• Advise the Media that they will be briefed only through that representative, and that the information they seek will be provided only at or through the Media Center. (Site tour may be organized through the Center.)
• Manage resources efficiently (i.e., ensure proper feeding and rest of response personnel; ensure proper maintenance of equipment; avoid having unnecessary equipment on stand-by).
• Manage the staging area effectively right from the start.
• Identify staging area resources using three status conditions: ‘Assigned’ means the resource is performing an active role at the site; ‘Available’ means the resource is in the staging area ready for use; And, ‘Unavailable’ means the resource is not ready for use at this time.
• Plan for the operation to last longer than initially expected.
• Plan for an extremely stressful work environment.
• Communicate, communicate, communicate!!!

SUMMARY
The Emergency Site Management system is a structure and a system for linking various management systems into a single disaster response framework at the municipal level. It is based primarily on activities at and through two physical locations: The municipal emergency operations center (EOC) and the emergency site. Both are important, however, the focus of the system is on the emergency site and its response personnel.
The emergency site is bounded by its outer perimeter. All activities within that perimeter are the responsibility of the Site Manager and the Site Team. The Site Manager is the team leader whose primary role is to manage the Site Team comprised of senior representatives of the key response agencies at the site. Their role is to return life to normal at the site as soon as is reasonable.

The Municipal Emergency Operation Center is operated by the Municipal EOC Control Group, which includes Department heads of the key municipal departments/agencies involved in the response effort. The EOC and the EOC Control Group are often managed by the Town Manager/Town Clerk/CAO.

All activities outside the outer perimeter are the responsibility of the EOC Control Group. The group has a duel role. It supports the emergency site, as requested, with needed resources. And, it maintains or strives to maintain normal operations for the rest of the municipality. The municipal EOC is also the key channel for site-destined resources from other jurisdictions.

The Emergency Site Management system contains a number of roles, general procedures and expectations. It is, by design, a flexible system, which allows for the inclusion and integration of various agencies, jurisdictions, and systems into a municipal framework. The system assumes the continuation of pre-disaster organizational lines of authority. The only ‘subordination’ (if any) is to the officials of the local authority (i.e., municipality) and their legal responsibility to protect their citizens from harm.
11. APPENDICES

11.1 KINGS REGIONAL EMERGENCY MANAGEMENT BY-LAWS

11.1.1 Town of Berwick
11.1.2 Town of Kentville
11.1.3 Municipality of the County of Kings
11.1.4 Town of Wolfville
11.1.1 REGIONAL EMERGENCY MANAGEMENT BY-LAW

A By-law to Provide for a Prompt and Coordinated Response to a State of Local Emergency.

The Council of the Town of Berwick, under the authority vested in it by the Municipal Government Act, R.S.N.S. 1999, and the Emergency Management Act, R.S.N.S. 1990,c.8, enacts as follows:

SHORT TITLE

1. This By-law may be cited as the “Regional Emergency Management By-Law”.

INTERPRETATION

2. In this By-law
   a. “Act” means the Emergency Management Act, R.S.N.S. 1990, c.8;
   b. “Agreement” means the Kings Regional Emergency Services Agreement made between the Town of Berwick, the Town of Kentville, the Town of Wolfville and Municipality of the County of Kings pursuant to Section 10 (2) of the Act executed by all of the Participating Parties in the year 2006 and attached to this By-law as Schedule 1;
   c. “Council” means the Council of the Town of Berwick;
   d. “Councils” means the Councils of the Town of Berwick, the Town of Kentville, the Town of Wolfville and the Municipality of the County of Kings also referred to herein individually as a "Participating Municipality" or collectively as "Participating Municipalities";
   e. “Councillor” means a member of the Council of the Town of Berwick;
   f. “Director” means the Director of the Nova Scotia Emergency Management Organization;
   g. “Emergency” means a present or imminent event which requires the prompt coordination of action or regulation of persons or property to be undertaken to protect property or the health, safety or welfare of people;
   h. “Minister” means the member of the Executive Council of the Province of Nova Scotia to whom is assigned the administration of the Act and regulations made pursuant thereto;
i. “Emergency Management Plans” means plans, programs or procedures prepared by the Municipality of the County of Kings and the Regional Emergency Management Organization (REMO) that are intended to mitigate the effects of an emergency and to provide for the safety, health or welfare of the civil population and the protection of property in the event of such an emergency;

j. “Regional Emergency Management Advisory Committee” means the committee established by the Agreement to plan and be responsible for the direction and management of emergency activities;

k. “Regional Emergency Management Coordinator” means the person appointed to serve as the staff person in accordance with the Agreement;

l. “Regional Emergency Management Organization” means the organization established in accordance with the Agreement, and also referred to as “REMO”;

m. “Regional Emergency Management Planning Committee” means the committee responsible for recommending policy to the Regional Emergency Management Advisory Committee, for preparing a Regional Emergency Management Plan, and for maintaining a state of preparedness for emergencies;

n. “State of Emergency Regulations” means regulations made pursuant to the Act;

o. “State of local emergency” means a state of local emergency declared or renewed pursuant to the Act and Regulations made pursuant thereto.

**REGIONAL EMERGENCY MANAGEMENT ORGANIZATION**

3. The Agreement is hereby adopted and approved.

4. Regional Emergency Management Organization in accordance with the Agreement is hereby established.

5. The Regional Emergency Management Organization shall consist of the following persons and Committees:

   a. a Regional Emergency Management Advisory Committee;

   b. a Regional Emergency Management Coordinator; the Municipal Emergency Management Coordinators shall act as assistant Regional Emergency Management Coordinators; and

   c. a Regional Emergency Management Planning Committee.
REGIONAL EMERGENCY MANAGEMENT COORDINATOR

6. The Regional Emergency Management Coordinator and Assistant Coordinators identified in the Agreement shall be the Emergency Management Coordinator and Assistant Coordinators for the Town of Berwick.

7. The Regional Emergency Management Coordinator shall be paid for work performed in accordance with the Agreement.

8. The Regional Emergency Management Coordinator shall:
   a. perform such duties as may be provided for in the Agreement.

REGIONAL EMERGENCY MANAGEMENT PLANNING COMMITTEE

9. The Town of Berwick shall appoint representatives to the Regional Emergency Management Planning Committee as the Agreement provides.

COST SHARING

10. The Town of Berwick shall pay its portion of any costs associated with the Regional Emergency Management Organization as outlined in the Agreement.

RELATIONSHIP TO INDIVIDUAL MUNICIPAL EMERGENCY BY-LAW

11. Emergency Measures By-law of the Town of Berwick shall be subject to the provisions of this REMO By-law only in the event that a Regional Emergency has been declared in accordance with the REMO Agreement.
11.1.2 REGIONAL EMERGENCY MANAGEMENT BY-LAW

A By-law to Provide for a Prompt and Coordinated Response to a State of Local Emergency.

The Council of the Town of Kentville, under the authority vested in it by the Municipal Government Act, R.S.N.S. 1999, and the Emergency Management Act, R.S.N.S. 1990,c.8, enacts as follows:

SHORT TITLE

1. This By-law may be cited as the “Regional Emergency Management By-Law”.

INTERPRETATION

2. In this By-law

   a. “Act” means the Emergency Management Act, R.S.N.S. 1990, c.8;

   b. “Agreement” means the Kings Regional Emergency Services Agreement made between the Town of Berwick, the Town of Kentville, the Town of Wolfville and Municipality of the County of Kings pursuant to Section 10 (2) of the Act executed by all of the Participating Parties in the year 2006 and attached to this By-law as Schedule 1;

   c. “Council” means the Council of the Town of Kentville;

   d. “Councils” means the Councils of the Town of Berwick, the Town of Kentville, the Town of Wolfville and the Municipality of the County of Kings also referred to herein individually as a "Participating Municipality" or collectively as "Participating Municipalities";

   a. “Councillor” means a member of the Council of the Town of Kentville;

   f. “Director” means the Director of the Nova Scotia Emergency Management Organization;

   g. “Emergency” means a present or imminent event which requires the prompt coordination of action or regulation of persons or property to be undertaken to protect property or the health, safety or welfare of people;

   h. “Minister” means the member of the Executive Council of the Province of Nova Scotia to whom is assigned the administration of the Act and regulations made pursuant thereto;

   i. “Emergency Management Plans” means plans, programs or procedures prepared by the Municipality of the County of Kings and the Regional Emergency Management Organization (REMO) that are intended to mitigate the effects of an
emergency and to provide for the safety, health or welfare of the civil population and the protection of property in the event of such an emergency;

j. “Regional Emergency Management Advisory Committee” means the committee established by the Agreement to plan and be responsible for the direction and management of emergency activities;

k. “Regional Emergency Management Coordinator” means the person appointed to serve as the staff person in accordance with the Agreement;

l. “Regional Emergency Management Organization” means the organization established in accordance with the Agreement, and also referred to as “REMO”;

m. “Regional Emergency Management Planning Committee” means the committee responsible for recommending policy to the Regional Emergency Management Advisory Committee, for preparing a Regional Emergency Management Plan, and for maintaining a state of preparedness for emergencies;

n. “State of Emergency Regulations” means regulations made pursuant to the Act;

o. “State of local emergency” means a state of local emergency declared or renewed pursuant to the Act and Regulations made pursuant thereto.

REGIONAL EMERGENCY MANAGEMENT ORGANIZATION

3. The Agreement is hereby adopted and approved.

4. Regional Emergency Management Organization in accordance with the Agreement is hereby established.

5. The Regional Emergency Management Organization shall consist of the following persons and Committees:

   a. a Regional Emergency Management Advisory Committee;

   b. a Regional Emergency Management Coordinator; the Municipal Emergency Management Coordinators shall act as assistant Regional Emergency Management Coordinators; and

   c. a Regional Emergency Management Planning Committee.

REGIONAL EMERGENCY MANAGEMENT COORDINATOR

6. The Regional Emergency Management Coordinator and Assistant Coordinators identified in the Agreement shall be the Emergency Management Coordinator and Assistant Coordinators for the Town of Kentville
7. The Regional Emergency Management Coordinator shall be paid for work performed in accordance with the Agreement.

8. The Regional Emergency Management Coordinator shall:
   a. perform such duties as may be provided for in the Agreement.

**REGIONAL EMERGENCY MANAGEMENT PLANNING COMMITTEE**

9. The Town of Kentville shall appoint representatives to the Regional Emergency Management Planning Committee as the Agreement provides.

**COST SHARING**

10. The Town of Kentville shall pay its portion of any costs associated with the Regional Emergency Management Organization as outlined in the Agreement.

**RELATIONSHIP TO INDIVIDUAL MUNICIPAL EMERGENCY BY-LAW**

11. Bylaw #51 of the Town of Kentville shall be subject to the provisions of this REMO By-law only in the event that a Regional Emergency has been declared in accordance with the REMO Agreement.

WILLIAM E. BOYD
Chief Administrative Officer
11.1.3 REGIONAL EMERGENCY MANAGEMENT BY-LAW

A By-law to Provide for a Prompt and Coordinated Response to a State of Local Emergency.

The Council of the Municipality of the County of Kings, under the authority vested in it by the Municipal Government Act, R.S.N.S. 1999, and the Emergency Management Act, R.S.N.S. 1990, c.8, enacts as follows:

SHORT TITLE

1. This By-law may be cited as the “Regional Emergency Management By-Law”.

INTERPRETATION

2. In this By-law
   a. “Act” means the Emergency Management Act, R.S.N.S. 1990, c.8;
   b. “Agreement” means the Kings Regional Emergency Services Agreement made between the Town of Berwick, the Town of Kentville, the Town of Wolfville and Municipality of the County of Kings pursuant to Section 10 (2) of the Act executed by all of the Participating Parties in the year 2006 and attached to this By-law as Schedule 1;
   c. “Council” means the Council of the Municipality of the County of Kings;
   d. “Councils” means the Councils of the Town of Berwick, the Town of Kentville, the Town of Wolfville and the Municipality of the County of Kings also referred to herein individually as a "Participating Municipality" or collectively as "Participating Municipalities";
   e. “Councillor” means a member of the Council of the Municipality of the County of Kings;
   f. “Director” means the Director of the Nova Scotia Emergency Management Organization;
   g. “Emergency” means a present or imminent event which requires the prompt coordination of action or regulation of persons or property to be undertaken to protect property or the health, safety or welfare of people;
   h. “Minister” means the member of the Executive Council of the Province of Nova Scotia to whom is assigned the administration of the Act and regulations made pursuant thereto;
   i. “Emergency Management Plans” means plans, programs or procedures prepared by the Municipality of the County of Kings and the Regional Emergency
Management Organization (REMO) that are intended to mitigate the effects of an emergency and to provide for the safety, health or welfare of the civil population and the protection of property in the event of such an emergency;

j. “Regional Emergency Management Advisory Committee” means the committee established by the Agreement to plan and be responsible for the direction and management of emergency activities;

k. “Regional Emergency Management Coordinator” means the person appointed to serve as the staff person in accordance with the Agreement;

l. “Regional Emergency Management Organization” means the organization established in accordance with the Agreement, and also referred to as “REMO”;

m. “Regional Emergency Management Planning Committee” means the committee responsible for recommending policy to the Regional Emergency Management Advisory Committee, for preparing a Regional Emergency Management Plan, and for maintaining a state of preparedness for emergencies;

n. “State of Emergency Regulations” means regulations made pursuant to the Act;

o. “State of local emergency” means a state of local emergency declared or renewed pursuant to the Act and Regulations made pursuant thereto.

REGIONAL EMERGENCY MANAGEMENT ORGANIZATION

3. The Agreement is hereby adopted and approved.

4. Regional Emergency Management Organization in accordance with the Agreement is hereby established.

5. The Regional Emergency Management Organization shall consist of the following persons and Committees:

   a. a Regional Emergency Management Advisory Committee;

   b. a Regional Emergency Management Coordinator; the Municipal Emergency Management Coordinators shall act as assistant Regional Emergency Management Coordinators; and

   c. a Regional Emergency Management Planning Committee.

REGIONAL EMERGENCY MANAGEMENT COORDINATOR

6. The Regional Emergency Management Coordinator and Assistant Coordinators identified in the Agreement shall be the Emergency Management Coordinator and Assistant Coordinators for the Municipality of the County of Kings.
7. The Regional Emergency Management Coordinator shall be paid for work performed in accordance with the Agreement.

8. The Regional Emergency Management Coordinator shall:

(a) perform such duties as may be provided for in the Agreement.

REGIONAL EMERGENCY MANAGEMENT PLANNING COMMITTEE

9. The Municipality of the County of Kings shall appoint representatives to the Regional Emergency Management Planning Committee as the Agreement provides.

COST SHARING

10. The Municipality of the County of Kings shall pay its portion of any costs associated with the Regional Emergency Management Organization as outlined in the Agreement.

RELATIONSHIP TO INDIVIDUAL MUNICIPAL EMERGENCY BY-LAW

11. Bylaw #61 of the Municipality of the County of Kings shall be subject to the provisions of this REMO By-law only in the event that a Regional Emergency has been declared in accordance with the REMO Agreement.

THIS IS TO CERTIFY that the foregoing is a true copy of a By-Law duly passed at a duly called meeting of the Council of the County of Kings duly held on the 4th day of July, 2006 and passing advertised during the week of July 10, 2006.

GIVEN under the hands of the Warden and Municipal Clerk and under the corporate seal of the Municipality of the County of Kings this 12th day of July, 2006.

l. “Regional Emergency Management Organization” means the organization established in accordance with the Agreement, and also referred to as “REMO”;

m. “Regional Emergency Management Planning Committee” means the committee responsible for recommending policy to the Regional Emergency Management Advisory Committee, for preparing a Regional Emergency Management Plan, and for maintaining a state of preparedness for emergencies;

n. “State of Emergency Regulations” means regulations made pursuant to the Act;

o. “State of local emergency” means a state of local emergency declared or renewed pursuant to the Act and Regulations made pursuant thereto.

**REGIONAL EMERGENCY MANAGEMENT ORGANIZATION**

3. The Agreement is hereby adopted and approved.

4. Regional Emergency Management Organization in accordance with the Agreement is hereby established.

5. The Regional Emergency Management Organization shall consist of the following persons and Committees:

   a. a Regional Emergency Management Advisory Committee;

   b. a Regional Emergency Management Coordinator; the Municipal Emergency Management Coordinators shall act as assistant Regional Emergency Management Coordinators; and

   c. a Regional Emergency Management Planning Committee.
6. The Regional Emergency Management Coordinator and Assistant Coordinators identified in the Agreement shall be the Emergency Management Coordinator and Assistant Coordinators for the Town of Wolfville.

7. The Regional Emergency Management Coordinator shall be paid for work performed in accordance with the Agreement.

8. The Regional Emergency Management Coordinator shall:
   a. perform such duties as may be provided for in the Agreement.

REGIONAL EMERGENCY MANAGEMENT PLANNING COMMITTEE

9. The Town of Wolfville shall appoint representatives to the Regional Emergency Management Planning Committee as the Agreement provides.

COST SHARING

10. The Town of Wolfville shall pay its portion of any costs associated with the Regional Emergency Management Organization as outlined in the Agreement.

RELATIONSHIP TO INDIVIDUAL MUNICIPAL EMERGENCY BY-LAW

11. By-law (Chapter) #57 of the Town of Wolfville shall be subject to the provisions of this REMO By-law only in the event that a Regional Emergency has been declared in accordance with the REMO Agreement.

First Reading: June 19, 2006
Second Reading: July 17, 2006

CERTIFICATE

I, Brian Porter, Town Clerk of the Town of Wolfville, do hereby certify that the Bylaw of which the foregoing is a true copy was duly passed at a duly called meeting of the Town Council of the Town of Wolfville held on the 17th day of July, 2006.

Notice of the said Bylaw passing was published in THE KINGS COUNTY REGISTER on the 27th day of July, 2006.

Given under the hand of the Town Clerk and the corporate seal of the Town of Wolfville this 28th day of July, 2006.
11.2  KINGS REGIONAL INTER-MUNICIPAL EMERGENCY SERVICES AGREEMENT

THIS AGREEMENT is made in quadruplicate this ___________ day of _________________, 2007.

AMONG:

The TOWN OF BERWICK, a municipal body corporate pursuant to the Municipal Government Act;

OF THE FIRST PART

-and-

The TOWN OF KENTVILLE, a municipal body corporate pursuant to the Municipal Government Act;

OF THE SECOND PART

-and-

The MUNICIPALITY OF THE COUNTY OF KINGS, a municipal body corporate pursuant to the Municipal Government Act;

OF THE THIRD PART

-and-

The TOWN OF WOLFVILLE, a municipal body corporate pursuant to the Municipal Government Act;

OF THE FOURTH PART

THE PARTIES HERETO AGREE AS FOLLOWS:

PURPOSE

1. The purpose of this inter-municipal services agreement (hereinafter called “the Agreement”) is to provide for a coordinated joint municipal response to an emergency occurring within the County of Kings, including the Town of Berwick, Town of Wolfville and the Town of Kentville, referred to in this Agreement as the region.

2. This Agreement also provides for the parties to render mutual aid with respect to personnel and equipment during an emergency.

3. This Agreement is to provide for the joint provision of services and facilities by the municipal units in the region pursuant to Part III-60(1) of the Municipal Government Act and section 10(2)(c) of the Emergency Management Act.
4. The planning for and coordination of emergency service delivery during a present or imminent emergency, as defined by the Emergency Management Act, shall be provided by the individual municipalities or the Regional Emergency Management Organization, referred to in this Agreement as the (REMO).

REGIONAL EMERGENCY MANAGEMENT ORGANIZATION

5. The REMO shall consist of a Regional Emergency Management Advisory Committee, a Regional Emergency Management Planning Committee and the Regional Emergency Management Coordinator.

(a) The Regional Emergency Management Advisory Committee shall be responsible for the development of a Regional Emergency Management Plan, and for the direction of emergency preparedness activities within the region and to advise the appointing Councils pursuant to section 10 (1) (d) of the Emergency Management Act.

(i) Each party to this agreement shall appoint to the Regional Emergency Management Advisory Committee two (2) members of its Council, one of whom shall be the Mayor or Warden. The two representatives should be members of the Municipal EMO Advisory Committee.

(ii) The Regional Emergency Management Advisory Committee shall annually name one of its members to be chair and one to be vice-chair, to act in the absence or incapacity of the chair.

(iii) The chair or other person presiding shall vote on every question before the Regional Emergency Management Advisory Committee.

(iv) The Regional Emergency Management Advisory Committee shall appoint a person to be secretary of the REMO.

(v) Members of the Regional Emergency Management Advisory Committee are appointed for the same term of office as designated by the Council that appoints them and hold office until their successors are named. (subject to i. Above).

(vi) In the event of a vacancy occurring, the Council that appointed the member shall appoint a replacement within six weeks after the vacancy occurs.

(b) The Regional Emergency Management Planning Committee shall be responsible for recommending policy and management procedures to the Regional Emergency Management Advisory Committee, for preparing a Regional Emergency Management Plan, and for maintaining a state of preparedness for emergencies. This committee shall be appointed by the
parties hereto. Each such appointee shall be drawn from representatives of emergency services that may have direct operational responsibilities in an emergency.

(i) Each party to this agreement shall appoint their Emergency Management Coordinator or assistant Emergency Management Coordinator, to the Regional Emergency Management Planning Committee.

(ii) The Regional Emergency Management Coordinator shall chair the Regional Emergency Management Planning Committee.

(c) The Emergency Management Coordinator for the Municipality of the County of Kings shall be the Regional Emergency Management Coordinator.

(d) The parties agree that the Emergency Management Coordinators for each Municipality shall act as Assistant Regional Emergency Management Coordinators.

EMERGENCY RESPONSE BY INDIVIDUAL MUNICIPALITIES

(a) Each Party will respond to emergency events as appropriate to the situation. As part of this response, the individual municipal EMO will notify the Regional EMC as soon as possible after the initial event.

(b) The EMC or Emergency Operations Centre (EOC) Manager for the Municipality or Town may request resources from the other municipal units as required, and these will be provided at cost to the requesting municipal unit. Fire response would continue to be cost-shared under the terms of the Kings County Mutual Aid Agreement.

(c) Emergency responses by individual municipal units, as described in this Section 6 will not constitute a regional response, nor trigger the activation of REMO as per Section 7.

ACTIVATION OF REMO

7. The EMC or EOC Manager for the Municipality or Town may request the activation of the REMO if necessary to increase the resources and scope of the municipal response.

(a) The REMO Coordinator will activate the REMO Organization at a level (Standby, Active or Recovery) appropriate to the circumstances.
(b) The EOC Manager from the Municipality or Town that initiates the emergency response will assume the role of Regional EOC Manager unless he/she determines another CAO alternate should perform that role.

OPERATION OF REMO

8. The REMO shall be the organization directly responsible for the control and conduct of emergency response operations according to the plans and procedures adopted by the parties from time to time. When the capacity of REMO is exceeded, or is likely to be exceeded, REMO will activate support from other agencies in accordance with formal or informal agreements.

9. The REMO is authorized to operate, maintain and manage physical facilities for emergency activities both at the scene of the emergency and at a centralized coordination facility.

10. The REMO shall establish its own rules of procedure.

11. The REMO is empowered to acquire or contract for the use of equipment, facilities and personnel necessary or advisable to carry out the responsibilities assigned to it by this Agreement.

   (a) The REMO may contract with any person or organization, including a municipal unit and a municipal unit that is party to this Agreement, for the provision of any service or facility necessary or advisable to carry out the responsibilities assigned to the REMO by this Agreement.

   (b) Any capital asset created or acquired by the REMO shall be deemed to be owned jointly by the parties in the same proportion as was used to calculate their last annual financial contribution to the REMO except for assets donated by a particular municipality for REMO use (those assets shall remain the property of the donating municipality).

   (c) The Regional Emergency Management Advisory Committee may enter into Agreements with the Government of Canada, the Province of Nova Scotia, a municipality, city or town, or any other agency or any person.

COST SHARING OF REMO

12. The parties recognize than an emergency may require the sharing or redeployment of personnel and equipment in order to save lives or minimize damage to property or the environment, and undertake to provide personnel and equipment as deemed appropriate by the Regional Emergency Management Advisory Committee and recommended by the Regional Emergency Management Planning Committee.

   (a) Any cost associated with the development of resources will be recorded by the responding municipality, and cost shared as per the funding formula in section 13.

   (b) Other resources that may be required by REMO during an emergency will be cost shared as per the funding formula in section 13.
In dealing with emergency events that don’t impact all four municipal units, where an alternate cost sharing formula may be more appropriate, the Regional Emergency Management Advisory Committee may recommend this to the parties to the agreement. Failing agreement by all parties to an alternate approach for a specific incident, the formula outlined in section 13 would apply.

13. The parties shall contribute to the cost of operations of the REMO based on equal blend (50/50) of population and uniform assessment for each of the respective parties.

(a) REMO shall have its budget submitted to the municipal units by December 31, to provide for approval of the participating municipalities by April 1 of the following fiscal year.

(b) The actual dollar contribution of the Municipalities shall be based on the annual budget of the REMO.

(c) REMO will invoice the Parties for their portion of the actual costs on a quarterly basis, to be payable within 30 days.

(d) In the event the REMO requires additional money for capital or operating purposes, any such increase shall be approved by the parties or such of them as agree to contribute.

(e) The Regional Emergency Management Coordinator shall arrange for the REMO organization and assets to be specifically recognized in the Municipality of Kings County liability insurance policy such that the REMO’s assets and its liability are covered under such policy.

14. The fiscal year of the REMO shall be from April 1 to March 31 of the following year.

TRANSITIONAL PROVISIONS

15. This Agreement is conditional on the parties passing a complementary by-law respecting the coordinated response to an emergency pursuant to the Emergency Management Act.

16. This Agreement comes into effect on the date upon which the signatures of all parties have been affixed to the Agreement.

(a) This Agreement continues in force until notice of termination is given by the Council of any party to the councils of the other parties not less than one (1) year prior to the intended termination date, which shall be the 31st day of March in a year to be specified in the notice of termination.

(b) Any party withdrawing from this Agreement remains responsible for its share of any liabilities of the REMO incurred up to the date of the withdrawal and any severance, penalty or other costs necessarily incurred by the REMO as a result of the withdrawal.
(c) Any party to this Agreement which exercises its right to withdraw from the Agreement ceases to have any ownership of any assets contributed, created or acquired by REMO and the full property interest in any such assets shall be distributed among the remaining parties in proportion to their accumulated contributions to REMO.

17. This Agreement may be amended from time to time with the agreement by Council resolution of all Councils. Such an amendment would be subject to the parties passing by-law amendments if required to implement the changes made to this agreement.

18. Upon dissolution of the REMO by unanimous consent of the Parties who are still active members of the REMO, the assets of the REMO are vested in the parties and the parties are responsible for the liabilities of the REMO in proportion to the amounts contributed by the Parties in accordance with their respective obligation under this Agreement.

19. Each party shall indemnify its representatives from any liability that may arise as a result of that member acting as a member of the REMO.

20. If any disagreement arises among the parties as to the proper interpretation of this agreement that cannot be resolved, the parties shall submit the area of disagreement to an arbitrator as provided by the Commercial Arbitration Act.

21. This Agreement is governed by the laws of Nova Scotia.
IN WITNESS WHEREOF the parties hereto have caused this Agreement to be executed by the hands of their duly authorized officers and the affixing of their respective seals the day and year first above written.

DATED this ___ day of __________________, 2007.

11.3 IMPLEMENTATION AND ALERTING PROCEDURE

IMPLEMENTATION

Accidents that happen on a day-to-day occurrence in the Kings Region are usually handled by the police, fire, ambulance and our local hospital. These accidents may seem to be major emergencies to the individual(s) involved, but may not affect the safety, property and environment of the surrounding community.

Should an event occur where the size, potential hazard, or seriousness of the emergency appears beyond the capability or the responsibility of the first response agencies, the senior officer may request the activation of the emergency plan (as per Section 4, page 6).

The Kings Regional Emergency Management Coordinator will assess the need to activate the plan by consulting members of the Kings Regional Emergency Management Planning Committee. If activation of the plan is required, the Kings Regional Emergency Management Coordinator will recommend the appropriate activation level to the Chief Administrative Officer and ensure that the chairperson of the Advisory Committee is advised. The Kings Regional Emergency Management support staff will help in the alerting of the following:

- Advisory Committee Members
- Planning Committee Members
- EOC support staff

Upon activation of the plan, the Kings Regional Emergency Operations Centre Manager will appoint an emergency site manager, based on the agency that is most likely to have the greatest involvement or legal responsibility in the handling of the emergency or disaster.

If the magnitude of the emergency or disaster requires actions beyond normal procedures, then the Kings Regional Emergency Management Coordinator/Chief Administrative Officer will advise the Regional Emergency Advisory Committee that a local state of emergency be declared in accordance with the authority given to the Committee by the Kings Regional Emergency Management By-law.

The Assistant Emergency Management Coordinators, upon being advised of an emergency occurring in their towns, shall immediately advise the Kings Regional Emergency Management Coordinator or in his absence the Kings Regional Alternate Coordinator.

11.4 KINGS REGIONAL HAZARD ANALYSIS

A brief hazard analysis of potential dangers to the Kings Region follows which describes the likelihood of each type of disaster:

.1 Construction Accident
Heavy snowfalls, frequent changes in occupancy, and building fatigue might place undue stress on buildings and contribute to their collapse. Other disastrous occurrences, such as, flood, fire, or explosion, might jeopardize the stability of any structure.

.2 Epidemic
With the weakening effects of antibiotics on bacteria, and the ease with which disease can be carried throughout the world by air travel, the potential for an epidemic increases daily. The near release of Bola-Zaire into the environment at Reston, Virginia, in 1989 shows how vulnerable we really are; this virus was transmitted as an airborne agent, similar to the influenza epidemic of 1918-19 (20 million deaths), or Asian flu of 1968-69. Fortunately, the Reston strain only affected monkeys. Even more recently (Summer 1995), the Bola virus in Zaire caused public health concern worldwide.

.3 Explosion
Restaurants in most of the Kings Region use propane gas as their principal means of food preparation. Though the use of propane under normal circumstances is safe, accidents can rupture storage tanks, valves, or feed lines. An accident involving a propane delivery truck could prove catastrophic. There have been several propane leaks in different parts of the Kings Region during the past two years.

.4 Fire
The Kings Fire Service responds to hundreds of fire related calls each year. The majority of these alarms are considered minor, i.e. chimney and grass fires. However, there is potential for a large-scale fire in area where there are large buildings in close proximity. Older buildings of wood frame construction make it easier for fire to spread. Fire and wind conditions can often produce severe smoke conditions throughout an area, which may necessitate an evacuation.

.5 Flood
Damage by wind and snow can be complicated by the action of our local tides. There have been several instances of flooding in the Kings Region in recent history. In 1958 and again in 1977, large areas of this region had major flooding which required evacuation of residents for long periods of time. This flooding is often the consequence of high tides, heavy rainstorm and strong north-easterly winds. Though flooding is infrequent, seasonal high tides (approx. 20 year cycle) combined with heavy snow melt can pose a flood threat.

.6 Hurricane/Windstorm/Snow
During the winter months, severe weather conditions often occur in this area including heavy snowfalls, ice storms, and severe winds. Long-term power outages resulting from
these conditions can cause severe hardship. Winds generally blow off the Minas Basin in a southwesterly direction. During the hurricane season, Nova Scotia often receives the tail end of these events. The procession of hurricanes up the Atlantic coast in the summer of 1995 demonstrates how helpless we are against the whims of nature.

.7 Power Failure
There are many situations that might result in the cessation of power, including an act of terrorism. However, severe winds or a winter ice storm are more likely causes. Power outages can last several days or even weeks. In cold weather this would cause considerable hardship to the community.

.8 Transportation Accidents involving Hazardous Materials/Road
Highway 101 which runs through the middle of the Kings Region creates perhaps the greatest threat for a disaster. Today's lifestyle depends on the use of a multitude of materials that are classified as hazardous. These agents are everywhere in varying amounts. Under normal storage conditions, these chemicals and substances pose no threat to life. However, fire or transportation accidents may rupture containers and release these hazardous substances into the air or water systems. Located along the 101 Highway are several towns and small communities, which would be most vulnerable to such an accident.

.9 Transportation/Air
The Kings Region lies under the flight path of many aircraft landing at Halifax International Airport. Canadian Forces Base, Greenwood, do regular patrols in and out of the region and other small aircraft from the Annapolis Valley Municipal Airport often sightsee over this area. Crop dusters also spray our orchards and crops from the air. Although aircraft disasters are infrequent, the crash of the Air force jet near Falmouth, NS (1994), and the recent tragedy of Swissair Flight 111 near Peggy’s Cove (Sept. 1998), demonstrate the potential for this type of disaster.

.10 Transportation/ Rail
The Kings region has a rail line that passes through its eastern section, which includes the Town of Wolfville. There are on an average of two trains per day and the cargo is mostly grain to the Greenwich Area, which is located just west of Wolfville.

.11 Transportation/Water
The County of Kings is bounded on two sides by water, the Bay of Fundy and the Minas Basin. A marine disaster involving a spill could wash into any of the small harbours in the Kings Region and create an environmental problem. Hazardous cargos on a ship in distress, such as on fire or explosion, could threaten a near by community with toxic smoke. Under certain conditions, the Fundy coast may even be threatened by a tidal wave.
11.5 PEACETIME DISASTERS

.1 AIRCRAFT CRASH

Possible Major Effects
1. Casualties
2. Deaths
3. Fire
4. Explosion
5. Damage to property
6. Nuclear cargo problems
7. International implications
8. Special cargo problems
9. Sudden hospital requirements
10. Disruption of traffic and communications
11. Disruption of utilities
12. Involvement of dangerous goods

11.6 KINGS REGIONAL MUTUAL AID AGREEMENTS

The following Mutual Aid Agreements have been entered into and copies of these Agreements are held by the parties involved.

Kings County Amateur Radio Club
Annapolis Valley Regional School Board
Municipal Aid Fire Fighting Agreement
Municipality of Annapolis
Municipality of West Hants
Municipality of Lunenburg
First Nations: Glooscap/Horton - Annapolis Valley/Cambridge
11.7 KINGS REGIONAL EMERGENCY PUBLIC INFORMATION PLAN

Introduction

Objective: The Objective of this plan is to ensure, in the event of an emergency, that prompt, effective and coordinated public information is provided by the Kings Region to the affected segments of the population and the public as a whole. This plan also ensures the rapid deployment of staff and other resources needed to carry out these responsibilities.

Application: The Kings Regional Emergency Public Information Plan applies to all emergencies requiring a municipal level response as defined by the Kings Regional Emergency Readiness Plans.

The Public Information Officer may activate this plan at the request of:
- Advisory Committee
- The Chief Administration Officer

Some emergencies to which the plan may apply:
- Widespread flooding
- Forest Fire
- Extraordinary severe weather
- Large Scale toxic spill
- Catastrophic industrial accident; or
- Airplane crash

In the event of an emergency, any Municipal staff in the Kings Region may be called upon to perform related duties for the Kings Regional Emergency Management Organization. The Kings Regional Public Information Officer or Alternate will contact staff members as they are needed.

Operations: Upon activation of this plan, a Media Centre will be established adjacent to the EOC, located at the Kings Municipal Complex located at 87 Cornwallis Street, Kentville, Nova Scotia or at the Alternate Operations Centre as directed or Site Command Centre near the site of the disaster. The Alternate Operation Centres are located at 465 Main Street, Kentville and 359 Main Street, Wolfville (see Section 8.3 and 8.4).

A bulletin will be sent by telephone, facsimile, radio or personal delivery to all local news media, giving a brief status report and, if telephones are working, the direct numbers (for the media) to call for further information.

If telephones are working when the emergency arises, the PIO will request the designated municipal staff be on alert status. There are two different levels of alert status:

- Level I, where communications staff can go about their personal business as long as they can be reached by telephone; and
- Level II, where communications staff must remain at their desks or at home until further notice.
Depending on the situation, the Inquiry Centre Receptionist may be put on standby for Citizen’s Inquiry purposes. The Inquiry Centre may be activated to answer public calls in the event of emergencies with no localized site, such as forest fires. All Media will be advised of the Inquiry Centre telephone numbers. The Inquiry Centre Receptionist will have a separate, unlisted number. Having been placed on alert, municipal staff will leave numbers where they can be reached 24 hours a day.

If telecommunications have failed as a result of an emergency, designated communications staff will automatically report to the Kings Regional EOC. Designated staff are listed in Appendices 11.3.4 of the Kings Regional Emergency Readiness Plan.

If staff are unable to report (due to localized flooding or impassible snow drifts, for example), they should contact the Kings Regional EOC to arrange for transportation.

**Organization:** The public information staff will be under the direction of the Kings Regional PIO Supervisor, who will act as the primary communications link between public information staff and the Emergency personnel.

The Media Centre will have separate incoming telephone lines for the media and a dedicated link to the Kings Regional EOC. It will also have a dedicated fax line to the Kings Regional EOC and the Inquiry Centre. It will be staffed 24 hours a day or as required. The Kings Regional Public Information Officers will be situated at the Emergency Site. The Kings Regional PIO Supervisor will be located at the Kings Emergency Operations Centre.

The public will be advised via media to direct their calls to the Inquiry Centre during emergencies.

**Roles and Responsibilities:** During an emergency, the Kings Regional Public Information Officer and Staff must attend to the following key duties:

- Public notification
- Media relations
- Public inquiries response and referral
- Media information monitoring; and
- Maintain accurate logs

Individual responsibilities are as follows:
Kings Regional Public Information Supervisor

- Direct the Kings Regional Emergency Public Information Plan
- Advise Kings Regional CAO
- Link EOC, the Site, the Kings Media Centre and Inquiry Centre
- Keep the Chairperson of the Regional Advisory Committee up to date, prepare the Chairperson for media briefing, act as the Chairperson facilitator at media briefings
- Organize regular media briefings as required
- Issue news releases on a timely, as needed basis
- Accredit all media
- Monitor media coverage
- Number and file all media releases
- Establish the initial contact with the news media (see Appendix 11.2 – Kings Regional Emergency Readiness Plan)
- Dispatch PIO staff to site
- Identify appropriate spokesperson for interviews requiring specific expertise
- Liaise with PIO’s of other responding agencies, such as the police, other Municipal units
- Approve news releases written by the Media Centre for the media in a timely and accurate manner
- Ensure the Inquiry Centre are supported in a manner sufficient to do their jobs
- Liaise with Site PIO’s
- Identify contradictions and discrepancies in information arriving at EOC and keep the CAO up to date
- Post all information released to the media in the Kings Regional EOC
- Ensure that staff are relieved as required; and
- Maintain accurate logs

Kings Regional Site Public Information Staff

- Act as liaison between Site and Kings Regional EOC
- Write Site news “updates” and send to Kings Regional PIO Supervisor for information and to the Media Centre for distribution to media
- Respond to media requests on site
- Conduct media briefings after each on-site briefing
- Gather and coordinate information for release to the media and the public
- Meet and check accreditation of media coming to emergency site, ensure arrangements have been made for a trailer or tent (depending on weather) for on-site media
- Log all site media inquiries.
**Kings Regional Inquiry Centre Receptionist**

- Organize personnel and equipment to respond effectively to public inquiry
- Maintain log of inquiries
- Answer questions with approved information
- Put calls related to an existing emergency through to the appropriate agencies.

**Kings Regional Emergency Public Information Responsibilities**

1. Emergency Call Received by Kings Regional Public Information Supervisor
   1. Initiates Fan Out Procedure
   1. Media Centre Established
   1. Dispatch P.I.’s to site
   1. Activate Inquiry Centre
   1. PIO report to EOC

**Procedures**

The Kings Regional Public Information Supervisor will be the lead spokesperson, but this responsibility can be delegated to alternate.

Technical spokesperson and alternates from all departments involved will be identified, depending on the emergency.

As soon as a Kings Regional PIO office is operational, a bulletin to that effect will be issued to the media and other organizations involved in the response. The bulletin will provide the telephone numbers of the office and public inquiry numbers.

PIO’s at site will only deal with the media located at the site. All media calls will be referred to the Media Centre.
Regular printed updates for the news media will be provided and media briefings will be held near the Emergency Site as information becomes available. In the case of an emergency with no localized site, media briefings may be held near the Media Centre or adjacent to the EOC.

Public Information will be given out in the following order of PRIORITY:

- **Lifesaving** – information essential to survival, health and safety
- **Response** – information concerning response operations and relief services
- **Other** – non-emergency information such as background, recovery and human interest

All significant information released by the Media Centre will have been authorized by the CAO, or Kings Regional PIO Supervisor, who will get the CAO’s approval.

Any information released will be posted in a media book in the EOC and in the Site Command Post.

**Administration and Logistics Support**

In the event of an emergency, facilities, equipment and support for the Kings Regional Public Information office must be available immediately. These include:

Office equipment and supplies, such as computers, printer, photocopiers and fax machines

- Telecommunications equipment and services
- Back up cellular phones; and
- Personnel support and administration

When an emergency occurs, an office should be set aside adjacent to the EOC and designated as the Media Centre. The telephone number of this office is then provided on the first update to the media as a media contact line. The Kings Regional EOC should also be equipped with an additional fax machine for public information staff to ensure quick dissemination of information.

The Kings Regional PIO Supervisor will be issued a pager and cellular telephone in order to be accessible at all times. When the PIO Supervisor is out of the city, this equipment will be passed on to an alternate.
Implementation Guide

Fan-Out – Word of an emergency is likely to come to the Kings Regional Emergency Management Organization (EMO) via telephone. Once EMO has determined its scope, the Kings Regional Duty Officer will notify the Kings Regional PIO Supervisor as part of the emergency fan-out notification process.

Procedure – The message that an emergency exists or is thought to exist and that PIO’s should stand by or report for work will be passed to PIO staff on the priority fan-out list (see Appendix 11.3 Kings Regional Emergency Management Plan).

When the nature of the emergency public information need is known, designated personnel will be given their assignments and any special instructions. Other staff may subsequently be put on alert status.

The decision to activate this plan will be made by the Kings Regional PIO Supervisor, in consultation with the Kings Regional EMO Coordinator, and the Kings Regional CAO. Certain emergencies may not require activation of the plan. Instead, all that may be required is notification that the situation exists.

11.8 KINGS REGIONAL EMERGENCY EVACUATION PLAN

On receipt of information about an actual or potential emergency, all agencies involved shall react as per their standard operating procedures and then promptly decide whether the situation will require activation of the Kings Regional Emergency Readiness Plan. *(Kings Regional Emergency Readiness Plan, Section 4, Page 6)*

(a) The determining agency will notify their emergency dispatch center and inform them of the situation and that the Kings Regional Emergency Readiness Plan should be activated;
(b) The emergency dispatch center will notify the Kings Regional Emergency Management Coordinator to ensure the CAO for the area is appraised of the situation;
(c) The Kings Regional Emergency Management Coordinator will assess the situation and the need to activate the Emergency Plan. If activation is requested, the Kings Regional Emergency Management Coordinator decides on the appropriate activation level. The Kings Regional Emergency Management Coordinator may confer with other members of the Planning Committee. However, unnecessary delay must be prevented;
(d) The Kings Regional Emergency Management Coordinator will make a recommendation to the CAO. This recommendation should be provided immediately and based on information and recommendations from the emergency responders at the site.

