Bear Creek
with the Mean High Tide Line of Hudson Bay;
Thence on a bearing of 295°00′00″ along the aforesaid line to the intersection of said bank with the Mean
High Tide Line of Hudson Bay;
Thence generally westerly following the sinuosities of said right bank of Black Bear Creek to the Ordinary
High Water Mark of Black Bear Lake;
Thence westerly along the Ordinary High Water Mark of Black Bear Lake to its intersection with a line drawn
southerly and at right angles to the first above described course;
Thence northerly in a straight line to the point of commencement.
Said parcel containing an area of about 11 475 square kilometres.

**PART 5 — ONTARIO**

**(1) ST. LAWRENCE ISLANDS NATIONAL PARK OF CANADA**

In the Province of Ontario;

In the counties of Leeds and Frontenac;

All those parcels of land being more particularly described under Firstly to Twelfthly as follows:

Firstly
The following 17 islands as shown on plans 50113, 50114, 50115 and 50116 in the Canada Lands Surveys Records at Ottawa:

In the Township of Pittsburgh:

Whiskey Island,
  containing about 0.32 hectare;

Cedar Island,
  containing about 9.31 hectares;

Milton (Pitcairn) (Amazon) Island,
  containing about 3.24 hectares;

In the Township of Front of Leeds and Lansdowne:

Aubrey Island,
  containing about 5.79 hectares;

Mermaid Island,
  containing about 1.54 hectares;

Red Horse (7A) Island,
  containing about 0.21 hectare;

Beaurivage Island,
  containing about 4.17 hectares;

Leek (Thwartway) Island,
  containing about 36.71 hectares;

Camelot Island,
  containing about 9.47 hectares;

Endymion Island,
  containing about 4.41 hectares;

Gordon Island,
  containing about 6.27 hectares;

Mulcaster (Sugar) Island,
  containing about 5.38 hectares;
Lyndoe (79) Island,
  containing about 0.57 hectare;

Georgina Island,
  containing about 9.43 hectares;

Constance Island,
  containing about 2.95 hectares;

In the Township of Front of Yonge:

Adelaide (116) Island,
  containing about 5.30 hectares;

In the Township of Elizabethtown:

Stovin Island,
  containing about 4.13 hectares.

Secondly

The following 88 islands as shown on plans 61449, 61450, 61451 and 61452 in the Canada Lands Surveys Records at Ottawa, copies of which are filed in the Registry Office at Brockville as LE 338, LE 339, LE 340 and LE 341 respectively;

In the Township of Front of Leeds and Lansdowne:

In the Township of Front of Escott:

In the Township of Front of Yonge:

Islands 115F, 115G, 115I, 116C and 116N, containing together about 0.01 hectare.

Thirdly

In the Township of Front of Escott:

Squaw, Car and Shoe Islands as shown on Plan 57151 in the Canada Lands Surveys Records at Ottawa, a copy of which is filed in the Registry Office at Brockville as LE 327, containing together about 3.05 hectares.

Fourthly
In the Township of Lansdowne;

In the Municipality of Front of Leeds and Lansdowne;

Those portions of Hill (Leroux) Island being the whole of lot 5 and parts of Lot 6 on Registered Plan 163, shown as Parts 1 and 2 on a plan deposited in the Registry Office at Brockville as 28R-1962, a copy of which is recorded in the Canada Lands Surveys Records at Ottawa as 61190;

Together with a Right-of-Way over those parts of Lot 1 on Registered Plan 120, shown as Parts 6, 9, 10 and 11 on said Plan 28R-1962, containing together about 2.13 hectares;

Island 89C on Registered Plan 120, shown as Part 29 on a plan deposited in said office as 28R-1962, a copy of which is recorded in said records as 61190, said island containing about 0.16 hectare.

Fifthly

In the Municipality of the Township of Front of Escott;

Those portions of Grenadier (Bathurst) Island described as follows:

The whole of the Dominion Park lot and Lighthouse Site lot as shown on Plan 681 in the Canada Lands Surveys Records at Ottawa;

EXCEPT a parcel of land 50 feet (15.24 metres) square comprising the site of Grenadier Light LL 331 as described in Order-in-Council P.C. 1965-1692 dated September 15, 1965; the remainder containing about 4.39 hectares;

That part of Lot 4 on Registered Plan 120, described in a deed between G.R. Latimer and H. Latimer and Her Majesty the Queen in right of Canada, registered in the Registry Office at Brockville as 39049 on December 14, 1970, shown on a Plan of Survey by K.M. Wiseman, O.L.S., dated August 8, 1967, attached to Instrument registered as 7367 in said office, said part containing about 0.09 hectare;

That part of Lot 5 on Registered Plan 120, as shown on Plan 53064 in said records, a copy of which is deposited in said office as instrument 5774, said part containing about 85.4 hectares;

That part of Lot 5 on Registered Plan 120, described in a deed between Hubert L. Mallory and Gordon H. Hunt, Trustees of the Public School Board of the Township School Area of Front of Escott and Her Majesty the Queen in right of Canada, registered in said office as 7439 on April 2, 1968, said part containing about 0.2 hectare;

That part of Lot 6 on Registered Plan 120, described in a deed between Franz Benedek and Her Majesty the Queen in right of Canada, registered in said office as 35119 on May 25, 1970, said part containing about 39 hectares;

Lot 8 on Registered Plan 120, shown as Part 1, parts of the bed of the St. Lawrence River adjacent to Lots 8 and 9 shown as Parts 2 and 9, and Part 6, all shown on a plan deposited in said office as 28R-4854, a copy of which is recorded as 70113 in said records, containing together about 22.38 hectares;

That part of Lot 10 on Registered Plan 120, and parts of the bed of the St. Lawrence River adjacent to Lot 10, shown as Parts 1 to 5 inclusive on a plan deposited in said office as 28R-4005, a copy of which is recorded as 68276 in said records, containing together about 32.38 hectares;

That part of Lot 10 on Registered Plan 120, and parts of the bed of the St. Lawrence River adjacent to Lot 10, shown as Parts 1 to 5 inclusive on a plan deposited in said office as 28R-4140, a copy of which is recorded as 68554 in said records, containing together about 2.63 hectares;

The whole of Lot 12 as shown on Plan 56630 in said records, a copy of which is deposited in said office as 42324, said lot containing about 30 hectares.
Sixthly
In the Municipality of the Township of Front of Leeds and Lansdowne;

That part of Hay (Melville) Island on Registered Plan 313, described in a deed between C. Carpenter and Her Majesty the Queen in right of Canada, registered in the Registry Office at Brockville as 82282 on August 16, 1976; said part containing about 24.42 hectares.

Seventhly
In the Municipality of the Township of Front of Leeds and Lansdowne;

That part of McDonald (Hog) (Cow) (Georgiana) Island on Registered Plan 120, described in a deed between M.M. Caird and Her Majesty the Queen in right of Canada, registered in the Registry Office at Brockville as 28990 on May 25, 1969; said part containing about 11.63 hectares;

Islands 12B and 12C (Leeward Islands) and that part of said McDonald Island on Registered Plan 120, described in a deed between H.S. Fuller and R.S. Fuller, and Her Majesty the Queen in right of Canada, registered in said office as 80855 on June 21, 1976; containing together about 0.49 hectare.

Eighthly
In the Municipality of the Township of Front of Leeds and Lansdowne;

That part of Joel (Lindsay) (Crocker) Island described in a deed between S.H. Manson and Her Majesty the Queen in right of Canada, registered in the Registry Office at Brockville as 68820 on December 19, 1974; said part containing about 4.05 hectares.

Ninthly
In the Township of Front of Yonge;
In the Broken Front Concession;
In Lot 22;
The whole of Parcels A and B as shown on Plan 42935 in the Canada Lands Surveys Records at Ottawa, a copy of which is deposited in the Registry Office at Brockville as 2734; containing together about 4.14 hectares.

Tenthly
In the Township of Front of Yonge;
In the Broken Front Concession;
In Lots 22 and 23;
The whole of Parcel C as shown on Plan 43518 in the Canada Lands Surveys Records at Ottawa, a copy of which is deposited in the Registry Office at Brockville as 3380; said parcel containing about 33.82 hectares.

Eleventhly
In the Township of Front of Yonge;
In the Broken Front Concession;
That part of Lot 22 as shown on Plan 57594 in the Canada Lands Surveys Records at Ottawa, said part
containing about 0.40 hectare.

Twelfthly

In the Township of Lansdowne;

In the Municipality of the Township of Front of Leeds and Lansdowne;

Those portions of Hill (Leroux) Island described as follows:

Those parts of Lots 2 and 4 on Registered Plan 163, the whole of Block P on Registered Plan 273 and those parts of Lots 1 and 5 on Registered Plan 120, shown as Parts 3 to 24 inclusive and Part 28 on Plan 28R-1962 deposited in the Registry Office at Brockville, a copy of which is recorded as 61190 in the Canada Lands Surveys Records at Ottawa; and Parts 1 to 5 inclusive and Parts 7 to 57 inclusive on Plan 28R-1961 deposited in said office, a copy of which is recorded as 61192 in said records; and Parts 1 to 8 inclusive on Plan 28R-1963 deposited in said office, a copy of which is recorded as 61191 in said records, containing together about 150.7 hectares;

Those parts of Lots 2, 3 and 4 on Registered Plan 120, shown as Parts 1, 2, 3, 4 and 5 on Plan 28R-3747 deposited in said office, a copy of which is recorded as 67675 in said records, containing together about 115.8 hectares;

Those parts of Lots 6 and 7 on Registered Plan 120, shown as Parts 7 to 17 inclusive on Plan 28R-3786 deposited in said office, a copy of which is recorded as 67731 in said records;

Together with a Right-of-Way over Parts 1 and 3 as shown on said Plan 28R-3786, containing together about 105 hectares;

That part of Lot 8 on Registered Plan 120, now re-subdivided and described as Block 6 on Registered Plan 389, shown as Part 1 on Plan 28R-562 deposited in said office, a copy of which is recorded as 73572 in said records, said part containing about 7.5 hectares;

Those parts of Lot 8 on Registered Plan 120, shown as Parts 1 to 7 inclusive on Plan 28R-6405 deposited in said office, a copy of which is recorded as 73164 in said records, containing together about 33 hectares;

Those parts of Lot 8 on Registered Plan 120, shown as Parts 1, 2 and 3 on Plan 28R-7831 deposited in said office, containing together about 6.2 hectares;

The whole from Firstly to Twelfthly containing about 829.6 hectares (8.30 square kilometres).

(2) POINT PELEE NATIONAL PARK OF CANADA

In Ontario;

In the County of Essex;

In the Townships of Mersea and Pelee;

All those parcels of land being more particularly described under Firstly and Secondly as follows:

Firstly, all that parcel of land known as Point Pelee, and being comprised of the Naval Reserve at said Point Pelee as shown on a plan of said Naval Reserve, signed by Alexander Baird, Provincial Land Surveyor, at Leamington on February 17, 1883, a copy of which is recorded as Plan 52325 in the Canada Lands Surveys Records at Ottawa;

Said parcel containing about 1,500 hectares.

Secondly, all that parcel of land being Middle Island in Lake Erie;
SAVING AND EXCEPTING that part of Middle Island conveyed to Her Majesty the Queen in right of Canada, by Quit Claim Deed dated January 6, 1958, registered in the Registry Office for the Registry Division of the County of Essex on March 9, 1960, as instrument 215703, containing by ad-measurement an area of 0.3 hectares (0.75 acres), more or less and being more particularly described as follows:

PREMISING that the bearings mentioned are magnetic and are referred to the year 1889 at which time the variation was 1 degree 20 minutes West;

COMMENCING at a point distant One Hundred and Fifty feet (150’) measured South, magnetically (South 1 degree 20 minutes West, astronomically) from a red cedar post planted on the North shore of the said Island by the Department of Marine and Fisheries of Canada;

Thence South, magnetically (South 1 degree 20 minutes West astronomically) a distance of Two Hundred and Seventeen feet (217’);

Thence East, magnetically, (South 88 degrees 40 minutes East astronomically) a distance of One Hundred and Fifty feet (150’);

Thence North, magnetically, (North 1 degree 20 minutes East astronomically) a distance of Two Hundred and Seventeen feet (217’);

Thence West, magnetically, (North 88 degrees 40 minutes West astronomically) a distance of One Hundred and Fifty feet (150’), more or less, to the point of commencement.

Together with a right-of-way, 25 feet in perpendicular width, lying East of and adjacent to a line drawn North, magnetically, (North 1 degree 20 minutes East astronomically) from the point of commencement of the above described parcel, the said strip of land extending Northerly from the Northern boundary of the above described parcel to the natural High Water Mark of Lake Erie, which said parcel is shown on a plan of survey dated October 1889, of record in the Department of Transport, at Ottawa, a copy of which plan is attached to an instrument between Elizabeth Bender and Her Majesty the Queen in right of Canada, dated January 6, 1958, registered March 9, 1960 as Instrument 215703.

The remainder of Middle Island containing about 19.7 hectares (48.7 acres).

Said parcels described under Firstly and Secondly containing together about 1,520 hectares.

(3) GEORGIAN BAY ISLANDS NATIONAL PARK OF CANADA

All those islands or parts of islands in Georgian Bay, Province of Ontario, as follows:

(a) Islands or parts of islands opposite Baxter Township, now Township of Georgian Bay, in the District Municipality of Muskoka.

Beausoleil Island according to plan 789 in the Canada Lands Surveys Records at Ottawa, being a plan of said Island, by W. Galbraith, Ontario Land Surveyor, dated August 10, 1907;

Beausoleil Island containing about 1098 hectares.

The following 6 islands according to plan 385 in said Records, being a plan of Islands in Georgian Bay, by C.E. Fitton, Ontario Land Surveyor, dated January 4, 1897:

Island 92, containing about 11.36 hectares

Island 92H, containing about 0.10 hectare

Island 92I, containing about 0.11 hectare
Island 92M, containing about 0.08 hectare

Island 93, containing about 3.65 hectares

Island 118A, containing about 0.02 hectare

The following 4 islands according to plan 380 in said Records, being a map of certain islands in Georgian Bay, by J.G. Sing, Dominion and Ontario Land Surveyor, dated April 16, 1900:

Island 147K, containing about 0.36 hectare

Island 147L, containing about 0.01 hectare

Island 183 (Gin Rock), containing about 1.30 hectares

Island 184 (McCrosson’s Island), containing about 1.40 hectares

The following 11 islands according to plan 381 in said Records, being a map of Certain Islands in Georgian Bay, by J.G. Sing, Dominion and Ontario Land Surveyor, dated April 16, 1900:

Island 147A, containing about 0.04 hectare

Island 147-O, containing about 0.61 hectare

Island 147U, containing about 0.03 hectare

Island 147V, containing about 0.04 hectare

Island 154, containing about 0.53 hectare

Island 163A, containing about 0.02 hectare

Island 163B, containing about 0.01 hectare

Island 176, containing about 0.38 hectare

Island 189, containing about 0.22 hectare

Island 190, containing about 0.18 hectare

Island 194, containing about 0.20 hectare

Lot B, Island No. 95, according to plan 43498, in said Records, a copy of which is registered in the Land Registry Office at Bracebridge under number 24562;

Lot B, containing about 17.85 hectares

(b) Islands or parts of islands opposite Gibson Township, now Township of Georgian Bay, in the District Municipality of Muskoka.

Lots E, F and M, Bone Island (No. 75) according to plan 50222 in said Records, a copy of which is deposited in said Office under number 28622;

Lot E, containing about 12.34 hectares

Lot F, containing about 6.19 hectares
Lot M, containing about 4.03 hectares

Lot D, Portage Island (No. 139) according to plan 43499 in said Records, a copy of which is registered in said Office under number 24563;

Lot D, containing about 7.53 hectares

Island 200 (Gray Island) according to plan 399 in said Records, being a plan of Certain Islands in Georgian Bay, by J.G. Sing, Dominion and Ontario Land Surveyor, dated April 20, 1901;

Island 200, containing about 5.06 hectares

(c) Island opposite Freeman Township, now Township of Georgian Bay, in the District Municipality of Muskoka.

The following 3 islands according to said plan 399;

Island 220, containing about 0.49 hectare

Island 221, containing about 0.93 hectare

Island 226, containing about 0.53 hectare

The following 11 islands according to plan 409 in said Records, being a plan of certain islands in Georgian Bay, by J.G. Sing, Dominion and Ontario Land Surveyor, dated June 12, 1902;

Island 355, containing about 0.75 hectare

Island 356, containing about 1.21 hectares

Island 358, containing about 1.98 hectares

Island 359, containing about 1.50 hectares

Island 371, containing about 0.89 hectare

Island 371A (Gilford Rocks), containing about 0.71 hectare

Island 372, containing about 0.81 hectare

Island 373, containing about 0.45 hectare

Island 374, containing about 0.40 hectare

Island 383, containing about 1.17 hectares

Island 397, containing about 19.32 hectares

Island 400, containing about 0.40 hectare, according to plan 407 in said Records, being a plan of certain islands in Georgian Bay, by J.G. Sing, Dominion and Ontario Land Surveyor, dated June 12, 1902.

Island 402, containing about 1.01 hectares, according to plan 405 in said Records, being a plan of certain islands in Georgian Bay, by J.G. Sing, Dominion and Ontario Land Surveyor, dated June 12, 1902.

(d) Islands opposite Conger Township, now Township of the Archipelago, in the District of Parry Sound.

The following 3 islands according to said plan 409;
Island 473, containing about 0.51 hectare

Island 497, containing about 1.32 hectares

Island 504 (McQuade Island), containing about 1.96 hectares

(e) Islands opposite St. Edmunds Township, north of Saugeen Peninsula in the County of Bruce;

The following 18 islands or parts thereof according to plan 2693 in said Records, being a plan showing Cape Hurd Islands compiled from surveys made by W.R. White, O.L.S., in 1936 and from information supplied by the Department of Marine, approved July 30, 1942:

Island 1, containing about 1.20 hectares

Island 2, containing about 0.20 hectare

Island 3, containing about 0.10 hectare

Island 5, containing about 0.40 hectare

Island 5A, containing about 0.10 hectare

Island 11, containing about 0.13 hectare

Island 12, containing about 0.60 hectare

Island 15, containing about 0.61 hectare

Island 16, containing about 0.10 hectare

Island 17, containing about 0.13 hectare

Cove Island saving and excepting 12.97 hectares off the north end thereof under instrument number 554;

The remainder of Cove Island containing about 887 hectares.

Big or North Otter Island, containing about 32.40 hectares

Little or South Otter Island, containing about 12.96 hectares

Williscroft Island, containing about 25.20 hectares

Turning Island, containing about 2 hectares

Bear’s Rump Island, containing about 88 hectares

Russell Island or Rabbit Island, containing about 81.36 hectares

Flowerpot Island saving and excepting thereout and therefrom land required for Lighthouse Reserve on Flowerpot Island as shown on a plan by W.P. Anderson, Chief Engineer, Department of Marine and Fisheries, dated May 6, 1899, recorded as Plan 51964 in said Records;

The remainder of Flowerpot Island containing about 188 hectares

Harbour Island containing about 3.6 hectares
Said Islands and parts of islands containing together about 25.64 square kilometres.

PART 6 — QUEBEC

(1) FORillon NATIONAL PARK OF CANADA

Starting from a point on the southeast right of way of highway No. 6A located 40 chains from the intersection of the northeast side of highway No. 6 with the extension of the southeast side of highway 6A; thence, successively the following lines and demarcations; a straight line southeasterly to a point on the dividing line between lots 29A and 28G in the 1st Range of the Township of Gaspé Bay-North located 77 chains from the dividing line between the 1st and 2nd Ranges of the said township, such distance measured along the dividing line between lots 28G and 29A; southwesterly, the dividing line between lots 29A and 28G and its extension to the southwest side of highway No. 6; the southwest side of highway No. 6 northwesterly to the dividing line between lots 34B and 34C in the 1st Range of the township of Gaspé Bay-North; the dividing line between lots 34B and 34C southwesterly to the average low water mark; in Gaspé Bay, a line running parallel to and 500 feet from the average low water mark, following the west and south coasts of Pénouil peninsula and the shore of the said bay to its meeting point with the extension of the dividing line between lots 15A and 14B in the 1st Range of the township of Gaspé Bay-North; the said extension and the dividing line between lots 15A and 14B to the northeast side of highway No. 6 (between the line dividing lots 29A and 28G and the line dividing lots 15A and 14B in the 1st Range of the township of Gaspé Bay-North, such line following the northeast and southwest sides of the 1st Range of the township of Gaspé Bay-North; the dividing line between lots 10I and 11A in the 1st Range South of the township of Gaspé Bay-North, such distance measured along the dividing line between lots 10I and 11A; a straight line southeasterly to a point on the dividing line between lots 10I and 11A in the 1st Range South of the township of Gaspé Bay-North located 79 chains from the dividing line between lots 10I and 11A in the 1st Range South of the township of Gaspé Bay-North; the dividing line between the 1st and 2nd Ranges of the township of Gaspé Bay-North, such distance measured along the dividing line between lots 15A and 14B; a straight line southeasterly to a point on the dividing line between lots 9 and 8A in the 1st Range of the township of Gaspé Bay-North located 72 chains from the dividing line between the 1st and 2nd Ranges of the said township, such distance measured along the dividing line between lots 9 and 8A; a straight line southeasterly to a point on the dividing line between lots 3A and 2A in the 1st Range of the township of Gaspé Bay-North located 90 chains from the dividing line between the 1st and 2nd Ranges of the said township, such distance measured along the dividing line between lots 3A and 2A; a straight line southeasterly to a point on the boundary between the townships of Gaspé Bay-North and Cap-des-Rosiers located 20 chains from the northeast side of highway No. 6, such distance measured along the boundary between the said townships; a straight line southeasterly to a point on the dividing line between lots 3C and 4A in the 1st Range South of the township of Cap-des-Rosiers located 58 chains from the dividing line between the 1st Range South and the 2nd Range South of the said township, such distance measured along the dividing line between lots 3C and 4A; a straight line southeasterly to a point on the dividing line between lots 8B and 9A in the 1st Range South of the township of Cap-des-Rosiers located 77 chains from the dividing line between the 1st Range South and the 2nd Range South of the said township, such distance measured along the dividing line between lots 8B and 9A; a straight line southeasterly to a point on the dividing line between lots 10I and 11A in the 1st Range South of the township of Cap-des-Rosiers located 79 chains from the dividing line between the 1st Range South and the 2nd Range South of the said township, such distance measured along the dividing line between lots 10I and 11A; a straight line southeasterly to a point on the east line of lot 19B in the 1st Range South of the township of Cap-des-Rosiers located 20 chains from the northeast side of highway No. 6, such distance measured along the east line of lot 19B; southerly the east line of lot 19B and its extension to a line parallel to and 152.4 metres from the average low water mark; in Gaspé Bay and the Gulf of St. Lawrence along a line parallel to and 152.4 metres from the average low water mark to the extension of the dividing line between lots B-56 and B-13 in the 1st Range East of the township of Cap-des-Rosiers; northwesterly, the said extension and the dividing line between lots B-56 and B-13 to the southeast side of highway No. 6; the southeast side of highway No. 6 southwesterly to the extension of the dividing line between lots B-18 and B-55 in the 1st Range East of the township of Cap-des-Rosiers; the said extension and the south line of lot B-18 to a point located 60 chains from the northwest side of highway No. 6, such distance measured along the south line of lot B-18; a straight line northwesterly to a point on the dividing line between lots 28-4 and 29-1 in the 1st Range North of the township of Cap-des-Rosiers located 63 chains from the limit between the 1st Range North and the 2nd Range North of the said township, such distance measured along the dividing line between lots 28-4 and 29-1; a straight line, northwesterly to the intersection of the dividing line between lots 60-5 and 61-1 in the 1st Range South of L’Anse-aux-Griffons in the township of Cap-des-Rosiers with the north line of lot 57-4 in the 1st Range North of the said township; a straight line, northwesterly to a point on the dividing line between lots 65-5 and 66-1 in the 1st Range South of L’Anse-aux-Griffons in the township of Cap-des-Rosiers located 45 chains from the north bank of the L’Anse-aux-Griffons river; northwesterly, the north bank of the said river to the dividing line between lots 11-4 and 12-1 in the 1st Range North of L’Anse-aux-Griffons in the township of Cap-des-Rosiers; northerly, the dividing line between lots 12-1 and 11-4 to a point located 82 chains from the dividing line between the 1st Range North of L’Anse-aux-Griffons and the 2nd Range North of

Said Islands and parts of islands containing together about 25.64 square kilometres.
L'Anse-aux-Griffons in the township of Cap-des-Rosiers, such distance measured along the dividing line between lots 11-4 and 12-1; a straight line northeasterly to a point on the dividing line between lots 4-2 and 5-1 in the 1st Range North of L'Anse-aux-Griffons in the township of Cap-des-Rosiers located 69 chains from the dividing line between the 1st Range North of L'Anse-aux-Griffons and the 2nd Range North of L'Anse-aux-Griffons in the said township, such distance measured along the dividing line between lots 5-1 and 4-2; northeasterly the dividing line between lots 5-1 and 4-2 to the northwest boundary of the 1st Range North of L'Anse-aux-Griffons in the township of Cap-des-Rosiers; northeasterly, the northwest side of the 1st Range North of L'Anse-aux-Griffons in the township of Cap-des-Rosiers to the southwest side of highway No. 6; the southwest side of the highway No. 6 to the dividing line between lots 4-2 and 5-1 in the 1st Range East of the township of Fox; southerly, the dividing line between lots 4-2 and 5-1 to the dividing line between the 1st Range East and the 2nd Range East of the township of Fox; northerly, the dividing line between the 1st Range East and the 2nd Range East of the township of Fox to the intersection of the dividing line between lots 520-3 and 520-4 in the 2nd Range East of the township of Fox; a straight line, northerly to the point of the intersection of the dividing line between lots 510 and 509-1 in the 2nd Range East of the township of Fox with the dividing line between the south range of the river and the 2nd Range East of the said township; westerly, the dividing line between the south range of the river and the 2nd Range East of the township of Fox to the dividing line between lots 127-1 and 129-1 in the south range of the river in the said township; northerly, the dividing line between lots 127-1 and 129-1 to a point located 64 chains from the dividing line between the south range of the river and the 2nd Range East in the township of Fox, such distance measured along the dividing line between lots 127-1 and 129-1; a straight line westerly to a point on the dividing line between lots 151-1 and 152 in the south range of the river in the township of Fox located 64 chains from the dividing line between the south range of the river and the 2nd Range East of the said township, such distance measured along the northeast line of lot 152; northerly, the dividing line between lots 151-1 and 152 to the south bank of the Rivière au Renard; northerly, the southwest bank of the Rivière au Renard to the southeast line of the side of highway No. 6A; southerly, the southeast side of highway No. 6A to the northeast bank of the Rivière au Renard; northerly, the northeast bank of the said river to the northeast line of lot 547-1 in the south range of the Fox township road; northerly, the northeast line of lot 547-1 to the southeast side of highway No. 6A; southerly, the southeast side of highway No. 6A to the southwest line of lot 562 in the north range of the Fox township road; southeasterly, the southwest line of lot 562 in the north range of the road and 559-1 in the south range of the road to a point located 49 chains from the dividing line between the south range of the road and the 5th Range East of the township of Fox, such distance measured along the northeast line of lot 560-1 in the south range of the Fox township road; a straight line, southerly to a point on the southwest line of lot 560-2 in the south range of the Fox township road located 41 chains from the dividing line between the south range of the road and the 5th Range East of the township of Fox, such distance measured along the southwest line of lot 560-2; northerly, the northeast line of lot 19 of the east range of the Gaspé Bay-North township road to the southeast side of highway No. 6A; northerly, the southeast side of highway No. 6A to the dividing line between lots 11 and 12 of the east range of the Gaspé Bay-North township road; southerly, the dividing line between lots 11 and 12 to the southeast boundary of the east range of the Gaspé Bay-North township road; southerly, the southeast boundary of the east range of the Gaspé Bay-North township road to the southwest line of lot 1 of the east range of the Gaspé Bay-North township road; northerly, the southwest line of lot 1 to the southeast side of highway No. 6A; finally, southerly, the southeast side of highway No. 6A to the starting point.

The area of the territory comprised within the limits above described is 21,696 hectares.

(2) **LA MAURICIE NATIONAL PARK OF CANADA**

In the county municipalities of Champlain and St-Maurice, in the Seigniories of Bastican and Cap de la Madeleine and the townsships at Allard, Belleau, Desaulniers, Matawin and Radnor: all that land bordered by a heavy line and dealt with as La Mauricie National Park on Canada Lands Surveys Records at Ottawa Plan 61255, containing 53,613 hectares, more or less.

**PART 7 — NEW BRUNSWICK**

(1) **FUNDY NATIONAL PARK OF CANADA**

All and singular that certain parcel or tract of land situated, lying and being in the Province of New Brunswick which may be more particularly described as follows:

Beginning at the Southeast corner of the breakwater situated on the West side of the outlet of the Upper Salmon (Alma) River; thence in a Northwesterly direction following the Easterly side of said breakwater and the Westerly shore at low tide of the said river for approximately three miles upstream to a point opposite the outlet of Lake Brook, a tributary of aforesaid river flowing from the East; thence across said river to the point of intersection between the East bank or shore of said Upper Salmon (Alma) River and the Northwest bank or
shore of said Lake Brook; thence in a Northeasterly direction following the various courses of said bank or
shore of said brook upstream to a point where the same intersects the East limit of the Highway Road leading
from Alma and Hebron vicinity to the Old Shepody Road; thence in a Northerly direction following said limit of
said Highway Road to its intersection with the Northern limit of the aforementioned Old Shepody Road; thence
in a Westerly direction following said limit of said Old Shepody Road (a portion of which is now Highway
Number Fourteen) to its intersection with the West limit of Lot Number Four, granted to Isaiah Wallace; thence
in a Southerly direction along said limit of said lot and the Southern prolongation of same South four degrees
and fifty-seven minutes West by the Magnet of the year 1947, a distance of eighty-three chains and ninety-nine
links to a Beech post standing in the South limit of Lot Number Sixty-eight, granted to W.A. McManus; thence
South eighty-six degrees and forty-eight minutes East along said limit of said lot, a distance of twenty-seven
chains and eighty-six links to a Spruce post standing in the West limit of Lot Letter V, granted to J. Vernon;
thence along said limit of said lot South four degrees and forty-four minutes West, a distance of twelve chains
and forty-two links to another Spruce post standing in the Southwest angle of said lot; thence along the South
limit of said lot South eighty-six degrees and twenty-five minutes East, a distance of nine chains and eighty-
seven links to a point in the Eastern bank or shore of Drummond Stream (the outlet of Point Wolfe Lake);
thence in a Southerly direction along said bank or shore of said Stream to the Northeasterly bank or shore of
Point Wolfe River; thence in a Southeastern direction along said bank or shore of said River to a point opposite
a tributary of said River flowing from Keyhole Lake, said outlet being approximately thirty chains below the
outlet of Drummond Stream; thence across said River to the point of intersection between the Eastern bank or
shore of said tributary and the Southwestern bank or shore of said River; thence in a Southerly direction
following said bank or shore of said tributary and said bank or shore of Keyhole Lake to a Spruce post standing
in the Southern bank or shore of said Lake; thence by the Magnet of the aforesaid year South twenty-one
degrees East, a distance of twenty-four chains and twenty-nine links to another Spruce post standing in the
Northern bank or shore of Meadow Lake, said lake situated on the West branch of Goose River approximately
one mile above the outlet of said branch; thence in a Southerly direction following the Western bank or shore of
said lake to a point in the Eastern bank or shore of the aforesaid West branch; thence in a Southerly direction
following said bank or shore of said branch and said bank or shore of Goose River to the shore of the Bay of
Fundy; thence in a general Easterly direction along said shore of said Bay to the Western side of the aforesaid
breakwater; and thence in a Southerly and Easterly direction along said breakwater to the place of beginning.

Containing seventy-nine and one-half square miles, more or less, and situated in the Parish of Alma, County
of Albert, Parishes of Waterford and Hammond, County of Kings, and Parish of St. Martins, County of Saint
John.

(2) KOUCHIBOUGUAC NATIONAL PARK OF CANADA

In the Province of New Brunswick;

In the County of Kent;

All those parcels described under Firstly and Secondly as follows:

Firstly:

All that parcel according to a plan recorded in the Canada Lands Surveys Records at Ottawa as 61463;

said parcel containing about 23 882 hectares.

Secondly:

All that parcel designated as “Remainder of 73” on a plan recorded in the Canada Lands Surveys Records
at Ottawa as 59734, a copy of which is filed in the Registry Office at Richibucto as 2724A;

said parcel containing about 40.9 hectares.

Said parcels containing together about 23 922.9 hectares.

PART 8 — NOVA SCOTIA

(1) CAPE BRETON HIGHLANDS NATIONAL PARK OF CANADA
In the Province of Nova Scotia;

In the Counties of Inverness and Victoria;

The whole of Cape Breton Highlands National Park shown bordered red on Plan 53565 in the Canada Lands Surveys Records at Ottawa, copies of which are registered in the Registries of Deeds at Port Hood and at Baddeck as 124-1967 and 995-A, respectively;

Saving and excepting, that parcel at Ingonish, being a part of Crown Grant No. 5219 made to Honourable T.D. Archibald, September 20, 1860, and being more particularly described as follows:

Beginning at a point on the southeastern boundary of lands conveyed by the said T.D. Archibald to the Trustees of the Roman Catholic Church at Ingonish, at a distance of 388.01 metres from the intersection of said boundary with the line of high water mark on the shore of North Bay Ingonish, said point being marked by an iron bar stamped with the letter “R”;

Thence southwesterly along the said boundary a distance of 291.694 metres;

Thence northwesterly at right angles to said southeastern boundary, following a blazed line passing approximately 2 metres south of the well on the Church property, a distance of 100.58 metres, more or less, to the northwestern boundary of the lands conveyed as aforesaid to the said Trustees;

Thence northeasterly along the said northwestern boundary a distance of 291.69 metres, more or less, to an iron bar stamped with the letter “T”, said iron bars being shown on plan 53859 in the Canada Lands Surveys Records at Ottawa;

Thence at right angles to the said northwestern boundary in a southeasterly direction a distance of 100.58 metres, more or less, to the point of beginning;

Also saving and excepting, that strip of land, 6.096 metres wide, adjoining the northwestern boundary of the parcel described above, and extending from the Cabot Trail to the northwesterly extension of the line joining said iron bars “R” and “T”;

Also saving and excepting, that parcel at Ingonish designated CB-9 according to a plan recorded in the Canada Lands Surveys Records at Ottawa as 65443, a copy of which is registered in the Registry of Deeds at Baddeck as P-60;

Also saving and excepting, those parcels of land at Neils Harbour designated CB-11 and CB-12 on plan No. 69189 recorded in the Canada Lands Surveys Records at Ottawa a copy of which is recorded in the Registry of Deeds Office in Baddeck as Plan No. P-759.

The above described lands contain an area of 948 square kilometres, more or less.

(2) KEJIMKUJIK NATIONAL PARK OF CANADA

In the Province of Nova Scotia;

All those parcels more particularly described under Firstly and Secondly as follows:

Firstly:

All that parcel in the counties of Annapolis, Digby and Queens, as shown on Plan 55629 recorded in the Canada Lands Surveys Records at Ottawa, copies of which are registered in the Registrar of Deeds Offices at Bridgetown, Weymouth and Liverpool as 74238, 1215 and 6496 respectively;

said parcel containing about 38 145.7 hectares (94,260 acres).

Secondly:
All that parcel at South West Port Mouton, Queens County, as shown on a plan of survey by David L. Crooker, N.S.L.S., a copy of which is recorded in the Canada Lands Surveys Records at Ottawa under number 70492;

said parcel containing about 2218 hectares (5,480 acres).

Said parcels containing together about 40,363.7 hectares (99,740 acres).

PART 9 — PRINCE EDWARD ISLAND

PRINCE EDWARD ISLAND NATIONAL PARK OF CANADA

All those parcels along the northerly coast of Prince Edward Island, described under Parcel 1 to Parcel 5 as follows:

Parcel No. 1

Commencing at the most easterly intersection of the line of mean high tide along the northerly side of an indentation of New London Bay with the most westerly of the rectilinear boundaries of Parcel 1, as said intersection, indentation and boundaries are shown on Plan 51557 in the Canada Lands Surveys Records at Ottawa, a copy of which has been registered in the Office of the Registrar of Deeds for the county of Queens at Charlottetown under number 1304;

Thence westerly along said line of mean high tide and the line of mean high tide along the northerly side of New London Bay to the line of mean high tide of the Gulf of St. Lawrence, at the easterly side of the entrance to New London Bay;

Thence easterly and southeasterly along the last aforesaid line of mean high tide to its intersection with the most easterly of said rectilinear boundaries, near the westerly side of the entrance to Rustico Harbour;

Thence in a general northwesterly direction along said rectilinear boundaries to a legal survey marker on the easterly limit of a road right-of-way, commonly referred to as the Cawnpore Lane, as said marker and easterly limit of the Cawnpore Lane are shown on Plan 55710 recorded in said records, a copy of which is filed in said office under number 661;

Thence southerly along said easterly limit of the Cawnpore Lane to a legal survey marker on the north limit of the Cavendish Road, as said marker and road are shown on the last aforementioned plan;

Thence in a westerly direction along the projected north limit of the Cavendish Road to a point 20.12 metres from the last aforesaid survey marker, as said point is witnessed by standard post N.P. 12 shown on the last mentioned plan;

Thence continuing along the said rectilinear boundaries, being, in part, the westerly boundary of Lot A and the southerly boundary of Lot C, as said lots and rectilinear boundaries are shown on said plan 51557 to the point of commencement;

EXCEPT those parcels described as follows:

All that parcel lying easterly of and adjoining the easterly boundary of the Gulf Shore Road, as said parcel is shown bordered red in Detail B on last aforesaid plan;

All that parcel of land southerly of the Cavendish Cemetery as said parcel containing 0.32 hectare is shown on plan 62872 in said records, a copy of which is filed under number 3594 in said office;

Parcels 1-4-1, 1-5 and 1-6 as shown on Plan 77754 in said records, a copy of which is filed in said office under number 9246.

Parcels No. 2 & 3
Commencing at the intersection of the line of mean high tide along the easterly side of Rustico Bay with the southerly boundary of Parcel 3, as the said boundary is shown on Plan 43502 in the Canada Lands Surveys Records at Ottawa a copy of which is registered in the Office of the Registrar of Deeds for the County of Queens at Charlottetown under number 1005;

Thence easterly along said southerly boundary to an iron post marked XLIII, the last aforesaid post being shown on a compiled plan approved and confirmed by Bruce Wallace Waugh, Surveyor General at Ottawa, on March 18, 1953, the last aforesaid plan being recorded as 41714 in said records, a copy of which was registered on May 4, 1953, in the said office;

Thence southeasterly in a straight line to an iron post marked XLIV according to the last aforesaid plan;

Thence continuing southeasterly along the production of the last aforesaid line to the line of mean high tide along the northerly side of Brackley Bay;

Thence easterly along the line of mean high tide of Brackley Bay and Covehead Bay to the line of mean high tide of the Gulf of St. Lawrence, at the westerly side of the entrance to Covehead Bay;

Thence westerly along the last aforesaid line of mean high tide, past the causeway to Rustico Island to the line of mean high tide along the easterly side of the entrance to Rustico Harbour;

Thence southerly and easterly along the last aforesaid line of mean high tide and the line of mean high tide along the northerly and easterly sides of Rustico Bay to the point of commencement.

Parcel No. 4

Commencing at the intersection of the line of mean high tide along the easterly side of Covehead Harbour with the most westerly of the landward boundaries of Parcel 4, as the last aforesaid intersection and boundaries are shown on Plan 42611 in the Canada Lands Surveys Records at Ottawa, a copy of which has been filed in the Office of the Registrar of Deeds for the county of Queens at Charlottetown under number 1804;

Thence in a general easterly direction along said landward boundaries to the line of mean high tide along the westerly side of Tracadie Harbour;

Thence northwesterly, westerly and southwesterly along the lines of mean high tide of Tracadie Harbour, the Gulf of St. Lawrence and Covehead Harbour respectively to the point of commencement.

Parcel No. 5

Commencing at the most northerly intersection of the line of mean high tide along the easterly side of Tracadie Bay with the east boundary of Parcel 5 distant 166.12 metres, more or less, north from a standard concrete post numbered 132-11-L, as said intersection, east boundary and post are shown on Plan 42612 in the Canada Lands Surveys Records at Ottawa, a copy of which has been filed in the Office of the Registrar of Deeds for the county of Queens at Charlottetown under number 1805;

Thence westerly, northerly and easterly along the lines of mean high tide of Tracadie Bay, Tracadie Harbour and the Gulf of St. Lawrence respectively, to said east boundary;

Thence south along said east boundary to the point of commencement.

Said parcels 1 to 5 containing together about 2,149.8 hectares (21.5 square kilometres).

PART 10 — NEWFOUNDLAND

(1) TERRA NOVA NATIONAL PARK OF CANADA

Firstly:

All that certain tract or parcel of land situate, lying, and being in the former districts of Bonavista North and
Firstly:

All that certain tract or parcel of land, situate, lying, and being in the District of Terra Nova, in the Province of Newfoundland, as the same is shown as Parcel A on a plan recorded in the Canada Lands Surveys Records in Ottawa under number 69827; a copy of said plan is also filed in the Registry of Deeds in St. John’s, Newfoundland, under number 1407; said parcel or tract contains an area of 365 hectares.

Secondly:

All that certain tract or parcel of land, situate, lying, and being in the District of Terra Nova, in the Province of Newfoundland, as the same is shown on a plan recorded in the Canada Lands Surveys Records at Ottawa under number 50066, a copy of said plan is also registered in the Registry of Deeds in St. John’s, Newfoundland in volume 455, folio 44; said parcel or tract contains an area of 39,627 hectares.

(2) GROS MORNE NATIONAL PARK OF CANADA

All that certain tract of land, situate, lying and being in the District of St. Barbe (formerly St. Barbe South and St. Barbe North) and Bay of Islands (formerly Humber West) in the Province of Newfoundland, shown as "Proposed Gros Morne National Park" on a plan of survey recorded in the Canada Lands Surveys Records at Ottawa under Number 69288. A copy of said plan is also filed in the Registry of Deeds Office in St. John's, Newfoundland, under Number 1209;

Said tract or tracts contains an area of approximately 1805 square kilometres and includes the White Rock Islets and Stearing Island and excludes Parcel 4.

PART 11 — YUKON

(1) IVVAVIK NATIONAL PARK OF CANADA

All latitudes and longitudes hereinafter are referred to the North American Datum of 1927; all topographic features hereinafter are according to Editions 1 of National Topographic Series Maps 117B/9, 117A/12 Cottonwood Creek, 117A/11 Welcome Mountain, 117D/3E and 3W Crow River, 117D/6E and 6W Kay Point, 117D/5E Loney Creek, 117D/11W & 117D/12E Herschel Island, 117D/12W Herschel Island, and 117C/9E and 9W Clarence Lagoon, and Edition 2 of N.T.S. Map 117A/14 Babbage River, all produced at a scale of 1:50,000 by the Department of Energy, Mines and Resources at Ottawa, and a part of the Canada-United States International Boundary Atlas;

In Yukon;

That certain parcel of land more particularly described as follows:

Commencing at the point of intersection of the Canada-United States International Boundary, near monument number 26 of said boundary, with a line of watershed separating the streams flowing into the Porcupine River System from those flowing into the Beaufort Sea, at approximate latitude 68°33′25″;

Thence generally easterly following said line of watershed to its intersection with the longitude passing through Geodetic Surveys of Canada triangulation station Pete 51-A number 568051 at approximate latitude 68°37′17″; said station being on record in the Geodetic Data Bank of the Department of Energy, Mines and Resources at Ottawa, having published geographic coordinate values of latitude 68°37′17.08385″ and longitude 139°44′37.86856″;

Thence north along said longitude to its intersection with the right bank of Babbage River at approximate latitude 68°38′12″;

Thence generally easterly and northerly along the sinuosities of the right bank of said river to a point on the low water mark of Phillips Bay in the Beaufort Sea, at approximate latitude 69°14′55″ and approximate longitude 138°26′20″;

Thence southwesterly and generally northwesterly along the low water mark of said bay to a point being at the most northerly extremity of Catton Point, at approximate latitude 69°30′14″ and approximate longitude 139°06′37″;
Thence northwesterly in a straight line, in Workboat Passage between Herschel Island and the mainland, to a point on the low water mark, at the most easterly extremity of an unnamed island south of Avadlek Spit, said point being at approximate latitude 69°32′20″ and approximate longitude 139°18′40″;

Thence westerly along said low water mark on the north side of said unnamed island and continuing westerly across the waters and along the low water mark on the north side of a series of unnamed islands to the easterly extremity of Nunaluk Spit at approximate latitude 69°33′17″ and approximate longitude 139°31′16″ (The north boundary of Ivvavik National Park between said series of islands is defined as being a straight line running westerly from the most northwesterly point of an island to the most northeasterly point of the next island);

Thence generally westerly along the low water mark on the north side of Nunaluk Spit and the coast of the Beaufort Sea to its intersection with the Canada-United States International Boundary at approximate latitude 69°39′00″;

Thence south along said international boundary to the point of commencement;

Said parcel including all shoals, islands, sandbars and spits that may be periodically exposed at low tide within 3.5 kilometres of the shore and all islands, sandbars and spits lying within Phillips Bay, but not including Herschel Island and its sandbars spits and immediately adjoining islets;

Said parcel containing about 9750 square kilometres.

(2) VUNTUT NATIONAL PARK OF CANADA

All latitudes and longitudes hereinafter described are referred to the North American Datum of 1927; all topographic features hereinafter referred to being according to Edition 1 of the National Topographic Series Maps 117A/3, 117A/4, 117A/5, 117A/6, 117A/11, 117A/12, 117B/1, 117B/8 and 117B/9 produced at a scale of 1:50,000 by the Department of Energy, Mines and Resources at Ottawa, and a part of the Canada-United States International Boundary Atlas;

In Yukon;

That parcel of land more particularly described as follows:

Commencing at the point on the Canada-United States International Boundary near monument number 26 of said boundary and a line of watershed separating the streams flowing into the Porcupine River System from those flowing into the Beaufort Sea, at approximate latitude 68°33′25″;

Thence generally easterly following said line of watershed to the northeasterly production of the right bank of an unnamed tributary of Black Fox Creek at approximate latitude 68°29′52″ and approximate longitude 138°22′31″;

Thence southwesterly along said northeasterly production, and generally southwesterly along the right bank of said tributary to the right bank of Black Fox Creek;

Thence generally southwesterly along the right bank of Black Fox Creek to the left bank of the Old Crow River;

Thence generally northwesterly, southwesterly and northwesterly along the left bank of the Old Crow River to said International Boundary;

Thence north along said International Boundary to the point of commencement;

Said parcel containing about 4345 square kilometres.
PART 12 — NORTHWEST TERRITORIES

(1) AULAVIK NATIONAL PARK OF CANADA

In the Northwest Territories;

On Banks Island;

All that parcel being more particularly described as follows; all topographic features hereinafter referred to being according to the First Edition of the Cape M’Clure map sheet, and the Second Edition of the Mercy Bay, White Sand Creek, Deans Dundas Bay, Jesse Harbour and Bernard River map sheets, 98E, 88F, 88C, 88B, 98A and 98D and C of the National Topographic System, produced at a scale of 1:250,000 by the Department of Energy, Mines and Resources at Ottawa (map sheets 98E, 88B and 88C being produced by the Army Survey Establishment, R.C.E.). All co-ordinates are derived from the above mentioned map sheet series being referred to the North American Datum of 1927.

Commencing at a point on the ordinary low water mark of M’Clure Strait at the mouth of an unnamed creek at approximate latitude 74°16′37″ north and approximate longitude 117°58′44″ west;

Thence southeasterly in a straight line an approximate distance of 28 kilometres to a point at latitude 74°02′51″ north and longitude 117°38′20″ west;

Thence southerly in a straight line an approximate distance of 24 kilometres to a point at latitude 73°50′00″ north and longitude 117°38′00″ west;

Thence west in a straight line an approximate distance of 11 kilometres to a point at latitude 73°50′00″ north and longitude 118°00′00″ west;

Thence south in a straight line an approximate distance of 48 kilometres to a point at latitude 73°24′00″ north and longitude 118°00′00″ west;

Thence southwesterly in a straight line an approximate distance of 23 kilometres to a point at latitude 73°16′00″ north and longitude 118°32′00″ west;

Thence west in a straight line an approximate distance of 21 kilometres to a point at latitude 73°16′00″ north and longitude 119°12′00″ west;

Thence south in a straight line an approximate distance of 35 kilometres to a point at latitude 72°57′00″ north and longitude 119°12′00″ west;

Thence west in a straight line an approximate distance of 32 kilometres to a point at latitude 72°57′00″ north and longitude 120°10′00″ west;
Thence north in a straight line an approximate distance of 47 kilometres to a point at latitude 73°22'00" north and longitude 120°10'00" west;

Thence northwesterly in a straight line an approximate distance of 30 kilometres to a point at latitude 73°30'00" north and longitude 121°00'00" west;

Thence north in a straight line an approximate distance of 6 kilometres to a point at latitude 73°33'00" north and longitude 121°00'00" west;

Thence west in a straight line an approximate distance of 8 kilometres to a point at latitude 73°33'00" north and longitude 121°15'00" west;

Thence north in a straight line an approximate distance of 4 kilometres to a point at latitude 73°35'00" north and longitude 121°15'00" west;

Thence west in a straight line an approximate distance of 10 kilometres to a point at latitude 73°35'00" north and longitude 121°35'00" west;

Thence north in a straight line an approximate distance of 13 kilometres to a point at latitude 73°42'00" north and longitude 121°35'00" west;

Thence east in a straight line an approximate distance of 11 kilometres to a point at latitude 73°42'00" north and longitude 121°14'00" west;

Thence north in a straight line an approximate distance of 86 kilometres to a point at latitude 74°28'00" north and longitude 121°14'00" west;

Thence northeasterly in a straight line an approximate distance of 6 kilometres to the point of intersection of the ordinary low water mark on the south side of M'Clure Strait with latitude 74°29'00" north at approximate longitude 121°02'56" west;

Thence southeasterly following the ordinary low water mark of the south side of M'Clure Strait to the western end of the sand or gravel bar located at the mouth of Castel Bay, at approximate latitude 74°14'29" north and approximate longitude 119°40'00" west;

Thence easterly along the northerly side of said sand or gravel bar extending across the mouth of Castel Bay and the ordinary low water mark of M'Clure Strait to the most northerly tip of Mahogany Point;

Thence easterly, southerly, easterly, northerly and northeasterly following the ordinary low water mark of the south side of M'Clure Strait and the westerly, southerly and easterly sides of Mercy Bay and the said south side of M'Clure Strait to the point of commencement.

Containing approximately 12 200 square kilometres.

(2) TUKTUT NOGAIT NATIONAL PARK OF CANADA

In the Northwest Territories;

In the Inuvialuit Settlement Region;

All that parcel being more particularly described as follows: (Geographic coordinates are North American
Commencing at a point being the intersection of the shoreline of Amundsen Gulf and the mouth of the Outwash River at approximate latitude 69°33′ north and approximate longitude 120°40′51″ west, the said point being a corner of the Inuvialuit Settlement Region as described in Annex A-1 of the Agreement referred to in the Western Arctic (Inuvialuit) Claims Settlement Act (S.C. 1984, c. 24);

Thence south in a straight line along the limit of the Inuvialuit Settlement Region to a point at latitude 68°00′ north and approximate longitude 120°40′51″ west (said point being a corner of the Inuvialuit Settlement Region);

Thence west along latitude 68°00′ north, also being the limit of the Inuvialuit Settlement Region, to its intersection with longitude 122°05′ west;

Thence northwesterly in a straight line to a point having a latitude of 68°30′ north and longitude 123°20′ west;

Thence north along longitude 123°20′ west to its intersection with the surveyed boundary of the Paulatuk 7 (1)(b) lands at approximate latitude 69°00′ north;

Thence easterly along the surveyed boundary of the Paulatuk lands to the surveyed corner at approximate latitude 69°19′ north and approximate longitude 123°10′ west;

Thence northerly along the surveyed boundary of the Paulatuk 7(1)(b) and 7(1)(a) lands to the surveyed corner of the 7(1)(b) lands at approximate latitude 69°27′46″ north and approximate longitude 120°51′51″ west;

Thence northerly and easterly along the middle thread of the Outwash River to the point of commencement.

Said parcel containing about 16 340 square kilometres.

PART 13 — NUNAVUT

(1) SIRMILIK NATIONAL PARK OF CANADA

In Nunavut;

All those parcels described as Parts I to IV as follows:

PART I

On Baffin Island;

All that parcel being more particularly described as follows: All topographic features hereinafter referred to being according to the first edition of the Pond Inlet and Icebound Lakes map sheets, 38B and 37G of the National Topographic System, as shown on sheets 13 and 10 of 237 respectively of maps recorded in the Land Titles Office at Yellowknife as 2405-13 and 2405-10 respectively, copies of which are recorded in the Canada Lands Surveys Records at Ottawa as 77288. All co-ordinates are derived from the above mentioned map sheets and are referred to the 1927 North American Datum.

Commencing at boundary monument 177PI as shown on Plan of Parcel PI-24 recorded in said records as 82874, a copy of which is filed in said office as 3405;
Thence on a bearing of 114°10′31″, a distance of 27 201.56 metres to boundary monument 176PI as shown on said plan;

Thence southeasterly to a height of land at approximate latitude 72°14′30″ and approximate longitude 77°11′00″;

Thence southeasterly to a height of land at approximate latitude 72°11′00″ and approximate longitude 76°26′00″;

Thence southwesterly to a height of land at approximate latitude 71°46′20″ and approximate longitude 76°52′00″;

Thence westerly to boundary monument 66PI as shown on Plan of Parcel PI-12 recorded in said records as 82872, a copy of which is filed in said office as 3408;

Thence on a bearing of 9°49′13″, a distance of 3 294.30 metres to boundary monument 75PI as shown on said plan;

Thence on a bearing of 275°21′29″, a distance of 5 412.98 metres to boundary monument 74PI as shown on said plan;

Thence on a bearing of 336°45′38″, a distance of 7 679.00 metres to boundary monument 73PI as shown on said plan;

Thence on a bearing of 73°57′32″, a distance of 6 381.74 metres to boundary monument 72PI as shown on said plan;

Thence on a bearing of 319°32′01″, a distance of 4 199.38 metres to boundary monument 71PI as shown on said plan;

Thence on a bearing of 256°10′48″, a distance of 12 526.34 metres to boundary monument 70PI as shown on said plan;

Thence on a bearing of 168°47′25″, a distance of 6 127.41 metres to boundary monument 69PI as shown on said plan;

Thence northwesterly along the sinuosity of the ordinary high water mark of Paquet Bay and northerly along the sinuosity of the ordinary high water mark of the easterly coast of Tay Sound to boundary monument 162PI as shown on Plan of Parcel PI-22 recorded in said records as 82873, a copy of which is filed in said office as 3409;

Thence on a bearing of 77°20′14″, a distance of 2 062.04 metres to boundary monument 161PI being at the intersection of the ordinary high water mark of an unnamed lake and the ordinary high water mark of the left bank of an unnamed stream at the southerly extremity of said unnamed lake as shown on said plan;

Thence northerly along the ordinary high water mark of the western shore of said lake to its intersection with the ordinary high water mark of the left bank of an unnamed stream, and continuing northerly along the ordinary high water mark of the left bank of said stream to point 220028LWM as shown on sheet 8 of 13 of a Descriptive Map Plan registered in said office as 2690, a copy of which is recorded in said records as 77971, said point being further described as the intersection of the ordinary high water mark of the left bank of said stream with the ordinary high water mark of Tay Sound at approximate latitude 72°19′55″ and approximate longitude 78°43′50″;

Thence northeasterly along the sinuosity of the ordinary high water mark of Tay Sound to the northerly
extremity of the promontory known as Oorbignaluk Headland at approximate latitude 72°22′00″ and approximate longitude 78°36′15″;

Thence northeasterly across Oliver Sound to boundary monument 177PI being the point of commencement as shown on said Plan of Parcel PI-24.

Said parcel described under Part I containing about 3 144 square kilometres.

**PART II**

On Bylot Island;

All that parcel being more particularly described as follows:

All topographic features hereinafter referred to being according to the first editions of the Pond Inlet and Milne Inlet map sheets 38B and 48A and the second edition of the Navy Board Inlet map sheet 48D of the National Topographic System, as shown on sheets 13, 27 and 30 of 237 respectively of maps recorded in the Land Titles Office at Yellowknife as 2405-13, 2405-27 and 2405-30 respectively, copies of which are recorded in the Canada Lands Surveys Records at Ottawa as 77288, as well as the second edition of Bylot Island map sheet 38C of the National Topographic System, produced at a scale of 1:250,000 by the Department of Energy, Mines and Resources (formerly Department of Mines and Technical Surveys) at Ottawa. All co-ordinates are derived from the above mentioned map sheets and are referred to the 1927 North American Datum.

Commencing at boundary monument 179PI as shown on Plan of Parcel PI-28 recorded in said records as 82875, a copy of which is filed in said office as 3407;

Thence westerly, northwesterly, northerly, easterly and southeasterly along the sinuosity of the ordinary high water mark of Eclipse Sound, Navy Board Inlet and Baffin Bay to boundary monument 36PI as shown on Plan of Parcel PI-29 recorded in said records as 82871, a copy of which is filed in said office as 3406;

Thence on a bearing of 210°17′11″, a distance of 8 786.12 metres to boundary monument 35PI as shown on said plan;

Thence on a bearing of 249°38′15″, a distance of 7 882.77 metres to boundary monument 34PI as shown on said plan;

Thence on a bearing of 200°27′17″, a distance of 3 248.81 metres to boundary monument 33PI as shown on said plan;

Thence westerly along the ordinary high water mark of Pond Inlet and the northerly coast of Eclipse Sound to boundary monument 183PI as shown on said Plan of Parcel PI-28 recorded in said records as 82875, a copy of which is filed in said office as 3407;

Thence on a bearing of 6°14′21″, a distance of 6 754.00 metres to boundary monument 182PI as shown on said plan;

Thence on a bearing of 258°41′12″, a distance of 12 600.00 metres to boundary monument 181PI as shown on said plan;

Thence on a bearing of 220°58′27″, a distance of 7 475.51 metres to boundary monument 180PI as shown on said plan;

Thence on a bearing of 26°14′23″, a distance of 13 892.64 metres to boundary monument 179PI as shown on said plan, being the point of commencement.

SAVING AND EXCEPTING a parcel of land known as Polar Sport Hunt Camp situated in the vicinity of Cape Walter Bathurst, in accordance with article 14.3.1 of An Inuit Impact and Benefit Agreement between the Inuit of...
the Nunavut Settlement Area and Her Majesty the Queen in Right of Canada, signed in Pond Inlet on the 12th day of August, 1999, said parcel being more particularly described as follows:

Commencing at the intersection of longitude 76°48′00″ and the ordinary high water mark of Baffin Bay at approximate latitude 73°19′30″;

Thence south in a straight line to the intersection of said longitude with latitude 73°18′00″;

Thence west in a straight line to the intersection of said latitude with the ordinary high water mark of the right bank of an unnamed stream at approximate longitude 76°57′30″;

Thence northeasterly along the ordinary high water mark of the right bank of said unnamed stream to its intersection with the ordinary high water mark of Bathurst Bay at approximate latitude 73°19′00″ and approximate longitude 76°56′00″;

Thence easterly along the sinuosity of the ordinary high water mark of Bathurst Bay and Baffin Bay to the point of commencement.

Said parcel containing about 11 square kilometres.

The remainder of the parcel described under Part II containing about 10 858 square kilometres.

PART III

On Baffin Island;

All that parcel being more particularly described as follows: All topographic features hereinafter referred to being according to the first edition of the Milne Inlet map sheet 48A and the second edition of the Navy Board Inlet map sheet 48D of the National Topographic System, as shown on sheets 27 and 30 of 237 respectively of maps recorded in the Land Titles Office at Yellowknife as 2405-27 and 2405-30 respectively, copies of which are recorded in the Canada Lands Surveys Records at Ottawa as 77288. All co-ordinates are derived from the above mentioned map sheets and are referred to the 1927 North American Datum.

Commencing at boundary monument 233PI as shown on Plan of Parcel PI-37 recorded in said records as 82243, a copy of which is filed in said office as 3382;

Thence on a bearing of 190°09′21″, a distance of 15 449.93 metres to boundary monument 232PI as shown on said plan 82243;

Thence on a bearing of 132°49′06″, a distance of 6 249.07 metres to boundary monument 231PI as shown on said plan;

Thence southerly along the sinuosity of the ordinary high water mark of the westerly coast of Navy Board Inlet to its intersection with the ordinary high water mark of the right bank of an unnamed stream at approximate latitude 72°50′20″ and approximate longitude 80°30′25″;

Thence westerly to a height of land at approximate latitude 72°47′25″ and approximate longitude 81°05′55″;

Thence southwesterly to a height of land at approximate latitude 72°44′50″ and approximate longitude 81°17′15″;

Thence southerly to a height of land at approximate latitude 72°37′35″ and approximate longitude 81°26′00″;

Thence southwesterly to a height of land at approximate latitude 72°33′45″ and approximate longitude 81°
40'45";

Thence northerly and northwesterly along the sinuosity of the ordinary high water mark of Elwin Inlet to its intersection with the southwesterly production of the southeasterly boundary of Parcel AB-08 between boundary monuments 54AB and 55AB as shown on Plan of said parcel recorded in said records as 82171, a copy of which is filed in said office as 3377;

Thence northeasterly along said production to boundary monument 55AB as shown on said plan;

Thence on a bearing of 49°54'41", a distance of 17 629.52 metres to boundary monument 54AB as shown on said plan;

Thence northeasterly along the ordinary high water mark of Admiralty Inlet to boundary monument 59AB as
shown on Plan of Parcel AB-09 recorded in said records as 82172, a copy of which is filed in said office as 3362;

Thence on a bearing of 112°53'16", a distance of 8 947.05 metres to boundary monument 58AB as shown on said plan;

Thence on a bearing of 22°54'26", a distance of 14 326.67 metres to boundary monument 57AB as shown on said plan;

Thence easterly along the ordinary high water mark of Lancaster Sound to boundary monument 248PI as shown on Plan of Parcel PI-40 recorded in said records as 82244, a copy of which is filed in said office as 3381;

Thence on a bearing of 168°17'55", a distance of 11 388.34 metres to boundary monument 247PI as shown on said plan;

Thence on a bearing of 149°04'08", a distance of 8 452.73 metres to boundary monument 246PI as shown on said plan;

Thence on a bearing of 104°40'01", a distance of 5 426.72 metres to boundary monument 245PI as shown on said plan;

Thence southerly along the ordinary high water mark of Navy Board Inlet to boundary monument 244PI as shown on Plan of Parcel PI-39 recorded in said records as 82191, a copy of which is filed in said office as 3370;

Thence on a bearing of 287°33'31", a distance of 1 381.24 metres to boundary monument 243PI as shown on said plan;

Thence on a bearing of 250°07'54", a distance of 6 296.69 metres to boundary monument 242PI as shown on said plan;

Thence on a bearing of 174°19'10", a distance of 8 672.30 metres to boundary monument 241PI as shown on said plan;

Thence on a bearing of 147°14'04", a distance of 2 882.61 metres to boundary monument 240PI as shown on said plan;

Thence on a bearing of 166°48'38", a distance of 3 785.15 metres to boundary monument 239PI as shown on said plan;

Thence on a bearing of 105°46'59", a distance of 1 405.05 metres to boundary monument 238PI as shown on said plan;

Thence on a bearing of 53°38'52", a distance of 2 027.07 metres to boundary monument 237PI as shown on said plan;

Thence southeasterly along the ordinary high water mark of Navy Board Inlet to the point of commencement.

Said parcel described under Part III containing about 8 031 square kilometres.

PART IV

On Baffin Island;

All that parcel being more particularly described as follows: All topographic features hereinafter referred to being according to the second edition of the Arctic Bay and Navy Board Inlet map sheets, 48C and 48D of the
National Topographic System, as shown on sheets 29 and 30 of 237 respectively of maps recorded in the Land Titles Office at Yellowknife as 2405-29 and 2405-30 respectively, copies of which are recorded in the Canada Lands Surveys Records at Ottawa as 77288. All co-ordinates are derived from the above mentioned map sheets and are referred to 1927 North American Datum.

Commencing at point 226017RWM as shown on sheet 2 of 15 of a Descriptive Map Plan registered in said office as 2686, a copy of which is recorded in said records as 77419, said point being further described as the intersection of the ordinary high water mark of the west coast of Elwin Inlet and the ordinary high water mark of the right bank of an unnamed stream at approximate latitude 73°18′45″ and approximate longitude 83°39′50″;

Thence southwesterly to point 226016HL as shown on said sheet 2 of 15, said point being further described as a height of land at approximate latitude 73°17′55″ and approximate longitude 83°41′05″;

Thence westerly to a height of land at approximate latitude 73°18′20″ and approximate longitude 83°45′30″;

Thence northerly to a height of land at approximate latitude 73°23′00″ and approximate longitude 83°47′35″;

Thence northwesterly to the summit of Nautilus Mountain at approximate latitude 73°25′50″ and approximate longitude 84°08′25″;

Thence westerly in a straight line passing through a height of land at approximate latitude 73°23′25″ and approximate longitude 84°33′00″ to the ordinary high water mark of the northeast coast of Baillarge Bay;

Thence northerly, northeasterly and southeasterly along the sinuosity of the ordinary high water mark of the easterly coast of Baillarge Bay, the southeasterly coast of Admiralty Inlet, and the southwesterly coast of Elwin Inlet to the point of commencement.

Said parcel described under Part IV containing about 167 square kilometres.

Said parcels described under Parts I, II, III and IV containing together about 22 200 square kilometres.

(2) AUYUITTUQ NATIONAL PARK OF CANADA

In Nunavut;

On, and adjacent to, Cumberland Peninsula of Baffin Island;

All that parcel being more particularly described as follows: all topographic features hereinafter referred to being according to the first editions of the Pangnirtung, Clearwater Fiord, Nedluksak Fiord, Ekalugad Fiord, Home Bay, Okoa Bay, Padloping Island and Cape Dyer map sheets 26I, 26J, 26O, 27B, 27A, 26P, 16M & N, and 16L & K respectively of the National Topographic System, as shown on sheets 83, 84, 88, 91, 90, 89, 65 and 64 of 237 respectively of maps recorded in the Land Titles Office at Yellowknife as 2405-83, 2405-84, 2405-88, 2405-91, 2405-90, 2405-89, 2405-65 and 2405-64 respectively, copies of which are recorded in the Canada Lands Surveys Records at Ottawa as 77288, as well as the first edition of Isurtuq River map sheet 26N of the National Topographic System, produced at a scale of 1:250 000 by the Department of Energy, Mines and Resources (formerly Department of Mines and Technical Surveys) at Ottawa. All co-ordinates are derived from the above mentioned map sheets and are referred to the 1927 North American Datum.

Commencing at the summit of Overlord Peak, located at the northeasterly end of Pangnirtung Fiord, at approximate latitude 66°22′40″ and approximate longitude 65°26′20″;

Thence northwesterly to a peak having an elevation of about 1 372 metres, at approximate latitude 66°24′00″ and approximate longitude 65°33′20″;

Thence northerly to the summit of Aegir Peak, at approximate latitude 66°24′50″ and approximate longitude 65°33′40″;
Thence northerly to the summit of Niord Peak, at approximate latitude 66°26′20″ and approximate longitude 65°34′00″;

Thence northerly to a peak having an elevation of about 1 219 metres, at approximate latitude 66°29′30″ and approximate longitude 65°33′30″;

Thence northeasterly to the summit of Mount Odin, at approximate latitude 66°32′40″ and approximate longitude 65°25′30″;

Thence northeasterly to a peak having an elevation of about 1 676 metres, at approximate latitude 66°34′00″ and approximate longitude 65°22′00″;

Thence northeasterly to the summit of Freya Peak, at approximate latitude 66°38′40″ and approximate longitude 65°15′20″;

Thence westerly to a peak having an elevation of about 1 981 metres, at approximate latitude 66°38′50″ and approximate longitude 65°27′40″;

Thence northwesterly to a peak having an elevation of about 524 metres, at approximate latitude 66°42′20″ and approximate longitude 65°43′00″;

Thence southwesterly to a peak having an elevation of about 853 metres, at approximate latitude 66°39′00″ and approximate longitude 66°01′20″;

Thence southwesterly to a peak having an elevation of about 549 metres, at approximate latitude 66°35′30″ and approximate longitude 66°08′00″;

Thence northwesterly to a peak having an elevation of about 427 metres, at approximate latitude 66°38′20″ and approximate longitude 66°23′20″;

Thence northerly to a peak having an elevation of about 853 metres, at approximate latitude 66°44′30″ and approximate longitude 66°22′40″;

Thence northwesterly to a peak having an elevation of about 1 158 metres, at approximate latitude 66°55′10″ and approximate longitude 66°34′30″;

Thence northwesterly to a peak having an elevation of about 1 067 metres, at approximate latitude 67°02′00″ and approximate longitude 66°39′40″;

Thence westerly to a peak having an elevation of about 1 067 metres, at approximate latitude 67°01′30″ and approximate longitude 66°54′00″;

Thence northwesterly to a peak having an elevation of about 914 metres, at approximate latitude 67°08′50″ and approximate longitude 67°11′20″;

Thence westerly to a peak having an elevation of about 610 metres, at approximate latitude 67°09′10″ and approximate longitude 67°21′40″;
Thence northwesterly to a peak having an elevation of about 762 metres, at approximate latitude 67°17′50″ and approximate longitude 67°30′20″;

Thence northwesterly to a peak having an elevation of about 762 metres, at approximate latitude 67°25′30″ and approximate longitude 67°40′40″;

Thence northwesterly to a peak having an elevation of about 792 metres, at approximate latitude 67°35′30″ and approximate longitude 68°03′00″;

Thence northwesterly to a peak having an elevation of about 732 metres, at approximate latitude 67°46′00″ and approximate longitude 68°14′00″;

Thence northerly to a peak having an elevation of about 975 metres, at approximate latitude 67°57′00″ and approximate longitude 68°12′30″;

Thence northerly to a peak having an elevation of about 914 metres, at approximate latitude 68°05′00″ and approximate longitude 68°06′30″;

Thence northeasterly to a peak at approximate latitude 68°12′00″ and approximate longitude 67°50′40″, the last aforesaid peak being approximately at the position indicated by the spot elevation 1 590 feet shown on said Home Bay map sheet;

Thence northeasterly to a peak having an elevation of about 792 metres, at approximate latitude 68°14′00″ and approximate longitude 67°40′00″;

Thence northeasterly to a peak having an elevation of about 1 036 metres, at approximate latitude 68°17′20″ and approximate longitude 67°23′00″;

Thence northeasterly to a peak having an elevation of about 792 metres, at approximate latitude 68°19′00″ and approximate longitude 67°15′00″;

Thence easterly to the ordinary low water mark at the easterly extremity of a point of land at the northerly coast of the entrance to Confederation Fiord, said extremity being at approximate latitude 68°19′40″ and approximate longitude 67°01′00″;

Thence due south to a point on the ordinary low water mark along the southerly coast of the entrance to said Confederation Fiord, the last aforesaid point being at approximate latitude 68°17′30″ and approximate longitude 67°01′00″;

Thence first easterly, then southeasterly, then southerly along the sinuosity of the ordinary low water mark of the southwesterly coast of Home Bay to its intersection with latitude 68°09′30″, at approximate longitude 66°50′30″;

Thence southeasterly to the ordinary low water mark at the westerly extremity of a point of land at the easterly coast of the entrance to an unnamed fiord, said extremity being at approximate latitude 68°08′20″ and approximate longitude 66°37′00″;

Thence in general northeasterly and southeasterly directions, along the last aforesaid low water mark, to the easterly extremity of a point of land at approximate latitude 68°07′20″ and approximate longitude 66°18′40″;
Thence southeasterly to the intersection of longitude 66°17′00″ with the ordinary low water mark along the southerly coast of the entrance to an unnamed fiord, at approximate latitude 68°05′10″;

Thence in general easterly and southerly directions, along the last aforesaid low water mark, to the easterly extremity of a point of land along the westerly coast of Nedlukseak Fiord, at approximate latitude 68°00′50″ and approximate longitude 66°11′00″;

Thence easterly across the entrance to Nedlukseak Fiord, to the ordinary low water mark at the westerly extremity of a point of land at approximate latitude 68°01′20″ and approximate longitude 66°03′00″;

Thence in general easterly, northeasterly and southerly directions, along the last aforesaid low water mark, to the easterly extremity of a point of land at approximate latitude 67°59′30″ and approximate longitude 65°58′40″;

Thence southerly to the intersection of latitude 67°56′30″ with the ordinary low water mark of Okoa Bay, at approximate longitude 66°00′00″;

Thence easterly to the point where said latitude 67°56′30″ intersects the ordinary low water mark along the easterly coast of Okoa Bay at approximate longitude 65°46′00″;

Thence in general northerly, easterly, southeasterly, northeasterly, easterly and southeasterly directions, along the ordinary low water marks of Okoa Bay and Davis Strait, to the easterly extremity of a point of land at approximate latitude 67°58′30″ and approximate longitude 65°27′00″;

Thence southeasterly to the ordinary low water mark at the westerly extremity of Nunatsiaq island, at approximate latitude 67°57′50″ and approximate longitude 65°26′00″;

Thence in general southeasterly, northerly, easterly, southerly, easterly and northeasterly directions, along the last aforesaid low water mark, to the easterly extremity of said island at approximate latitude 67°59′30″ and approximate longitude 65°12′00″;

Thence easterly to the ordinary low water mark at the southerly extremity of a point of land, at approximate latitude 67°59′20″ and approximate longitude 65°09′20″;

Thence in general northwesterly, northerly, northeasterly, southerly, easterly, northerly, easterly and southeasterly directions, along the last aforesaid low water mark, to the easterly extremity of Kangeeak Point at approximate latitude 67°58′30″ and approximate longitude 64°42′40″;

Thence continuing along the last aforesaid low water mark in general southwesterly and westerly directions to its intersection with longitude 64°55′00″, at approximate latitude 67°55′40″;

Thence southerly to the ordinary low water mark at the easterly extremity of a point of land, at approximate latitude 67°55′10″ and approximate longitude 64°55′30″;

Thence in a general southwesterly direction along the last aforesaid low water mark to its intersection with latitude 67°51′00″ at approximate longitude 65°03′00″;

Thence southeasterly to the ordinary low water mark at the northerly extremity of a point of land at the easterly coast of the entrance to Quajon Fiord, the last aforesaid extremity being at approximate latitude 67°47′20″ and approximate longitude 64°55′00″;

Thence in general easterly and southerly directions along the last aforesaid low water mark to a point at
approximate longitude 64°49′20″, the last aforesaid point being due east of a peak having an elevation of about 762 metres and being located at approximate latitude 67°44′30″ and approximate longitude 64°51′30″;

Thence due west to the last aforesaid peak;

Thence southwesterly to a peak having an elevation of about 1,372 metres, at approximate latitude 67°39′20″ and approximate longitude 65°01′00″;

Thence southeasterly to a peak having an elevation of about 1,219 metres, at approximate latitude 67°29′00″ and approximate longitude 64°42′30″;

Thence southeasterly to a peak at approximate latitude 67°22′00″ and approximate longitude 64°29′00″, the last aforesaid peak being approximately at the position indicated by the spot elevation 4,525 feet shown on said Okoa Bay map sheet and being on the height of land forming the northerly limit of the watershed area of Maktak Fjord;

Thence in a general easterly direction along the last aforesaid height of land to a peak having an elevation of about 762 metres, at approximate latitude 67°20′00″ and approximate longitude 64°03′20″;

Thence southeasterly to the ordinary low water mark at the easterly extremity of a point of land at the northerly coast of the entrance to North Pangnirtung Fjord, the last aforesaid extremity being at approximate latitude 67°16′00″ and approximate longitude 63°57′20″;

Thence southerly, across North Pangnirtung Fjord, to a peak having an elevation of about 610 metres, at approximate latitude 67°11′00″ and approximate longitude 63°55′20″;

Thence southeasterly to a peak having an elevation of about 762 metres, at approximate latitude 67°07′20″ and approximate longitude 63°48′40″;

Thence southerly to a peak at approximate latitude 67°02′20″ and approximate longitude 63°52′20″, the last aforesaid peak being approximately at the position indicated by the spot elevation 4,364 feet shown on said Padloping Island map sheet;

Thence southerly to a peak having an elevation of about 1,219 metres, at approximate latitude 66°55′00″ and approximate longitude 63°56′00″;

Thence southwesterly to a peak having an elevation of about 1,067 metres, at approximate latitude 66°50′40″ and approximate longitude 64°08′40″;

Thence southwesterly to a peak having an elevation of about 1,524 metres, at approximate latitude 66°42′40″ and approximate longitude 64°35′00″;

Thence southwesterly to the summit of Mount Fleming, at approximate latitude 66°41′00″ and approximate longitude 64°41′00″;

Thence southwesterly to a peak having an elevation of about 1,981 metres, at approximate latitude 66°34′20″ and approximate longitude 65°04′30″;

Thence southwesterly to a peak having an elevation of about 1,676 metres, at approximate latitude 66°29′40″ and approximate longitude 65°10′30″;
Thence westerly to a peak having an elevation of about 1,829 metres, at approximate latitude 66°28′40″ and approximate longitude 65°19′30″;

Thence southwesterly to a peak having an elevation of about 1,219 metres, at approximate latitude 66°26′40″ and approximate longitude 65°26′00″;

Thence southerly to the point of commencement;

Saving and excepting those parcels described in Schedule 8-1 of the Nunavut Land Claims Agreement, said parcels being more particularly described as follows:

Narpaing and Quajon Fiords, the inlet between Quajon Fiord and Inuit Owned Lands Parcel BI-38/26P, the islands in those fiords and inlet, Kivitoo Harbour and Kivitoo DEW Line Site; and

Inuit Owned Land Parcels:

BI-20/26P, 27A
BI-23/26O, 27A
BI-24/26O, 27A
BI-25/26O, 27A
BI-38/26P

Said Auyuittuq National Park of Canada containing about 13,089 square kilometres.

(3) QUTTINIRPAQ NATIONAL PARK OF CANADA

In Nunavut;

On Ellesmere Island;

All topographic features being according to the Gazetteer of Canada (Northwest Territories) First Edition, Ottawa 1980 and to National Topographic Series Maps, (120 C&D Lady Franklin Bay), (120 E Robeson Channel), (120 F&G Clements Markham Inlet), (340 E&H M’Clintock Inlet) and (340 D Tanquary Fiord) produced at a scale of 1:250,000 by the Department of Energy, Mines and Resources at Ottawa;

All that part of said Ellesmere Island, including a part of the Arctic Ocean, the bays, the fiords, Discovery Harbour, the inlets, the rivers, the lakes, the islands and all the streams that lie within the boundaries which may be more particularly described as follows:

Commencing at the summit of Mount Thompson located at approximate latitude 81°15′ and approximate longitude 76°57′;

Thence southeasterly to the summit of Mount Koch at approximate latitude 81°11′ and approximate longitude 75°20′;

Thence easterly to the summit of Mount Neville at approximate latitude 81°10′ and approximate longitude 70°33′;

Thence easterly to a point on the ordinary low water mark of Beatrix Bay at the mouth of an unnamed stream that flows into Beatrix Bay at approximate latitude 81°11′ and approximate longitude 70°12′;
Thence generally northeasterly following the ordinary low water mark along the north side of Beatrix Bay and Archer Fiord to the most easterly point of the promontory on the southwest side of Simmonds Bay at approximate latitude 81°14’ and approximate longitude 69°18’;

Thence northeasterly across Simmonds Bay to the most southerly point on the ordinary low water mark on the north side of Archer Fiord at approximate latitude 81°15’ and approximate longitude 69°09’;

Thence generally northeasterly following the ordinary low water mark along the northern side of Archer Fiord to its most northeasterly point at Keppel Head at approximate latitude 81°31’ and approximate longitude 66°37’;

Thence northeasterly across Lady Franklin Bay to the most southerly point on the ordinary low water mark at Distant Cape at approximate latitude 81°43’ and approximate longitude 64°27’;

Thence generally northeasterly following the ordinary low water mark along Watercourse Bay on the northern side of Robeson Channel to its most easterly point at Cape Murchison at approximate latitude 81°46’ and approximate longitude 64°06’;

Thence northeasterly across St. Patrick Bay to the most southerly point on the ordinary low water mark near Cartmel Point at approximate latitude 81°47’ and approximate longitude 64°02’;

Thence generally northeasterly following the ordinary low water mark along the northern side of Robeson Channel to a point at the entrance of Wrangel Bay at approximate latitude 81°58’30” and approximate longitude 62°32’;

Thence northwesterly to a point at latitude 82°03’00” and longitude 63°01’00” being approximately 990.5 metres on an approximate azimuth of 231°14’31” from an unnamed peak having an elevation of about 655 metres at approximate latitude 82°03’ and approximate longitude 62°58’;

Thence northwesterly to an unnamed peak having an elevation of about 732 metres at approximate latitude 82°09’ and approximate longitude 63°35’;

Thence northwesterly to the summit of Mount Eugene at approximate latitude 82°25’ and approximate longitude 66°47’;

Thence northwesterly to a point on the ordinary low water mark on the south side of Clements Markham Inlet at longitude 68°00’00” and approximate latitude 82°39’;

Thence due north along said longitude 68°00’00” and across Clements Markham Inlet to a point on the ordinary low water mark on the north side of Clements Markham Inlet at approximate latitude 82°42’;

Thence generally northeasterly following the ordinary low water mark along the northern side of Clements Markham Inlet to its most northerly point at Cape Colan at approximate latitude 82°55’ and approximate longitude 66°20’;

Thence northwesterly in the Arctic Ocean to the intersection of latitude 83°09’00” and longitude 70°00’00”;

Thence westerly in the Arctic Ocean to the intersection of latitude 83°09’00” and longitude 74°20’00”;

Thence southwesterly in the Arctic Ocean to the intersection of latitude 83°05’00” and longitude 77°10’00”;

Thence southwesterly to the most northerly point on the ordinary low water mark at the entrance of
M’Clintock Inlet near Borup Point at approximate latitude 82°56' and approximate longitude 77°47';

Thence southerly to the summit of Mount Ayles at approximate latitude 82°43' and approximate longitude 77°18';

Thence southerly to an unnamed peak having an elevation of about 1,829 metres at approximate latitude 82°31' and approximate longitude 77°04';

Thence due south to an unnamed peak having an elevation of about 1,676 metres at approximate latitude 81°49' and approximate longitude 77°04';

Thence southwesterly to an unnamed peak having an elevation of about 1,524 metres at approximate latitude 81°34' and approximate longitude 79°03';

Thence southeasterly to triangulation station number 629232 (established by the Geodetic Survey Division of the Earth Sciences Sector, Natural Resources Canada at Ottawa, the geographic coordinates of said station being at latitude 81°18'38.8738" and longitude 78°07'09.4867" according to the 1975 Arctic Islands Adjustment, North American Datum of 1927);

Thence southeasterly along the production of the last aforesaid mentioned line to its intersection with the ordinary low water mark on the northwest side of Tanquary Fiord at approximate latitude 81°18' and approximate longitude 78°07';

Thence easterly across Tanquary Fiord to its intersection with a point on the ordinary low water mark on the southeast side of Tanquary Fiord near Fishhook Point at approximate longitude 77°37'00" and approximate latitude 81°19';

Thence southeasterly to the point of commencement;

Excluding thereout and therefrom the whole of Ward Hunt Island together with a right of access to Ward Hunt Island from the part of the Arctic Ocean included within the boundaries described above.

The above described lands containing about 37 775 square kilometres.

2000, c. 32, Sch. 1; 2001, c. 34, s. 25(F); 2002, c. 7, s. 106; SOR/2003-345; 2004, c. 20, s. 1; SOR/2004-300.

SCHEDULE 2
(Sections 2, 6, 7 and 41)

NATIONAL PARK RESERVES OF CANADA

KLUANE NATIONAL PARK RESERVE OF CANADA

In Yukon;

Adjoining the westerly and southerly boundaries of said territory;

All that parcel being more particularly described as follows, all topographic features hereinafter referred to, except where otherwise stated, being according to the first edition of the Dezadeash map sheet number 115A, produced at a scale of 1:250,000 by the Army Survey Establishment, R.C.E., at Ottawa, and to the second edition of the Mount St. Elias map sheet number 115B & 115C and the first edition of the Kluane Lake map sheet number 115G & 115F, produced at a scale of 1:250,000 by the Department of Energy, Mines and Resources (formerly Department of Mines and Technical Surveys) at Ottawa:

Commencing on latitude 60°00'00" at the point where the British Columbia-Yukon Boundary meets the
International Boundary between Alaska and Yukon, at approximate longitude 139°03'30";

Thence easterly along the British Columbia-Yukon Boundary to its most westerly intersection with the right bank of Tatshenshini River, at approximate longitude 137°12'45";

Thence in a general northerly direction along the right banks of the Tatshenshini River and Silver Creek to a point on the southerly bank of a small unnamed lake, at approximate latitude 60°08'00" and longitude 137°21'20", the last aforesaid point being described with reference to the first edition of the Dalton Post map sheet number 115A/3 West, produced at a scale of 1:50,000 by the Army Survey Establishment, R.C.E., at Ottawa;

Thence northerly in a straight line to a peak having an elevation of about 1828.8 metres, at approximate latitude 60°11'00" and longitude 137°21'20", as shown on the last aforesaid map;

Thence northeasterly in a straight line to a peak at approximate latitude 60°16'45" and longitude 137°09'40", the last aforesaid peak being approximately at the position indicated by the spot elevation 2180.8 metres shown on the first edition of the Mush Lake map sheet number 115A/6 East, produced at a scale of 1:50,000 by the Army Survey Establishment, R.C.E., at Ottawa;

Thence easterly in a straight line to a peak having an elevation of about 1920.2 metres, at approximate latitude 60°16'45" and longitude 137°06'10", as shown on the last aforesaid map;

Thence easterly in a straight line to a peak, at approximate latitude 60°17'25" and longitude 137°00'30", as shown on said plan 41519;

Thence northerly in a straight line to the southerly limit of the Alaska Highway as widened, as the last aforesaid limit is shown on plan 40905 in said Records;

Thence in a general northwesterly direction along the last aforesaid limit, according to plans 40905 and 40906 in said Records, to the angle in the last aforesaid limit opposite a standard post, pits and mound numbered H2034, the last aforesaid post being shown on plan 40911 in said Records.
Records and being located at approximate latitude 60°59′30″ and longitude 138°28′00″;

Thence in general westerly and northerly directions along the last aforesaid limit, according to plans 40911 and 40912 in said Records, to its most northerly intersection with the right bank of Congdon Creek, at approximate latitude 61°08′50″ and longitude 138°33′30″;

Thence in a general southwesterly direction along the last aforesaid bank to its most easterly intersection with the straight line joining a peak having an elevation of about 2225 metres, at approximate latitude 61°05′10″ and longitude 138°42′40″, and the most easterly of two peaks having an elevation of about 2346.9 metres, at approximate latitude 61°05′10″ and longitude 138°47′15″, the last aforesaid intersection being described with reference to the second edition of the Destruction Bay map sheet number 115G/2, produced at a scale of 1:50,000 by the Army Survey Establishment, R.C.E., at Ottawa:

Thence westerly in a straight line to the last aforesaid peak;

Thence northwesterly in a straight line to a peak having an elevation of about 2286 metres, at approximate latitude 61°09′30″ and longitude 138°55′45″;

Thence northwesterly in a straight line to a peak having an elevation of about 2133.6 metres, at approximate latitude 61°14′00″ and longitude 139°05′30″;

Thence northwesterly in a straight line to Topographic Survey Monument 66-A-19, being a brass plug at approximate elevation 1932.1 metres and located at approximate latitude 61°16′16″ and longitude 139°13′11″;

Thence northwesterly in a straight line to Topographic Survey Monument 66-A-37, being a brass plug at approximate elevation 2278.4 metres and located at approximate latitude 61°20′05″ and longitude 139°35′06″;

Thence westerly in a straight line to a peak at approximate elevation 2895.6 metres and located at approximate latitude 61°19′00″ and longitude 140°06′30″;

Thence southwesterly in a straight line to the summit of

Mount Wood, at approximate latitude 61°14′00″ and longitude 140°30′30″;

Thence westerly in a straight line to the summit of

Mount Craig, at approximate latitude 61°16′00″ and longitude 140°53′00″;

Thence due west to said International Boundary between Alaska and Yukon;

Thence southerly along the last aforesaid boundary to the point of commencement;

Saving and excepting, those parts of said parcel lying within 304.8 metres of said limit of the Haines Cut-off Road and within 304.8 metres of said limit of the Alaska Highway;

Also saving and excepting, those portions of said parcel transferred to Kluane National Park of Canada, as referred to in the description thereof in Part 11 of Schedule 1.