THE REQUEST TO EVACUATE

The request to evacuate should come in consultation with the Kings Regional Emergency Management Coordinator and the emergency response group who have visited the scene and have appraised the seriousness of the situation. A situation might require prompt and immediate action by the emergency responders to safeguard public safety. If time permits the decision regarding the evacuation of an area will be directed through channels as per the Kings Regional Emergency Readiness Plan.

THE DECISION TO EVACUATE

The decision to evacuate or seal off an area in the Kings Region is a very important one which requires an evaluation of the risks involved and the consequences for the Municipalities and cannot be made lightly. Removal of people from their homes to ensure public safety might be a double-edged sword. This exercise may protect people against the elements but it will also inconvenience them. The evacuation may save lives but it might have an adverse effect on the mental and physical state of the people we are attempting to help. Often because of this, these people criticize the decision for ordering the evacuation and for what is construed as an apathetic response to their needs. Decision makers should avail themselves with as much pertinent information as possible because the decision to evacuate is a big one and might require a significant price to be paid by everyone.
PLANNING AND DECISION-MAKING

- Knowledge of the area in question and its specific features;
- Identify the risks an evacuation might pose;
- Evaluate what elements could help minimize the disadvantages that might occur should the risks materializing compromise an evacuation;
- An analysis and evaluation of response Management that can mitigate, or even neutralize, the negative impacts of the limiting factors;
- Evaluate what emergency response scenarios can be realistically implemented;
- Making the Decision or Recommendation having chosen the best strategy for safeguarding the public in accordance with the circumstances observed;
- Dissemination/Implementation of the Decision or Recommendation. The decision is disseminated and put into action. Emergency responders and the public are advised of the operational strategy and stages planned;
- Follow-up/monitoring/evaluating the chosen response strategy. Managers must evaluate and bring new information to the decision-making process;
- Revisiting the decision or recommendation. The initial decision must be evaluated and might lead to a second decision.

WHO IS IN CHARGE

The importance of clearly establishing the roles of who will be called on to act in the event of a disaster cannot be over-emphasized. It begins with making a determination at the municipal level – and at the top of the pyramid – about who decides, who co-ordinates and who plans. If there is uncertainty about who is in charge, the actions of other emergency responders could result in serious defects in the emergency planning Management or evacuation and even cause problems in the on-site response if a disaster is declared.

The CAO or another designated senior municipal administrator most often manages the Emergency Operations Center and the EOC CONTROL GROUP. The Kings Regional Emergency Management Coordinator and Kings Regional Alternate Emergency Management Coordinator(s) generally reports to and supports the Manager of the EOC. Similarly, the Site Manager manages the emergency site and leads the Site Team. Each response agency and organization is managed/commanded by its own senior representative (i.e. the Agency Site Control Officer). For example, the Senior Fire Officer at the Site is a member of the Site Team and is also the Fire Ground Commander. This individual’s role is to fight the fire and neither the Site Manager nor the Team should interfere with that function. However, they must be able to provide input when it comes to coordinating their activities and resources with those of the Fire Services at the Site. When an Agency Site Control Officer is assigned to the role of Site Manager, he or she must relinquish the Agency role and assume fully the Agency-neutral role of Site Manager.

The ESM may recommend Management or response actions for areas outside the outer perimeter (e.g. evacuation recommendation) to the EOC Manager. However, the ESM has no authority for any actions in that regard.

Until the Master Emergency Plan is activated, all directions and requests for resources are handled according to routine departmental procedure. When the Master Emergency Plan is activated, the EOC Manager ensures that an Emergency Site Manager (ESM) is in place. If there are multiple sites, the EOC Manager will ensure that there is an ESM for each site. The selection...
of the ESM(s) is based on recommendations from Department Heads, who are part of the Planning Committee.

**DUTIES PERTAINING TO EVACUATION DECISIONS**

1. **Emergency Response Coordinator or Municipal officer**
   Map the area into sectors for the purpose of planning the evacuation. The coordinator can delegate this task to another department. Prepare a list of parties concerned (municipal government and community) which the coordinator can plan to call upon for help should the need for evacuation arise. Prepare memoranda of agreement with responders, to specify the roles and responsibilities. The coordinator must, therefore, plan the following resources:

   a) **Security**: Police – Fire Department  
   b) **Health**: Medical Care – Public Health  
   c) **Environment**:  
   d) **Transportation**: Ambulances – Public Transit – Traffic  
   e) **Planning**:  
   f) **Communications**:  
   g) **Relief Services**:  

2. **Local Police Department**
   The police department may be called upon to inform the public of the decision or recommendation to evacuate. They will then, in accordance with the emergency plan implemented, lead the evacuation process by directing traffic and monitoring and securing the stricken area. They will subsequently inform managers about the outcome of events and the evacuation procedure implemented. The police will inform decision-makers about the status of events and make recommendations in the event that a shift from the original decision is warranted.

   a) Identify police resources and components in the area at risk;  
   b) Identify where the response will require greater resources;  
   c) Identify human and material resources available to police;  
   d) Identify time available to the police to warn population and organize an early evacuation;  
   e) Ensure that outer perimeters are established at the site and are in accordance with ESM practices;  
   f) Ensure a system of traffic control is in place to facilitate the movement of emergency vehicles to and from the outer perimeters;  
   g) Provide post-evacuation security;  
   h) Provide assistance to the coroner;  
   i) Provide assistance in ground search and rescue;  
   j) Establish liaison when required with the SPCA and Humane Society;  
   k) Recommend the activation of mutual aid when required;  
   l) Maintain a record of all action taken.
3. **Local Fire Department**

The fire department may be called upon to inform the public of the decision or recommendation to evacuate. If their resources permit, they might be called upon to assist the police and other departments to carry out the evacuation. They will subsequently inform the managers about the outcome of events and the evacuation procedure implemented. In conjunction with other departments, identify the planning sectors where it is anticipated that the response will require greater resources or more extensive planning due to higher risk potential. They will evaluate the help and hindrance factors for each threat identified.

a) Identify human and material resources available to the fire department;
b) Identify time available to the fire department;
c) Identify human and material resources available to other fire departments in the area;
d) Direct and coordinate all fire fighting operations;
e) Direct and coordinate search and rescue operations;
f) Activate the Fire Mutual Aid System when required;
g) Ensure that dangerous goods support services are contacted when required;
h) Provide discretionary assistance to ambulance and police services;
i) Maintain a record of all action taken.

4. **Public and Private Transportation Services**

The primary task of transportation personnel is to move people from one location to another. They will be required to respond to the area to be evacuated and assist in removing members of the public as directed. The director of transportation will establish effective control over all local transportation, provide qualified personnel to operate transportation vehicles, and will provide transportation and improvised ambulances for casualties, evacuees and special care persons. The director of transportation will also act as liaison with local transport companies, taxi firms, etc.

a) Identify human and transit resources available;
b) Identify time available to prepare for evacuation;
c) Keep the Emergency Operations Control Group advised on all matters related to the transportation of people;
d) Maintain a record of all action taken.

5. **Ambulance Service**

The ambulance service will be responsible for transporting casualties for the area and assisting where possible. They will establish the best operational scenarios for transporting people by ambulance. The ambulance service will brief decision-makers as accurately as possible on the status of ambulance movements in the stricken area.

a) Identify existing human and material resources in the area;
b) Identify human and material resources available from other areas;
c) Maintain a record of all action taken.

6. **Emergency Social Services**

Emergency Social Services will provide emergency feeding, lodging, clothing, registration and inquiry as well as personal service. The Red Cross, our local Community Services, St. John Ambulance and the Salvation Army, who make up the ESS, provide these services. The director of the Red Cross will coordinate the response of the ESS group. The director will also keep the decision makers at the EOC updated and make recommendations when necessary.

**The Canadian Red Cross Society**

a) Activate the branch’s emergency mobilization system;
b) Establish a registration and inquiry service under the authority of the Emergency Social Services;
c) Assist with the management of reception centers including the provision of first aid, feeding, clothing and personal services as required;
d) Maintain a record of all action taken.

**Emergency Social Services**

a) Activate the department’s emergency mobilization system;
b) Advise members of the Emergency Operations Control group in all matters related to the care and maintenance of people relocated as a result of the emergency;
c) Provide as required emergency feeding, clothing, lodging, registration and inquiry, and personal services;
d) Designate reception centers and lodging facilities to be opened when the evacuation of residents is necessary;
e) Open, staff, supply and manage all reception centers and lodging facilities;
f) Direct and coordinate the support activities of other local area and provincial welfare agencies;
g) Request the Telecommunication Manager to establish a network to meet the needs of Emergency Social Services;
h) Maintain a record of all action taken.

**The Salvation Army**

a) Activate the division’s emergency mobilization system;
b) Operate under the authority of the Emergency Social Services;
c) At the request of Emergency Social Services, provide assistance with the management of reception centers and the provision of food, clothing, bedding, and personal services;
d) Coordinate the clerical response to the emergency;
e) Maintain a record of all action taken.

**The St. John Ambulance**

a) Activate the division’s emergency mobilization system;
b) Operate under the authority and direction of the Emergency Social Services;
c) At the request of Community Services, provide assistance with the management of reception centers and with the provision of first aid;
d) At the request of the Ambulance Service, provide assistance with triage, first aid and casualty handling;

e) Maintain a record of all action taken.

7. **Health Services**
The medical officer of health or designated alternate will identify and locate the components of the health system: the provincial ministry responsible for health.

- **a)** Activate the department’s emergency plan and alert system;
- **b)** Provide information on any health hazard for dissemination by the Public Information Officer;
- **c)** Provide for mass immunization if required;
- **d)** Oversee water quality checks;
- **e)** Provide authority for evacuation of buildings or residential areas for health reasons;
- **f)** Coordinate first aid, casualty collection posts, distribution of casualties, real or improvised ambulances and health personnel;
- **g)** Provide life saving surgery and hospitalization for seriously injured;
- **h)** Provide for emergency medical treatment for the injured not requiring hospitalization;
- **i)** Act as liaison with federal and provincial health departments;
- **j)** Maintain a record of all action taken.

8. **Department of Environment**
This department would be requested to provide as accurate and complete a picture as possible of the situation to the municipal decision makers. The Department of the Environment should perform the following duties:

- **a)** Establish what risks they have detected;
- **b)** List and cross-reference the environmental components in the affected area;
- **c)** According to the impact and the evolution of the risk, develop scenarios to monitor the situation from the environmental quality viewpoint;
- **d)** Simulate the evolution of the situation;
- **e)** Analyze the systems concerned and risk detected;
- **f)** Maintain a record of all action taken.

9. **Communications**
The work to be done is twofold as it will be important to develop internal communication as well as external communication.

- **a)** Internal communication, for the most part, will be carried out between emergency responders and the EOC. In the event of a situation where these groups are unable to communicate, the services of the Kings Amateur Radio club would be essential. This area of communication will be the responsibility of the Telecommunication Officer (Page 22 of the Kings Regional Emergency Readiness Plans);
b) External communication will be the responsibility of the Public Information Director (Page 24 of the Kings Regional Emergency Readiness Plans). Keep the public informed of significant developments occurring during the emergency or disaster. Arrange for media facilities at the pre-designated media center;

c) A record of all action taken will be maintained.

**10. Human Resources**

a) Report to the EOC and advise on all matters related to the acquisition and utilization of human resources;
b) Establish liaison with Human Resources Canada;
c) Coordinate requests for human resources on behalf of the Emergency Operations Control Group;
d) Select a site, staff, and manage any Emergency Human Resources Registration Centre required in support of the emergency;
e) Register and maintain a work record of individuals employed during the emergency and/or post-emergency phases;
f) Ensure that each person employed receives an identification card for feeding, transportation, and other purposes;
g) Arrange for the transportation of workers from the registration center to a job site or from one job site to another;
h) Maintain a record of all action taken.

**11. Public Works – Kings Region**

These departments respond by assisting with and providing information regarding water and sewage. If flooding is a problem, they can provide sand bags and other related materials.

**12. Department of Transportation – Province of Nova Scotia**

This department responds by assisting with setting up a special system of traffic signs during evacuation operations. They can make changes to traffic signals for rerouting traffic and supply equipment to block roadways.

**13. Recreation – Kings Region**

These departments can organize and manage services to the evacuees such as recreation and information to assist them to pass their time, if they are to be away from their homes for a long period of time.

**14. The Evacuees Themselves**

Lastly the key players in the entire evacuation process are the evacuees themselves. The accumulated experience shows that the victims have an active role to play in the evacuation, which they generally perform in a satisfactory manner. Evacuees help one another get through a confusing situation.
11.9 KINGS REGIONAL EMERGENCY TELECOMMUNICATIONS PLAN

GENERAL
1. In the event of an emergency or disaster, the ability to communicate will contribute greatly to the success or failure of emergency operations. One area of focus in Emergency Preparedness Evaluation by the Province of Nova Scotia is Telecommunication Planning.

   In the Scotiaville Exercise, our Provincial EMO training staff have provided us with an excellent Telecommunication Planning Guide. This document has been prepared using that same format.

AIM
2. The aim of the Kings Regional Emergency Telecommunication Plan is to provide a telecommunications resource and infrastructure that enables those dealing with an emergency to communicate with Municipal departments, governments and external agencies to support their functions in response to an emergency.

SCOPE
3. The concept of the Emergency Telecommunication Plan is to provide for:

   (a) emergency altering systems;
   (b) telecommunication links to various levels of government;
   (c) co-ordinate and controlled operations;
   (d) a list of human and material resources.

CONDUCT
4. (a) Emergency Alerting System (see Figures 1,2)

   1. On receipt of information about an actual or potential emergency, all agencies involved shall react as per their standard operating procedures and then promptly decide whether the situation will require activation of the Kings Regional Emergency Readiness Plan. If it has been determined that due to the overall situation the Emergency Readiness Plan should be activated, then the emergency dispatch center will notify the Kings Regional Emergency Management Coordinator/Alternate Emergency Measure Coordinator.

   2. Within the Regional Emergency Operations Centre, provision is made for the Regional Emergency Operations Control Group:

       • Regional Emergency Management Advisory Committee
       • Regional Emergency Operations Centre Manager
       • Duty Officer
       • Regional EMO Co-ordinator
       • Alternate EMO Co-ordinators
• Operations Officer
• Telecommunications Officer
• Human Resources
• Public Information Officer
• Fire Chief
• Police Chief – Detachment Commander
• Director of Public Works & Utilities
• Director of Emergency Social Services
• Medical Officer of Health
• Director of Purchasing & Stores
• Kings County Amateur Radio Club
• Valley Search & Rescue
• Emergency Health Services
• St. John Ambulance
• C.F.B. Greenwood – 14 Wing / Camp Aldershot
• Kings Regional Safety Officer

CO-ORDINATING INSTRUCTIONS

GENERAL

5. (a) Immediately on arrival at the Emergency Operations Centre, the members of the Emergency Operations Control Group will establish telecommunications via telephone with their respective agencies or organizations.

(b) The Emergency Telecommunications Officer will establish and maintain radio communications with the responding agencies or organizations and, if required, with the Nova Scotia Emergency Management Organization.

(c) The Emergency Telecommunications Officer will co-ordinate the provision of radio operations and equipment to furnish telecommunications to emergency agencies and organizations.

(d) The Telecommunications Officer will establish and supervise the Message Control Centre. All messages are to be logged and copies retained.

(e) All IN and OUT radio messages are to be directed through the Message Control Centre.

(f) All members of the Emergency Control Group and their respective operation centers will maintain a log of all action taken.
SUPPORT

GENERAL

6.

a. The Municipality of Kings Emergency Operations Centre
   1. This center is equipped with one (1) TMR base unit, one (1) VHF radio which operates on the EMO repeater at Garland, N.S., and one (1) VHF amateur radio.
   2. The Emergency Management Organization has five (5) portable VHF radios.

b. Fire Department
   The Kings Region has a Mutual Aid System which is comprised of sixteen (16) fire departments. These departments operate on a NSIMRS, “grid” fire frequency, which includes a local and mutual aid VHF frequency and they also have TMR radio capabilities. Some departments are paged through dial-up encoders. Several of the fire service units are equipped with mobile command units.

c. Hospitals
   There are three (3) major health centers in the County of Kings and these are as follows:
   • Valley Regional Hospital, 150 Exhibition Street, Kentville, Nova Scotia
   • Eastern Kings Memorial Community Health, Wolfville, Nova Scotia
   • Western Kings Memorial Health Centre, Berwick, Nova Scotia

   Valley Regional alone has trunked mobile radio contact with Emergency Health Services.

d. Police Department
   All Kings Detachments of the RCMP operate on the Trunked Mobile Radio System (TMR). In the event of an emergency, the RCMP will activate an additional radio for the Emergency Operations Centre. The RCMP have access to a mobile command post which is located in Halifax.

e. Private Commercial Services
   The major private radio systems cannot communicate directly with the telecommunication center, although they can all be contacted by phone.

f. Public Transit
   Kings Transit Authority employs six (6) buses and communication to these vehicles is done via cell phones. In the event of an emergency, equipment from Kings Transit, as well as the Annapolis Valley School Board would be used for evacuation. There are ninety nine (99) large buses and three (3) mini buses in service in the Kings County School System and they all operate on a VHF radio system with their own repeater, which is located on Blomidon Mountain, Kings County, N.S.

g. Municipal Services
   Engineering and Public Works has its own radio network consisting of a VHF repeater system with emergency backup power. There are mobile VHF radios in all municipal fleet work equipment and offices, as well as cell phones for communication.

h. Search and Rescue
   The Kings County Search and Rescue has ten (10) portable VHF radios, one (1) mobile radio and one (1) NS Grid radio, all of which can operate through Nova Scotia Integrated Radio System (NS/MRS).
i. **St. John Ambulance**
The St. John Ambulance are not equipped with radios. They may be contacted by phone.

j. **Kings County Amateur Radio Club**
1. The Kings County Amateur Radio Club is supported by forty-three (43) active amateur radio operators. Their resources include thirty (30) VHF mobiles, thirty (30) VHF portables, twenty-five (25) HF bases.

2. The club also operates a VHF two-meter repeater that has phone patch facilities allowing radio access to the telephone system, and a VHF Packet Station (hard copy similar to e-mail) and there is emergency power available for these systems.

k. **Emergency Health Services (E.H.S.)**
All Emergency Health Service vehicles and dispatchers use the trunked mobile radio system (TMR) fax radio communications.

l. **Nova Scotia Emergency Management Organization**
The primary telecommunication link between EMO (Central Zone) and the Municipality of the County of Kings is by telephone and trunked mobile radio. Backup communications is via amateur radio HF Voice or N.S.I.M.R.S.

m. **Aliant**
1. Line Load Control (L.L.C.) and priority restoration for emergency telephones are now in force by MT &T.

2. Line Load Control means that listed telephones will be in an emergency, the only telephones that can originate a call. All other telephones can be called only.

3. Aliant will establish telephone communications to the emergency site(s) if required.

n. **Engineering and Public Works**
All vehicles operate on a VHF repeater which is located on the Brown Mountain Road. These vehicles are also equipped with cell phones.
Valley Communications Inc., which is located in Kentville, Kings County, N.S. operates as one of six 9-1-1 PSAP’s (Public Safety Answering Points) in the Province of Nova Scotia. It provides direct dispatch for all Kings County Fire Departments as well as digital computer mapping for the counties of Kings and Annapolis. Valley Communications operates as a VHF and UHF radio system and employs one TMR base radio. It monitors E.O.P.-1 as they dispatch a total of twenty-one (21) Fire Departments located in five different counties. All offices and equipment have backup power.

Department of Natural Resources
The Department of Natural Resources operates on the TMR System and all five (5) of their vehicles are equipped with TMR. The radio inventory of this department also includes ten (10) portable radios.

Town of Berwick
The Town of Berwick operates on a VHF repeater. Their Electric Commission, Public Works and Fire Departments have a total of eighteen (18) Portable VHF radios, nine (9) VHF mobile radios and three (3) VHF base stations. The Berwick Fire Services also has two (2) TMR portables.

Town of Kentville
The Kentville Emergency Management, Fire Service, Police Service, Public Works, Parks and Recreation Departments all operate on a VHF repeater. Kentville EMO has one (1) TMR portable radio and the Kentville Fire Service has two (2) TMR portables. There are approximately forty-three (43) portable VHF radios, twenty-four (24) mobile VHF radios and three (3) VHF base stations being used by these five departments.

Town of Wolfville
The Wolfville Emergency Management, Fire Service and Public Works all operate on a VHF repeater. Wolfville EMO has one (1) TMR portable and the Fire Service has two (2) TMR portables. The Wolfville Fire Service also has seven (7) apparatus mounted radios, six (6) officer vehicle (mobile) radios and twenty-one (21) portable radios. The Wolfville Public Works Department has fifteen (15) mobile VHF radios, six (6) VHF portables. One base station radio serves all departments and this base station has a battery backup of four (4) hours. The repeater which serves these radios is located on Wolfville Ridge and has a battery backup system which would last for four (4) hours during a power outage.
11.10 KINGS REGIONAL EMERGENCY TRANSPORTATION PLAN

Primary Task

The primary task of the Transportation Officer in the Emergency Readiness Plan is to respond to the requirement to move people from danger areas, volunteers to work sites, and to assist in the evacuation of casualties when major incidents or accidents occur.

Responsibilities

The Transportation Officer will exercise his authority in response to the needs of the EMO Planning Committee. The Transportation Officer will select and assign an assistant, dictated by the demands or magnitude of the emergency response required, and act as an alternate member of the EMO Planning Committee in his absence.

Equipment Source

The provision of logistic support is best achieved through the large contingent of school buses operated by the private school bus carriers in Kings County (95 units) and the Annapolis Valley Regional School Board buses (75 units) operated in the adjoining Counties of West Hants and Annapolis.

School Board Notification of Municipal Emergency

The Kings Region shall, in the event of an emergency that could impact on normal school bus operations, advise the Superintendent of Schools for the Annapolis Valley Regional School Board.

School Board Representation in an Emergency

The Annapolis Valley Regional School Board agrees to provide a Transportation Officer from the Board. He would provide assistance in arranging the logistical use of the school buses owned and operated by the Board.

Conditions of Municipal Use of Board School Buses

The Advisory Committee and other parties having authority pursuant to the Kings Regional Peacetime Emergency Plan shall use school buses of the Board with due diligence and care and shall not interfere with any of the Board’s activities unless deemed absolutely necessary by emergency.
11.11 EMERGENCY MANAGEMENT ACT

CHAPTER 8 OF THE ACTS OF 1990
An Act to Provide for a Prompt and Co-ordinated Response to a State of Emergency

Short title 1 This Act may be cited as the Emergency Management Act. 1990, c. 8, s. 1.

Interpretation 2 In this Act,

(a) "Director" means the Director of the Emergency Management Organization;

(b) "emergency" means a present or imminent event in respect of which the Minister or a municipality, as the case may be, believes prompt co-ordination of action or regulation of persons or property must be undertaken to protect property or the health, safety or welfare of people in the Province;

(c) "Emergency Management Organization" means the Emergency Management Organization of Nova Scotia continued by Section 4;

(d) "emergency Management plan" means any plan, program or procedure prepared by the Province or a municipality, as the case may be, that is intended to mitigate the effects of an emergency or disaster and to provide for the safety, health or welfare of the civil population and the protection of property in the event of such an occurrence;

(e) "Fire Marshal" means the Fire Marshal appointed pursuant to the Fire Prevention Act;

(f) "mayor or warden" includes an alderman or councillor acting in the stead of the mayor or warden, as the case may be;

(g) "Minister" means the member of the Executive Council to whom is assigned the administration of this Act and the regulations;

(h) "municipality" means a city, an incorporated town or a municipality or a county or district;

(i) "police officer" means a member of the Royal Canadian Mounted Police and a police officer of a municipality;

(j) "state of emergency" means a state of emergency declared by the Minister or renewed by the Minister pursuant to this Act;

(k) “state of local emergency" means a state of local emergency declared by a municipality or renewed by it pursuant to this Act. 1990, c. 8, s. 2.
Supervision of Act
3 (1) The Minister has the general supervision and management of this Act.

Powers of Minister
(2) The Minister shall co-ordinate emergency Management plans within the Province and may delegate powers vested in the Minister by or pursuant to this Act. 1990,c. 8, s.3.

Emergency Management Organization of Nova Scotia
4 (1) The Emergency Management Organization of Nova Scotia is continued.

Powers and duties
(2) The Emergency Management Organization has and shall exercise and perform such powers and duties as are vested in it by or under this Act and those assigned to it by the Minister.

Personnel
(3) A Director and such other persons as may be required for the administration of the Emergency Management Organization shall be appointed in accordance with the Civil Service Act.

Director
(4) The Director shall advise and assist the Minister on all matters relating to emergencies and emergency Management plans and perform such other duties and exercise such powers as are imposed or conferred upon the Director by this Act or the regulations. 1990, c. 8, s. 4.

Committee to advise Governor in Council
5 The Governor in Council may appoint, from among the members of the Executive Council, a committee to advise the Governor in Council on matters relating to emergencies. 1990, c. 8, s. 5.

Advisory committees
6 (1) The Emergency Management Organization may appoint such committees as it considers necessary or desirable to advise or assist the Emergency Management Organization, the Minister or the Governor in Council.

Remuneration and expenses
(2) A member of a committee appointed pursuant to subsection (1) may, if the member is not an employee of Her Majesty or an agency thereof, be paid such remuneration and expenses as the Governor in Council determines. 1990, c. 8, s. 6.

Powers of the Minister
7 (1) Subject to the approval of the Governor in Council, the Minister may, on behalf of the Province,

(a) enter into agreements with the Government of Canada, a province or a municipality, or an agent of any of them, in respect of emergency Management plans;
(b) enter into agreements with a board, commission, agency or Crown corporation of the Government of Canada, of a province or of a municipality, or an agent of any of them, in respect of emergency Management plans;

(c) enter into agreements with the Government of Canada and the Workers' Compensation Board for the administration and payment of compensation benefits to persons engaged in training or carrying out duties related to a state of emergency or a state of local emergency;

(d) acquire, by purchase or lease, real and personal property for the purpose of administering the Emergency Management Organization.

**Workers' Compensation Board**

(2) The Workers' Compensation Board may execute and administer an agreement referred to in this Section. 1990, c. 8, s.7.

**Powers of Emergency Management Organization**

8 The Emergency Management Organization may, subject to the approval of the Minister,

(a) review and approve, or require modification to Provincial and municipal emergency Management plans;

(b) make surveys and studies to identify and record actual and potential hazards that may cause an emergency;

(c) make surveys and studies of resources and facilities to provide information for the effective preparation of emergency Management plans;

(d) conduct public information programs related to the prevention and mitigation of damage during an emergency;

(e) conduct training and training exercises for the effective implementation of emergency Management plans;

(f) procure food, clothing, medicines, equipment and goods of any nature or kind for the purposes of emergencies;

(g) authorize or require the implementation of any emergency Management plan;

(h) enter into agreements with any persons, organizations or associations in respect of emergency Management plans. 1990, c. 8, s. 8.

**Powers of Minister**

9 The Minister may

(a) divide the Province into districts and subdistricts for the purpose of this Act;
(a) After consultation with the municipalities concerned, designate a combination of municipalities or parts thereof as a municipality for the purpose of this Act and determine the respective responsibilities of municipalities on the designated area;

(c) require municipalities to prepare emergency Management plans, including mutual aid programs, and to submit such plans to the Emergency Management Organization for review for adequacy and integration with the Provincial emergency Management plans;

(d) establish procedures for the prompt and efficient implementation of emergency Management plans;

(e) require any person to develop emergency Management plans in conjunction with the Emergency Management Organization or the municipalities to remedy or alleviate any hazard to persons or property that is or may be created by

(i) a condition that exists or may exist on that person's property,
(ii) that person’s use of property,
(iii) an operation in which that person is or may be engaged, or
(iv) a process that that person is or may be utilizing except where an enactment of the Province or a municipal by-law provides a procedure for dealing with the hazard. 1990, c. 8, s. 9.

Duties of Municipalities

10 (1) Within one year after the coming into force of this Act, each municipality shall:

(a) subject to the approval of the Minister, establish and maintain a municipal emergency by-law;

(b) establish and maintain a municipal emergency Management organization;

(c) appoint a co-ordinator of the municipal emergency Management organization and prescribe the duties of the co-ordinator which shall include the preparation and co-ordination of emergency Management plans for the municipality;

(d) appoint a committee consisting of members of the municipal council to advise it on the development of emergency Management plans; and

(e) prepare and approve emergency Management plans.

Powers of Municipalities

(2) The municipality may

(a) pay the reasonable expenses of members of the organization or members of the committee appointed pursuant to clause (b) or (d) of subsection (1);
(b) enter into agreements with and make payments to persons and organizations for the provision of services in the development and implementation of emergency Management plans;

(c) enter into an arrangement or agreement with any other municipality respecting a common organization, plan or program;

(d) appropriate and expend sums approved by it or the purpose of this Section. 1990, c. 8, s. 10.

Appointment of Auxiliary Police

11 (1) The Minister may appoint persons trained for police duties as auxiliary police officers for the purpose of this Act.

Powers and duties of police and auxiliary police

(2) Police officers and auxiliary police officers have such powers, duties and responsibilities as the regulations prescribe and shall be organized and operate in accordance with the regulations.

Powers, authorities and immunities of peace officers

(3) A police officer or auxiliary police officer, in carrying out duties pursuant to this Act and the regulations, has and may exercise in any part of the Province all the powers, authorities, and immunities of a peace officer as defined in the Criminal Code (Canada).

Protection for person assisting police

(4) The protection afforded by this Act and any other enactment to a police officer or auxiliary police officer extends to any other person while and to the extent that that person is in the course of assisting a police officer or auxiliary police officer under the police officer's or auxiliary police officer's direction. 1990, c. 8, s. 11.

Declaration by Minister of state of emergency

12 (1) The Minister, after consulting if it is practical to do so, with a majority of the members of a committee established pursuant to Section 5 or a quorum of the Executive Council and, if the Minister is satisfied that an emergency exists or may exist, may declare a state of emergency in respect of all or any district, subdistrict or area of the Province.

Declaration by municipal council

(2) A municipal council may, when satisfied that an emergency exists or may exist in all or any area of that municipality, declare a state of local emergency in respect of that municipality or area thereof.
Exercise of authority by mayor or warden

(3) If a municipal council is unable to act promptly, the mayor or warden may exercise the authority of the municipal council contained in subsection (2) after consulting, if it is practical to do so, with a majority of the members of the council's committee to advise on the development of emergency Management plans.

Content of declaration

(4) A declaration pursuant to this Section shall identify the nature of the emergency and the area in which it exists.

Interpretation of Section

(5) Nothing in this Section prevents the Minister from declaring a state of emergency whether a state of local emergency has been declared or not. 1990, c. 8, s. 12.

Publication of declaration or termination

13 When a state of emergency or a state of local emergency has been declared or terminated pursuant to this Act, the Minister or the municipality, as the case may be, shall immediately cause the details of the declaration or termination to be communicated or published by such means as the Minister or the municipality, respectively, considers the most likely to make the contents of the declaration or termination known to the people of the area affected. 1990, c. 8, 8.13.

Powers respecting protection of property and safety

14 Upon a state of emergency being declared in respect to the Province or an area thereof, or upon a state of local emergency being declared in respect to a municipality or an area thereof, the Minister may, during the state of emergency, in respect of the Province or an area thereof, or the mayor or warden, as the case may be, may, during the state of local emergency, in respect of such municipality or a area thereof, as the case may be, do everything necessary for the protection of property and the health or safety of persons therein and, without restricting the generality of the foregoing, may

(a) cause an emergency Management plan or any part thereof to be implemented;

(b) acquire or utilize or cause the acquisition or utilization of personal property by confiscation or any means considered necessary;

(c) authorize or require a qualified person to render aid of such type as that person may be qualified to provide;

(d) control or prohibit travel to or from an area or on a road, street or highway;

(e) provide for the maintenance and restoration of essential facilities, the distribution of essential supplies and the maintenance and co-ordination of emergency medical, social and other essential services;
(f) cause or order the evacuation of persons and the removal of livestock and personal property threatened by an emergency and make arrangements for the adequate care and protection thereof;

(g) authorize the entry by a person into any building or upon land without warrant;

(h) cause or order the demolition or removal of any thing where the demolition or removal is necessary or advisable for the purpose of reaching the scene of an emergency, of attempting to forestall its occurrence or of combating its progress;

(i) order the assistance of persons needed to carry out the provisions mentioned in this Section;

(j) regulate the distribution and availability of essential goods, services and resources;

(k) authorize and make emergency payments;

(l) assess damage to any works, property or undertaking and the costs to repair, replace or restore the same;

(m) assess damage to the environment and the costs and methods to eliminate or alleviate the damage. 1990, c. 8, s. 14.

Powers and duties of mayor or warden

15  (1)  Upon declaring a state of local emergency, a mayor or warden, as the case may be,

(a) shall immediately forward a copy of the declaration to the Minister; and

(b) may authorize any person or committee to exercise any power vested in the mayor or warden, respectively, by Section 14.

Delegation by Minister

(2)  Upon declaring a state of emergency, the Minister may authorize any person or committee to exercise any power vested in the Minister by Section 14. 1990, c. 8, s.15.

Prices

16  (1)  During a state of emergency or a state of local emergency, no person in the Province may charge higher prices for food, clothing, fuel, equipment, medical or other essential supplies for the use of property, services, resources or equipment than the fair market value of the same thing immediately before the emergency.
Contract contrary to subsection (1)

(2) A contract that is contrary to subsection (1) is voidable at the option of the purchaser if the purchaser repudiates the contract within one month after the termination of the state of emergency or state of local emergency. 1990, c. 8, s. 16.

Fires and law enforcement

During a state of emergency,

(a) the Fire Marshal is the co-ordinator of all efforts in relation to the suppression and prevention of fires, and every fire brigade, fire department and firefighter in the area in which the state of emergency exists is subject to the direction and control of the Fire Marshal; and

(b) a peace officer designated for this purpose by the Solicitor General is the co-ordinator of all efforts in relation to law enforcement and every police officer and auxiliary police officer in the area in which the state of emergency exists is subject to the direction and control of that officer. 1990, c. 8, s. 17.

Termination by Minister

The Minister may

(a) terminate a state of emergency with respect to an area identified by the Minister in a declaration of a state of emergency when, in the Minister's opinion, an emergency no longer exists in such area and

(b) terminate a state of local emergency with respect to an area identified by a municipality in its declaration of a state of local emergency when, in the Minister's opinion, an emergency no longer exist in such area.

Termination by municipality

A municipality may terminate a state of local emergency with respect to an area identified by it in its declaration of a state of local emergency when, in its opinion, an emergency no longer exists in such area. 1990, c. 8, s. 18.

Termination within fourteen days

A state of emergency terminates fourteen days after the day on which it was declared unless it is terminated by the Minister.

Renewal of state of emergency

A state of emergency may be renewed by the Minister with the approval of the Governor in Council.

Application of Act to renewal

The provisions of this Act respecting a state of emergency and the declaration thereof apply, with the necessary changes, to a renewal of a state of emergency. 1990, c. 8, s. 19.

Termination of state of local emergency

A state of local emergency terminates
(a) When the area identified by the municipality in its declaration of a state of local emergency is included in an area identified by the Minister in a declaration of a state of emergency;

(b) when it is terminated by the Minister or by the municipality;

(c) seven days after the day on which it was declared unless it is renewed in accordance with this Act.

Renewal of state of local emergency

(2) A state of local emergency may be renewed by the municipality with the approval of the Minister.

Application of Act to renewal

(3) The provisions of this Act respecting a state of local emergency or the declaration thereof apply, with the necessary changes, to a renewal of a state of local emergency. 1990, c. 8, s. 20.

No liability

21 The Minister, a mayor or warden, a municipality, the Emergency Management Organization, a committee established pursuant to this Act or a member thereof, or any other person

(a) is not liable for any damage arising out of any action taken pursuant to this Act or the regulations; and

(b) is not subject to any proceedings by prohibition, certiorari, mandamus or injunction with respect to any action take pursuant to this Act or the regulations. 1990, c. 8, s. 21.

Entry upon property

22 Any person in the course of implementing an emergency Management plan pursuant to this Act or the regulations may, at any time enter upon any property. 1990, c. 8, s. 22.

Offence of obstruction

23 Any person who obstructs the Minister, a municipality, the Emergency Management Organization, a committee established pursuant to this Act or any person in the performance of any action, matter or thing authorized by this Act or who contravenes or fails to comply

(a) with any provision of this Act or any regulation; or

(b) with any direction, order or requirement made pursuant to this Act or the regulations,

is guilty of an offence and liable on summary conviction to a fine not exceeding one thousand dollars or to imprisonment of not more than six months or both. 1990, c. 8, s. 23.
Absence from employment

24 Every person, who with proper authority is absent from that person's accustomed employment and is on duty authorized by the Minister or by the council of a municipality for the purpose of this Act shall, while so absent, for all purposes relative to retention of employment, of seniority rights and of superannuation benefits, be deemed to have been in that person’s accustomed employment during the period of absence. 1990, c.8., s. 24.

Regulations

25 (1) The Governor in Council may make regulations

(a) respecting emergency planning for the continuity of functions of departments, boards, commissions, corporations and other agencies of the Province;
(b) respecting the vesting of special powers and duties in various departments and agencies of the Province for the purposes of emergency planning and the implementation of an emergency Management plan;
(c) respecting the organization, responsibilities, powers, duties and operation of police officers and auxiliary police officers throughout the Province or any part thereof for the purpose of this Act;
(d) respecting authority to be delegated pursuant to this Act;
(e) prescribing the forms to be used for a declaration of a state of emergency and renewals and termination of the same;
(f) respecting the establishment, operation, liability and responsibilities of ground search and rescue organizations;
(g) prescribing renewal periods for states of emergency;
(h) defining any word or expression used in this Act but not defined herein;
(i) respecting any matter or thing that the Governor in Council deems necessary for the administration of this Act.

Regulations Act

(2) The exercise by the Governor in Council of the authority contained in subsection (1) shall be regulations within the meaning of the Regulations Act. 1990, c. 8, s. 25.

Repeal

26 Chapter 145 of the Revised Statutes, 1989, the Emergency Management Act, is repealed. 1990, c. 8, s. 26.

Proclamation

27 This Act comes into force on and not before such day as the Governor in Council orders and declares by proclamation. 1990, c. 8, s. 27

Proclaimed - July 31, 1990

In force - November 1, 1990
11.12 STATE OF EMERGENCY DECLARATION – REGULATIONS

made under Section 25 of the
Emergency Management Act
R.S.N.S. 1989, c.8
O.I.C. 92-61, N.S. Reg. 17/92
January 21 1992

Citation

1 These regulations may be cited as the “State of Emergency Regulations”.

Definitions

2. In these regulations,

(a) “Act” means the Emergency Management Act;

(b) “mayor or warden” includes an alderman or councilor acting in the stead of the mayor or warden, as the case may be;

(c) “Minister” means the member of the Executive Council to whom is assigned the administration of the Act and regulations;

(d) “municipality” means a city, an incorporated town or a municipality of a county or district;

(e) “state of emergency” means a state of emergency declared by the Minister or renewed by the Minister pursuant to the Act;

(f) “state of local emergency” means a state of local emergency declared by a municipality or renewed by it pursuant to the Act.

State of emergency

3  (1) For the purposes of declaring a state of emergency pursuant to subsection(1) of Section 12 of the Act, the Minister shall use Form 1 attached to these regulations.

(2) (a) For the purposes of renewing a state of emergency pursuant to subsection (2) of Section 19 of the Act, the Minister shall use Form 2 attached to these regulations.

(b) Renewal period under clause (a) may extend for 14 days.

(3) For the purposes of terminating a state of emergency pursuant to clause (a) of subscription (1) of Section 18 of the Act, the Minister shall use Form 3 attached to these regulations
State of local emergency

4 (1) For the purposes of declaring a state of local emergency pursuant to subsection (2) of Section 12 of the Act, a municipal council shall use Form 4 attached to these regulations.

(2) For the purposes of declaring a state of local emergency pursuant to subsection (3) of Section 12 of the Act, a mayor or a warden shall use Form 5 attached to these regulations.

(3) (a) For the purposes of renewing a state of local emergency pursuant to subsection (2) of Section 20 of the Act, a municipality shall use Form 6 attached to these regulations.

(b) A renewal period under clause (a) may extend for 7 days.

(4) For the purposes of terminating a state of local emergency pursuant to subsection (2) of Section 18 of the Act, a municipality shall use Form 7 attached to these regulations.

(5) For the purposes of terminating a state of local emergency pursuant to clause (b) of subsection (1) of Section 18 of the Act, the Minister shall use Form 8 attached to these regulations.

Effective date

5 These regulations are effective on, from and after the 1st day of February 1992.

Form 1 – Declaration of a State of Emergency (Minister)
Section 12(1) of the Emergency Management Act, S.N.S. 1990, c.8

WHEREAS the area herein described is or may soon be encountering an emergency that requires prompt action to prevent harm or damage to the safety, health or welfare of persons or to prevent damage to property;

Emergency area:

(a) all of the Province of Nova Scotia (hereafter referred to as the “Province”) Yes ( ) No ( )

(b) the district, subdistrict or area generally described as ________________ situated in the County/Counties of ________________ Province of Nova Scotia (hereafter referred TO AS THE “Designated Area(s)”) Yes ( ) No ( )
Nature of the Emergency:

AND WHEREAS the undersigned is satisfied that an emergency as defined in Section 2(b) of Chapter 8 of the Statutes of Nova Scotia 1990, the Emergency Management Act, exists or may exist in the Province/Designated Area(s) noted above;

AND WHEREAS the undersigned has (check appropriate box):

(a) consulted with a majority of the members of the Provincial Emergency Management Committee

Yes (   ) No (   )

(b) consulted with a quorum of the Executive Council

Yes (   ) No (   )

(c) found it impractical to consult with the persons listed in (a) or (b)

Yes (   ) No (   )

THE UNDERSIGNED HEREBY DECLARES pursuant to Section 12(1) of the Emergency Management Act, a state of emergency in the Province/Designated Area(s) noted above as and from _______________ o’clock in the forenoon (   ) or afternoon (   ) of the _____ day of __________, 20 ___.

THIS DECLARATION OF STATE OF EMERGENCY shall exist until ______ o’clock in the forenoon (   ) or the afternoon (   ) of the ______ day of ________________, 20 ___.

DATED at ____________________________, in the County of _________________________, Province of Nova Scotia, this ______ day of _______________, 20 ___.

Guidelines for Engineering Works ............................................1
The *Standards and Guidelines for the Conservation of Historic Places in Canada* is the result of a major collaborative effort among federal, provincial, territorial and municipal governments, heritage conservation professionals, heritage developers, and many individual Canadians.