NAHANNI NATIONAL PARK RESERVE OF CANADA

In the Northwest Territories:

Along the South Nahanni River:
All that parcel being more particularly described as follows, all topographic features hereinafter referred to being according to the first edition of The Twisted Mountain map sheet number 95 G/4 of the National Topographic System, produced at a scale of 1:50,000 by the Department of Energy, Mines and Resources at Ottawa and according to the second editions of the Flat River, Virginia Falls and Sibbeston Lake map sheets and the first edition of the Glacier Lake Map sheet, numbers 95E, 95F, 95G and 95L respectively of the National Topographic System, produced at a scale of 1:250,000, by the Army Survey Establishment, R.C.E., at Ottawa:

Commencing at National Topographic Survey Monument 63-A-152 being a brass plug located on Yohin Ridge, at approximate latitude 61°12′07″ and approximate longitude 123°50′51″;

Thence southeasterly in a straight line to the more southwesterly of two peaks having an elevation of about 1432.6 metres, at approximate latitude 61°06′55″ and approximate longitude 123°44′55″;

Thence southeasterly in a straight line to a peak having an elevation of about 1005.8 metres, at approximate latitude 61°04′45″ and approximate longitude 123°42′20″;

Thence northeasterly in a straight line to latitude 61°12′30″ and longitude 123°36′30″;

Thence northerly in a straight line, across the South Nahanni River, to the summit of Twisted Mountain, at approximate latitude 61°12′30″ and approximate longitude 123°36′30″;

Thence northerly in a straight line to latitude 61°18′00″ and longitude 123°46′00″;

Thence westerly in a straight line to latitude 61°17′00″ and longitude 123°56′00″;

Thence westerly in a straight line to latitude 61°17′00″ and longitude 123°56′00″;

Thence westerly in a straight line to a peak at approximate latitude 61°24′00″ and approximate longitude 124°35′00″, said peak being approximately at the spot elevation 6,105 feet (1860.8 metres) shown on said Virginia Falls map sheet;

Thence westerly in a straight line to latitude 61°24′00″ and longitude 124°51′00″;

Thence northerly in a straight line to Army Survey Establishment Monument "Scrub", being a cairn at approximate latitude 61°37′20″ and approximate longitude 125°18′03″;

Thence northerly in a straight line to Army Survey Establishment Monument "Lock", being a cairn at approximate latitude 61°45′26″ and approximate longitude 125°43′41″;

Thence northerly in a straight line to Army Survey Establishment Monument "Next", being a cairn at approximate latitude 61°53′09″ and approximate longitude 126°14′11″;

Thence westerly in a straight line to Army Survey Establishment Monument "Dip", being a cairn at approximate latitude 61°54′39″ and approximate longitude 126°35′40″;

Thence northerly in a straight line to Army Survey Establishment Monument "Hop", being a cairn at approximate latitude 62°00′31″ and approximate longitude 126°57′27″;

Thence westerly in a straight line to Army Survey Establishment Monument "Flag", being a bronze bolt at approximate latitude 61°58′14″ and approximate longitude 127°23′31″;

Thence southerly in a straight line to Army Survey Establishment Monument "Skip", being a cairn at approximate latitude 61°54′43″ and approximate longitude 127°24′03″;
Thence southerly in a straight line to a peak at approximate latitude 61°50′00″ and approximate longitude 127°25′30″, the last aforesaid peak being approximately at the position indicated by the spot elevation 8,822 feet (2688.9 metres) shown on said Flat River map sheet;

Thence southwesterly in a straight line to a peak having an elevation of about 2438.4 metres, at approximate latitude 61°45′40″ and approximate longitude 127°30′00″, the last aforesaid peak being on the height of land forming the southwesterly limit of the watershed area of Hole-in-the-Wall Creek;

Thence in general southeasterly and easterly directions along the last aforesaid height of land to a peak at approximate latitude 61°45′30″ and approximate longitude 127°17′00″, the last aforesaid peak being approximately at the position indicated by the spot elevation 8,302 feet (2530.5 metres) shown on said Flat River map sheet;

Thence easterly in a straight line to a peak having an elevation of about 1524 metres, at approximate latitude 61°46′00″ and approximate longitude 127°06′40″;

Thence northerly in a straight line to a peak having an elevation of about 2286 metres, at approximate latitude 61°49′00″ and approximate longitude 127°05′00″;

Thence easterly in a straight line to Army Survey Establishment Monument "Don", being a cairn at approximate latitude 61°49′24″ and approximate longitude 126°59′17″, the last aforesaid Monument being approximately at the position indicated by the spot elevation 7,401 feet (2255.8 metres) shown on said Flat River map sheet;

Thence easterly in a straight line to Army Survey Establishment Monument "Cross", being a cairn at approximate latitude 61°50′26″ and approximate longitude 126°40′00″;

Thence southeasterly in a straight line to Army Survey Establishment Monument "Saddle", being a cairn at approximate latitude 61°46′08″ and approximate longitude 126°26′27″;

Thence southeasterly in a straight line to Army Survey Establishment Monument "Mesa", being a cairn at approximate latitude 61°42′34″ and approximate longitude 126°15′16″;

Thence southeasterly in a straight line to Army Survey Establishment Monument "Andy", being a cairn at approximate latitude 61°38′11″ and approximate longitude 126°10′52″, the last aforesaid Monument being approximately at the position indicated by the spot elevation 5,022 feet (1530.7 metres) shown on said Flat River map sheet;

Thence southeasterly in a straight line to a peak at approximate latitude 61°32′20″ and approximate longitude 126°42′40″, the last aforesaid peak being approximately at the position indicated by the spot elevation 6,687 feet (2038.2 metres) shown on said Flat River map sheet;

Thence southeasterly in a straight line to a peak having an elevation of about 1524 metres, at approximate latitude 61°26′30″ and approximate longitude 126°35′20″;

Thence northeasterly in a straight line to National Topographic Survey Monument 63-A-9, being a brass plug at approximate latitude 61°28′12″ and approximate longitude 126°18′39″;

Thence southeasterly in a straight line to a peak at approximate latitude 61°22′00″ and approximate longitude 125°49′00″, the last aforesaid peak being approximately at the position indicated by the spot elevation 4,511 feet (1375 metres) shown on said Virginia Falls map sheet;

Thence easterly in a straight line to a peak at approximate latitude 61°26′30″ and approximate longitude 125°21′00″, the last aforesaid peak being approximately at the position indicated by the spot elevation 4,497
feet (1370.7 metres) shown on said Virginia Falls map sheet;

Thence easterly in a straight line to Army Survey Establishment Monument "Nubby", being a cairn at approximate latitude 61°24'05" and approximate longitude 125°04'19";

Thence southeasterly in a straight line to National Topographic Survey Monument 63-A-107, being a brass plug at approximate latitude 61°16'38" and approximate longitude 124°42'32";

Thence southeasterly in a straight line to Army Survey Establishment Monument "Mary", being a cairn at approximate latitude 61°08'04" and approximate longitude 124°34'02";

Thence northeasterly in a straight line to latitude 61°16'00" and longitude 124°09'00";

Thence southeasterly in a straight line to latitude 61°13'00" and longitude 124°00'00";

Thence easterly in a straight line to the point of commencement; all co-ordinates described above being Geodetic, referred to the North American Datum of 1927; said parcel containing about 4766 square kilometres.

MINGAN ARCHIPELAGO NATIONAL PARK RESERVE OF CANADA

In the Province of Quebec;

All those lands being the whole and entire Fief and Seigneurie of the Isles and Islets of Mingan, situate and being on the coast of the North shore of the St. Lawrence River, in the Province of Quebec, the said Fief and Seigneurie consisting of the Isles and Islets which being on the said North shore of the St. Lawrence River from Perroquet Island, longitude 64°12'40" following continuation to the mouth of River Aguanus, longitude 62°05'00" in such manner as the said Fief and Seigneurie with its rights is more amply conceded and designated by the title of concession granted to Jacques de Lalande and Louis Joliet.

Some of the Isles and Islets forming part of the Fief and Seigneurie of the Isles and Islets of Mingan are now known and designated as being lots number FOUR HUNDRED, FOUR HUNDRED ONE, FOUR HUNDRED TWO, FOUR HUNDRED THREE, FOUR HUNDRED FOUR, FOUR HUNDRED FIVE and FOUR HUNDRED SIX (400, 401, 402, 403, 404, 405, 406) of the revised cadastre of parts of the Municipality of Havre Saint-Pierre, Registration Division of Sept-Iles. The other Isles and Islets, forming part of the Fief and Seigneurie of the Isles and Islets of Mingan are without cadastral designation.

Notwithstanding the generality of the foregoing, the following Isles and Islets (without cadastral designation) forming part of the Fief and Seigneurie of the Isles and Islets of Mingan are not included in the present description, namely: Perroquet Island, Havre de Mingan Island, Le Sanctuaire Island, De la Maison Island, Wreck Island, Aux Sauvages Island and that part of Fright Island described in a deed registered at the Saguenay Registry Office on January 15, 1952, under number 13630.

Those lands included in the present description containing about 150.7 square kilometres and excluding the lands situated below the ordinary high water mark of the said Isles and Islets.

The longitudes mentioned above were scaled from the 1:250,000 map sheets 12L and 22I of the national topographic series.

PACIFIC RIM NATIONAL PARK RESERVE OF CANADA

PART I

All those parcels or tracts of land, together with all that foreshore and land covered by water, situated in Clayoquot District and lying within the following described limits:

Commencing at the northeast corner of Wya Indian Reserve No. 7;
Thence westerly along the northerly limit of Wya Indian Reserve No. 7 and continuing westerly along the westerly production of said northerly limit to the 20 metre isobath of the bed of the Pacific Ocean as shown on Canadian Hydrographic Service (C.H.S.) Chart 3603 and which indicates depths as being reduced to lowest normal tide, which at Tofino is 2.1 metres below mean water level;

Thence in a general northwesterly direction along said 20 metre isobath to the westerly production of the northerly limit of District Lot 1360;

Thence easterly along said westerly production of the northerly limit of District Lot 1360 to its northwest corner, being a point on the shore of Cox Bay, and continuing easterly along the northerly limits of District Lots 1360 and 256 to the northwest corner of the northeast quarter of District Lot 256;

Thence southerly and easterly along the westerly and southerly limits of said northeast quarter of District Lot 256 to the easterly limit of District Lot 256;

Thence southerly along said easterly limit of District Lot 256 to its southeast corner;

Thence southerly in a straight line to the northwest corner of District Lot 1966;

Thence southerly and easterly along the westerly and southerly limits of District Lot 1966 and continuing easterly along the easterly production of the southerly limit of said District Lot 1966 to the westerly limit of District Lot 242;

Thence northerly along the westerly limits of District Lots 242, 243 and 250 to the northwest corner of said District Lot 250, being a point on the southerly shore of an unnamed arm of Browning Passage;

Thence in a general easterly direction along said southerly shore of the unnamed arm, being the northerly limits of District Lots 250, 249, 251 and 252 to the northeast corner of said District Lot 252;

Thence in a general northwesterly direction along said southerly shore of the unnamed arm and continuing in a general easterly direction along the southerly shore of Browning Passage to a point lying due west of the most westerly point of District Lot 1431;

Thence on a bearing of 45°, a distance of about 221 metres to a point lying due west of the most northerly point of Dinner Island, being part of District Lot 288;

Thence due east to said northerly point of Dinner Island and continuing due east 101 metres to a point;

Thence on a bearing of 135°, to a point on the southerly shore of Browning Passage, said point lying about 704 metres due north and about 604 metres due east from the most westerly southwest corner of said District Lot 288;

Thence southeasterly along said southerly shore of Browning Passage to a point lying due west of the most westerly point of Indian Island;

Thence due east to said most westerly point of Indian Island;

Thence in a general northeasterly and southeasterly direction along the shore of said Indian Island to its most easterly point;

Thence southwesterly in a straight line to a point on the southerly shore of Tofino Inlet, said point being about 480 metres due east of the most southerly point of District Lot 1680, being Indian Island Indian Reserve No. 30;

Thence on a bearing of 135° to the northerly limit of the watershed of Grice Bay;

Thence in a general southeasterly direction along said northerly limit of the watershed of Grice Bay to the westerly limit of District Lot 1473;
Thence southerly along the westerly limits of District Lots 1473 and 1472 to the southwest corner of said District Lot 1472;

Thence due south to the northerly limit of District Lot 494;

Thence easterly and southerly along the northerly and easterly limits of District Lots 494 and 487A to the northwest corner of District Lot 398;

Thence easterly along the northerly limits of District Lots 398 and 403 to the northwest corner of District Lot 404;

Thence southerly and easterly along the westerly and southerly limits of said District Lot 404 to the northwest corner of District Lot 1385;

Thence easterly and southerly along the northerly and easterly limits of said District Lot 1385 and the west half of District Lot 1321 to the southwest corner of the east half of District Lot 1321;

Thence easterly along the southerly limits of District Lot 1321 and 1320 to the northwest corner of the east half of District Lot 1314;

Thence southerly and easterly along the westerly and southerly limits of said east half of District Lot 1314 to the northwest corner of District Lot 428;

Thence easterly and southerly along the northerly and easterly limits of District Lot 428 to the southwest corner of District Lot 1313;

Thence easterly along the southerly limit of said District Lot 1313 to the northeast corner of District Lot 442;

Thence southerly along the easterly limits of District Lots 442, 441, 447, 461 and 464 to the northeast corner of Lot 1 of District Lot 467 as shown on a plan deposited in the Land Title Office at Victoria as 44818;

Thence southerly and westerly along the easterly and southerly limits of said Lot 1 as shown on said Plan 44818, to the northeast corner of Wya Indian Reserve No. 7, being the point of commencement.

EXCEPT

Firstly: the whole of Oo-oolth Indian Reserve No. 8, Quisitis Indian Reserve No. 9, Kootowis Indian Reserve No. 4, Esowista Indian Reserve No. 3 and Indian Island Indian Reserve No. 30;

Secondly: the Tofino Airport, described as:

( a) District Lots 167, 168, 169, 170 and 178, Clayoquot District;

( b) those portions of District Lots 163, 164 and 165 lying to the north of Tofino-Ucluelet Highway as shown on Plan 1417RW in said office, a copy of which is recorded in the Canada Lands Surveys Records at Ottawa as 82048, excepting from said District Lot 163, Parcel A as shown on Plan 32328 in said office, a copy of which is recorded in said records as 65248;

( c) those portions of District Lots 113, 166 and 192 lying to the north and east of Tofino-Ucluelet Highway on said Plan 1417RW in said office;

( d) those portions of District Lots 193, 194, 195 and 196 lying to the east of Plan 1371RW in said office.

Thirdly: Parcel 1 and Village Connector Road, as shown on a plan recorded in the Canada Lands Surveys Records at Ottawa as 88700.

PART II

All those parcels or tracts of land, together with all that foreshore and land covered by water, situated in Barclay District and lying within the following described limits:
Commencing at the centre of Sail Rock, being a small islet west of Benson Island, District Lot 43;

Thence due north 2.735 kilometres to a point;

Thence on a bearing of 38°, a distance of 8.046 kilometres to a point;

Thence on a bearing of 115°30′, a distance of 9.334 kilometres to a point;

Thence on a bearing of 217°, a distance of 12.391 kilometres to a point;

Thence on a bearing of 296°, a distance of about 6.598 kilometres to a point due south of the centre of Sail Rock;

Thence due north about 1.931 kilometres to the centre of Sail Rock, being the point of commencement.

EXCEPT the whole of each of the following:

Cieho Indian Reserve No. 6, Keith Island Indian Reserve No. 7, Nettle Island Indian Reserve No. 5 and Omoah Indian Reserve No. 9.

PART III

Firstly: Lot A in Section 18 as shown on Plan 38380 in said office, and the west half of the north half of the north half of the southeast quarter of said Section 18, all in Township 1, Barclay District.

Secondly: Lot 1 of Sections 1 and 12 as shown on Plan 44813 in said office, a copy of which is recorded in said records as 82763, Lots 4, 5, 6 and 7 as shown on a plan recorded in said records as 83569, and Lot A in Section 1 as shown on Plan 10982 in said office, a copy of which is recorded in said records as 82765, all in Township 11, Renfrew District.

Thirdly: All those parcels or tracts of land, together with all that foreshore and land covered by water, situated in Barclay and Renfrew Districts, and lying within the following described limits:

Commencing at the southwest corner of Oyees Indian Reserve No. 9, Renfrew District, being a point on the southeasterly shore of Nitinat Lake;

Thence easterly along the southerly limit of said Oyees Indian Reserve No. 9 to its southeast corner;

Thence due south 1.006 kilometres to a point;

Thence due east 783 metres to a point;

Thence southerly in a straight line to the northwest corner of Block A of District Lot 756;

Thence easterly along the northerly limit of said Block A of District Lot 756 to its northeast corner;

Thence southerly along the easterly limits of Blocks A and B of District Lot 756 to Pipe Post No. 1, being a point on the easterly limit of the Reserve for Pacific Rim National Park as shown on Plan 12 Tube 1410 on file with the Office of The Surveyor General of the Ministry of Environment, Lands and Parks, Victoria, a copy of which is recorded in said records as 71572;

Thence in general westerly and southwesterly directions along said easterly limit of the Reserve for Pacific Rim National Park as shown on said Plan 12 Tube 1410 to the northeast corner of Section 56;

Thence southerly along the easterly limit of said Section 56 to its southeast corner;

Thence on a bearing of 190°, a distance of 609 metres to a point;
Thence southeasterly in a straight line to the northeast corner of Section 50;

Thence southeasterly in a straight line to a point on the easterly limit of District Lot 727, said point being about 340 metres due north and about 1.319 kilometres due west from the northeast corner of District Lot 730;

Thence due east to the right bank of Carmanah Creek;

Thence in a general southerly direction along said right bank of Carmanah Creek to a point about 305 metres due south and about 230 metres due east from the northeast corner of District Lot 729;

Thence southeasterly in a straight line to the most northerly northeast corner of District Lot 732;

Thence southerly and easterly along the easterly and northerly limits of said District Lot 732 to the northwest corner of District Lot 734;

Thence easterly along the northerly limits of District Lots 49 and 736 to the northeast corner of said District Lot 736;

Thence southerly along the easterly limit of said District Lot 736 to the northwest corner of District Lot 708;

Thence easterly along the northerly limit of said District Lot 708 to the southwest corner of the Fractional south half of Section 11, Township 11;

Thence northerly and easterly along the westerly and northerly limits of said Fractional south half of Section 11 to a point on the right bank of Gordon River, and shown as the most northerly northeast corner of Lot A of said Section 11, Township 11, Renfrew District as shown on Plan 44812 in said office, a copy of which is recorded in said records as 82764;

Thence in a general southerly direction along said right bank of Gordon River and continuing southerly along the right bank of San Juan River to the northwesterly shore of Port San Juan;

Thence in a general southwesterly direction along said northwesterly shore of Port San Juan to a point lying about 1.0 metres due south of the P. Rock shown on Plan 7 Tube 1550, on file with said Office of The Surveyor General, a copy of which is recorded in said records as Plan 73926, being a survey of part of the easterly limit of the Reserve for Pacific Rim National Park;

Thence southerly along said easterly limit of the Reserve for Pacific Rim National Park, as shown on said Plan 7 Tube 1550 to the P. Rock at the most easterly point of Owen Island, shown on said Plan 7 Tube 1550, and continuing southerly along the southerly production of said easterly limit to the 20 metre isobath of the bed of Juan de Fuca Strait, as shown on Canadian Hydrographic Service (C.H.S.) Chart 3606 and which indicates depths as being reduced to lowest normal tide, which at Port Renfrew is 2.0 metres below mean water level;

Thence in a general northwesterly direction along said 20 metre isobath of the bed of Juan de Fuca Strait
and continuing in general northwesterly and northeasterly directions along the 20 metre isobath of the bed of
the Pacific Ocean as shown on Canadian Hydrographic Service (C.H.S.) Chart 3602 and which indicates
depths as being reduced to lowest normal tide, which at Bamfield is 2.0 metres below mean water level, to a
point lying due west of the northwest corner of District Lot 412, Barclay District;

Thence due east to said northwest corner of District Lot 412, being a point on the northerly shore of Tapaltos
Bay;

Thence easterly along the northerly limits of District lot 412, Fractional Section 7 and Fractional Section 8 of
Township 1, to the northwest corner of Anacla Indian Reserve No. 12;

Thence southerly along the westerly limit of Anacla Indian Reserve No. 12 to its southwest corner, being a
point on the right bank of Pachena River;

Thence on a bearing of 100°, a distance of about 183 metres to the northeasterly shore of Pachena Bay,
being a point on the southerly limit of said Anacla Indian Reserve No. 12;

Thence in a general southeasterly direction along said northeasterly shore of Pachena Bay to the southeast
corner of said Anacla Indian Reserve No. 12;

Thence northerly along the easterly limit of Anacla Indian Reserve No. 12 to the northwest corner of Lot 1 of
Section 9, Township 1, as shown on Plan 44819 in said office;

Thence easterly and southerly along the northerly and easterly limits of said Lot 1 on said Plan 44819, to the
northwest corner of the northeast quarter of Section 4, Township 1;

Thence southerly along the westerly limit of said northeast quarter of Section 4 to its southwest corner;

Thence southerly in a straight line to the northeast corner of District Lot 659;

Thence southerly in a straight line to the northwest corner of District Lot 273;

Thence southerly and easterly along the westerly and southerly limits of said District Lot 273 to the northeast
corner of District Lot 275;

Thence southerly along the easterly limit of said District Lot 275 to its southeast corner;

Thence southeasterly in a straight line to the northwest corner of District Lot 281;

Thence easterly along the northerly limits of District Lots 281 and 282 to the Pipe Post set as a quarter post
on the northerly limit of said District Lot 282;

Thence on a bearing of 140°, a distance of 240 metres to a point;

Thence on a bearing of 108°, a distance of 680 metres to a point;

Thence on a bearing of 119°, a distance of 1.670 kilometres to a point;

Thence easterly in a straight line to the northwest corner of District lot 288;

Thence southeasterly in a straight line to the most northeasterly internal corner of District Lot 103;

Thence easterly along the northerly limits of District Lots 103, 60 and 59 to the northwesterly internal corner
of District Lot 59;

Thence easterly in a straight line to the northwest corner of District Lot 527;

Thence easterly along the northerly limit of District Lot 527, Barclay District, a distance of about 650 metres
to the northwesterly limit of the watershed of Tsusiat Lake;

Thence in a general northeasterly direction along the northwesterly limits of the watersheds of Tsusiat and Hobiton Lakes to a point being about 3.010 kilometres due north and about 1.690 kilometres due west of the northwest corner of Homitan Indian Reserve No. 8;

Thence due east 600 metres to a point;

Thence on a bearing of 139°, a distance of 1.100 kilometres to a point;

Thence due south to the northwesterly limit of the watershed of Nitinat Lake;

Thence in a general southwesterly direction along said northwesterly limit of the watershed of Nitinat Lake to a point being about 260 metres due north and about 860 metres due west of the northwest corner of Homitan Indian Reserve No. 8;

Thence southeasterly in a straight line to the intersection of the left bank of Hobiton Creek with the westerly limit of Homitan Indian Reserve No. 8;

Thence southerly and easterly along the westerly and southerly limits of Homitan Indian Reserve No. 8 to its southeast corner, being a point on the westerly shore of Nitinat Lake;

Thence in a general southwesterly direction along said westerly shore of Nitinat Lake to a point lying due north of the northwest corner of District Lot 769, Renfrew District;

Thence southeasterly in a straight line to the most northerly point of Block A of District Lot 746, Renfrew District, being a point on the southerly shore of Nitinat Lake;

Thence in general easterly and northeasterly directions along said southerly shore of Nitinat Lake, to the southwest corner of Oyees Indian Reserve No. 9, being the point of commencement.

EXCEPT

Firstly: the whole of each of the following:

Ahuk Indian Reserve No. 1, Carmanah Indian Reserve No. 6, Cheewat Indian Reserve No. 4A, Claoose Indian Reserve No. 4, Clutus Indian Reserve No. 11, Cullite Indian Reserve No. 3, Iktuksasuk Indian Reserve No. 7, Kich-ha Indian Reserve No. 10, Masit Indian Reserve No. 13, Sarque Indian Reserve No. 5, Tsuquanah Indian Reserve No. 2, and Wyah Indian Reserve No. 3;

Secondly: Lot 2 of Block 10, Lots 1 and 2 of Block 16, Lot 8 of Block 18 and Lot 3 of Block 37, all of Section 57, Plan 1771 in said office, and Block 7 of District Lot 527, Plan 2008 in said office, and Section 63, all in Renfrew District.

PART IV

All those parcels or tracts of land, together with all that foreshore and land covered by water, situated in Clayoquot District and lying within the following described limits:

Commencing at the northeast corner of Section 70, Alberni District (situated in Clayoquot District), being a point on the southerly shore of Kennedy Lake;

Thence southerly along the easterly limit of said Section 70 to the northwesterly limit of Alberni-Tofino Highway, as shown on Plan 1936RW in said office;

Thence in a general southerly direction along the westerly limit of said Alberni-Tofino Highway to the southeast corner of Lot 1 of Sections 69 and 70, Alberni District (situated in Clayoquot District), Plan 44820 in said office;
Thence westerly, northerly, westerly and northerly along the southerly and westerly limits of said Lot 1 to its northwest corner, being a point on the southerly shore of Kennedy Lake;

Thence due north 300 metres to a point;

Thence easterly in a straight line to a point 500 metres due north of the northeast corner of said Section 70;

Thence due south to said northeast corner of Section 70, being the point of commencement.

**GWAII HAANAS NATIONAL PARK RESERVE OF CANADA**

In the Province of British Columbia;

In Queen Charlotte Land District;

In the Queen Charlotte Islands;

All those parcels being more particularly described under FIRSTLY, SECONDLY AND THIRDLY as follows:

**FIRSTLY:**

All those parcels or tracts of land, together with all that foreshore or land covered by water lying above the ordinary high water mark (O.H.W.M.) of the Queen Charlotte Islands and situated southerly of a line described as follows:

Commencing at the intersection of the 52°50′05″ parallel of north latitude with the 131°20′10″ meridian of west longitude (said intersection being a point in Hecate Strait approximately 10 kilometres northeasterly of Lost Islands);

Thence westerly in a straight line to the ordinary high water mark at the most northeasterly point of Tangil Peninsula at Porter Head at approximate latitude 52°48′35″ and approximate longitude 131°39′20″ (said line passing approximately 2 kilometres north of Lost Islands);

Thence southwesterly in a straight line to the most easterly peak on the Tangil Peninsula at approximate latitude 52°48′10″ and approximate longitude 131°39′39″;

Thence generally westerly along the watershed boundary that separates those creeks that flow into Dana Inlet from those that flow into Logan Inlet to Standard B.C. capped post being the intersection of the northerly boundary of the watershed of Crescent Inlet with the said watershed boundary that separates those creeks that flow into Dana Inlet from those that flow into Logan Inlet, said post shown as point G on a plan recorded in the Canada Lands Surveys Records at Ottawa as 79937, a copy of which is filed in the Land Title Office at Prince Rupert as PRP 41538;

Thence on a bearing of 211°52′07″ through two Standard B.C. capped posts, a total distance of 4 607.526 metres to the northeast corner of Lot 663 as shown on said Plan 79937;

Thence southerly and westerly along the easterly and southerly boundaries of said Lot 663 to the intersection with the southerly boundary of the watershed of Crescent Inlet, said intersection marked by a Pipe Post, being a point on the northerly boundary of Gwaii Haanas National Park Reserve as shown on Plan 9 Tube 1483 on file with the Surveyor General Branch of the Ministry of Environment, Lands and Parks, at Victoria, a duplicate of which is recorded as Plan 72869 in the Canada Lands Surveys Records at Ottawa;

Thence generally southwesterly along the southerly boundary of the watershed of said Crescent Inlet, being also a portion of the southerly boundary of Tree Farm Licence 24 Block 2, to the intersection with the easterly boundary of the Lockeport Four Mineral Claim, Record Number 5828(2), said intersection marked by a Pipe Post, being a point on the northerly boundary of the Gwaii Haanas National Park Reserve as shown on Plan 27 Tube 1452 on file with the Surveyor General Branch of the Ministry of Environment, Lands and Parks, at Victoria, a duplicate of which is recorded as Plan 72242 in the Canada Lands Surveys Records at Ottawa;
Thence southerly and westerly along the easterly and southerly boundaries of the said mineral claim to the intersection with the southerly boundary of the watershed of Crescent Inlet, said intersection marked by a P.Rock being a point on said northerly boundary of the Gwaii Haanas National Park Reserve as shown on said Plan 27 Tube 1452;

Thence generally westerly along the southerly boundaries of the watershed of said Crescent Inlet and of Tasu Sound, being also a portion of the southerly boundary of Tree Farm Licence 24 Block 2, to a point on the O.H.W.M. at Tasu Head, said southerly boundaries crossing in sequence the summits of Apex Mountain, Mount de la Touche, Mount Oliver and Mount Moody;

Thence southwesterly in a straight line to the intersection of the 52°40′36″ parallel of north latitude with the 132°13′16″ meridian of west longitude (said intersection being a point in the Pacific Ocean approximately 10 kilometres from said point on the O.H.W.M. at Tasu Head);

Save and Except the following described parcels or tracts of land:

Firstly:

The whole of Tanoo Indian Reserve No. 9 (Tanu) according to Plan B.C. 42 recorded in the Canada Lands Surveys Records at Ottawa.

Secondly:

That part of District Lot 120 as dealt with by Plan 80235 in said records, a copy of which is filed in the Land Title Office at Prince Rupert as PRP 41539.

Thirdly:

Lot 1 of District Lot 120, Plan 9837.

Fourthly:

Forest Exclusion Areas 1 to 3 (inclusive) described as:

Area 1

Those parcels or tracts of land described as Blocks 3, 4 and 5 in Schedule “B” of Tree-Farm Licence No. 24, dated May 2, 1979, and on the Official Register of the Forest Service, Timber Harvesting Branch, Victoria, British Columbia.

Area 2

That portion of Block 2 described in Schedule “B” of said Tree Farm Licence lying to the south and east of the above described line.

Area 3

Lots 640, 647, 660 and 1940 (being Timber Licences TO938, TO943, TO931 and TO950, respectively), together with that portion of Special Timber Licence 1209P (being TO924) which lies to the south of the above described line.

Fifthly:

Mineral Exclusion Areas 1 to 5 (inclusive) described as:

Area 1
Commencing at Poole Point, being a point on the easterly O.H.W.M. of Burnaby Island at approximate latitude 52°22'23" and approximate longitude 131°14'35";

Thence generally westerly and southwesterly along the O.H.W.M. of Burnaby Island to the most southerly point of Francis Bay, being a point on said O.H.W.M. at approximate latitude 52°21'51" and approximate longitude 131°17'00";

Thence southwesterly in a straight line to the most northerly point of Swan Bay, being a point on the O.H.W.M. of Burnaby Island at approximate latitude 52°21'00" and approximate longitude 131°18'10";

Thence southeasterly in a straight line to the intersection of the 52°20'15" parallel of north latitude with the 131°17'00" meridian of west longitude;

Thence easterly in a straight line to a point on the 52°20'15" parallel of north latitude lying due south of Poole Point, being a point on the easterly O.H.W.M. of Burnaby Island and being the point of commencement;

Thence due north to said point of commencement.

Area 2

Commencing at the northwest corner of Lot 105, being a point on the O.H.W.M. of Skincuttle Inlet;

Thence due north to a point lying due west of Deluge Point, Moresby Island, said point at approximate latitude 52°19'36" and approximate longitude 131°13'00";

Thence due east to said Deluge Point, Moresby Island, being a point on the O.H.W.M. of Skincuttle Inlet, at approximate latitude 52°19'36" and approximate longitude 131°10'00";

Thence generally southeasterly along the O.H.W.M. of Skincuttle Inlet to Ikeda Point, Moresby Island, being a point on the O.H.W.M. of Hecate Strait at approximate latitude 52°18'55" and approximate longitude 131°08'10";

Thence southeasterly in a straight line to the most easterly point of Marion Rock, being a point on the O.H.W.M. of Collison Bay at approximate latitude 52°17'25" and approximate longitude 131°06'30";

Thence due south to a point lying due east of the southeast corner of Lot 2748;

Thence due west to a point lying due south of the southeast corner of Lot 2610;

Thence northwesterly in a straight line to the most southerly corner of Lot 2604;

Thence northwesterly along the southwesterly boundary of said Lot 2604 to the most westerly corner thereof;

Thence northerly in a straight line to the northwest corner of Lot 2607;

Thence northeasterly in a straight line to the most westerly corner of Lot 79;

Thence northeasterly in a straight line to the most westerly corner of Lot 88;

Thence northeasterly along the northwesterly boundary of said Lot 88 to the most northerly corner thereof, and continuing northeasterly in a straight line to the northwest corner of Lot 2597;

Thence northeasterly along the northerly boundary of said Lot 2597 to the O.H.W.M. of Harriet Harbour, on
the easterly shore thereof;

Thence generally northerly, northwestely and northeastely along the O.H.W.M. of Harriet Harbour and Skincuttle Inlet to the point of commencement.

Area 3

Commencing at a point on the O.H.W.M. of Richardson Island, on the westerly shore thereof, lying due east of the southeast corner of Lot 663, said point being at approximate latitude 52°43′35″ and approximate longitude 131°45′15″;

Thence southeasterly in a straight line to the intersection of latitude 52°39′25″ with longitude 131°42′36″, said straight line passing to the west of Lyell and Shuttle Islands;

Thence southeasterly in a straight line to the intersection of latitude 52°34′00″ with longitude 131°35′45″, said intersection lying easterly of Darwin Point, Moresby Island;

Thence easterly in a straight line to a point on latitude 52°34′00″ lying due south of Sedgwick Point, being a point on the O.H.W.M. of Lyell Island and at approximate latitude 52°35′50″ and approximate longitude 131°32′15″;

Thence due north to the O.H.W.M. of Sedgwick Bay, on the most northerly shore thereof at approximate latitude 52°38′00″ and approximate longitude 131°32′15″;

Thence generally northwesterly along said O.H.W.M. of Sedgwick Bay to a point thereon lying due south of Powrivco Point being a point on the O.H.W.M. of Atli Inlet, said point on the O.H.W.M. of Sedgwick Bay at approximate latitude 52°39′10″ and approximate longitude 131°35′20″;

Thence in a straight line on a bearing of 345° to a point on the northerly O.H.W.M. of Dog Island at approximate latitude 52°44′15″ and approximate longitude 131°37′45″;

Thence northwesterly in a straight line to Tanu Point, being a point on the O.H.W.M. of Tanu Island at approximate latitude 52°44′46″ and approximate longitude 131°42′35″;

Thence southwesterly in a straight line to the point of commencement.

Area 4

Commencing at the intersection of latitude 52°04′25″ with longitude 131°02′24″;

Thence northerly along said longitude 131°02′24″ to the O.H.W.M. of Heater Harbour on the southerly shore thereof;

Thence generally northwestely along said O.H.W.M. of Heater Harbour to the intersection of said O.H.W.M. with latitude 52°07′26″;

Thence westerly in a straight line to the intersection of latitude 52°07′26″ with longitude 131°08′10″;

Thence southwesterly in a straight line to the intersection of latitude 52°06′00″ with longitude 131°08′15″;

Thence southeasterly in a straight line to the intersection of latitude 52°04′20″ with a point on the O.H.W.M. of Kunghit Island at approximate longitude 131°06′50″;
Thence easterly in a straight line to the point of commencement.

Area 5

Commencing at the southeast corner of Lot 663;

Thence westerly along the southerly boundary of said Lot 663 to the intersection with the southerly boundary of the watershed of Crescent Inlet, said intersection marked by a Pipe Post, being a point on the northerly boundary of the Gwaii Haanas National Park Reserve as shown on Plan 9 Tube 1483 on file with the Surveyor General Branch of the Ministry of Environment, Lands and Parks, at Victoria, a duplicate of which is recorded as Plan 72869 in the Canada Lands Surveys Records at Ottawa;

Thence generally southwesterly along the southerly boundary of the watershed of said Crescent Inlet, being also a portion of the southerly boundary of Tree Farm Licence 24 Block 2, to the intersection with the easterly boundary of the Lockeport Four Mineral Claim, Record Number 5828(2), said intersection marked by a Pipe Post, being a point on the northerly boundary of the Gwaii Haanas National Park Reserve as shown on Plan 27 Tube 1452 on file with the Surveyor General Branch of the Ministry of Environment, Lands and Parks, at Victoria, a duplicate of which is recorded as Plan 72242 in the Canada Lands Surveys Records at Ottawa;

Thence southerly and westerly along the easterly and southerly boundaries of the said mineral claim to the intersection with the southerly boundary of the watershed of Crescent Inlet, said intersection marked by a P.Rock being a point on said northerly boundary of the Gwaii Haanas National Park Reserve as shown on said Plan 27 Tube 1452;

Thence generally westerly along the southerly boundary of the watershed of Crescent Inlet to the intersection with the westerly boundary of the watershed of Darwin Sound;

Thence generally southerly along said westerly boundary of the watershed of Darwin Sound to a point lying due west of the southwest corner of Lot 647;

Thence due east to a point on a line drawn between the intersection of latitude 52°39′25″ with longitude 131°42′36″ and the intersection of latitude 52°34′00″ with longitude 131°35′45″;

Thence northwesterly along said line drawn between the intersection of latitude 52°39′25″ with longitude 131°42′36″ and the intersection of latitude 52°34′00″ with longitude 131°35′45″ to said intersection of latitude 52°39′25″ with longitude 131°42′36″;

Thence northwesterly in a straight line to a point on the O.H.W.M. of Richardson Island, on the westerly shore thereof, lying due east of the southeast corner of Lot 663, said point being at approximate latitude 52°43′35″ and approximate longitude 131°45′15″;

Thence due west to said southeast corner of Lot 663, being the point of commencement.

Explanatory Note: All topographic features herein referred to being according to the Gazetteer of Canada (British Columbia) Third Edition, Ottawa 1985; to National Topographic Series (N.T.S.) Map, (103 B-C Moresby Island, Edition 2) produced at a scale of 1:250,000 by the Army Survey Establishment at Ottawa; to N.T.S. Maps (102-0/14 and 102-0/15 Cape St. James), (103B/2W Lyman Point), (103B/3 Kunghit Island), (103B/5 Gowgaia Bay), (103B/6 Burnaby Island), (103B/11 Ramsay Island), (103B/12 Darwin Sound), (103B/13 and 103B/14 Louise Island) and (103C/9 Tasu Head) produced at a scale of 1:50,000 by the Department of Energy, Mines and Resources at Ottawa and to Canadian Hydrographic Service (C.H.S.) Chart 3853 produced at a scale of 1:150,000 by the Department of Fisheries and Oceans, Ottawa.

SECONDLY:

Commencing at a point on the O.H.W.M. of Richardson Island, on the westerly shore thereof, lying due east of the southeast corner of Lot 663, said point being at approximate latitude 52°43′35″ and approximate longitude 131°45′15″;
Thence southeasterly in a straight line to the intersection of latitude 52°39'25" with longitude 131°42'36",
said straight line passing to the west of Lyell and Shuttle Islands;

Thence southeasterly in a straight line to the intersection of latitude 52°34'00" with longitude 131°35'45",
said intersection lying easterly of Darwin Point, Moresby Island;

Thence easterly in a straight line to a point on latitude 52°34'00" lying due south of Sedgwick Point, being a point on the O.H.W.M. of Lyell Island and at approximate latitude 52°35'50" and approximate longitude 131°32'15";

Thence due north to the O.H.W.M. of Sedgwick Bay, on the most northerly shore thereof at approximate latitude 52°38'00" and approximate longitude 131°32'15";

Thence generally northwesterly along said O.H.W.M. of Sedgwick Bay to a point thereon lying due south of Powrivco Point being a point on the O.H.W.M. of Atli Inlet, said point on the O.H.W.M. of Sedgwick Bay at approximate latitude 52°39'10" and approximate longitude 131°35'20";

Thence in a straight line on a bearing of 345° to a point on the northerly O.H.W.M. of Dog Island at approximate latitude 52°44'15" and approximate longitude 131°37'45";

Thence northwesterly in a straight line to Tanu Point, being a point on the O.H.W.M. of Tanu Island at approximate latitude 52°44'46" and approximate longitude 131°42'35";

Thence southwesterly in a straight line to the point of commencement.

THIRDLY:

All those parcels or tracts of land, together with all that foreshore or land covered by water lying above the ordinary high water mark; (O.H.W.M.) of the Queen Charlotte Islands and more particularly described as follows:

Firstly:

Commencing at the southeast corner of Lot 663;

Thence due east to the ordinary high water mark of Darwin Sound;

Thence in a general northeasterly direction along the ordinary high water mark of Darwin Sound and continuing in a general northwesterly direction along the ordinary high water mark of Crescent Inlet to its intersection with a straight line running from the northeast corner of Lot 663 to Standard B.C. capped post shown as point G on a plan recorded in the Canada Lands Surveys Records at Ottawa as 79937, a copy of which is filed in the Land Title Office at Prince Rupert as PRP 41538;

Thence on a bearing of 211°52'07" to the northeast corner of Lot 663 as shown on said Plan 79937;

Thence southerly along the easterly boundary of said Lot 663 to the southeast corner thereof,

being the point of commencement.