This collaborative process has laid down an important foundation for the evolution of conservation practice in Canada and this approach, based on the involvement of all stakeholders and interested parties, will continue to be used for the periodic revision of the *Standards and Guidelines for the Conservation of Historic Places in Canada* and for other issues related to the conservation of historic places.

Through this pan-Canadian collaboration, we have reinforced the development of a culture of conservation in Canada, which will continue to find a unique expression in each of the jurisdictions and regions of our country.

The development of the *Standards and Guidelines for the Conservation of Historic Places in Canada* could not have been so successful without the vision, leadership and rigor of a Parks Canada employee, Gordon Fulton. As a steward and a guide, he has helped to make available to the heritage conservation community an effective new tool.

On behalf of Parks Canada, I am proud to adopt the *Standards and Guidelines for the Conservation of Historic Places in Canada* for use in our stewardship of Canada’s national historic sites and other heritage properties. Together with our many partners, we will move towards a strengthened culture of conservation.

*Alan Latourelle*

Chief Executive Officer
Parks Canada
Preface and Acknowledgements

Over the years, guidance on how best to conserve our irreplaceable built heritage, and the limits of acceptable change to it, have been provided in a number of documents (see the BIBLIOGRAPHY). A common set of standards and guidelines for the conservation of historic places in Canada, however, remained an unfulfilled challenge. In June 2000, a working group of heritage conservation and real property experts from industry, non-governmental heritage organizations, municipal, provincial and territorial governments, and federal departments and agencies was brought together by the federal Department of Canadian Heritage to address this shortcoming. The result is this document.

Like most of its Canadian predecessors, Standards and Guidelines for the Conservation of Historic Places in Canada draws very heavily and is modelled quite directly on the United States Government’s landmark publication, The Secretary of the Interior’s Standards for the Treatment of Historic Properties, with Guidelines for Preserving, Rehabilitating, Restoring and Reconstructing Historic Buildings (1995). This document is a model of clarity and practicality. The working group that developed these Canadian standards and guidelines could find no reason not to use it as a basis, with appropriate modifications to the Canadian situation.

The working group acknowledges the U.S. National Park Service’s Technical Preservation Services for its support and encouragement in using and adapting this document and its companion, The Secretary of the Interior’s Standards for the Treatment of Historic Properties, with Guidelines for the Treatment of Cultural Landscapes (1996).

The Standards and Guidelines for the Conservation of Historic Places in Canada was produced under the guidance and direction of the Working Group on Conservation Standards and Guidelines, whose members volunteered their time and expertise. Gordon W. Fulton served as the Working Group’s project manager and edited the draft of the Standards and Guidelines, which was then used for consultations.

Working Group members, and their affiliations at the time of their involvement, are as follows:

Gordon Bennett, Policy and Government Relations Branch, Parks Canada (Historic Places Initiative steering committee); Jim Bezanson, Community Planning Department, City of Saint John, New Brunswick; Dinu Bumbaru, Héritage Montréal; Monika Dankova and Byron Johnson, Real Property Services, Public Works and Government Services Canada; Neil Einarson, Historic Resources Branch, Manitoba Culture, Heritage and Tourism; Ken Elder, Heritage Conservation Services (formerly Heritage Conservation Program), Public Works and Government Services Canada; Mary Lou Evans and Melissa Gordon, Heritage Policy and Program Development, Ontario Ministry of Tourism, Culture and Recreation; Louise Fox, Department of Canadian Heritage (Archaeology); Gordon Fulton, Parks Canada (Historic Places Initiative, working group project manager); Denise Gendron, Preservation Services, City of Toronto; Robert Harrold and Daniel LaRoche, Archaeological Services Branch, Parks Canada; Alastair Kerr, Heritage Branch, British Columbia Ministry of Small Business, Tourism and Culture; François Leblanc, Architecture, National Capital Commission and ICOMOS Canada; Robert Lemon, Robert G. Lemon Architecture & Preservation, Vancouver; Don K. Macdonald, Real Estate Advisory Services, Public Works and Government Services Canada; Cliff McCawley, Conservation and Scientific Services, Canadian Conservation Institute; Guy Masson, Heritage Conservation Services, Public Works and Government Services Canada and ICOMOS Canada; Doug Olnyuk, Heritage Branch, Tourism...
A number of people reviewed specific parts of the Standards and Guidelines for the Conservation of Historic Places in Canada. Special thanks go to Karen L. Mudie of the Department of Canadian Heritage’s Legal Services; Douglas Bryce, Lyle Henderson, Daniel LaRoche and Virginia Myles of Parks Canada’s Archaeological Services; Victoria Angel and Johanne Fortier of Parks Canada’s Historic Places Program; David A. Morrison of the Canadian Museum of Civilization (Archaeological Survey of Canada); Lyse Blanchet, Lyne Fontaine, Joann Latremouille, Gerry van Rijn, Jack Vandenberg, John Ward and John Zvonar of Public Works and Government Services Canada’s Heritage Conservation Services; Douglas Franklin of The Heritage Canada Foundation; Rick Goodacre of the Heritage Society of British Columbia; Shelley Bruce, Giles Bugailiskis, David Firman and Linda Seyers of the City of Winnipeg’s Historical Buildings Committee; and Wayne Morgan and Sherry Pedersen of the City of Toronto’s Preservation Services.

Following the preparation of the Standards and Guidelines for the Conservation of Historic Places in Canada, 42 pilot projects were undertaken to test use of the Standards and Guidelines. Pat Buchik, Robert Pajot and Ève Wertheimer from Heritage Conservation Services of Public Works and Government Services Canada were instrumental in identifying and coordinating the pilot projects and sharing the results of this work with the working group. Comments provided as a result of these pilot projects contributed to the further refinement of the document and a final review of the document by the working group.

We also acknowledge members of the piloting team, which included the following:

A special acknowledgement must be made to working group members and others who generously made their photographic collections available to illustrate this document. Guy Masson and Jim Bezanson both contributed numerous photographs from their extensive collections. Susan Ross, from the Heritage Conservation Services of Public Works and Government Services Canada provided a needed focus for the selection of illustrations for this document.

The coordination of the last stages of production of the document was under the responsibility of the following: Christiane Lefebvre and Johanne Fortier of the Historic Places Program, National Historic Sites Directorate, Pat Buchik, Ève Wertheimer and Geneviève Charrois of Heritage Conservation Services, Public Works and Government Services Canada, who oversaw the editing of the document in both official languages, as well as Ellen Cunningham and Lana Stewart of the Historic Places Program, National Historic Sites Directorate, for the coordination of the design and layout.

Peter Frood
Director
Historic Places Program
National Historic Sites Directorate
Parks Canada
Introduction

The principles and practices that encourage the long-term conservation of our country’s historic places are described in this document. The fundamental principles for conserving historic places of all types were first outlined in a set of “Standards”. Detailed “Guidelines” then present the Dos and Don’ts of safeguarding archaeological sites, and preserving, rehabilitating or restoring historic landscapes, buildings and engineering works. Emphasis has been placed on providing sound, practical advice for conserving our rich and irreplaceable built heritage.

The Purpose of the Standards and Guidelines

The primary purpose of the *Standards and Guidelines for the Conservation of Historic Places in Canada* is to provide **sound, practical guidance** to achieve good conservation practice. Anyone with an interest in conserving Canada’s historic places who voluntarily follows these Standards and Guidelines will benefit from clear and consistent guidance. The intent of the document is not to replace the role of conservation practitioners or provide detailed technical specifications appropriate to every situation. It does, however, offer results-oriented guidance for sound decision making when planning for, intervening and using a historic place.

A second purpose of the *Standards and Guidelines for the Conservation of Historic Places in Canada* is to develop a pan-Canadian set of Standards and Guidelines. The Standards and Guidelines may be adopted by federal, provincial, territorial or other authorities as a benchmark for assessing proposed conservation interventions. For example, jurisdictions which adopt the Standards and Guidelines may use them to assess proposed changes to a historic place listed on the Canadian Register of Historic Places. Under these circumstances, the Standards and Guidelines would be used to measure compliance with legislation relating to the **statutory protection** of these historic places. To comply with the legislation, a project would then have to respect and conserve the heritage value and character-defining elements of the historic place as recommended in these Standards and Guidelines and as determined by the appropriate authority both at the planning stage and upon completion.

The third purpose is to assist people who intend to apply for government **financial incentives** for conservation. When adopted by a jurisdiction, the Standards and Guidelines may form the basis for review and assessment of a preservation, rehabilitation or restoration project before the project starts, and again upon completion. To be approved and certified for federal financial incentives, a project must be consistent with the *Standards and Guidelines for the Conservation of Historic Places in Canada.*
Definitions of Some Key Terms

A number of terms used in this document have very specific meanings in the context of heritage conservation and are defined as follows:

**Character-defining elements**: the materials, forms, location, spatial configurations, uses and cultural associations or meanings that contribute to the *heritage value* of a *historic place*, which must be retained in order to preserve its *heritage value*.

**Conservation**: all actions or processes that are aimed at safeguarding the *character-defining elements* of a cultural resource so as to retain its *heritage value* and extend its physical life. This may involve “Preservation,” “Rehabilitation,” “Restoration,” or a combination of these actions or processes. Reconstruction or reconstitution of a disappeared cultural resource is not considered conservation and is therefore not addressed in this document.

**Guidelines**: statements that provide practical guidance in applying the *Standards for the Conservation of Historic Places*. They are presented herein as recommended and non-recommended actions.

**Heritage value**: the aesthetic, historic, scientific, cultural, social or spiritual importance or significance for past, present or future generations. The *heritage value* of a *historic place* is embodied in its character-defining materials, forms, location, spatial configurations, uses and cultural associations or meanings.

**Historic place**: a structure, building, group of buildings, district, landscape, archaeological site or other place in Canada that has been formally recognized for its *heritage value*.

**Intervention**: any action, other than demolition or destruction, that results in a physical change to an element of a *historic place*.

**Maintenance**: routine, cyclical, non-destructive actions necessary to slow the deterioration of a *historic place*. It entails periodic inspection; routine, cyclical, non-destructive cleaning; minor repair and refinishing operations; replacement of damaged or deteriorated materials that are impractical to save.

**Minimal intervention**: the approach which allows functional goals to be met with the least physical intervention.

**Standards**: Norms for the respectful conservation of historic places.

Preservation: the action or process of protecting, maintaining, and/or stabilizing the existing materials, form, and integrity of a *historic place* or of an individual component, while protecting its *heritage value*.

Preservation can include both short-term and interim measures to protect or stabilize the place, as well as long-term actions to retard deterioration or prevent damage so that the place can be kept serviceable through routine maintenance and minimal repair, rather than extensive replacement and new construction.
Rehabilitation: the action or process of making possible a continuing or compatible contemporary use of a historic place or an individual component, through repair, alterations, and/or additions, while protecting its heritage value.

Restoration: the action or process of accurately revealing, recovering or representing the state of a historic place or of an individual component, as it appeared at a particular period in its history, while protecting its heritage value.

Rehabilitation can include replacing missing historic features. The replacement may be an accurate replica of the missing feature, or it may be a new design that is compatible with the style, era, and character of the historic place.

Restoration includes the removal of features from other periods in its history and the reconstruction of missing features from the restoration period. Restoration must be based on clear evidence and detailed knowledge of the earlier forms and materials being recovered.

These and other definitions can also be found in the Glossary.
Heritage conservation involves identifying, protecting and promoting the elements that our society values. The term “heritage” can cover a wide range of physical things from a railway station to a garden to a painting, and non-physical things such as traditional knowledge and language. The term “heritage conservation” (or “historic preservation” in some regions) has traditionally been associated with protecting the physical or “built” environment, i.e., the tangible landscapes, buildings, structures and artefacts that have been created throughout the history of Canada. More recently, the term has also come to be associated with safeguarding the non-physical associations between people and a place, i.e., associations linked to use, meanings and cultural or spiritual values. Standards and Guidelines for the Conservation of Historic Places in Canada deals with both the physical aspects of historic places and their non-physical associations.

The fundamental principles that form the basis for good conservation practice have traditionally been collected and published in “charters.” These charters, beginning with the Athens Charter in 1931, reflect our ongoing efforts to spell out as clearly as possible the reasons why one idea or one action may be better than another when dealing with our fragile and irreplaceable historic places. Each of the charters embodies a certain philosophy or bias or focus — the cultural associations in Australia’s Burra Charter, for example. Nevertheless, a consistent thread of logic runs through each. This thread is summarized here and forms the philosophical foundation for the Standards and Guidelines that follow. The principles are presented in a sequence of actions from “beginning” to “end” — from understanding the historic place to making changes to it. However, the persons involved in conservation must occasionally backtrack and re-examine their approaches and obtain additional information, because conservation, an ongoing process, is cyclical by nature.

Decisions regarding any conservation action on the heritage value of a historic place require sound, cautious judgment to balance conflicting requirements while engaging all relevant stakeholders and considering case-specific criteria. Engaging multidisciplinary experts and all relevant stakeholders is often necessary in the decision-making process.

A. Understanding

A comprehensive understanding of a historic place is an essential first step to good conservation practice, which is normally achieved through documentary and oral research and physical investigation. It is important to know where the heritage value of the historic place lies; how it fits physically and functionally into its surroundings; and how it was and is important to its larger community past, present, and future. The evaluation of a historic place therefore constitutes an important part of the process of understanding it. Planning for, using and intervening in a historic place must be made with this understanding.

B. Planning

Planning must precede any interventions to a historic place. In other words, conservation work must be coordinated and integrated with planning and other future-oriented activities. Planning is the mechanism that links a comprehensive understanding of a historic place with interventions that respect that place’s specific heritage value. In planning, it is important to maintain a firm sense of the longer term and the larger picture, and to not place emphasis on particular character-defining elements at the expense of others. Planning should include consideration of all factors affecting the future of a historic place, including the owner’s needs, resources and external constraints.

C. Using

If the use of a historic place is part of its heritage value, then that use should be retained. Otherwise, a use compatible with its heritage value should be found. A viable use — economic, social or symbolic — will better ensure the long-term survival of a historic place and lessen or prevent deterioration caused by environmental and human activities. Because of the effects of the ongoing day-to-day use of a historic place, regular inspection, monitoring and maintenance, appropriate to the particular circumstances of the place, should be planned and undertaken. Accessible records should be kept on an ongoing basis to document its condition over time. These records will add to the comprehensive understanding of the historic place. In addition, emergency response plans, monitoring systems and other safeguards should be implemented in a respectful way to protect the place and any people within, in the event of a disaster such as fire.
D. Intervening

Any interventions to a historic place, i.e., any actions or processes that result in a physical change to its tangible elements, must respect its heritage value. In any intervention, as French archaeologist Adolphe-Napoléon Didron wrote in 1839, “it is better to preserve than to repair, better to repair than to restore, better to restore than to reconstruct.” New contributions should respect the spirit and substance of the old. The objective for the conservation of a historic place is to meet functional goals while respecting its heritage value and character-defining elements. This “minimal intervention” approach is the foundation of good conservation practice. Translating good intentions into respectful interventions and clear, unambiguous instructions (usually in the form of design drawings and specifications) is essential.

The fourth section includes detailed recommendations for other considerations, such as health and safety issues, accessibility, energy efficiency and ecological objectives, and new additions to historic places.

A number of terms used in this document have very specific meanings in the context of heritage conservation. These terms are defined in this Introduction, and are also included in the Glossary. The glossary is followed by a bibliography (technical guide) of useful books and references.

The Format of the Standards and Guidelines

Standards and Guidelines for the Conservation of Historic Places in Canada has four main sections. The first section, the Introduction, begins with the purpose of the Standards and Guidelines, followed by definitions of some key terms. The fundamental principles that form the basis for good conservation practice and underlie every standard and guideline in this document are then summarized. The Introduction concludes with this outline of the format of the Standards and Guidelines, and a description of how to use this document.

In the second section, the Standards for conservation are introduced and presented. Nine “General Standards” apply to historic places of all types and to the conservation treatment “Preservation.” They are also required for the two other conservation treatments, “Rehabilitation” and “Restoration.” There are three additional Standards that apply only to the Rehabilitation conservation treatment, and two additional Standards that apply only to the Restoration conservation treatment.

The third and largest section of this document is made up of the Guidelines, which are intended to assist in applying the Standards and determining whether the intent of the Standards has been met. After an introduction that discusses the application of the Guidelines, and a general discussion on substitute materials and balancing other considerations, the specific Guidelines for archaeological sites, landscapes, buildings and engineering works — any or all of which may be part of a historic place — are presented.
How to Use the Standards and Guidelines

The following text and accompanying chart outline the main steps to achieving a successful conservation project. Key recommendations and cautions are highlighted.

1. Identify Heritage Value and Character-Defining Elements

A concept that permeates this document is a respect for heritage value and character-defining elements. A historic place’s heritage value and character-defining elements are usually identified when it is formally recognized by an authority or when it is nominated to the Canadian Register of Historic Places. If the character-defining elements of a historic place have not been identified, the first and absolutely essential step in any project is to identify and describe the elements that are important in defining the overall heritage value of the historic place. The essence of these elements is usually captured in a “statement of significance” or equivalent document.

2. Determine the Primary Treatment

While any conservation project may involve aspects of more than one of the three conservation treatments, it is truly beneficial to decide during the planning stage whether it is essentially a Preservation, a Rehabilitation or a Restoration project. A clear idea of the primary focus or objective of the project along with the heritage values of the historic place, from the outset, will contribute to the success of a consistent, coherent conservation project. For a discussion on when to use Preservation, Rehabilitation or Restoration as the primary treatment, see section 2, Applying the Standards.

3. Review the Standards

The Standards, which are at the heart of this document, and the principles on which they are based, are central to the process of Preserving, Rehabilitating or Restoring a historic place in a responsible and consistent manner. It is important, therefore, to review the Standards and the principles before getting into the Guidelines. Note that the Standards are interrelated, meaning that compliance with the Standards for each type of treatment means compliance with all of the Standards for that type of treatment, not just some of them. In other words, Standards 1 to 9 apply to a Preservation project; Standards 1 to 12 to a Rehabilitation project; and Standards 1 to 9 and 13 to 14 to a Restoration project.

4. Follow the Guidelines for the Appropriate Resource Type and Treatment

A thorough understanding of a historic place and its components is essential to good conservation practice. The better the understanding, the more likely heritage value will be respected. The Guidelines therefore always recommend documenting, identifying, surveying and analyzing the form, materials and condition (and function and interrelationships, where applicable) of the historic place and its components before the project work begins.

Balancing health and safety and other issues with conservation objectives is an extremely important aspect of any conservation project. The challenge often involves meeting requirements such as fire codes, seismic standards or the use of chemicals, while minimizing the negative impact on a historic place’s heritage value. A conservation project’s chances of success may depend on the extent to which fundamental issues of health, safety and heritage value can be adequately reconciled. Therefore, a general discussion on meeting these concerns while respecting heritage value is presented at the beginning of the Guidelines section (Balancing other considerations). Detailed recommendations on these issues can be found in Section 4, Other Considerations.

After an understanding of the historic place and its components has been developed and other applicable issues have been given consideration, the next step is following the appropriate Guidelines. In terms of resource types, the Guidelines are divided into four parts: archaeological sites, landscapes, buildings and engineering works. For ease of use, the landscapes and buildings Guidelines are subdivided into separate components, such as landforms or windows.

These Guidelines, which deal with different resource types including their separate components, should not be used in isolation. There may be heritage value in the relationships between archaeological sites, landscapes, buildings or engineering works, and these values should not be compromised when undertaking a project on individual components of a historic place.
In terms of treatments, each of the Guideline sections in this document begins with recommendations concerned with *Preserving*, i.e., stabilizing, protecting, maintaining and/or retaining the elements that are important in defining the heritage value of the historic place. *All conservation projects should follow these Guidelines*. For projects requiring more than *Preservation*, one can follow either the additional Guidelines for Rehabilitation or the additional Guidelines for Restoration.

The Guidelines’ approaches to work, treatments, and techniques that are consistent with the Standards for the Conservation of Historic Places in Canada are listed in the “Recommended” column on the left; those that are not are listed in the “Not Recommended” column on the right.

5) Undertake the Project Work

The project work is a critical phase in the conservation process. It is just as important to have well-supervised people with the right skills undertaking the work as it is to determine the right work to undertake. While giving advice on project management and related activities is beyond the scope of this document, one can safely say that it is vital to ensure that all those involved in the actual work of a conservation project possess the right training and skills. They must be familiar with special conservation approaches and understand the scope of the project. Furthermore, while significant interventions may be necessary in a conservation project, the best long-term investment in a historic place is adequate and appropriate maintenance.
The Standards for the Conservation of Historic Places in Canada are intended to promote responsible conservation practices that help protect Canada’s irreplaceable historic places. They provide a philosophical consistency for project work; and while neither technical nor case-specific, they provide the framework for making essential decisions about which features of a historic place should be maintained, and which can be altered.

Applying the Standards

The Standards are to be applied to historic places, which have been (or could be) recognized by an appropriate authority for their heritage value, i.e., for their aesthetic, historic, scientific, cultural, social or spiritual importance or significance for past, present, or future generations. Historic places can include archaeological sites with resources on or below ground or under water, such as battlefields or shipwrecks; landscapes of all types and sizes, with their related natural and built features, such as urban parks or Aboriginal sacred sites; buildings such as individual houses or entire urban districts; and engineering works of all materials, construction types and sizes such as bridges or mining headframes. The Standards can also be applied to new construction attached, adjacent or related to any of these resource types. They are to be applied to specific conservation projects in a reasonable manner, taking into consideration economic and technical feasibility.

Conservation in the context of these Standards refers to retaining the heritage value of historic places and extending their physical life. Retaining the heritage value of historic places is primarily ensured through interventions, i.e., any actions (or deliberate inactions) that have a physical effect on the tangible elements of a historic place that do not obscure, damage, or destroy character-defining elements. The latter consist of the materials, forms, location, spatial configurations, uses and cultural associations or meanings that contribute to the heritage value of the historic place.

It is useful to consider conservation under three distinct headings: Preservation, Rehabilitation and Restoration, while recognizing that a given conservation project will often include a combination of these activities.

Preservation

Preservation involves protecting, maintaining and stabilizing the existing form, material and integrity of a historic place, or of an individual component, while protecting its heritage value. There are nine Standards relating to Preservation, and they must all be applied to a Preservation project.

Since protection, maintenance and stabilization are at the core of all conservation projects, all nine Preservation Standards must be applied to any conservation project.

Preservation should be considered as the primary treatment when (a) the historic place’s materials, features and spaces are essentially intact and thus convey the historic significance without extensive repair or replacement; (b) depiction during a particular period in its history is not appropriate; and (c) a continuing or new use does not require extensive alterations or additions. Preservation tends to be the most cautious of the conservation treatments and retains the most materials. It is therefore most appropriate when heritage values related to physical materials dominate. A plan for Preservation should be developed before work is undertaken.
Rehabilitation involves the sensitive adaptation of a historic place or of an individual component for a continuing or compatible contemporary use, while protecting its heritage value. This is achieved through repairs, alterations and/or additions.

Three Standards relate to Rehabilitation and all three must be applied to a Rehabilitation project, in addition to the nine Preservation Standards.

Rehabilitation should be considered as the primary treatment when (a) repair or replacement of deteriorated features is necessary; (b) alterations or additions to the historic place are planned for a new or continued use; and (c) its depiction during a particular period in its history is not appropriate. Rehabilitation can revitalize historical relationships and settings and is therefore most appropriate when heritage values related to the context of the historic place dominate. A plan for Rehabilitation should be developed before work begins.

Restoration involves revealing, recovering or representing the state of a historic place or of an individual component, as it appeared at a particular period in its history, as accurately as possible, while protecting its heritage value.

Two Standards relate to Restoration, both of which must be applied to a Restoration project, in addition to the nine Preservation Standards.

Restoration may be considered as the primary treatment when (a) the significance of a historic place during a particular period in its history significantly outweighs the potential loss of existing materials, features and spaces from other periods; (b) there is substantial physical and documentary or oral evidence to accurately carry out the work; and (c) contemporary alterations and additions are not planned. Restoration is most appropriate when strong associative or symbolic heritage values have been obscured and can be revealed through removals, repairs and replacements based on detailed historical evidence. Before the work begins, a particular period (i.e., the restoration period) must be selected and justified, and a plan for Restoration should be developed.

A word of caution is in order: the removal of materials, features and spaces can result in considerable change to a historic place. The Restoration plan must therefore include a thorough analysis of the heritage value of the existing historic place as part of the justification for this potentially damaging treatment.
Standards

Definitions of the terms in italics can be found in the Introduction. The Standards are not presented in a sequential or hierarchical order, and as such, equal consideration should be given to each. All standards for any given type of treatment must therefore be applied simultaneously to a project.

General Standards (all projects)

1. Conserve the heritage value of a historic place. Do not remove, replace, or substantially alter its intact or repairable character-defining elements. Do not move a part of a historic place if its current location is a character-defining element.

2. Conserve changes to a historic place which, over time, have become character-defining elements in their own right.

3. Conserve heritage value by adopting an approach calling for minimal intervention.

4. Recognize each historic place as a physical record of its time, place and use. Do not create a false sense of historical development by adding elements from other historic places or other properties or by combining features of the same property that never coexisted.

5. Find a use for a historic place that requires minimal or no change to its character-defining elements.

6. Protect and, if necessary, stabilize a historic place until any subsequent intervention is undertaken. Protect and preserve archaeological resources in place. Where there is potential for disturbance of archaeological resources, take mitigation measures to limit damage and loss of information.

7. Evaluate the existing condition of character-defining elements to determine the appropriate intervention needed. Use the gentlest means possible for any intervention. Respect heritage value when undertaking an intervention.

8. Maintain character-defining elements on an ongoing basis. Repair character-defining elements by reinforcing their materials using recognized conservation methods. Replace in kind any extensively deteriorated or missing parts of character-defining elements, where there are surviving prototypes.

9. Make any intervention needed to preserve character-defining elements physically and visually compatible with the historic place, and identifiable upon close inspection. Document any intervention for future reference.

(continued)
Additional Standards Relating to Rehabilitation

10. Repair rather than replace character-defining elements. Where character-defining elements are too severely deteriorated to repair, and where sufficient physical evidence exists, replace them with new elements that match the forms, materials and detailing of sound versions of the same elements. Where there is insufficient physical evidence, make the form, material and detailing of the new elements compatible with the character of the historic place.

11. Conserve the heritage value and character-defining elements when creating any new additions to a historic place or any related new construction. Make the new work physically and visually compatible with, subordinate to and distinguishable from the historic place.

12. Create any new additions or related new construction so that the essential form and integrity of a historic place will not be impaired if the new work is removed in the future.

Additional Standards Relating to Restoration

13. Repair rather than replace character-defining elements from the restoration period. Where character-defining elements are too severely deteriorated to repair and where sufficient physical evidence exists, replace them with new elements that match the forms, materials and detailing of sound versions of the same elements.

14. Replace missing features from the restoration period with new features whose forms, materials and detailing are based on sufficient physical, documentary and/or oral evidence.
Guidelines for Archaeological Sites, Landscapes, Buildings, and Engineering Works

The Guidelines for Preserving, Rehabilitating and Restoring archaeological sites, landscapes, buildings and engineering works have been prepared to provide direction on how the Standards for the Conservation of Historic Places in Canada are to be interpreted and applied. They are intended for owners, managers and developers of historic places, conservation practitioners and contractors. They are also intended for project reviewers prior to and after treatment, if compliance with the Standards and Guidelines has been mandated.

Applying the Guidelines

As noted earlier, the Standards have been designed to be applied to all types of historic places included in the Canadian Register of Historic Places. The Guidelines, however, apply to specific resource types: archaeological sites, landscapes, buildings and engineering works.

The Guidelines are not meant to give case-specific advice or to address exceptions or rare instances. It is therefore recommended that the advice of qualified conservation professionals be obtained early in the planning stage of the project. Such professionals may include conservation architects, conservation engineers, conservation landscape architects, architectural historians, historians, archaeologists and others who have experience in working with historic places. For historic places imbued with spiritual or other non-material cultural values, persons recognized and accepted as competent in such matters should be consulted.

The Guidelines’ approaches to work, treatments and techniques that are consistent with the Standards for the Conservation of Historic Places in Canada are listed in the “Recommended” column on the left; those that are not appear in the “Not Recommended” column on the right.

The Guidelines are presented in ascending sequence of lesser to greater intervention — from documenting, to maintaining, to repairing, to replacing character-defining elements. Since the expressed objective of the Standards is to conserve the character of historic places, projects should focus on the first activities in the sequence of Guidelines, i.e., applying the standard of “minimal intervention” and resort to the last activities in the sequence only when essential functional goals cannot otherwise be met.

Preserving Elements

The Guidelines always begin with a recommendation on preserving elements that are important in defining the overall heritage value of the historic place. The heritage value may be defined by the form and detailing of materials, such as wood and metal, and of features, such as windows, vegetation, machinery and spatial relationships, as well as structural and mechanical systems; and by uses and cultural associations.

Next are recommendations about documenting the character-defining elements prior to beginning project work. This includes identifying their location, form and materials (and their function and relationships, where applicable), and analyzing them in order to gain a thorough understanding of the historic place and its components. An overall evaluation of their physical condition should always begin at this level.

Recommendations are then presented on protecting and maintaining elements, with an emphasis on non-destructive methods and daily, seasonal and cyclical tasks such as maintenance. Protection generally represents the least degree of intervention. For example, protection includes the maintenance of historic material through treatments such as rust removal, limited paint removal and the re-application of protective coatings; cyclical pruning, top-dressing and cleaning of drainage inlets or outlets; or installation of fencing, alarm systems and other preventive measures.

Then, recommendations are provided on retaining sound elements and elements that can be repaired, rather than removing or reconstructing them.
Recommendations on stabilizing fragile and deteriorated elements follow next. This typically involves interim structural reinforcement, protection from the weather and correction of any unsafe conditions, as may be required, until any additional work is undertaken. A limited amount of repair and replacement may be acceptable at this point for extensively deteriorated or missing parts of an element, if the repair focuses on using limited reinforcement or well-tested consolidants, or if the replacement is done “in kind” (i.e., with the same form, material and detailing as the existing), where there are surviving prototypes.

Each section on Preserving elements concludes with a recommendation to evaluate the overall physical condition of the element to determine whether more than protection, maintenance and limited repair or replacement in kind are required.

Repairing Elements

When the physical condition of character-defining elements warrants more than protection, maintenance, or limited repair and replacement in kind, repairing is recommended. Guidance for the repair of materials such as masonry, wood and metal begins with the least degree of intervention possible, such as patching, piecing-in, splicing, consolidating, or otherwise reinforcing or upgrading them according to recognized preservation methods.

In Restoration projects, all repair work should be unobtrusively dated to guide future research and treatment.

Replacing Elements

Following repair in the hierarchy of conservation interventions, guidance is provided for replacing all or part of a character-defining element (for example, a storefront, an interior staircase, or a diseased sentinel tree), if there is sufficient physical evidence to match the forms, materials and detailing of a sound version of the same element. Replacement may be required because an existing feature is so severely deteriorated or damaged that repair is not possible, or because a feature is missing entirely. In all cases where replacement is required, sound elements that may be part of a larger grouping should be preserved. For example, a few brackets in a cornice, a few windows in a factory, or

Minimally destructive testing techniques should be used to determine the strength of materials. For example, this in-place “push test” uses a calibrated hydraulic ram and a pressure gauge to measure the actual shear strength of a traditional brick wall, and thus its seismic resistance. A single brick beside the brick being tested is removed to accommodate the hydraulic ram (and is replaced in the wall after completion of the test).
a few plantings in a flowerbed may be salvageable, even though the overall character-defining element is severely damaged. Retaining even a small piece of the latter will sustain an important historic record, provide a point of reference for new work and enhance the richness of the site.

The specific guidance on replacement for Rehabilitation and Restoration projects is slightly different:

In a Rehabilitation project, replacing an existing feature that is beyond reasonable repair may be appropriate if its essential form and detailing are still evident. Replacing a feature that is missing but is known from physical, documentary and oral evidence may be appropriate; accepting the loss and not intervening is another possibility. (Where an important feature is missing, its replacement is always recommended in these Guidelines as the first, or preferred, course of action.) The approach for replacement work will depend on the overall design approach and design intentions for the historic place, and most particularly on achieving a visual and functional balance between the new work and the remaining historic “fabric.” In some cases, the preferred design approach will be replacement “in kind” (with the same form, material and detailing as the existing); in other cases, substitute forms, materials or detailing may be appropriate. In both cases, the replacement should be visually and physically compatible with the fabric and character of the historic place and, secondarily, should be distinguishable from the historic place. If the replacement is in kind, the work need only be distinguishable on close inspection; otherwise, it should be distinguishable at a glance to avoid creating a misleading or false historic appearance.

In a Restoration project, replacement, as a rule, should be done in kind. Re-creating earlier forms, materials, textures, finishes, colours and detailing, as well as patterns and relationships, can help to recover or represent a historic place as it appeared at a particular period in its history. Success is largely a question of accuracy, and this requires scrupulous attention to the physical, documentary and oral evidence, as well as careful monitoring of the replication process. The replacement work will normally be distinguishable only on close inspection, or as part of the project documentation. The source of the information (the physical evidence, such as paint traces, and the documentary and oral evidence, such as historic photographs or traditional knowledge) and the extent of the replacement (how much was replaced, and where was it replaced) should both be carefully documented. If there is insufficient physical, documentary and oral evidence to establish a reasonable level of accuracy, then Restoration is probably not an appropriate treatment.

Removing Existing Features from Other Periods

In a Restoration project, the goal is to depict the appearance of a historic place or an individual component as it appeared at a particular period in its history (usually the most significant). Thus, specific guidance is included on removing or altering existing features such as landforms, roof dormers or windows that do not represent the restoration period. (Since this can result in considerable change to a historic place, Restoration should be undertaken only when the place’s heritage value relates very specifically to a single period in its history.) Before such materials, features, spaces, or finishes from other periods are altered or removed, they should be documented to guide future research and treatment.

Alterations/Additions for a New Use

In a Rehabilitation project, some alterations to a historic place may be needed to assure its continued use. If this is the case, it is most important that such alterations do not obscure, radically change, or destroy character-defining materials, forms, spatial configurations, uses or cultural associations and meanings. Alterations required for the new use could include providing additional parking space, installing landscape drainage systems, cutting new entrances or windows on secondary building elevations, inserting an additional floor, installing an entirely new mechanical system, or creating an atrium or light well.

The construction of an exterior addition in a historic place may seem to be essential for the new use, but it is emphasized in the Guidelines that such new additions should be avoided, if possible, and considered only after it is determined that those needs cannot be met by altering secondary, i.e., non character-defining interior spaces. If, after a thorough evaluation of interior solutions, an exterior addition is still judged to be the only viable alternative, it should be designed and created so that the heritage value of the historic place is not radically changed and to ensure that its character-defining elements are not obscured, damaged, or destroyed. The addition should be physically and visually compatible with, subordinate to and distinguishable from the historic place, so that a false historical appearance is not created.

Additions and alterations to historic places are mentioned within specific sections of the Guidelines such as Landforms, Roofs, Structural Systems, etc., but are addressed in more detail in New Additions to Historic Places, in Section 4: Other Considerations.
Substitute Materials

Historic materials should be used whenever possible. Substitute materials — those products used to imitate historic materials — should be used only after all other options for repair and replacement in kind have been ruled out. Substitute materials are normally used only when the historic materials or craftsmanship are no longer available, when the original or existing materials are of a poor quality or are causing damage to adjacent materials, or when there are specific regulations that preclude the use of historic materials. Use of these materials should be limited, since replacement of historic materials on a large scale may jeopardize the integrity of a historic place.

Every means of repairing deteriorating historic materials or replacing them with identical materials should be examined before turning to substitute materials. Because there are so many unknowns regarding the long-term performance of substitute materials, their use should not be considered without a thorough investigation into the proposed materials, the manufacturer, the installer, the availability of specifications and the use of that material in a similar situation in a similar environment. The importance of matching the appearance and physical properties of historic materials and, thus, of finding a successful long-term solution cannot be overstated.

The long-term performance of many substitute materials is uncertain. This is why historic materials should be used whenever possible. Instead of repairing and repainting the wood elements of this character-defining balcony (original balcony above, altered balcony below), the existing wood structure was covered in metal and fiberglass cladding. The original colours that matched the remaining wood windows and details such as a drip moulding were lost. Materials that are considered “low-maintenance” are often used as new substitutes, although they may be less durable in the longer term.

Under certain circumstances, substitute materials may be appropriate. As part of a Rehabilitation project, new finials were designed based on remains of originals. The originals were fabricated of wafer thin galvanized metal soldered together. The substitute material used in the new design was plate aluminum.
Balancing Other Considerations

In a conservation project, there may be a need to strike a reasonable balance between health and safety, land use or other regulations and the conservation of the character-defining materials, forms, spatial configurations, uses and cultural associations or meanings of a historic place. Fulfilling the requirements set down in regulations such as by-laws and construction codes should include creative solutions that also preserve a historic place’s heritage value.

The Guidelines recommend that repairs or alterations should not radically change, obscure, damage or destroy character-defining elements in the process of meeting other requirements. Thus, actions such as seismic upgrading or abatement of lead paint and asbestos within a historic place require particular care if the heritage value is not to be adversely affected. In addition, alterations and new construction needed to meet requirements such as universal accessibility should respect heritage value and character-defining elements of the historic place. Even recognized preservation methods, if improperly applied (such as washing exterior masonry when there is a possibility of freezing temperatures), may cause or accelerate the physical deterioration of a historic place.

A general discussion on ways of addressing health and safety, accessibility, energy efficiency and ecological concerns while respecting heritage value is presented herein. Detailed recommendations on these issues can be found in Section 4, OTHER CONSIDERATIONS.

Health And Safety

In undertaking work on historic places, it is necessary to consider the impact that compliance with current health and safety codes (public health, occupational health, life safety, fire safety, electrical, seismic, structural and building codes) will have on a historic place’s heritage value. Special coordination with the proper code officials may be required. Securing required permits is best accomplished early in project planning. It is often necessary to look beyond the “letter” of code requirements to their underlying purpose; most modern codes allow for alternative approaches and reasonable variance to achieve compliance.

Some historic materials (insulation, lead paint, etc.) contain toxic substances that are potentially hazardous to people. Following careful investigation and analysis, some form of abatement may be required. All workers involved in the encapsulation, repair or removal of known toxic materials should be adequately trained and should wear proper personal protective gear. Finally, preventive and routine maintenance for historic places known to contain such materials should also be developed to include proper warnings and precautions.

Accessibility

Providing people of all ages, interests and capacities with broad, general access to heritage places — and ensuring that such access is accompanied by adequate psychological comfort and dignity — is a highly desirable and therefore a frequently mandated social goal. In general, the solutions that best balance accessibility needs with heritage values are those that enhance the use and appreciation of a property for everyone. Work should be carefully planned and undertaken so that damage to a historic place’s heritage value and character-defining elements is minimized: the objective is to provide the highest level of access with the lowest level of impact. To determine the most appropriate solutions to access problems, it is recommended that accessibility and conservation specialists, as well as affected users, be consulted early in the planning process.
Energy Efficiency

Some features of a historic place such as treed windbreaks, window shutters and porches can play an energy-conserving role. Therefore, prior to adapting or retrofitting historic places to make them more energy efficient, the first step should always be to identify and evaluate existing features to assess their inherent energy-conserving potential. Any decision to proceed with energy saving measures should include a step where the total environmental cost of these measures is weighed against the overall environmental costs of retaining the existing features. If it is determined that retrofitting measures are appropriate, such work then needs to be carried out with particular care to ensure that character-defining elements are not obscured, damaged, or destroyed.

Environmental Considerations

Modifications undertaken to comply with environmental objectives such as protecting a rare or endangered species’ nesting area should not result in the damage or loss of a historic place’s heritage value and character-defining elements. To determine the most appropriate solutions to meet environmental objectives, it is recommended that officials be consulted early in the planning process. In the case of environmentally motivated requirements, it may be possible to develop systems, methods, devices or technologies of equivalent or superior effectiveness to those prescribed by regulation so that damage to character-defining elements can be avoided.
Guidelines for Archaeological Sites

An archaeological site refers to physical evidence of past human activity found in a specific location on or below the ground, or under water. (A palaeontological site refers to the physical evidence of fossilized animals and plants; both types of evidence may be associated with the same location.) An archaeological site is comprised of features, structures and objects, including artefacts, soil, botanical samples, animal bones, pollen, or any specimen of archaeological interest. Identifying an archaeological site is a remarkable — and perhaps unique — opportunity to learn about the ancient and the not-so-ancient past of this country.

These Guidelines, which address archaeological sites, including their separate components, should not be used in isolation. There may be heritage value in the relationships between archaeological sites and landscapes, buildings or engineering works, and therefore, those sections of the Guidelines should also be consulted when undertaking a project. The intention is to protect ALL heritage values associated with the historic place.

Archaeology and the Law

Provinces and territories have laws that relate to exploration for and the discovery and disturbance of archaeological resources. These should be consulted before undertaking any work that could result in the disturbance of archaeological resources. It is a complex subject and providing precise instructions on how to evaluate, excavate, stabilize, monitor or generally manage archaeological sites in Canada lies beyond the scope of this document. For specific guidelines dealing with these activities, consult the appropriate permitting agency. Some general concepts, however, are common to all or almost all provincial and territorial legislation. These are explained in detail in Unearthing the Law: Archaeological Legislation on Lands in Canada (Parks Canada, 2000) and are summarized here.

The various laws related to archaeological sites apply not only to physical evidence in the ground and under water, but on the ground as well — and above the ground for old carvings in rock in British Columbia and Ontario or culturally modified trees in British Columbia. The laws also require governments and members of the private sector to plan for archaeology and to protect archaeological resources, whether discovered by accident or as part of a conscious research effort.

Accidental Discoveries

All the laws explain what to do in the event of accidental discoveries, involving either artefacts or human remains. In the event of the accidental discovery of human remains, the laws specify that all activities must be halted, the area secured and the police called. The police will determine whether the site is a crime scene or “archaeological,” and then contact the relevant authorities.

While human remains are, by law, managed separately from archaeological resources, respecting their association with archaeological resources, as well as their physical and interpretive context, is still very important. A prerequisite for any physical anthropology research on human remains is consultation with relatives and/or an existing cultural group(s) thought to have a direct relationship with the remains to be studied.

The laws are less explicit about what to do in the event of the accidental discovery of artefacts not involving human remains. In general, all work that could potentially threaten the site should be halted, the site secured and the responsible provincial, territorial or federal archaeological officials notified. Where there is any doubt as to whether a find is an archaeological object, it is best to obtain expert advice immediately.

Authorized Exploration

Under the laws of the provinces and territories, all archaeological exploration must be authorized. This includes scanning the land visually or with various kinds of equipment (e.g., metal detectors), though British Columbia, Alberta and Saskatchewan require a permit only if the applicant intends to dig or “disturb” the soil, or move or alter an archaeological object. Every province and territory has a governmental body with an established format for permit applications and for filing reports for authorized archaeological exploration. As part of the permit process, consultations with affected groups (such as Aboriginal people) may be stipulated.

The federal government also has various policies and departmental directives that support archaeological evaluation and interventions when projects could potentially disturb the land.
Recognized Archaeological Sites

A number of historic places in Canada are archaeological sites or include an archaeological component that is a character-defining element of the recognized historic place. General guidelines for maintaining the physical integrity of such archaeological sites are provided in the following pages. The focus of these guidelines is on Preservation; i.e., on documenting, stabilizing, protecting, maintaining and retaining the archaeological site. There are no guidelines provided for Restoring or Rehabilitating an archaeological site, as there are for historic landscapes, buildings and engineering works, since these treatments have limited and specific application in the field of archaeology.

Note: Protecting archaeological resources is required by provincial, territorial and federal law. Obtaining qualified advice on meeting the obligations spelled out in the various archaeological legislation, policies and directives is strongly recommended.
Archaeological sites in the context of these Guidelines are the physical traces of material culture left behind by people in the past. Examples include evidence of past human activity such as a stone tool flaking area, a butchering site, a fishing station or an industrial site; remains of human settlement such as a temporary shelter, building, trading post, agricultural settlement or village; vestiges of means of communication or transportation, such as a ship or dugout canoe; and the context in which these traces are found, including the stratigraphy and the spatial distribution of artefacts. These remnants of the past may be visible on the surface of the earth, or deeply buried, leaving no indication of their existence; or, partially or completely submerged in a lake, a river or the sea, like a shipwreck.

**Recommended**

*Preserving* archaeological sites that are important in defining the overall heritage value of the historic place.

*Documenting* and surveying the historic place and surroundings prior to beginning project work and, in particular, the zones where the terrain will be altered, in order to determine the potential impact on archaeological sites.

*Protecting and maintaining* the context of archaeological sites, including the stratigraphy and the spatial distribution of artefacts, in order to retain the associated scientific and research information for those sites.

Protecting archaeological sites in place by identifying, evaluating and treating the causes of deterioration, such as environmental erosion or tourism-generated traffic.

Providing proper drainage for terrestrial sites to ensure that water does not damage or destroy archaeological sites.

Minimizing disturbance of the terrain, thus reducing the possibility of damaging or destroying archaeological sites.

Protecting archaeological sites against unauthorized activity before work begins, such as erecting protective fencing or installing alarm systems that are keyed into local protection agencies.

**Not Recommended**

Removing or damaging archaeological sites that are important in defining the overall heritage value of the historic place, which diminishes the heritage value.

Damaging or destroying archaeological sites by failing to document and survey the historic place before beginning project work.

Disturbing the context of archaeological sites, thus compromising the associated scientific and research information for those sites.

Failing to undertake adequate measures to protect the archaeological sites in place from environmental or human damage.

Failing to maintain adequate drainage for terrestrial sites so that archaeological sites are damaged or destroyed; or alternatively, changing the terrain grading so that water no longer drains properly.

Introducing a use, activity, feature, or piece of equipment (such as on-site parking or heavy machinery) into areas where it will disturb or damage archaeological sites.

Allowing the historic place to remain unprotected so that archaeological sites are damaged or destroyed.
Recommended

**Retaining** features such as ground cover that help to protect archaeological sites.

Monitoring archaeological sites on a regular basis in order to maintain a stable environment.

Planning and carrying out any necessary investigation and salvage work using qualified personnel such as trained archaeologists. Such work would be undertaken only if the archaeological site must be disturbed, and then only after the required mitigation efforts have been explored.

Ensuring that there is a reasonable balance between the scientific and research knowledge that may be gained from excavating archaeological sites and the preservation of archaeological resources in place.

Protecting the physical integrity of archaeological objects and records during and after excavation.

Ensuring the proper long-term storage of archaeological objects related to the site in order to minimize their deterioration.

Not Recommended

Removing or altering protective features so that archaeological sites are exposed to an increased risk of damage or deterioration.

Failing to monitor archaeological sites on a regular basis, thus increasing the chances of a destructive change in the site’s environment going undetected and untreated.

After the required mitigation efforts have been explored, permitting unqualified personnel to perform salvage work and data recovery on archaeological sites, creating a situation where improper methodology results in the loss of important archaeological data or material.

Excavating archaeological sites to such an extent that the preservation of archaeological resources in place is seriously compromised, thus significantly reducing the potential for future research and presentation.

Failing to protect the physical integrity of archaeological objects and records during and after excavation.

Failing to provide proper long-term storage for archaeological objects.

The physical integrity of this excavated archaeological site at Fort Battleford, Saskatchewan was temporarily protected from accidental disturbance by covering the ground with plastic sheets and erecting a small barrier fence. As required by law, the archaeological exploration was authorized and a permit was obtained before excavation began.
Introduction

Guidelines for Landscapes

Landscapes in the context of these Guidelines are exterior spaces that have been assigned cultural (including spiritual) meaning, such as an Aboriginal sacred site, or have been deliberately altered in the past for aesthetic, cultural, or functional reasons, such as a city park, a cemetery or a backyard garden. Landscapes include land patterns, such as the Métis river lot system; landforms, such as hills, prairie or terraces; spatial organization, such as the relation of a house to a barn; and vegetation, such as trees, shrubs or herbaceous plants. They also include related circulation systems, such as paths, roads, parking lots, rail lines and rights-of-way or canals; water features such as lakes, streams, pools or fountains; built features such as light standards, fences, benches or statuary; and views or other visual relationships.

These Guidelines, which address landscapes, including their separate components, should not be used in isolation. There may be heritage value in the relationships between landscapes and archaeological sites, buildings or engineering works, and therefore, those sections of the Guidelines should also be consulted when undertaking a project. The intention is to protect ALL heritage values associated with the historic place.

Standards and Guidelines

Land Patterns

Recommended

**PRESERVING** land patterns — such as the overall arrangement and interrelationship of forests, meadows, water, topography, built features and other larger landscape components that are important in defining the overall heritage value of the landscape.

**Documenting** the overall pattern of the landscape; the size, configuration, proportion and relationship of its larger components, such as forests or fields; and its evolution and condition prior to beginning project work. Documentation also includes identifying the intangible values that contribute to the meaning of land patterns, such as associations from Aboriginal oral traditions.

Evaluating and understanding the local environmental context, including climate, prevailing winds, underlying topography and ecological processes.

**Protecting and maintaining** features that define land patterns by using non-destructive methods in daily, seasonal and cyclical tasks. This could include maintaining the topography, vegetation and structures that comprise the overall pattern of the landscape.

**Retaining** sound land patterns or deteriorated land patterns that can be repaired or rejuvenated.

**Repairing and stabilizing** deteriorated land pattern elements by structural reinforcement, weather protection, or correcting unsafe conditions, as required, until any additional work is undertaken. Repairs should be physically and visually compatible.

**Replacing in kind** extensively deteriorated or missing parts of land patterns where there are surviving prototypes. The new work should match the old in form and detailing.

Evaluating the overall condition of the landscape’s land patterns to determine whether more than protection, maintenance and limited repair or replacement in kind are required; i.e., if more extensive repairs to the land pattern elements will be necessary.

Not Recommended

Removing or radically changing land patterns that are important in defining the overall heritage value of the landscape.

Undertaking project work that will have an impact on character-defining land patterns without first documenting and understanding their characteristics, relationships, evolution, conditions, intangible values and environmental context.

Allowing land patterns to be altered through incompatible development or neglect.

Utilizing maintenance methods that destroy or obscure the landscape’s land patterns.

Replacing land patterns that can be repaired or rejuvenated.

Removing deteriorated land pattern elements that could be stabilized, repaired and conserved; or using untested consolidants and untrained personnel, thus causing further damage to fragile elements.

Replacing an entire land pattern element such as a forest when limited replacement of deteriorated and missing components is appropriate.

Using replacement material that does not match the historic land pattern element.

Failing to undertake adequate measures to protect the landscape’s land patterns.
**Recommended**

** Rehabilitating** land patterns, if an evaluation of their overall condition determines that more than preservation is required.

**Repairing or rejuvenating** extensively deteriorated or missing parts of features that define land patterns by using non-destructive methods and materials, such as regenerating a deteriorated meadow.

**Replacing in kind** an entire feature that defines a land pattern that is too deteriorated to repair, such as replanting a clear-cut woodlot.

**Not Recommended**

Failing to evaluate the overall condition of land patterns in order to determine the proper method of conservation.

Failing to undertake necessary repairs, resulting in the loss of land patterns.

Replacing a feature that defines land patterns when repair is possible.

Removing a feature that is beyond repair and not replacing it; or replacing it with a new feature that does not respect the land pattern.

The overall arrangement of landscape may best be appreciated from an aerial view or photograph. The land patterns created by the interrelationship of larger landscape components, such as the topography, cultivated fields and human settlements of Neubergthal, Manitoba, are often more obvious from this perspective.
The following REHABILITATION work has been highlighted to indicate that it involves a particularly complex technical or design aspect and should only be considered after the Preservation and Rehabilitation concerns listed above have been addressed.

### Recommended

**Designing for the Replacement of Missing Historic Features**

Designing and installing new features that respect or acknowledge historic land patterns. It may be a new design that is compatible with the style, era and character of the historic place; or a replica based on physical, documentary and oral evidence.

**Alterations/Additions for the New Use**

Designing new features when required by the new compatible use that do not obscure, damage or destroy character-defining land patterns, such as locating a new road to follow a forest edge.

Removing non-significant features that detract from or have altered the land patterns.

### Not Recommended

Introducing new features that are incompatible with the land patterns.

Creating a false history because the replacement feature is based on insufficient physical, documentary and oral evidence.

Adding a new feature that detracts from, damages or destroys character-defining land patterns, such as draining a character-defining wetland to create a residential subdivision.

Placing a new feature where it may cause damage to or is intrusive in land patterns, such as cutting a straight utility corridor through a forest with rolling topography.

Introducing a new feature that is incompatible in size, scale or design.

Removing historic features that are important in defining the land patterns, such as removing hedgerows that define field size.

### Additional Guidelines for Restoration Projects

**Recommended**

**Restoring** land patterns, if an evaluation of their overall condition determines that more than preservation is required; i.e., if repairs to land patterns from the restoration period will be necessary.

**Repairing or rejuvenating** declining features that define land patterns from the restoration period by using non-destructive methods.

**Replacing in kind** an entire feature from the restoration period that defines land patterns, which is too deteriorated to repair or rejuvenate, such as replanting in kind a historic orchard.

**Not Recommended**

Failing to evaluate the overall condition of land patterns in order to determine the proper method of conservation.

Replacing an entire feature from the restoration period that defines land patterns when repair or rejuvenation is possible; or using destructive repair or rejuvenation methods, thus causing further damage to fragile historic materials.

Removing a feature from the restoration period that is beyond repair and not replacing it; or replacing it with a new feature that does not respect land patterns.
The following RESTORATION work has been highlighted to indicate that it involves the removal or alteration of existing land patterns from periods other than the accepted restoration period; and the replacement of missing land patterns from the restoration period with all new materials. This work should only be considered after the Preservation and Restoration concerns listed above have been addressed.

Landforms

**Recommended**

Preserving landforms — such as naturally occurring hills, valleys, slopes, plains and other topographical features, as well as terraces, embankments, berms, swales and other human-engineered topographical changes to the underlying ground plane that are important in defining the overall heritage value of the landscape.

**Documenting** the elevation, slope, shape, orientation, contour, condition and function of landforms prior to beginning project work.

Evaluating the evolution of landforms over time, using archival resources such as plans and aerial photographs or, in their absence, archaeological analysis or oral history techniques, in order to understand the landforms and any cultural values associated with them.

Protecting and maintaining landforms by using non-destructive methods and daily, seasonal and cyclical tasks. This may include cleaning drainage systems or mowing vegetative cover.

Retaining sound landforms or deteriorated landforms that can be repaired or rejuvenated.

Repairing and stabilizing deteriorated landform elements by structural reinforcement and weather protection, or correcting unsafe conditions, as required, until any additional work is undertaken. Repairs should be physically and visually compatible.

Replacing in kind extensively deteriorated or missing parts of landforms when there are surviving prototypes. The new work should match the old in form and detailing.

Evaluating the overall condition of landforms to determine whether more than protection, maintenance and limited repair or replacement in kind are required; i.e., if more extensive repairs to landform elements will be necessary.

**Not Recommended**

Removing or radically changing the landform elements that are important in defining the overall heritage value of the landscape.

Undertaking project work that will have an impact on landforms without documenting the existing topographic variation, condition and function.

Undertaking project work without understanding its impact on historic landforms.

Failing to undertake regular preventive maintenance.

Utilizing maintenance methods that destroy or degrade landforms, such as using heavy equipment on steep or vulnerable slopes.

Replacing landforms that can be repaired or rejuvenated.

Removing deteriorated landform elements that could be stabilized, repaired and conserved; or using untested consolidants and untrained personnel, thus causing further damage to fragile elements.

Replacing an entire landform element such as a slope or terrace when limited replacement of deteriorated and missing components is appropriate.

Using replacement material that does not match the historic landform element.

Failing to undertake adequate measures to protect landforms.
Additional Guidelines for Rehabilitation Projects

**Recommended**

**Rehabilitating** landforms, if an evaluation of their overall condition determines that more than preservation is required.

**Repairing** declining landforms. This could include re-excavating a silted swale through appropriate regrading, or re-establishing an eroding agricultural terrace.

**Replacing** deteriorated landform materials and features by using the existing physical evidence of their form and composition. If using the same kind of material is not technically, economically or environmentally feasible, then a compatible substitute material may be considered. For example, eroded bunkers or ramparts in a battlefield could be re-established with a substitute soil mix that supports improved drainage and health and vigour of ground cover plant materials.

**Not Recommended**

Failing to evaluate the overall condition of the landscape's landforms in order to determine the proper method of conservation.

Destroying the shape, slope, elevation or contour of landforms when repair is possible.

Removing a landform feature that is deteriorated and not replacing it; or replacing it with a new feature that does not convey the same visual appearance (for example, changing stepped terracing to a graded slope).

Land forms can be natural, such as hills and plains, or they can be human-engineered. Dramatic examples of human-engineered landforms that define the overall character of a landscape are the early 20th century tailing fields in the Yukon’s Klondike Gold Fields.
The following REHABILITATION work has been highlighted to indicate that it involves a particularly complex technical or design aspect and should only be considered after the Preservation and Rehabilitation concerns listed above have been addressed.

### Recommended

**Designing for the Replacement of Missing Historic Features**

Designing and installing new landform features when the historic feature is completely missing. It may be a new design that is compatible with the shape, slope, elevation and contour of the historic landform (for example, recutting an earthen embankment that has slumped or eroded over time); or a replica based on physical, documentary and oral evidence.

### Not Recommended

Introducing a new landform feature that is incompatible in shape, slope, elevation, aspect and contour.

Creating a false history because the replacement feature is based on insufficient physical, documentary and oral evidence.

### Alterations/Additions for the New Use

Designing new landform features when required by the new use so that they are as unobtrusive as possible and assure the preservation of the historic topography. This could include incorporating existing low points in the landscape when designing and installing new drainage swales to protect historic landform features.

Placing a new feature where it may cause damage to or be incompatible with historic topography. This could include failing to provide proper drainage for a new feature, which results in the decline or loss of historic landforms.

Locating a new feature in such a way that it detracts from or alters the historic topography (for example, planting trees and shrubs that mask the austerity and visual drama of a steep, grassed embankment).

Introducing a new feature in an appropriate location, but making it visually incompatible in terms of its size, scale, design, materials, colour and texture, such as installing berms to screen a parking area, but using an incongruous topographic shape and contour.
Additional Guidelines for Restoration Projects

**Recommended**

**RESTORING** landforms, if an evaluation of their overall condition determines that more than preservation is required; i.e., if repairs to landforms from the restoration period will be necessary.

**Repairing** declining landforms from the restoration period.

**Replacing in kind** an entire landform feature from the restoration period that is too deteriorated to repair — if the overall form and detailing are still evident — using the physical evidence as a model to reproduce the feature.

**Not Recommended**

Failing to evaluate the overall condition of landforms in order to determine the proper method of conservation.

Replacing an entire landform feature from the restoration period when repair is possible; or using destructive repair methods, thus causing further damage to fragile historic materials.

Removing a deteriorated landform feature from the restoration period that is beyond repair and not replacing it; or replacing it with a new feature that does not convey the same appearance.

The following RESTORATION work has been highlighted to indicate that it involves the removal or alteration of existing landform features from periods other than the accepted restoration period; and the replacement of missing landform features from the restoration period with all new materials. This work should only be considered after the *Preservation and Restoration* concerns listed above have been addressed.

**Recommended**

**Removing Existing Features from Other Periods**

Removing or altering landform features dating from other periods, such as reshaping knolls to their appearance during the restoration period.

Documenting landforms from other periods prior to their alteration or removal.

**Recreating Missing Features from the Restoration Period**

Recreating a missing landform that existed during the restoration period, based on physical, documentary and oral evidence; for example, recreating a trench and fortification from the restoration period based on stratigraphic research.

**Not Recommended**

Failing to remove landscape features from another period, thus confusing the depiction of the landscape during the restoration period.

Failing to document landforms from other periods (which results in the loss of a valuable portion of the historic record) prior to removing or altering them.

Creating a landform that was part of the original design but was never executed, thus creating a false historic appearance; or creating a landform that was thought to have existed during the restoration period, but for which there is insufficient documentation.
Spatial Organization

**Recommended**

**Preserving** the spatial organization of the landscape — such as the arrangement in three dimensions of a landscape’s component elements, their relationship to each other and their relationship to the overall landscape — that is important in defining the overall heritage value of the landscape.

**Documenting** the spatial organization of the landscape, including the orientation, alignment, size, configuration and interrelationships of its component features; the relationship of features to the overall landscape; and its evolution and condition prior to beginning project work. Documentation also includes recognizing the functional basis for spatial arrangements, such as siting a farmhouse upwind from a barn, as well as identifying the intangible values that contribute to the spatial organization of the landscape, such as feng shui and other locational theories and practices.

**Protecting and maintaining** features that define spatial organization by using non-destructive methods in daily, seasonal and cyclical tasks.

**Retaining** sound spatial organizations or deteriorated spatial organizations that can be repaired or rejuvenated.

**Repairing and stabilizing** deteriorated elements of the landscape’s spatial organization by structural reinforcement or weather protection, or correcting unsafe conditions, as required, until any additional work is undertaken. Repairs should be physically and visually compatible.

**Replacing in kind** extensively deteriorated or missing parts of the landscape’s spatial organization where there are surviving prototypes. The new work should match the old in form and detailing.

Evaluating the overall condition of the landscape’s spatial organization to determine whether more than protection, maintenance and limited repair or replacement in kind are required; i.e., if more extensive repairs to the landscape’s spatial organization will be necessary.

**Not Recommended**

Removing or radically changing the spatial organization of elements and relationships that are important in defining the overall heritage value of the landscape.

Undertaking project work that will have an impact on the character-defining spatial organization of the landscape without first documenting and understanding their characteristics, relationships, evolution, conditions and intangible values.

Allowing spatial organization to be altered through incompatible development or neglect.

Utilizing maintenance methods that destroy or obscure the landscape’s spatial organization.

Replacing elements of the spatial organization that can be repaired or rejuvenated.

Removing deteriorated elements of the spatial organization that could be stabilized, repaired and conserved; or using untested consolidants and untrained personnel, thus causing further damage to fragile elements.

Replacing an entire element of the spatial organization when limited replacement of deteriorated and missing components is appropriate.

Using replacement material that does not match the landscape’s historic spatial organization.

Failing to undertake adequate measures to protect the landscape’s spatial organization.
### Additional Guidelines for Rehabilitation Projects

**Recommended**

**Rehabilitating** the spatial organization of the landscape, if an evaluation of its overall condition determines that more than preservation is required.

**Repairing or rejuvenating** extensively deteriorated or missing parts of features that define the spatial organization by using non-destructive methods and materials.

**Replacing in kind** an entire feature that defines the spatial organization that is too deteriorated to repair.

---

**Not Recommended**

Failing to evaluate the overall condition of the spatial organization of the landscape in order to determine the proper method of conservation.

Failing to undertake necessary repairs, resulting in the loss of spatial organization.

Replacing a feature that defines spatial organization when repair is possible.

Removing a feature that is beyond repair and not replacing it; or replacing it with a new feature that does not respect the spatial organization of the landscape.

---

The following REHABILITATION work has been highlighted to indicate that it involves a particularly complex technical or design aspect and should only be considered after the *Preservation* and *Rehabilitation* concerns listed above have been addressed.

**Recommended**

**Designing for the Replacement of Missing Historic Features**

Designing and installing new features that respect or acknowledge the historic spatial organization of the landscape. It may be a new design that is compatible with the character of the historic place; or a replica based on physical, documentary and oral evidence. For example, a new shrub planting could be reinstalled to define the edge of a missing historic boundary.

**Alterations/Additions for the New Use**

Designing new features when required by the new compatible use that do not obscure, damage or destroy the character-defining spatial organization.

Removing non-significant features that detract from or have altered the spatial organization of the landscape.

---

**Not Recommended**

Introducing new features that are incompatible with the spatial organization of the landscape.

Creating a false history because the replacement feature is based on insufficient physical, documentary and oral evidence.

Adding a new feature that detracts from or alters the spatial organization, such as constructing a new farmhouse wing on top of a kitchen garden.

Placing a new feature where it may cause damage to or is intrusive in the spatial organization.

Introducing a new feature that is incompatible in size, scale or design.

Removing historic features that are important in defining the spatial organization of the landscape.
Additional Guidelines for Restoration Projects

**Recommended**

**Restoring** the spatial organization of the landscape, if an evaluation of its overall condition determines that more than preservation is required; i.e., if repairs to the spatial organization from the restoration period will be necessary.

**Repairing or rejuvenating** declining features that define the spatial organization from the restoration period by using non-destructive methods.

**Replacing in kind** an entire feature from the restoration period that defines spatial organization that is too deteriorated to rejuvenate.

**Not Recommended**

Failing to evaluate the overall condition of the spatial organization of the landscape in order to determine the proper method of conservation.

Replacing an entire feature from the restoration period that defines spatial organization when repair or rejuvenation is possible; or using destructive repair or rejuvenation methods, thus causing further damage to fragile historic materials. This could include replacing a hedge when the existing hedge could have been pruned to generate new growth.

Removing a feature from the restoration period that is beyond repair and not replacing it; or replacing it with a new feature that does not respect the spatial organization.

The character-defining spatial organization of Motherwell Homestead in Saskatchewan was preserved when the landscape was restored. In particular, the orientation, alignment, size, configuration and interrelationships of its component features, including the formal tennis lawn and ornamental garden (foreground), the household vegetable garden (beside the implement shed) and the grain fields beyond, were carefully preserved.
The following RESTORATION work has been highlighted to indicate that it involves the removal or alteration of existing spatial organization features from periods other than the accepted restoration period; and the replacement of missing spatial organization features from the restoration period with all new materials. This work should only be considered after the Restoration and Preservation concerns listed above have been addressed.

| **Recreating Missing Features from the Restoration Period** | **Constructing a feature that was part of the original design or concept but was never executed, thus creating a false historic appearance; or constructing a feature of the spatial organization that was thought to have existed during the restoration period, but for which there is insufficient documentation.** |
| Recreating a missing feature important to the spatial organization of the landscape that existed during the restoration period, based on physical, documentary and oral evidence. | |
Vegetation

Recommended

**Preserving** vegetation — such as trees, shrubs, herbaceous plants, grasses, vines and other living plant material that is important in defining the overall heritage value of the landscape.

**Documenting** the extent and condition of broad cover types within forests, woodlands, meadows, planted and fallow fields, as well as the genus, species, caliber, height, colour, form and texture of significant individual plants prior to beginning project work.

Evaluating the evolution of a landscape’s vegetation over time, using archival resources such as plans and aerial photographs or, in their absence, archaeological analysis or minimally destructive techniques (e.g., resistivity testing to determine tree age) to understand the historic vegetation; and understanding any cultural values embedded in vegetation, such as the oak as a symbol of fortitude.

Analyzing the roles of people, animals and insects in producing and maintaining the existing vegetation.

**Protecting and maintaining** vegetation by using non-destructive methods and daily, seasonal and cyclical tasks. This could include pruning or establishing colonies of beneficial insects that protect fruit trees from pests.

Utilizing maintenance practices that respect the habit, form, colour, texture, bloom, fruit, fragrance, scale and context of historic vegetation.

Utilizing historic horticultural and agricultural maintenance practices when those techniques are critical to maintaining the character of the vegetation, such as the manual removal of dead flowers to ensure continuous bloom.

**Retaining** and perpetuating vegetation through the propagation of existing plants by preserving seed collections and genetic stock cuttings from existing materials to preserve the genetic pool.

**Stabilizing** deteriorated vegetation by structural reinforcement (e.g., using steel cables to support large branches) or correcting unsafe conditions, as required, until any additional work is undertaken.

Not Recommended

Removing or radically changing vegetation that is important in defining the overall character of the landscape.

Undertaking project work that will have an impact on character-defining vegetation without preparing a survey of existing plant material and its condition.

Undertaking project work such as indiscriminately clearing a woodland understory without understanding its impact on historic vegetation.

Undertaking project work without understanding the dynamics of the ecosystem and the human history of the historic place.

Failing to undertake preventive maintenance of vegetation.

Utilizing maintenance practices and techniques that are harmful to vegetation, such as insufficient or excessive irrigation.

Utilizing maintenance practices and techniques that fail to recognize the uniqueness of individual plant materials. Examples could include utilizing soil amendments that may alter flower colour, or poorly timed pruning and/or application of insecticide, which may alter fruit production.

Employing contemporary practices when traditional or historic practices can be used, such as utilizing untraditional harvesting practices when traditional practices are still feasible.

Failing to propagate vegetation from existing genetic stock, when few or no known sources or replacements are available.

Failing to stabilize deteriorated vegetation, thus putting it at risk of further deterioration.
### Standards and Guidelines

#### Recommended

**Replacing in kind** extensively deteriorated or missing parts of vegetation where there are surviving prototypes. The new plantings should match the old.

Evaluating the overall condition of vegetation to determine whether more than protection, maintenance and limited rejuvenation or replacement in kind are required; i.e., if more extensive repairs to vegetation elements will be necessary.

#### Not Recommended

Removing deteriorated vegetation that could be stabilized and conserved; or using untested techniques and untrained personnel, thus causing further damage to fragile elements.

Replacing vegetation when limited replacement of deteriorated and missing elements is appropriate.

Using replacement material that does not match the historic vegetation.

Failing to undertake adequate measures to protect vegetation.

### Additional Guidelines for Rehabilitation Projects

#### Recommended

**Rehabilitating** vegetation, if an evaluation of its overall condition determines that more than preservation is required.

**Rejuvenating** historic vegetation by corrective pruning, deep root fertilizing, aerating soil, renewing seasonal plantings and/or grafting onto historic genetic root stock.

**Replacing** a deteriorated or declining vegetation feature with a new feature based on the physical evidence of its composition, form and habit. If using the same kind of material is not technically, economically, or environmentally feasible, then a compatible substitute material may be considered. For example, a diseased sentinel tree in a meadow may be replaced with a disease resistant tree of similar type, form, shape and scale.

#### Not Recommended

Failing to evaluate the overall condition of vegetation in order to determine the proper method of conservation.

Replacing or destroying vegetation when rejuvenation is possible. This could include removing a deformed or damaged plant when corrective pruning could be successfully employed.

Removing deteriorated historic vegetation and not replacing it, or replacing it with a new feature that does not convey the same appearance, such as replacing a large, mature, declining canopy tree with a dwarf ornamental flowering tree.
The following REHABILITATION work has been highlighted to indicate that it involves a particularly complex technical or design aspect and should only be considered after the Preservation and Rehabilitation concerns listed above have been addressed.

**Recommended**

**Designing for the Replacement of Missing Historic Features**

Designing and installing new vegetation features when the historic features are completely missing. It may be a new design that is compatible with the habit, form, colour, texture, bloom, fruit, fragrance, scale and context of the historic vegetation (for example, replacing a lost vineyard with more hardy stock similar to the historic); or a replica based on physical, documentary and oral evidence.

**Not Recommended**

Introducing new replacement vegetation that is incompatible with the historic character of the landscape.

Creating a false history because the replaced feature is based on insufficient physical, documentary and oral evidence.

**Alterations/Additions for the New Use**

Designing a compatible new vegetation feature when required by the new use to assure the preservation of the historic character of the landscape. This could include designing and installing a hedge that is compatible with the historic character of the landscape to screen new construction.

Placing a new feature where it may cause damage to or is incompatible with the character of the historic vegetation (for example, constructing a new building that adversely affects the root systems of historic vegetation).

Locating any new vegetation feature in such a way that it detracts from or alters the historic vegetation. An example could include introducing exotic species in a landscape that was historically comprised of indigenous plants.

Introducing a new vegetation feature which is incompatible in terms of its habit, form, colour, texture, bloom, fruit, fragrance, scale or context.

The Saskatoon Forestry Farm and Zoo was originally operated by the Federal Government from 1914 as a tree nursery. Its original function was to grow and distribute tree seedlings to Prairie farmers for shelterbelts. Used as a park since 1966, the City of Saskatoon has preserved this character-defining linear row of trees that act as a windscreen for the site. To the right are seedlings waiting to be transplanted – part of a programme of retaining and perpetuating vegetation through the propagation of existing plants.
### Additional Guidelines for Restoration Projects

**Recommended**

RESTORING vegetation, if an evaluation of its overall condition determines that more than preservation is required; i.e., if repairs to vegetation from the restoration period will be necessary.

Rejuvenating declining vegetation from the restoration period by corrective pruning, deep root fertilizing, aerating the soil, renewing seasonal plantings and/or grafting onto historic stock.

Replacing in kind an entire vegetation feature from the restoration period that is declining or too deteriorated to repair — if the overall form, habit or composition is still evident — using the physical evidence as a model to reproduce the feature.

---

**Not Recommended**

Failing to evaluate the overall condition of vegetation in order to determine the proper method of conservation.

Replacing vegetation from the restoration period when rejuvenation is possible; or using destructive repair methods, thus causing further damage to fragile historic materials.

Removing vegetation from the restoration period that has deteriorated and not replacing it; or replacing it with a new feature that does not convey the same appearance.

The following RESTORATION work has been highlighted to indicate that it involves the removal or alteration of existing vegetation from periods other than the accepted restoration period; and the replacement of missing vegetation from the restoration period with all new materials. This work should only be considered after the Preservation and Restoration concerns listed above have been addressed.

#### Recommended

**Removing Existing Features from Other Periods**

Removing or altering vegetation dating from other periods, such as removing later foundation planting or old-field successional species.

Documenting vegetation from other periods prior to its alteration or removal. If possible, representative examples of this vegetation should be saved, cultivated and managed through seed collection and genetic stock cuttings to facilitate future research.

**Recreating Missing Features from the Restoration Period**

Recreating a missing vegetation feature that existed during the restoration period, based on physical, documentary and oral evidence. An example could include replanting crop types based on pollen analysis.

---

#### Not Recommended

Failing to remove vegetation from another period, thus confusing the depiction of the landscape during the restoration period.

Failing to document vegetation from other periods (which results in the loss of a valuable portion of the historic record) prior to removing or altering it.

Planting vegetation that was part of the original design but was never installed, thus creating a false historic appearance; or installing vegetation that was thought to have existed during the restoration period, but for which there is insufficient documentation.
### Viewscapes

#### Recommended

- **Preserving** viewscapes — such as vistas, views, aspects, visual axes and sight lines that may (or may not) be framed by vertical features or terminate in a focal point — that are important in defining the overall heritage value of the landscape.

- **Documenting** viewscapes — including their foreground, middle ground and background; landmarks, edges and skyline; prospects both to and from the historic place; and condition — prior to beginning project work.

- Evaluating the evolution of the viewscapes. This could include using historic photographs to understand how a viewscape may have changed or been lost over time.

- **Protecting and maintaining** viewscapes by using non-destructive methods and daily, seasonal and cyclical tasks, such as pruning to retain sight lines.

- **Stabilizing** deteriorated viewscapes by structural reinforcement or weather protection, or correcting unsafe conditions, as required, until any additional work is undertaken.

- Evaluating the overall condition of viewscapes to determine whether more than protection and maintenance are required; i.e., if repairs to viewscapes will be necessary.

#### Not Recommended

- Removing or radically changing viewscapes that are important in defining the overall character of the landscape.

- Undertaking project work that will have an impact on character-defining viewscapes without beginning a survey of characteristics and conditions.

- Undertaking project work without understanding its impact on viewscapes (for example, removing vegetation that was intended to frame an important viewscape from the historic place).

- Allowing viewscapes to be altered, obscured or lost through incompatible development or neglect.

- Utilizing maintenance methods that destroy or obscure character-defining viewscapes.

- Failing to stabilize deteriorated viewscapes, thus putting them at risk of further deterioration.

- Failing to undertake adequate measures to protect viewscapes.
Additional Guidelines for Rehabilitation Projects

**Recommended**

**Rehabilitating** viewscapes, if an evaluation of their overall condition determines that more than preservation is required.

**Repairing or rejuvenating** materials that define viewscapes by using non-destructive methods and materials when additional work is required, such as regenerating vegetation that frames important viewscapes.

**Replacing in kind** an entire feature that defines a viewscape that is too deteriorated to repair. If using the same kind of material is not technically, economically or environmentally feasible, then a compatible substitute material may be considered.

**Not Recommended**

Failing to evaluate the overall condition of viewscapes in order to determine the proper method of conservation.

Failing to undertake necessary repairs, resulting in the loss of character-defining viewscapes.

Replacing a feature that defines a viewscape when repair is possible.

Removing a feature that is beyond repair and not replacing it; or replacing it with a new feature that does not respect the viewscape.

Project work that will have an impact on character-defining viewscapes should not be started before completing a survey of their characteristics, conditions and interrelationships – such as the interrelationship between built features, water, vegetation and viewscapes at Hatley Park near Victoria – or before understanding any related cultural values (such as the still pool as a symbol of the quiet mind).
The following REHABILITATION work has been highlighted to indicate that it involves a particularly complex technical or design aspect and should only be considered after the Preservation and Rehabilitation concerns listed above have been addressed.

| Designing and creating new viewscapes when required by the new use. These should be compatible with the overall design of the landscape and not undermine its heritage value. | Creating a false history because the replacement viewscape is based on insufficient physical, documentary and oral evidence.  
Placing a new viewscape where it may cause damage to the overall character of the landscape. This could include inserting a focal point such as a building at the end of a character-defining vista that was traditionally terminated only by the sky.  
Introducing a new viewscape in an appropriate location, but making it incompatible in terms of its size, scale, design, materials, colour and texture, as when historical framing devices such as trees have been replaced by modern high-rise buildings.  
Locating a new feature in such a way that it detracts from or alters character-defining viewscapes (for example, obscuring a view to a prominent landmark by constructing a new wall). |
Additional Guidelines for Restoration Projects

**Recommended**

**Restoring** viewscapes, if an evaluation of their overall condition determines that more than preservation is required; i.e., if repairs to viewscapes from the restoration period will be necessary.

**Repairing** declining viewscapes from the restoration period by reinforcing the materials that comprise these features.

**Replacing in kind** an entire viewscape feature from the restoration period that is too deteriorated to repair — if the overall form, detailing and alignment are still evident — using the physical evidence as a model to reproduce the feature.

**Not Recommended**

Failing to evaluate the overall condition of viewscapes in order to determine the proper method of conservation.

Replacing an entire viewscape from the restoration period when repair, limited replacement and/or rejuvenation of deteriorated or missing components are appropriate; or using destructive repair methods, such as re-establishing the vegetative framing for a sight line by introducing exotic plants that call attention to themselves and thus detract from the vista.

Using a substitute material for a replacement part that neither conveys the same appearance of the surviving parts of the viewscape from the restoration period, nor is physically or environmentally compatible.

Removing a deteriorated viewscape feature from the restoration period that is irreparable and not replacing it; or replacing it with a new feature that does not convey the same appearance or reinforce the same view.

---

The following RESTORATION work has been highlighted to indicate that it involves the removal or alteration of existing viewscapes from periods other than the accepted restoration period; and the replacement of missing viewscapes from the restoration period with all new materials. This work should only be considered after the Preservation and Restoration concerns listed above have been addressed.

**Recommended**

**Removing Existing Features from Other Periods**

Removing or altering viewscapes or viewscape features dating from other periods.

Documenting viewscapes and viewscape features from other periods prior to their alteration or removal. If possible, selective examples of these materials or features should be stored to facilitate future research.

**Recreating Missing Features from the Restoration Period**

Recreating a missing viewscape that existed during the restoration period, based on physical, documentary and oral evidence.

**Not Recommended**

Failing to remove viewscapes or viewscape features from another period, thus confusing the depiction of the landscape during the restoration period.

Failing to document viewscapes or viewscape features from other periods (which results in the loss of a valuable portion of the historic record) prior to removing or altering them.

Creating a viewscape that was part of the original design but was never executed, thus creating a false historic appearance; or creating a viewscape that was thought to have existed during the restoration period, but for which there is insufficient documentation.
Circulation

**Recommended**

**Preserving** circulation systems — such as paths, walkways, parking lots, roads, highways, railways and canals — that are important in defining the overall heritage value of the landscape.

**Documenting** the alignment, surface treatment, edge, grade, materials, infrastructure and condition of circulation systems prior to beginning project work.

Evaluating the evolution of circulation systems. This could include using aerial photographs to understand a transportation corridor’s change from a two-lane road to a six-lane highway, or using archaeological techniques to locate pathways and roads not obvious from surface investigation; and understanding the cultural values that may be embedded in circulation systems, such as the journey as a metaphor for life.

**Protecting and maintaining** circulation systems by using non-destructive methods in daily, seasonal and cyclical tasks. This could include using rubberized blade edges on snow plows to prevent damage to stone curbs.

Utilizing maintenance practices that respect infrastructure; for example, periodically resetting paving stones to ensure a level road surface, rather than paving them over.

**Not Recommended**

Removing or radically changing circulation system elements that are important in defining the overall heritage value of the landscape.

Undertaking project work that will have an impact on character-defining circulation systems without preparing a survey of the character and condition of the circulation systems.

Undertaking project work without understanding the evolution of circulation systems. This could include changing road alignments and widths without a thorough evaluation of the historic road.

Failing to undertake preventive maintenance of circulation features and materials. This could include using a snow plow across a coarse-textured pavement.

Using materials such as salts and chemicals that can hasten the deterioration of surfaces.

Allowing infrastructure to become dysfunctional, such as permitting aquatic weeds to clog a canal and thus interfere with boat propellers.

Circulation systems largely define the character of the Sault-Ste. Marie Canal National Historic Site of Canada, where a historic canal, paths, roadways, parking lots and railways converge in a very small area. Protecting and maintaining this landscape requires careful management of the site’s circulation infrastructure.
### Standards and Guidelines

#### Additional Guidelines for Rehabilitation Projects

**Recommended**

- **Retaining** sound circulation systems or deteriorated circulation systems that can be repaired.
- **Repairing and stabilizing** deteriorated circulation system elements by structural reinforcement or weather protection, or correcting unsafe conditions, as required, until any additional work is undertaken. Repairs should be physically and visually compatible.
- **Replacing in kind** extensively deteriorated or missing parts of circulation systems where there are surviving prototypes. The new work should match the old in form and detailing.

**Not Recommended**

- Failing to evaluate the overall condition of circulation systems in order to determine the proper method of conservation.
- Replacing or rebuilding circulation systems that can be repaired.
- Removing deteriorated circulation system elements that could be stabilized, repaired and conserved; or using untested consolidants and untrained personnel, thus causing further damage to fragile elements.
- Replacing an entire circulation system element such as a stone curb when limited replacement of deteriorated and missing components is appropriate.
- Using replacement material that does not match the historic circulation system element.
- Failing to undertake adequate measures to protect the circulation systems.

**Recommended**

- **Rehabilitating** circulation systems, if an evaluation of their overall condition determines that more than preservation is required.
- **Repairing** surface treatment, materials and edges. Examples could include applying a traditional material to a stabilized subsurface base, or patching a canal’s retaining wall.
- **Replacing** a deteriorated circulation feature by using the physical evidence of its form, detailing and alignment to reproduce it. If using the same kind of material is not technically, economically or environmentally feasible, then a compatible substitute material may be considered (for example, replacing decayed timber edging in kind along a historic trail route).

**Not Recommended**

- Failing to evaluate the overall condition of circulation systems in order to determine the proper method of conservation.
- Replacing or destroying circulation features and materials when repair is possible (for example, not salvaging and reusing historic stone walk material).
- Removing a circulation feature that is deteriorated and not replacing it, or replacing it with a new feature that does not convey the same visual appearance. This could include replacing a set of stairs with a wall or terrace.
The following REHABILITATION work has been highlighted to indicate that it involves a particularly complex technical or design aspect and should only be considered after the Preservation and Rehabilitation concerns listed above have been addressed.

<table>
<thead>
<tr>

</tr>
</tbody>
</table>

**Alterations/Additions for the New Use**

Designing and installing compatible new circulation features when required by the new use to protect the historic character of the landscape. This could include controlling and limiting new curb cuts, driveways and intersections along a historic road.

Placing a new feature where it may cause damage to or is incompatible with the historic circulation, such as adding new driveways or intersections along a historic road.

Locating any new circulation feature in such a way that it detracts from or alters the historic circulation pattern (for example, installing a new bike path when an existing historic path can accommodate the new use).

Introducing a new circulation feature but making it incompatible in terms of its scale, alignment, surface treatment, width, edge treatment, grade, materials or infrastructure. An example could be installing a new parking lot in a non-significant location, but utilizing paving materials and patterns that are incongruous with the landscape’s historic character.
### Additional Guidelines for Restoration Projects

#### Recommended

**RESTORING** circulation systems, if an evaluation of their overall condition determines that more than preservation is required; i.e., if repairs to circulation systems from the restoration period will be necessary.

**Repairing** declining circulation features from the restoration period by reinforcing the materials that comprise these features. Repairs will also generally include the limited replacement — preferably in kind — of those extensively deteriorated or missing parts of features when there are surviving prototypes. The new work should be unobtrusively dated to guide future research and treatment.

**Replacing in kind** an entire circulation feature from the restoration period that is too deteriorated to repair — if the overall form, detailing and alignment are still evident — using the physical evidence as a model to reproduce the feature. The new work should be unobtrusively dated to guide future research and treatment.

#### Not Recommended

Failing to evaluate the overall condition of circulation systems in order to determine the proper method of conservation.

Replacing an entire circulation feature from the restoration period when repair of materials and limited replacement of deteriorated or missing components are appropriate; or using destructive repair methods, thus causing further damage to fragile historic materials.

Removing a deteriorated circulation feature from the restoration period that is irreparable and not replacing it; or replacing it with a new feature that does not convey the same appearance; or failing to document the new work.