Secondly:

Commencing at the intersection of the northerly ordinary high water mark of Crescent Inlet with a straight line running from the northeast corner of Lot 663 to Standard B.C. capped post shown as point G on a plan recorded in the Canada Lands Surveys Records at Ottawa as 79937, a copy of which is filed in the Land Title Office at Prince Rupert as PRP 41538;
Thence in general southeasterly, northeasterly and northerly directions along the ordinary high water marks of Crescent Inlet, Logan Inlet and Hecate Straight to the most northeasterly point of Tangil Peninsula at Porter Head at approximate latitude 52°48′35″ and approximate longitude 131°39′20″;

Thence southwesterly in a straight line to the most easterly peak on the Tangil Peninsula at approximate latitude 52°48′10″ and approximate longitude 131°39′39″;

Thence westerly along the watershed boundary that separates those creeks that flow into Dana Inlet from those that flow into Logan Inlet to Standard B.C. capped post being the intersection of the northerly boundary of the watershed of Crescent Inlet with the said watershed boundary that separates those creeks that flow into Dana Inlet from those that flow into Logan Inlet, said post shown as point G on a plan recorded in the Canada Lands Surveys Records at Ottawa as 79937, a copy of which is filed in the Land Title Office at Prince Rupert as PRP 41538;

Thence on a bearing of 211°52′07″ to the point of commencement, except that portion of Special Timber Licence 1209 P (being TO924) lying within the described boundaries.

Thirdly:

That portion of Richardson Island lying to the north and west of a straight line drawn between Tanu Point, being a point on the ordinary high water mark of Tanu Island (at approximate latitude 52°44′46″ and approximate longitude 131°42′35″) and a point on the ordinary high water mark of Richardson Island, on the westerly shore thereof, lying due east of the southeast corner of Lot 663, said point being at approximate latitude 52°43′35″ and approximate longitude 131°45′15″, except Lot 660 (being Timber Licence TO931);

Those portions of Lyell Island lying to the east of a straight line drawn on a bearing of 345° between a point on the ordinary high water mark of Sedgwick Bay (at approximate latitude 52°39′10″ and approximate longitude 131°35′20″) lying due south of Powrivco Point, being a point on the ordinary high water mark of Atli Inlet, and a point on the northerly ordinary high water mark of Dog Island at approximate latitude 52°44′15″ and approximate longitude 131°37′45″, except Lot 1940 (being Timber Licence TO950);

Tanu Island, except Lot 640 (being Timber Licence TO938) and the whole of Tanoo Indian Reserve No. 9 (Tanu) according to Plan B.C. 42 recorded in the Canada Lands Surveys Records at Ottawa;

Kunga Island; Faraday Island; Murchison Island; and Ramsay Island.

Fourthly:

Huxley Island, Alder Island and Bolkus Islands, together with that portion of Burnaby Island lying to the north and west of a straight line drawn between the most southerly point of Francis Bay, being a point on the ordinary high water mark of Burnaby Island (at approximate latitude 52°21′51″ and approximate longitude 131°17′00″), and the most northerly point of Swan Bay, being a point on the ordinary high water mark of Burnaby Island (at approximate latitude 52°21′00″ and longitude 131°18′10″).

Fifthly:

That portion of Moresby Island lying to the east of the westerly boundaries of the watersheds of Louscoone Inlet, Skincuttle Inlet and Burnaby Strait, and to the south of the northerly boundary of the watershed of Bag Harbour, except that portion within the following described boundaries:

Commencing at the northwest corner of Lot 105, being a point on the ordinary high water mark of Moresby Island;

Thence in general easterly, southwesterly, northeasterly, southerly, southwesterly and northeasterly directions along the ordinary high water mark of Moresby Island to the most easterly point of Marion Rock, being a point on said ordinary high water mark at approximate latitude 52°17′25″ and approximate longitude
131°06′30″;

Thence due south to a point lying due east of the southeast corner of Lot 2748;

Thence due west to a point lying due south of the southeast corner of Lot 2610;

Thence northwesterly in a straight line to the most southerly corner of Lot 2604;

Thence northwesterly along the southwesterly boundary of said Lot 2604 to the most westerly corner thereof;

Thence northerly in a straight line to the northwest corner of Lot 2607;

Thence northeasterly in a straight line to the most westerly corner of Lot 79;

Thence northeasterly in a straight line to most westerly corner of Lot 88;

Thence northeasterly along the northerly boundary of said Lot 88 to the most northerly corner thereof, and continuing northeasterly in a straight line to the northwest corner of Lot 2597;

Thence northeasterly along the northerly boundary of said Lot 2597 to the ordinary high water mark of Moresby Island;

Thence generally northerly, northwesterly and northeasterly along the ordinary high water mark of Moresby Island to the point of commencement.

Explanatory Note: All topographic features herein referred to being according to the Gazetteer of Canada (British Columbia) Third Edition, Ottawa 1985; to National Topographic Series (N.T.S.) Map, (103 B-C Moresby Island, Edition 2) produced at a scale of 1:250,000 by the Army Survey Establishment at Ottawa; to N.T.S. Maps (102-0/14 and 102-0/15 Cape St. James), (103B/2W Lyman Point), (103B/3 Kunghit Island), (103B/5 Gowgaia Bay), (103B/6 Burnaby Island), (103B/11 Ramsay Island), (103B/12 Darwin Sound), (103B/13 and 103B/14 Louise Island) and (103C/9 Tasu Head) produced at a scale of 1:50,000 by the Department of Energy, Mines and Resources at Ottawa and to Canadian Hydrographic Service (C.H.S.) Chart 3853 produced at a scale of 1:150,000 by the Department of Fisheries and Oceans, Ottawa.

TORNGAT MOUNTAINS NATIONAL PARK RESERVE OF CANADA

All that parcel of land in the Province of Newfoundland and Labrador shown on a descriptive map plan prepared by the Department of Natural Resources, dated November 15, 2004 and recorded in the Crown Lands Registry Office in St. John’s, Newfoundland and Labrador, under number SP 367; a copy of the plan is attached as appendix D-1 to the Agreement, as defined in section 2 of the Labrador Inuit Land Claims Agreement Act; said parcel contains an area of approximately 9,700 square kilometres.

more or less, to the point of commencement.
The said parcel being shown as Lot 1 on a plan recorded in the
Vancouver office of Legal Surveys Division of Natural Resources
Canada under number MPS768;
The said parcel containing an area of 1329 square metres more
or less.
Secondly;
That part of Lot W as shown on a plan recorded in the Canada
Lands Surveys Records at Ottawa under number 37572, said part
described as follows:
Commencing at an iron bar located at a bearing of 250°37′12″ a
distance of 70.71 metres from a capped post, said capped post
located at a bearing of 225°02′51″ a distance of 82.50 metres
from an iron bar located on the west boundary of Second Street
East and labelled as Point 52 on a plan recorded in the said
Canada Lands Surveys Records under number 52883;
Thence on a bearing of 135°59′40″ a distance of 17.92 metres to
a capped post;
Thence on a bearing of 221°06′07″ a distance of 101.88 metres
to a capped post;
Thence on a bearing of 297°19′56″ a distance of 29.76 metres to
an iron post;
Thence on a curve to the right having a radius of 268.10 metres,
an arc distance of 112.60 metres, having a chord bearing of 39°
21′50″ and a chord distance of 111.78 metres to an iron post;
Thence on a bearing of 135°59′40″ a distance of 14.50 metres
more or less, to the point of commencement.
The said parcel being shown as Lot 2 on a plan recorded in the
Vancouver office of Legal Surveys Division of Natural Resources
Canada under number MPS768;
The said parcel containing an area of 3712 square metres more
or less.
Thirdly;
That part of Lot W as shown on the plan recorded in the Canada
Lands Surveys Records at Ottawa under number 37572, said part
described as follows:
Commencing at an iron post located at a bearing of 294°49′39″ a
distance of 16.78 from an iron post, said iron post being located
at a bearing of 198°21′20″ a distance of 29.64 metres from an
iron post located on the north west boundary of Stephen Avenue
and labelled as Point 329 on a plan recorded in the said Canada
Lands Surveys Records under number 52883;
Thence on a bearing of 201°30′39″ a distance of 25.27 metres to
an iron post;
Thence on a bearing of 289°42′06″ a distance of 56.77 metres to
an iron post;
Thence on a bearing of 19°42′06″ a distance of 25.26 metres to
an iron post;
Thence on a bearing of 109°42'06" a distance of 57.57 metres more or less, to the point of commencement.

The said parcel being shown as Lot 3 on a plan recorded in the Vancouver office of Legal Surveys Division of Natural Resources Canada under number MPS768;

The said parcel containing an area of 1444 square metres more or less.

Fourthly;

That part of Lot W as shown on a plan recorded in the Canada Lands Surveys Records at Ottawa under number 37572, described as follows:

Commencing at an iron post located at a bearing of 198°21'20" a distance of 29.64 metres from an iron post located on the north west boundary of Stephen Avenue and labelled as Point 329 on a plan recorded in the said Canada Lands Surveys Records under number 52883;

Thence continuing on a bearing of 198°21'20" a distance of 18.54 metres to an iron post;
Thence on a bearing of 252°10'46" a distance of 8.58 metres to an iron post;
Thence on a bearing of 289°42'06" a distance of 11.15 metres to an iron post;
Thence on a bearing of 21°30'39" a distance of 25.27 metres to an iron post;
Thence on a bearing of 114°49'39" a distance of 16.78 metres more or less, to the point of commencement.

The said parcel being shown as Lot 4 on a plan recorded in the Vancouver office of Legal Surveys Division of Natural Resources Canada under number MPS768;

The said parcel containing an area of 408 square metres more or less.

Fifthly;

That part of Lot V as shown on a plan recorded in the Canada Lands Surveys Records at Ottawa under number 37572, described as follows:

Commencing at an iron post located at a bearing of 203°04'12" a distance of 284.51 metres from a capped post located on the boundary of the Townsite of Field and labelled as Point 12 on a plan recorded in the said Canada Lands Surveys Records under number 83808;

Thence on a bearing of 109°04'25" a distance of 25.60 metres to an iron post in concrete;
Thence on a bearing of 199°05'15" a distance of 54.07 metres to an iron post in concrete;
Thence on a bearing of 289°04'46" a distance of 25.26 metres to an iron post;
Thence on a bearing of 11°59'25" a distance of 8.63 metres to a capped post;
Thence on a bearing of 20°00'10" a distance of 45.51 metres more or less, to the point of commencement.
The said parcel being shown as Lot 5 on a plan recorded in the Vancouver office of Legal Surveys Division of Natural Resources Canada under number MPS768;

The said parcel containing an area of 1402 square metres more or less.

All bearings are astronomic and are derived from the bearing between found capped posts on the boundary of the Townsite of Field as shown on a plan recorded in the said Canada Lands Surveys Records under number 83808, said capped posts labelled on this plan as points 33 and 34A and having a bearing between them of 63°15′40″.

SCHEDULE 5
(Section 36)

COMMERCIAL SKI AREAS

LAKE LOUISE SKI AREA

In Banff National Park of Canada, the following described area:

The whole of Parcel DZ as shown on Plan 69749 in the Canada Lands Surveys Records at Ottawa, a copy of which has been deposited in the Land Titles Office for the South Alberta Land Registration District at Calgary under number 8510449, said parcel containing 2192 hectares, more or less.

MOUNT NORQUAY SKI AREA

In Banff National Park of Canada, the following described area:
The whole of Parcel EY as shown on Plan 74099 in the Canada Lands Surveys Records at Ottawa, a copy of which has been deposited in the Land Titles Office for the South Alberta Land Registration District at Calgary under number 9210231, said parcel containing 300.06 hectares, more or less.

MARMOT BASIN SKI AREA

In Jasper National Park of Canada, the following described area:

The whole of Parcel FG as shown on Plan 69622 in the Canada Lands Surveys Records at Ottawa, a copy of which has been deposited in the Land Titles Office for the North Alberta Land Registration District at Edmonton under number 8520246, said parcel containing 678 hectares, more or less.

MOUNT AGASSIZ SKI AREA

In Riding Mountain National Park of Canada, the following described area:

All that parcel of land shown as Mount Agassiz Ski Resort on Plan 64217 in the Canada Lands Surveys Records at Ottawa, a copy of which is filed in the Land Titles Office in Neepawa as 6406, said parcel containing 141.64 hectares, more or less.

Important Notices
Canadian Environmental Assessment Act

S.C. 1992, c. 37

Published by the Minister of Justice at the following address:
http://laws-lois.justice.gc.ca

À jour au 1er janvier 2010

Loi canadienne sur l’évaluation environnementale

L.C. 1992, ch. 37

Publié par le ministre de la Justice à l’adresse suivante :
http://laws-lois.justice.gc.ca
Subsections 31(1) and (2) of the Legislation Revision and Consolidation Act, in force on June 1, 2009, provide as follows:

31. (1) Every copy of a consolidated statute or consolidated regulation published by the Minister under this Act in either print or electronic form is evidence of that statute or regulation and of its contents and every copy purporting to be published by the Minister is deemed to be so published, unless the contrary is shown.

(2) In the event of an inconsistency between a consolidated statute published by the Minister under this Act and the original statute or a subsequent amendment as certified by the Clerk of the Parliaments under the Publication of Statutes Act, the original statute or amendment prevails to the extent of the inconsistency.
Preamble

WHEREAS the Government of Canada seeks to achieve sustainable development by conserving and enhancing environmental quality and by encouraging and promoting economic development that conserves and enhances environmental quality;

WHEREAS environmental assessment provides an effective means of integrating environmental factors into planning and decision-making processes in a manner that promotes sustainable development;

WHEREAS the Government of Canada is committed to exercising leadership within Canada and internationally in anticipating and preventing the degradation of environmental quality and at the same time ensuring that economic development is compatible with the high value Canadians place on environmental quality;

AND WHEREAS the Government of Canada is committed to facilitating public participation in the environmental assessment of projects to be carried out by or with the approval or assistance of the Government of Canada and providing access to the information on which those environmental assessments are based;

NOW, THEREFORE, Her Majesty, by and with the advice and consent of the Senate and House of Commons of Canada, enacts as follows:

Loi de mise en œuvre du processus fédéral d’évaluation environnementale

[Assented to 23rd June 1992]

Attendu :

que le gouvernement fédéral vise au développement durable par des actions de conservation et d’amélioration de la qualité de l’environnement ainsi que de promotion d’une croissance économique de nature à contribuer à la réalisation de ces fins;

que l’évaluation environnementale constitue un outil efficace pour la prise en compte des facteurs environnementaux dans les processus de planification et de décision, de façon à promouvoir un développement durable;

que le gouvernement fédéral s’engage à jouer un rôle moteur tant au plan national qu’au plan international dans la prévention de la dégradation de l’environnement tout en veillant à ce que les activités de développement économique soient compatibles avec la grande valeur qu’accordent les Canadiens à l’environnement;

que le gouvernement fédéral s’engage à favoriser la participation de la population à l’évaluation environnementale des projets à entreprendre par lui ou approuvés ou aidés par lui, ainsi qu’à fournir l’accès à l’information sur laquelle se fonde cette évaluation,
SHORT TITLE

1. This Act may be cited as the Canadian Environmental Assessment Act.

INTERPRETATION

Definitions

2. (1) In this Act, “Agency” means the Canadian Environmental Assessment Agency established by section 61;

“assessment by a review panel” means an environmental assessment that is conducted by a review panel established pursuant to section 33 and that includes a consideration of the factors required to be considered under subsections 16(1) and (2);

“comprehensive study” means an environmental assessment that is conducted pursuant to sections 21 and 21.1, and that includes a consideration of the factors required to be considered pursuant to subsections 16(1) and (2);

“comprehensive study list” means a list of all projects or classes of projects that have been prescribed pursuant to regulations made under paragraph 59(d);

“environment” means the components of the Earth, and includes

(a) land, water and air, including all layers of the atmosphere,

(b) all organic and inorganic matter and living organisms, and

(c) the interacting natural systems that include components referred to in paragraphs (a) and (b);

“environmental assessment” means, in respect of a project, an assessment of the environmental effects of the project that is conducted in accordance with this Act and the regulations;

“environmental effect” means, in respect of a project

(a) any change that the project may cause in the environment, including any change it may cause to a listed wildlife species, its critical habitat or the residences of individuals of that species, as those terms are defined in subsection 2(1) of the Species at Risk Act,

(b) any effect of any change referred to in paragraph (a) on

TITRE ABRÉGÉ

1. Loi canadienne sur l’évaluation environnementale.

DÉFINITIONS

2. (1) Les définitions qui suivent s’appliquent à la présente loi.

« Agence » L’Agence canadienne d’évaluation environnementale constituée par l’article 61.

« autorité fédérale »

a) Ministre fédéral;

b) agence fédérale, société d’État mère au sens du paragraphe 83(1) de la Loi sur la gestion des finances publiques ou autre organisme constitué sous le régime d’une loi fédérale et tenu de rendre compte au Parlement de ses activités par l’intermédiaire d’un ministre fédéral;

c) ministère ou établissement public mentionnés aux annexes I et II de la Loi sur la gestion des finances publiques;

d) tout autre organisme désigné par les règlements d’application de l’alinéa 59e).

Sont exclus le conseil exécutif et les ministres du Yukon, des Territoires du Nord-Ouest et du Nunavut, ainsi que les ministères et les organismes de l’administration publique de ces territoires, tout conseil de bande au sens donné à « conseil de la bande » dans la Loi sur les Indiens, Exportation et développement Canada, l’Office d’investissement du régime de pensions du Canada, les sociétés d’État qui sont des filiales à cent pour cent au sens du paragraphe 83(1) de la Loi sur la gestion des finances publiques, les commissions portuaires constituées par la Loi sur les commissions portuaires, les commissaires nommés en vertu de la Loi des commissaires du havre de Hamilton, la société sans but lucratif qui a conclu une entente en vertu du paragraphe 80(5) de la Loi maritime du Canada et les administrations portuaires constituées sous le régime de cette loi.

« autorité responsable » L’autorité fédérale qui, en conformité avec le paragraphe 11(1), est tenue de veiller à ce qu’il soit procédé à l’évaluation environnementale d’un projet.
Évaluation environnementale — 1er janvier 2010

(i) health and socio-economic conditions,
(ii) physical and cultural heritage,
(iii) the current use of lands and resources for traditional purposes by aboriginal persons, or
(iv) any structure, site or thing that is of historical, archaeological, paleontological or architectural significance, or

(c) any change to the project that may be caused by the environment, whether any such change or effect occurs within or outside Canada;

“exclusion list” « liste d’exclusion »

“exclusion list” means a list of projects or classes of projects that have been exempted from the requirement to conduct an assessment by regulations made under paragraph 59(c) or (c.1);

“federal authority” « autorité fédérale »

“federal authority” means

(a) a Minister of the Crown in right of Canada,
(b) an agency of the Government of Canada, a parent Crown corporation, as defined in subsection 83(1) of the Financial Administration Act, or any other body established by or pursuant to an Act of Parliament that is ultimately accountable through a Minister of the Crown in right of Canada to Parliament for the conduct of its affairs,
(c) any department or departmental corporation set out in Schedule I or II to the Financial Administration Act, and
(d) any other body that is prescribed pursuant to regulations made under paragraph 59(e),

but does not include the Executive Council of — or a minister, department, agency or body of the government of — Yukon, the Northwest Territories or Nunavut, a council of the band within the meaning of the Indian Act, Export Development Canada, the Canada Pension Plan Investment Board, a Crown corporation that is a wholly-owned subsidiary, as defined in subsection 83(1) of the Financial Administration Act, The Hamilton Harbour Commissioners as constituted pursuant to The Hamilton Harbour Commissioners’ Act, a harbour commission established pursuant to the Harbour Commissions Act, a not-for-profit corporation that enters into

“développement durable” “sustainable development”

“document” « record »

“document” means Tous éléments d’information, quels que soient leur forme et leur support, notamment correspondance, note, livre, plan, carte, dessin, diagramme, illustration ou graphique, photographie, film, microforme, enregistrement sonore, magnétoscopique ou informatisé, ou toute reproduction de ces éléments d’information.

“effets environnementaux” “environmental effect”

“effets environnementaux” Que ce soit au Canada ou à l’étranger, les changements que la réalisation d’un projet risque de causer à l’environnement — notamment à une espèce sauvage inscrite, à son habitat essentiel ou à la résidence des individus de cette espèce, au sens du paragraphe 2(1) de la Loi sur les espèces en péril — les répercussions de ces changements soit en matière sanitaire et socioéconomique, soit sur l’usage courant de terres et de ressources à des fins traditionnelles par les autochtones, soit sur une construction, un emplacement ou une chose d’importance en matière historique, archéologique, paléontologique ou architecturale, ainsi que les changements susceptibles d’être apportés au projet du fait de l’environnement.

“environnement” « environment »

“environnement” Ensemble des conditions et des éléments naturels de la Terre, notamment :

a) le sol, l’eau et l’air, y compris toutes les couches de l’atmosphère;

b) toutes les matières organiques et inorganiques ainsi que les êtres vivants;

c) les systèmes naturels en interaction qui comprennent les éléments visés aux alinéas a) et b).

“étude approfondie” “comprehensive study”

“étude approfondie” Évaluation environnementale d’un projet effectuée aux termes des articles 21 et 21.1 et qui comprend la prise en compte des éléments énumérés aux paragraphes 16(1) et (2).

“évaluation environnementale” “environmental assessment”

“évaluation environnementale” Évaluation des effets environnementaux d’un projet effectuée conformément à la présente loi et aux règlements.
an agreement under subsection 80(5) of the Canada Marine Act or a port authority established under that Act;

“federal lands” means
(a) lands that belong to Her Majesty in right of Canada, or that Her Majesty in right of Canada has the power to dispose of, and all waters on and airspace above those lands, other than lands under the administration and control of the Commissioner of Yukon, the Northwest Territories or Nunavut,
(b) the following lands and areas, namely,
(i) the internal waters of Canada,
(ii) the territorial sea of Canada,
(iii) the exclusive economic zone of Canada, and
(iv) the continental shelf of Canada, and
(c) reserves, surrendered lands and any other lands that are set apart for the use and benefit of a band and are subject to the Indian Act, and all waters on and airspace above those reserves or lands;

“follow-up program” means a program for
(a) verifying the accuracy of the environmental assessment of a project, and
(b) determining the effectiveness of any measures taken to mitigate the adverse environmental effects of the project;

“interested party” means, in respect of an environmental assessment, any person or body having an interest in the outcome of the environmental assessment for a purpose that is neither frivolous nor vexatious;

“mediation” means an environmental assessment that is conducted with the assistance of a mediator appointed pursuant to section 30 and that includes a consideration of the factors required to be considered under subsections 16(1) and (2);

“Minister” means the Minister of the Environment;

“mitigation” means, in respect of a project, the elimination, reduction or control of the adverse environmental effects of the project, and includes restitution for any damage to the environment caused by such effects through re-
placement, restoration, compensation or any other means;

“prescribed” means prescribed by the regulations;

“project” means

(a) in relation to a physical work, any proposed construction, operation, modification, decommissioning, abandonment or other undertaking in relation to that physical work, or

(b) any proposed physical activity not relating to a physical work that is prescribed or is within a class of physical activities that is prescribed pursuant to regulations made under paragraph 59(b);

“proponent”, in respect of a project, means the person, body, federal authority or government that proposes the project;

“record” includes any correspondence, memorandum, book, plan, map, drawing, diagram, pictorial or graphic work, photograph, film, microform, sound recording, videotape, machine readable record, and any other documentary material, regardless of physical form or characteristics, and any copy thereof;

“Registry” means the Canadian Environmental Assessment Registry established under section 55;

“responsible authority”, in relation to a project, means a federal authority that is required pursuant to subsection 11(1) to ensure that an environmental assessment of the project is conducted;

“screening” means an environmental assessment that is conducted pursuant to section 18 and that includes a consideration of the factors set out in subsection 16(1);

“screening report” means a report that summarizes the results of a screening;

“sustainable development” means development that meets the needs of the present, without compromising the ability of future generations to meet their own needs.

(2) In so far as this Act applies to Crown corporations, the expression “administration of federal lands” includes the ownership or management of those lands.

(2) Dans l’application de la présente loi aux sociétés d’État, la mention de la gestion du territoire domanial vaut mention de l’administra-
For greater certainty, any construction, operation, modification, decommissioning, abandonment or other undertaking in relation to a physical work and any activity that is prescribed or is within a class of activities that is prescribed for the purposes of the definition “project” in subsection (1) is a project for at least so long as, in relation to it, a person or body referred to in subsection 5(1) or (2), 8(1), 9(2), 9.1(2), 10(1) or 10.1(2) is considering, but has not yet taken, an action referred to in those subsections.

1992, c. 37, s. 2; 1993, c. 28, s. 78, c. 34, s. 18(F); 1996, c. 31, s. 61; 1998, c. 10, s. 164, c. 15, s. 50; 2002, c. 7, s. 122, c. 29, s. 137; 2003, c. 9, s. 1.

(3) Il est entendu que la réalisation — y compris l’exploitation, la modification, la désaffectation ou la fermeture — d’un ouvrage, ou l’exercice d’une activité désignée par règlement ou faisant partie d’une catégorie d’activités désignée par règlement pour l’application de la définition de « projet » au paragraphe (1), constituent un projet, au minimum, tant qu’une personne ou un organisme visés aux paragraphes 5(1) ou (2), 8(1), 9(2), 9.1(2), 10(1) ou 10.1(2) envisage mais n’a pas encore pris une mesure prévue à ces dispositions.

1992, ch. 37, art. 2; 1993, ch. 28, art. 78, ch. 34, art. 18(F); 1996, ch. 31, art. 61; 1998, ch. 10, art. 164, ch. 15, art. 50; 2002, ch. 7, art. 122, ch. 29, art. 137; 2003, ch. 9, art. 1.

**PURPOSES**

4. (1) The purposes of this Act are

(a) to ensure that projects are considered in a careful and precautionary manner before federal authorities take action in connection with them, in order to ensure that such projects do not cause significant adverse environmental effects;

(b) to encourage responsible authorities to take actions that promote sustainable development and thereby achieve or maintain a healthy environment and a healthy economy;

(b.1) to ensure that responsible authorities carry out their responsibilities in a coordinated manner with a view to eliminating unnecessary duplication in the environmental assessment process;

(b.2) to promote cooperation and coordinated action between federal and provincial governments with respect to environmental assessment processes for projects;

(b.3) to promote communication and cooperation between responsible authorities and Aboriginal peoples with respect to environmental assessment;

(c) to ensure that projects that are to be carried out in Canada or on federal lands do not cause significant adverse environmental ef-
Effects outside the jurisdictions in which the projects are carried out; and

\(d\) to ensure that there be opportunities for timely and meaningful public participation throughout the environmental assessment process.

Duties of the Government of Canada

(2) In the administration of this Act, the Government of Canada, the Minister, the Agency and all bodies subject to the provisions of this Act, including federal authorities and responsible authorities, shall exercise their powers in a manner that protects the environment and human health and applies the precautionary principle.

Mission du gouvernement du Canada

(2) Pour l’application de la présente loi, le gouvernement du Canada, le ministre, l’Agence et les organismes assujettis aux dispositions de celle-ci, y compris les autorités fédérales et les autorités responsables, doivent exercer leurs pouvoirs de manière à protéger l’environnement et la santé humaine et à appliquer le principe de la prudence.

ENVIRONMENTAL ASSESSMENT OF PROJECTS

Projects to be Assessed

5. (1) An environmental assessment of a project is required before a federal authority exercises one of the following powers or performs one of the following duties or functions in respect of a project, namely, where a federal authority

\(a\) is the proponent of the project and does any act or thing that commits the federal authority to carrying out the project in whole or in part;

\(b\) makes or authorizes payments or provides a guarantee for a loan or any other form of financial assistance to the proponent for the purpose of enabling the project to be carried out in whole or in part, except where the financial assistance is in the form of any reduction, avoidance, deferral, removal, refund, remission or other form of relief from the payment of any tax, duty or impost imposed under any Act of Parliament, unless that financial assistance is provided for the purpose of enabling an individual project specifically named in the Act, regulation or order that provides the relief to be carried out;

\(c\) has the administration of federal lands and sells, leases or otherwise disposes of those lands or any interests in those lands, or transfers the administration and control of those lands or interests to Her Majesty in

\(d\) de veiller à ce que le public ait la possibilité de participer de façon significative et en temps opportun au processus de l’évaluation environnementale.

5. (1) L’évaluation environnementale d’un projet est effectuée avant l’exercice d’une des attributions suivantes :

\(a\) une autorité fédérale en est le promoteur et le met en oeuvre en tout ou en partie;

\(b\) une autorité fédérale accorde à un promoteur en vue de l’aider à mettre en œuvre le projet en tout ou en partie un financement, une garantie d’emprunt ou toute autre aide financière, sauf si l’aide financière est accordée sous forme d’allègement — notamment réduction, évitement, report, remboursement, annulation ou remise — d’une taxe ou d’un impôt qui est prévu sous le régime d’une loi fédérale, à moins que cette aide soit accordée en vue de permettre la mise en œuvre d’un projet particulier spécifié nommément dans la loi, le règlement ou le décret prévoyant l’allègement;

\(c\) une autorité fédérale administre le territoire domanial et en autorise la cession, notamment par vente ou cession à bail, ou celle de tout droit foncier relatif à celui-ci ou en transfère à Sa Majesté du chef d’une province l’administration et le contrôle, en vue de la mise en œuvre du projet en tout ou en partie;

\(d\) une autorité fédérale, aux termes d’une disposition prévue par règlement pris en vertu de l’alinéa 59f), délivre un permis ou une
right of a province, for the purpose of enabling the project to be carried out in whole or in part; or

(d) under a provision prescribed pursuant to paragraph 59(f), issues a permit or licence, grants an approval or takes any other action for the purpose of enabling the project to be carried out in whole or in part.

(2) Notwithstanding any other provision of this Act,

(a) an environmental assessment of a project is required before the Governor in Council, under a provision prescribed pursuant to regulations made under paragraph 59(g), issues a permit or licence, grants an approval or takes any other action for the purpose of enabling the project to be carried out in whole or in part; and

(b) the federal authority that, directly or through a Minister of the Crown in right of Canada, recommends that the Governor in Council take an action referred to in paragraph (a) in relation to that project

(i) shall ensure that an environmental assessment of the project is conducted as early as is practicable in the planning stages of the project and before irrevocable decisions are made,

(ii) is, for the purposes of this Act and the regulations, except subsection 11(2) and sections 20 and 37, the responsible authority in relation to the project,

(iii) shall consider the applicable reports and comments referred to in sections 20 and 37, and

(iv) where applicable, shall perform the duties of the responsible authority in relation to the project under section 38 as if it were the responsible authority in relation to the project for the purposes of paragraphs 20(1)(a) and 37(1)(a).

6. Notwithstanding any other provision of this Act, no confidence of the Queen’s Privy Council for Canada in respect of which subsection 39(1) of the Canada Evidence Act applies shall be disclosed or made available to any person.

6. Par dérogation à toute autre disposition de la présente loi, nul renseignement confidentiel du Conseil privé de la Reine pour le Canada visé par le paragraphe 39(1) de la Loi sur la preuve au Canada ne peut être divulgé ni fourni à quiconque.
7. (1) An assessment of a project is not required under section 5 or sections 8 to 10.1, where

(a) the project is described in an exclusion list;

(b) the project is to be carried out in response to a national emergency for which special temporary measures are being taken under the Emergencies Act; or

(c) the project is to be carried out in response to an emergency and carrying out the project forthwith is in the interest of preventing damage to property or the environment or is in the interest of public health or safety.

(2) For greater certainty, an assessment is not required under any of the provisions referred to in this subsection where a federal authority exercises a power or performs a duty or function referred to in paragraph 5(1)(b) or 10.1(2)(b) — or a person or body exercises a power or performs a duty or function referred to in paragraph 5(1)(b), 9(2)(b), 9.1(2)(b) or 10(1)(b) — in relation to a project and the essential details of the project are not specified before or at the time the power is exercised or the duty or function is performed.

1992, c. 37, s. 7; 1994, c. 26, s. 23(F); 2003, c. 9, s. 3.

8. (1) A Crown corporation, as defined in subsection 83(1) of the Financial Administration Act, that is not a federal authority shall, if regulations have been made in relation to it under paragraph 59(j) and have come into force, ensure that, before it exercises a power or performs a duty or function referred to in any of paragraphs 5(1)(a) to (d) in relation to a project, an environmental assessment of the project under this section is conducted in accordance with those regulations as early as is practicable in the planning stages of the project and before irrevocable decisions are made.

(2) Notwithstanding section 5, a Minister of the Crown in right of Canada is not required to ensure that an environmental assessment of a project is conducted by reason only of that minister’s authorization or approval under any other Act of Parliament or any regulations made under such an Act of the exercise of a power or performance of a duty or function referred to in paragraph 5(1)(a), (b) or (c) in relation to the

Where a minister has no duty

8. (1) À compter de l’entrée en vigueur des règlements pris à son égard en vertu de l’alinéa 59(j), toute société d’État, au sens du paragraphe 83(1) de la Loi sur la gestion des finances publiques, qui n’est pas une autorité fédérale veille, avant d’exercer une attribution visée à l’un ou l’autre des alinéas 5(1)(a) à d) à l’égard d’un projet, à ce qu’une évaluation environnementale du projet soit effectuée conformément à ces règlements, le plus tôt possible au stade de la planification du projet et avant la prise d’une décision irrévocable.

(2) Malgré l’article 5, un ministre fédéral n’est pas tenu de veiller à ce que l’évaluation environnementale d’un projet soit effectuée uniquement parce qu’il autorise ou approuve, en vertu d’une autre loi fédérale ou de ses règlements, l’exercice par une société d’État, au sens de la Loi sur la gestion des finances publiques, d’une attribution visée aux alinéas 5(1)a), b) ou c) à l’égard du projet.
(3) If a Crown corporation is the proponent of a project and proposes to do any act or thing that commits it to carrying out the project in whole or in part and a federal authority other than the Crown corporation is required under paragraph 5(1)(d) to ensure the conduct of an environmental assessment of that project, the Crown corporation is not required to ensure that an environmental assessment of the project is conducted but, for greater certainty, it may accept a delegation from the federal authority under section 17.

9. (1) The Hamilton Harbour Commissioners as constituted pursuant to The Hamilton Harbour Commissioners’ Act, a harbour commission established pursuant to the Harbour Commissions Act, a not-for-profit corporation that enters into an agreement under subsection 80(5) of the Canada Marine Act or a port authority established under that Act shall, if regulations have been made under paragraph 59(k) and have come into force, ensure that an environmental assessment of a project under this section is conducted in accordance with those regulations as early as is practicable in the planning stages of the project and before irrevocable decisions are made.

(2) The environmental assessment of a project under this section shall be conducted where

(a) a person or body referred to in subsection (1) is the proponent of the project and does any act or thing that commits it to carrying out the project in whole or in part;

(b) a person or body referred to in subsection (1) makes or authorizes payments or provides a guarantee for a loan or any other form of financial assistance to the proponent for the purpose of enabling the project to be carried out in whole or in part;

(c) a person or body referred to in subsection (1) sells, leases or otherwise disposes of federal lands or any interests in those lands, for the purpose of enabling the project to be carried out in whole or in part;

(d) under a provision prescribed under paragraph 59(k.1), a person or body referred to in

(3) La société d’État qui est le promoteur d’un projet et se propose de le mettre en œuvre en tout ou en partie n’est pas tenue de veiller à ce que soit effectuée une évaluation environnementale du projet si une autorité fédérale — autre que la société d’État — doit prendre une mesure prévue à l’alinéa 5(1)(d) à l’égard du projet; il est entendu que rien ne l’empêche d’accepter une délégation dans le cadre de l’article 17.

92, ch. 37, art. 8; 2003, ch. 9, art. 4.

9. (1) Les commissaires nommés en vertu de la Loi des commissaires du havre de Hamilton, les commissions portuaires constituées par la Loi sur les commissions portuaires, la société sans but lucratif qui a conclu une entente en vertu du paragraphe 80(5) de la Loi maritime du Canada et les administrations portuaires constituées sous le régime de cette loi veillent, à compter de l’entrée en vigueur des règlements pris en vertu de l’alinéa 59k, à ce qu’une évaluation environnementale d’un projet soit effectuée conformément à ces règlements, le plus tôt possible au stade de la planification du projet et avant la prise d’une décision irrévocable.

(2) L’évaluation environnementale d’un projet est effectuée dans les cas suivants :

a) les personnes ou organismes visés au paragraphe (1) en sont le promoteur et le mettent en œuvre, en tout ou en partie;

b) ils accordent au promoteur un financement, une garantie d’emprunt ou toute autre aide financière en vue d’en permettre la mise en œuvre, en tout ou en partie;

c) ils autorisent la cession du territoire domanialement, notamment par vente ou cession à bail, ou celle de tout droit foncier relatif à celui-ci, en vue de la mise en œuvre du projet, en tout ou en partie;

d) aux termes d’une disposition visée par règlement pris en vertu de l’alinéa 59k.1), ils délivrent un permis ou une licence, donnent toute autorisation ou prennent toute mesure en vue de permettre la mise en œuvre du projet, en tout ou en partie;

92, ch. 37, s. 8; 2003, c. 9, s. 4.
subsection (1) issues a permit or licence, grants an approval or takes any other action for the purpose of enabling the project to be carried out in whole or in part; or

\(e\) in circumstances prescribed by regulations made under paragraph 59(k.2), a project is to be carried out in whole or in part on federal lands over which a person or body referred to in subsection (1) has administration or management.

1992, c. 37, s. 9; 1998, c. 10, s. 165; 2003, c. 9, s. 5.

\(9.1\) (1) If regulations have been made under paragraph 59(k.3) and have come into force, an authority prescribed by those regulations shall ensure that an environmental assessment of a project under this section is conducted in accordance with those regulations as early as is practicable in the planning stages of the project and before irrevocable decisions are made.

\(2\) The environmental assessment of a project under this section shall be conducted where

\(a\) the project is to be carried out on federal lands and the prescribed authority is the proponent of the project and does any act or thing that commits it to carrying out the project in whole or in part;

\(b\) the project is to be carried out on federal lands and the prescribed authority makes or authorizes payments or provides a guarantee for a loan or any other form of financial assistance to the proponent for the purpose of enabling the project to be carried out in whole or in part;

\(c\) the prescribed authority sells, leases or otherwise disposes of federal lands or any interests in those lands, for the purpose of enabling the project to be carried out in whole or in part;

\(d\) the prescribed authority, under a provision prescribed under paragraph 59(k.4), issues a permit or licence, grants an approval or takes any other action for the purpose of enabling the project to be carried out in whole or in part; or

\(e\) in circumstances prescribed by regulations made under paragraph 59(k.5), a project is to be carried out in whole or in part on federal lands over which the prescribed

\(e\) le cas est prévu par règlement pris en vertu de l’alinéa 59k.2 et le projet doit être mis en œuvre, en tout ou en partie, sur le territoire domanial dont ils ont l’administration ou la gestion.

1992, ch. 37, art. 9; 1998, ch. 10, art. 165; 2003, ch. 9, art. 5.

\(9.1\) (1) À compter de l’entrée en vigueur des règlements pris en vertu de l’alinéa 59k.3, toute autorité visée par ceux-ci veille à ce qu’une évaluation environnementale d’un projet soit effectuée conformément à ces règlements, le plus tôt possible au stade de la planification de celui-ci et avant la prise d’une décision irrévocable.

\(2\) L’évaluation environnementale d’un projet est effectuée dans les cas suivants :

\(a\) l’autorité en est le promoteur et le met en œuvre, en tout ou en partie, sur un territoire domanial;

\(b\) elle accorde au promoteur un financement, une garantie d’emprunt ou toute autre aide financière en vue d’en permettre la mise en œuvre, en tout ou en partie, sur le territoire domanial;

\(c\) elle autorise la cession du territoire domanial, notamment par vente ou cession à bail, ou celle de tout droit foncier relatif à celui-ci, en vue de la mise en œuvre du projet, en tout ou en partie;

\(d\) aux termes d’une disposition visée par règlement pris en vertu de l’alinéa 59k.4, elle délivre un permis ou une licence, donne toute autorisation ou prend toute mesure en vue de permettre la mise en œuvre du projet, en tout ou en partie;

\(e\) le cas est prévu par règlement pris en vertu de l’alinéa 59k.5 et le projet doit être mis en œuvre, en tout ou en partie, sur le territoire domanial dont elle a l’administration ou la gestion ou sur lequel elle a un droit ou un intérêt prévus par règlement.

2003, ch. 9, art. 5.
authority has administration or management or any right or interest specified in those regulations.

2003, c. 9, s. 5.

Assessments by band councils under regulations

10. (1) If a project is to be carried out in whole or in part on a reserve that has been set apart for the use and benefit of a band and that is subject to the Indian Act, the council of the band for whose use and benefit the reserve has been set apart shall, if regulations that apply to the band have been made under paragraph 59(l) and have come into force, ensure that an environmental assessment of the project is conducted in accordance with those regulations before the band council exercises one of the following powers or performs one of the following duties or functions in respect of the project, namely, where the band council

(a) is the proponent of the project and does any act or thing that commits it to carrying out the project in whole or in part;

(b) makes or authorizes payments or provides a guarantee for a loan or any other form of financial assistance to the proponent of the project for the purpose of enabling the project to be carried out in whole or in part, including financial assistance in the form of any reduction, avoidance, deferral, removal, refund, remission or other form of relief from the payment of any tax; or

(c) takes any action under a provision prescribed under paragraph 59(l.001) for the purpose of enabling the project to be carried out in whole or in part.

(2) Where an environmental assessment of a project is required under subsection (1), the band council shall ensure that the assessment is conducted as early as is practicable in the planning stages of the project and before irrevocable decisions are made.

1992, c. 37, s. 10; 2003, c. 9, s. 5.

Assessments — CIDA

10.1 (1) The Canadian International Development Agency shall, if regulations have been made under paragraph 59(l.01) and have come into force, ensure that an environmental assessment of a project is conducted under this section in accordance with those regulations as early as is practicable in the planning stages of the project and before irrevocable decisions are made.

1992, c. 37, s. 10; 2003, c. 9, s. 5.

Timing of assessment

10. (1) Le conseil d’une bande assujettie à la Loi sur les Indiens veille, à compter de l’entrée en vigueur des règlements pris en vertu de l’alinéa 59(l) à son égard, à ce qu’une évaluation environnementale d’un projet devant être mis en œuvre, en tout ou en partie, sur une réserve mise de côté à l’usage et au profit de cette bande soit effectuée conformément à ces règlements, avant l’exercice de l’une des attributions suivantes :

a) il est le promoteur du projet et le met en œuvre tout ou en partie;

b) il accorde à un promoteur en vue de l’aider à mettre en œuvre le projet en tout ou en partie un financement, une garantie d’emprunt ou toute autre aide financière, y compris une aide financière accordée sous forme d’allègement — réduction, évitement, report, remboursement, annulation ou remise — d’une taxe;

c) il prend une mesure, au titre d’une disposition prévue par règlement pris en vertu de l’alinéa 59(l.001), en vue de permettre la mise en œuvre du projet en tout ou en partie.

(2) Dans le cas où l’évaluation environnementale d’un projet est obligatoire au titre du paragraphe (1), le conseil de bande veille à ce que celle-ci soit effectuée le plus tôt possible au stade de la planification du projet, avant la prise d’une décision irrévocable.