The following RESTORATION work has been highlighted to indicate that it involves the removal or alteration of existing circulation features from periods other than the accepted restoration period; and the replacement of missing circulation features from the restoration period with all new materials. This work should only be considered after the Preservation and Restoration concerns listed above have been addressed.

#### Recommended

**Removing Existing Features from Other Periods**

Removing or altering circulation features, such as a later parking lot, dating from other periods.

Documenting circulation features from other periods prior to their alteration or removal. If possible, representative features should be stored for future research.

**Recreating Missing Features from the Restoration Period**

Recreating a missing circulation feature that existed during the restoration period, based on physical, documentary and oral evidence, such as duplicating paving patterns based on surviving prototypes.

#### Not Recommended

Failing to remove circulation features from another period, thus confusing the depiction of the landscape during the restoration period.

Failing to document circulation features from other periods (which results in the loss of a valuable portion of the historic record) prior to removing or altering them.

Constructing a circulation feature that was part of the original design but was never executed, thus creating a false historic appearance; or creating a circulation feature that was thought to have existed during the restoration period, but for which there is insufficient documentation.
Water Features

**Recommended**

**Preserving** water features and water sources — such as natural ocean fronts, lakes, ponds, sloughs, rivers and streams, as well as constructed pools, dugouts and fountains — that are important in defining the overall heritage value of the landscape.

**Documenting** water features before beginning project work. Documentation should include shape, edge and bottom condition/material; water level, sound and reflective qualities; associated plant and animal life; water quality; natural erosion and flooding; and condition.

Evaluating the evolution of water features over time and their role in the overall hydrology of the landscape. This could include using archaeological techniques to determine the changing path of a watercourse using infrared aerial photographs to map hydrological patterns; and understanding the cultural values embedded in water features, such as the still pool as a symbol of the quiet mind.

**Protecting and maintaining** water features by using non-destructive methods in daily, seasonal and cyclical tasks, such as cleaning leaf litter or mineral deposits from drainage inlets or outlets.

**Not Recommended**

Removing or radically changing water feature elements that are important in defining the overall heritage value of the landscape. Examples could include placing a section of stream in a culvert or concrete channel, or filling in a farm dugout.

Undertaking project work that will have an impact on character-defining water features and associated hydrology without beginning a survey of the character and condition of the water features.

Undertaking project work without understanding the evolution of water features.

Failing to undertake preventive maintenance of water features and materials.

Utilizing maintenance methods that destroy or degrade water features (for example, using harsh chemical additives for maintaining water quality).

Beaver Lake is a man-made pond that has become a central feature in Montreal’s Mount Royal Park, part of Quebec’s first natural and historic district. Its intense use puts great pressure on its condition. Protecting and maintaining water features includes daily, seasonal and cyclical tasks. Maintaining a constructed water feature’s mechanical, plumbing and electrical systems is essential to ensure the appropriate depth and quality of water.
Maintaining a constructed water feature’s mechanical, plumbing and electrical systems to ensure appropriate depth of water or direction of flow. This could include maintaining the timing and sequencing mechanisms for irrigation systems.

**Retaining** sound water features or deteriorated water features that can be repaired or rejuvenated.

**Repairing and stabilizing** deteriorated water feature elements by structural reinforcement or weather protection, or correcting unsafe conditions, as required, until any additional work is undertaken. Repairs should be physically and visually compatible.

**Replacing in kind** extensively deteriorated or missing parts of water features where there are surviving prototypes. The new work should match the old in form and detailing.

Evaluating the overall condition of water features to determine whether more than protection, maintenance and limited repair or replacement in kind are required; i.e., if more extensive repairs to water features will be necessary.

Allowing mechanical systems to fall into a state of disrepair, resulting in the degradation of the water feature. For example, algae could develop if a pool’s aeration system is not maintained.

Replacing or rebuilding water features that can be repaired or rejuvenated.

Removing deteriorated water feature elements that could be stabilized, repaired and conserved; or using untested consolidants and untrained personnel, thus causing further damage to fragile elements.

Replacing an entire water feature element such as a fountain when limited replacement of deteriorated and missing components is appropriate.

Using replacement material that does not match the historic water feature element.

Failing to undertake adequate measures to protect water features.

### Additional Guidelines for Rehabilitation Projects

<table>
<thead>
<tr>
<th><strong>Recommended</strong></th>
<th><strong>Not Recommended</strong></th>
</tr>
</thead>
<tbody>
<tr>
<td><strong>REHABILITATING</strong> water features, if an evaluation of their overall condition determines that more than preservation is required.</td>
<td>Failing to evaluate the overall condition of water features in order to determine the proper method of conservation.</td>
</tr>
<tr>
<td><strong>Repairing</strong> water features by reinforcing materials or augmenting mechanical systems. Examples could include patching a crack in a pond liner or repairing a failed pump mechanism.</td>
<td>Replacing or removing water features or systems when repair is possible, such as abandoning a silted-in retention pond.</td>
</tr>
<tr>
<td><strong>Replacing</strong> a deteriorated water feature by using the existing physical evidence of its form, depth and detailing to reproduce it. If using the same kind of material is not technically, economically or environmentally feasible, then a compatible substitute material may be considered (for example, replacing a lead pond liner with one made of plastic).</td>
<td>Removing a water feature that is irreparable and not replacing it, or replacing it with a new feature that does not convey the same appearance. This could include replacing a single orifice nozzle with a spray nozzle, thus changing a fountain’s historic character from a singular stem of water to a mist-like stream.</td>
</tr>
</tbody>
</table>
The following REHABILITATION work has been highlighted to indicate that it involves a particularly complex technical or design aspect and should only be considered after the Preservation and Rehabilitation concerns listed above have been addressed.

### Recommended

**Designing for the Replacement of Missing Historic Features**

Designing and installing a new water feature when the historic feature is completely missing. It may be a new design that is compatible with the style, era and character of the historic place (for example, a lost irrigation feature may be replaced by using materials that convey the same appearance); or a replica based on physical, documentary and oral evidence.

### Not Recommended

Introducing a new design that is inconsistent with the style, era and overall historic character of the landscape, such as replacing a natural pond with a manufactured pool.

Creating a false history because the replaced feature is based on insufficient physical, documentary and oral evidence.

### Alterations/Additions for the New Use

Designing and installing a compatible new water feature when required by the new use to assure the preservation of the historic character of the landscape. An example could include siting a new retention basin in a secondary or non-significant space in the landscape.

### Not Recommended

Placing a new water feature where it may cause damage to or is incompatible with the historic character, such as locating a baroque fountain within a picturesque garden.

Locating any new water feature in such a way that it detracts from or alters the historic character of the landscape (for example, installing a “period” fountain where one never existed).

Introducing a new water feature that is in an appropriate location, but is visually incompatible in terms of its shape, edge and bottom condition/material; or water level, movement, sound and reflective quality. An example could include introducing a wading pool in a non-significant space, but utilizing non-traditional materials and colours.

### Additional Guidelines for Restoration Projects

**Recommended**

RESTORING water features, if an evaluation of their overall condition determines that more than preservation is required; i.e., if repairs to water features from the restoration period will be necessary.

**Repairing** deteriorated water features from the restoration period by reinforcing the materials that comprise these features. Repairs will also generally include the limited replacement — preferably in kind — of those extensively deteriorated or missing parts of features when there are surviving prototypes. The new work should be unobtrusively dated to guide future research and treatment.

**Not Recommended**

Failing to evaluate the overall condition of water features in order to determine the proper method of conservation.

Replacing an entire water feature from the restoration period when repair of materials and limited replacement of deteriorated or missing components are appropriate; or using destructive repair methods, thus causing further damage to fragile historic materials.

Using a substitute material for the replacement part that neither conveys the same appearance as the surviving parts of the water feature from the restoration period, nor is physically or environmentally compatible.
**Recommended**

*Replacing in kind* an entire water feature from the restoration period that is too deteriorated to repair — if the overall form, depth and detailing are still evident — using the physical evidence as a model to reproduce the feature. The new work should be unobtrusively dated to guide future research and treatment.

---

**Not Recommended**

Removing a deteriorated water feature from the restoration period that is irreparable and not replacing it; or replacing it with a new feature that does not convey the same appearance; or failing to document the new work.

---

The following RESTORATION work has been highlighted to indicate that it involves the removal or alteration of existing water features from periods other than the accepted restoration period; and the replacement of missing water features from the restoration period with all new materials. This work should only be considered after the Preservation and Restoration concerns listed above have been addressed.

<table>
<thead>
<tr>
<th><strong>Recommended</strong></th>
<th><strong>Not Recommended</strong></th>
</tr>

## Built Features

### Recommended

**Preserving** built features — such as gazebos, grottoes, bridges, fences, benches, light standards, drinking fountains, playground equipment, statuary and other constructed amenities, as well as culturally significant objects such as inukshuks — that are important in defining the overall heritage value of the landscape.

*Documenting* the condition, materials and surroundings of built features and the relationship of these features to each other, prior to beginning project work.

Evaluating the evolution of built features over time. Examples could include using historic aerial photographs to understand the relationship of windmills, silos and water troughs in a ranch compound, or the placement of light standards and benches along park paths; and understanding the cultural values embedded in built features such as inukshuks.

**Protecting and maintaining** built features by using non-destructive methods and daily, cyclical and seasonal tasks. This may include limited rust or paint removal and reapplication of protective coating systems in kind (for example, painting metal wrought iron fences, or repointing masonry to match existing mortar material, colour and profile).

**Retaining** sound built features or deteriorated built features that can be repaired.

Retaining the relationships between the landscape and its built features.

**Repairing and stabilizing** deteriorated built feature elements by structural reinforcement or weather protection, or correcting unsafe conditions, as required, until any additional work is undertaken. Repairs should be physically and visually compatible.

**Replacing in kind** extensively deteriorated or missing parts of built features where there are surviving prototypes. The new work should match the old in form and detailing.

### Not Recommended

Removing or radically changing built features that are important in defining the overall heritage value of the landscape.

Undertaking project work that will have an impact on character-defining built features without beginning a survey of conditions, materials, surroundings and interrelationships.

Undertaking project work without understanding the evolution of built features.

Failing to undertake preventive maintenance for built features, resulting in their damage or loss. An example could include failing to stop water infiltration on roofs and in foundations.

Utilizing maintenance practices and materials that are harsh, abrasive or unproven, for example using aggressive and potentially damaging cleaning methods such as grit blasting on wood, brick or soft stone, or using harsh chemicals on masonry or metals.

Replacing or rebuilding built features that can be repaired.

Removing or relocating built features or objects, such as removing stones that are integral to an Aboriginal sacred site, thus diminishing or destroying the relationship between the landscape and these features.

Removing deteriorated built feature elements that could be stabilized, repaired and conserved; or using untested consolidants and untrained personnel, thus causing further damage to fragile elements.

Replacing an entire built feature element when limited replacement of deteriorated and missing components is appropriate.

Using replacement material that does not match the historic built feature element.
Standards and Guidelines

**Recommended**

Evaluating the overall condition of built features to determine whether more than protection, maintenance and limited repair or replacement in kind are required; i.e., if more extensive repairs to structures, furnishings or objects will be necessary.

**Not Recommended**

Failing to undertake adequate measures to protect the landscape’s built features.

### Additional Guidelines for Rehabilitation Projects

**Recommended**

**Rehabilitating** built features, if an evaluation of their overall condition determines that more than preservation is required.

**Repairing** features and materials of buildings, structures, furnishings or objects by reinforcing historic materials. Examples could include returning a children’s swing to good working order or reshaping a section of a deformed play structure.

**Replacing** a deteriorated built feature by using the existing physical evidence of its form, material and detailing to reproduce it. If using the same kind of material is not technically, economically or environmentally feasible, then a compatible substitute material may be considered, for example replacing redwood decking with wood from a less endangered tree species such as cedar.

**Not Recommended**

Failing to evaluate the overall condition of built features in order to determine the proper method of conservation.

Replacing or destroying a feature of structures, furnishings or objects when repair is possible. Examples could include replacing a pavilion’s tile roof with physically or visually incompatible roofing, or removing a non-working historic light fixture instead of rewiring it.

Removing and not replacing a built feature that is deteriorated, or replacing it with a new feature that does not convey the same visual appearance. An example could include removing a wooden rustic footbridge and replacing it with a concrete bridge.

---

*In addition to protecting and maintaining sound character-defining built features and retaining deteriorated built features that can be repaired, Preservation recommends retaining the relationships between the landscape and its built features. The open space surrounding this rustic gazebo is a character-defining aspect of this landscape.*
The following REHABILITATION work has been highlighted to indicate that it involves a particularly complex technical or design aspect and should only be considered after the Preservation and Rehabilitation concerns listed above have been addressed.

### Recommended

**Designing for the Replacement of Missing Historic Features**

Designing and installing new built features when the historic features are missing. It may be a new design that is compatible with the style, era and character of a historic place (this could include replacing a picnic shelter with one of a new compatible design); or a replica based on physical, documentary and oral evidence.

### Not Recommended

Introducing a new design that is inconsistent with the style, era and overall historic character of the landscape, such as replacing a lost wooden fence with a chain-link fence.

Creating a false history because the replaced feature is based on insufficient physical, documentary and oral evidence.

### Alterations/Additions for the New Use

Designing and installing a new built feature when required by the new use, which is compatible with the preservation of the historic character of the landscape. Examples could include constructing a new farm outbuilding, utilizing traditional building materials, or installing appropriately scaled and detailed signs.

Placing a new built feature where it may cause damage to or is incompatible with the historic character of the landscape, such as constructing a new maintenance facility in or near a character-defining space.

Locating a new built feature in such a way that it detracts from or alters the historic character of the landscape, such as locating a gazebo in an open space that has always been a simple grassed area.

Introducing a new built feature in an appropriate location, but making it visually incompatible in mass, scale, form, features, materials, texture or colour. This could include constructing a visitors' centre that is incompatible with the historic character of the landscape.
**Recommended**

**Restoring** built features, if an evaluation of their overall condition determines that more than preservation is required; i.e., if repairs to built features from the restoration period will be necessary.

**Repairing** deteriorated built features from the restoration period by reinforcing the materials that comprise these features. Repairs will also generally include the limited replacement — preferably in kind — of those extensively deteriorated or missing parts of features when there are surviving prototypes such as roof features, windows, bollards and signs. The new work should be unobtrusively dated to guide future research and treatment.

**Replacing in kind** an entire built feature from the restoration period that is too deteriorated to repair — if the overall form, material and detailing are still evident — using the physical evidence as a model to reproduce the feature. The new work should be unobtrusively dated to guide future research and treatment.

**Not Recommended**

Failing to evaluate the overall condition of built features in order to determine the proper method of conservation.

Replacing an entire structure, furnishing or object from the restoration period when repair of materials and limited replacement of deteriorated or missing components are appropriate; or using destructive repair methods, thus causing further damage to fragile historic material.

Using a substitute material for the replacement part that neither conveys the same appearance as the surviving parts of the structure, furnishing or object from the restoration period, nor is physically or environmentally compatible.

Removing a deteriorated built feature from the restoration period that is irreparable and not replacing it; or replacing it with a new feature that does not convey the same appearance; or failing to document the new work.
The following RESTORATION work has been highlighted to indicate that it involves the removal or alteration of existing built features from periods other than the accepted restoration period; and the replacement of missing built features from the restoration period with all new materials. This work should only be considered after the Preservation and Restoration concerns listed above have been addressed.

| **Recreating Missing Features from the Restoration Period** | |
| Recreating a missing built feature that existed during the restoration period, based on physical, documentary and oral evidence, such as duplicating a corn crib from an existing prototype. | Constructing a built feature that was part of the original design but was never executed, thus creating a false historic appearance; or constructing a built feature that was thought to have existed during the restoration period, but for which there is insufficient documentation. |
Guidelines for Buildings

Buildings in the context of these Guidelines include structures created in the past to shelter activities related to habitation, business or social functions, including houses, apartment buildings, hotels and other residential buildings; stores, offices, warehouses and other commercial buildings; auditoriums, stadiums, town halls, court houses, schools, places of worship; and other recreational and institutional buildings. These structures are not limited by size, material, occupancy or construction type.

These Guidelines, which address buildings, including their separate components, should not be used in isolation. There may be heritage value in the relationships between buildings and archaeological sites, landscapes or engineering works, and therefore, those sections of the Guidelines should also be consulted when undertaking a project. The intention is to protect ALL heritage values associated with the historic place.

2- Vancouver, British Columbia, © Guy Masson, PWGSC, 2000
3- Port Edward, British Columbia, © Jean-Pierre Jérôme, Parks Canada, 1997
4- Manitoulin Island, Ontario, © Gordon Fulton, 1998
Exterior Wood
Clapboard, weatherboard, shingles, logs and other wooden elements

**Recommended**

**Preserving** exterior wood features—such as siding, corner boards, brackets, columns, window and door surrounds or architraves, cornices, pediments and balustrades; and their paints, finishes and colours— that are important in defining the overall heritage value of the building.

**Documenting** the form, type and colour of coatings such as paint; and the condition of exterior wood features prior to beginning project work.

**Protecting and maintaining** exterior wood elements by preventing water penetration and by maintaining proper drainage so that water or organic matter is not allowed to stand on flat, horizontal surfaces or accumulate in decorative features.

Inspecting painted exterior wood surfaces to determine whether repainting is necessary or if cleaning is all that is required.

Retaining coatings such as paint that help protect the exterior wood from moisture and ultraviolet light. Paint removal should be considered only where there is paint surface deterioration and as part of an overall maintenance program that involves repainting or applying other protective coatings in kind.

Removing damaged or deteriorated paint to the next sound layer using the gentlest method possible (scraping and sanding by hand), then repainting in kind.

**Not Recommended**

Removing or radically changing exterior wood elements that are important in defining the overall heritage value of the building.

Undertaking project work that will have an impact on character-defining exterior wood elements without first documenting their existing character and condition.

Failing to identify, evaluate and treat the causes of exterior wood deterioration, including faulty flashing, leaking gutters, cracks and holes in siding, deteriorated caulking in joints and seams, plant material growing too close to wood surfaces, or insect or fungus infestation.

Removing paint that is firmly adhering to and thus protecting exterior wood surfaces.

Stripping paint or other coatings to reveal bare wood, thus exposing historically coated surfaces to the effects of accelerated weathering.

Using destructive paint removal methods such as propane or butane torches, sandblasting or water-blasting. These methods can irreversibly damage exterior woodwork or cause catastrophic fires.

Maximizing the retention of character-defining materials and features is the primary goal of Preservation, as demonstrated in this photograph. Work on this wooden warehouse consisted primarily of minor repairs to the foundation skirting and limited replacement of deteriorated material. The new wood will be left to weather to the same appearance as the old.
Recommended

Using electric hot-air guns carefully on decorative wood elements and electric heat plates on flat wood surfaces when paint is so deteriorated or so thick that total removal is necessary prior to repainting.

Using chemical strippers primarily to supplement other methods such as hand scraping, hand sanding and the thermal devices recommended above. Detachable wooden elements such as shutters, doors and columns may be chemically dip-stripped if proper safeguards are taken.

Creating conditions that are unfavourable to the growth of fungus, such as eliminating unintentional entry points for water, drying out the structure by opening vents, removing piled up earth resting against the building and applying a chemical preservative treatment using recognized preservation methods.

Applying compatible paint coating systems following proper surface preparation, such as washing with trisodium phosphate.

Repainting with colours that are appropriate to the building and district.

Applying chemical preservatives to exterior wood elements such as beam ends or outriggers that are exposed to decay hazards and are traditionally unpainted.

Inspecting buildings to determine the reason(s) for any damage or degradation, such as abrasion, animal gnawing (e.g., rodents), fungal decay or insect infestation (e.g., beetles, horntails, wood borers, carpenter ants, carpenter bees, wasps, termites and weevils).

Treating the deterioration of log buildings from abrasion or animals by isolating, insofar as possible, the building from the source of deterioration, such as blocking wind-borne sand and grit with a windbreak, or putting a wire mesh screen over floor joists in a crawlspace to thwart rodents.

Treating active infestations of insects by first identifying the type of insect and then implementing a program of elimination appropriate to that insect. If using pesticides, confirm that the chemical is registered for the intended purpose with Agriculture and Agri-Food Canada and follow the manufacturer’s product and application instructions. Fumigation should be done only by a licensed applicator.

Not Recommended

Using thermal devices improperly so that the woodwork is scorched.

Failing to have a fire extinguisher nearby when using thermal devices.

Failing to neutralize the wood thoroughly after using chemicals so that new paint does not adhere.

Allowing detachable wood elements to soak too long in a caustic solution so that the wood grain is raised and the surface roughened.

Stripping character-defining painted exterior wood surfaces to bare wood, then applying clear finishes or stains in order to create a “natural” look.

Stripping paint or varnish to bare wood rather than repairing or reapplying the same finish (e.g., a grained finish) to an exterior wood element such as a front door.

Failing to follow the manufacturer’s product and application instructions when repainting exterior woodwork.

Using new colours that are inappropriate to the building or district.

Using chemical preservatives such as creosote or copper naphthanate, because if they have not been used historically, they can change the appearance of exterior wood elements.

Undertaking remedial project work on log buildings without first identifying the actual cause(s) of damage or degradation.

Neglecting to treat known conditions that threaten buildings, such as abrasion, animal gnawing, fungal decay or insect infestation, thus putting them at risk of further deterioration.
Recommended

Taking into account the settlement rate of a building when augmenting or reinforcing its structural components, so that the new components settle at the same rate.

Retaining sound exterior wood or deteriorated exterior wood that can be repaired.

Repairing and stabilizing deteriorated exterior wood elements by structural reinforcement, weather protection, or correcting unsafe conditions, as required, until any additional work is undertaken. Repairs should be physically and visually compatible.

Replacing in kind extensively deteriorated or missing parts of exterior wood elements where there are surviving prototypes. The new work should match the old in form and detailing.

Evaluating the overall condition of the exterior wood to determine whether more than protection, maintenance and limited repair or replacement in kind are required; in other words, if more extensive repairs to wood elements will be necessary.

Additional Guidelines for Rehabilitation Projects

Recommended

REHABILITATING an exterior wood element, if an evaluation of its overall condition determines that more than preservation is required.

Repairing exterior wood elements by patching, piecing-in, consolidating or otherwise reinforcing the wood using recognized preservation methods. Repair may also include the limited replacement in kind — or with a compatible substitute material — of those extensively deteriorated or missing parts of elements where there are surviving prototypes such as brackets, moulding or sections of siding.

Replacing in kind an entire exterior wood element that is too deteriorated to repair — if the overall form and detailing are still evident — using the physical evidence as a model to reproduce the element. Examples of wood elements include a cornice, entablature, or balustrade. If using the same kind of material is not technically or economically feasible, then a compatible substitute material may be considered.

Not Recommended

Structurally augmenting or reinforcing a building with components that do not have a similar rate of settlement.

Replacing wood elements that can be repaired.

Removing deteriorated exterior wood elements that could be stabilized, repaired and conserved; or using untested consolidants and untrained personnel, thus causing further damage to fragile elements.

Replacing an entire wood element such as a cornice when limited replacement of deteriorated and missing components is appropriate.

Using replacement material that does not match the historic wood element.

Failing to undertake adequate measures to protect exterior wood elements.

Failing to evaluate the overall condition of an exterior wood element in order to determine the appropriate method of conservation.

Replacing an entire wood element such as a cornice or wall when repair of the wood and limited replacement of deteriorated or missing parts are appropriate.

Using a substitute material for the replacement part that neither conveys the same appearance as the surviving parts of the wood element nor is physically or chemically compatible.

Removing an entire exterior wood element that is irreparable and not replacing it; or replacing it with a new element that does not convey the same appearance.
The following REHABILITATION work has been highlighted to indicate that it involves a particularly complex technical or design aspect and should only be considered after the Preservation and Rehabilitation concerns listed above have been addressed.

**Recommended**

**Designing for the Replacement of Missing Historic Features**

Designing and installing a new exterior wood feature such as a cornice or doorway when the historic feature is completely missing. It may be a new design that is compatible with the style, era and character of the historic place; or a replica based on physical and documentary evidence.

**Not Recommended**

Introducing a new exterior wood feature that is incompatible in size, scale, material, style and colour.

Creating a false historical appearance because the replaced wood feature is based on insufficient physical and documentary evidence.

It is important to identify the cause of any damage to a wooden building element before beginning a Preservation treatment. In the case of the former machine shop of the North Pacific Cannery, exposure to marine conditions led to deterioration of the exterior wood cladding.
Additional Guidelines for Restoration Projects

Recommended

RESTORING an exterior wood element, if an evaluation of its overall condition determines that more than preservation is required; in other words, if repairs to wood features from the restoration period will be necessary.

Repairing, stabilizing and conserving fragile wood from the restoration period using well-tested consolidants, when appropriate. Repairs should be physically and visually compatible and identifiable upon close inspection for future research.

Repairing exterior wood elements from the restoration period by patching, piecing-in or otherwise reinforcing the wood using recognized preservation methods. Repair may also include the limited replacement — preferably in kind — of those extensively deteriorated or missing parts of elements from the restoration period where there are surviving prototypes such as brackets, moulding or sections of siding. The new work should be unobtrusively dated to guide future research and treatment.

Replacing in kind an entire exterior wood element from the restoration period that is too deteriorated to repair — if the overall form and detailing are still evident — using the physical evidence as a model to reproduce the element. Examples of exterior wood elements include a cornice, entablature or balustrade. The new work should be unobtrusively dated to guide future research and treatment.

Not Recommended

Failing to evaluate the overall condition of an exterior wood element in order to determine the appropriate method of conservation.

Removing wood from the restoration period that could be stabilized and conserved; or using untested consolidants and untrained personnel, thus causing further damage to fragile historic materials.

Replacing an entire exterior wood element from the restoration period such as a cornice or wall when repair of the wood and limited replacement of deteriorated or missing parts are appropriate.

Using substitute material for the replacement part, which neither conveys the same appearance as the surviving parts of the wood element, nor is physically or chemically compatible.

Removing an entire exterior wood element from the restoration period that is irreparable and not replacing it.

The extensively deteriorated wood siding on the exposed side of this building was replaced in kind. The new wood siding matches the surviving siding in form and detailing.
The following RESTORATION work has been highlighted to indicate that it involves the removal or alteration of existing wood features from periods other than the accepted restoration period; and the replacement of missing wood features from the restoration period with all new materials. This work should only be considered after the Preservation and Restoration concerns listed above have been addressed.

</tr>
</tbody>
</table>

| **Recreating Missing Features from the Restoration Period** |  |
| Recreating a missing wood feature that existed during the restoration period based on physical or documentary evidence; for example, duplicating a roof dormer or porch. | Constructing a wood feature that was part of the original design of the building, but was never actually built; or constructing a feature that was thought to have existed during the restoration period, but for which there is insufficient documentation. |
Exterior Masonry
Brick, stone, terra cotta, concrete, stucco and mortar

Recommended

**Preserving** masonry elements such as walls, brackets, railings, steps, columns, window and door surrounds or architraves, cornices, pediments, balustrades; and details such as jointing, tooling and bonding patterns, coatings and colour that are important in defining the overall heritage value of the building.

**Documenting** the form, materials and condition of masonry elements prior to beginning project work.

**Protecting and maintaining** masonry by preventing water penetration and by maintaining proper drainage so that water or organic matter does not stand on flat, horizontal surfaces or accumulate in curved decorative features.

Not Recommended

Removing or radically changing masonry elements that are important in defining the overall heritage value of the building.

Undertaking project work that will have an impact on character-defining masonry elements without first documenting their existing character and condition.

Failing to evaluate and treat the various causes of mortar joint deterioration such as leaking roofs or gutters, differential settlement of the building, capillary action, failed flashings or extreme weather exposure.

Applying water-repellent coatings to stop moisture penetration when the problem could be solved by repairing failed flashings, deteriorated mortar joints or other mechanical defects.

Preserving the exterior of the British Columbia Legislative Building (its rear façade is shown here), including its masonry walls, steps, columns, pilasters, window surrounds, decorative details and cornices, began with documenting the material, form, jointing, tooling, bonding patterns, coatings, colour, and conditions of these elements prior to beginning project work.
### Recommended

Cleaning masonry using recognized preservation methods and only when necessary to halt deterioration or remove heavy soiling or graffiti.

Carrying out masonry surface cleaning tests after it has been determined that such cleaning is appropriate. If acceptable, carrying out cleaning tests which should be observed over a sufficient period of time so that both the immediate and the long-range effects are known, the gentlest method possible is selected and appropriate level of cleanliness achieved.

Cleaning masonry surfaces using the gentlest method possible, such as low-pressure water and detergents, using natural bristle brushes.

Protecting adjacent materials during cleaning to avoid damage by abrasion or water infiltration.

Inspecting painted masonry surfaces to determine whether repainting is necessary.

Removing damaged or deteriorated paint only to the next sound layer using the gentlest method possible (e.g., hand scraping) prior to repainting.

Applying compatible paint or stucco following proper surface preparation.

### Not Recommended

Cleaning masonry surfaces when they are not heavily soiled in order to create a new appearance, thus needlessly introducing chemicals or moisture into the materials.

Cleaning masonry surfaces without testing or without sufficient time for the testing results to be of value.

Blasting brick or stone surfaces using dry or wet grit sand or other abrasives that permanently erode the surface of the material and accelerate deterioration.

Using a cleaning method that involves water or liquid chemical solutions when there is any possibility of freezing temperatures.

Cleaning with chemical products that will damage masonry or mortar such as using acid on limestone or marble; or leaving chemicals on masonry surfaces.

Applying high-pressure water cleaning methods that will damage the masonry and the mortar joints.

Removing paint that is firmly adhering to, and thus protecting, masonry surfaces.

Using methods of removing paint that are destructive to masonry, such as sandblasting, application of caustic solutions or high-pressure water-blasting.

Failing to follow manufacturers’ product and application instructions when repainting masonry.

Applying paint or stucco to masonry that has been historically unpainted or uncoated.

Removing paint from historically painted masonry, unless it is causing damage to the underlying masonry.

Removing stucco from masonry that was historically never exposed.

Radically changing the type of paint or coating or its colour.
The harsh climate in many parts of Canada can seriously damage masonry elements. This wall in Quebec City has suffered irreversible damage from water penetrating the brick façade and freezing, causing the faces of many bricks to pop off. To avoid damage such as this, it is recommended that moisture penetration be stopped by repairing failed flashings, deteriorated mortar joints or other mechanical defects, not by applying water-repellent coatings, which can trap moisture inside the masonry.

**Recommended**

- Repainting or re-stuccoing with colours that are historically appropriate to the building and district.
- **Retaining** sound exterior masonry or deteriorated exterior masonry that can be repaired.
- **Repairing and stabilizing** deteriorated masonry elements by structural reinforcement, weather protection, or correcting unsafe conditions, as required, until any additional work is undertaken. Repairs should be physically and visually compatible.
- **Replacing in kind** extensively deteriorated or missing parts of masonry elements where there are surviving prototypes. The new work should match the old in form and detailing.

**Not Recommended**

- Using new paint or stucco colours that are inappropriate to the building and district.
- Replacing or rebuilding masonry that can be repaired.
- Removing deteriorated masonry elements that could be stabilized, repaired and conserved; or using untested consolidants and untrained personnel, thus causing further damage to fragile elements.
- Replacing an entire masonry element such as a column when limited replacement of deteriorated and missing components is appropriate.
- Using replacement material that does not match the historic masonry element.
Recommended

**Repairing** masonry walls and other masonry elements by repointing the mortar joints where there is evidence of deterioration such as disintegrating mortar, cracks in mortar joints, loose bricks, damp walls or damaged plaster work.

Removing deteriorated or inappropriate mortar by carefully raking the joints using hand tools or appropriate mechanical means to avoid damaging the masonry.

Using mortars that will ensure the long-term preservation of the masonry assembly. Mortar should be compatible in strength, porosity, absorption and vapor permeability with the existing masonry units. Bedding and pointing mortars should be less durable than the masonry units. Bedding mortars should meet structural requirements. Colour, texture, width and joint profile should be physically and visually compatible with the masonry.

Duplicating original mortar joints in colour, texture, width and joint profile, if the mortar joints are a character-defining element.

Evaluating the overall condition of the exterior masonry to determine whether more than protection, maintenance and limited repair or replacement in kind are required; i.e., if more extensive repairs to masonry elements will be necessary.

---

Not Recommended

Removing non-deteriorated or acceptable mortar from sound joints, then repointing the entire building to achieve a uniform appearance.

Using rotary grinders on thin joints or vertical joints, or electric saws to remove mortar from joints prior to repointing.

Repointing with mortar of high Portland cement content (unless it is the content of character-defining mortar). This can often create a bond that is stronger than the historic material (brick or stone) and can cause damage as a result of the differing coefficients of expansion and the differing porosity of the materials.

Repointing with a synthetic caulking compound.

Using a “scrub” coating technique to repoint instead of traditional repointing methods.

Failing to evaluate the overall condition of an exterior masonry element in order to determine the appropriate method of conservation.

Failing to undertake adequate measures to protect masonry elements.
Additional Guidelines for Rehabilitation Projects

**Recommended**

**Rehabilitating** an exterior masonry element, if an evaluation of its overall condition determines that more than preservation is required.

Repairing stucco by removing the damaged material and patching with new stucco that duplicates the old in strength, composition, colour, porosity and texture.

Cutting damaged character-defining concrete back to remove and correct the source of deterioration (often corrosion on metal reinforcement bars). The new patch must be applied carefully so it will bond satisfactorily with and match the character-defining concrete.

Repairing character-defining masonry elements by patching, piecing-in or consolidating the masonry using appropriate conservation methods. Repair may also include the limited replacement in kind — or with a compatible substitute material — of those extensively deteriorated or missing parts of masonry elements such as terra cotta brackets or stone balusters when there are surviving prototypes.

Applying new or non-historic surface treatments such as proven water-repellent coatings to masonry only after repointing and only if masonry repairs, alternative design solutions or flashings have failed to arrest water penetration problems.

**Replacing in kind** an entire character-defining masonry element that is too deteriorated to repair — if the overall form and detailing are still evident — using the physical evidence as a model to reproduce the element. Examples can include large sections of a wall, a cornice, balustrade, column or stairway. If using the same kind of material is not technically or economically feasible, then a compatible substitute material may be considered.

**Not Recommended**

Failing to evaluate the overall condition of an exterior masonry element in order to determine the appropriate method of conservation.

Removing sound stucco or repairing with new stucco that is stronger than the character-defining material or does not convey the same appearance.

Patching concrete without removing the source of deterioration, or patching with a concrete that is incompatible with the existing.

Replacing an entire character-defining masonry element such as a cornice when repair of the masonry and limited replacement of deteriorated or missing parts are feasible.

Using a substitute material (in place of the replacement part) which neither conveys the appearance of the surviving parts of the masonry element, nor is physically or chemically compatible.

Applying waterproof, water repellent or non-historic coatings such as stucco to masonry as a substitute for repointing and masonry repairs. Coatings are frequently unnecessary and expensive and may change the appearance of character-defining masonry as well as accelerate its deterioration.

Removing a character-defining masonry element that is irreparable and not replacing it; or replacing it with a new element that does not convey the same appearance.
The following REHABILITATION work has been highlighted to indicate that it involves a particularly complex technical or design aspect and should only be considered after the Preservation and Rehabilitation concerns listed above have been addressed.

**Recommended**

**Designing for the Replacement of Missing Historic Features**

Designing and installing a new masonry feature such as steps or a door pediment when the historic feature is completely missing. It may be a new design that is compatible with the style, era and character of the historic place; or a replica based on physical and documentary evidence.

**Not Recommended**

Introducing a new masonry feature that is incompatible in size, scale, material, style and colour.

Creating a false historical appearance because the replaced masonry feature is based on insufficient physical and documentary evidence.

Cleaning masonry should be undertaken only when necessary to halt deterioration or remove heavy soiling. If surface cleaning is appropriate, tests using recognized preservation methods should be first be made in order to select the gentlest cleaning method possible, and be observed over time to determine the immediate and the long-term effects. The test-cleaning of the left portion of this brick and stone wall (using low pressure water and detergents, when there was no chance of freezing) created an acceptably clean wall.
### Additional Guidelines for Restoration Projects

#### Recommended

**RESTORING** an exterior masonry element, if an evaluation of its overall condition determines that more than preservation is required; i.e., if repairs to masonry features from the restoration period will be necessary.

**Repairing, stabilizing and conserving** fragile masonry from the restoration period by well-tested consolidants, when appropriate. Repairs should be physically and visually compatible and identifiable upon close inspection for future research.

Repairing stucco by removing the damaged material and patching with new stucco that duplicates stucco of the restoration period in strength, composition, colour and texture.

Cutting damaged concrete back to remove the source of deterioration (often corrosion on metal reinforcement bars). The new patch must be applied carefully so it will bond satisfactorily with and match the historic concrete.

Repairing masonry features from the restoration period by patching, piecing-in or otherwise reinforcing the masonry using recognized preservation methods. Repair may also include the limited replacement — preferably in kind — of those extensively deteriorated or missing parts of masonry features from the restoration period when there are surviving prototypes such as terra cotta brackets or stone balusters. The new work should be unobtrusively dated to guide future research and treatment.

Applying new or non-historic surface treatments such as proven water-repellent coatings to masonry only after repointing and only if masonry repairs have failed to arrest water penetration problems.

**Replacing in kind** an entire masonry feature from the restoration period that is too deteriorated to repair — if the overall form and detailing are still evident — using the physical evidence as a model to reproduce the feature. Examples can include large sections of a wall, a cornice, balustrade, column or stairway. The new work should be unobtrusively dated to guide future research and treatment.

#### Not Recommended

Failing to evaluate the overall condition of an exterior masonry element in order to determine the appropriate method of conservation.

Removing masonry from the restoration period that could be stabilized, repaired and conserved; or using untested consolidants and untrained personnel, thus causing further damage to fragile historic materials.

Removing sound stucco; or repairing with new stucco that is stronger than the historic material or does not convey the same appearance.

Patching concrete without removing the source of deterioration, or patching with a concrete that is incompatible with the existing.

Replacing an entire masonry feature from the restoration period such as a cornice or balustrade when repair of the masonry and limited replacement of deteriorated or missing parts are appropriate.

Using a substitute material for the replacement part that neither conveys the appearance of the surviving parts of the masonry feature, nor is physically or chemically compatible.

Applying waterproof, water repellent or non-historic coatings such as stucco to masonry as a substitute for repointing and masonry repairs. Coatings are frequently unnecessary and expensive, and may change the appearance of historic masonry as well as accelerate its deterioration.

Removing a masonry feature from the restoration period that is irreparable and not replacing it.
The following RESTORATION work has been highlighted to indicate that it involves the removal or alteration of existing masonry features from periods other than the accepted restoration period; and the replacement of missing masonry features from the restoration period with all new materials. This work should only be considered after the Preservation and Restoration concerns listed above have been addressed.

**Recommended**

**Removing Existing Features from Other Periods**

Removing or altering masonry features, such as a later doorway, porch or steps, dating from other periods. Documenting materials and features dating from other periods prior to their alteration or removal. If possible, selected examples of these features or materials should be stored to facilitate future research.

**Recreating Missing Features from the Restoration Period**

Recreating a missing masonry feature that existed during the restoration period based on physical or documentary evidence; for example, duplicating a terra cotta bracket or stone balustrade.

**Not Recommended**

Failing to remove a masonry feature from another period, thus confusing the depiction of the building’s significance. Failing to document masonry features from other periods (which results in the loss of a valuable portion of the historic record) prior to removing them from the building.

Constructing a masonry feature that was part of the original design of the building but was never actually built; or constructing a feature that was thought to have existed during the restoration period, but for which there is insufficient documentation.

One of the primary causes of deterioration of glazed architectural terra cotta is water. Water-related damage to the glazed units, mortar, metal anchors or masonry backfill can be repaired only when the sources of that water have been eliminated. This typically means repairing flashing, repointing deteriorated mortar with a mortar that has a compressive strength lower than the adjacent masonry unit, and coating or sealing blistered spots to prevent further entry of water. Repointing with waterproof caulking compounds or the wholesale coating of the wall with waterproof materials will impede the normal outward migration of moisture through the masonry joints and likely cause spalling of the glaze or mortar.
Architectural Metals
Cast iron, steel, pressed metal, copper, aluminum and zinc elements

Recommended

**Preserving** architectural metal elements — such as cladding, columns, capitals, brackets, window hoods, cornices, balustrades or stairways; and their finishes and colours — that are important in defining the overall heritage value of the building. (See also Roofs for gutters and downspouts.)

**Documenting** the form, materials and condition of architectural metal elements prior to beginning project work. It is critical to differentiate between metals prior to project work, since each metal has unique properties and thus requires a different treatment.

**Protecting and maintaining** architectural metals from corrosion by preventing water penetration and by maintaining proper drainage so that water or organic matter does not stand on flat, horizontal surfaces or accumulate in curved, decorative features.

Not Recommended

Removing or radically changing architectural metal elements that are important in defining the overall heritage value of the building.

Undertaking project work that will have an impact on character-defining architectural metal elements without undertaking a survey of existing conditions.

Failing to identify, evaluate and treat the causes of corrosion such as moisture from leaking roofs or gutters.

Placing incompatible metals together without providing a reliable separation material. Such incompatibility can result in galvanic corrosion of the less noble metal, e.g., copper will corrode cast iron, steel, tin and aluminum.

The first step in **Preserving** architectural metals is to identify the type of metal. Before cleaning, determine that cleaning is appropriate for the particular metal: removing the patina from the bronze door shown above would not be appropriate if the patina is a character-defining finish of the metal, or if it provides a protective coating. If cleaning is appropriate, testing is recommended to ensure that the gentlest cleaning method possible is used.

A regular programme of cleaning and re-applying appropriate paint has preserved to a remarkable degree the metal entrance canopy of Winnipeg’s Union Station, which was completed in 1911. Protection from corrosion should be considered the first line of defence in preserving architectural metals.
Recommended

Identifying the particular type of metal prior to any cleaning procedure and then testing to ensure that the gentlest cleaning method possible and the appropriate level of cleanliness are selected, or determining that cleaning is inappropriate for the particular metal.

Cleaning architectural metals, when appropriate, to remove corrosion prior to repainting or applying other appropriate protective coatings.

Cleaning soft metals such as lead, tin, copper, terneplate and zinc with appropriate chemical methods because their finishes can be easily abraded by blasting methods.

Using the gentlest cleaning methods for cast iron, wrought iron and steel — hard metals — in order to remove excessive paint build-up and corrosion. If hand scraping and wire brushing prove ineffective, low-pressure grit blasting may be used as long as it does not abrade or damage the surface.

Protecting adjacent materials during cleaning so as to avoid damage by abrasion or chemical reaction.

Applying an appropriate protective coating such as lacquer or wax to an architectural metal element such as a bronze door that is subject to heavy pedestrian use.

Re-applying appropriate paint or other coating systems after cleaning in order to decrease the corrosion rate of metals or alloys.

Repainting, if warranted, with colours that are appropriate to the building or district.

Not Recommended

Using cleaning methods that alter or damage the character-defining colour, texture and finish of the metal; or cleaning when it is inappropriate for the metal.

Removing the character-defining patina of metal. The patina may be a protective coating on some metals, such as bronze or copper, as well as a significant character-defining finish.

Exposing metals that were intended to be protected from the environment.

Applying paint or other coatings to metals such as copper, bronze or stainless steel that were meant to be exposed.

Cleaning soft metals such as lead, tin, copper, terneplate and zinc with grit blasting or other abrasive methods or tools such as wire brushing, which will abrade the surface of the metal.

Failing to employ gentler methods prior to abrasively cleaning cast iron, wrought iron or steel; or using high pressure grit blasting.

Failing to mask or otherwise protect adjacent masonry, wood or glass surfaces.

Failing to assess pedestrian use or new access patterns so that architectural metal elements are subject to damage by use or inappropriate maintenance such as salting adjacent sidewalks.

Failing to re-apply protective coating systems to metals or alloys that require them after cleaning so that accelerated corrosion occurs.

Using new colours that are inappropriate to the building or district.

Radically changing a character-defining type of finish or character-defining colour or accent scheme, which detracts from the character of the building.

Replacing architectural metal elements that can be repaired.

Removing deteriorated architectural metal elements that could be stabilized, repaired and conserved; or using untested consolidants and untrained personnel, thus causing further damage to fragile elements.

Retaining sound architectural metal elements or deteriorated architectural metal elements that can be repaired.

Repairing and stabilizing deteriorated architectural metal elements by structural reinforcement, weather protection or correcting unsafe conditions, as required, until any additional work is undertaken. Repairs should be physically and visually compatible.
**Recommended**

*Replacing in kind* extensively deteriorated or missing parts of architectural metal elements where there are surviving prototypes. The new work should match the old in form and detailing.

Evaluating the overall condition of architectural metals to determine whether more than protection, maintenance and limited repair or replacement in kind are required; i.e., if more extensive repairs to architectural metal elements will be necessary.

**Not Recommended**

Replacing an entire architectural metal element such as a pressed metal ceiling when limited replacement of deteriorated and missing components is appropriate.

Using replacement material that does not match the historic architectural metal elements in appearance or in physical or chemical properties.

Failing to undertake adequate measures to protect architectural metal elements.

**Additional Guidelines for Rehabilitation Projects**

**Recommended**

Rehabilitating an architectural metal element, if an evaluation of its overall condition determines that more than preservation is required.

Repairing an architectural metal element by welding, soldering, patching, splicing, or otherwise reinforcing the metal following recognized conservation methods. Repairs may also include the limited replacement in kind — or with a compatible substitute material — of those extensively deteriorated or missing parts of elements when there are surviving prototypes such as porch balusters, column capitals or bases; or roof cresting.

Replacing in kind an entire architectural metal element that is too deteriorated to repair — if the overall form and detailing are still evident — using the physical evidence as a model to reproduce the element. Examples could include cast iron porch steps or steel sash windows. If using the same kind of material is not technically or economically feasible, then a compatible substitute material may be considered.

**Not Recommended**

Failing to evaluate the overall condition of an architectural metal element in order to determine the appropriate method of conservation.

Replacing an entire architectural metal element such as a column or a balustrade when repair of the metal and limited replacement of deteriorated or missing parts are feasible.

Using a substitute material for the replacement part that neither conveys the appearance of the surviving parts of the architectural metal element, nor is physically or chemically compatible.

Removing an architectural metal element that is irreparable and not replacing it; or replacing it with a new architectural metal element that does not convey the same appearance.
The following REHABILITATION work has been highlighted to indicate that it involves a particularly complex technical or design aspect and should only be considered after the Preservation and Rehabilitation concerns listed above have been addressed.

### Recommended

**Designing for the Replacement of Missing Historic Features**

Designing and installing a new architectural metal feature such as a metal cornice or cast iron capital when the historic feature is completely missing. It may be a new design that is compatible with the style, era and character of the historic place; or a replica based on physical and documentary evidence.

### Not Recommended

Introducing a new architectural metal feature that is incompatible in size, scale, material, style and colour.

Creating a false historical appearance because the replaced architectural metal feature is based on insufficient physical and documentary evidence.

### Additional Guidelines for Restoration Projects

#### Recommended

**Restoring** an architectural metal element, if an evaluation of its overall condition determines that more than preservation is required; i.e., if repairs to metal features from the restoration period will be necessary.

**Repairing, stabilizing and conserving** fragile architectural metal from the restoration period using well-tested consolidants, when appropriate. Repairs should be physically and visually compatible and identifiable upon close inspection for future research.

#### Not Recommended

Failing to evaluate the overall condition of an architectural metal element in order to determine the appropriate method of conservation.

Removing architectural metal from the restoration period that could be stabilized and conserved; or using untested consolidants and untrained personnel, thus causing further damage to fragile historic materials.

---

In Rehabilitation, replacing in kind an entire architectural metal element that is too deteriorated to repair is recommended, if the overall form and detailing are still evident. Missing metal roof cresting on the Shaughnessy House in Montreal was replaced by using exiting physical evidence as a model to reproduce the element.
Recommended

Repairing architectural metal features from the restoration period by patching, splicing or otherwise reinforcing the metal using recognized preservation methods. Repairs may also include the limited replacement — preferably in kind — of those extensively deteriorated or missing parts of features from the restoration period when there are surviving prototypes such as porch balusters, column capitals or bases; or porch cresting. The new work should be unobtrusively dated to guide future research and treatment.

*Replacing in kind* an entire architectural metal feature from the restoration period that is too deteriorated to repair — if the overall form and detailing are still evident — using the physical evidence as a model to reproduce the feature. Examples could include cast iron porch steps or roof cresting. The new work should be unobtrusively dated to guide future research and treatment.

Not Recommended

Replacing an entire architectural metal feature from the restoration period such as a column or a balustrade when repair of the metal and limited replacement of deteriorated or missing parts are appropriate.

Using a substitute material for the replacement part that neither conveys the appearance of the surviving parts of the architectural metal feature, nor is physically or chemically compatible.

Removing an architectural metal feature from the restoration period that is irreparable and not replacing it.

The following RESTORATION work has been highlighted to indicate that it involves the removal or alteration of existing architectural metal features from periods other than the accepted restoration period; and the replacement of missing architectural metal features from the restoration period with all new materials. This work should only be considered after the *Preservation* and *Restoration* concerns listed above have been addressed.

Recommended

Removing Existing Features from Other Periods

Removing or altering architectural metal features, such as a later cast iron porch railing, or aluminum windows, dating from other periods.

Documenting materials and features dating from other periods prior to their alteration or removal. If possible, selected examples of these features or materials should be stored to facilitate future research.

Recreating Missing Features from the Restoration Period

Recreating a missing architectural metal feature that existed during the restoration period based on physical or documentary evidence; for example, duplicating a cast iron storefront or porch.

Not Recommended

Failing to remove an architectural metal feature from another period, thus confusing the depiction of the building’s significance.

Failing to document architectural metal features from other periods (which results in the loss of a valuable portion of the historic record) prior to removing them from the building.

Constructing an architectural metal feature that was part of the original design of the building but was never actually built; or constructing a feature that was thought to have existed during the restoration period, but for which there is insufficient documentation.
Recommended

Preserving roofs — and their functional and decorative elements — that are important in defining the overall heritage value of the building.

Documenting the form, materials and condition of roofs and roof elements prior to beginning project work. This includes the roof’s pitch; shape, such as hipped, gambrel and mansard; decorative elements such as cupolas, cresting, chimneys and weathervanes; and roofing material such as slate, wood, clay tile and metal, as well as its size, colour and patterning.

Stabilizing and protecting a leaking roof with plywood and building paper until it can be properly repaired.

Protecting and maintaining a roof by cleaning and maintaining the gutters and downspouts and replacing deteriorated flashing in kind. Roof sheathing should also be checked for proper venting to prevent moisture condensation and water penetration; and to ensure that materials are free from insect infestation.

Providing adequate anchorage for roofing material to guard against wind damage and moisture penetration.

Retaining sound roofs or roof elements, or deteriorated roofs or roof elements that can be repaired.

Repairing and stabilizing deteriorated roofs and roof elements by structural reinforcement, weather protection, or correcting unsafe conditions, as required, until any additional work is undertaken. Repairs should be physically and visually compatible.

Replacing in kind extensively deteriorated or missing parts of roofs where there are surviving prototypes. The new work should match the existing elements in form and detailing.

Not Recommended

Damaging or destroying roofs that are important in defining the overall heritage value of the building so that, as a result, the heritage value is diminished.

Changing the configuration of a roof by adding new elements such as dormer windows, vents or skylights so that the character is diminished.

Undertaking project work that will have an impact on character-defining roofs and roof elements without first documenting their existing character and condition.

Permitting a leaking roof to remain unprotected so that accelerated deterioration of its building materials (such as masonry, wood, plaster, paint and structural members) occurs.

Failing to replace deteriorated flashing or to clean and maintain gutters and downspouts properly so that water and debris collect and cause damage to roof fasteners, sheathing and the underlying structure.

Allowing roof fasteners such as nails and clips to corrode so that roofing material is subject to accelerated deterioration.

Replacing or rebuilding roofs that can be repaired.

Removing deteriorated roof elements that could be stabilized, repaired and conserved; or using untested consolidants and untrained personnel, thus causing further damage to fragile elements.

Replacing an entire roof element such as a dormer when limited replacement of deteriorated and missing components is appropriate.

Using replacement material that does not match the historic roof or roof element.
Recommended

Evaluating the overall condition of roofs and roof elements to determine whether more than protection, maintenance and limited repair or replacement in kind are required; i.e., if more extensive repairs to roofs will be necessary.

Not Recommended

Failing to undertake adequate measures to protect roofs.

Additional Guidelines for Rehabilitation Projects

Recommended

Rehabilitating a roof, if an evaluation of its overall condition determines that more than preservation is required.

Repairing a roof by reinforcing the character-defining materials that comprise roof elements. Repairs will also generally include the limited replacement in kind — or with a compatible substitute material — of those extensively deteriorated or missing parts of elements when there are surviving prototypes such as cupola louvers, dentils, dormer roofing; or slates, tiles or wood shingles on a main roof.

Replacing in kind an entire element of the roof that is too deteriorated to repair — if the overall form and detailing are still evident — using the physical evidence as a model to reproduce the element. Examples can include a large section of roofing or a dormer or chimney. If using the same kind of material is not technically or economically feasible, then a compatible substitute material may be considered.

Not Recommended

Failing to evaluate the overall condition of a roof in order to determine the appropriate method of conservation.

Replacing an entire roof element such as a cupola, dormer or lightning protection when repair of the character-defining materials and limited replacement of deteriorated or missing parts is feasible.

Failing to reuse intact slate or tile when only the roofing substrate needs replacement.

Using a substitute material for the replacement part that neither conveys the appearance of the surviving parts of the roof, nor is physically or chemically compatible.

Removing an element of the roof that is irreparable, such as a chimney or dormer and not replacing it; or replacing it with a new element that does not convey the same appearance.

The Rehabilitation of the Truro Federal Building, in Truro, Nova Scotia included restoring its distinctive slate roof. In Rehabilitation, the replacement of missing historic features with a replica based on physical and documentary evidence, as in this project, is acceptable, as is a new design that is compatible with the character of the historic place.
The following REHABILITATION work has been highlighted to indicate that it involves a particularly complex technical or design aspect and should only be considered after the Preservation and Rehabilitation concerns listed above have been addressed.

**Recommended**

**Designing for the Replacement of Missing Historic Features**

Designing and constructing a new feature when the historic feature is completely missing, such as chimney or cupola. It may be a new design that is compatible with the style, era and character of the historic place; or a replica based on physical and documentary evidence.

**Not Recommended**

Introducing a new roof feature that is incompatible in size, scale, material, style and colour.

Creating a false historical appearance because the replaced feature is based on insufficient physical and documentary evidence.

**Alterations/Additions for the New Use**

Installing mechanical and service equipment on the roof such as air conditioning, transformers or solar collectors when required for the new use so that they are inconspicuous from the public right-of-way and do not damage or obscure character-defining elements, or undermine the heritage value.

Installing mechanical or service equipment which damages or obscures character-defining elements; or is conspicuous from the public right-of-way.

Designing additions to roofs such as residential, office or storage spaces; elevator housing; decks and terraces; or dormers or skylights when required by the new use so that they are inconspicuous from the public right-of-way and do not damage or obscure character-defining elements, or undermine the heritage value.

Radically changing a character-defining roof shape or damaging or destroying character-defining roofing material as a result of incompatible design or improper installation techniques.

### Additional Guidelines for Restoration Projects

**Recommended**

**RESTORING** a roof, if an evaluation of its overall condition determines that more than preservation is required; i.e., if repairs to a roof from the restoration period will be necessary.

**Repairing** a roof from the restoration period by reinforcing the materials that comprise roof features. Repairs will also generally include the limited replacement — preferably in kind — of those extensively deteriorated or missing parts of features such as cupola louvers, dentils, dormer roofs or slates, tiles or wood shingles when there are surviving prototypes. The new work should be unobtrusively dated to guide future research and treatment.

**Not Recommended**

Failing to evaluate the overall condition of a roof in order to determine the appropriate method of conservation.

Replacing an entire roof feature from the restoration period such as a cupola or dormer when the repair of materials and limited replacement of deteriorated or missing parts are appropriate.

Failing to reuse intact slate or tile when only the roofing substrate needs replacement.

Using a substitute material for the replacement part that neither conveys the appearance of the surviving parts of the roof, nor is physically or chemically compatible.
During the *Restoration* of the former post office in Dawson, Yukon, the metal roofing surface, which was too deteriorated to repair, was replaced “in kind” (using the same form, materials, and detailing). Physical evidence from the *Restoration* period was used as a model to reproduce the characteristic standing seam detail.

**Recommended**

*Replacing in kind* an entire roof feature from the restoration period that is too deteriorated to repair — if the overall form and detailing are still evident — using the physical evidence as a model to reproduce the feature. The new work should be unobtrusively dated to guide future research and treatment.

**Not Recommended**

Removing a roof feature from the restoration period that is irreparable and not replacing it; or failing to document the new work.

A surviving pressed metal shingle was used as a prototype for manufacturing replacement shingles for the *Restoration* of the main house at the Motherwell Homestead near Abernathy, Saskatchewan. As a rule, in *Restoration*, repairs or replacements of extensively deteriorated or missing parts of features are done in kind, and are based on physical, documentary and oral evidence.
The following RESTORATION work has been highlighted to indicate that it involves the removal or alteration of existing roofs and roof features from periods other than the accepted restoration period; and the replacement of missing roof features from the restoration period with all new materials. This work should only be considered after the Preservation and Restoration concerns listed above have been addressed.

### Recommended

**Removing Existing Features from Other Periods**

Removing or altering roofs or roof features, such as a later dormer or asphalt roofing, dating from other periods.

Documenting materials and features dating from other periods prior to their alteration or removal. If possible, selected examples of these features or materials should be stored to facilitate future research.

**Recreating Missing Features from the Restoration Period**

Recreating missing roofing material or a roof feature that existed during the restoration period based on physical or documentary evidence; for example, duplicating a dormer or cupola.

### Not Recommended

**Failing to remove a roof feature from another period, thus confusing the depiction of the building's significance.**

**Failing to document roofing materials and roof features from other periods (which results in the loss of a valuable portion of the historic record) prior to removing them from the building.**

**Constructing a roof feature that was part of the original design of the building, but was never actually built; or constructing a feature that was thought to have existed during the restoration period, but for which there is insufficient documentation.**
Windows

Recommended

Preserving windows and their functional and decorative components — such as frames, sashes, muntins, glazing, sills, heads, hoodmoulds, panelled or decorated jambs and mouldings, interior and exterior shutters and blinds — that are important in defining the overall heritage value of the building.

Documenting the location, form, style, materials and method of operation of windows and their elements prior to beginning project work.

Not Recommended

Removing or radically changing windows that are important in defining the heritage value of the building.

Changing the number, location, size or glazing pattern of windows by cutting new openings, blocking in windows and installing replacement sashes that do not fit the character-defining window opening.

Changing the character-defining appearance of windows through the use of inappropriate designs, materials, finishes or colours that noticeably change the sash, depth of reveal and muntin configuration; the reflectivity and colour of the glazing; or the appearance of the frame.

Obscuring character-defining window trim with metal or other materials.

Preserving a building’s character-defining windows generally involves scraping, sanding, re-puttying and repainting. While some limited repair and replacement work was undertaken within the scope of work on the Aberdeen Pavilion in Ottawa (photo on left: before, photo below: after), almost all of the windows were retained, including the glass. Wholesale replacement of window units is not an appropriate Preservation treatment.
Recommended

Conducting an in-depth survey of the condition of windows early in the planning process so that repair and upgrading methods and possible replacement options can be fully explored.

*Protecting and maintaining* the wood and architectural metals that comprise the window frames, sashes, muntins and surrounds through appropriate surface treatments such as cleaning, rust removal, limited paint removal and re-application of protective coating systems in kind.

Making windows weathertight by re-puttying and replacing or installing weatherstripping. These actions also improve thermal efficiency (see also section 4 Energy Efficiency Considerations, Buildings: Windows).

*Retaining* sound windows and window elements or deteriorated windows and window elements that can be repaired.

*Repairing and stabilizing* deteriorated windows and window elements by structural reinforcement, weather protection, or correcting unsafe conditions, as required, until any additional work is undertaken. Repairs should be physically and visually compatible.

*Replacing in kind* extensively deteriorated or missing parts of windows where there are surviving prototypes. The new work should match the old in form and detailing.

Evaluating the overall condition of windows and window elements to determine whether more than protection, maintenance and limited repair or replacement in kind are required; i.e., if more extensive repairs to windows will be necessary.

Not Recommended

Undertaking project work that will have an impact on character-defining windows without first documenting their existing character and condition.

Failing to provide adequate protection of materials on a cyclical basis, which results in deterioration of the window.

Retrofitting or replacing windows rather than maintaining the sash, frame and glazing.

Replacing windows that can be repaired. Peeling paint, broken glass, stuck sashes or high air infiltration are NOT, in themselves, indications that windows are beyond repair.

Removing deteriorated materials such as wood, cast iron or bronze from windows that could be stabilized, repaired and conserved; or using untested consolidants and untrained personnel, thus causing further damage to fragile elements.

Replacing an entire window element such as a shutter when limited replacement of deteriorated and missing components is appropriate.

Using replacement material that does not match the historic window or window element.

Failing to undertake adequate measures such as cyclical maintenance to protect windows.
Additional Guidelines for Rehabilitation Projects

**Recommended**

**Rehabilitating** a window, if an evaluation of its overall condition determines that more than preservation is required.

**Repairing** window frames and sashes by patching, splicing, consolidating or otherwise reinforcing. Such repair may also include replacement in kind — or with a compatible substitute material — of those parts that are either extensively deteriorated or are missing, when there are surviving prototypes such as architraves, hoodmolds, sashes, sills and interior or exterior shutters and blinds.

**Replacing in kind** an entire window that is too deteriorated to repair using the same sash and pane configuration and other design details. If using the same kind of material is not technically or economically feasible when replacing windows deteriorated beyond repair, then a compatible substitute material may be considered.

**Not Recommended**

Failing to evaluate the overall condition of a window, in order to determine the appropriate method of conservation.

Replacing an entire window when repair of materials and limited replacement of deteriorated or missing parts is feasible.

Failing to reuse serviceable window hardware such as sash lifts and sash locks.

Using substitute material for the replacement part, that neither conveys the same appearance as the surviving parts of the window, nor is physically or chemically compatible.

Removing a character-defining window that is irreparable and blocking it in; or replacing it with a new window that does not convey the same appearance.
The following REHABILITATION work has been highlighted to indicate that it involves a particularly complex technical or design aspect and should only be considered after the Preservation and Rehabilitation concerns listed above have been addressed.

**Recommended**

**Designing for the Replacement of Missing Historic Features**

Designing and installing new windows when the historic windows (frames, sashes and glazing) are completely missing. It may be a new design that is compatible with the style, era and character of the historic place; or a replica based on physical and documentary evidence.

**Not Recommended**

Introducing a new design that is inconsistent with the style, era and overall historic character of the building.

Creating a false historical appearance because the replaced window is based on insufficient physical and documentary evidence.

**Alterations/Additions for the New Use**

Designing and installing additional windows on non-character-defining elevations if required by the new use. Such designs should be compatible with the overall style, era and character of the building, but not necessarily duplicate the fenestration pattern and detailing of a character-defining elevation.

Providing a setback in the design of dropped ceilings when they are required for the new use to allow for the full height of the window openings.

**Not Recommended**

Installing new windows, including frames, sashes and muntins, that are incompatible with the building’s historic appearance or obscure, damage or destroy character-defining elements.

Inserting new floors or furred-down ceilings that cut across the glazed areas of windows so that the exterior form and appearance of the windows are changed.

**Additional Guidelines for Restoration Projects**

**Recommended**

**RESTORING** a window, if an evaluation of its overall condition determines that more than preservation is required; i.e., if repairs to wood features from the restoration period will be necessary.

**Repairing** window frames and sashes from the restoration period by patching, splicing, consolidating or otherwise reinforcing. Such repair may also include limited replacement — preferably in kind — of extensively deteriorated or missing parts such as architraves, hoodmoulds, sash, sills and interior or exterior shutters and blinds when there are surviving prototypes. The new work should be unobtrusively dated to guide future research and treatment.

**Not Recommended**

Failing to evaluate the overall condition of a window in order to determine the appropriate method of conservation.

Replacing an entire window from the restoration period when repair of materials and limited replacement of deteriorated or missing parts are appropriate.

Failing to reuse serviceable window hardware such as brass sash lifts and sash locks.

Using a substitute material for the replacement part that neither conveys the appearance of the surviving parts of the window, nor is physically or chemically compatible.
### Recommended

**Replacing in kind** a window feature from the restoration period that is too deteriorated to repair using the same sash and pane configuration and other design details. The new work should be unobtrusively dated to guide future research and treatment.

### Not Recommended

Removing a window feature from the restoration period that is irreparable and not replacing it; or failing to document the new work.

---

The following RESTORATION work has been highlighted to indicate that it involves the removal or alteration of existing windows and window features from periods other than the accepted restoration period; and the replacement of missing window features from the restoration period with all new materials. This work should only be considered after the Preservation and Restoration concerns listed above have been addressed.

### Recommended

**Removing Existing Features from Other Periods**

Removing or altering windows or window features, such as later single-pane glazing or inappropriate shutters, dating from other periods.

Documenting materials and features dating from other periods prior to their alteration or removal. If possible, selected examples of these features or materials should be stored to facilitate future research.

**Recreating Missing Features from the Restoration Period**

Recreating a missing window or window feature that existed during the restoration period based on physical or documentary evidence; for example, duplicating a hoodmould or shutter.

### Not Recommended

Failing to remove a window feature from another period, thus confusing the depiction of the building’s significance.

Failing to document window features from other periods (which results in the loss of a valuable portion of the historic record) prior to removing them from the building.

Constructing a window feature that was part of the original design of the building, but was never actually built; or constructing a feature that was thought to have existed during the restoration period, but for which there is insufficient documentation.
Entrances and Porches

Recommended

Preserving entrances and porches — and their functional and decorative features such as doors, fanlights, sidelights, pilasters, entablatures, columns, balustrades and stairs — which are important in defining the overall heritage value of the building.

Documenting the form, materials and condition of entrances and porches prior to beginning project work.

Protecting and maintaining the masonry, wood and architectural metals that comprise entrances and porches through appropriate surface treatments such as cleaning, rust removal, limited paint removal and re-appllication of protective coating systems in kind.

Retaining sound entrance and porch elements or deteriorated entrance and porch elements that can be repaired (see also section 4: Accessibility Considerations).

Repairing and stabilizing deteriorated entrance and porch elements by structural reinforcement, weather protection; or correcting unsafe conditions, as required, until any additional work is undertaken. Repairs should be physically and visually compatible.

Replacing in kind extensively deteriorated or missing parts of entrance and porch elements where there are surviving prototypes. The new work should match the existing elements in form and detailing.

Evaluating the overall condition of materials to determine whether more than protection, maintenance and limited repair or replacement in kind are required; i.e., if more extensive repairs to entrance and porch elements will be necessary.

Not Recommended

Removing or radically changing entrances and porches that are important in defining the overall heritage value of the building so that, as a result, the heritage value is diminished.

Undertaking project work that will have an impact on character-defining entrances and porches without first documenting their existing character and condition.

Failing to provide adequate protection of materials on a cyclical basis, which results in deterioration of entrances and porches.

Removing sound or repairable material such as wood, cast iron, terra cotta tile and brick from entrances and porches.

Removing an entrance or porch because the building has been re-oriented to accommodate a new use.

Creating new entrances on a character-defining elevation.

Altering utilitarian or service entrances so they appear to be formal entrances by adding panelled doors, fanlights and sidelights.

Removing deteriorated entrance and porch elements that could be stabilized, repaired and conserved; or using untested consolidants and untrained personnel, thus causing further damage to fragile elements.

Replacing an entire entrance or porch element when limited replacement of deteriorated and missing components is appropriate.

Using a replacement material that does not match the historic entrance or porch element.

Failing to undertake adequate measures to protect entrances and porches.
Additional Guidelines for Rehabilitation Projects

**Recommended**

*Rehabilitating* an entrance or a porch, if an evaluation of its overall condition determines that more than preservation is required.

*Repairing* an entrance or porch by reinforcing the character-defining materials. Repair will also generally include the limited replacement in kind — or with a compatible substitute material — of those extensively deteriorated or missing parts of repeated elements where there are surviving prototypes such as balustrades, cornices, entablatures, columns, sidelights and stairs, or where there is clear evidence such as old paint traces on adjacent surfaces.

*Replacing in kind* an entire entrance or porch that is too deteriorated to repair — if the form and detailing are still evident — using the physical evidence as a model to reproduce the element. If using the same kind of material is not technically or economically feasible, then compatible substitute materials may be considered.

**Not Recommended**

Failing to evaluate the overall condition of an entrance or a porch in order to determine the appropriate method of conservation.

Replacing an entire entrance or porch when the repair of materials and limited replacement of parts are feasible.

Using a substitute material for replacement parts that neither conveys the appearance of the surviving parts of the entrance and porch, nor is physically or chemically compatible.

Removing an entrance or porch that is irreparable and not replacing it; or replacing it with a new entrance or porch that does not convey the same appearance.

Porches, such as this portico on the old Bonsecours Market in Montreal (built 1844-47) with its striking Greek Doric cast iron columns, can play a very significant role in defining the character of a building. Maximizing the retention of character-defining elements, including the portico, was the primary conservation objective when the building was Rehabilitated for use as a Municipal office.
The following REHABILITATION work has been highlighted to indicate that it involves a particularly complex technical or design aspect and should only be considered after the Preservation and Rehabilitation concerns listed above have been addressed.

**Recommended**

**Designing for the Replacement of Missing Historic Features**

Designing and constructing a new entrance or porch when the historic entrance or porch is completely missing. It may be a new design that is compatible with the style, era and character of the historic place; or a replica based on physical and documentary evidence.

**Not Recommended**

Introducing a new entrance or porch that is incompatible in size, scale, material, style or colour.

Creating a false historical appearance because the replaced entrance or porch is based on insufficient physical and documentary evidence.

**Alterations/Additions for the New Use**

Designing enclosures or screening for character-defining porches on secondary elevations when required by the new use in a manner that preserves the character of the building. This can include using large sheets of glass and recessing the enclosure wall behind existing scrollwork, posts or balustrades.

Enclosing porches in a manner that detracts from or results in a loss of character by using materials such as wood, stucco or masonry.

Designing and installing additional entrances or porches on non-character-defining elevations when required for the new use in a manner that preserves the character of the building, i.e., limiting such alteration to non-character-defining elevations.

Installing secondary entrances and porches on non-character-defining elevations that are incompatible in size or scale with the historic building or obscure, damage or destroy character-defining elements.

In Rehabilitation, deteriorated features should be repaired, whenever possible, and replaced when the severity of the damage makes it necessary. Here, the character-defining stone steps of the entrance to a house in Saint John, New Brunswick were cracked. Appropriate work on the entrance included repairs to the stone steps and walls, and the installation of a metal handrail to meet building code requirements.
Additional Guidelines for Restoration Projects

**Recommended**

**Restoring** an entrance or a porch, if an evaluation of its overall condition determines that more than preservation is required; i.e., if repairs to features from the restoration period will be necessary.

**Repairing** entrances and porches from the restoration period by reinforcing the historic materials. Repairs will also generally include the limited replacement — preferably in kind — of those extensively deteriorated or missing parts of repeated features such as balustrades, cornices, entablatures, columns, sidelights and stairs where there are surviving prototypes, or where there is clear evidence such as old paint traces on adjacent surfaces. The new work should be unobtrusively dated to guide future research and treatment.

**Replacing in kind** an entire entrance or porch from the restoration period that is too deteriorated to repair — if the form and detailing are still evident — using the physical evidence as a model to reproduce the feature. The new work should be unobtrusively dated to guide future research and treatment.

**Not Recommended**

Failing to evaluate the overall condition of an entrance or a porch in order to determine the appropriate method of conservation.

Replacing an entire entrance or porch feature from the restoration period when the repair of materials and limited replacement of parts are appropriate.

Using a substitute material for the replacement part that neither conveys the appearance of the surviving parts of the entrance and porch, nor is physically or chemically compatible.

Removing an entrance or porch feature from the restoration period that is irreparable and not replacing it; or failing to document the new work.

In *Restoration*, reinstating the historic paint colours from the restoration period should be based on physical or documentary evidence, such as on-site paint analysis and colour photographs.
The following Restoration work has been highlighted to indicate that it involves the removal or alteration of existing entrance and porch features from periods other than the accepted restoration period; and the replacement of missing entrance and porch features from the restoration period with all new materials. This work should only be considered after the Preservation and Restoration concerns listed above have been addressed.

Storefronts

**Recommended**

*Preserving* storefronts — and their functional and decorative features such as display windows, doors, transoms, cornices, corner posts, awnings and signs — that are important in defining the overall heritage value of the building.

*Documenting* the form, materials and condition of storefronts prior to beginning project work. The careful removal of non-character-defining cladding, false mansard roofs and other cover-ups may reveal an earlier storefront beneath.

*Stabilizing* and protecting storefronts against arson and vandalism before work begins by boarding up windows and installing alarm systems that are keyed into local protection agencies.

*Protecting and maintaining* wood, masonry and architectural metals that comprise storefronts through appropriate treatments such as cleaning, rust removal, limited paint removal and re-application of protective coating systems in kind.

**Not Recommended**

Removing or radically changing storefronts — and their features — that are important in defining the overall heritage value of the building.

Undertaking project work that will have an impact on character-defining storefronts and storefront elements without first documenting their existing character and condition.

Permitting entry into the building through unsecured or broken windows and doors so that interior elements and finishes are damaged by exposure to weather or vandalism.

Failing to provide adequate protection of materials on a cyclical basis, which results in the deterioration of storefronts.

The character-defining form and features of 1880s storefronts in Vancouver, including their large plate-glass display windows with multi-pane transom windows above and recessed central doorways, have been retained through Preservation.
Recommended

Retaining sound storefronts and storefront elements, or deteriorated storefronts and storefront elements that can be repaired.

Retaining character-defining signs and awnings that are sound or could be repaired.

Repairing and stabilizing deteriorated storefront elements by structural reinforcement, weather protection, or correcting unsafe conditions, as required, until any additional work is undertaken. Repairs should be physically and visually compatible.

Replacing in kind extensively deteriorated or missing parts of storefronts where there are surviving prototypes. The new work should match the old in form and detailing.

Evaluating the overall condition of storefronts to determine whether more than protection, maintenance and limited repair or replacement in kind is required; i.e., if more extensive repairs to storefronts will be necessary.

Not Recommended

Stripping storefronts of character-defining material such as wood, brick, metal, structural glass (e.g., Carrara Glass or Vitrolite), terra cotta and cast iron; or covering over character-defining material.

Changing the storefront so that it appears residential rather than commercial in character.

Changing the proportions of display windows.

Changing the location of a storefront’s main entrance.

Removing material from the storefront to create a recessed arcade.

Introducing coach lanterns, false mansard roofs, wood shakes, non-operable shutters and small-paned windows if they cannot be documented historically.

Replacing sound character-defining signs and awnings, or signs and awnings that could be repaired.

Removing deteriorated storefront elements that could be stabilized, repaired and conserved; or using untested consolidants and untrained personnel, thus causing further damage to fragile elements.

Replacing an entire storefront element such as a cornice when limited replacement of deteriorated and missing components is appropriate.

Using replacement material that does not match the historic storefront element.

Failing to undertake adequate measures to protect storefronts.

Creating a false sense of history, such as adding features based on 18th century American architecture to a 19th century Canadian building, is not recommended.
Additional Guidelines for Rehabilitation Projects

Recommended

**Rehabilitating** a storefront, if an evaluation of its overall condition determines that more than preservation is required.

**Repairing** storefronts by reinforcing the character-defining materials. Repairs will also generally include the limited replacement in kind — or with compatible substitute materials — of those extensively deteriorated or missing parts of storefronts where there are surviving prototypes such as transoms, cornices, pilasters or signs.

**Replacing in kind** an entire storefront that is too deteriorated to repair — if the overall form and detailing are still evident — using the physical evidence as a model. If using the same material is not technically or economically feasible, then compatible substitute materials may be considered.

Not Recommended

Failing to evaluate the overall condition of a storefront in order to determine the appropriate method of conservation.

Replacing an entire storefront when repair of materials and limited replacement of its parts are feasible.

Using a substitute material for replacement parts, which neither conveys the same appearance as the surviving parts of the storefront, nor is physically or chemically compatible.

Removing a storefront that is irreparable and not replacing it; or replacing it with a new storefront that does not convey the same appearance.

The Rehabilitation of the exterior of this building in Nelson, British Columbia involved carefully removing panels that covered the storefront and stripping the paint from the second storey to reveal the underlying brick and stone façade, and installing traditional-style fabric awnings. Many older commercial buildings were reclad in an attempt to give them a modern face. Beneath these cover-ups may be a well-designed and well-built façade. Removing such cover-ups, if they are not character-defining elements, is recommended.
The following REHABILITATION work has been highlighted to indicate that it involves a particularly complex technical or design aspect and should only be considered after the Preservation and Rehabilitation concerns listed above have been addressed.

**Recommended**

**Designing for the Replacement of Missing Historic Features**

Designing and constructing a new storefront when the historic storefront is completely missing. It may be a new design that is compatible with the style, era and character of the historic place; or a replica based on physical and documentary evidence.

**Not Recommended**

Introducing a new design that is incompatible in size, scale, material, style and colour.

Creating a false historical appearance because the replaced storefront is based on insufficient physical and documentary evidence.

Using inappropriately scaled signs and logos or other types of signs that are incompatible in size, scale, material, style, colour or illumination; or obscure, damage, or destroy character-defining elements of the building, or undermine its heritage value.

Using awnings, canopies or marquees that are incompatible in size, scale, material, style, colour or illumination; or obscure, damage, or destroy character-defining elements of the building, or undermine its heritage value.

A new storefront was constructed to replace the extensively altered storefront of this bank in Perth, Ontario when the building was Rehabilitated. The new storefront could have been a replica of the historic storefront, if there had been sufficient evidence. An acceptable alternative in Rehabilitation, as shown in the photo to the right, is a new design that is compatible in form, material and detailing with the style, era and character of the building.
Additional Guidelines for Restoration Projects

**Recommended**

**Restoring** a storefront, if an evaluation of its overall condition determines that more than preservation is required; i.e., if repairs to storefront features from the restoration period will be necessary.

**Repairing** store fronts from the restoration period by reinforcing the historic materials. Repairs will also generally include the limited replacement — preferably in kind — of those extensively deteriorated or missing parts of storefronts such as transoms, cornices, pilasters or signs where there are surviving prototypes. The new work should be unobtrusively dated to guide future research and treatment.

**Replacing in kind** a storefront from the restoration period that is too deteriorated to repair — if the overall form and detailing are still evident — using the physical evidence as a model. The new work should be unobtrusively dated to guide future research and treatment.

**Not Recommended**

Failing to evaluate the overall condition of a storefront in order to determine the appropriate method of conservation.

Replacing an entire storefront feature from the restoration period when repair of materials and limited replacement of its parts are appropriate.

Using a substitute material for the replacement part, which neither conveys the same appearance as the surviving parts of the storefront, nor is physically or chemically compatible.

Removing a storefront feature from the restoration period that is irreparable and not replacing it; or failing to document the new work.

New signs, as illustrated at right, should be compatible with the building in terms of size, scale, material, style and colour. In addition, they should not obscure, damage, or destroy character-defining elements of the building. In some cases, as in the Rialto Theatre in Montreal at left, signs added later become character-defining elements in their own right.
The following RESTORATION work has been highlighted to indicate that it involves the removal or alteration of existing storefront features from periods other than the accepted restoration period; and the replacement of missing storefront features from the restoration period with all new materials. This work should only be considered after the Preservation and Restoration concerns listed above have been addressed.

*Restoration of a storefront may involve removing inappropriate cladding dating from a later period. Recreating a missing feature, such as the awnings on this storefront in New Brunswick, should be based on physical or documentary evidence.*
Interiors Spaces, Features and Finishes

**Recommended**

**Interior Spaces**

*Preserving* circulation patterns or interior spaces — such as lobbies, reception halls, entrance halls, double parlours, theatres, auditoriums and industrial or commercial spaces — that are important in defining the overall heritage value of the building.

*Documenting* the form, materials and condition of circulation patterns or interior spaces prior to beginning project work. This includes the size, configuration, proportion and relationship of rooms and corridors; and the relationship of features to spaces.

*Retaining* sound circulation patterns or interior spaces, or deteriorated circulation patterns or interior spaces that can be repaired (see also section 4: *Accessibility Considerations*).

**Not Recommended**

Radically changing circulation patterns or interior spaces — including individual rooms — that are important in defining the overall heritage value of the building.

Undertaking project work that will have an impact on character-defining circulation patterns or interior spaces without first documenting their existing character and condition.

Altering the floor plan by demolishing principal walls and partitions in order to create a new appearance.

Altering or destroying interior spaces by inserting floors, cutting through floors, lowering ceilings, or adding or removing walls.

Relocating an interior feature such as a staircase, thereby altering the relationship between features and spaces.

Restoring theatre interiors includes preserving the proportion and form of spaces and furnishings, as well as other features and finishes that are important in defining the overall character of the building. The *Restoration* of the interior of the Imperial Theatre in Saint John, New Brunswick included rehabilitation of the seating and circulation according to code requirements, and restoration of the ornamental plaster ceilings and light fixtures.
Recommended

**Interior Features and Finishes**

**Preserving** interior features and finishes that are important in defining the character of the building, including columns, cornices, baseboards, fireplaces and mantels, panelling, light fixtures, hardware and flooring; wallpaper, plaster, paint and finishes such as stencilling, marbling and graining; and other character-defining decorative materials that accent interior features and provide colour, texture and patterning to walls, floors and ceilings.

**Documenting** the form, materials and condition of interior features and finishes prior to beginning project work.

**Stabilizing** and protecting interior features and finishes against arson and vandalism before project work begins, in a non-damaging, reversible manner, such as erecting protective fencing, boarding up windows and installing fire alarm systems that are keyed to local protection agencies.

---

Not Recommended

**Removing or radically changing features and finishes that are important in defining the overall character of the building.**

**Undertaking project work that will have an impact on character-defining interior features and finishes without first documenting their existing character and condition.**

**Permitting unauthorized entry into historic buildings through unsecured or broken windows and doors, exposing the interior features and finishes to damage caused by weather or vandalism.**

**Stripping interiors of decorative materials and features such as woodwork, doors, windows, light fixtures, copper piping, radiators.**

An example of “limited replacement in kind” points out an appropriate scope of work within the treatment Preservation. Only the damaged corner of a stair’s newel post has been replaced (it will be stained to match). Targeting repairs to the deteriorated elements meant that most of the character-defining elements were retained.
**Recommended**

**Protecting and maintaining** masonry, wood and architectural metals, as well as wall treatments that comprise interior features through appropriate surface treatments such as cleaning, rust removal, limited paint removal and re-application in kind of protective coating systems.

Protecting interior features such as a staircase, mantel or decorative finishes and wall coverings against damage during project work by covering them with heavy canvas or plastic sheets, for example.

Installing protective coverings in areas of heavy pedestrian traffic to protect elements such as wall coverings, parquet flooring and panelling.

Removing damaged or deteriorated paints and finishes to the next sound layer using the gentlest method possible, then repainting or refinishing using compatible paint or other coating systems.

Using proven cleaning methods that do not damage interior features and finishes. Abrasive cleaning should only be considered when it is necessary to halt deterioration or remove heavy soiling and only after other, gentler methods have been proven in tests to be ineffective and the desired level of cleanliness has been established.

Repainting with colours that are appropriate to the historic building.

**Retaining** sound interior features and finishes, or deteriorated interior features and finishes that can be repaired.

**Repairing and stabilizing** deteriorated interior features and finishes by addressing the root causes of the damage, opting for structural reinforcement or correcting unsafe conditions, as required, until any additional work is undertaken. Repairs should be physically and visually compatible.

**Not Recommended**

Failing to provide adequate protection of materials on a cyclical basis, which results in the deterioration of interior features.

Failing to provide proper protection of interior features and finishes during work so that they are gouged, scratched, dented or otherwise mechanically damaged.

Failing to take new patterns of use and circulation into consideration, resulting in damage to interior features and finishes.

Using destructive methods such as propane or butane torches or sandblasting to remove paint, whitewash or other coatings. These methods can irreversibly damage the materials that comprise interior features.

Changing the texture and patina of interior features and finishes through sandblasting or use of abrasive methods to remove paint, discolouration or plaster. This includes both exposed wood (including structural members) and masonry.

Using new finishes or paint colours that are inappropriate to the historic building.

Removing paint, plaster or other finishes from historically finished surfaces in order to create a new appearance (e.g., removing plaster to expose masonry surfaces such as brick walls or a chimney piece).

Stripping paint to bare wood rather than repairing or reapplying grained or marbled finishes to features such as doors and panelling.

Radically changing the type of finish or its colour, such as painting a previously varnished wood feature.

Installing new decorative material that obscures or damages interior features or finishes, or undermines the heritage value of the space.

Applying paint, plaster or other finishes to surfaces that have been historically unfinished in order to create a new appearance.

Removing deteriorated interior features and finishes that could be stabilized, repaired and conserved; or using untested consolidants and untrained personnel, thus causing further damage to fragile elements.
Recommended

**Replacing in kind** extensively deteriorated or missing parts of interior features and finishes where there are surviving prototypes. The new work should match the old in form and detailing.