1992, ch. 37, art. 10; 2003, ch. 9, art. 5.

ACDI

Moment de l’évaluation

Conseils de bande

(c) il prend une mesure, au titre d’une dispo-
sition prévue par règlement pris en vertu de l’alinéa 59(l.001), en vue de permettre la mise en œuvre du projet en tout ou en partie.
### Projects

(2) An environmental assessment of a project under this section is required to be conducted where the Canadian International Development Agency

(a) is the proponent of the project and does any act or thing that commits it to carrying out the project in whole or in part; or

(b) makes or authorizes payments or provides a guarantee for a loan or any other form of financial assistance for the purpose of enabling the project to be carried out in whole or in part.

### Replacement for environmental assessment

(3) The application of subsection 5(1) to the Canadian International Development Agency is suspended while regulations referred to in subsection (1) are in force.

2003, c. 9, s. 5.

### Responsible Authority

### AUTORITÉ RESPONSABLE

11. (1) Where an environmental assessment of a project is required, the federal authority referred to in section 5 in relation to the project shall ensure that the environmental assessment is conducted as early as is practicable in the planning stages of the project and before irrevocable decisions are made, and shall be referred to in this Act as the responsible authority in relation to the project.

### Moment de l’évaluation

11. (1) Dans le cas où l’évaluation environnementale d’un projet est effectuée dans les cas où l’Agence canadienne de développement international :

a) en est le promoteur et le met en œuvre, en tout ou en partie;

b) accorde un financement, une garantie d’emprunt ou toute autre aide financière en vue d’en permettre la mise en œuvre, en tout ou en partie.

### No power, etc., to be exercised until assessment is complete

(2) A responsible authority shall not exercise any power or perform any duty or function referred to in section 5 in relation to a project unless it takes a course of action pursuant to paragraph 20(1)(a) or 37(1)(a).

### Effet suspensif

(2) L’autorité responsable d’un projet ne peut exercer ses attributions à l’égard de celui-ci que si elle prend une décision aux termes des alinéas 20(1)(a) ou 37(1)(a).

### Ministerial orders

11.1 (1) The Minister or the minister through whom the responsible authority is accountable to Parliament for the conduct of its affairs in respect of a project being assessed under this Act — or, if there is more than one responsible authority in respect of a project, the ministers together — may, by order, prohibit a proponent from doing, until the day on which the responsible authority or authorities take a course of action under paragraph 20(1)(a) or (b) or subsection 37(1), any act or thing that carries out the project being assessed in whole or in part and that would alter the environment.

### Arrêté ministériel

11.1 (1) Le ministre ou le ministre qui doit répondre devant le Parlement des activités de l’autorité responsable — ou les ministres agissant conjointement, lorsque plusieurs autorités sont responsables d’un même projet — peut, par arrêté, ordonner au promoteur de s’abstenir de tout acte modifiant l’environnement et permettant la mise en œuvre, même partielle, du projet faisant l’objet de l’évaluation jusqu’à ce que l’autorité ait pris une décision en application des alinéas 20(1)(a) ou b) ou du paragraphe 37(1).

### Order in force

(2) An order under subsection (1) takes effect on the day on which it is made.

### Prise d’effet de l’arrêté

(2) L’arrêté prend effet dès sa prise.
(3) The order ceases to have effect 14 days after it is made unless, within that period, it is approved by the Governor in Council.

(4) The order is exempt from the application of sections 3, 5 and 11 of the Statutory Instruments Act and shall be published in the Canada Gazette within 23 days after it is approved by the Governor in Council.

2003, c. 9, s. 6.

Injunction

11.2 (1) If, on the application of the Attorney General of Canada or any interested person, it appears to a court of competent jurisdiction that an order made under section 11.1 has been, is about to be or is likely to be contravened, the court may issue an injunction ordering any person named in the application to refrain from doing any act or thing that would contravene the order, until the day on which the responsible authority or authorities referred to in that section take a course of action under paragraph 20(1)(a) or (b) or subsection 37(1).

2003, c. 9, s. 6.

Notice

(2) At least forty-eight hours before an injunction is issued under subsection (1), notice of the application shall be given to persons named in the application, unless the urgency of the situation is such that the delay involved in giving the notice would not be in the public interest.

2003, c. 9, s. 6.

More than one responsible authority

12. (1) Where there are two or more responsible authorities in relation to a project, they shall together determine the manner in which to perform their duties and functions under this Act and the regulations.

(2) In the case of a disagreement, the Agency may advise responsible authorities and other federal authorities with respect to their powers, duties and functions under this Act and the manner in which those powers, duties and functions may be determined and allocated among them.

2003, c. 9, s. 6.

Disagreement

12. (1) Dans le cas où plusieurs autorités responsables sont chargées d’un même projet, elles décident conjointement de la façon de remplir les obligations qui leur incombent aux termes de la présente loi et des règlements.

(2) En cas de différend, l’Agence peut conseiller les autorités responsables et les autres autorités fédérales sur leurs obligations communes et sur la façon de les remplir conjointement.

2003, c. 9, art. 6.

Participation by federal authorities

(3) Every federal authority that is in possession of specialist or expert information or knowledge with respect to a project shall, on request, make available that information or knowledge to the responsible authority or to a mediator or a review panel.

(4) Where a screening or comprehensive study of a project is to be conducted and a judicial approval is required, the Governor in Council shall, if satisfied that the screening or comprehensive study shall be conducted in a manner that is consistent with the Act, direct the Governor of Canada to cause the project to be screened or studied and the associated environmental assessment to be conducted.

2003, c. 9, s. 6.

Cooperation with other jurisdictions

12. (1) Il incombe à l’autorité fédérale pourvue des connaissances voulues touchant un projet de fournir, sur demande, les renseignements pertinents à l’autorité responsable ou à un médiateur ou à une commission.

(2) L’autorité responsable peut, dans le cadre de l’examen préalable ou de l’étude appro-
risdiction has a responsibility or an authority to conduct an assessment of the environmental effects of the project or any part thereof, the responsible authority may cooperate with that jurisdiction respecting the environmental assessment of the project.

(5) In this section, “jurisdiction” means:

(a) the government of a province;

(b) an agency or a body that is established pursuant to the legislation of a province and that has powers, duties or functions in relation to an assessment of the environmental effects of a project;

(c) a body that is established pursuant to a land claims agreement referred to in section 35 of the Constitution Act, 1982 and that has powers, duties or functions in relation to an assessment of the environmental effects of a project; or

(d) a governing body that is established pursuant to legislation that relates to the self-government of Indians and that has powers, duties or functions in relation to an assessment of the environmental effects of a project.

1992, c. 37, s. 12; 1993, c. 34, s. 20(F).

FEDERAL ENVIRONMENTAL ASSESSMENT COORDINATOR

Role

12.1 The role of a federal environmental assessment coordinator is to coordinate the participation of federal authorities in the environmental assessment process for a project where a screening or comprehensive study is or might be required and to facilitate communication and cooperation among them and with provinces, persons or bodies referred to in sections 8 to 10, jurisdictions referred to in paragraph 12(5)(c) or (d) or 40(1)(e) or (f) and other participants.

2003, c. 9, s. 7.

Duties

12.2 The federal environmental assessment coordinator shall

(a) ensure that the federal authorities that are or may be responsible authorities and those that are or may be in possession of specialist or expert information or knowledge with respect to the project are identified;

1992, c. 37, s. 12; 1993, c. 34, s. 20(F).

Définition d’“instance”

Dans le présent article, « instance » s’entend :

a) du gouvernement d’une province;

b) d’un organisme établi sous le régime d’une loi provinciale ayant des attributions relatives à l’évaluation des effets environnementaux d’un projet;

c) d’un organisme, constitué aux termes d’un accord sur des revendications territoriales visé à l’article 35 de la Loi constitutionnelle de 1982, ayant des attributions relatives à l’évaluation des effets environnementaux d’un projet;

d) d’un organisme dirigeant, constitué par une loi relative à l’autonomie gouvernementale des Indiens, ayant des attributions relatives à l’évaluation des effets environnementaux d’un projet.

1992, ch. 37, art. 12; 1993, ch. 34, art. 20(F).

COORDONNATEUR FÉDÉRAL DE L’ÉVALUATION ENVIRONNEMENTALE

Rôle

12.1 Le coordonnateur fédéral de l’évaluation environnementale d’un projet est chargé de coordonner la participation des autorités fédérales au processus d’évaluation environnementale pour un projet qui doit ou pourrait faire l’objet d’un examen préalable ou d’une étude approfondie et de faciliter les communications et la collaboration entre elles et avec les autres intervenants, notamment les provinces, les personnes et organismes visés aux articles 8 à 10 et les instances au sens prévu aux alinéas 12(5)c) ou d) ou 40(1)e) ou f).

2003, ch. 9, art. 7.

Obligations

12.2 Le coordonnateur est tenu :

a) de veiller au recensement des autorités responsables — actuelles ou éventuelles —, de même que des autorités fédérales disposant — effectivement ou éventuellement — de l’expertise ou des connaissances voulues touchant le projet;
(b) coordinate their involvement throughout the environmental assessment process;
(c) coordinate the responsible authorities’ fulfilment of their obligations under subsection 55.3(1), paragraph 55.4(1)(a) and section 55.5;
(d) ensure that federal authorities fulfil their obligations under this Act in a timely manner; and
(e) coordinate the federal authorities’ involvement with other jurisdictions.

2003, c. 9, s. 7.

12.3 In carrying out duties under section 12.2, the federal environmental assessment coordinator may

(a) establish and chair a committee composed of the federal authorities that are or may be responsible authorities for the project and those that are or may be in possession of specialist or expert information or knowledge with respect to the project;
(b) after consulting with the authorities referred to in paragraph (a), establish time lines in relation to the assessment; and
(c) in consultation with the federal authorities that are or may be responsible authorities, determine the timing of any public participation.

2003, c. 9, s. 7.

12.4 (1) Subject to subsection (3), the federal environmental assessment coordinator for a project is the Agency if

(a) the project is subject to the environmental assessment process of another jurisdiction referred to in paragraph 12(5)(a), (c) or (d) or 40(1)(e) or (f); or
(b) the project is described in the comprehensive study list.

2003, c. 9, s. 7.

12.4 (1) Sous réserve du paragraphe (3), les attributions de coordonnateur sont exercées par l’Agence dans les cas suivants :

(a) le projet est assujetti au processus d’évaluation environnementale d’une autre instance, au sens des alinéas 12(5)a, c) ou d) ou 40(1)e) ou f);
(b) le projet est visé dans la liste d’étude approfondie.

(2) Subject to subsections (1) and (3), the federal environmental assessment coordinator for a project is

(a) the sole responsible authority in relation to the project; or
(b) if there is more than one responsible authority in relation to the project, the one that
is selected by the responsible authorities or, if they have not selected one within a reasonable time, the one that is designated by the Agency.

(3) No person or body other than the coordinator designated under subsections (1) and (2) may assume any of the powers, duties or functions of the federal environmental assessment coordinator except

(a) the Agency, if the responsible authorities referred to in paragraph (2)(b) and the Agency agree; or

(b) a responsible authority, in a case referred to in paragraph (1)(a) or (b), if the Agency and the responsible authority agree.

(4) For greater certainty, agreements contemplated by subsection (3) may apply generally and not be specific to a particular project.

2003, c. 9, s. 7.

12.5 Every federal authority shall comply in a timely manner with requests and determinations made by the federal environmental assessment coordinator in the course of carrying out its duties or functions.

2003, c. 9, s. 7.

**Action of Federal Authorities Suspended**

13. Where a project is described in the comprehensive study list or is referred to a mediator or a review panel, notwithstanding any other Act of Parliament, no power, duty or function conferred by or under that Act or any regulation made thereunder shall be exercised or performed that would permit the project to be carried out in whole or in part unless an environmental assessment of the project has been completed and a course of action has been taken in relation to the project in accordance with paragraph 37(1)(a).

**Environmental Assessment Process**

14. The environmental assessment process includes, where applicable,

(a) a screening or comprehensive study and the preparation of a screening report or a comprehensive study report;

**Processus d’évaluation environnementale**

14. Le processus d’évaluation environnementale d’un projet comporte, selon le cas :

(a) un examen préalable ou une étude approfondie et l’établissement d’un rapport d’examen préalable ou d’un rapport d’étude approfondie;
(b) a mediation or assessment by a review panel as provided in section 29 and the preparation of a report; and

(c) the design and implementation of a follow-up program.

15. (1) The scope of the project in relation to which an environmental assessment is to be conducted shall be determined by

(a) the responsible authority; or

(b) where the project is referred to a mediator or a review panel, the Minister, after consulting with the responsible authority.

(2) For the purposes of conducting an environmental assessment in respect of two or more projects,

(a) the responsible authority, or

(b) where at least one of the projects is referred to a mediator or a review panel, the Minister, after consulting with the responsible authority,

may determine that the projects are so closely related that they can be considered to form a single project.

(3) Where a project is in relation to a physical work, an environmental assessment shall be conducted in respect of every construction, operation, modification, decommissioning, abandonment or other undertaking in relation to that physical work that is proposed by the proponent or that is, in the opinion of

(a) the responsible authority, or

(b) where the project is referred to a mediator or a review panel, the Minister, after consulting with the responsible authority,

likely to be carried out in relation to that physical work.

1992, c. 37, s. 15; 1993, c. 34, s. 21(F).

16. (1) Every screening or comprehensive study of a project and every mediation or assessment by a review panel shall include a consideration of the following factors:

(a) the environmental effects of the project, including the environmental effects of malfunctions or accidents that may occur in connection with the project and any cumulative environmental effects that are likely to result from the project in combination with other

(b) une médiation ou un examen par une commission prévu à l’article 29 et l’établissement d’un rapport;

(c) l’élaboration et l’application d’un programme de suivi.

15. (1) L’autorité responsable ou, dans le cas où le projet est renvoyé à la médiation ou à l’examen par une commission, le ministre, après consultation de l’autorité responsable, détermine la portée du projet à l’égard duquel l’évaluation environnementale doit être effectuée.

(2) Dans le cadre d’une évaluation environnementale de deux ou plusieurs projets, l’autorité responsable ou, si au moins un des projets est renvoyé à la médiation ou à l’examen par une commission, le ministre, après consultation de l’autorité responsable, peut décider que deux projets sont liés assez étroitement pour être considérés comme un seul projet.

(3) Est effectuée, dans l’un ou l’autre des cas suivants, l’évaluation environnementale de toute opération — construction, exploitation, modification, désaffectation, fermeture ou autre — constituant un projet lié à un ouvrage :

(a) l’opération est proposée par le promoteur;

(b) l’autorité responsable ou, dans le cadre d’une médiation ou de l’examen par une commission et après consultation de cette autorité, le ministre estime l’opération susceptible d’être réalisée en liaison avec l’ouvrage.

1992, ch. 37, art. 15; 1993, ch. 34, art. 21(F).
projects or activities that have been or will be carried out;

(b) the significance of the effects referred to in paragraph (a);

(c) comments from the public that are received in accordance with this Act and the regulations;

(d) measures that are technically and economically feasible and that would mitigate any significant adverse environmental effects of the project; and

(e) any other matter relevant to the screening, comprehensive study, mediation or assessment by a review panel, such as the need for the project and alternatives to the project, that the responsible authority or, except in the case of a screening, the Minister after consulting with the responsible authority, may require to be considered.

(2) In addition to the factors set out in subsection (1), every comprehensive study of a project and every mediation or assessment by a review panel shall include a consideration of the following factors:

(a) the purpose of the project;

(b) alternative means of carrying out the project that are technically and economically feasible and the environmental effects of any such alternative means;

(c) the need for, and the requirements of, any follow-up program in respect of the project; and

(d) the capacity of renewable resources that are likely to be significantly affected by the project to meet the needs of the present and those of the future.

(3) The scope of the factors to be taken into consideration pursuant to paragraphs (1)(a), (b) and (d) and (2)(b), (c) and (d) shall be determined

(a) by the responsible authority; or

(b) where a project is referred to a mediator or a review panel, by the Minister, after consulting the responsible authority, when fixing the terms of reference of the mediation or review panel.

(2) L’étude approfondie d’un projet et l’évaluation environnementale qui fait l’objet d’une médiation ou d’un examen par une commission portent également sur les éléments suivants :

a) les raisons d’être du projet;

b) les solutions de rechange réalisables sur les plans technique et économique, et leurs effets environnementaux;

c) la nécessité d’un programme de suivi du projet, ainsi que ses modalités;

d) la capacité des ressources renouvelables, risquant d’être touchées de façon importante par le projet, de répondre aux besoins du présent et à ceux des générations futures.

(3) L’évaluation de la portée des éléments visés aux alinéas (1)a), b) et d) et (2)b), c) et d) incombe :

a) à l’autorité responsable;

b) au ministre, après consultation de l’autorité responsable, lors de la détermination du mandat du médiateur ou de la commission d’examen.
Factors not included

(4) An environmental assessment of a project is not required to include a consideration of the environmental effects that could result from carrying out the project in response to a national emergency for which special temporary measures are taken under the Emergencies Act.

1992, c. 37, s. 16; 1993, c. 34, s. 22(F).

Community knowledge and aboriginal traditional knowledge

16.1 Community knowledge and aboriginal traditional knowledge may be considered in conducting an environmental assessment.

2003, c. 9, s. 8.

Regional studies

16.2 The results of a study of the environmental effects of possible future projects in a region, in which a federal authority participates, outside the scope of this Act, with other jurisdictions referred to in paragraph 12(5)(a), (c) or (d), may be taken into account in conducting an environmental assessment of a project in the region, particularly in considering any cumulative environmental effects that are likely to result from the project in combination with other projects or activities that have been or will be carried out.

2003, c. 9, s. 8.

Publication of determinations

16.3 The responsible authority shall document and make available to the public, pursuant to subsection 55(1), its determinations pursuant to section 20.

2003, c. 9, s. 8.

Delegation

17. (1) A responsible authority may delegate to any person, body or jurisdiction within the meaning of subsection 12(5) any part of the screening or comprehensive study of a project or the preparation of the screening report or comprehensive study report, and may delegate any part of the design and implementation of a follow-up program, but shall not delegate the duty to take a course of action pursuant to subsection 20(1) or 37(1).

(2) For greater certainty, a responsible authority shall not take a course of action pursuant to subsection 20(1) or 37(1) unless it is satisfied that any duty or function delegated pursuant to subsection (1) has been carried out in accordance with this Act and the regulations.

Situations de crise nationale

16.1 L’évaluation environnementale d’un projet n’a pas à porter sur les effets environnementaux que sa réalisation peut entraîner en réaction à des situations de crise nationale pour lesquelles des mesures d’intervention sont prises aux termes de la Loi sur les mesures d’urgence.

1992, ch. 37, art. 16; 1993, ch. 34, art. 22(F).

Connaissances des collectivités et connaissances traditionnelles autochtones

Études régionales

16.1 Les connaissances des collectivités et les connaissances traditionnelles autochtones peuvent être prises en compte pour l’évaluation environnementale d’un projet.

2003, ch. 9, art. 8.

Publication des décisions

16.2 Les résultats d’une étude des effets environnementaux de projets éventuels dans une région, faite hors du champ d’application de la présente loi et à laquelle une autorité fédérale a collaboré avec des instances, au sens des alinéas 12(5)a), c) ou d), peuvent être pris en compte dans l’évaluation environnementale d’un projet à réaliser dans cette région, notamment dans l’évaluation des effets cumulatifs que la réalisation du projet, combinée à celle d’autres projets ou activités déjà complétées ou à venir, est susceptible de produire sur l’environnement.

2003, ch. 9, art. 8.

Délégation

17. (1) L’autorité responsable consigne et rend accessibles au public, conformément au paragraphe 55(1), les décisions qu’elle prend aux termes de l’article 20.

2003, ch. 9, art. 8.

Précision

(2) Il est entendu que l’autorité responsable qui a délégué l’exécution de l’examen ou de l’étude ainsi que l’établissement des rapports en vertu du paragraphe (1) ne peut prendre une décision aux termes du paragraphe 20(1) ou 37(1) que si elle est convaincue que les attributions déléguées ont été exercées conformément à la présente loi et à ses règlements.
Évaluation environnementale — 1er janvier 2010

SCREENING

18. (1) Where a project is not described in the comprehensive study list or the exclusion list made under paragraph 59(c), the responsible authority shall ensure that

(a) a screening of the project is conducted; and

(b) a screening report is prepared.

(2) Any available information may be used in conducting the screening of a project, but where a responsible authority is of the opinion that the information available is not adequate to enable it to take a course of action pursuant to subsection 20(1), it shall ensure that any studies and information that it considers necessary for that purpose are undertaken or collected.

EXAMEN PRÉALABLE

18. (1) Dans le cas où le projet n’est pas visé dans la liste d’étude approfondie ou dans la liste d’exclusion établie par règlement pris en vertu de l’alinéa 59c), l’autorité responsable veille :

a) à ce qu’en soit effectué l’examen préalable;

b) à ce que soit établi un rapport d’examen préalable.

(2) Dans le cadre de l’examen préalable qu’elle effectue, l’autorité responsable peut utiliser tous les renseignements disponibles; toutefois, si elle est d’avis qu’il n’existe pas suffisamment de renseignements pour lui permettre de prendre une décision en vertu du paragraphe 20(1), elle fait procéder aux études et à la collecte de renseignements nécessaires à cette fin.

(3) Dans les cas où elle estime que la participation du public à l’examen préalable est indiquée ou dans les cas prévus par règlement, l’autorité responsable :

a) verse au site Internet, avant de donner au public la possibilité d’examiner le rapport d’examen préalable et de faire des observations à son égard, une description de la portée du projet, des éléments à prendre en compte dans le cadre de l’examen préalable et de la portée de ceux-ci ou une indication de la façon d’obtenir copie de cette description;

b) avant de prendre sa décision aux termes de l’article 20, donne au public la possibilité d’examiner le rapport d’examen préalable et tout document relatif au projet et de faire ses observations à leur égard et un avis suffisant de cette possibilité;

c) peut donner au public la possibilité de prendre part à toute étape de l’examen préalable qu’elle choisit.

(4) L’exercice du pouvoir discrétionnaire dont dispose l’autorité responsable, dans le cadre du paragraphe (3), de déterminer à quel moment peut se faire la participation du public est assujetti à toute décision pouvant être prise par
19. (1) Subject to subsection (3), the Agency may declare a report to be a class screening report if projects of the class described in the report are not likely, in the opinion of the Agency, to cause significant adverse environmental effects when the design standards and mitigation measures described in the class screening report are applied.

(2) The declaration shall include a statement that the class screening report may be used as

(a) a replacement for the screening required by section 18, and the decision required by section 20, for projects of the class; or

(b) a model for streamlining the screening required by section 18 for projects of the class.

(3) The Agency shall, before making a declaration pursuant to subsection (1),

(a) publish, in any manner it considers appropriate, a notice setting out the following information, namely,

(i) the date on which the draft report will be available to the public,

(ii) the place at which copies of it may be obtained, and

(iii) the deadline and address for filing comments on the appropriateness of its use as a replacement or model for screenings for projects of that class; and

(b) take into consideration any comments filed under subparagraph (a)(iii) and include in the Registry any comments filed by the public.

(4) Any declaration made pursuant to subsection (1) shall be published in the Canada Gazette and, together with the report to which it relates or a description of how a copy of the report may be obtained, shall be included in the Internet site.

19. (1) Sous réserve du paragraphe (3), l’Agence peut désigner tout rapport comme rapport d’examen préalable type applicable à une catégorie de projets, à la condition que les projets appartenant à la catégorie ne soient pas susceptibles, selon elle, de causer des effets environnementaux négatifs importants si les normes de conception et les mesures d’atténuation prévues par le rapport sont appliquées.

(2) La désignation doit indiquer que le rapport d’examen préalable type peut servir :

a) soit de substitut à l’examen préalable exigé par l’article 18 et à la décision visée par l’article 20 à l’égard de projets appartenant à la catégorie;

b) soit de modèle pour simplifier l’examen préalable exigé par l’article 18 pour des projets appartenant à la catégorie.

(3) Avant de faire une désignation, l’Agence :

a) publie, selon les modalités qu’elle estime indiquées, un avis contenant les éléments suivants :

(i) la date à laquelle l’ébauche du rapport sera accessible au public,

(ii) le lieu où des exemplaires de celle-ci peuvent être obtenus,

(iii) l’adresse et la date limite pour la réception par elle d’observations sur l’appréciabilité du rapport comme modèle ou substitut de l’examen préalable pour les projets appartenant à la catégorie;

b) prend en compte les observations reçues et conserve au registre les commentaires formulés par le public.

(4) La désignation est publiée dans la Gazette du Canada et versée, avec le rapport — ou une indication de la façon d’en obtenir copie — , au site Internet.

(5) Si l’autorité responsable estime que le projet appartient à une catégorie faisant l’objet d’un rapport d’examen préalable type visé à
to which paragraph (2)(a) applies, no further action is required under section 18 or 20 with respect to the project, as long as the responsible authority ensures that the design standards and mitigation measures described in the report are implemented.

(6) Where a responsible authority is satisfied that a project or part of a project falls within a class in respect of which a class screening report has been made to which paragraph (2)(b) applies, the responsible authority may use or permit the use of that report and any screening on which it is based to whatever extent the responsible authority considers appropriate for the purpose of complying with section 18.

(7) Where a responsible authority uses or permits the use of a class screening report to which paragraph (2)(b) applies, it shall ensure that any adjustments are made to the report that are necessary to take into account local circumstances and any cumulative environmental effects that may result from the project in combination with other projects or activities that have been or will be carried out.

(8) Where the Agency determines that a class screening report is no longer appropriate to be used as a replacement or model in conducting screenings of other projects within the same class, the Agency may declare the report not to be a class screening report.

(9) Any declaration made pursuant to subsection (8) shall be published in the Canada Gazette and included in the Internet site.

20. (1) The responsible authority shall take one of the following courses of action in respect of a project after taking into consideration the screening report and any comments filed pursuant to subsection 18(3):

(a) subject to subparagraph (c)(iii), where, taking into account the implementation of any mitigation measures that the responsible authority considers appropriate, the project is not likely to cause significant adverse environmental effects, the responsible authority may exercise any power or perform any duty or function that would permit the project to be carried out in whole or in part;

(b) where, taking into account the implementation of any mitigation measures that

l’alinéa (2)a), les mesures visées par les articles 18 et 20 ne sont plus applicables; l’autorité responsable doit toutefois veiller à ce que soient mises en œuvre les normes de conception et les mesures d’atténuation qui sont prévues au rapport visé par la désignation.

(6) Si l’autorité responsable estime que tout ou partie du projet appartient à une catégorie faisant l’objet d’un rapport d’examen préalable type visé à l’alinéa (2)b), l’autorité responsable peut utiliser les résultats de l’examen préalable et le rapport, ou en permettre l’utilisation, dans la mesure qu’elle estime indiquée pour l’application de l’article 18.

(7) Dans les cas visés au paragraphe (6), l’autorité responsable veille à ce que soient apportées au rapport d’examen préalable type les adaptations nécessaires à la prise en compte des facteurs locaux et des effets environnementaux cumulatifs qui, selon elle, peuvent résulter de la réalisation du projet combinée à l’existence d’autres ouvrages ou à la réalisation d’autres projets ou activités.

(8) L’Agence, si elle décide qu’un rapport type ne peut plus servir de substitut ou de modèle pour des projets appartenant à la catégorie, peut faire une déclaration en ce sens.

(9) La déclaration est publiée dans la Gazette du Canada et versée au site Internet.

20. (1) L’autorité responsable prend l’une des mesures suivantes, après avoir pris en compte le rapport d’examen préalable et les observations reçues aux termes du paragraphe 18(3) :

a) sous réserve du sous-alinéa c)(iii), si la réalisation du projet n’est pas susceptible, compte tenu de l’application des mesures d’atténuation qu’elle estime indiquées, d’entraîner des effets environnementaux négatifs importants, exercer ses attributions afin de permettre la mise en œuvre totale ou partielle du projet;

b) si, compte tenu de l’application des mesures d’atténuation qu’elle estime indiquées, la réalisation du projet est susceptible d’entrai-
the responsible authority considers appropriate, the project is likely to cause significant adverse environmental effects that cannot be justified in the circumstances, the responsible authority shall not exercise any power or perform any duty or function conferred on it by or under any Act of Parliament that would permit the project to be carried out in whole or in part; or

(c) where

(i) it is uncertain whether the project, taking into account the implementation of any mitigation measures that the responsible authority considers appropriate, is likely to cause significant adverse environmental effects,

(ii) the project, taking into account the implementation of any mitigation measures that the responsible authority considers appropriate, is likely to cause significant adverse environmental effects and paragraph (b) does not apply, or

(iii) public concerns warrant a reference to a mediator or a review panel,

the responsible authority shall refer the project to the Minister for a referral to a mediator or a review panel in accordance with section 29.

(1.1) Mitigation measures that may be taken into account under subsection (1) by a responsible authority are not limited to measures within the legislative authority of Parliament and include

(a) any mitigation measures whose implementation the responsible authority can ensure; and

(b) any other mitigation measures that it is satisfied will be implemented by another person or body.

(2) When a responsible authority takes a course of action referred to in paragraph (1)(a), it shall, with respect to any mitigation measures it has taken into account and that are described in paragraph (1.1)(a), ensure their implementation in any manner that it considers necessary and, in doing so, it is not limited to its duties or powers under any other Act of Parliament.
(2.1) A federal authority shall provide any assistance requested by a responsible authority in ensuring the implementation of a mitigation measure on which the federal authority and the responsible authority have agreed.

(3) Where the responsible authority takes a course of action pursuant to paragraph (1)(b) in relation to a project, the responsible authority shall publish a notice of that course of action in the Registry and, notwithstanding any other Act of Parliament, no power, duty or function conferred by or under that Act or any regulation made under it shall be exercised or performed that would permit that project to be carried out in whole or in part.

Time for decision

(4) A responsible authority shall not take any course of action under subsection (1) before the 15th day after the inclusion on the Internet site of

(a) notice of the commencement of the environmental assessment;

(b) a description of the scope of the project; and

(c) where the responsible authority, in accordance with subsection 18(3), gives the public an opportunity to participate in the screening of a project, a description of the factors to be taken into consideration in the environmental assessment and of the scope of those factors or an indication of how such a description may be obtained.

1992, c. 37, s. 20; 1993, c. 34, s. 25(F); 2003, c. 9, s. 11.

21. (1) Where a project is described in the comprehensive study list, the responsible authority shall ensure public consultation with respect to the proposed scope of the project for the purposes of the environmental assessment, the factors proposed to be considered in its assessment, the proposed scope of those factors and the ability of the comprehensive study to address issues relating to the project.

(2) After the public consultation, as soon as it is of the opinion that it has sufficient information to do so, the responsible authority shall

(a) report to the Minister regarding

Interdiction de mise en œuvre

Versement préalable de documents

Comprehensive Study

Étude approfondie

Consultation

Report and recommendation
(i) the scope of the project, the factors to be considered in its assessment and the scope of those factors,
(ii) public concerns in relation to the project,
(iii) the potential of the project to cause adverse environmental effects, and
(iv) the ability of the comprehensive study to address issues relating to the project; and

(b) recommend to the Minister to continue with the environmental assessment by means of a comprehensive study, or to refer the project to a mediator or review panel in accordance with section 29.

1992, c. 37, s. 21; 1993, c. 34, s. 26(F); 2003, c. 9, s. 12.

21.1 (1) The Minister, taking into account the things with regard to which the responsible authority must report under paragraph 21(2)(a) and the recommendation of the responsible authority under paragraph 21(2)(b), shall, as the Minister considers appropriate,

(a) refer the project to the responsible authority so that it may continue the comprehensive study and ensure that a comprehensive study report is prepared and provided to the Minister and to the Agency; or

(b) refer the project to a mediator or review panel in accordance with section 29.

Decision final

2003, c. 9, s. 12.

(2) Despite any other provision of this Act, if the Minister refers the project to a responsible authority under paragraph (1)(a), it may not be referred to a mediator or review panel in accordance with section 29.

2003, c. 9, s. 12.

21.2 Where a project has been referred to a responsible authority under paragraph 21.1(1)(a), the responsible authority shall ensure that the public is provided with an opportunity, in addition to those provided under subsection 21(1) and section 22, to participate in the comprehensive study, subject to a decision with respect to the timing of the participation made by the federal environmental assessment coordinator under paragraph 12.3(c).

2003, c. 9, s. 12.

21.2 En plus des consultations publiques prévues au paragraphe 21(1) et à l’article 22, l’autorité responsable à laquelle le projet est renvoyé en vertu de l’alinéa 21.1(1)a est tenue de veiller à ce que le public ait la possibilité de prendre part à l’étude approfondie. Elle est toutefois assujettie à toute décision éventuellement prise par le coordonnateur fédéral de l’évaluation environnementale en vertu de l’alinéa 12.3c) quant au moment de la participation.

2003, ch. 9, art. 12.
22. (1) After receiving a comprehensive study report in respect of a project, the Agency shall, in any manner it considers appropriate to facilitate public access to the report, publish a notice setting out the following information:

(a) the date on which the comprehensive study report will be available to the public;
(b) the place at which copies of the report may be obtained; and
(c) the deadline and address for filing comments on the conclusions and recommendations of the report.

22. (1) Quand elle reçoit un rapport d’étude approfondie, l’Agence donne avis, de la façon qu’elle estime indiquée pour favoriser l’accès du public au rapport, des éléments suivants :

(a) la date à laquelle le rapport d’étude approfondie sera accessible au public;
(b) le lieu d’obtention d’exemplaires du rapport;
(c) l’adresse et la date limite pour la réception par celle-ci d’observations sur les conclusions et recommandations du rapport.

22. (2) Prior to the deadline set out in the notice published by the Agency, any person may file comments with the Agency relating to the conclusions and recommendations and any other aspect of the comprehensive study report.

22. (2) Toute personne peut, dans le délai indiqué dans l’avis publié par l’Agence, lui présenter ses observations relativement aux conclusions ou recommandations issues de l’étude approfondie ou à tout autre aspect du rapport qui y fait suite.

23. (1) The Minister shall, after taking into consideration the comprehensive study report and any comments filed pursuant to subsection 22(2), refer the project back to the responsible authority for action under section 37 and issue an environmental assessment decision statement that

(a) sets out the Minister’s opinion as to whether, taking into account the implementation of any mitigation measures that the Minister considers appropriate, the project is or is not likely to cause significant adverse environmental effects; and
(b) sets out any mitigation measures or follow-up program that the Minister considers appropriate, after having taken into account the views of the responsible authorities and other federal authorities concerning the measures and program.

23. (1) Le ministre, après avoir pris en compte le rapport d’étude approfondie et les observations qui ont été présentées en vertu du paragraphe 22(2), renvoie le projet à l’autorité responsable pour qu’elle prenne une décision en application de l’article 37 et fait une déclaration dans laquelle :

(a) il indique si, selon lui, le projet est susceptible ou non, compte tenu de la mise en œuvre des mesures d’atténuation qu’il estime appropriées, d’entraîner des effets environnementaux négatifs importants;
(b) il indique, s’il y a lieu, les mesures d’atténuation et tout programme de suivi qu’il estime appropriés, compte tenu des observations des autorités responsables et des autorités fédérales concernant ces mesures ou programmes.

23. (2) Before issuing the environmental assessment decision statement, the Minister shall, if the Minister is of the opinion that additional information is necessary or that there are public concerns that need to be further addressed, request that the federal authorities referred to in paragraph 12.3(a) or the proponent ensure that the necessary information is provided or actions are taken to address those public concerns.

23. (2) Avant de faire la déclaration, le ministre, s’il estime qu’il lui faut des renseignements supplémentaires ou qu’il convient de mieux répondre aux préoccupations du public, demande aux autorités fédérales visées à l’alinéa 12.3a) ou au promoteur de veiller à ce que les renseignements nécessaires soient fournis ou à ce que les mesures nécessaires pour répondre aux préoccupations du public soient prises.

23. (3) The Minister shall not issue the environmental assessment decision statement before

(3) Le ministre ne peut faire la déclaration avant le trentième jour suivant la date à laquelle
the 30th day after the inclusion on the Internet site of

(a) notice of the commencement of the environmental assessment;
(b) a description of the scope of the project;
(c) where the Minister, under paragraph 21.1(1)(a), refers a project to the responsible authority to continue a comprehensive study,
   (i) notice of the Minister’s decision to so refer the project, and
   (ii) a description of the factors to be taken into consideration in the environmental assessment and of the scope of those factors or an indication of how such a description may be obtained; and
(d) the comprehensive study report that is to be taken into consideration by a responsible authority in making its decision under subsection 37(1) or a description of how a copy of the report may be obtained.

1992, c. 37, s. 23; 2003, c. 9, s. 13.

24. (1) Where a proponent proposes to carry out, in whole or in part, a project for which an environmental assessment was previously conducted and

(a) the project did not proceed after the assessment was completed,
(b) in the case of a project that is in relation to a physical work, the proponent proposes an undertaking in relation to that work different from that proposed when the assessment was conducted,
(c) the manner in which the project is to be carried out has subsequently changed, or
(d) the renewal of a licence, permit, approval or other action under a prescribed provision is sought,
the responsible authority shall use that assessment and the report thereon to whatever extent is appropriate for the purpose of complying with section 18 or 21.

(2) Where a responsible authority uses an environmental assessment and the report thereon pursuant to subsection (1), the responsible authority shall ensure that any adjustments are made to the report that are necessary to take into account any significant changes in the envi-

24. (1) Si un promoteur se propose de mettre en œuvre, en tout ou en partie, un projet ayant déjà fait l’objet d’une évaluation environnementale, l’autorité responsable doit utiliser l’évaluation et le rapport correspondant dans la mesure appropriée pour l’application des articles 18 ou 21 dans chacun des cas suivants :

(a) le projet n’a pas été mis en œuvre après l’achèvement de l’évaluation;
(b) le projet est lié à un ouvrage à l’égard duquel le promoteur propose une réalisation différente de celle qui était proposée au moment de l’évaluation;
(c) les modalités de mise en œuvre du projet ont par la suite été modifiées;
(d) il est demandé qu’un permis, une licence ou une autorisation soit renouvelé, ou qu’une autre mesure prévue par disposition réglementaire soit prise.

(2) Dans les cas visés au paragraphe (1), l’autorité responsable veille à ce que soient apportées au rapport les adaptations nécessaires à la prise en compte des changements importants de circonstances survenus depuis l’évaluation.
Discretionary Powers

25. Subject to paragraphs 20(1)(b) and (c), where at any time a responsible authority is of the opinion that

(a) a project, taking into account the implementation of any mitigation measures that the responsible authority considers appropriate, may cause significant adverse environmental effects, or

(b) public concerns warrant a reference to a mediator or a review panel,

the responsible authority may request the Minister to refer the project to a mediator or a review panel.

26. Where at any time a responsible authority decides not to exercise any power or perform any duty or function referred to in section 5 in relation to a project that has not been referred to a mediator or a review panel, it may terminate the environmental assessment of the project.

27. Where at any time a responsible authority decides not to exercise any power or perform any duty or function referred to in section 5 in relation to a project that has been referred to a mediator or a review panel, the Minister may terminate the environmental assessment of the project.

28. (1) Where at any time the Minister is of the opinion that

(a) a project for which an environmental assessment may be required under section 5, taking into account the implementation of any appropriate mitigation measures, may cause significant adverse environmental effects, or

(b) public concerns warrant a reference to a mediator or a review panel,

the Minister may, after offering to consult with the jurisdiction, within the meaning of subsection 12(5), where the project is to be carried out and after consulting with the responsible authority or, where there is no responsible authori-
ity in relation to the project, the appropriate federal authority, refer the project to a mediator or a review panel in accordance with section 29.

(2) Where a proposal is referred pursuant to paragraph 130(1)(c) of the *Mackenzie Valley Resource Management Act*, the Minister shall refer the proposal to a review panel.

1992, c. 37, s. 28; 1998, c. 25, s. 162.

**Mediation and Panel Reviews**

29. (1) Subject to subsection (2), where a project is to be referred to a mediator or a review panel, the Minister shall

(a) refer the environmental assessment relating to the project to

(i) a mediator, or

(ii) a review panel; or

(b) refer part of the environmental assessment relating to the project to a mediator and part of that assessment to a review panel.

(2) An environmental assessment or a part thereof shall not be referred to a mediator unless the interested parties have been identified and are willing to participate in the mediation.

(3) The Minister may, at any time, refer any issue relating to an assessment by a review panel to a mediator where the Minister is of the opinion, after consulting with the review panel, that mediation is appropriate in respect of that issue.

(4) Where, at any time after an environmental assessment or part of an environmental assessment of a project has been referred to a mediator, the Minister or the mediator determines that the mediation is not likely to produce a result that is satisfactory to all the participants, the Minister shall order the conclusion of the mediation.

1992, c. 37, s. 29; 2003, c. 9, s. 14.

30. (1) Where a reference is made under subparagraph 29(1)(a)(i) in relation to a project, the Minister shall, after consulting with the responsible authority and all parties who are to participate in the mediation,

(2) Dans les cas où il en est saisi en vertu de l’alinéa 130(1)c) de la *Loi sur la gestion des ressources de la vallée du Mackenzie*, le ministre est tenu de soumettre l’affaire à un examen par une commission.

1992, ch. 37, art. 28; 1998, ch. 25, art. 162.

**Appointment of Mediator**

30. (1) S’il effectue le renvoi au médiateur visé à l’alinéa 29(1)a), le ministre, après consultation de l’autorité responsable et des parties qui doivent participer à la médiation :

a) nomme médiateur une personne :
(a) appoint as mediator any person who
(i) is unbiased and free from any conflict of interest relative to the project and who has knowledge or experience in acting as a mediator, and
(ii) may have been selected from a roster established pursuant to subsection (2); and
(b) fix the terms of reference of the mediation.

(2) The Minister may establish a roster of persons to act as mediators to be appointed pursuant to paragraph (1)(a).

31. The mediator may, at any time, allow an additional interested party to participate in a mediation.

32. (1) A mediator shall, at the conclusion of the mediation, prepare and submit a report to the Minister and to the responsible authority.

(2) No evidence of or relating to a statement made by a mediator or a participant to the mediation during the course of and for the purposes of the mediation is admissible without the consent of the mediator or participant, in any proceeding before a review panel, court, tribunal, body or person with jurisdiction to compel the production of evidence.

1992, c. 37, s. 32; 2003, c. 9, s. 15(F).

33. (1) Where a project is referred to a review panel, the Minister shall, in consultation with the responsible authority,

(a) appoint as members of the panel, including the chairperson thereof, persons who
(i) are unbiased and free from any conflict of interest relative to the project and who have knowledge or experience relevant to the anticipated environmental effects of the project, and
(ii) may have been selected from a roster established pursuant to subsection (2); and
(b) fix the terms of reference of the panel.

(2) The Minister may establish a roster of persons, to act as members of any review panel to be established pursuant to paragraph (1)(a).

1992, c. 37, s. 33; 1993, c. 34, s. 28(F).

34. A review panel shall, in accordance with any regulations made for that purpose and with its term of reference,
(a) ensure that the information required for an assessment by a review panel is obtained and made available to the public;

(b) hold hearings in a manner that offers the public an opportunity to participate in the assessment;

(c) prepare a report setting out

(i) the rationale, conclusions and recommendations of the panel relating to the environmental assessment of the project, including any mitigation measures and follow-up program, and

(ii) a summary of any comments received from the public; and

(d) submit the report to the Minister and the responsible authority.

Powers of review panel

35. (1) A review panel has the power of summoning any person to appear as a witness before the panel and of ordering the witness to

(a) give evidence, orally or in writing; and

(b) produce such documents and things as the panel considers necessary for conducting its assessment of the project.