Evaluating the overall condition of interior features and finishes to determine whether more than protection, maintenance and limited repair or replacement in kind is required; i.e., if more extensive repairs to interior features and finishes will be necessary.

**Additional Guidelines for Rehabilitation Projects**

**Recommended**

Rehabilitating interior spaces, features and finishes, if an evaluation of their overall condition determines that more than preservation is required.

Repairing interior features and finishes by reinforcing the character-defining materials. Repair will also generally include the limited replacement in kind — or with a compatible substitute material — of those extensively deteriorated or missing parts of repeated features when there are surviving prototypes such as stairs, balustrades, wood panelling, columns; or decorative wall coverings or ornamental tin or plaster ceilings.

Not Recommended

Replacing an entire interior feature or finish when limited replacement of deteriorated and missing components is appropriate.

Using replacement material that does not match the historic interior feature or finish.

Failing to undertake adequate measures to protect interior features and finishes.

**Recommended**

Replacing in kind extensively deteriorated or missing parts of interior features and finishes where there are surviving prototypes. The new work should match the old in form and detailing.

Evaluating the overall condition of interior features and finishes to determine whether more than protection, maintenance and limited repair or replacement in kind is required; i.e., if more extensive repairs to interior features and finishes will be necessary.

**Not Recommended**

Replacing an entire interior feature such as a staircase, panelled wall, parquet floor or cornice; or finish such as a decorative wall covering or ceiling, when repair of materials and limited replacement of such parts is feasible.

Using a substitute material for the replacement part that neither conveys the appearance of the surviving parts or portions of the interior feature or finish, nor is physically or chemically compatible.

When the Birkett Castle in Ottawa was first converted from residential to office use, its plaster ceiling was covered in acoustic tiles and fluorescent lighting was installed throughout. Some years later the building was sensitively rehabilitated by its new owner: in addition to removing the ceiling tiles and fluorescent light fixtures and carefully patching the damage they created, the sound character-defining interior features and finishes were retained and restored, and the deteriorated ones were repaired or replaced in kind.
### Recommended

**Replacing in kind** an entire interior feature or finish that is too deteriorated to repair — if the overall form and detailing are still evident — using the physical evidence as a model for reproduction. Examples could include wainscoting, a pressed-metal ceiling, or interior stairs. If using the same kind of material is not technically or economically feasible, then a compatible substitute material may be considered.

### Not Recommended

Removing a character-defining feature or finish that is irreparable and not replacing it; or replacing it with a new feature or finish that does not convey the same appearance.

---

</tbody>
</table>

### Alterations/Additions for the New Use

Accommodating service functions such as bathrooms, mechanical equipment and office machines required by the building’s new use in secondary spaces such as first floor service areas or on upper floors.

Reusing decorative material or features that have had to be removed during the rehabilitation work including wall and baseboard trim, door moulding, panelled doors and simple wainscoting; and relocating such material or features to areas appropriate to their historic placement.

Installing permanent partitions in secondary spaces; removable partitions that do not destroy the sense of space should be installed when the new use requires the subdivision of character-defining interior space.

Dividing rooms, lowering ceilings and damaging or obscuring character-defining elements such as fireplaces, niches, stairways or alcoves, so that a new use can be accommodated in the building.

Discarding character-defining material when it can be reused within the rehabilitation project or relocating it to historically inappropriate areas.

Installing permanent partitions that damage or obscure character-defining spaces, features or finishes.
**Recommended**

Enclosing an interior stairway where required by code so that its character is retained. In many cases, glazed fire-rated walls may be used.

Placing new code-required stairways or elevators in secondary and service areas of the historic building.

Creating an atrium or a light well to provide natural light when required for the new use in a manner that ensures the preservation of the structural system as well as character-defining interior spaces, features and finishes.

Adding a new floor if required for the new use in a manner that preserves character-defining interior spaces, features and finishes.

**Not Recommended**

Enclosing an interior stairway with fire-rated construction so that the stairwell space or any character-defining elements are destroyed.

Radically changing, damaging, or destroying character-defining spaces, features or finishes when adding new code-required stairways and elevators.

Destroying character-defining interior spaces, features or finishes; or damaging the structural system, in order to create an atrium or light well.

Inserting a new floor within a building that radically changes a character-defining interior space; obscures, damages, or destroys decorative detailing; or alters or destroys the arrangement of windows in a building.

---

**Additional Guidelines for Restoration Projects**

**Recommended**

**RESTORING** interior features and finishes, if an evaluation of their overall condition determines that more than preservation is required; i.e., if repairs to interior features and finishes from the restoration period will be necessary.

**Repairing** interior features and finishes from the restoration period by reinforcing the historic materials. Repair will also generally include the limited replacement — preferably in kind — of extensively deteriorated or missing parts of repeated features such as stairs, balustrades, wood panelling, columns, or decorative wall coverings or ornamental metal or plaster ceilings when there are surviving prototypes. The new work should be unobtrusively dated to guide future research and treatment.

**Replacing in kind** an entire interior feature or finish from the restoration period that is too deteriorated to repair — if the overall form and detailing are still evident — using the physical evidence as a model for reproduction. Examples could include wainscoting, a pressed-metal ceiling or interior stairs. The new work should be unobtrusively dated to guide future research and treatment.

**Not Recommended**

Failing to evaluate the overall condition of interior features and finishes in order to determine their proper conservation.

Replacing an interior feature from the restoration period such as a staircase, panelled wall, parquet floor or cornice; or finish such as a decorative wall covering or ceiling when repair of materials and limited replacement of such parts are appropriate.

Using a substitute material for the replacement part, which neither conveys the same appearance as the surviving parts or portions of the interior feature or finish, nor is physically or chemically compatible.

Removing a feature or finish from the restoration period that is irreparable and not replacing it; or failing to document the new work.
The following RESTORATION work has been highlighted to indicate that it involves the removal or alteration of existing interior spaces, features and finishes from periods other than the accepted restoration period; and the replacement of missing interior spaces, features and finishes from the restoration period with all new materials. This work should only be considered after the Preservation and Restoration concerns listed above have been addressed.

**Recommended**

**Removing Existing Features from Other Periods**

Removing or altering interior spaces, features and finishes, such as a later suspended ceiling or wood panelling, dating from other periods.

Documenting materials and features dating from other periods prior to their alteration or removal. If possible, selected examples of these features or materials should be stored to facilitate future research.

**Recreating Missing Features from the Restoration Period**

Recreating an interior space, or a missing feature or finish, from the restoration period based on physical or documentary evidence; for example, duplicating a marbleized mantel or a staircase.

**Not Recommended**

**Failing to remove or alter an interior space, feature or finish from another period, thus confusing the depiction of the building’s significance.**

Failing to document interior spaces, features and finishes from other periods (which results in the loss of a valuable portion of the historic record) prior to removing them from the building.

Constructing an interior space, feature or finish that was part of the original design of the building but was never actually built; or constructing a feature that was thought to have existed during the restoration period, but for which there is insufficient documentation.

When adding any new features to meet functional requirements, it is recommended that adjacent character-defining elements be conserved. A new glass wall in this Halifax office building was carefully designed to complement the quality of the lobby’s materials and finishes, and installed in a way that avoided damaging the adjacent character-defining plasterwork and stone-wainscoting. Its contemporary design is sympathetic to the style of the mid-1930s building.
Recommended

**Preserving** structural systems and individual features of systems — such as load-bearing wood, brick, or stone walls, trusses, post-and-beam systems, summer beams, cast iron columns or above-grade stone foundation walls — that are important in defining the overall heritage value of the building.

**Documenting** the form, materials, function and condition of structural systems prior to beginning project work.

**Stabilizing** deteriorated structural systems by structural reinforcement or weather protection, or ensuring that unsafe conditions are corrected, as required, until any additional work is undertaken.

**Protecting and maintaining** the structural system by cleaning and maintaining the roof gutters and downspouts; replacing roof flashing in kind; keeping masonry, wood and architectural metals in a sound condition; and ensuring that structural members are free of fungal decay and insect infestation.

Examing and evaluating the physical condition of the structural system and its individual features using minimally destructive techniques such as radiographic, ultrasonic, electromagnetic or acoustic testing.

**Retaining** sound structural systems or deteriorated structural systems that can be repaired.

**Repairing** deteriorated structural systems in such a way that repairs are physically and visually compatible.

Not Recommended

Removing, covering or radically changing visible features of structural systems that are important in defining the overall heritage value of the building.

Leaving known structural problems untreated such as deflection of beams, cracking and bowing of walls, or racking of structural members.

Utilizing treatments or products that accelerate the deterioration of structural material such as introducing urea formaldehyde foam insulation into frame walls.

Putting the building to a new use, which could overload the existing structural system; or installing equipment or mechanical systems that could damage the structure.

Undertaking project work that will have an impact on character-defining structural systems without first documenting their existing character and condition.

Failing to stabilize deteriorated structural systems, thus putting them at risk of further deterioration.

Failing to obtain advice from qualified personnel such as professional engineers for any structural systems that may be unsafe.

Failing to provide proper building maintenance, resulting in the deterioration of the structural system. Causes of deterioration include subsurface ground movement, rising damp, vegetation growing too close to foundation walls, improper grading, fungal rot and poor interior ventilation that results in condensation.

Utilizing destructive probing or sampling techniques that will damage or destroy structural material.

Replacing or rebuilding structural systems that can be repaired; e.g., demolishing a load-bearing masonry wall that could be augmented and retained and replacing it with a new wall, using the masonry only as an exterior veneer.

Removing deteriorated structural system elements that could be stabilized, repaired and conserved; or using untested consolidants and untrained personnel, thus causing further damage to fragile elements.
Recommended

Replacing in kind extensively deteriorated or missing parts of structural systems where there are surviving prototypes. The new work should match the old in form and detailing and have adequate strength.

Evaluating the overall condition of structural systems to determine whether more than protection, maintenance and limited repair or replacement in kind is required; i.e., if more extensive repairs to structural systems will be necessary.

Not Recommended

Replacing an entire structural system element such as a summer beam when limited replacement of deteriorated and missing components is appropriate.

Using a replacement material that does not match the historic structural system element.

Failing to undertake adequate measures to protect structural systems.

Additional Guidelines for Rehabilitation Projects

Recommended

Rehabilitating a structural system and its individual features, if an evaluation of its overall condition determines that more than preservation is required.

Repairing the structural system by augmenting or upgrading individual parts or features. For example, weakened structural members such as floor framing can be paired with a new member, braced or otherwise supplemented and reinforced.

Preserving structural systems includes stabilizing deteriorated systems by structural reinforcement until any additional work is undertaken, as illustrated here in the temporary bracing of the E.B. Eddy factory in Gatineau, Quebec.

Not Recommended

Failing to evaluate the overall condition of a structural system and its individual features in order to determine the appropriate method of conservation.

Upgrading the building structurally in a manner that diminishes the character of the exterior (such as installing strapping or channels, or removing a decorative cornice) or that damages interior features or spaces.

Replacing a structural member or other feature of the structural system when it could be augmented and retained.
**Recommended**

**Replacing in kind** — or with a substitute material — those portions or features of the structural system that are either extensively deteriorated or are missing when there are surviving prototypes such as cast iron columns, roof rafters or trusses, or sections of load-bearing walls. Substitute material should convey the same form, design and overall appearance as the character-defining element; and at least be equal to its load-bearing capabilities.

The following REHABILITATION work has been highlighted to indicate that it involves a particularly complex technical or design aspect and should only be considered after the Preservation and Rehabilitation concerns listed above have been addressed.

Additional Guidelines for Restoration Projects

**Recommended**

Restoring a structural system and its individual features, if an evaluation of their overall condition determines that more than preservation is required; i.e., if repairs to structural features from the restoration period will be necessary.

Repairing the structural system by augmenting or upgrading individual parts or features in a manner that is consistent with the restoration period. For example, weakened structural members such as floor framing can be paired with a new member, braced or otherwise supplemented and reinforced. The new work should be unobtrusively dated to guide future research and treatment.

Replacing in kind — or with a substitute material — those portions or features of the structural system that are either extensively deteriorated or are missing when there are surviving prototypes such as cast iron columns, roof rafters or trusses, or sections of load-bearing walls. Substitute material should convey the same form, design and overall appearance as the historic feature; and, at a minimum, be equal to its load-bearing capabilities. The new work should be unobtrusively dated to guide future research and treatment.

**Not Recommended**

Failing to evaluate the overall condition of a structural system and its individual features in order to determine the appropriate method of conservation.

Upgrading the building structurally in a manner that diminishes the historic character of the exterior (such as installing strapping channels or removing a decorative cornice) or that damages interior features or spaces.

Replacing a structural member or other feature of the structural system when it could be augmented and retained.

Installing a visible replacement feature that does not convey the same appearance, e.g., replacing an exposed wood summer beam with a steel beam; or failing to document the new work.

Using substitute material that does not equal the load-bearing capabilities of the historic material and design or is otherwise physically or chemically incompatible.

In Preservation, visible structural systems that are important in defining the overall character of a building should not be removed or obscured. If an evaluation of the physical condition of the structural system (using minimally destructive techniques) indicates that repairs of deteriorated parts are required, they should match the old in form and detailing and have adequate strength.
The following RESTORATION work has been highlighted to indicate that it involves the removal or alteration of existing structural systems and features from periods other than the accepted restoration period; and the replacement of missing structural system features from the restoration period with all new materials. This work should only be considered after the Preservation and Restoration concerns listed above have been addressed.

**Recommended**

**Removing Existing Features from Other Periods**

Removing or altering visually intrusive structural features such as a non-matching column or exposed ceiling beams, dating from other periods.

Documenting materials and features dating from other periods prior to their alteration or removal. If possible, selected examples of these features or materials should be stored to facilitate future research.

**Recreating Missing Features from the Restoration Period**

Recreating a missing structural feature that existed during the restoration period based on physical or documentary evidence; for example, duplicating a cast iron column.

**Not Recommended**

Failing to remove or alter a visually intrusive structural feature from another period, thus confusing the depiction of the building’s significance.

Failing to document structural features from other periods (which results in the loss of a valuable portion of the historic record) prior to removing them from the building.

Constructing a structural feature that was part of the original design of the building but was never actually built; or constructing a feature that was thought to have existed during the restoration period, but for which there is insufficient documentation.

---

Evaluating the physical condition of the elements of a wood structure should be carried out using non-destructive testing methods. The testing of wood columns in Gatineau, Quebec was carried out with a Densitomat micro-drill. The principle of measurement is based on the power required to advance the drill bit at a constant rate through the material. This can provide information about wood density variations indicative of decay or insect damage, and is a preferred method for testing because of the small diameter of the bit involved. The resulting borehole is generally invisible to the eye, essentially closing itself with the sawdust generated by the procedure.
# Mechanical Systems

### Not Recommended

| Removing or radically changing elements of mechanical systems that are important in defining the overall heritage value of the building. |
| Undertaking project work that will have an impact on character-defining mechanical systems without first documenting their existing character and condition. |
| Failing to provide adequate protection of materials on a cyclical basis, which results in deterioration of mechanical systems and their visible elements. |
| Enclosing mechanical systems in areas that are not adequately ventilated so that deterioration of the systems results, or in areas that cannot be accessed easily for servicing or maintenance. |
| Installing unnecessary climate control systems that can add excessive moisture to the building. This additional moisture can either condense inside, damaging interior surfaces, or pass through interior walls to the exterior, potentially damaging adjacent materials as it migrates. |
| Replacing mechanical systems that can be repaired. |
| Removing deteriorated mechanical systems that could be stabilized, repaired and conserved; or using untested consolidants and untrained personnel, thus causing further damage to fragile elements. |
| Replacing an entire mechanical system when limited replacement of deteriorated and missing components is appropriate. |
| Using a replacement material that does not match the historic mechanical system element. |
| Failing to undertake adequate measures to protect mechanical systems. |
Additional Guidelines for Rehabilitation Projects

**Recommended**

- **Repairing** mechanical systems by augmenting or upgrading system parts, such as installing new pipes and ducts, rewiring or adding new compressors or boilers.

- **Replacing in kind** — or with a compatible substitute material — those visible character-defining elements of mechanical systems such as ceiling fans, switch plates, radiators, grilles or plumbing fixtures that are extensively deteriorated.

- Installing a completely new mechanical system, if required, for the new use, while ensuring that it causes the least alteration possible to the building’s floor plan and the exterior elevations, and the least damage to the character-defining building materials.

- Providing adequate structural support and vibration isolation for new mechanical equipment.

- Installing the vertical runs of ducts, pipes and cables in non-character-defining areas (e.g., closets, service rooms and wall cavities).

- Installing heating/air conditioning units if required by the new use in such a manner that character-defining elements are not damaged or obscured and excessive moisture, which will accelerate deterioration of character-defining materials, is not generated.

**Not Recommended**

- Installing a new mechanical system so that character-defining structural or interior elements are radically changed, damaged or destroyed.

- Failing to consider the weight and design of new mechanical equipment, resulting in a weakening or cracking of character-defining structural members or finished surfaces.

- Installing vertical runs of ducts, pipes and cables in places where they will obscure character-defining elements.

- Concealing mechanical equipment in walls or ceilings in a manner that requires the removal of character-defining building material.

- Installing a “dropped” acoustical ceiling to hide mechanical equipment when it destroys the proportions of character-defining interior spaces.

- Cutting through elements such as masonry walls in order to install heating/air conditioning units.

**Recommended**

- **REHABILITATING** a mechanical system, if an evaluation of its overall condition determines that more than preservation is required.

- **Repairing** mechanical systems by augmenting or upgrading system parts, such as installing new pipes and ducts, rewiring or adding new compressors or boilers.

- **Replacing in kind** — or with a compatible substitute material — those visible character-defining elements of mechanical systems such as ceiling fans, switch plates, radiators, grilles or plumbing fixtures that are extensively deteriorated.

- Installing a completely new mechanical system, if required, for the new use, while ensuring that it causes the least alteration possible to the building’s floor plan and the exterior elevations, and the least damage to the character-defining building materials.

- Providing adequate structural support and vibration isolation for new mechanical equipment.

- Installing the vertical runs of ducts, pipes and cables in non-character-defining areas (e.g., closets, service rooms and wall cavities).

- Installing heating/air conditioning units if required by the new use in such a manner that character-defining elements are not damaged or obscured and excessive moisture, which will accelerate deterioration of character-defining materials, is not generated.

**Not Recommended**

- Failing to evaluate the overall condition of a mechanical system in order to determine the appropriate method of conservation.

- Replacing a mechanical system or its functional parts when it could be upgraded and retained.

- Installing a visible replacement element that does not convey the same appearance.

- Failing to evaluate the overall condition of a mechanical system in order to determine the appropriate method of conservation.

- Replacing a mechanical system or its functional parts when it could be upgraded and retained.

- Installing a visible replacement element that does not convey the same appearance.

The following REHABILITATION work is highlighted to indicate that it involves a particularly complex technical or design aspect and should only be considered after the Preservation and Rehabilitation concerns listed above have been addressed.
Recommended

Installing heating/air conditioning units in window frames in such a manner that sashes and frames are protected. Window installations should be considered only when all other viable heating/cooling systems would result in significant damage to character-defining materials.

Not Recommended

Radically changing the appearance of the historic building or damaging or destroying windows by installing heating/air conditioning units in character-defining window frames.

Additional Guidelines for Restoration Projects

Recommended

**Restoring** a mechanical system, if an evaluation of its overall condition determines that more than preservation is required; i.e., if repairs to mechanical features from the restoration period will be necessary.

**Repairing** mechanical systems from the restoration period by augmenting or upgrading system parts, such as installing new pipes and ducts, rewiring or adding new compressors or boilers.

**Replacing in kind** — or with a compatible substitute material — those visible features of restoration period mechanical systems that are either extensively deteriorated or are prototypes such as ceiling fans, switch plates, radiators, grilles or plumbing fixtures.

Installing a new mechanical system, if required, in a way that results in the least alteration possible to the building.

Providing adequate structural support for new mechanical equipment.

Installing the vertical runs of ducts, pipes and cables in closets, service rooms and wall cavities.

Installing heating/air conditioning units in such a manner that features are not damaged or obscured and excessive moisture, which will accelerate the deterioration of historic materials, is not generated.

Not Recommended

Failing to evaluate the overall condition of a mechanical system in order to determine the appropriate method of conservation.

Replacing a mechanical system from the restoration period or its functional parts when it could be upgraded and retained.

Installing a visible replacement feature that does not convey the same appearance.

Installing a new mechanical system that alters the structural or interior features of the restoration period.

Failing to consider the weight and design of new mechanical equipment, resulting in a weakening or cracking of character-defining structural members or finished surfaces.

Installing vertical runs of ducts, pipes and cables in places where they will obscure features from the restoration period.

Concealing mechanical equipment in walls or ceilings in a manner that requires the removal of building material from the restoration period.

Cutting through features such as masonry walls in order to install heating/air conditioning units.
The following RESTORATION work has been highlighted to indicate that it involves the removal or alteration of existing mechanical systems and features from periods other than the accepted restoration period; and the replacement of missing mechanical systems and features from the restoration period with all new materials. This work should only be considered after the Preservation and Restoration concerns listed above have been addressed.

**Recommended**

**Removing Existing Features from Other Periods**

Removing or altering mechanical systems and features, such as an elevator or plumbing fixture, dating from other periods.

Documenting materials and features dating from other periods prior to their alteration or removal. If possible, selected examples of these features or materials should be stored to facilitate future research.

**Recreating Missing Features from the Restoration Period**

Recreating a missing feature of the mechanical system that existed during the restoration period based on physical or documentary evidence; for example, duplicating a heating vent or gaslight fixture.

**Not Recommended**

Failing to remove a mechanical system or feature from another period, thus confusing the depiction of the building’s significance.

Failing to document mechanical systems and features from other periods (which results in the loss of a valuable portion of the historic record) prior to removing them from the building.

Installing a mechanical system or feature that was part of the original design of the building but was never actually built; or constructing a feature that was thought to have existed during the restoration period, but for which there is insufficient documentation.

New mechanical systems should be installed in a way that results in the least alteration possible to the building. In the Restoration of St. George’s Anglican Church, Halifax after a devastating fire, care was taken to ensure that the character-defining structural system and interior features from the restoration period were not altered or obscured when a new fire-suppression sprinkler system was installed in the attic.
Introduction

Guidelines for Engineering Works

Engineering works in the context of these Guidelines include the structures created by people in the past, primarily for purposes other than habitation. This includes transportation (i.e., bridges, roads, railways, canals, lighthouses and airports); energy development (i.e., dams and generating plants); communications (i.e., telegram, telephone and radio installations); industry (i.e., mills and factories); resource extraction and processing (i.e., mines and refineries); flood control and irrigation (i.e., weirs); and defence (i.e., fortifications). Also included are human-engineered landscapes such as canal corridors, mining districts, industrial complexes and flood control systems, where engineering works have transformed and defined the landscape.

These Guidelines, which address engineering works, including their separate components, should not be used in isolation. There may be heritage value in the relationships between engineering works and archaeological sites, landscapes or buildings, and therefore, those sections of the Guidelines should also be consulted when undertaking a project. The intention is to protect ALL heritage values associated with the historic place.
Engineering Works

Engineering works are structures created primarily for purposes other than habitation, such as industry, transportation, communications, energy development, resource extraction and processing, flood control and irrigation, and defence. These works may also include associated landscapes that have been transformed and defined by engineering works such as flood control systems.

Engineering and the Law

Engineering is a regulated profession in Canada. This means that, by law, no one can practice the profession of engineering without a licence. Licences are issued by twelve provincial and territorial engineering associations (Nunavut is represented by the Northwest Territories’ association), which set standards and regulate the profession. These associations are mandated to ensure public safety and serve the public interest on behalf of their provincial or territorial government.

Provincial and territorial laws on the practice of engineering vary considerably, and as a result, the information presented here is very general in nature. More complete information can be obtained from the engineering association of your province or territory.

The Practice of Professional Engineering

By law, only licenced engineers can approve engineering drawings or reports or in any way offer engineering services to the public. Most other technical work (i.e., work not considered part of the practice of professional engineering) may be performed by non-licenced persons without restriction. However, such work may be governed by other legislation, including acts governing architects or land surveyors. Buildings under a certain size or projects of less than a certain value may be exempted from the provisions of the relevant provincial or territorial act.

The definition of professional engineering varies from province to province to territory. The Ontario definition, for example, has three parts, or tests: “(1) any act of designing, composing, evaluating, advising, reporting, directing or supervising, (2) wherein the safeguarding of life, health, property or the public welfare is concerned, and (3) that requires the application of engineering principles, but does not include practising as a natural scientist.” If the proposed project work meets all three tests, it must be carried out under the supervision and control of a licenced engineer.

The Hamilton Waterworks, built in 1857-59, is the only intact mid-19th century waterworks in North America. The character-defining compound-beam steam pumping engines were restored to working condition in 1998.
Alberta, on the other hand, defines the practice of engineering as reporting on, advising on, evaluating, designing, preparing plans and specifications for, or directing the construction, technical inspection, maintenance, or operation of any structure, work, or process that (1) is aimed at the discovery, development or utilization of matter, materials, or energy or in any other way designed for the use and convenience of man, and (2) requires the professional application of the principles of mathematics, chemistry, physics, or any related applied subject.

Where there is any doubt as to whether a project involves the practice of professional engineering, it is best to obtain expert advice.

**Public Safety**

One of the responsibilities of licenced engineers is to ensure the health and safety of people who may be affected by their work. Engineers may be held liable for injuries resulting from their failure to perform to a reasonable level of competence. The public safety responsibilities of engineering, therefore, require engineers to be aware of both the applicable standards for health and safety, and the laws relevant to practice. Knowing and complying with health and safety requirements is an essential component of any project.

**Recognized Engineering Works**

A number of historic places in Canada are recognized engineering works, or include an engineering component that is a character-defining element of the recognized historic place. General guidelines for such engineering works are provided in this document on the following pages.

*Note: Since the practice of professional engineering is regulated by provincial and territorial laws, it is strongly recommended that qualified engineering advice be obtained from a licensed professional engineer.*

The Brilliant Suspension Bridge was built over the Kootenay River near Castlegar, British Columbia in 1913. Ensuring public safety is one of the primary concerns of professional engineers.
Guidelines for Engineering Works

**Recommended**

**Preserving** engineering works that are important in defining the overall heritage value of the historic place.

**Documenting** the form, materials and condition of engineering works prior to beginning project work.

Analyzing and evaluating the engineering work in sufficient detail to fully understand its structural complexity and behaviour. This can include determining its load history, applied loads and load paths; measuring the actual strength of its materials and any deflections; monitoring its movements and rate of deterioration over time to understand the actual behaviour of the engineering work; and undertaking mathematical modelling that replicates the actual characteristics of and thus the potential risk to the engineering work.

**Not Recommended**

Removing or radically changing engineering works that are important in defining the overall heritage value of the historic place.

Undertaking work that will have an impact on character-defining engineering works without (a) first documenting their existing character and condition; (b) understanding their complexity and behaviour; and (c) being able to mathematically replicate what is observed in real life.

Prior to beginning project work, the form, materials and condition of engineering works should be documented. Heritage recording of the Percy covered bridge, National Historic Site of Canada in Powerscourt, Quebec, the only surviving bridge that uses the McCallum inflexible arch construction, included detailed measurements and a photographic record.
Recommended

Testing engineering works or their components in place in order to determine their actual rather than theoretical characteristics, provided the appropriate precautions are taken to avoid their failure or destruction.

Examining and evaluating the physical condition of engineering works and their components using minimally or non-destructive techniques such as flat jacks or radiographic, ultrasonic, electromagnetic or acoustic testing.

Taking into account the past performance of engineering works when determining their present or future capacity.

Stabilizing deteriorated engineering works on an interim basis by structural reinforcement, weather protection, or correcting unsafe conditions, as required, until any additional work is undertaken.

Protecting and maintaining engineering works through appropriate and regular treatments such as cleaning, removing injurious oxidization, maintaining protective coating systems, keeping materials and mechanical components in sound condition, lubricating working components and avoiding moisture problems.

Not Recommended

Undertaking testing in place without taking appropriate precautions against the failure or destruction of the engineering works being tested or their components.

Utilizing highly destructive probing techniques that damage or destroy engineering works or their components.

Making assumptions about the present or future capacity of engineering works without taking into account their past performance.

Failing to stabilize deteriorated engineering works, thus putting them at risk of further deterioration.

Neglecting to treat known conditions that threaten engineering works, such as deflection of beams, cracking and bowing of walls, or racking of structural members.

Failing to provide adequate maintenance of engineering works on a cyclical basis, causing the materials and mechanical components to deteriorate.

Failing to identify, evaluate and treat the causes of surface or structural deterioration, including corrosion caused by moisture.

Utilizing treatments or products that accelerate the deterioration of engineering works, pollute the environment or create a health hazard.

A regular program of inspection and maintenance is recommended for the Preservation of engineering works. This is particularly true for structures in exposed, damp locations, such as bridges. Regular cleaning, removal of oxidization and re-application of protective paint coatings can help to minimize the deterioration of materials and mechanical components, and thus reduce the need for extensive interventions in the future.
Recommended

Protecting engineering works against unauthorized activity before project work begins by, for example erecting protective fencing or installing alarm systems that are keyed into local protection agencies.

Protecting ecological features that are part of or associated with engineering works, such as wetlands in a canal corridor.

Imposing limits on the acceptable use and loading capacity of engineering works to protect them from damage. There is a need to balance present and anticipated usage demands with its historic character, and to avoid, if possible, any use that would damage or destroy the engineering work.

Retaining sound engineering works, or deteriorated engineering works that can be repaired.

Retaining the relationship between an engineering work and its location, when this relationship is part of its heritage value. In the case of an engineering work that is designed for a particular application rather than a particular location, and where its present location is not a character-defining element, it may be moved and re-established at another comparable location if the move is necessary to ensure its conservation, and if its character-defining elements can be maintained unimpaired at the new location.

Repairing and stabilizing deteriorated engineering works by structural reinforcement, weather protection, or correcting unsafe conditions, as required, until any additional work is undertaken. Repairs should be physically and visually compatible.

Not Recommended

Failing to undertake adequate measures to protect engineering works against unauthorized activity before project work begins.

Failing to protect ecological features that are part of or associated with engineering works.

Subjecting engineering works to uses that could overload the existing structural systems; or installing equipment or mechanical systems that damage or destroy the historic character of the engineering works.

Replacing or rebuilding an engineering work that can be repaired.

Removing or relocating an engineering work when its heritage value is related to its location, thus destroying the relationship between the engineering work and its historic place.

Removing deteriorated engineering works that could be safely stabilized, repaired and conserved; or using untested consolidants and untrained personnel, thus causing further damage to fragile elements.

The cracks and checks in these wooden trusses were filled with epoxy in a questionable attempt to consolidate them. The result is not only visually disturbing, it has significantly altered the performance characteristics of the building’s structural systems.
Standards and Guidelines

**Recommended**

**Replacing in kind** extensively deteriorated or missing parts of engineering works where there are surviving prototypes. The new work should match the old in form and detailing, and have adequate strength.

Evaluating the overall condition of engineering works to determine whether more than protection, maintenance, and limited repair or replacement in kind is required; that is, if more extensive repairs to engineering works will be necessary.

**Not Recommended**

Replacing an entire element of an engineering work when limited replacement of deteriorated and missing components is appropriate.

Using a replacement material that does not match the historic engineering work.

Failing to undertake adequate measures to protect engineering works.

**Additional Guidelines for Rehabilitation Projects**

**Recommended**

**Rehabilitating** an engineering work, if an evaluation of its overall condition determines that more than preservation is required.

**Repairing** engineering works or their components by patching, piecing-in, splicing, consolidating or otherwise augmenting them using recognized preservation methods. For example, weakened structural members in a truss could be paired with new members, braced, spliced or otherwise consolidated. Repairs may also include the limited replacement in kind — or with a compatible substitute material — of those extensively deteriorated or missing parts of elements when there are surviving prototypes.

**Replacing in kind** an entire component of an engineering work that is too deteriorated to repair — if the overall form and detailing are still evident — using the physical evidence as a model to reproduce the component. Examples could include cast iron columns or sections of load-bearing walls. If using the same kind of material is not technically or economically feasible, then a compatible substitute material may be considered. Substitute materials should have the same form and overall appearance; and material properties similar to a sound version of the replaced component and adequate strength or load-bearing capabilities.

**Not Recommended**

Failing to evaluate the overall condition of an engineering work in order to determine its proper method of conservation.

Replacing an entire component of an engineering work such as a truss when repair and limited replacement of deteriorated or missing parts are feasible.

Using a substitute material for the replacement part that does not convey the appearance of the surviving parts of the engineering work or that is physically or chemically incompatible.

Removing an engineering work component that is irreparable and not replacing it; or replacing it with a new component that does not convey the same appearance.

Using a substitute material that does not have adequate strength or load-bearing capabilities, or is otherwise physically or chemically incompatible.
The following REHABILITATION work has been highlighted to indicate that it involves a particularly complex technical or design aspect and should only be considered after the Preservation and Rehabilitation concerns listed above have been addressed.

</table>
Additional Guidelines for Restoration Projects

**Recommended**

**Restoring** an engineering work, if an evaluation of its overall condition determines that more than preservation is required; that is, if repairs to engineering works from the restoration period will be necessary.

**Repairing** engineering works or their components from the restoration period by patching, piecing-in, splicing, consolidating or otherwise augmenting them using recognized preservation methods. Repairs may also include the limited replacement — preferably in kind — of those extensively deteriorated or missing parts of features when there are surviving prototypes. The new work should be physically and visually compatible, and be unobtrusively dated, if possible, to guide future research and treatment.

**Replacing in kind** an entire component of an engineering work from the restoration period that is too deteriorated to repair — if the overall form and detailing are still evident — using the physical evidence as a model to reproduce the component. The replacement should have the same form and overall appearance and material properties similar to a sound version of the replaced component; and have adequate strength or load-bearing capabilities. Replacement mechanisms should function in the same way as the historic mechanism and operate using the same motive power, e.g., hand-operated or automated. The new work should be unobtrusively dated, if possible, to guide future research and treatment.

**Not Recommended**

Failing to evaluate the overall condition of an engineering work in order to determine the proper method of conservation.

Replacing an entire component of an engineering work from the restoration period when the repair of materials and limited replacement of deteriorated or missing parts are appropriate.

Using a substitute material for the replacement part which neither conveys the appearance of the surviving parts of the engineering work, nor is physically or chemically compatible.

Removing an engineering work component from the restoration period that is irreparable, and not replacing it; or failing to document the new work.

Using a substitute material that does not have adequate strength or load-bearing capabilities, or is otherwise physically or chemically incompatible.

---

The Rehabilitation of the Rideau Canal Waterway, Ottawa involved replacing deteriorated portions of the canal’s stone walls and lock gates “in kind” with new stone blocks and wooden members, using the physical evidence of the existing walls and gates to replicate their form and detailing. Nearby circulation paths and roadways were rehabilitated using compatible substitute materials, including modern asphalt. Replacement “in kind” and replacement with compatible substitute materials forms and detailing are both acceptable approaches in Rehabilitation.
The following RESTORATION work has been highlighted to indicate that it involves the removal or alteration of existing features from engineering works from periods other than the accepted restoration period; and the replacement of missing features from engineering works from the restoration period with all new materials. This work should only be considered after the Preservation and Restoration concerns listed above have been addressed.

<tr>
<td><strong>Removing Existing Features from Other Periods</strong></td>
<td>Failing to remove or alter a visually intrusive feature from another period, thus confusing the depicted significance of the engineering works.</td>
</tr>
<tr>
<td>Removing or altering visually intrusive features, such as a non-matching column or exposed ceiling beams, dating from other periods.</td>
<td>Failing to document features from other periods (which results in the loss of a valuable portion of the historic record) prior to removing them from the engineering work.</td>
</tr>
<tr>
<td>Documenting materials and features dating from other periods prior to their alteration or removal. If possible, selected examples of these features or materials should be stored to facilitate future research.</td>
<td></td>
</tr>
</tbody>
</table>

**Recreating a Missing Feature from the Restoration Period**

- Recreating a missing feature of an engineering work that existed during the restoration period based on physical or documentary evidence; for example, duplicating a metal catwalk.
- Constructing a structural feature that was part of the original design for the engineering work but was never actually built; or constructing a feature that was thought to have existed during the restoration period, but for which there is insufficient documentation.

The Restoration program for this early 20th-century brick plant near Claybank, Saskatchewan, included a monitoring program and analysis of the various components such as the kilns and stacks in order to thoroughly understand their structural properties and deficiencies; testing the structural components in place using minimally destructive techniques to determine their actual rather than theoretical characteristics; stabilizing and repairing the deteriorated elements by structural reinforcement; and replacing “in kind” extensively deteriorated or missing parts, such as roofs that had failed due to overloading. This is an appropriate scope of work within the treatment Restoration.
Health and safety, accessibility, energy efficiency, environmental considerations and new additions to historic places can be extremely important aspects of conservation projects. While they are usually not part of the overall process of conserving heritage value (Preservation, Rehabilitation or Restoration), it is important that such considerations be assessed for any potential adverse impact on the heritage values of the historic place. In particular, care must be taken not to obscure, damage or destroy character-defining elements.

Health and Safety Considerations

**Recommended**

Identifying the historic place’s heritage value and character-defining elements, i.e., materials, forms, location, spatial configurations, uses and cultural associations or meanings in order to avoid damaging or destroying them while making modifications to comply with health and safety requirements.

Complying with health and safety requirements such as seismic standards or the use of chemicals in such a manner that character-defining elements are conserved and heritage value is maintained.

Removing toxic materials only after thorough testing has been conducted and only after less invasive abatement methods have been shown to be inadequate.

Working with code officials to investigate systems, methods or devices of equivalent or superior effectiveness and safety to those prescribed by code so that unnecessary interventions can be avoided.

Upgrading character-defining elements to meet health and safety requirements in a manner that assures their conservation (e.g., upgrading a stairway without destroying its character-defining handrails and balustrades).

**Not Recommended**

Undertaking health and safety-required modifications before identifying the heritage value and those elements that are important in defining the overall character of the historic place.

Radically changing, damaging or destroying character-defining elements or undermining the heritage value while making modifications to a historic place in order to comply with health and safety requirements.

Damaging or destroying a historic place’s character-defining elements or heritage value when removing toxic materials by neglecting to conduct thorough testing first and not considering less invasive abatement methods.

Making changes to historic places without first exploring equivalent health and safety systems, methods or devices that may be less damaging to character-defining elements and to the heritage value.

Damaging or obscuring character-defining elements or adjacent areas, or undermining the heritage value while doing work to meet health and safety requirements.

An exit stair added to meet fire code requirements was sensitively designed and installed in a secondary area of the Bank of Montreal in Ottawa, Ontario. This reversible intervention minimized the visual and physical impact on the materials, forms and finishes of this character-defining interior by careful placement, choice of materials and details.
### Recommended

- Installing sensitively designed fire-suppression systems such as sprinklers, which retain character-defining elements and respect the heritage value.

- Applying the necessary materials to add protection to character-defining elements. An example could include applying fire-retardant intumescent paint coatings to a deck to add protection to its steel.

- Limiting public access to fragile character-defining elements when, for technical, economic or environmental reasons, these elements cannot be protected immediately using recognized preservation methods.

- Adding new features to meet health and safety requirements in a manner that conserves adjacent character-defining elements and respects the overall heritage value.

- Placing a code-required stairway or elevator in a new exterior addition if it cannot be accommodated within the historic place. Such an addition should be on an inconspicuous, non-character-defining elevation.

### Not Recommended

- Covering flammable character-defining elements with fire-resistant sheathing that alters their appearance.

- Using materials intended to provide additional protection, such as fire-retardant coatings, if they damage or obscure character-defining elements.

- Replacing or reconstructing fragile character-defining elements when, for technical, economic or environmental reasons, they cannot be immediately protected.

- Damaging or destroying adjacent character-defining elements or undermining the heritage value when adding new health and safety-required features.

- Constructing a new addition to accommodate code-required stairs or elevators on highly visible, character-defining elevations; or in a location where it obscures, damages or destroys character-defining elements.
Accessibility Considerations

**Recommended**

Identifying the heritage value of the historic place and character-defining elements — materials, forms, location, spatial configurations, uses and cultural associations or meanings — so that required accessibility modifications will not damage or destroy them.

Complying with accessibility requirements in such a way that character-defining elements are conserved and heritage value maintained.

Working with accessibility and conservation specialists and affected users to determine the most appropriate solution to access problems that will have the least impact on character-defining elements and overall heritage value.

Providing accessibility that promotes independence for the disabled person to the highest degree practicable, while conserving the heritage value and character-defining elements.

Adapting the intervention to its anticipated lifespan, so that short-term improvements remain as reversible as possible.

Finding solutions to meet accessibility requirements that minimize the impact on the historic place and its environment.

**Not Recommended**

Undertaking required accessibility modifications before identifying those elements that are important in defining the overall character of the historic place.

Damaging or destroying character-defining elements or undermining the heritage value in attempting to comply with accessibility requirements.

Altering character-defining elements without consulting with the appropriate experts.

Making accessibility modifications that do not strike a reasonable balance between independent, safe access and conservation of character-defining elements and heritage value.

Intervening without taking into consideration the anticipated lifespan of the modification, so that a short-term improvement has an irreversible impact on the heritage value of the place.

Making accessibility-related modifications without considering the impact on the historic place and its environment.

This new ramp was discretely integrated into one side of an existing entrance porch, in order to minimize the impact on the historic building.
Energy Efficiency Considerations

**Recommended**

Identifying the historic place’s heritage value and character-defining elements — materials, forms, location, spatial configurations, uses and cultural associations or meanings — so that energy efficiency modifications will not damage or eliminate them.

Complying with energy efficiency objectives in such a manner that character-defining elements are conserved and the heritage value maintained.

Working with energy efficiency and conservation specialists to determine the most appropriate solution to energy conservation problems that will have the least impact on character-defining elements and the overall heritage value.

Weighing the total environmental cost of energy saving measures against the overall environmental costs of retaining the existing features or fabric, when deciding whether to proceed with energy saving measures.

**Landscapes**

Retaining and maintaining character-defining landscape elements such as deciduous trees, windbreaks and lakes or ponds that perform passive energy conserving functions and moderate the effects of climate on the historic place.

Improving the energy efficiency of existing character-defining landscape elements through non-destructive means, such as utilizing a recirculating system in a fountain rather than uncontrolled discharge to a storm system.

**Buildings: Insulation**

Exercising caution and foreseeing the potential effects of insulating the building on the envelope system so as to avoid damaging changes such as displacing the dew point and creating thermal bridges.

Installing thermal insulation in attics and in unheated cellars and crawl spaces to increase the efficiency of the existing mechanical systems unless this could adversely affect the building envelope.

**Not Recommended**

Undertaking energy efficiency modifications before identifying those elements that are important in defining the overall heritage value of the historic place.

Damaging or destroying character-defining elements or undermining the heritage value while making modifications to a historic place to comply with energy efficiency objectives.

Making changes to historic places without first exploring equivalent energy efficiency systems, methods or devices that may be less damaging to character-defining elements and heritage value.