Enforcement powers

(2) A review panel has the same power to enforce the attendance of witnesses and to compel them to give evidence and produce documents and other things as is vested in a court of record.

35. (2) La commission a, pour contraindre les témoins à comparaître, à déposer et à produire des pièces, les pouvoirs d’une cour d’archives.

Hearings to be public

(3) A hearing by a review panel shall be public unless the panel is satisfied after representations made by a witness that specific, direct and substantial harm would be caused to the witness or specific harm to the environment by the disclosure of the evidence, documents or other things that the witness is ordered to give or produce pursuant to subsection (1).

35. (3) Les audiences de la commission sont publiques sauf si elle décide, à la suite d’observations faites par le témoin, que la communication des éléments de preuve, documents ou objets qu’il est tenu de présenter au titre du paragraphe (1) lui causerait directement un préjudice réel et sérieux ou causerait un préjudice réel à l’environnement.

35. (4) Si la commission conclut que la communication d’éléments de preuve, de documents ou d’objets causerait directement un préjudice réel et sérieux au témoin, ces éléments de preuve, documents ou objets sont protégés; la personne qui les a obtenus en vertu de la présente loi ne peut sciemment les communiquer ou permettre qu’ils le soient sans l’autorisation du témoin.

Non-disclosure

(4) Where a review panel is satisfied that the disclosure of evidence, documents or other things would cause specific, direct and substantial harm to a witness, the evidence, documents or things are privileged and shall not, without the authorization of the witness, knowingly be or be permitted to be communicated, disclosed or made available by any person who has obtained the evidence, documents or other things pursuant to this Act.

4.1 Where a review panel is satisfied that the disclosure of evidence, documents or other things would cause specific, direct and substantial harm to a witness, the evidence, documents or things are privileged and shall not, without the authorization of the witness, knowingly be or be permitted to be communicated, disclosed or made available by any person who has obtained the evidence, documents or other things pursuant to this Act.

Non-disclosure

(4.1) Where a review panel is satisfied that the disclosure of evidence, documents or other things would cause specific, direct and substantial harm to a witness, the evidence, documents or things are privileged and shall not, without the authorization of the witness, knowingly be or be permitted to be communicated, disclosed or made available by any person who has obtained the evidence, documents or other things pursuant to this Act.
things would cause specific harm to the environment, the evidence, documents or things are privileged and shall not, without the authorization of the review panel, knowingly be or be permitted to be communicated, disclosed or made available by any person who has obtained the evidence, documents or other things pursuant to this Act.

(5) Any summons issued or order made by a review panel pursuant to subsection (1) shall, for the purposes of enforcement, be made a summons or order of the Federal Court by following the usual practice and procedure.

(6) No action or other proceeding lies or shall be commenced against a member of a review panel for or in respect of anything done or omitted to be done, during the course of and for the purposes of the assessment by the review panel.

1992, c. 37, s. 35; 2003, c. 9, s. 16.

(1) Subject to subsections (1.1) to (1.3), the responsible authority shall take one of the following courses of action in respect of a project after taking into consideration the report submitted by a mediator or a review panel or, in the case of a project referred back to the responsible authority pursuant to subsection 23(1), the comprehensive study report:

(а) where, taking into account the implementation of any mitigation measures that the responsible authority considers appropriate,

(i) the project is not likely to cause significant adverse environmental effects, or

(ii) the project is likely to cause significant adverse environmental effects that can be justified in the circumstances,

the responsible authority may exercise any power or perform any duty or function that would permit the project to be carried out in whole or in part; or

la communication d’éléments de preuve, de documents ou d’objets, ces éléments de preuve, documents ou objets sont protégés; la personne qui les a obtenus en vertu de la présente loi ne peut sciemment les communiquer ou permettre qu’ils le soient sans l’autorisation de la commission.

(5) Aux fins de leur exécution, les assignations faites et ordonnances rendues aux termes du paragraphe (1) sont, selon la procédure habituelle, assimilées aux assignations ou ordonnances de la Cour fédérale.

(6) Les membres d’une commission d’examens sont soustraits aux poursuites et autres procédures pour les faits — actes ou omissions — censés accomplis dans le cadre d’un examen par la commission.

1992, ch. 37, art. 35; 2003, ch. 9, art. 16.

36. On receiving a report submitted by a mediator or a review panel, the Minister shall make the report available to the public in any manner the Minister considers appropriate to facilitate public access to the report, and shall advise the public that the report is available.

36. Sur réception du rapport du médiateur ou de la commission d’évaluation environnementale, le ministre en donne avis public et en favorise l’accès par le public de la manière qu’il estime indiquée.

37. (1) Sous réserve des paragraphes (1.1) à (1.3), l’autorité responsable, après avoir pris en compte le rapport du médiateur ou de la commission ou, si le projet lui est renvoyé aux termes du paragraphe 23(1), le rapport d’étude approfondie, prend l’une des décisions suivantes :

а) si, compte tenu de l’application des mesures d’atténuation qu’elle estime indiquées, la réalisation du projet n’est pas susceptible d’entraîner des effets environnementaux néfastes importants ou est susceptible d’en entraîner qui sont justifiables dans les circonstances, exercer ses attributions afin de permettre la mise en œuvre totale ou partielle du projet;

б) si, compte tenu de l’application des mesures d’atténuation qu’elle estime indiquées, la réalisation du projet est susceptible d’entraîner des effets environnementaux qui ne sont pas justifiables dans les circonstances, ne pas exercer les attributions qui lui sont conférées sous le régime d’une loi fédérale et
(b) where, taking into account the implementation of any mitigation measures that the responsible authority considers appropriate, the project is likely to cause significant adverse environmental effects that cannot be justified in the circumstances, the responsible authority shall not exercise any power or perform any duty or function conferred on it by or under any Act of Parliament that would permit the project to be carried out in whole or in part.

(1.1) Where a report is submitted by a mediator or review panel,

(a) the responsible authority shall take into consideration the report and, with the approval of the Governor in Council, respond to the report;

(b) the Governor in Council may, for the purpose of giving the approval referred to in paragraph (a), require the mediator or review panel to clarify any of the recommendations set out in the report; and

(c) the responsible authority shall take a course of action under subsection (1) that is in conformity with the approval of the Governor in Council referred to in paragraph (a).

(1.2) Where a response to a report is required under paragraph (1.1)(a) and there is, in addition to a responsible authority, a federal authority referred to in paragraph 5(2)(b) in relation to the project, that federal authority may act as a responsible authority for the purposes of that response. This subsection applies in the case of a federal authority within the meaning of paragraph (b) of the definition “federal authority” in subsection 2(1) if the Minister through whom the authority is accountable to Parliament agrees.

(1.3) Where a project is referred back to a responsible authority under subsection 23(1) and the Minister issues an environmental assessment decision statement to the effect that the project is likely to cause significant adverse environmental effects, no course of action may be taken by the responsible authority under subsection (1) without the approval of the Governor in Council.

(1.1) Une fois pris en compte le rapport du médiateur ou de la commission, l’autorité responsable est tenue d’y donner suite avec l’agrément du gouverneur en conseil, qui peut demander des précisions sur l’une ou l’autre de ses conclusions; l’autorité responsable prend alors la décision visée au titre du paragraphe (1) conformément à l’agrément.

(1.2) Lorsqu’une autorité responsable a l’obligation, en vertu du paragraphe (1.1), de donner suite au rapport qui y est visé, toute autorité fédérale dont le rôle à l’égard du projet est prévu à l’alinéa 5(2)b) peut prendre part à l’exécution de cette obligation comme si elle était une autorité responsable. S’agissant d’une autorité fédérale visée à l’alinéa b) de la définition de « autorité fédérale », au paragraphe 2(1), elle peut s’acquitter de cette obligation avec l’agrément du ministre par l’intermédiaire duquel elle rend compte de ses activités au Parlement.

(1.3) L’autorité responsable à laquelle le projet est renvoyé au titre du paragraphe 23(1) ne prend la décision visée au paragraphe (1) qu’avec l’agrément du gouverneur en conseil si le projet est, selon la déclaration du ministre, susceptible d’entraîner des effets environnementaux négatifs importants.
(2) Where a responsible authority takes a course of action referred to in paragraph (1)(a), it shall, notwithstanding any other Act of Parliament, in the exercise of its powers or the performance of its duties or functions under that other Act or any regulation made thereunder or in any other manner that the responsible authority considers necessary, ensure that any mitigation measures referred to in that paragraph in respect of the project are implemented.

(2) L’autorité responsable qui prend la décision visée à l’alinéa (1)a) veille, malgré toute autre loi fédérale, lors de l’exercice des attributions qui lui sont conférées sous le régime de cette loi ou de ses règlements ou selon les autres modalités qu’elle estime indiquées, à l’application des mesures d’atténuation visées à cet alinéa.

(2.1) Mitigation measures that may be taken into account under subsection (1) by a responsible authority are not limited to measures within the legislative authority of Parliament and include

(a) any mitigation measures whose implementation the responsible authority can ensure; and

(b) any other mitigation measures that it is satisfied will be implemented by another person or body.

(2.1) Les mesures d’atténuation que l’autorité responsable peut prendre en compte dans le cadre du paragraphe (1) ne se limitent pas à celles qui relèvent de la compétence législative du Parlement; elles comprennent :

a) les mesures d’atténuation dont elle peut assurer l’application;

b) toute autre mesure d’atténuation dont elle est convaincue qu’elle sera appliquée par une autre personne ou un autre organisme.

(2.2) When a responsible authority takes a course of action referred to in paragraph (1)(a), it shall, with respect to any mitigation measures it has taken into account and that are described in paragraph (2.1)(a), ensure their implementation in any manner that it considers necessary and, in doing so, it is not limited to its duties or powers under any other Act of Parliament.

(2.2) Si elle prend une décision dans le cadre de l’alinéa (1)a), l’autorité responsable veille à l’application des mesures d’atténuation qu’elle a prises en compte et qui sont visées à l’alinéa (1.1)a) de la façon qu’elle estime nécessaire, même si aucune autre loi fédérale ne lui confère de tels pouvoirs d’application.

(2.3) A federal authority shall provide any assistance requested by a responsible authority in ensuring the implementation of a mitigation measure on which the federal authority and the responsible authority have agreed.

(2.3) Il incombe à l’autorité fédérale qui convient avec l’autorité responsable de mesures d’atténuation d’appuyer celle-ci, sur demande, dans l’application de ces mesures.

(3) Where the responsible authority takes a course of action referred to in paragraph (1)(b) in relation to a project, the responsible authority shall publish a notice of that course of action in the Registry and, notwithstanding any other Act of Parliament, no power, duty or function conferred by or under that Act or any regulation made under it shall be exercised or performed that would permit that project to be carried out in whole or in part.

(3) L’autorité responsable qui prend la décision visée à l’alinéa (1)b) à l’égard d’un projet est tenue de publier un avis de cette décision dans le registre, et aucune attribution conférée sous le régime de toute autre loi fédérale ou de ses règlements ne peut être exercée de façon à permettre la mise en œuvre, en tout ou en partie, du projet.

(4) A responsible authority shall not take any course of action under subsection (1) before the 30th day after the report submitted by a mediator or a review panel or a summary of it

(4) L’autorité responsable ne peut prendre une décision dans le cadre du paragraphe (1) avant le trentième jour suivant le versement du rapport du médiateur ou de la commission, ou
has been included on the Internet site in accordance with paragraph 55.1(2)(p).
1992, c. 37, s. 37; 1993, c. 34, s. 29(F); 1994, c. 46, s. 3; 2003, c. 9, s. 17.

**FOLLOW-UP PROGRAM**

38. (1) Where a responsible authority takes a course of action under paragraph 20(1)(a), it shall consider whether a follow-up program for the project is appropriate in the circumstances and, if so, shall design a follow-up program and ensure its implementation.

(2) Where a responsible authority takes a course of action under paragraph 37(1)(a), it shall design a follow-up program for the project and ensure its implementation.

(3) In designing a follow-up program and in ensuring its implementation, a responsible authority is not limited by the Act of Parliament that confers the powers it exercises or the duties or functions it performs.

(4) A federal authority shall provide any assistance requested by a responsible authority in ensuring the implementation of a follow-up program on which the federal authority and the responsible authority have agreed.

(5) The results of follow-up programs may be used for implementing adaptive management measures or for improving the quality of future environmental assessments.

1992, c. 37, s. 38; 1993, c. 34, s. 30(F); 2003, c. 9, s. 18.

**CERTIFICATE**

39. A certificate that states that an environmental assessment of a project has been completed, and that is signed by a responsible authority that exercises a power or performs a duty or function referred to in paragraph 5(1)(c) in relation to the project, is, in the absence of evidence to the contrary, proof of the matter stated.

1992, c. 37, s. 38; 1993, c. 34, s. 30(F); 2003, c. 9, s. 18.

**Definition of “jurisdiction”**

40. (1) For the purposes of this section and sections 41 and 42, “jurisdiction” includes

(a) a federal authority;

(b) the government of a province;

**PROGRAMME DE SUIVI**

38. (1) Si elle décide de la mise en œuvre conformément à l’alinéa 20(1)a), l’autorité responsable examine l’opportunité d’un programme de suivi dans les circonstances; le cas échéant, elle procède à l’élaboration d’un tel programme et veille à son application.

(2) Si elle décide de la mise en œuvre conformément à l’alinéa 37(1)a), l’autorité responsable élabore un programme de suivi et veille à son application.

(3) Dans l’élaboration et l’application du programme de suivi qu’elle estime indiqué, l’autorité responsable n’est pas limitée par le champ d’application de la loi sous le régime de laquelle elle exerce ses attributions.

(4) Il incombe à l’autorité fédérale qui convient avec l’autorité responsable du programme de suivi d’appuyer celle-ci, sur demande, dans la mise en œuvre du programme.

(5) Les résultats des programmes de suivi peuvent être utilisés pour mettre en œuvre des mesures de gestion adaptative ou pour améliorer la qualité des évaluations environnementales futures.

1992, ch. 37, art. 38; 1993, ch. 34, art. 30(F); 2003, ch. 9, art. 18.

**EXAMEN CONJOINT**

39. Le certificat signé par l’autorité responsable qui exerce une attribution visée à l’alinéa 5(1)c) et où il est déclaré qu’une évaluation environnementale a été effectuée fait foi, sauf preuve contraire, de son contenu.

40. (1) Pour l’application du présent article et des articles 41 et 42, « instance » s’entend notamment :

a) d’une autorité fédérale;

b) du gouvernement d’une province;
(c) any other agency or body established pursuant to an Act of Parliament or the legislature of a province and having powers, duties or functions in relation to an assessment of the environmental effects of a project;

(d) any body established pursuant to a land claims agreement referred to in section 35 of the Constitution Act, 1982 and having powers, duties or functions in relation to an assessment of the environmental effects of a project;

(e) a government of a foreign state or of a subdivision of a foreign state, or any institution of such a government; and

(f) an international organization of states or any institution of such an organization.

(2) Subject to section 41, where the referral of a project to a review panel is required or permitted by this Act, the Minister

(a) may enter into an agreement or arrangement with a jurisdiction referred to in paragraph (1)(a), (b), (c) or (d) that has powers, duties or functions in relation to the assessment of the environmental effects of the project, respecting the joint establishment of a review panel and the manner in which the environmental assessment of the project is to be conducted by the review panel; and

(b) shall, in the case of a jurisdiction within the meaning of subsection 12(5) that has a responsibility or an authority to conduct an assessment of the environmental effects of the project or any part of it, offer to consult and cooperate with that other jurisdiction respecting the environmental assessment of the project.

(2.1) Subject to section 41, where the Minister is required by subsection 28(2) to refer a proposal to a review panel, the Minister and the Mackenzie Valley Environmental Impact Review Board shall, in writing, jointly establish a review panel and prescribe the manner of its examination of the impact of the proposal on the environment.

(2.2) Despite subsection (2.1), if, in respect of a proposal referred to in subsection 138.1(1) of the Mackenzie Valley Resource Management Act where no agreement is established jointly with another jurisdiction, the Minister may refer the proposal to the Mackenzie Valley Environmental Impact Review Board or to a body established pursuant to a land claims agreement referred to in section 35 of the Constitution Act, 1982 and having powers, duties or functions in relation to an assessment of the environmental effects of a project.
Act, no agreement is entered into under that subsection within the period fixed by the regulations referred to in subsection 138.1(4) of that Act, an assessment by a review panel of the proposal shall be conducted.

(2.3) The Minister shall to the extent possible ensure that any assessment of the proposal required by subsection (2.2) is coordinated with any environmental impact review of the proposal under the Mackenzie Valley Resource Management Act.

(2.4) Before taking a course of action under subsection 37(1) in respect of a proposal referred to in subsection (2.3), the responsible authority shall take into consideration any report in respect of the proposal that is issued under subsection 134(2) of the Mackenzie Valley Resource Management Act and shall consult the persons and bodies to whom the report is submitted or distributed under subsection 134(3) of that Act.

(3) Subject to section 41, where the referral of a project to a review panel is required or permitted by this Act and a jurisdiction referred to in paragraph (1)(e) or (f) has a responsibility or an authority to conduct an assessment of the environmental effects of the project or any part of it, the Minister and the Minister of Foreign Affairs may enter into an agreement or arrangement with that jurisdiction respecting the joint establishment of a review panel and the manner in which the environmental assessment of the project is to be conducted by the review panel.

(4) Any agreement or arrangement referred to in subsection (2) or (3), and any document establishing a review panel under subsection (2.1), shall be published before the commencement of the hearings conducted by the review panel.

1992, c. 37, s. 40; 1993, c. 34, s. 31(F); 1995, c. 5, s. 25; 1998, c. 25, s. 163; 2003, c. 9, s. 19; 2005, c. 1, s. 99.

41. An agreement or arrangement entered into pursuant to subsection 40(2) or (3), and any document establishing a review panel under subsection 40(2.1), shall provide that the environmental assessment of the project shall include a consideration of the factors required to be considered under subsections 16(1) and (2) and be conducted in accordance with any additional requirements and procedures set out in the agreement and shall provide that
(a) the Minister shall appoint or approve the appointment of the chairperson or appoint a co-chairperson, and shall appoint at least one other member of the panel;

(b) the members of the panel are to be unbiased and free from any conflict of interest relative to the project and are to have knowledge or experience relevant to the anticipated environmental effects of the project;

(c) the Minister shall fix or approve the terms of reference for the panel;

(d) the review panel is to have the powers and immunities provided for in section 35;

(e) the public will be given an opportunity to participate in the assessment conducted by the panel;

(f) on completion of the assessment, the report of the panel will be submitted to the Minister; and

(g) the panel’s report will be published.

1992, c. 37, s. 41; 1993, c. 34, s. 32(F); 1998, c. 25, s. 164; 2003, c. 9, s. 20.

**Deemed substitution**

42. Where the Minister establishes a review panel jointly with a jurisdiction referred to in subsection 40(1), the assessment conducted by that panel shall be deemed to satisfy any requirements of this Act and the regulations respecting assessments by a review panel.

1992, c. 37, s. 42; 1993, c. 34, s. 33(F).

**Public hearing by a Federal Authority**

43. (1) Where the referral of a project to a review panel is required or permitted by this Act and the Minister is of the opinion that a process for assessing the environmental effects of projects that is followed by a federal authority under an Act of Parliament other than this Act or by a body referred to in paragraph 40(1) (d) would be an appropriate substitute, the Minister may approve the substitution of that process for an environmental assessment by a review panel under this Act.

1992, c. 37, s. 43; 1993, c. 34, s. 34(F).

(2) An approval of the Minister pursuant to subsection (1) shall be in writing and may be given in respect of a project or a class of projects.

1992, c. 37, s. 43; 1993, c. 34, s. 34(F).
Conditions

44. The Minister shall not approve a substitution pursuant to subsection 43(1) unless the Minister is satisfied that

(a) the process to be substituted will include a consideration of the factors required to be considered under subsections 16(1) and (2);

(b) the public will be given an opportunity to participate in the assessment;

(c) at the end of the assessment, a report will be submitted to the Minister;

(d) the report will be published; and

(e) any criteria established pursuant to paragraph 58(1)(g) are met.

Deemed substitution

45. Where the Minister approves a substitution of a process pursuant to subsection 43(1), an assessment that is conducted in accordance with that process shall be deemed to satisfy any requirements of this Act and the regulations in respect of assessments by a review panel.

TRANSBOUNDARY AND RELATED ENVIRONMENTAL EFFECTS

46. (1) Where no power, duty or function referred to in section 5 is to be exercised or performed by a federal authority in relation to a project that is to be carried out in a province and the Minister is of the opinion that the project may cause significant adverse environmental effects in another province, the Minister may refer the project to a mediator or a review panel in accordance with section 29 for an assessment of the environmental effects of the project in that other province.

Agreement

(2) The Minister shall not refer a project to a mediator or a review panel pursuant to subsection (1) where the Minister and the governments of all interested provinces have agreed on another manner of conducting an assessment of the interprovincial environmental effects of the project that

(a) includes a consideration of the factors required to be considered under subsections 16(1) and (2);

(b) includes an opportunity for the public to participate in the assessment;

(c) includes a consideration of the factors required to be considered under subsections 16(1) and (2);

(d) includes an opportunity for the public to participate in the assessment;

(e) any criteria established pursuant to paragraph 58(1)(g) are met.

Effets interprovinciaux

46. (1) S’il est d’avis qu’un projet qui doit être mis en œuvre dans une province et à l’égard duquel aucune des attributions visées à l’article 5 ne doit être exercée par une autorité fédérale peut entraîner des effets environnementaux négatifs importants dans une autre province, le ministre peut, conformément à l’article 29, renvoyer à un médiateur ou à une commission l’évaluation de ces effets dans cette autre province.

Entente interprovinciale

(2) Le ministre ne peut effectuer le renvoi prévu au paragraphe (1) que si lui-même et les gouvernements des provinces concernées ne peuvent s’entendre sur des modalités de révision de l’évaluation des effets environnementaux interprovinciaux du projet qui réunissent les conditions suivantes :

(a) l’évaluation porte sur les éléments dont la prise en compte est exigée en vertu des paragraphes 16(1) et (2);

(b) le public a la possibilité de participer au processus d’évaluation;

(c) dès l’achèvement de l’évaluation, un rapport lui sera présenté;
(c) includes a requirement that the report is to be submitted to the Minister at the end of the assessment;
(d) includes a requirement that the report is to be published; and
(e) meets any criteria established pursuant to paragraph 58(1)(h).

(3) The Minister shall consider whether to make a reference pursuant to subsection (1)
(a) on the request of the government of any interested province; or
(b) on the receipt of a petition that is
(i) signed by one or more persons each of whom has an interest in lands on which the project may cause significant adverse environmental effects, and
(ii) accompanied by a concise statement of the evidence supporting the contention of the petitioners that the project may cause significant adverse environmental effects in a province other than the one in which it is to be carried out.

(4) At least ten days before referring a project to a mediator or a review panel pursuant to subsection (1), the Minister shall give notice of the intention to do so to the proponent of the project, to the governments of all interested provinces and to any person who signed a petition considered by the Minister pursuant to subsection (3).

(5) For the purposes of this section and sections 47, 48, 50 and 51, “interested province” means
(a) a province in which the project is to be carried out; or
(b) a province that claims that significant adverse environmental effects may occur in that province as a result of the project.

1992, c. 37, s. 46; 2003, c. 9, s. 21.

47. (1) Where no power, duty or function referred to in section 5 is to be exercised or performed by a federal authority in relation to a project that is to be carried out in Canada or on federal lands and the Minister is of the opinion that the project may cause significant adverse environmental effects occurring both outside Canada and outside those federal lands, the
Minister and the Minister of Foreign Affairs may refer the project to a mediator or a review panel in accordance with section 29 for an assessment of the environmental effects of the project occurring both outside Canada and outside federal lands.

(2) The Minister and the Minister of Foreign Affairs shall not refer a project to a mediator or a review panel pursuant to subsection (1) where the Minister and the governments of all interested provinces have agreed on another manner of conducting an assessment of the environmental effects of the project occurring both outside Canada and outside federal lands that

(a) includes a consideration of the factors required to be considered under subsections 16(1) and (2);

(b) includes an opportunity for the public to participate in the assessment;

(c) includes a requirement that the report is to be submitted to the Minister at the end of the assessment;

(d) includes a requirement that the report is to be published; and

(e) meets any criteria established pursuant to paragraph 58(1)(h).

(3) On a request to the Minister to refer a project to a mediator or a review panel pursuant to subsection (1) made by

(a) the government of any province in which the project is to be carried out or that is adjacent to federal lands on which the project is to be carried out, or

(b) the government of a foreign state or a subdivision thereof that claims that significant adverse environmental effects may occur in that foreign state or subdivision thereof as a result of the project,

the Minister and the Minister of Foreign Affairs shall consider whether to make a reference pursuant to subsection (1).

(4) At least ten days before making a reference pursuant to subsection (1), the Minister shall give notice of the intention to do so to

(a) the proponent of the project;

(b) the government of any province in which the project is to be carried out or that is adjacent to federal lands on which the project is to be carried out, or

(c) the government of a foreign state or a subdivision thereof that is adjacent to federal lands on which the project is to be carried out.

Defaut d’entente

(2) Le ministre et le ministre des Affaires étrangères ne peuvent effectuer le renvoi prévu au paragraphe (1) que si le ministre et les gouvernements des provinces concernées ne peuvent s’entendre sur des modalités de rechange de l’évaluation des effets environnementaux du projet qui surviennent à la fois à l’étranger et hors du territoire domanial et que si ces modalités de rechange réunissent les conditions suivantes :

(a) elles portent sur les éléments dont la prise en compte est exigée en vertu des paragraphes 16(1) et (2);

(b) le public a la possibilité de participer au processus d’évaluation;

(c) dès son achèvement, un rapport sera présenté au ministre;

(d) le rapport sera publié;

(e) elles satisfont aux critères fixés aux termes de l’alinéa 58(1)(h).

(3) Le ministre et le ministre des Affaires étrangères sont tenus d’examiner la possibilité d’effectuer le renvoi prévu au paragraphe (1) sur réception par le ministre d’une demande présentée soit par le gouvernement d’une province où doit être mis en œuvre le projet ou dont le territoire est contigu au territoire domanial sur lequel le projet doit être mis en œuvre, soit par le gouvernement d’un État étranger ou d’une subdivision politique d’un État étranger qui allègue que le projet peut entraîner des effets environnementaux négatifs importants sur son territoire.

(4) Avant d’effectuer le renvoi prévu au paragraphe (1), le ministre en donne un préavis d’au moins dix jours :

(a) au promoteur du projet;

(b) au gouvernement de la province où est mis en œuvre le projet ou dont le territoire
cent to federal lands on which the project is to be carried out; and

(e) the government of any foreign state or a subdivision thereof in which, in the opinion of the Minister, significant adverse environmental effects may occur as a result of the project.

1992, c. 37, s. 47; 1995, c. 5, s. 25; 2003, c. 9, s. 22.

48. (1) Where no power, duty or function referred to in section 5 is to be exercised or performed by a federal authority in relation to a project that is to be carried out in Canada and the Minister is of the opinion that the project may cause significant adverse environmental effects on

(a) lands in a reserve that is set apart for the use and benefit of a band and that is subject to the Indian Act,

(a.1) a park or park reserve as defined in subsection 2(1) of the Canada National Parks Act,

(b) federal lands other than those mentioned in paragraph (a) or (a.1),

(c) lands that are described in a land claims agreement referred to in section 35 of the Constitution Act, 1982 and that are prescribed,

(d) lands that have been set aside for the use and benefit of Indians pursuant to legislation that relates to the self-government of Indians and that are prescribed, or

(e) lands in respect of which Indians have interests,

the Minister may refer the project to a mediator or a review panel in accordance with section 29 for an assessment of the environmental effects of the project on those lands.

(1.1) In deciding whether or not a project may cause significant adverse environmental effects on a park or park reserve as defined in subsection 2(1) of the Canada National Parks Act, the Minister shall take into account its ecological integrity, as that expression is defined in that subsection.

(1.1) Le ministre, pour décider si un projet peut entraîner des effets environnementaux négatifs importants sur un parc ou une réserve, au sens du paragraphe 2(1) de la Loi sur les parcs nationaux du Canada, tient compte des effets que le projet aura sur leur intégrité écologique, au sens de ce paragraphe.
(2) Where no power, duty or function referred to in section 5 is to be exercised or performed by a federal authority in relation to a project that is to be carried out on

(a) lands in a reserve that is set apart for the use and benefit of a band and that is subject to the Indian Act,

(b) lands that are described in a land claims agreement referred to in section 35 of the Constitution Act, 1982 and that are prescribed,

(c) lands that have been set aside for the use and benefit of Indians pursuant to legislation that relates to the self-government of Indians and that are prescribed,

and the Minister is of the opinion that the project may cause significant adverse environmental effects outside those lands, the Minister may refer the project to a mediator or a review panel in accordance with section 29 for an assessment of the environmental effects of the project outside those lands.

(3) The Minister shall not refer a project to a mediator or a review panel pursuant to subsection (1) or (2) where the Minister and the governments of all interested provinces, and

(a) in respect of federal lands referred to in paragraph (1)(b), the federal authority having the administration of those lands,

(b) in respect of lands referred to in paragraph (1)(a) or (2)(a), the council of the band for whose use and benefit the reserve has been set apart,

(c) in respect of lands referred to in paragraph (1)(c) or (e) or (2)(b), the party to the agreement or claim — or that party’s successor — that was, or was acting on behalf of, an aboriginal people or group, or

(d) in respect of lands that have been set aside for the use and benefit of Indians pursuant to legislation referred to in paragraph (1)(d) or (2)(c), the governing body established by that legislation,

have agreed on another manner of conducting an assessment of the environmental effects of the project on or outside those lands, as the case may be.
(4) The Minister shall consider whether to make a reference pursuant to subsection (1) or (2)

(a) on the request of the government of any interested province or the federal authority having the administration of federal lands referred to in paragraph (1)(b); or

(b) on receipt of a petition that is

(i) signed by one or more persons each of whom has an interest in lands on which the project may cause significant adverse environmental effects, and

(ii) accompanied by a concise statement of the evidence supporting the contention of the petitioner that the project may cause significant adverse environmental effects in respect of which a reference may be made pursuant to subsection (1) or (2).

(5) At least ten days before a reference is made pursuant to subsection (1) or (2), the Minister shall give notice of the intention to do so to

(a) the proponent of the project;

(b) the governments of all interested provinces;

(c) any person who signed a petition considered by the Minister pursuant to subsection (4);

(d) the federal authority, in the case of a reference to be made pursuant to paragraph (1)(b);

(e) in respect of lands referred to in paragraph (1)(e) or (2)(a), the council of the band for whose use and benefit the reserve has been set apart;

(f) in respect of lands referred to in paragraph (1)(c) or (e) or (2)(b), the party to the agreement or claim — or that party’s successor — that was, or was acting on behalf of, an aboriginal people or group; and

(g) in respect of lands that have been set aside for the use and benefit of Indians pursuant to legislation referred to in paragraph (1)(d) or (2)(c), the governing body established by that legislation.

(4) Le ministre est tenu d’examiner la possibilité d’effectuer le renvoi prévu aux paragraphes (1) ou (2) :

a) à la demande du gouvernement d’une province concernée ou de l’autorité fédérale chargée de la gestion du territoire domanial visé à l’alinéa (1)b);

b) sur réception d’une pétition :

(i) signée par une ou plusieurs personnes qui ont chacune des droits sur des terres où le projet peut entraîner des effets environnementaux négatifs importants,

(ii) accompagnée d’un bref exposé alléguant que la mise en oeuvre du projet dans une province peut causer de tels effets, à l’égard desquels un renvoi peut être effectué aux termes des paragraphes (1) ou (2).

(5) Avant d’effectuer le renvoi prévu aux paragraphes (1) ou (2), le ministre en donne un préavis d’au moins dix jours :

a) au promoteur du projet;

b) aux gouvernements des provinces concernées;

c) aux signataires d’une pétition examinée par le ministre aux termes du paragraphe (4);

d) à l’autorité fédérale, dans le cas du renvoi qui doit être effectué aux termes de l’alinéa (1)b);

e) à l’égard des terres visées aux alinéas (1)a) ou (2)a), au conseil de la bande à l’usage et au profit de laquelle la réserve a été mise de côté;

f) à l’égard des terres visées aux alinéas (1)c) ou (e) ou (2)b), au peuple ou groupe autochtone, ou à son représentant, partie à l’accord ou à la revendication, ou à leurs successeurs;

g) à l’égard des terres qui ont été mises de côté à l’usage et au profit des Indiens conformément à une loi visée aux alinéas (1)d) ou (2)c), à l’organisme dirigeant constitué par cette loi.
(6) For the purposes of this section, “lands in respect of which Indians have interests” means

(a) land areas that are subject to a land claim accepted by the Government of Canada for negotiation under its comprehensive land claims policy and that

(i) for the purposes of land claim settlement have been withdrawn from disposal, under the *Territorial Lands Act* in the case of land areas situated in the Northwest Territories or Nunavut, or under a law of the Legislature of Yukon in the case of land areas situated in Yukon, or

(ii) in the case of land areas situated in a province, have been agreed on for selection by the Government of Canada and the government of the province; and

(b) land areas that belong to Her Majesty or in respect of which Her Majesty has the right to dispose and that have been identified and agreed on by Her Majesty and an Indian band for transfer to settle claims based on

(i) an outstanding lawful obligation of Her Majesty towards an Indian band pursuant to the specific claims policy of the Government of Canada, or

(ii) treaty land entitlement.

(7) For the purposes of this section, a reference to any lands, land areas or reserves includes a reference to all waters on and air above those lands, areas or reserves.

1992, c. 37, c. 48; 1993, c. 28, s. 78; 2002, c. 7, s. 123; 2003, c. 9, s. 23.

49. Sections 29 to 36 and 40 to 42 apply, with such modifications as the circumstances require, in respect of a reference to a mediator or a review panel pursuant to subsection 46(1), 47(1) or 48(1) or (2).

50. (1) Where the Minister refers a project to a mediator or a review panel for an assessment of the environmental effects of the project referred to in subsection 46(1), 47(1) or 48(1) or (2), the Minister may, by order, prohibit the proponent of the project from doing any act or thing that would commit the proponent to ensuring that the project is carried out in whole or in part until the assessment is completed and
the Minister is satisfied that, taking into account the implementation of any appropriate mitigation measures the project is not likely to cause any significant adverse environmental effects referred to in that subsection or that any such effects are justified in the circumstances.

(2) Where a project is referred to a mediator or a review panel for an assessment of the environmental effects of the project referred to in subsection 46(1), 47(1) or 48(1) or (2) and the mediator or review panel submits a report to the Minister indicating that the project is likely to cause significant adverse environmental effects referred to in that subsection the Minister may, by order, prohibit the proponent of the project from doing any act or thing that would commit the proponent to ensuring that the project is carried out in whole or in part until the Minister is satisfied that, taking into account the implementation of any appropriate mitigation measures, the project is not likely to cause any significant adverse environmental effects referred to in that subsection or that any such effects are justified in the circumstances.

(3) The Minister shall, before exercising discretion to make an order under subsection (1) or (2), advise and offer to consult with the governments of all interested provinces and any federal authority, or the band council, party to the agreement or claim or governing body having an interest in the lands where the project is to be carried out, as the case may be.

1992, c. 37, s. 50; 1993, c. 34, s. 35(F).

51. (1) Where, on the application of the Attorney General of Canada, it appears to a court of competent jurisdiction that an order made under section 50 in respect of a project has been, is about to be or is likely to be contravened, the court may issue an injunction ordering any person named in the application to refrain from doing any act or thing that would commit the proponent to ensuring that the project or any part thereof is carried out until

(a) with respect to an order made pursuant to subsection 50(1), the assessment of the environmental effects of the project referred to in subsection 46(1), 47(1) or 48(1) or (2) is completed and the Minister is satisfied that, taking into account the implementation of any appropriate mitigation measures, the project is not likely to cause any significant adverse environmental effects referred to in that subsection or that any such effects are justified in the circumstances.

(2) Where a project is referred to a mediator or a review panel for an assessment of the environmental effects of the project referred to in subsection 46(1), 47(1) or 48(1) or (2) and the mediator or review panel submits a report to the Minister indicating that the project is likely to cause significant adverse environmental effects referred to in that subsection the Minister may, by order, prohibit the proponent of the project from doing any act or thing that would commit the proponent to ensuring that the project is carried out in whole or in part until the Minister is satisfied that, taking into account the implementation of any appropriate mitigation measures, the project is not likely to cause any significant adverse environmental effects referred to in that subsection or that any such effects are justified in the circumstances.

(2) Dans le cas où le médiateur ou la commission en vient à la conclusion dans son rapport au ministre que la mise en oeuvre du projet visé aux paragraphes 46(1), 47(1) ou 48(1) ou (2) est susceptible d’entraîner des effets environnementaux négatifs importants, le ministre peut, par arrêté, interdire au promoteur d’accomplir tout acte permettant la mise en oeuvre du projet en tout ou en partie jusqu’à ce qu’il soit convaincu que, compte tenu de l’application des mesures d’atténuation indiquées, la réalisation du projet n’est pas susceptible d’entraîner les effets environnementaux négatifs importants visés à ces articles ou qu’ils sont justifiables dans les circonstances.

(3) Avant de prendre sa décision aux termes des paragraphes (1) ou (2), le ministre avise et offre de consulter, selon le cas, les gouvernements des provinces concernées, toute autorité fédérale ou le conseil de bande, la partie à l’entente ou à la revendication ou l’organisme dirigeant qui a des droits dans les terres où le projet doit être mis en oeuvre.

1992, ch. 37, art. 50; 1993, ch. 34, art. 35(F).

51. (1) Si, sur demande présentée par le procureur général du Canada, il conclut à l’inobservation — réelle ou appréhendée — de l’arrêté pris en application de l’article 50, le tribunal compétent peut, par injonction, interdire à toute personne visée par la demande d’accomplir tout acte permettant la mise en oeuvre du projet en tout ou en partie jusqu’à ce que : a) dans le cas d’un arrêté pris en vertu du paragraphe 50(1), l’examen par une commission soit terminé et que le ministre soit convaincu que, compte tenu de l’application des mesures d’atténuation indiquées, la réalisation du projet n’est pas susceptible d’entraîner les effets environnementaux négatifs importants visés aux paragraphes 46(1), 47(1) ou 48(1) ou (2) ou qu’ils sont justifiables dans les circonstances;
adverse environmental effects referred to in that subsection or any such effects are justified in the circumstances; and

(b) with respect to an order made pursuant to subsection 50(2), the Minister is satisfied that, taking into account the implementation of any appropriate mitigation measures, the project is not likely to cause any significant adverse environmental effects referred to in that subsection or any such effects are justified in the circumstances.

Notice

(2) At least forty-eight hours before an injunction is issued under subsection (1), notice of the application shall be given to

(a) persons named in the application, and

(b) the governments of all interested provinces and any federal authority, band council, party to the agreement or claim or governing body having an interest in the lands where the project is to be carried out, as the case may be,

unless the urgency of the situation is such that the delay involved in giving such notice would not be in the public interest.

1992, c. 37, s. 51; 1993, c. 34, s. 36(F).

Order in force

52. (1) An order under section 50 comes into force at the time it is made.

(2) The order ceases to have effect fourteen days after it is made unless, within that period, it is approved by the Governor in Council.

Exemption from application of Statutory Instruments Act

(3) The order is exempt from the application of sections 3, 5 and 11 of the Statutory Instruments Act and shall be published in the Canada Gazette within twenty-three days after it is approved by the Governor in Council.

Follow-up program

53. (1) Where the Minister has referred a project to a mediator or a review panel pursuant to subsection 46(1), 47(1) or 48(1) or (2), the Minister shall, in accordance with any regulations made for that purpose, design or approve any follow-up program that the Minister considers appropriate for the project and arrange for the implementation of that program.

(2) Following the receipt of the report of the mediator or review panel in respect of the assessment of the environmental effects of the project referred to in subsection 46(1), 47(1) or 48(1) or (2), the Minister shall, in accordance
with any regulations made for that purpose, advise the public of:

(a) any order or injunction issued under section 50 or 51 in respect of the project;

(b) any mitigation measures to be implemented with respect to the adverse environmental effects of the project referred to in those subsections;

(c) the extent to which the recommendations set out in the report have been adopted, and the reasons for not having adopted any of those recommendations;

(d) any follow-up program that is designed or approved for the project pursuant to subsection (1); and

(e) any results of any follow-up program.

AGREEMENTS AND ARRANGEMENTS

54. (1) Subject to subsection (3), where a federal authority or the Government of Canada on behalf of a federal authority enters into an agreement or arrangement with the government of a province or any institution of such a government under which a federal authority exercises a power or performs a duty or function referred to in paragraph 5(1)(b) in relation to projects the essential details of which are not specified, the Government of Canada or the federal authority shall ensure that the agreement or arrangement provides for the assessment of the environmental effects of those projects and that the assessment will be carried out as early as practicable in the planning stages of those projects, before irrevocable decisions are made, in accordance with:

(a) this Act and the regulations; or

(b) a process for the assessment of the environmental effects of projects that is consistent with the requirements of this Act and is in effect in the province where the projects are to be carried out.

(2) Subject to subsection (3), where a federal authority or the Government of Canada on behalf of a federal authority enters into an agreement or arrangement with any government or any person, organization or institution, whether or not part of or affiliated with a government, under which a federal authority exer-

la connaissance du public, conformément aux règlements pris à cette fin :

(a) tout arrêté pris aux termes de l’article 50 ou toute injonction prononcée aux termes de l’article 51;

(b) les mesures d’atténuation éventuelles des effets environnementaux négatifs d’un projet visé à ces paragraphes;

(c) la suite donnée aux recommandations issues du rapport et les motifs du rejet éventuel d’une de celles-ci;

(d) le programme de suivi élaboré ou approuvé aux termes du paragraphe (1);

(e) les résultats du programme de suivi.

ACCORDS SIGNÉS PAR LES AUTORITÉS FÉDÉRALES

54. (1) Sous réserve du paragraphe (3), le gouvernement du Canada ou toute autorité fédérale veille à ce que les accords que l’autorité fédérale conclut — ou que le gouvernement conclut en son nom — avec le gouvernement d’une province ou avec l’un de ses organismes, en vertu desquels une autorité fédérale exerce une attribution visée à l’alinéa 5(1)b) au titre de projets dont les éléments essentiels ne sont pas déterminés, prévoient l’évaluation des effets environnementaux des projets, cette évaluation devant être effectuée le plus tôt possible au stade de leur planification, avant la prise d’une décision irrévocable conformément à la présente loi et aux règlements ou au processus, compatible avec la présente loi, d’évaluation des effets environnementaux de projets applicable dans la province où ceux-ci doivent être mis en œuvre.

(2) Sous réserve du paragraphe (3), le gouvernement du Canada ou toute autorité fédérale veille à ce que les accords que l’autorité fédérale conclut — ou que le gouvernement conclut en son nom — avec soit un gouvernement, soit une personne, un organisme ou une institution, peu importe qu’ils soient ou non affiliés à un
cises a power or performs a duty or function referred to in paragraph 5(1)(b) or 10.1(2)(b) in relation to projects the essential details of which are not specified and that are to be carried out both outside Canada and outside federal lands, the Government of Canada or the federal authority shall ensure, in so far as is practicable and subject to any other such agreement to which the Government of Canada or federal authority is a party, that the agreement or arrangement provides for the assessment of the environmental effects of those projects and that the assessment will be carried out as early as practicable in the planning stages of those projects, before irrevocable decisions are made, in accordance with

(a) this Act and the regulations; or

(b) a process for the assessment of the environmental effects of projects that is consistent with the requirements of this Act and is in effect in the foreign state where the projects are to be carried out.

Exception

(3) For greater certainty, if a federal authority will be required to exercise a power or perform a duty or function referred to in paragraph 5(1)(b) or 10.1(2)(b) — in relation to a project in respect of which an agreement or arrangement referred to in subsection (1) or (2) applies — after the essential details of the project are specified

(a) subsection (1) or (2), as the case may be, does not apply in respect of the agreement or arrangement; and

(b) section 5 or 10.1, as the case may be, applies.

1992, c. 37, s. 54; 1993, c. 34, s. 37(F); 2003, c. 9, s. 24.

CANADIAN ENVIRONMENTAL ASSESSMENT REGISTRY

ESTABLISHMENT OF REGISTRY

55. (1) For the purpose of facilitating public access to records relating to environmental assessments and providing notice in a timely manner of the assessments, there shall be a registry called the Canadian Environmental Assessment Registry, consisting of an Internet site and project files.

(2) The Registry shall be operated in a manner to ensure convenient public access to it.

1992, ch. 37, art. 54; 1993, ch. 34, art. 37(F); 2003, ch. 9, art. 24.

REGISTRE CANADIEN D’ÉVALUATION ENVIRONNEMENTALE

ÉTABLISSEMENT DU REGISTRE

55. (1) Afin de faciliter l’accès du public aux documents relatifs aux évaluations environnementales et de notifier celles-ci en temps opportun, est établi le registre canadien d’évaluation environnementale formé, d’une part, d’un site Internet et, d’autre part, des dossiers de projet.

(2) Le registre est maintenu de façon à en assurer l’accès facile au public. Ce droit d’ac-
This right of access to the Registry is in addition to any right of access provided under any other Act of Parliament.

(3) For the purpose of facilitating public access to records included in the Registry, in the case of a screening or comprehensive study, the federal environmental assessment coordinator and, in any other case, the Agency shall ensure that a copy of any such record is provided in a timely manner on request.

Internet Site

55.1 (1) The Agency shall, in accordance with this Act and the regulations, establish and maintain an Internet site to be generally accessible through what is commonly referred to as the Internet.

Contents

(2) Subject to subsection 55.5(1), the Internet site shall include

(a) within 14 days after the commencement of an environmental assessment, notice of its commencement, except where a class screening report is used under subsection 19(5) or (6);

(b) an agreement contemplated by subsection 12.4(3);

(c) a description of the scope of the project in relation to which an environmental assessment is to be conducted, as determined under section 15;

(d) a statement of the projects in respect of which a class screening report is used under subsection 19(5) or (6);

(e) any declaration referred to in subsection 19(4) and the report to which it relates or a description of how a copy of the report may be obtained, and any declaration referred to in subsection 19(9);

(f) notice of termination of an environmental assessment by a responsible authority under section 26;

(g) notice of termination of an environmental assessment by the Minister under section 27;

cèses existe indépendamment de tout droit d'accès prévu par toute autre loi fédérale.

(3) Afin de faciliter l'accès du public aux documents versés au registre, le coordonnateur fédéral de l'évaluation environnementale, dans le cas d'un examen préalable et d'une étude approfondie, et l'Agence, dans les autres cas, veillent à ce que soit fourni, sur demande et en temps opportun, une copie de tout tel document.

55.1 (1) L’Agence établit et tient, conformément à la présente loi et aux règlements, un site généralement accessible sur le réseau communément appelé Internet.

(2) Sont versés au site Internet, sous réserve du paragraphe 55.5(1) :

a) dans les quatorze jours suivant le début de l'évaluation environnementale, avis du début de l'évaluation, sauf si l'autorité responsable utilise un rapport d'examen préalable type en vertu des paragraphes 19(5) ou (6);

b) l'entente visée au paragraphe 12.4(3);

c) la description de la portée, déterminée au titre de l'article 15, du projet à l'égard duquel l'évaluation environnementale doit être effectuée;

d) le relevé des projets à l'égard desquels une autorité responsable utilise un rapport d'examen préalable type en vertu des paragraphes 19(5) ou (6);

e) toute désignation faite dans le cadre du paragraphe 19(4), avec le rapport ou une indication de la façon d'en obtenir copie, de même que toute déclaration faite dans le cadre du paragraphe 19(9);

f) avis de la décision de l'autorité responsable de mettre fin à l'évaluation environnementale au titre de l'article 26;

g) avis de la décision du ministre de mettre fin à l'évaluation environnementale au titre de l'article 27;
(
h) any public notices that are issued by responsible authorities or the Agency to request public input into an environmental assessment;

(i) notice of a decision of the Minister to refer a project under paragraph 21.1(1)(a);

(j) where the responsible authority, in accordance with subsection 18(3), gives the public an opportunity to participate in the screening of a project or where the Minister, under paragraph 21.1(1)(a), refers a project to the responsible authority to continue a comprehensive study, a description of the factors to be taken into consideration in the environmental assessment and of the scope of those factors or an indication of how such a description may be obtained;

(k) the screening or comprehensive study report taken into consideration by a responsible authority for the purpose of a decision under section 20 or 37 or a description of how a copy of the report may be obtained, except where a class screening report is used under subsection 19(5) or (6);

(l) an environmental assessment decision statement under subsection 23(1) and any request made under subsection 23(2);

(m) notice of the referral of a project to a mediator or review panel;

(n) the terms of reference of a mediation or a review panel;

(o) if the Minister has ordered the conclusion of a mediation under subsection 29(4), notice of the order;

(p) a report of a mediator or review panel or a summary of the report;

(q) a response under paragraph 37(1.1)(a) to the report of a mediator or review panel;

(r) except where a class screening report is used under subsection 19(5) or (6), the decision of a responsible authority, made under section 20 or 37 concerning the environmental effects of the project, and a statement of any mitigation measures the implementation of which the responsible authority took into account in making its decision;

(h) avis public lancé par l’autorité responsable ou l’Agence sollicitant la participation du public à l’évaluation environnementale;

(i) avis de la décision du ministre de renvoyer le projet au titre de l’alinéa 21.1(1)a);

(j) dans le cas où l’autorité responsable donne, au titre du paragraphe 18(3), la possibilité au public de participer à l’examen préalable ou dans le cas où le ministre renvoie, au titre de l’alinéa 21.1(1)a), le projet à l’autorité responsable pour qu’elle poursuive l’étude approfondie, une description des éléments à prendre en compte dans le cadre de l’évaluation environnementale et de la portée de ceux-ci ou une indication de la façon d’obtenir copie de cette description;

(k) le rapport d’examen préalable ou de l’étude approfondie sur lequel se fonde la décision de l’autorité responsable au titre des articles 20 ou 37 — ou une indication de la façon d’en obtenir copie — , sauf si l’autorité responsable utilise un rapport d’examen préalable type en vertu des paragraphes 19(5) ou (6);

(l) la déclaration que fait le ministre en application du paragraphe 23(1) et toute demande faite au titre du paragraphe 23(2);

(m) avis de renvoi du projet à la médiation ou à l’examen par une commission;

(n) le mandat du médiateur ou de la commission;

(o) avis, le cas échéant, de la décision du ministre de mettre fin à la médiation au titre du paragraphe 29(4);

(p) le rapport du médiateur ou de la commission, ou un résumé du rapport;

(q) la suite à donner, au titre du paragraphe 37(1.1), au rapport du médiateur ou de la commission;

(r) sauf si l’autorité responsable utilise un rapport d’examen préalable type en vertu des paragraphes 19(5) ou (6), la décision prise par celle-ci en application des articles 20 ou 37 relativement aux effets environnementaux du projet et la mention des mesures d’atténuation dont elle a tenu compte dans le cadre de sa décision;
(s) a notice stating whether or not, pursuant to subsection 38(1), a follow-up program for the project is considered appropriate;

(t) a description summarizing any follow-up program and its results or an indication of how a full description of the program and its results may be obtained;

(u) any other information that the responsible authority or the Agency, as the case may be, considers appropriate, including information in the form of a list of relevant documents in which case a description of how they may be obtained shall be provided; and

(v) any other record or information prescribed under paragraph 59(h.1).

(3) The Agency shall determine and notify the public

(a) what the form of the Internet site is to be and how it is to be kept;

(b) how records and information are to be included in it;

(c) what information must be contained in any record referred to in subsection (2);

(d) what records and information are to be included in the Internet site, in addition to any record referred to in subsection (2);

(e) when information must be included in the Internet site;

(f) when information may be removed from the Internet site; and

(g) how access to the Internet site is to be provided.

2003, c. 9, s. 25.

55.2 (1) The Agency shall ensure that the records referred to in paragraphs 55.1(2)(b), (e), (i) and (l) are included in the Internet site.

(2) The Agency shall, in the case of a mediation or an assessment by a review panel, ensure that the records referred to in paragraphs 55.1(2)(c), (g), (h), (m), (n), (o), (p), (q) and (u) and any record or information referred to in paragraph 55.1(2)(v) are included in the Internet site.

2003, c. 9, s. 25.
55.3 (1) A responsible authority shall ensure that the records referred to in paragraphs 55.1(2)(a), (f), (j), (k), (r), (s) and (t) and, in the case of a screening or a comprehensive study, the records referred to in paragraphs 55.1(2)(c), (h) and (u) and any record or information referred to in paragraph 55.1(2)(v), are included in the Internet site.

(2) A responsible authority shall ensure that the statement referred to in paragraph 55.1(2) (d) is included in the Internet site every three months or with any other greater frequency to which it agrees with the Agency.

(3) A screening report referred to in paragraph 55.1(2)(k) or a description of how a copy of it may be obtained shall be included in the Internet site not later than the decision referred to in paragraph 55.1(2)(r) that is based on the report, unless otherwise authorized by the Agency.

2003, c. 9, s. 25.

PROJECT FILES

Establishment and maintenance

55.4 (1) In respect of every project for which an environmental assessment is conducted, a project file shall be established and maintained, in accordance with this Act and the regulations,

(a) by the responsible authority from the commencement of the environmental assessment until any follow-up program in respect of the project is completed; and

(b) where the project is referred to a mediator or a review panel, by the Agency from the appointment of the mediator or the members of the review panel until the report of the mediator or review panel is submitted to the Minister.

(2) Subject to subsection 55.5(1), a project file shall contain all records produced, collected or submitted with respect to the environmental assessment of the project, including

(a) all records included in the Internet site;

(b) any report relating to the assessment;

(c) any comments filed by the public in relation to the assessment;

Dossiers de projet

55.3 (1) L’autorité responsable veille à ce que soient versés au site Internet les documents visés aux alinéas 55.1(2)(a), (f), (j), (k), (r), (s) et (t). Elle veille également à ce que, dans le cas d’un examen préalable ou d’une étude approfondie, les documents visés aux alinéas 55.1(2)(c), (h) et (u) y soient versés, de même que les documents et renseignements visés à l’alinéa 55.1(2)(v).

(2) Elle veille également à ce que les relevés visés à l’alinéa 55.1(2)(d) y soient versés trimestriellement ou selon la fréquence plus élevée dont elle convient avec l’Agence.

(3) Sauf autorisation contraire de l’Agence, le rapport d’examen préalable ou de l’étude approfondie visé à l’alinéa 55.1(2)(k) — ou une indication de la façon d’en obtenir copie — doit être versé au site Internet avant la décision connexe visée à l’alinéa 55.1(2)(r) ou en même temps qu’elle.

2003, ch. 9, art. 25.

55.4 (1) Les dossiers de projet sont établis et tenus conformément à la présente loi et aux règlements à l’égard de chacun des projets pour lesquels une évaluation environnementale est effectuée :

a) par l’autorité responsable dès le début de l’évaluation environnementale et jusqu’à ce que le programme de suivi soit terminé;

b) par l’Agence, dans les cas où une médiation ou un examen par une commission est effectué, dès la nomination du médiateur ou des membres de la commission et jusqu’au moment de la remise du rapport au ministre.

(2) Sous réserve du paragraphe 55.5(1), chaque dossier de projet contient tous les documents produits, recueillis ou reçus relativement à l’évaluation environnementale du projet, notamment :

a) les documents versés au site Internet;

b) tout rapport relatif à l’évaluation environnementale;

c) toute observation du public à l’égard de l’évaluation;
Categories of information that may be made publicly available

55.5 (1) The Registry shall contain a record, part of a record or information only if

(a) it has otherwise been made publicly available; or

(b) the responsible authority, in the case of a record under its control, or the Minister, in the case of a record under the Agency’s control,

(i) determines that it would have been disclosed to the public in accordance with the Access to Information Act if a request had been made in respect of that record under that Act at the time the record came under the control of the responsible authority or the Agency, including any record that would be disclosed in the public interest pursuant to subsection 20(6) of that Act, or

(ii) believes on reasonable grounds that it would be in the public interest to disclose it because it is required for the public to participate effectively in the environmental assessment — other than any record the disclosure of which would be prohibited under section 20 of the Access to Information Act.

(2) Sections 27, 28 and 44 of the Access to Information Act apply to any information described in subsection 27(1) of that Act that the Agency or a responsible authority intends be included in the Registry with any modifications that the circumstances require, including the following:

(a) the information is deemed to be a record that the head of a government institution intends to disclose; and

(b) any reference to the person who requested access shall be disregarded.

Applicability of sections 27, 28 and 44 of Access to Information Act to third party information

55.5 (1) Le registre ne comporte que les documents, parties de document ou renseignements :

a) qui ont par ailleurs été rendus publics;

b) dont, de l’avis de l’autorité responsable, dans le cas de documents qu’elle contrôle, ou de l’avis du ministre, dans le cas de documents que l’Agence contrôle :

(i) soit la communication serait faite conformément à la Loi sur l’accès à l’information si une demande en ce sens était faite aux termes de celle-ci au moment où l’autorité responsable ou l’Agence prend le contrôle des documents, y compris les documents qui seraient communiqués dans l’intérêt public aux termes du paragraphe 20(6) de cette loi,

(ii) soit il existe des motifs raisonnables de croire qu’il serait d’intérêt public de les communiquer parce qu’ils sont nécessaires à une participation efficace du public à l’évaluation environnementale, à l’exception des documents contenant des renseignements dont la communication doit être refusée en vertu de l’article 20 de la Loi sur l’accès à l’information.

(2) Sous réserve des adaptations nécessaires, notamment de celles qui suivent, les articles 27, 28 et 44 de la Loi sur l’accès à l’information s’appliquent à tout renseignement visé au paragraphe 27(1) de cette loi que l’Agence ou l’autorité responsable a l’intention de faire verser au registre :

a) ce renseignement est réputé constituer un document que le responsable d’une institution fédérale a l’intention de communiquer;

b) il ne doit pas être tenu compte des mentions de la personne qui fait la demande de communication des renseignements.
Deemed application

(3) This section applies with respect to a responsible authority that is a parent Crown corporation but is not a government institution within the meaning of the Access to Information Act as if it were such a government institution.

2003, c. 9, s. 25.

Protection from civil proceeding or prosecution

55.6 Notwithstanding any other Act of Parliament, no civil or criminal proceedings lie against a responsible authority, the Agency or the Minister, or against any person acting on behalf of them or under their direction, or against a director or officer of a Crown corporation to which this Act applies and no proceedings lie against the Crown, the Agency or any responsible authority, for the disclosure in good faith of any record or any part of a record pursuant to this Act or for any consequences that flow from that disclosure or for the failure to give any notice required under section 27 or 28 of the Access to Information Act if reasonable care is taken to give the required notice.

2003, c. 9, s. 25.

RELEVANT INFORMATION

56. (1) During each fiscal year a responsible authority shall maintain a statistical summary of all of the environmental assessments undertaken or directed by it and all courses of action taken, and all decisions made, in relation to the environmental effects of the projects after the assessments were completed.

(2) The responsible authority shall ensure that the summary for a fiscal year is completed within one month after the end of that fiscal year.

56.1 Federal authorities and persons and bodies referred to in sections 8 to 10 shall, if requested to do so by the Agency, provide the Agency with any information respecting the assessments whose conduct they ensure under this Act that the Agency considers necessary in support of a quality assurance program that it establishes.

2003, c. 9, s. 27.

INFORMATION PERTINENTE

56. (1) L’autorité responsable prépare pour chaque exercice un résumé statistique de toutes les évaluations environnementales effectuées par elle ou sous son autorité ainsi que de toutes les décisions prises à l’égard des effets environnementaux causés par les projets une fois terminées les évaluations.

(2) L’autorité responsable veille à ce que le résumé applicable à un exercice soit prêt au plus tard un mois après la fin de l’exercice.

56.1 Les autorités fédérales et les personnes ou organismes visés à l’un ou l’autre des articles 8 à 10 fournissent à l’Agence, sur demande, les renseignements concernant toute évaluation dont ils veillent à la réalisation sous le régime de la présente loi que l’Agence estime utiles à l’appui d’un programme d’assurance de la qualité mis sur pied à son initiative.

2003, ch. 9, art. 27.
57. An application for judicial review in connection with any matter under this Act shall be refused where the sole ground for relief established on the application is a defect in form or a technical irregularity.

57. Il n’est admis aucune demande de contrôle judiciaire liée à la présente loi et fondée uniquement sur un vice de forme ou une irrégularité technique.

58. (1) For the purposes of this Act, the Minister may

(a) issue guidelines and codes of practice respecting the application of this Act and the regulations and, without limiting the generality of the foregoing, establish criteria to determine whether a project, taking into account the implementation of any appropriate mitigation measures, is likely to cause significant adverse environmental effects or whether such effects are justified in the circumstances;

(b) establish research and advisory bodies;

(c) enter into agreements or arrangements with any jurisdiction within the meaning of paragraph 40(1)(a), (b), (c) or (d) respecting assessments of environmental effects;

(d) enter into agreements or arrangements with any jurisdiction, within the meaning of subsection 40(1), for the purposes of coordination, consultation, exchange of information and the determination of factors to be considered in relation to the assessment of the environmental effects of projects of common interest;

(e) recommend the appointment of members to bodies established by federal authorities or to bodies referred to in paragraph 40(1)(d), on a temporary basis, for the purpose of facilitating a substitution pursuant to section 43;

(f) establish criteria for the appointment of mediators and members of review panels;

(g) establish criteria for the approval of a substitution pursuant to section 43;

(h) establish criteria for the purposes of an alternative manner of conducting an assessment of the environmental effects of a
project referred to in subsection 46(2) or 47(2); and

(i) make regulations prescribing any project or class of projects for which a comprehensive study is required where the Minister is satisfied that the project or any project within that class is likely to have significant adverse environmental effects.

1.1) For the purposes of this Act, the Minister shall establish a participant funding program to facilitate the participation of the public in comprehensive studies, mediations and assessments by review panels established under either subsection 33(1) or 40(2).

2) The Minister and the Minister of Foreign Affairs may enter into agreements or arrangements with any jurisdiction within the meaning of paragraph 40(1)(e) or (f) respecting assessments of environmental effects, including, without limiting the generality of the foregoing, for the purposes of implementing the provisions of any international agreement or arrangement to which the Government of Canada is a party respecting the assessment of environmental effects referred to in subsection 47(1).

3) The Minister shall provide reasonable public notice of and a reasonable opportunity for anyone to comment on draft guidelines, codes of practice, agreements, arrangements, criteria or orders under this section.

4) Any guidelines, codes of practice, agreements, arrangements, criteria or orders shall be made available to the public.

59. The Governor in Council may make regulations

(a) respecting the procedures and requirements of, and the time periods relating to, environmental assessment and follow-up programs, including the conduct of assessments by review panels established pursuant to section 40 and the timing of taking a course of action pursuant to section 20 or 37 where two or more federal authorities are likely to exercise a power or perform a duty

i) prendre des règlements désignant des projets ou des catégories de projets pour lesquels une étude approfondie est obligatoire, s’il est convaincu que ceux-ci sont susceptibles d’entraîner des effets environnementaux négatifs importants.

1.1) Le ministre crée, pour l’application de la présente loi, un programme d’aide financière pour faciliter la participation du public aux études approfondies, aux médiation et aux examens par une commission constituée dans le cadre des paragraphes 33(1) ou 40(2).

2) Le ministre et le ministre des Affaires étrangères peuvent conclure des accords avec toute instance au sens des alinéas 40(1) e) ou f) en matière d’évaluation des effets environnementaux, notamment pour la mise en œuvre de tout accord international, auquel le gouvernement du Canada est partie, concernant l’examen des effets environnementaux visé au paragraphe 47(1).

3) Le ministre donne un préavis public raisonnable des projets de lignes directrices, de codes de pratique, d’accords, de critères ou d’arrêtés établis en application du présent article, ainsi que la possibilité, pour quiconque, de faire des observations à leur sujet.

4) Les lignes directrices, codes de pratique, accords, critères et arrêtés sont accessibles au public.

59. Le gouverneur en conseil peut, par règlement :

a) régir les procédures, les délais applicables et les exigences relatives à l’évaluation environnementale et au programme de suivi, notamment le moment de la prise de mesures au titre des articles 20 ou 37 quand plusieurs autorités fédérales sont susceptibles d’exercer les attributions visées à l’article 5, ainsi que les évaluations effectuées par une commission aux termes de l’article 40;
or function referred to in section 5 with respect to the same project;

(a.1) respecting the duties and functions of the federal environmental assessment coordinator, and respecting the selection or designation of the coordinator;

(b) prescribing, for the purpose of the definition “project” in subsection 2(1), any physical activity or class of physical activities;

(c) exempting any projects or classes of projects from the requirement to conduct an assessment under this Act that

(i) in the opinion of the Governor in Council, ought not to be assessed for reasons of national security,

(ii) in the case of projects in relation to physical works, in the opinion of the Governor in Council, have insignificant environmental effects, or

(iii) have a total cost below a prescribed amount and meet prescribed environmental conditions;

(c.1) exempting, in replacement of exemptions made under paragraph (c), in relation to any Crown corporation to which this Act applies or in relation to the Canadian International Development Agency, any projects or classes of projects to be carried out outside Canada and any federal lands from the requirement to conduct an environmental assessment under this Act that

(i) in the opinion of the Governor in Council, ought not to be assessed for reasons of national security,

(ii) which are linked to a work and which, in the opinion of the Governor in Council, have insignificant environmental effects, or

(iii) which meet the environmental conditions prescribed by regulation and have a total cost below a prescribed amount;

d) [Repealed, 2003, c. 9, s. 29]

e) prescribing any body, other than the government of a province, to be a federal authority for the purposes of this Act;

(f) prescribing, for the purposes of paragraph 5(1)(d), the provisions of any Act of

a.1) régir les attributions du coordonnateur fédéral de l’évaluation environnementale et la façon dont il est désigné;

b) désigner une activité concrète ou une catégorie d’activités concrètes pour l’application de la définition de « projet » au paragraphe 2(1);

c) soustraire à l’évaluation exigée par la présente loi des projets ou des catégories de projets :

(i) dont, à son avis, l’évaluation ne serait pas indiquée pour des raisons de sécurité nationale,

(ii) qui sont liés à un ouvrage et dont, à son avis, les effets environnementaux ne sont pas importants,

(iii) qui remplissent les conditions de nature environnementale prévues par règlement et dont le coût total est en-deçà du seuil réglementaire;

c.1) en remplacement des projets ou catégories de projets visés à l’alinéa c) et à l’égard des sociétés d’État auxquelles la présente loi s’applique ou de l’Agence canadienne de développement international, soustraire à l’évaluation environnementale prévue à la présente loi des projets ou catégories de projets devant être réalisés à l’extérieur du Canada et du territoire domanial :

(i) dont, à son avis, l’évaluation ne serait pas indiquée pour des raisons de sécurité nationale,

(ii) qui sont liés à un ouvrage et dont, à son avis, les effets environnementaux ne sont pas importants,

(iii) qui remplissent les conditions de nature environnementale que prévoit le règlement et dont le coût total est en-deçà du seuil réglementaire;

d) [Abrogé, 2003, ch. 9, art. 29]

e) déterminer quels organismes, autres que le gouvernement d’une province, sont des autorités fédérales pour l’application de la présente loi;

f) déterminer, pour l’application de l’alinéa 5(1)d), des dispositions de toute loi fédérale ou de textes pris sous son régime;
Canadian Environmental Assessment — January 1, 2010

Parliament or any instrument made under an Act of Parliament;

(g) prescribing the provisions of any Act of Parliament or any regulation made pursuant to any such Act that confer powers, duties or functions on the Governor in Council, the exercise or performance of which require an environmental assessment under subsection 5(2);

(h) respecting the dissemination by responsible authorities of information relating to projects and the environmental assessment of projects and the establishment, maintenance and operation of project files referred to in section 55.4, including facilities to enable the public to examine physical or electronic records contained in the files, the time and manner in which those records may be examined or copied by the public and the transfer and retention of those records after the completion of any follow-up program;

(h.1) prescribing records or information to be included in the Internet site by the Agency or a responsible authority;

(h.2) respecting the charging of fees for providing copies of documents contained in the Registry;

(h.3) for the purposes of subsection 38(1) or (2) or 53(1), prescribing the manner of designing a follow-up program;

(i) varying or excluding, in the prescribed circumstances, any procedure or requirement of the environmental assessment process set out in this Act or the regulations for the purpose of adapting the process in respect of projects to be carried out on reserves, surrendered lands or other lands that are vested in Her Majesty and subject to the Indian Act, projects to be carried out outside Canada and either outside of federal lands or on federal lands described in paragraph (a) of the definition “federal lands” in subsection 2(1), projects to be carried out under international agreements or arrangements entered into by the Government of Canada or a federal authority, projects to be carried out on reserves, surrendered lands or other lands that are vested in Her Majesty and subject to the Indian Act, projects to be carried out outside Canada and either outside of federal lands or on federal lands described in paragraph (a) of the definition “federal lands” in subsection 2(1), projects to be carried out under international agreements or arrangements entered into by the Government of Canada or a federal authority,
(iv) projects to be carried out within Canada or on federal lands in respect of which a federal authority exercises a power or performs a duty or function referred to in paragraph 5(1)(b) or (c),

(v) projects in respect of which the Canada-Nova Scotia Offshore Petroleum Board established pursuant to the Canada-Nova Scotia Offshore Petroleum Resources Accord Implementation Act, the Canada-Newfoundland Offshore Petroleum Board established pursuant to the Canada-Newfoundland Atlantic Accord Implementation Act or other similar boards exercise a power or perform a duty or function referred to in section 5, or

(vi) projects in relation to which there are matters of national security;

(i.1) prescribing, in the case of projects that are to be carried out outside Canada and any federal lands and that are subject to an environmental assessment whose conduct a Crown corporation to which this Act applies must ensure, in prescribed circumstances or on any prescribed terms and conditions,

(i) federal authorities that, notwithstanding subsection 5(1), are not required to conduct environmental assessments of those projects, and

(ii) federal authorities for whom the requirements under this Act in respect of those projects, other than those set out in subsections 20(1) and 37(1), are deemed to be satisfied by the environmental assessment of those projects whose conduct the Crown corporation ensures;

(i.2) for the purposes of subparagraph (i.1)

(ii), varying subsection 20(1) or 37(1) in its application to federal authorities prescribed under that subparagraph in the case of projects that are to be carried out outside Canada and outside any federal lands;

(j) for the purposes of section 8, designating Crown corporations that are not federal authorities individually or by class and respecting the manner in which those corporations or classes of corporations conduct environmental assessments of, and follow-up programs for, projects, as well as any action to be taken in respect of projects during the assessment, vis-à-vis a federal authority, and

(j) for the purposes of subparagraph (i.1)

(ii), varying the application of subsections 20(1) and 37(1) to the Crown corporation to which this Act applies in relation to projects that are to be carried out outside Canada and outside any federal lands;
assessment process, which manners and actions may vary by corporation or class of corporation;

(j.1) for the purposes of section 8, respecting the application to a Crown corporation that is designated, or is a member of a class that is designated, under a regulation made under paragraph (j) of the laws from time to time in force in any province;

(j.2) varying or excluding any procedure or requirement of this Act or the regulations as it applies to Crown corporations that are federal authorities, individually or by class;

(j.3) for projects to be carried outside Canada and any federal lands, prescribing, in relation to Crown corporations to which this Act applies, any physical activity or class of physical activities in replacement of those prescribed under paragraph (b);

(k) for the purposes of section 9, respecting the manner of conducting environmental assessments of, and follow-up programs for, projects, as well as any action to be taken in respect of projects during the assessment process and, for those purposes, respecting the application of the laws from time to time in force in any province;

(k.1) prescribing the provisions of any Act of Parliament or any regulation made pursuant to an Act of Parliament that confer powers, duties or functions on a person or body referred to in subsection 9(1), the exercise or performance of which requires an environmental assessment under paragraph 9(2)(d);

(k.2) prescribing the circumstances in which an environmental assessment of a project to be carried out in whole or in part on federal lands must be conducted under paragraph 9(2)(e);

(k.3) for the purposes of section 9.1, prescribing by class authorities other than federal authorities and respecting the manner in which those classes of authorities shall conduct environmental assessments of, and follow-up programs for, projects, as well as any action to be taken in respect of projects during the assessment process — which manners and actions may vary by class of authority — and, for those purposes, respecting the
application of the laws from time to time in force in any province;

(k.4) prescribing the provisions of any Act of Parliament or any regulation made pursuant to an Act of Parliament that confer powers, duties or functions on an authority prescribed in regulations made under paragraph (k.3), the exercise or performance of which requires an environmental assessment under paragraph 9.1(2)(d);

(k.5) for the purposes of paragraph 9.1(2)(e), prescribing the circumstances in which an environmental assessment of a project to be carried out in whole or in part on federal lands must be conducted, and specifying the right or interest that the authority prescribed in regulations made under paragraph (k.3) must have in the federal lands;

(l) for the purposes of section 10, designating bands individually or by category and respecting the manner of conducting environmental assessments of, and follow-up programs for, projects that are to be carried out in whole or in part on a reserve that is set apart for the use and benefit of a designated band and that is subject to the Indian Act, as well as any action to be taken in respect of projects during the assessment process, which manners and actions may vary by band or category of band;

(l.001) prescribing, for the purposes of paragraph 10(1)(c), provisions of any Act of Parliament or any instrument made under an Act of Parliament that confer powers, duties or functions on a band council;

(l.01) for the purposes of section 10.1,

(i) varying the definition “project” in subsection 2(1),

(ii) respecting the manner of conducting environmental assessments of, and follow-up programs for, projects for which the Canadian International Development Agency exercises a power or performs a duty or function referred to in subsection 10.1(2) and respecting any action to be taken in respect of those projects during the assessment process,

(iii) providing that, in the case of a project in respect of which an agreement or ar-
rangement entered into by the Canadian International Development Agency in accordance with subsection 54(2) applies, no environmental assessment need be carried out by that agency,

(iv) varying or excluding any of the provisions of section 54 in their application to the Canadian International Development Agency, or

(v) providing for the application of section 55.6 to the Canadian International Development Agency as if it were a responsible authority;

(l.02) varying or excluding any of the provisions of sections 55 to 55.5 in their application to the Canadian International Development Agency;

(l.03) prescribing, for the purposes of subsection 18(3), circumstances in which a responsible authority shall give the public an opportunity to participate in the screening;

(l.1) respecting a participant funding program referred to in subsection 58(1.1);

(m) prescribing anything that, by this Act, is to be prescribed; and

(n) generally, for carrying out the purposes and provisions of this Act.

1992, c. 37, s. 59; 1993, c. 34, s. 40(F); 1994, c. 46, s. 5; 1998, c. 10, s. 166; 2003, c. 9, s. 29.

60. Notwithstanding this or any other Act of Parliament, where the Governor in Council is of the opinion that a federal authority on which duties and functions are imposed under this Act is unable to perform those duties and functions by reason of a time limitation or other procedural requirement that is binding on the federal authority under an Act of Parliament other than this Act or any regulation made under such an Act, the Governor in Council may, on the recommendation of the Minister and the Minister responsible for the administration of that other Act, make regulations varying the time limitation or other procedural requirement in so far as it applies to those duties and functions and to the extent necessary to permit the federal authority to perform them.

Malgré les autres dispositions de la présente loi ou toute autre loi fédérale, le gouverneur en conseil peut, s’il estime qu’une autorité fédérale assujettie à la présente loi ne peut remplir ses obligations en raison des délais impartis ou de toute autre formalité prévue sous le régime d’une autre loi fédérale ou de ses règlements, prendre, sur la recommandation du ministre et du ministre responsable de l’application de cette autre loi, des règlements visant à modifier ces délais et formalités dans la mesure où ils s’appliquent à ces obligations et dans la mesure nécessaire pour permettre à l’autorité fédérale de remplir les obligations qui lui incombent sous le régime de la présente loi.

Variation of procedures

Modification de la procédure
CANADIAN ENVIRONMENTAL ASSESSMENT AGENCY

61. (1) There is hereby established an agency, to be called the Canadian Environmental Assessment Agency, which shall advise and assist the Minister in performing the duties and functions conferred on the Minister by this Act.

(2) The Minister is responsible for the Agency.

62. The objects of the Agency are

(a) to administer the environmental assessment process and any other requirements and procedures established by this Act and the regulations;

(b) to promote uniformity and harmonization in the assessment of environmental effects across Canada at all levels of government;

(c) to promote or conduct research in matters of environmental assessment and to encourage the development of environmental assessment techniques and practices, including testing programs, alone or in cooperation with other agencies or organizations;

(d) to promote environmental assessment in a manner that is consistent with the purposes of this Act;

(e) to promote, monitor and facilitate compliance with this Act and the regulations;

(f) to promote and monitor the quality of assessments conducted under this Act;

(g) to ensure an opportunity for timely public participation in the environmental assessment process; and

(h) to engage in consultation with aboriginal peoples on policy issues related to this Act.

1992, c. 37, s. 62; 2003, c. 9, s. 30.

AGENCE CANADIENNE D’ÉVALUATION ENVIRONNEMENTALE

61. (1) Est constituée l’Agence canadienne d’évaluation environnementale chargée de conseiller et d’assister le ministre dans l’exercice des attributions qui lui sont conférées par la présente loi.

(2) L’Agence est placée sous la responsabilité du ministre.

62. L’Agence a pour mission :

(a) de gérer le processus d’évaluation environnementale et toute autre procédure ou exigence établis par la présente loi conformément à celle-ci et aux règlements;

(b) de promouvoir l’uniformisation et l’harmonisation des processus d’évaluation des effets environnementaux à l’échelle du Canada et à tous les niveaux administratifs;

(c) de promouvoir, seule ou en collaboration avec d’autres organismes, la recherche en matière d’évaluation environnementale, de mener des recherches en cette matière et de favoriser l’élaboration de techniques en cette matière, notamment en ce qui a trait aux programmes d’essais;

(d) de promouvoir les évaluations environnementales conformément à l’objet de la présente loi;

(e) de promouvoir, de surveiller et de faciliter l’observation de la présente loi et de ses règlements;

(f) de promouvoir et de contrôler la qualité des évaluations effectuées sous le régime de la présente loi;

(g) de veiller à ce que le public ait la possibilité de participer au processus d’évaluation environnementale en temps opportun;

(h) de tenir des consultations avec les peuples autochtones au sujet des questions de politique liées à la présente loi.

1992, ch. 37, art. 62; 2003, ch. 9, art. 30.

63. (1) In carrying out its objects, the Agency shall

(a) provide administrative support for mediators and review panels;

(b) provide, on the request of the Minister, administrative support for any research or
advisory body that the Minister may establish in the area of environmental assessment; (c) provide information or training to facilitate the conduct of environmental assessments; and (d) establish and lead a quality assurance program for assessments conducted under this Act.

Powers of Agency

(2) In carrying out its objects, the Agency may:

(a) undertake studies or activities or conduct research relating to environmental assessment;
(b) advise persons and organizations on matters relating to the assessment of environmental effects;
(b.1) coordinate the development of a response to a report required under paragraph 37(1.1)(a);
(c) negotiate agreements referred to in paragraph 58(1)(c) or (d) on behalf of the Minister;
(d) examine and from time to time report to the Minister on the implementation of the environmental assessment process by responsible authorities;
(e) issue guidelines regarding the records to be kept by responsible authorities in relation to the environmental assessment process concerning projects;
(f) assist parties in building consensus and resolving disputes; and
(g) request federal authorities, and persons and bodies referred to in sections 8 to 10, to provide information respecting assessments that they conduct under this Act.

1992, c. 37, s. 63; 2003, c. 9, s. 31.

64. In exercising its powers and performing its duties and functions under this Act, the Agency shall, where appropriate, make use of the services and facilities of departments, boards and agencies of the Government of Canada.
65. (1) The Governor in Council shall appoint an officer to be called the President of the Agency, to hold office during pleasure, who shall be, for the purposes of this Act, a deputy of the Minister.

65. (1) Le gouverneur en conseil nomme à titre amovible le président de l’Agence; celui-ci, pour l’application de la présente loi, rang d’administrateur général de ministère.

(2) The President shall be the chief executive officer of the Agency, and may exercise all of the powers of the Minister under this Act as authorized by the Minister.

(2) Le président est le premier dirigeant de l’Agence et peut exercer les pouvoirs que la présente loi confère au ministre et que celui-ci l’autorise à exercer.

Acting President

(3) Subject to subsection (5), in the event of the absence or incapacity of the President or a vacancy in that office, the Executive Vice-President shall act as, and exercise the powers of, the President for the time being.

(3) Sous réserve du paragraphe (5), en cas d’absence ou d’empêchement du président ou de vacance de son poste, l’intérim est assuré par le premier vice-président.

Idem

(4) Subject to subsection (5), the Minister may appoint a person other than the Executive Vice-President to act as the President for the time being.

(4) Sous réserve du paragraphe (5), le ministre peut nommer une autre personne que le premier vice-président pour assurer l’intérim.

Approval required

(5) The Executive Vice-President, or a person appointed pursuant to subsection (4), shall not act as the President for a period exceeding ninety days without the approval of the Governor in Council.

(5) Le premier vice-président ou une personne nommée aux termes du paragraphe (4) ne peut assurer l’intérim que pour une période de quatre-vingt-dix jours, sauf approbation du gouverneur en conseil.

Executive Vice-President

66. (1) The Governor in Council may appoint an officer, to be called the Executive Vice-President of the Agency, to hold office during pleasure.

66. (1) Le gouverneur en conseil peut nommer à titre amovible le premier vice-président de l’Agence.

Powers, duties and functions

(2) The Executive Vice-President shall exercise such powers and perform such duties and functions as the President may assign.

(2) Le premier vice-président exerce les pouvoirs et fonctions que lui attribue le président.

Remuneration

67. The President and the Executive Vice-President shall be paid such remuneration as the Governor in Council may fix.

67. Les président et premier vice-président reçoivent la rémunération fixée par le gouverneur en conseil.

Appointment under the Public Service Employment Act

68. The officers and employees necessary to carry out the work of the Agency shall be appointed in accordance with the Public Service Employment Act.

68. Le personnel nécessaire à l’exécution des travaux de l’Agence est nommé conformément à la Loi sur l’emploi dans la fonction publique.

Head office

69. The head office of the Agency shall be in the National Capital Region described in the schedule to the National Capital Act.

69. Le siège de l’Agence est fixé dans la région de la capitale nationale définie à l’annexe de la Loi sur la capitale nationale.

Contracts, etc., binding on Her Majesty

70. (1) Every contract, memorandum of understanding and arrangement entered into by the Agency in its own name is binding on Her Majesty in right of Canada to the same extent as it is binding on the Agency.

70. (1) Les contrats ou ententes conclus par l’Agence sous son propre nom lient Sa Majesté du chef du Canada au même titre qu’elle-même.

Legal proceedings

(2) Actions, suits or other legal proceedings in respect of any right or obligation acquired or incurred by the Agency, whether in its own

(2) À l’égard des droits et obligations qu’elle assume sous le nom de Sa Majesté du chef du Canada ou le sien, l’Agence peut ester
name or in the name of Her Majesty in right of Canada, may be brought or taken by or against the Agency in the name of the Agency in any court that would have jurisdiction if the Agency were a corporation that is not an agent of Her Majesty.

ANNUAL REPORT

71. (1) The Minister shall report annually to Parliament, within four months after the end of the fiscal year being reported, on the activities of the Agency and the administration and implementation of this Act and regulations during that year.

(2) The annual report to Parliament referred to in subsection (1) shall include a statistical summary of all environmental assessments conducted or completed, under the authority of this Act during the fiscal year being reported.

RAPPORT ANNUEL

71. (1) Dans les quatre mois suivant la fin de chaque exercice, le ministre établit un rapport sur l’application de la présente loi et de ses règlements et les activités de l’Agence au cours de l’exercice précédent et le fait déposer devant le Parlement.

(2) Le rapport contient le résumé statistique des évaluations environnementales effectuées ou terminées en application de la présente loi au cours de l’exercice visé.

REVIEW

72. (1) Five years after the coming into force of this section, a comprehensive review of the provisions and operation of this Act shall be undertaken by the Minister.

(2) The Minister shall, within one year after a review is undertaken pursuant to subsection (1) or within such further time as the House of Commons may authorize, submit a report on the review to Parliament including a statement of any changes the Minister recommends.

1992, c. 37, s. 72; 1993, c. 34, s. 41(F); 1994, c. 26, s. 24(F).

EXAMEN

72. (1) Cinq ans après l’entrée en vigueur du présent article, un examen complet des dispositions et de l’application de la présente loi doit être fait par le ministre.

(2) Dans l’année qui suit le début de l’examen ou dans le délai supérieur que la Chambre des communes lui accorde, le ministre remet son rapport, accompagné des modifications de la présente loi ou des modalités d’application de celle-ci qu’il recommande, au Parlement.

1992, ch. 37, art. 72; 1993, ch. 34, art. 41(F); 1994, ch. 26, art. 24(F).

TRANSITIONAL

73. (1) Each person employed in the Federal Environmental Assessment Review Office, or seconded to that Office from any portion of the public service of Canada, on the day preceding the day on which section 61 comes into force is deemed to have been appointed pursuant to section 68 or seconded, as the case may be, to a position in the Agency of the same occupational nature and at the same level as the position occupied by the person on that preceding day.

(2) Notwithstanding section 28 of the Public Service Employment Act, no person who is deemed under subsection (1) to have been appointed to a position in the Agency is subject to probation unless the person was subject to probation.

DISPOSITIONS TRANSITOIRES

73. (1) Les membres du personnel du Bureau fédéral d’examen des évaluations environnementales et les personnes détachées d’autres secteurs de l’administration publique fédérale auprès de lui et en fonctions à l’entrée en vigueur de l’article 61 deviennent membres de celui de l’Agence et sont réputés avoir été nommés à des fonctions identiques en vertu de l’article 68, ou être détachés auprès du Bureau, selon le cas, lors de cette entrée en vigueur.

(2) Par dérogation à l’article 28 de la Loi sur l’emploi dans la fonction publique, sont seules considérées comme stagiaires les personnes qui étaient en cours de stage la veille du jour où elles sont réputées avoir été nommées. Ces per-
Guidelines Order continued

74. (1) The Environmental Assessment and Review Process Guidelines Order, approved by Order in Council P.C. 1984-2132 of June 21, 1984 and registered as SOR/84-467, shall continue to apply in respect of any proposal that prior to the coming into force of this section was referred to the Minister for public review and for which an Environmental Assessment Panel was established by the Minister pursuant to that Order.

(2) The Order referred to in subsection (1) shall continue to apply in respect of any proposal for which an environmental screening or initial assessment under that Order was commenced before the coming into force of this section, but where any such proposal is referred to the Minister for public review pursuant to section 20 of that Order, this Act shall thereupon apply and the Minister may refer the project to a mediator or a review panel in accordance with section 29.

(3) Where a proponent proposes to carry out, in whole or in part, a project for which an environmental screening or an initial assessment was conducted in accordance with the Order referred to in subsection (1), and

(a) the project did not proceed after the assessment was completed,

(b) in the case of a project that is in relation to a physical work, the proponent proposes an undertaking in relation to that work different from that proposed when the assessment was conducted,

(c) the manner in which the project is to be carried out has subsequently changed, or

(d) the renewal of a licence, permit, approval or other action under a prescribed provision is sought,

the responsible authority may use or permit the use of the environmental screening or initial assessment and the report thereon to whatever extent it is appropriate to do so for the purpose of complying with section 18 or 21.

74. (1) Le Décret sur les lignes directrices visant le processus d’évaluation et d’examen en matière d’environnement approuvé par le décret C.P. 1984-2132 du 21 juin 1984 et enregistré sous le numéro DORS/84-467 continue de s’appliquer aux examens publics qui y sont visés et pour lesquels les membres de la commission d’évaluation environnementale ont été nommés sous son régime avant l’entrée en vigueur du présent article.

(2) Le décret visé au paragraphe (1) continue de s’appliquer aux examens préalables ou aux évaluations initiales commencés sous son régime avant l’entrée en vigueur du présent article, jusqu’au moment où, le cas échéant, une proposition est soumise au ministre pour examen public aux termes de l’article 20 du décret, auquel cas la présente loi commence de s’appliquer et le ministre peut prendre une décision aux termes de l’article 29.

(3) Dans le cas où un promoteur propose la réalisation de tout ou partie d’un projet à l’égard duquel l’examen préalable ou l’évaluation initiale a été effectuée sous le régime du décret visé au paragraphe (1), l’autorité responsable peut utiliser le rapport de l’examen ou de l’évaluation, ou en permettre l’utilisation, dans la mesure appropriée pour l’observation des articles 18 ou 21 dans chacun des cas suivants :

a) le projet n’a pas été réalisé après l’achèvement de l’évaluation;

b) le promoteur d’un projet lié à un ouvrage en propose une réalisation différente de celle qui était proposée au moment de l’évaluation;

c) les modalités de réalisation du projet sont nouvelles;

d) la présentation d’une demande de renouvellement d’un permis, d’une licence, d’une autorisation ou d’une autre mesure en vertu d’une disposition désignée par règlement.
(4) Where the construction or operation of a physical work or the carrying out of a physical activity was initiated before June 22, 1984, this Act shall not apply in respect of the issuance or renewal of a licence, permit, approval or other action under a prescribed provision in respect of the project unless the issuance or renewal entails a modification, decommissioning, abandonment or other alteration to the project, in whole or in part.

CONSEQUENTIAL AMENDMENTS

75. to 81. [Amendments]

COMING INTO FORCE

82. This Act, or any provision of this Act, shall come into force on a day or days to be fixed by order of the Governor in Council.

* [Note: Sections 61 to 70, 73, 75 and 78 to 80 in force December 22, 1994, see SI/95-3; sections 1 to 60, 71, 72, 74, 76 and 77 in force January 19, 1995, see SI/95-11.]

MODIFICATIONS CORRÉLATIVES

75. à 81. [Modifications]

ENTRÉE EN VIGUEUR

82. La présente loi ou telle de ses dispositions entre en vigueur à la date ou aux dates fixées par décret du gouverneur en conseil.

* [Note : Articles 61 à 70, 73, 75 et 78 à 80 en vigueur le 22 décembre 1994, voir TR/95-3; articles 1 à 60, 71, 72, 74, 76 et 77 en vigueur le 19 janvier 1995, voir TR/95-11.]
125. (1) Notwithstanding section 6, the *Canadian Environmental Assessment Act* continues to apply — to the exclusion of the provisions of this Act respecting projects — in respect of a proposal for a project that was referred, before the coming into force of Part 2 of this Act, to a mediator or a review panel pursuant to that Act.

(2) Notwithstanding section 6, the *Canadian Environmental Assessment Act* continues to apply — to the exclusion of the provisions of this Act respecting projects — in respect of a proposal for a project for which a screening or comprehensive study was commenced under that Act before the coming into force of Part 2 of this Act, but where the project is referred to a review panel pursuant to subsection 29(1) of that Act, that Act ceases to apply and section 63 of this Act applies as if the Minister of the Environment had agreed to a request made by the executive committee under paragraph 61(1)(b).

32. (1) Within seven years after this Act receives royal assent, a comprehensive review of the provisions and operation of the *Canadian Environmental Assessment Act* shall be undertaken by such committee of the Senate, of the House of Commons or of both Houses of Parliament as may be designated or established by the Senate or the House of Commons, or by both Houses of Parliament, as the case may be, for that purpose.

(2) The committee referred to in subsection (1) shall, within a year after a review is undertaken pursuant to that subsection or within such further time as may be authorized by the Senate, the House of Commons or both Houses of Parliament, as the case may be, submit a report on the review to Parliament, including a statement of any changes that the committee recommends.

33. Any environmental assessment or assessment of the environmental effects of a project commenced under the *Canadian Environmental Assessment Act* before this section comes into force shall be continued and completed as if this Act had not been enacted.
Historic Sites and Monuments Act

H-4

An Act to establish the Historic Sites and Monuments Board of Canada

SHORT TITLE

Short title

1. This Act may be cited as the Historic Sites and Monuments Act.

R.S., c. H-6, s. 1.

INTERPRETATION

Definitions

2. In this Act,

"Board" «Commission »
"Board" means the Historic Sites and Monuments Board of Canada established by section 4;

"historic place" «lieu historique »
"historic place" means a site, building or other place of national historic interest or significance, and includes buildings or structures that are of national interest by reason of age or architectural design;

"Minister" «ministre »
"Minister" means the Minister responsible for the Parks Canada Agency.

R.S., 1985, c. H-4, s. 2; 1995, c. 11, s. 23; 2005, c. 2, s. 11.

COMMEMORATION OF HISTORIC SITES

Powers of Minister

3. The Minister may

(a) by means of plaques or other signs or in any other suitable manner mark or otherwise commemorate historic places;

(b) make agreements with any persons for marking or commemorating historic places pursuant to this Act
and for the care and preservation of any places so marked or commemorated;

(c) with the approval of the Governor in Council, establish historic museums;

(d) with the approval of the Treasury Board, acquire on behalf of Her Majesty in right of Canada any historic places, or lands for historic museums, or any interest therein, by purchase, lease or otherwise; and

(e) provide for the administration, preservation and maintenance of any historic places acquired or historic museums established pursuant to this Act.

R.S., c. H-6, s. 3.

HISTORIC SITES AND MONUMENTS BOARD OF CANADA

Board established

4. (1) A Board to be called the Historic Sites and Monuments Board of Canada is hereby established, consisting of eighteen members as follows:

(a) the Librarian and Archivist of Canada;

(b) an officer of the Canadian Museum of Civilization designated by the member of the Queen's Privy Council for Canada who is designated by the Governor in Council pursuant to the Museums Act as the Minister responsible for the Canadian Museum of Civilization;

(c) an officer of the Parks Canada Agency designated by the Minister; and

(d) two representatives for each of Ontario and Quebec, one representative for each of the other provinces, and one representative for each of Yukon, the Northwest Territories and Nunavut, to be appointed by the Governor in Council.

Eligibility of appointed members

(2) A person is not eligible to be appointed or to continue as a representative for a province or a territory, unless that person resides in that province or territory.

Tenure of office

(3) A member appointed by the Governor in Council holds office during pleasure for such period not exceeding five years as may be fixed by the Governor in Council.

Re-appointment

(4) A retiring member of the Board is eligible for re-appointment.

R.S., 1985, c. H-4, s. 4; R.S., 1985, c. 1 (3rd Supp.), s. 12; 1990, c. 3, s. 32; 1993, c. 28, s. 78; 1995, c. 11, s. 24; 2002, c. 7, s. 179; 2004, c. 11, s. 31; 2005, c. 2, s. 12.

Chairman

5. (1) The Governor in Council shall designate one of the members of the Board to be its Chairman.

Meetings

(2) The Board shall meet at least once in every calendar year at the call of the Chairman, but the time and place of each such meeting is subject to the approval of the Minister.

Idem

(3) The Board shall hold such other meetings at such times and places as the Minister may require.

Quorum
(4) Nine members of the Board constitute a quorum.
R.S., c. H-6, s. 4; 1976-77, c. 20, s. 1.

Secretary

6. (1) The Minister may designate an officer or employee of the Parks Canada Agency established under the Parks Canada Agency Act to be the Secretary of the Board, or appoint a Secretary of the Board at the remuneration and under the terms or conditions of employment that may be prescribed by the Governor in Council.

Other staff

(2) The Minister may, from among the persons employed in the Parks Canada Agency, provide the Board with any other employees or assistants that are necessary for the proper conduct of the business of the Board.
R.S., 1985, c. H-4, s. 6; 1995, c. 11, s. 25(E); 1998, c. 31, s. 51.

Powers and duties of Board

7. The Board may receive and consider recommendations respecting the marking or commemoration of historic places, the establishment of historic museums and the administration, preservation and maintenance of historic places and historic museums, and shall advise the Minister in carrying out his powers under this Act.
R.S., c. H-6, s. 5.

Travel and living expenses

8. (1) Each member of the Board appointed by the Governor in Council may be paid

(a) for each day the member is necessarily absent from his ordinary place of residence for the purpose of attending at meetings or to other business of the Board, such remuneration as is fixed by the Governor in Council; and

(b) actual travel expenses necessarily incurred in connection with the business of the Board.

Idem

(2) Members of the Board other than those appointed by the Governor in Council are entitled to be paid actual travel and living expenses necessarily incurred in connection with the business of the Board.

Clerical and stenographic assistance

(3) There may be paid for clerical and stenographic assistance

(a) the sum of seventy-five dollars per year to the Chairman of the Board; and

(b) the sum of thirty dollars per year to the other members of the Board appointed by the Governor in Council.
R.S., c. H-6, s. 6.

GENERAL

Regulations

9. The Governor in Council may make regulations for carrying the purposes and provisions of this Act into effect.
R.S., c. H-6, s. 8.

Annual report
10. (1) As soon as practicable after the end of each calendar year, the Board shall submit to the Minister a report of its proceedings for the calendar year in such form as the Minister may prescribe.

Further reports

(2) In addition to the report required by subsection (1), the Board shall furnish the Minister with such other statements or reports in respect of its activities, at such time and in such manner, as the Minister may require.
R.S., c. H-6, s. 9.
An Act to establish the Parks Canada Agency and to amend others Acts as a consequence

Preamble

Whereas the Government of Canada wishes to establish an Agency for the purpose of ensuring that Canada’s national parks, national historic sites and related heritage areas are protected and presented for this and future generations and in order to further the achievement of the national interest as it relates to those parks, sites and heritage areas and related programs;

Whereas the Government of Canada wishes to establish an Agency that, through the exercise of its responsibilities in relation to those parks, sites and heritage areas and related programs, will reflect Canada’s values and identity and contribute to enhancing pride in Canada;

Whereas the Government of Canada wishes to establish an Agency to provide quality services to visitors and the Canadian public through alternative human resource and administrative regimes and financial authorities;

And Whereas it is in the national interest

(a) to protect the nationally significant examples of Canada’s natural and cultural heritage in national parks, national historic sites, national marine conservation areas and related heritage areas in view of their special role in the lives of Canadians and the fabric of the nation,

(b) to present that heritage through interpretive and educational programs for public understanding, appreciation and enjoyment, both for international visitors and the Canadian public, thereby enhancing pride, encouraging stewardship and giving expression to our identity as Canadians,

(c) to carry out Canada’s international obligations and agreements to protect, conserve and present that heritage and to contribute towards the protection and presentation of the global heritage and biodiversity,

(d) to include representative examples of Canada’s land and marine natural regions in the systems of national parks and national marine conservation areas,

(e) to commemorate places, people and events of national historic significance, including Canada’s rich and ongoing aboriginal traditions,

(f) to ensure the commemorative integrity of national historic sites,

(g) to maintain or restore the ecological integrity of national parks,

(h) to ensure the ecologically sustainable use of national marine conservation areas,

(i) to protect heritage railway stations and the heritage character of federal heritage buildings,

(j) to provide leadership and support to the Canadian Heritage Rivers System,

(k) to provide Canadians with an opportunity to enjoy Canada’s special places,
to maintain ecological and commemorative integrity as a prerequisite to the use of national parks and national historic sites, and

(m) to manage visitor use and tourism to ensure both the maintenance of ecological and commemorative integrity and a quality experience in such heritage and natural areas for this and future generations;

NOW, THEREFORE, Her Majesty, by and with the advice and consent of the Senate and House of Commons of Canada, enacts as follows:

1998, c. 31, preamble; 2002, c. 18, s. 33.

SHORT TITLE

Short title

1. This Act may be cited as the Parks Canada Agency Act.

INTERPRETATION

Definitions

2. (1) The definitions in this section apply in this Act. "Agency"

«Agence »

"Agency" means the Parks Canada Agency established by section 3.

"Chief Executive Officer"

«directeur général »

"Chief Executive Officer" means the Chief Executive Officer appointed under section 10.

"employee"

«employé »

"employee" means an employee appointed under subsection 13(1).

"heritage protection programs"

«programmes de protection du patrimoine »

"heritage protection programs" includes programs that relate to

(a) heritage railway stations and federal heritage buildings;

(b) Canadian heritage rivers and federal archaeology; and

(c) any other matters within the jurisdiction of the Minister that relate to areas of Canadian natural or historical significance that the Minister may, with the approval of the Governor in Council, specify for the purposes of this definition.

"Minister"

«ministre »

"Minister" means the Minister of the Environment.

"national historic site"

«lieu historique national »

"national historic site" means a place designated under subsection (2) or a national historic site of Canada to which the Canada National Parks Act applies.

"national marine conservation area"

«aire marine nationale de conservation »
"national marine conservation area" means a marine conservation area or reserve as defined in subsection 2(1) of the Canada National Marine Conservation Areas Act.

"national park"
«parc national »
"national park" means a park or park reserve as defined in section 2 of the Canada National Parks Act.

"other protected heritage areas"
«autres lieux patrimoniaux protégés »
"other protected heritage areas" includes

(a) historic canals;

(b) historic museums that may be established by the Minister under the Historic Sites and Monuments Act;

(b.1) the Saguenay-St. Lawrence Marine Park established by section 5 of the Saguenay-St. Lawrence Marine Park Act; and

(c) any other areas within the jurisdiction of the Minister that are of Canadian natural or historical significance and that the Minister may, with the approval of the Governor in Council, specify for the purposes of this definition.

Designation

(2) The Minister may designate any historic place as defined in section 2 of the Historic Sites and Monuments Act as a national historic site for the purposes of this Act.

1998, c. 31, ss. 2, 61.1; 2000, c. 32, s. 58; 2002, c. 18, s. 34; 2005, c. 2, s. 3.

ESTABLISHMENT OF AGENCY

Establishment

3. There is hereby established a body corporate to be called the Parks Canada Agency, that may exercise powers and perform duties and functions only as an agent of Her Majesty in right of Canada.

Minister responsible

4. (1) The Minister is responsible for the Agency and the powers, duties and functions of the Minister, in that capacity, extend to and include all matters over which Parliament has jurisdiction, not by law assigned to any other department, board or agency of the Government of Canada, relating to

(a) areas of natural or historical significance to the nation, including national parks, national marine conservation areas, national historic sites, historic canals, historic museums established under the Historic Sites and Monuments Act and Saguenay-St. Lawrence Marine Park;

(b) heritage railway stations, federal heritage buildings, historic places in Canada, federal archaeology and Canadian heritage rivers; and

(c) the design and implementation of programs that relate primarily to built heritage.

Ministerial direction

(2) The Minister has the overall direction of the Agency, which shall comply with any general or special direction given by the Minister with reference to the carrying out of its responsibilities.

Exception

(3) Notwithstanding subsection (2), no direction may be given with respect to the matters referred to in
Exercise of powers conferred on Minister

5. (1) Subject to any direction given by the Minister, the Agency may exercise the powers and shall perform
the duties and functions that relate to national parks, national historic sites, national marine conservation areas,
other protected heritage areas and heritage protection programs that are conferred on, or delegated, assigned
or transferred to, the Minister under any Act or regulation.

Officers and employees

(2) An officer or employee of the Agency may exercise any power and perform any duty or function referred
to in subsection (1) if the officer or employee is appointed to serve in the Agency in a capacity appropriate to the
exercise of the power or the performance of the duty or function, and in so doing, shall comply with any general
or special direction given by the Minister.

Exception

(3) Subsection (1) does not include

(a) any power, duty or function of the Minister under this Act, other than those referred to in subsection 4(1);

(b) a power to make regulations under this or any other Act; or

(c) a power to make designations or appointments under the Historic Sites and Monuments Act or the
Heritage Railway Stations Protection Act.

Non-application of Statutory Instruments Act

5.1 A direction by the Minister referred to in sections 4 and 5 is not a statutory instrument for the purposes of
the Statutory Instruments Act.

Responsibilities — subject-matter

6. (1) The Agency is responsible for the implementation of policies of the Government of Canada that relate
to national parks, national historic sites, national marine conservation areas, other protected heritage areas and
heritage protection programs.

System plans

(2) The Agency shall ensure that there are long-term plans in place for establishing systems of national
parks, national historic sites and national marine conservation areas.

New protected heritage areas

(3) The Agency is responsible for negotiating, and recommending to the Minister, the establishment of new
national parks, national marine conservation areas and other protected heritage areas and the acquisition of
national historic sites.

Responsibilities — Acts

(4) The Agency is responsible for the administration and enforcement of the Acts listed in Part 1 of the
schedule and any regulations made under those Acts and the regulations listed in Part 2 of the schedule.

Additions to or deletions from the schedule

7. The Governor in Council may, by order, add to or delete from the schedule any Act of Parliament or
regulation or part of an Act or regulation that relates to national parks, national historic sites, national marine
conservation areas or other protected heritage areas or heritage protection programs.

1998, c. 31, s. 7; 2002, c. 18, s. 37.

Ancillary powers

8. The Agency may, in carrying out its responsibilities,

(a) enter into contracts, agreements, memoranda of understanding or other arrangements with a department or agency of the Government of Canada, with any other government or any of its agencies or with any person or organization in the name of Her Majesty in right of Canada or in its own name;

(b) acquire any property, including securities, by way of gift, bequest or other form of donation and, subject to the terms and conditions on which the property was acquired, hold, administer, expend, sell, exchange or otherwise dispose of the property;

(c) sell, exchange, loan or otherwise dispose of any personal property or moveables acquired, held or administered by the Agency;

(d) license, assign or otherwise make available any patent, copyright, industrial design, trade-mark, trade secret or other like property right held, controlled or administered by the Agency;

(e) publish, sell or otherwise disseminate studies, reports and other documents of the Agency; and

(f) do anything that is necessary or incidental to the furtherance of the purposes of the Agency.

Convening round table

8.1 (1) The Minister shall, at least once every two years, convene a round table of persons interested in matters for which the Agency is responsible to advise the Minister on the performance by the Agency of its responsibilities under section 6.

Response of Minister

(2) The Minister shall respond within 180 days to any written recommendations submitted during a round table convened under subsection (1).

Choice of goods and services providers

9. Notwithstanding section 9 of the Department of Public Works and Government Services Act, the Agency, with the approval given generally or in a specific case by the Governor in Council, on the recommendation of the Treasury Board, may procure goods and services, including legal services, from outside the federal public administration.

1998, c. 31, s. 9; 2003, c. 22, s. 224(E).

ORGANIZATION OF AGENCY

Appointment

10. (1) The Governor in Council shall appoint an officer, to be called the Chief Executive Officer, to hold office during pleasure for a term of not more than five years, which term may be renewed for one or more further terms.

Remuneration

(2) The Chief Executive Officer shall be paid the remuneration that may be fixed by the Governor in Council.

Absence or incapacity

11. In the event of the absence or incapacity of the Chief Executive Officer or a vacancy in that office, the
Minister may appoint any person to exercise the powers and perform the duties and functions of the Chief Executive Officer, but no person may be so appointed for a term of more than ninety days without the approval of the Governor in Council.

Role of Chief Executive Officer

12. (1) The Chief Executive Officer, under the direction of the Minister, has the control and management of the Agency and all matters connected with it.

Rank of deputy head

(2) The Chief Executive Officer has the rank and all the powers of a deputy head of a department.

Guiding principles and operational policies

(3) The Chief Executive Officer is responsible for preparing, for the Minister's approval, guiding principles and operational policies for matters within the Agency's responsibilities.

Delegation

(4) The Chief Executive Officer may delegate to any person any power, duty or function conferred on the Chief Executive Officer under this Act or any other Act or regulation.

HUMAN RESOURCES

Personnel

13. (1) The Chief Executive Officer has exclusive authority to

(a) appoint, lay-off or terminate the employment of the employees of the Agency; and

(b) establish standards, procedures and processes governing staffing, including the appointment, lay-off or termination of employment otherwise than for cause, of employees.

Right of employer

(2) Nothing in the Public Service Labour Relations Act shall be construed to affect the right or authority of the Chief Executive Officer to deal with the matters referred to in paragraph (1)(b).

Human resources management

(3) Subsections 11.1(1) and 12(2) of the Financial Administration Act do not apply with respect to the Agency and the Chief Executive Officer may

(a) determine the organization of and classify the positions in the Agency;

(b) set the terms and conditions of employment, including termination of employment for cause, for employees and assign duties to them; and

(c) provide for any other matters that the Chief Executive Officer considers necessary for effective human resources management in the Agency.

1998, c. 31, s. 13; 2003, c. 22, ss. 180, 223(E).

Political activities

14. (1) For the purposes of Part 7 of the Public Service Employment Act, the Chief Executive Officer is deemed to be a deputy head, and an employee is deemed to be an employee, within the meaning of subsection 2(1) of that Act.

Services of the Public Service Commission
(2) The Public Service Commission may, at the request of the Agency, provide any service to the Agency that it is authorized to provide to a department under the Public Service Employment Act or any other related service, and may recover from the Agency the costs incurred in providing the service, and the Commission is, for greater certainty, authorized to enter into arrangements with the Agency for those purposes.

1998, c. 31, s. 14; 2003, c. 22, s. 241.

Negotiation of collective agreements

15. Notwithstanding section 112 of the Public Service Labour Relations Act, the Chief Executive Officer may, in accordance with the negotiating mandate approved by the President of the Treasury Board, enter into a collective agreement with the bargaining agent for a bargaining unit composed of employees that is applicable to employees in that bargaining unit.

1998, c. 31, s. 15; 2003, c. 22, s. 181.

GENERAL

Charter for the Agency

16. (1) The Chief Executive Officer is responsible for establishing a charter for the Agency that sets out the values and principles governing

(a) the provision of services by the Agency to the public; and

(b) the management of the human resources of the Agency.

Available to the public

(2) The charter established under subsection (1) shall be made available to the public.

Principal office

17. The principal office of the Agency shall be in the National Capital Region described in the schedule to the National Capital Act.

Legal proceedings

18. (1) Actions, suits or other legal proceedings in respect of any right or obligation acquired or incurred by the Agency, whether in its own name or in the name of Her Majesty in right of Canada, may be brought or taken by or against the Agency in the name of the Agency in any court that would have jurisdiction if the Agency were not an agent of Her Majesty.

Property

(2) Property acquired by the Agency is the property of Her Majesty in right of Canada and title to it may be held in the name of Her Majesty or in the name of the Agency.

FINANCIAL PROVISIONS

Appropriations

19. (1) Money may be appropriated by Parliament from time to time by way of a vote in an appropriation Act or any other Act of Parliament, for the period that may be specified in the Act, for the purposes of making operating and capital expenditures of the Agency and providing financial assistance in the form of grants and contributions.

Multi-year lapsing

(2) The unexpended balance of money referred to in subsection (1) appropriated by any Act of Parliament for the purpose of making operational expenditures of the Agency lapses at the end of the fiscal year following the year in which the money was originally appropriated or at the end of any longer period that may be specified.
in the Act.

**Interpretation**

20. (1) For the purposes of paragraphs (2)(b) and 21(2)(a), terms and expressions used in those paragraphs have the same meaning as in the *Federal Real Property and Federal Immovables Act*.

**Operational revenues**

(2) Notwithstanding subsection 29.1(1) of the *Financial Administration Act*, the Agency may, for the purposes referred to in subsection 19(1), spend amounts equal to revenues resulting from the conduct of its operations in that or subsequent fiscal years, including

(a) proceeds from the sale, exchange, loan or other disposition or the licensing of any personal property or moveables acquired, held or administered by the Agency;

(b) proceeds from any of the following transactions in respect of federal real property and federal immovables under the administration of the Minister for the purposes of the Agency:

(i) the lease or giving of a licence,

(ii) the transfer to Her Majesty in any right other than Canada of administration and control, otherwise than in perpetuity, and

(iii) a disposition of any right or interest, other than a disposition referred to in paragraph 21(2)(a);

(c) proceeds from, including fees paid under any Act of Parliament in respect of, the provision by the Agency of a service, of the use of a facility or of a product, right or privilege;

(d) proceeds from any money recovered under section 29; and

(e) any refund of expenditures made in previous fiscal years.

1998, c. 31, s. 20; 2001, c. 4, s. 166.

**Establishment of New Parks and Historic Sites Account**

21. (1) There is hereby established an account in the accounts of Canada to be called the New Parks and Historic Sites Account.

**Amounts credited to Account**

(2) There shall be credited to the New Parks and Historic Sites Account money appropriated by Parliament from time to time by way of an appropriation Act or any other Act of Parliament for the purposes specified in subsection (3), and any revenues of the Agency resulting, including proceeds, from

(a) any of the following transactions in respect of federal real property and federal immovables under the administration of the Minister for the purposes of the Agency:

(i) the sale or any other disposition in perpetuity of any right or interest,

(ii) the transfer of administration to another minister or to an agent corporation, and

(iii) the transfer of administration and control in perpetuity to Her Majesty other than in right of Canada; and

(b) a gift, bequest or other form of donation made for the purposes of the Agency or for any purpose specified in subsection (3).

**Payments out of New Parks and Historic Sites Account**

(3) Subject to the approval by the Treasury Board of the corporate plan prepared under section 33, amounts may, notwithstanding any other Act of Parliament, be paid out of the New Parks and Historic Sites Account for the following purposes:

(a) to acquire any historic place, or lands for historic museums, or any interest therein, for the purpose of paragraph 3(d) of the *Historic Sites and Monuments Act*;
(b) to acquire any real property or immovables for the purpose of establishing, enlarging or designating, as the case may be, any national park, national historic site, national marine conservation area or other protected heritage area that has not yet attained full operational status;

(c) to develop or maintain any national park, national historic site, national marine conservation area or other protected heritage area that has not yet attained full operational status, and to make any related contribution or other payment;

(d) to implement a decision by the Minister to recommend the establishment of a national park, national historic site, national marine conservation area or other protected heritage area, or to commemorate a historic place under section 3 of the *Historic Sites and Monuments Act*, and to make any related contribution or other payment; and

(e) to repay advances made under subsection 22(2).

**Determination of status**

(4) The Chief Executive Officer must, in accordance with the guidelines established under subsection (5), determine whether a national park, national historic site, national marine conservation area or other protected heritage area has attained full operational status for the purposes of paragraphs (3)(b) and (c).

**Guidelines**

(5) The Chief Executive Officer must, with the approval of the Minister, establish guidelines respecting the making of a determination under subsection (4).

1998, c. 31, s. 21; 2001, c. 4, s. 167; 2002, c. 18, s. 38.

**Statutory appropriation**

22. (1) There is hereby appropriated from the Consolidated Revenue Fund the amount of ten million dollars for the purpose of providing advances, from time to time, to the New Parks and Historic Sites Account.

**Advances to the Account**

(2) The Minister of Finance may, on the request of the Minister, authorize the making of advances to the New Parks and Historic Sites Account from the money appropriated under subsection (1) in accordance with any terms and conditions that have been approved by the Treasury Board.

**Credits to the Account**

(3) An advance made as authorized under subsection (2) must be credited to the New Parks and Historic Sites Account.

**Repayment of advances**

(4) The repayment of the principal amount of any advance made as authorized under subsection (2) shall, in accordance with any direction made by the Treasury Board, be charged to the New Parks and Historic Sites Account and credited to the balance outstanding of money appropriated under subsection (1), and the payment of any amount on account of interest payable on the advance may be made from money appropriated under an Act of Parliament as authorized under subsection 19(1).

**Amount may be changed**

(5) The amount of advances authorized under subsection (1) may be amended, from time to time, by an item in an appropriation Act.

**FEES**

**Fees for services and use of facilities**

23. (1) The Minister may, subject to any regulations that the Treasury Board may make for the purposes of
this section, fix the fees or the manner of calculating the fees to be paid for a service or the use of a facility provided by the Agency.

Amount not to exceed cost

(2) Fees for a service or the use of a facility that are fixed under subsection (1) may not exceed the cost to Her Majesty in right of Canada of providing the service or the use of the facility.

Fees for products, rights and privileges

24. The Minister may, subject to any regulations that the Treasury Board may make for the purposes of this section, fix the fees or the manner of calculating fees in respect of products, rights or privileges provided by the Agency.

Consultation

25. (1) Before fixing a fee under section 23 or 24, the Minister must consult with any persons and organizations that the Minister considers to be interested in the matter.

Publication

(2) The Minister must publish any fee fixed under section 23 or 24 in the Canada Gazette within thirty days after fixing it.

Reference to Scrutiny Committee

(3) A fee fixed under section 23 or 24 stands permanently referred to the Committee referred to in section 19 of the Statutory Instruments Act to be reviewed and scrutinized as if it were a statutory instrument.

Regulations

26. The Treasury Board may make regulations for the purposes of sections 23 and 24.

Collection of fees

27. The Agency may enter into an agreement with any person respecting the collection of fees fixed under this Act or any other Act under which the Agency provides services, facilities, products, rights or privileges and, notwithstanding subsections 17(1) and (4) of the Financial Administration Act, authorizing that person to withhold amounts from those fees.

Remission of fees

28. The Minister may remit or refund all or part of a fee fixed under section 23 or 24 or under any other Act under which the Agency provides services, facilities, products, rights or privileges, and the interest on it.

Recovery of fees and costs

29. The Agency may recover, as a debt due to Her Majesty, any fee or charge fixed under this or any other Act, any costs incurred by the Agency, and any interest on those fees, charges or costs, that relate to providing a service, facility, product, right or privilege by the Agency under this or any other Act.

Delegation

30. The Minister may delegate to the Agency any power, duty or function conferred on the Minister under sections 23 to 25 and 28.

REPORTS AND PLANS

Report on state of heritage areas and programs

31. At least every two years, the Chief Executive Officer shall provide the Minister with a report, to be tabled
in each House of Parliament, on the state of national parks, national historic sites, national marine conservation areas and other protected heritage areas and heritage protection programs, and on the performance of the Agency in carrying out its responsibilities under section 6.

1998, c. 31, s. 31; 2002, c. 18, s. 39.

Management plans

*32. (1) In addition to the duties in relation to management plans under the Canada National Parks Act and the Canada National Marine Conservation Areas Act, the Chief Executive Officer shall, within five years after the establishment of a national historic site or other protected heritage area, or within five years after the coming into force of this section, whichever is later, provide the Minister with a management plan for that national historic site or other protected heritage area in respect of any matter that the Minister deems appropriate, including, but not limited to, commemorative and ecological integrity, resource protection or visitor use, and that plan shall be tabled in each House of Parliament.

* [Note: Section 32 in force on assent June 13, 2002.]

Review of management plans by Minister

(2) The Minister shall review the management plan of a national historic site or other protected heritage area every five years and shall cause any amendments to the plan to be tabled with the plan in each House of Parliament.

1998, c. 31, s. 32; 2000, c. 32, s. 59; 2002, c. 18, s. 40.

Corporate plan

33. (1) The Chief Executive Officer must submit to the Minister, before March 31 of each year and beginning the year that the Agency is established, a corporate plan for the operations of the Agency and the Minister must, after the plan is approved by the Treasury Board, table a summary of the plan in each House of Parliament on any of the first thirty days on which that House is sitting after the plan is so approved, at which time the plan shall be made available to the public on request.

Contents of corporate plan

(2) The corporate plan must include

(a) a statement of the Agency’s objectives, management strategies to achieve those objectives, expected performances and associated financial budgets for the approaching fiscal year and the four following fiscal years; and

(b) any other information that the Treasury Board may require to be included in it.

Terms and conditions for approval of plan

(3) The Treasury Board may specify any terms and conditions that the Treasury Board considers appropriate for the approval of a corporate plan or an amendment to a corporate plan.

Restriction on activity

(4) The Agency shall not carry on any activity in a manner that is inconsistent with its corporate plan as approved by the Treasury Board.

Annual report

34. (1) The Chief Executive Officer must, before September 30 of each year following the Agency’s first full year of operations, submit an annual report on the operations of the Agency for the preceding year to the Minister and the Minister must table a copy of the report in each House of Parliament on any of the first thirty days on which that House is sitting after the Minister receives it.

Contents of annual report

(2) The annual report must include
(a) the financial statements of the Agency and the Auditor General of Canada’s opinion on them;

(b) information about the Agency’s performance with respect to the objectives established in the corporate plan and a summary statement of the assessment by the Auditor General of Canada of the fairness and reliability of that information;

(c) any other information that the Minister or the Treasury Board may require to be included in it; and

(d) a summary of any report prepared under subsection 35(1) during the year for which the annual report is submitted.

Report on human resources regime

35. (1) The Chief Executive Officer must, at least every five years, have prepared by a person or body, other than the Agency or any of its officers or employees, a report on the consistency of its human resources regime with the values and principles that are to govern the management of its human resources.

Available to the public

(2) The report prepared under subsection (1) shall be made available to the public.

AUDIT

Audit

36. The Auditor General of Canada shall annually

(a) audit and provide an opinion on the financial statements of the Agency;

(b) provide an assessment of the fairness and reliability of the information about the Agency’s performance as set out in the Agency's annual report; and

(c) provide the Chief Executive Officer and the Minister with a report on the audit, opinion and assessment.

APPLICATION OF THE OFFICIAL LANGUAGES ACT

Official Languages Act applies

36.1 For greater certainty, the Official Languages Act applies to the Agency and the Agency has the duty, under section 25 of that Act, to ensure that, where services are provided or made available by another person or organization on its behalf, any member of the public in Canada or elsewhere can communicate with and obtain those services from that person or organization in either official language, in any case where those services, if provided by the Agency, would be required under Part IV of the Official Languages Act to be provided in either official language.

TRANSITIONAL

Appropriation Act

37. The provisions made by any appropriation Act for the fiscal year in which this section comes into force or a subsequent fiscal year, based on the Estimates for that year, to defray the charges and expenses of the public service of Canada within the Parks Canada Sector of the Department of Canadian Heritage in relation to any matter for which the Agency is responsible by virtue of this Act are deemed to be an amount appropriated for defraying the charges and expenses of the Agency in the amount that the Treasury Board may, on the recommendation of the Minister, determine.

Definitions
38. The definitions in this section apply in sections 39 to 45.

"designated position"
«poste désigné »
"designated position" has the same meaning as in subsection 2(1) of the Public Service Staff Relations Act.

"employee"
«employé »
"employee" means a person whose employment in the Department of Canadian Heritage is terminated under paragraph 11(2)(g.1) of the Financial Administration Act and who is appointed to the Agency following an offer of employment made by the Agency as a result of a transfer of any work, undertaking or business from the Department of Canadian Heritage to the Agency.

"grievance"
«grief »
"grievance" has the same meaning as in subsection 2(1) of the Public Service Staff Relations Act.

Pending competitions and appointments

39. A competition being conducted or an appointment being or about to be made under the Public Service Employment Act in respect of a position within the Department of Canadian Heritage the duties and functions of which are assigned to a position within the Agency, may continue to be conducted or made as if the Agency were a department for the purposes of that Act.

Pending appeals

40. (1) An appeal made under section 21 of the Public Service Employment Act by any person against an appointment to a position within the Department of Canadian Heritage the duties and functions of which are assigned to a position within the Agency, and not finally disposed of on the assignment, must be dealt with and disposed of in accordance with that Act as if the Agency were a department for the purposes of that Act and the person continued to be an employee for the purposes of that Act.

Other recourse

(2) Any recourse commenced by an employee under the Public Service Employment Act that has not been finally dealt with on the appointment of the employee to the Agency must be dealt with and disposed of in accordance with that Act as if the Agency were a department for the purposes of that Act and the person continued to be an employee for the purposes of that Act.

Employees on probation

41. (1) Every employee who was considered to be on probation under section 28 of the Public Service Employment Act immediately before being appointed to the Agency continues on probation with the Agency until the end of any period established by the Public Service Commission by regulation for that employee or a class of persons of which that employee is a member.

Rejection

(2) Subsection 28(2) of the Public Service Employment Act applies to an employee of the Agency who is on probation but the reference to deputy head in that subsection is to be read as a reference to the Chief Executive Officer.

Designated positions

42. If an employee, immediately before being appointed to the Agency, occupied a position that was a designated position in the Department of Canadian Heritage, that employee is, on appointment to the Agency, deemed to occupy a designated position in the Agency.

Pending grievances

43. (1) Any grievance commenced by an employee under the Public Service Staff Relations Act that has not
been finally dealt with on the appointment of the employee to the Agency, must be dealt with and disposed of in accordance with that Act as if the employee’s employment in the Department of Canadian Heritage had not been terminated.

Implementation of decision

(2) A final decision with respect to a grievance referred to in subsection (1) that provides for the reinstatement of or payment of money to a person must be implemented by the Agency as soon as practicable.

Successor rights

44. For the purpose of section 48.1 of the Public Service Staff Relations Act, the Governor in Council may fix the date on which the Parks Canada Sector and any other portion of the Department of Canadian Heritage are deemed to be severed from the Department and to become a part of the Agency, and that date is to be used for the purposes of subsections 48.1(3), (6) and (7) of that Act.

45. [Repealed, 2000, c. 32, s. 60]

CONSEQUENTIAL AMENDMENTS

46. to 61.01 [Amendments]

CONDITIONAL AMENDMENT

61.1 [Amendment]

COMING INTO FORCE

Coming into force

*62. This Act or any of its provisions, or any provision of an Act enacted or amended by this Act, comes into force on a day or days to be fixed by order of the Governor in Council.

* [Note: Act, other than sections 19 to 22, 51, 55, 56 and 61.01, in force December 21, 1998, see SI/99-4; sections 19 to 22, 51, 55, 56 and 61.01 in force April 1, 1999, see SI/99-4.]

Important Notices
NOTICE TO READERS

The Canada Gazette Part III is published under authority of the Statutory Instruments Act. The purpose of Part III is to publish public Acts as soon as is reasonably practicable after they have received Royal Assent in order to expedite their distribution.

Part III of the Canada Gazette contains the public Acts of Canada and certain other ancillary publications, including a list of Proclamations of Canada and Orders in Council relating to the coming into force of Acts, from the date of the previous number to the date shown above.

Each statute published in this number may be obtained by mail as a separate reprint from Canadian Government Publishing, Communication Canada, at a rate to be quoted.

The Canada Gazette Part III is available in most libraries for consultation.

For residents of Canada, the cost of an annual subscription to the Canada Gazette Part III is $28.50 and single issues, $4.50. For residents of other countries, the cost of a subscription is US$28.50 and single issues, US$4.50. Orders should be addressed to: Canadian Government Publishing, Communication Canada, Ottawa, Canada K1A 0S9.

The Canada Gazette is also available free of charge on the Internet at http://canadagazette.gc.ca. It is accessible in PDF (Portable Document Format) and in HTML (HyperText Mark-up Language) as the alternate format.

CHAPTER 29

SPECIES AT RISK ACT

SUMMARY

The purposes of this enactment are to prevent Canadian indigenous species, subspecies and distinct populations of wildlife from becoming extirpated or extinct, to provide for the recovery of endangered or threatened species, to encourage the management of other species to prevent them from becoming at risk.

This enactment establishes the Committee on the Status of Endangered Wildlife in Canada (COSEWIC) as an independent body of experts responsible for assessing and identifying species at risk. It provides that COSEWIC’s assessments are to be reported to the Minister of the Environment and to the Canadian Endangered Species Conservation Council and it authorizes the Governor in Council to establish by regulation the official list of species at risk based on that process.

It requires that the best available knowledge be used to define long- and short-term objectives in a recovery strategy for endangered and threatened species and it provides for action plans to identify specific actions.

It creates prohibitions to protect listed threatened and endangered species and their critical habitat.

It recognizes that compensation may be needed to ensure fairness following the imposition of the critical habitat prohibitions.

It creates a public registry to assist in making documents under the Act more accessible to the public.

It is consistent with Aboriginal and treaty rights and respects the authority of other federal ministers and provincial governments.

LOI SUR LES ESPÈCES EN PÉRIL

Sommaire

Le texte a pour objet d’empêcher la disparition des espèces indigènes, des sous-espèces et des populations géographiquement distinctes d’espèces sauvages du Canada, de prévoir le rétablissement des espèces en voie de disparition ou menacées et de favoriser la gestion des autres espèces pour empêcher qu’elles ne deviennent des espèces en péril.

Il établit le Comité sur la situation des espèces en péril au Canada (COSEPAC), un organisme d’experts indépendant chargé de l’évaluation et de la désignation des espèces en péril. Il prévoit la communication des évaluations du COSEPAC au ministre de l’Environnement et au Conseil canadien pour la conservation des espèces en péril et autorise le gouverneur en conseil à établir, par règlement, la liste officielle des espèces en péril en conséquence.

Il exige l’utilisation de la meilleure information accessible pour définir les objectifs à long et à court terme des programmes de rétablissement des espèces en voie de disparition ou menacées et porte que les plans d’action doivent comporter les mesures spécifiques à prendre.

Il crée des interdictions en vue de protéger les espèces inscrites comme espèces en voie de disparition ou menacées et leur habitat essentiel.

Il reconnaît que l’indemnisation peut être nécessaire afin d’assurer l’équité à la suite de l’application des interdictions en matière d’habitat essentiel.

Il établit un registre qui permet au public d’avoir accès aux documents générés par l’application de la loi.

Il est compatible avec les droits ancestraux ou issus de traités des peuples autochtones et respecte la compétence des autres ministres fédéraux et des provinces.
# TABLE OF PROVISIONS

## SPECIES AT RISK ACT

**Preamble**

**SHORT TITLE**

1. **Short title**

**INTERPRETATION**

2. **Definitions**
3. **Aboriginal and treaty rights**
4. **Sedentary living organisms**

**HER MAJESTY**

5. **Binding on Her Majesty**

**PURPOSES**

6. **Purposes**

**CANADIAN ENDANGERED SPECIES CONSERVATION COUNCIL**

7. **Composition**

**ADMINISTRATION OF ACT**

8. **Responsibility of Minister**
9. **Advisory committees to assist Minister**
10. **Administrative agreements**

**STEWARDSHIP ACTION PLAN**

10.1 **Stewardship action plan**
10.2 **Contents**

**STEWARDSHIP**

11. **Conservation agreements — species at risk**
12. **Conservation agreements — other species**
13. **Funding agreements**

**WILDLIFE SPECIES LISTING PROCESS**

*Committee on the Status of Endangered Wildlife in Canada*

14. **Establishment**
15. **Functions**
16. **Composition**
17. **Regulations and guidelines**
18. **Subcommittees**