Removing or altering those character-defining landscape elements or parts of elements that serve an energy conservation purpose, creating a situation where the effects of wind, rain and sun result in accelerated deterioration of the historic place.

Replacing energy inefficient character-defining landscape elements rather than improving their energy conservation potential, such as replacing an entire historic light standard rather than retrofitting the fixture to be more efficient.

Installing insulation without anticipating its potential impact on the building envelope.

Inserting thermal insulation with a high moisture content in wall cavities that might damage character-defining elements.
### Recommended

Installing insulating material on the inside of masonry walls to increase energy efficiency where there is no character-defining interior moulding around the windows or other character-defining interior architectural detailing.

**Buildings: Windows**

- Utilizing the inherent energy conserving features of a building by maintaining character-defining windows and/or louvered blinds in good operating condition for natural ventilation.
- Improving thermal efficiency with weatherstripping, storm windows, interior shades and, if historically appropriate, blinds and awnings.
- Installing interior storm windows with air-tight gaskets, ventilating holes and/or removable clips to ensure proper maintenance and to avoid condensation damage to character-defining windows.
- Installing exterior storm windows that do not damage or obscure character-defining windows and frames.

**Buildings: Entrances and Porches**

- Maintaining character-defining porches and double vestibule entrances so that they can retain heat or block the sun and provide natural ventilation.

**Buildings: Interior Features**

- Retaining character-defining interior shutters and transoms for their inherent energy conserving features.

**Buildings: Mechanical Systems**

- Improving the energy efficiency of existing mechanical systems by installing insulation in attics and basements, unless this could adversely affect the building envelope.

**New Additions to Historic Places**

- Putting on a new addition that may be necessary to increase energy efficiency on non-character-defining elevations.

### Not Recommended

Installing wall insulation without considering its effect on character-defining interior moulding or other character-defining architectural detailing.

**Buildings: Windows**

- Removing character-defining shading devices rather than keeping them in an operable condition.
- Replacing character-defining multi-paned sashes with new thermal sashes utilizing false muntins.
- Installing interior storm windows that allow moisture to accumulate and damage character-defining windows.
- Installing new exterior storm windows that are inappropriate in size, design or colour and therefore damage or obscure character-defining windows and frames.
- Replacing character-defining operable windows or transoms with fixed thermal glazing, or allowing operable windows and transoms to remain inoperable rather than utilizing them for their energy conserving potential.
- Altering character-defining porches or double vestibule entrances that serve an energy-conserving function so that they no longer retain heat or block the sun and provide natural ventilation.
- Removing character-defining interior elements that play an energy conserving role.
- Replacing existing mechanical systems that could be repaired for continued energy efficient use.
- Designing a new addition which obscures, damages or destroys character-defining elements.
According to the Standards for Conservation, existing historic materials should be protected, maintained and repaired. In an exemplary project, the character-defining multi-pane windows and associated trim in this historic residence were carefully preserved.
Environmental Considerations

**Recommended**

Identifying the heritage value of a historic place and character-defining elements — materials, forms, location, spatial configurations, uses and cultural associations or meanings — so that environmentally motivated modifications will not damage or eliminate them.

Complying with environmental objectives in such a manner that character-defining elements are conserved and heritage value maintained. This could include protecting character-defining vegetation in which rare or endangered species nest.

Working with environment officials to investigate systems, methods, devices or technologies that are just as or even more effective than those prescribed by regulation so that unnecessary interventions can be avoided.

Reclaiming or re-establishing natural resources in a manner that promotes environmental protection, while conserving character-defining elements and maintaining the heritage value. An example could include reclaiming a character-defining wetland to meet ecological objectives, while re-establishing the feature as it appeared historically.

**Not Recommended**

Undertaking environmentally motivated modifications before identifying those elements that are important in defining the overall character of the historic place.

Altering, damaging or destroying character-defining elements, or otherwise undermining the heritage value while making modifications to a historic place to comply with environmental objectives.

Making changes to historic places without first exploring equivalent environmental protection systems, methods, devices or technologies that may be less damaging to character-defining elements and heritage value.

Making environmental modifications that do not provide a reasonable balance between improved environmental conditions and the conservation of character-defining elements and heritage value.
New Additions to Historic Places

**Recommended**

Placing functions and services required for the proposed use in existing non-character-defining spaces rather than constructing a new addition.

Constructing a new addition to retain as many of the historic materials as possible and to ensure that the character-defining features are not obscured, damaged, or destroyed, or the heritage value undermined.

Designing a new addition in a manner that draws a clear distinction between what is historic and what is new.

Considering the design for an attached exterior addition in terms of its relationship to the historic place as well as the historic district or neighbourhood. Design for the new work may be contemporary or may reference design motifs from the historic place. In either case, it should be compatible in terms of mass, materials, relationship of solids to voids, and colour, yet be distinguishable from the historic place.

Placing a new addition on a non-character-defining portion and limiting its size and scale in relationship to the historic place.

When required for a new use of a building, designing a rooftop addition that is set back from the wall plane such that it is as inconspicuous as possible when viewed from the public realm.

**Not Recommended**

Constructing a new addition when the proposed use could be met by altering existing non-character-defining spaces.

Constructing a new addition so that the character-defining features of the historic resource are obscured, damaged or destroyed, or the heritage value is otherwise undermined.

Duplicating the exact form, material, style and detailing of the historic resource in a new addition so that the new work appears to be part of the historic place.

Replicating a historic style or period in a new addition.

Designing and constructing new additions that diminish or eliminate the historic character of the resource, including its design, materials, workmanship, location or setting.

Designing a new addition that obscures, damages or destroys character-defining features of the historic place or undermines its heritage value.

Constructing a rooftop addition to a building so that the historic appearance of the building is radically changed.

---

*This addition to a bank in Calgary, Alberta was built as a greenhouse type rooftop structure set back from the wall plane. The existing high parapet, making it as inconspicuous as possible from the street, largely conceals it. While distinguishable from the elaborate sandstone exterior of the original building, it is physically and visually compatible, and subordinate to, the historic building.*

Glossary

A number of definitions in this glossary are from *A History of Canadian Architecture* by Harold Kalman. Copyright © Oxford University Press Canada 1994. Reprinted by permission of Oxford University Press Canada.

**Arch** *(arche)* mechanical arrangement of building elements which are put together, generally along a curved line, in such a way that, supported by piers, abutments or walls, they carry the weight and resist the pressure.

**Architrave** *(chambranle)* mouldings around openings such as doors, windows and chimneys and certain other locations to conceal joints or for decorative purposes.

**Ashlar** *(pierre de parement)* stone that has been cut square and dressed.

**Atrium** *(atrium)* an interior courtyard that is open to the weather; or a significant interior space, often sky-lighted.

**Attic** *(combles)* the top floor of a building, often reduced in height and unfinished.

**Awning** *(auvent)* a moveable, fabric-covered, sloped surface that projects from a wall — usually over a door — to provide shelter from the weather. See also canopy and marquee.

**Balustrade** *(balustrade)* a railing composed of posts (balusters) and a handrail.

**Bargeboard** *(bordure de pignon)* boards or other decorative woodwork fixed to the edges or projecting rafters of a gabled roof, sometimes called gingerbread.

**Batten** *(tasseau)* a narrow vertical strip of wood, placed over joints of wider boards to protect the joints from the weather; the combination is called board-and-batten construction. See also siding.

**Beam** *(poutre)* a principal horizontal structural member; also see joist.

**Berm** *(talus)* an embankment or ridge of earth, usually created to serve as a protective barrier.

**Bracket** *(console)* a member, often triangular in form, that projects from a wall or other vertical surface and supports another component, such as an eave.

**Bunker** *(casematte)* part of a fortification defence system built partly or entirely below ground.

**Canopy** *(auvent fixe)* a fixed horizontal, sloped or arched surface that projects from a wall — usually over a door — to provide shelter from the weather. See also awning and marquee.

**Capital** *(chapiteau)* the decorative head of a column, pilaster, pier or other vertical support.

**Casement** *(fenêtre à battants)* a window that opens by being hinged on one side.

**Chamfer** *(chanfrein)* a sloping or bevelled edge.

**Character-defining elements** *(éléments caractéristiques)* the materials, forms, location, spatial configurations, uses and cultural associations or meanings that contribute to the heritage value of a historic place, and which must be retained in order to preserve its heritage value.

**Cladding** *(recouvrement)* the external, non-structural material that protects the structural wall or frame from the weather.

**Clapboard** *(planche à gorge)* a siding or cladding of bevelled boards laid horizontally and overlapping at the top and bottom, applied to the outside of a wood-framed building to make it weatherproof; the face of each board is oblique to the wall (also called bevelled siding).

**Column** *(colonne)* an upright support post of circular section; a steel or iron member used vertically is also called a column.

**Concrete** *(béton)* a mixture of cement, aggregate (usually sand and gravel) and water that hardens and attains great compressive strength. When used structurally it is usually reinforced with embedded steel rods or mesh to give it tensile strength as well.

**Conservation** *(conservation)* all actions or processes that are aimed at safeguarding the character-defining elements of a cultural resource so as to retain its heritage value and extend its physical life. This may involve “Preservation,” “Rehabilitation,” “Restoration,” or a combination of these actions or processes.
Corner board: (boiserie cornière) narrow vertical components used to encase the corner of a wall; most often used on buildings clad in shiplap or similar horizontal siding.

Cornice: (corniche) projecting horizontal element (to shed water and for decoration) at the top of a building or the top of a storefront, or a similar feature (often in plaster) at the top of a wall of a room.

Course: (assise) a single horizontal row of brick, stone or other walling material.

Crépi: (crépi) a lime plaster used as a coating on stone buildings, particularly in New France, to protect the wall and the mortar joints from the weather.

Cresting: (crête) a decorative rail, a row of finials or another feature at the top of a building, often along the ridge of a sloped roof.

Cupola: (coupole) a feature at the top of a roof, usually cylindrical with louvred openings and a dome-shaped roof on top.

Curtain wall: (mur-rideau) an exterior wall that is fastened to a frame and protects the building from the weather; it has no structural function and supports only its own weight.

Dentil: (denticule) a small, tooth-like square block, used in a row as a decorative feature in a cornice.

Dormer: (lucarne) a window that projects from a sloping roof, with a small roof of its own.

Dressed: (taillé) a stone cut square on all sides and smoothed on the face.

Earthworks: (remblai) in military architecture, a defensive structure constructed of earth.

Eave: (débord de toit) the projecting edge of a roof.

Ecosystem: (écosystème) the system formed by the interaction of all the living things of a particular environment with one another and with their habitat.

Entablature: (entablement) the horizontal component, usually decorated, that lies directly above a column or other support; in Classical architecture, the entablature is composed of an architrave, a frieze and a cornice.

Fascia: (bordure de toit) a finish element covering the face of eaves and roof projections.

Finial: (fleuron) an ornamental projection at the top of a gable, roof or other high component.

Frame: (charpente) the structural skeleton of a building.

Frieze: (frise) the middle portion of an entablature; or any decorated horizontal band.

Gable: (pignon) the triangular portion of a wall beneath the end of a gabled roof.

Gabled roof: (toit à pignon) a roof that slopes on two sides.

Guidelines: (lignes directrices) statements that provide practical guidance in applying the Standards for the conservation of historic places. They are presented here in a format that provides recommended and non-recommend actions.

Herbaceous plants: (plantes herbacées) plants with stems that are soft and not woody.

Heritage value: (valeur patrimoniale) the aesthetic, historic, scientific, cultural, social or spiritual importance or significance for past, present or future generations. The heritage value of a historic place is embodied in its character-defining materials, forms, location, spatial configurations, uses and cultural associations or meanings.

Hipped roof: (toit en croupe) a roof that slopes on four sides.

Historic place: (lieu patrimonial) a structure, building, group of buildings, district, landscape, archaeological site or other place in Canada that has been formally recognized for its heritage value.

In kind: (à l’identique) with the same form, material and detailing as the existing element.

Intervention: (intervention) any action, other than demolition or destruction, that results in a physical change to an element of a historic place.

Inukshuk: (inukshuk) an Inuit stone cairn having the rough outline of a human figure.
Joist: (silex) a secondary horizontal structural member, usually supported by a beam at each end, and itself supporting a floor, ceiling, or roof.

Lantern: (lanterron) a windowed superstructure at the top of a roof or dome; a small cupola.

Lintel: (linteau) the horizontal supporting member at the top of a door or window.

Mansard roof: (toit en mansarde) a roof that has a double slope, with the lower part steeper than the upper one; also called a gambrel roof, especially for barns.

Marquee: (marquise) a fixed horizontal structure that projects from a wall — usually over a theatre’s entrance — to provide shelter from the weather. See also awning and canopy.

Masonry: (maçonnerie) stone, brick, concrete, tile, or any other earthen products used in construction.

Maintenance: (entretien) the routine, cyclical, non-destructive actions necessary to slow the deterioration of a historic place. It normally entails routine, periodic inspection; routine, cyclical, non-destructive cleaning associated with housekeeping; minor repair and refinishing operations; replacement of damaged, broken or deteriorated materials that are impractical to save (e.g., broken window glass); rust removal; cyclical pruning; top-dressing; and cleaning of drainage inlets or outlets.

Minimal intervention: (intervention minimale) the approach which allows functional goals to be met with the least physical intervention.

Moulding: (moulure) a shaped decorative element, usually a horizontal band, that projects slightly from the surface of a wall.

Mullion: (meneau) a thin upright member within a window or between adjacent windows.

Old-field successional species: (espèce de succession des champs) plant species that naturally establish themselves in abandoned fields as a precursor to forest cover.

Parapet: (parapet) in a building, a portion of a wall that projects above a roof; in a fortification, a low wall or mound, usually of stone or earth, created to protect soldiers.

Patching: (ragrèage) the action of making defects disappear from a wood, stone or concrete surface.

Piecing-in: (rapéçage) the action of inserting a replacement piece as a substitute to a missing or irreparable portion of material.

Pediment: (fronton) the triangular end of a gable, or a triangular ornamental element resembling it, defined by a moulding (or series of mouldings) along its three edges.

Pier: (pilier) an upright support post of square or rectangular section, usually of masonry.

Pilaster: (pilastre) an upright shallow rectangular upright support post set into a wall and used mainly as decoration.

Post: (Poteau) a generic word for any upright support: a pier is a post of square or rectangular section, usually of masonry; a column is a post of circular section; a steel or iron member used vertically is also called a column; a pilaster is a shallow rectangular upright support set into a wall and used mainly as decoration.

Preservation: (préservation) the action or process of protecting, maintaining and/or stabilizing the existing materials, form and integrity of a historic place, or of an individual component, while protecting its heritage value.

Rafter: (chevron) in timber roof construction, a principal sloping component that runs from the top of the wall to the ridge.

Rampart: (rempart) a wide bank of earth, usually with a parapet on top, built around a fort to help defend it.

Rehabilitation: (réhabilitation) the action or process of making possible a continuing or compatible contemporary use for a historic place, or of an individual component, through repair, alterations and/or additions, while protecting its heritage value.

Restoration: (restauration) the action or process of accurately revealing, recovering or representing the state of a historic place, or of an individual component, as it appeared at a particular period in its history, while protecting its heritage value.
Ridge: (faîte) the uppermost part of a roof, usually horizontal; or the structural component at the top of a roof.

Sash: (châssis) in a window, the wood or metal frame that holds the glass.

Shed roof: (toit en appentis) a roof with only one slope; also used to describe the roof of a dormer window if it has only one slope.

Shiplap: (planche à feuillure) a siding or cladding of horizontally laid boards with notched edges that make an overlapping joint, applied to the outside of a wood-framed building, or a stone wall, to make it weatherproof; the face of each board is parallel to the plane of the wall (also called drop siding).

Sidelight: (fenêtre latérale) a window beside a door, forming part of the door unit.

Siding: (bardage) a facing material, or cladding, applied to the outside of a wood-framed building to make it weatherproof, sometimes called weatherboarding; shiplap (or drop siding) consists of horizontally laid boards with notched edges that make an overlapping joint; the face of each board is parallel to the plane of the wall; clapboard (or bevelled siding) consists of bevelled boards laid horizontally and overlapping at the top and bottom; the face of each board is oblique to the wall; board-and-batten siding is composed of vertically applied boards whose joints are covered by narrow strips (battens); shingles may also be used as a siding, as may composite materials such as asphalt, asbestos or synthetic materials, often imitating brick or shingle; metal and vinyl siding are also used.

Sill: (seuil) a horizontal member at the bottom of a window, or of a wall (sometimes called a sill plate).

Soffit: (soffite) the underside of an eave, beam, or other component.

Spandrel: (tympan) the portion of a wall between the top of one window and the window sill above it; or the roughly triangular surface between two adjacent arches.

Splicing: (épissage) the action of joining an existing element with a new element in order to compensate for the weakness of a damaged edge. The splicing of structural members for reinforcement is a typical example.

Stratigraphy: (stratigraphie) the composition and arrangement of geographic strata or layers of earth in a particular area.

Standards: (normes) Norms for the respectful conservation of historic places.

Stud: (poteau) in timber construction, one of a series of vertical supports.

Terra cotta: (terre cuite) fired clay commonly shaped in a mould and frequently glazed after firing.

Terrace: (terrasse) a flat level of land, often a component of a series of step-like flat levels on a slope.

Transom: (imposte) a small window over a door or another window, often hinged for opening.

Truss: (ferme) a structural framework, made of either timber or metal, that is composed of individual members fastened together in a triangular arrangement.

Windbreak: (brise-vent) a row of trees or bushes planted to provide protection from the wind and, often, to prevent soil erosion.

The Standards and Guidelines for the Conservation of Historic Places in Canada is the first Canada-wide set of standards and guidelines for heritage conservation. They have been developed by the Working Group on Standards and Guidelines as part of the Historic Places Initiative, a pan-Canadian collaboration between the federal, provincial and territorial governments to create new tools in support of heritage conservation in Canada. Designed as a common reference point for conservation practice in Canada, the Standards and Guidelines may be adopted by Canadian jurisdictions or other authorities.

The Standards and Guidelines are available on-line at: www.pc.gc.ca

INTRODUCTION

Grand Pré is on Canada’s Tentative List for potential World Heritage inscription by UNESCO since 2004. The Nomination Grand Pré Advisory Board has been actively working since 2007 at developing a nomination dossier for submission to UNESCO. The Board has been conducting research, public engagement activities and management planning exercises to prepare a solid proposal. The support of the local area communities and stakeholders and that of government departments and agencies at the federal, provincial and municipal levels has been instrumental in the completion of the nomination proposal.

The Board aims to submit a nomination proposal to the Canadian Delegation to the World Heritage Committee and then to UNESCO by February 2011. A potential decision by the World Heritage Committee is envisioned at the earliest in July 2012.

The mandate of the Nomination Grand Pré Advisory Board remains essentially the same up until a decision by World Heritage Committee. Upon successful inscription of Grand Pré, the Nomination Grand Pré Advisory Board will be replaced by the Grand Pré and Area Stewardship Board (the Stewardship Board) whose mandate will be to serve as site manager for the World Heritage Site in accordance with the requirements spelled out in the Operational Guidelines for the Implementation of the World Heritage Convention.

This strategic plan outlines the vision, mandate, key strategies, and objectives that will guide the work of the Stewardship Board for 10 years following a successful inscription and ensure a sustainable management of the nominated property.
EXECUTIVE SUMMARY

- This strategic plan articulates the vision, mandate, guiding principles, key strategies, and objectives of the Grand Pré and Area World Heritage Site Stewardship Board (Stewardship Board) over a 10 (ten) year period following a successful inscription of Grand Pré and area on the World Heritage List.

- The purpose of the Stewardship Board is to be the site manager of the nominated property in accordance with the Operational Guidelines for the Implementation of the World Heritage Convention, maintain partnerships for the benefit of the communities involved, and to capitalize on the economic opportunities stemming from a successful inscription.

- The Stewardship Board is composed of ten voting members and is co-chaired by a representative from the Société nationale de l’Acadie and one from the local community. The responsibilities include primarily acting as the steward of the World Heritage Site, implement the management plan through a coordinated management approach between all jurisdictions, engage the stakeholders in the stewardship of the WHS, promote the property’s outstanding universal value, report on the condition of the property, and obtain the support of the relevant authorities.

- The vision of the Stewardship Board is that “The Landscape of Grand Pré will be maintained as an outstanding and sustainable living heritage landscape, a shared legacy connecting the communities that care for it for the world to appreciate.”

- The mission of the Stewardship Board is “On behalf of people of the world and of the communities that care for the Landscape of Grand Pré, the Stewardship Board will work cooperatively with each government authority and engage the communities to protect, promote, interpret, and foster the sustainable development of this outstanding area for present and future generations.”

- The five key strategies focus on reaching the goals of:
  1. providing for the protection, continuing community and agricultural use and appreciation of the nominated property.
  2. enriching the existing tourism destination by promoting wide recognition, understanding and appreciation of the educational and cultural values represented by the nominated property.
  3. instilling a strong sense of shared community pride and stewardship in the protection, interpretation and promotion of the nominated property.
  4. fostering increased economic, tourism and agricultural opportunities through partnerships at the nominated property.
  5. ensuring the long-term sustainability of the nominated property’s governance

- To carry out its mandate and reach its goals, the Stewardship Board will need to build its capacity with regards to communication, stakeholder engagement, interpretation, promotion, governance, and sustainability of the governance structure through fundraising.

- In addition, the operations of the site relate to protection, research, interpretation, promotion, stakeholder engagement, partnerships, reporting, monitoring, administration, and accountability.

- In the first decade following a successful inscription, public funds and partnerships allow the Stewardship Board to implement its mandate. Those are outlined in the proposed implementation plan and budget outlines in the appendices.
PURPOSE OF A STEWARDSHIP BOARD

Identifying a site manager

The UNESCO World Heritage Committee document *Operational Guidelines for the Implementation of the World Heritage Convention* indicates that a nomination proposal will identify a site manager, in other words an entity whose responsibility will be to manage the property being nominated for World Heritage inscription.

In the case of Grand Pré, there are numerous authorities with responsibilities over the protection of heritage, agriculture, environmental issues, and development activities. In that context, the need for a single entity whose mandate was to coordinate the different authorities and stakeholders became apparent. In addition, a World Heritage inscription generates interest from business, researchers, media, and others to seek opportunities to achieve their goals. The Stewardship Board will take on that responsibility and advise the authorities on the best course of action.

Maintaining partnerships for the benefit of the communities

Beyond the need to fulfill the nomination proposal requirement, the stakeholders and authorities recognize that the process of preparing the nomination has led to new partnerships, an increase awareness of interests and resources from each individual partner, and sharing of resources. The process was an opportunity for organizations and individuals with very different interests – farmers, tourism industry, heritage associations, Mi’kmaq, Acadians, Planters, academic institutions, private enterprise, and government – to meet and work together to benefit the Grand Pré area, its residents, and the Acadian community. This resulted in the leveraging of financial and human resources from the three levels of government and private enterprise including the generation of thousands of hours of volunteer work from dozens of individuals.

The partners aim to continue these relationships and seek new ones through the work of the Stewardship Board for the protection, promotion, and interpretation of the nominated property and to contribute to the sustainable economic development of the local and Acadian communities.

Capitalizing on economic opportunities

Between 2002 and 2008, the Grand-Pré National Historic Site of Canada had an average number of visitors of 45,000 per year. The average annual total visitor spending during this period at Grand-Pré was $2.7 million per year. This information serves as a benchmark to assess the number of visitors and their economic impact in the Grand Pré area. Visitation and visitor spending have decreased by about 5% within Kings County, including the National Historic Site, since 2002.

The 2009 Economic Impact Assessment of a UNESCO World Heritage Designation, a study completed by Dr. Van Blarcom and team from Acadia University, indicates that the Grand-Pré National Historic Site of Canada and the surrounding area would receive a 6.2% increase in visitation, or between 1000 and 4000 additional visitors per year. An increase in visitation would have a positive economic impact for the historic site and the community. Incremental spending from the additional visitors would be between $50,000 and $300,000 per year.

The Tourism Study and Interpretation Framework completed in 2010 by Hockin Cronin and Associates, highlighted that the Van Blarcom study only includes non-resident visitors- visitors from outside Nova Scotia. Consequently, the total increase in visitation to the World Heritage Site, if successfully inscribed, could be greater than the predicted 6.2% increase if visitors from within Nova Scotia are accounted for. The study also does not account for any increase in length of stay by resident or non-resident visitors. Such increase in length of stay in the area could have an additional positive impact on visitor spending. Should Grand Pré receive World Heritage status, a positive economic impact will be felt within the community, the County and the Province of Nova Scotia.
While these studies focus primarily on the economic opportunities tied to tourism, a successful World Heritage inscription and the attention that accompanies it will undoubtedly enhance economic opportunities tied to other sectors, such as the agricultural sector.

The structure, membership, and governance approach of the Stewardship Board will allow the different stakeholders to harness those opportunities by leveraging each other’s resources, strengthening partnerships, and having a coordinated strategy that will enhance the economic benefits for the county and the region.

Financial resources are required in order to support both the need for a site manager and the aims of the partners. The following strategic plan outlines the guiding principles, vision, mission, key strategies, and resources needed to achieve effective support.
VISION AND MISSION

VISION

The Landscape of Grand Pré is maintained as an outstanding and sustainable living heritage landscape, a shared legacy connecting the communities that care for it for the world to appreciate.

MISSION

On behalf of people of the world and of the communities that care for the Landscape of Grand Pré, the Stewardship Board will work cooperatively with each government authority and engage the communities to protect, promote, interpret, and foster the sustainable development of this outstanding area for present and future generations.
KEY STRATEGY 1: PROTECTING AN OUTSTANDING HERITAGE ASSET

The nomination proposal highlights the importance of the agricultural landscape (dykes, aboiteaux, marshland, farming), the archaeological heritage, the core settlement in Grand Pré hamlet and in Hortonville, and the symbolic importance of the place for Acadians as heritage assets.

As such, this key strategy focuses on providing the resources to understand, protect, and monitor the authenticity and integrity of the heritage assets and of the nominated property as a whole. Those resources are the result of partnerships that are possible because of the presence of a stable, strong, and focused leadership provided by the Stewardship Board. Finally the protection is effective when the resources are provided to carry out legislated responsibilities, implement the management plan, and carry out the requirements linked to a World Heritage inscription, an essential condition for a credible nomination proposal. The protection of that asset is instrumental to the successful development of a sustainable tourism and agricultural asset.

Goal: To provide for the protection, continuing community and agricultural use and appreciation of the nominated property by:

Objective #1: Ensuring that agriculture remains a vibrant economic activity of the community.

Objective #2: Dedicating resources to the monitoring and maintenance of the dykes.

Objective #3: Preserving and enhancing the memorials reflecting the enduring importance of the area for the Acadians.

Objective #4: Nurturing ongoing research and fillingl the gaps in knowledge about the landscape and the people that inhabited it over the years.

Objective #5: Ensuring that the Grand Pré Marsh Body, as long term steward of the marshland, continues to play a significant role in the maintenance, use and protection of the marshlands.

Objective #6: Informing visitors to the community, through signage and brochures, of the need to be mindful that they are entering an active agricultural community.

Objective #7: Working with the Marsh Body to ensure that visitors have access to the values of the nominated property without interfering with the ongoing agricultural use of the marshland.
KEY STRATEGY 2: CREATING AN OUTSTANDING AND SUSTAINABLE EXPERIENCE

Grand Pré and area, as a candidate for World Heritage inscription, is in a position to become one of Nova Scotia’s star attractions, a signature destination that will attract visitors from Canada and the world to the province. While the inscription will enhance the area’s visibility and interest, a long-term sustainable tourism strategy is dependent on the development of an outstanding and sustainable experience in Grand Pré and area. This relies on high quality, unique, and authentic experiences being offered that reflect the values of the outstanding heritage asset expressed by the World Heritage Committee at the time of a successful inscription. Grand Pré and area will be a gateway to the countless other attractions of Nova Scotia, in particular in the County of Kings. A successful sustainable tourism complements the agricultural identity of the local communities and supports the strong connection of various communities to the heritage place.

This strategy focuses on developing and implementing the tools to explore and create opportunities for visitors to understand the values of, discover, and enjoy the Grand Pré area. This includes such actions as partnerships, promotion, branding, product development, and interpretation.

Goal: To enrich the existing tourism destination by promoting wide recognition, understanding and appreciation of the educational and cultural values represented by the nominated property by:

Objective #1: Developing programs, activities, tools, and interpretation that raise awareness of the importance of the landscape for the different communities, including the Mi’kmag, the Acadians, and the descendants of the New England Planters.

Objective #2: Promoting visitation through regional, national and international media.

Objective #3: Ensuring that promotion of the site is managed responsibly in all aspects of publicity in relation to the nominated property in accordance with UNESCO guidelines.

Objective #4: Developing tools and interpretation on the history and importance of agriculture.

Objective #5: Continuing to raise awareness about the Acadian people and the way they overcame their forced migrations of the 18th century.

Objective #6: Developing partnerships with existing World Heritage sites.
KEY STRATEGY 3: ENGAGING THE COMMUNITIES TO BUILD STRONG STEWARDSHIP

The ongoing connection and involvement in management of key stakeholder communities is essential to maintaining the values of the nominated property, protecting it, and developing an authentic experience for visitors. This has been the reality of the Grand Pré area for centuries where the Marsh Body has taken care of the marsh, the Acadian community has been involved at the park, and the farmers have worked the land.

This strategy focuses on developing the tools to continuously engage the different communities in the management, interpretation, and promotion of Grand Pré and area. This includes such actions as a functioning governance structure, community liaison, reporting, public education, and public participation.

Goal: To instill a strong sense of shared community pride and stewardship in the protection, interpretation and promotion of the nominated property by:

Objective #1: Providing for community input and encouraging community participation.

Objective #2: Engaging Acadian, local and other stakeholder communities in activities that celebrate the importance of the Grand Pré landscape.

Objective #3: Employing a governance model to ensure that the interests and concerns of local residents and the Acadian community are heard, discussed and reflected in the advice to the different regulatory authorities.

Objective #4: Ensuring the local and Acadian schools are provided sufficient information and opportunities to incorporate the experience at Grand Pré into their curriculum.
KEY STRATEGY 4: FACILITATING ECONOMIC OPPORTUNITIES FOR STAKEHOLDER COMMUNITIES

As previous studies have demonstrated, a World Heritage Site represents a positive economic opportunity for the stakeholder communities. In the case of Grand Pré and area, benefits are expected for the business and farming communities of Grand Pré, Hortonville, North Grand Pré and Lower Wolfville, the Acadian community, the Mi’kmaq community of Glooscap, and other neighboring communities.

These economic opportunities will be more effectively harnessed through the leadership provided by the Stewardship Board whose mandate brings together the different communities who would otherwise not have a common platform to discuss areas of common interest.

This key strategy focuses on articulating the role of the Stewardship Board in harnessing the economic opportunities stemming from a successful inscription for the benefit of the stakeholder communities.

Goal: To foster increased economic, tourism and agricultural opportunities through partnerships at the nominated property by:

Objective #1: Creating a gateway to the Acadian cultural heritage of Nova Scotia.

Objective #2: Creating a gateway to cultural tourism in the County of Kings and Nova Scotia.

Objective #3: Providing a forum for the discussion of economic, tourism, and agricultural opportunities affected the Grand Pré and area.

Objective #4: Facilitating opportunities to raise awareness, stimulate discussion, and educate about the importance and future of agriculture in Grand Pré and area.

Objective #5: Working with the Mi’kmaq to develop opportunities related to heritage.

Objective #6: Participating actively in economic, development, and tourism initiatives affecting Grand Pré and area.
KEY STRATEGY 5: SUSTAINING THE MANAGEMENT OF THE NOMINATED PROPERTY

The protection and proper management of a World Heritage Site is a commitment in perpetuity. This is a commitment made by all three levels of government and stakeholders. While public funds are essential to the stability of the management and governance structure, other sources of funding are required to enhance the Stewardship Board’s ability to deliver on its mandate.

This key strategy focuses articulating the means pursued by the Stewardship Board to attract private funding.

Goal: To ensure the long-term sustainability of the nominated property’s governance by:

Objective #1: Exploring financial strategies to leverage public funding.

Objective #2: Developing and implementing a private fundraising strategy.

Objective #3: Developing and adopting a financial model for the long-term sustainability of the governance model following the first decade of operations.

Objective #4: Exploring revenue streams from managing the brand.
IMPLEMENTATION TIMELINE

This strategic plan aims to reach its goals within ten (10) years following inscription. Since the World Heritage Committee meets annually in July, the start date of implementation is August of the year of a successful inscription on the World Heritage List.

Year 1 begins in August and ends at the end of March of the following year, in parallel with the end of fiscal year. Subsequent years follow the fiscal calendar cycle.

A first phase of ‘capacity building’ begins in the first year and is expected to last three years. During that period the critical components of operations are put in place. Following that phase, a transition phase allows for the implementation of these components towards full operation in year 7.
SUMMARY

Vision
The Landscape of Grand Pré will be maintained as an outstanding and sustainable living heritage landscape, a shared legacy connecting the communities that care for it for the world to appreciate.

Mission
On behalf of people of the world and of the communities that care for the Landscape of Grand Pré, the Stewardship Board will work cooperatively with each government authority and engage the communities to protect, promote, interpret, and foster the sustainable development of this outstanding area for present and future generations.

Key Strategies

<table>
<thead>
<tr>
<th>Protecting an outstanding heritage asset</th>

<th>Engaging the communities to build strong stewardship</th>
<th>Facilitating economic opportunities for stakeholder communities</th>
<th>Sustaining the management of the nominated property</th>
</tr>
</thead>
<tbody>
<tr>
<td>To provide for the protection, continuing community and agricultural use and appreciation of the Nominated Property</td>
<td>To enrich the existing tourism destination by promoting wide recognition, understanding and appreciation of the educational and cultural values represented by the Nominated Property</td>
<td>To instill a strong sense of shared community pride and stewardship in the protection, interpretation and promotion of the Nominated Property.</td>
<td>To foster increased economic, tourism and agricultural opportunities through partnerships at the Nominated Property</td>
<td>To ensure the long-term sustainability of the nominated property’s governance</td>
</tr>
</tbody>
</table>

Goals

Activities

Phase 1: years 1 – 3: Development and Capacity Building
- Hire Site Management Coordinator
- Set up the Education and Promotion Committee
- Establish the Stewardship Board
- Incorporate the nominated property into the brand for Eastern Kings County
- Identify resources to develop and implement the preferred fundraising strategy
- Explore fundraising strategies for the long term management of the nominated property
- Review and communicate the nominated property’s vision and mission
- Coordinate the information for preparing the report to the World Heritage Committee
- Coordinate the information for preparing the report to the Nominated Property
- Maintain and promote the nominated property
- Develop tourism products in partnership
- Develop and implement promotion and branding strategy
- Prepare and implement interpretation strategy
- Organize a forum on creating an outstanding and sustainable experience with key stakeholders based on the Tourism Management Study
- Establish institutional and tourism partnerships
- Calm and promote the nominated property effectively in a sustainable manner
- Support the nominated property in World Heritage Sites in Nova Scotia
- Carve out fundraising activities regarding agricultural issues
- Promote the nominated property in World Heritage Sites in Atlantic Canada

Phase 2: years 4 – 6: Transition
- Maintain website
- Maintain the Education and Promotion Committee
- Develop tourism products in partnership
- Maintain presence in the communities
- Contribute to the implementation of the local, regional branding strategies
- Contribute to the development of a World Heritage tourism package with World Heritage Sites in Atlantic Canada
- Coordinate the information for preparing the report to the Nominated Property
- Coordinate the information for preparing the report to the World Heritage Committee
- Update and communicate the nominated property’s vision and mission
- Coordinate the information for preparing the report to the Nominated Property
- Maintain and promote the nominated property
- Develop tourism products in partnership
- Prepare and implement promotion and branding strategy
- Organize a forum on creating an outstanding and sustainable experience with key stakeholders based on the Tourism Management Study
- Establish institutional and tourism partnerships
- Calm and promote the nominated property effectively in a sustainable manner
- Support the nominated property in World Heritage Sites in Nova Scotia
- Carve out fundraising activities regarding agricultural issues
- Promote the nominated property in World Heritage Sites in Atlantic Canada

Phase 3: years 7 – 10: Full operations
- Maintain the Technical Advisory Committee
- Monitor research activities, development pressures, policy development
- Review and communicate the nominated property’s vision and mission

# IMPLEMENTATION BY KEY STRATEGY

## PROTECTING AN OUTSTANDING HERITAGE ASSET

<table>
<thead>
<tr>
<th>Goal</th>
<th>Objectives</th>
<th>Activities and timeline</th>
</tr>
</thead>
</table>
| To provide for the protection, continuing community and agricultural use and appreciation of the Nominated Property | • Ensuring that agriculture remains a vibrant economic activity of the community.  
• Dedicating resources to the monitoring and maintenance of the dykes.  
• Preserving and enhancing the memorials reflecting the enduring importance of the area for the Acadians.  
• Nurturing ongoing research and filling the gaps in knowledge about the landscape and the people that inhabited it over the years.  
• Ensuring that the Grand Pré Marsh Body, as long term steward of the marshland, continues to play a significant role in the maintenance, use and protection of the marshlands.  
• Informing visitors to the community, through signage and brochures, of the need to be mindful that they are entering an active agricultural community.  
• Working with the Marsh Body to ensure that visitors have access to the values of the nominated property without interfering with the ongoing agricultural use of the marshland. | Phase 1: Years 1-3: Development and Capacity Building  
• Hire Site Management Coordinator  
• Organize forum on research priorities and partnerships  
• Implement outcome of the forum on research priorities  
• Set up the Technical and Advisory Committee  
• Prepare training  
• Respond to requests for information  
• Monitor condition  
• Conserve key attributes  

| | | Phase 2: years 4-6: Transition  
| | | • Coordinate output of the research units  
| | | • Manage resources and stakeholder relations for the survey and conservation of the property’s values  
| | | • Review management plan and other management related documents  
| | | • Coordinate the information for preparing the report to the World Heritage Committee  
| | | • Respond to requests for information  
| | | • Monitor condition  
| | | • Conserve key attributes  

| | | Phase 3: years 7-10: Full operations  
| | | • Maintain the Technical Advisory Committee  
| | | • Monitor research activities, development pressures, policy development  
| | | • Work with partners to ensure the protection of the nominated property.  
| | | • Respond to requests for information  
| | | • Monitor condition  
| | | • Conserve key attributes |

OPERATIONS

The operations of a site such as the Landscape of Grand Pré focus on protection, research, interpretation, promotion, stakeholder engagement, monitoring, and reporting. In essence it is about the protection of the site and about operating an outstanding and sustainable experience. While this is different from a museum type site, which includes infrastructure maintenance, there are basic operational requirements that stem from the creation of a World Heritage Site. At Grand Pré and area these requirements are fulfilled through the jurisdictional responsibilities as well as through the resources provided to the Stewardship Board to address jurisdictional gaps and gaps in resources. These operational aspects are guided by the four key strategies of this plan. Appendix 4 identifies the budget related to operations.

These gaps in resources include:
- limited operational budget (including staff) for survey, conservation, and monitoring of key heritage assets outside Parks Canada property;
- no funding for the conservation of specific types of heritage assets;
- limited budget (including staff) for data collection concerning pressures on the nominated property, and information for interpretation and tourism products; and,
- no coordinated approach to promotion of Grand Pré and area’s attractions.

Protection and Research

Protection aims to focus on maintaining the authenticity and the integrity of the tangible attributes of value, including the dykes, the roads, the archaeological sites, the agricultural system, and the memorials.

This aspect of operations will be supported through:
- Funds and resources from individual departments: ongoing departmental operational budgets invested in the Landscape of Grand Pré.
- Funds provided to the Stewardship Board for assistance to conserve specific heritage assets: managed by the Stewardship Board, under the direction of the regulatory authorities, to help protect heritage assets on private property.
- Funds and expertise provided to the Stewardship Board to commission studies in reaction to request for input or pressing threats to the integrity of the nominated property: this includes the expert resources provided through the Stewardship Board’s Technical Advisory Committee.

Research is an essential part of the protection and promotion of the nominated property. It allows for the gathering of essential data to monitor the condition of the property, identification of heritage assets, and collection of data to respond to pressures and threats to the nominated property. In addition, it allows the nominated property to play its role as a key attraction to raise awareness, educate, and stimulate public discussion about elements of the outstanding universal value.

Organizational partners, government institutions, and local facilities provide the backbone for the research. Research would be carried out by partner institutions. Funds provided by the Stewardship Board would allow it to be involved in the research agenda to focus on priorities for protection, promotion, and interpretation of the nominated property.

Research is supported through:
- Privileged partnerships with universities and other research institutions;
- Funds provided to the Stewardship Board to allocate annually as per priorities to leverage funds and resources provided by universities: universities provide access to other grants; and,
- Funds by private donations: as the Board gains maturity and a fundraising strategy is developed, fundraising may be targeted to complement the funds that are provided to the Stewardship Board.
Interpretation Products and Activities

Current heritage interpretation in the area focuses on the reasons for national significance of the Grand-Pré National Historic Site. Following a successful inscription, an interpretation strategy will be a priority to create an outstanding and sustainable experience for visitors. The World Heritage Site will play a crucial role in the definition of the Valley as a destination. Investments in research and the support of the Education and Promotion Committee allow the Stewardship Board the ability to provide accurate guidance regarding interpretation that is respectful of the nominated property’s values.

The Stewardship Board will work with business partners and government departments to implement the interpretation strategy.

Promotion and Stakeholder Engagement

The promotion of the nominated property will focus on the outstanding universal value and other key values. It provides an opportunity to leverage existing promotional efforts for the Annapolis Valley, Kings County and Nova Scotia.

While there is no province wide strategy for World Heritage and only specific initiatives regarding the promotion of Grand-Pré and area’s values, the promotion of the area and of its attractions will be developed in partnerships with the Stewardship Board taking a leadership role to promote the outstanding universal value of the area.

In addition, the proposed governance model relies on stakeholder engagement to sustain the long term management of the nominated property. This requires funds to communicate, promote, and facilitate the participation of stakeholders, including communicating in both French and English.

Partnerships and an operational budget will sustain promotional and stakeholders engagement activities. The development of products and partnerships may lead to revenues for the Stewardship Board from the management of the nominated property’s brand.

Reporting and Monitoring

Annual reporting on activities and condition of the property is part of the Stewardship Board’s duties. In addition, every 6 years, starting 5 years following inscription, a report on condition needs to be prepared for the Canadian Delegation to the World Heritage Committee for their periodic report to the World Heritage Committee.

The reporting and monitoring activities will be sustained through:

- **Funds and resources provided to the Stewardship Board to support the acquisition of data**;
- **Funds and resources provided to the Stewardship Board to support the production of reports**.

Administration and Accountability

Operations of the nominated property are managed by a secretariat and a site management coordinator. The purpose of the secretariat and of the site management coordinator is to support the Stewardship Board, ensure the decisions are followed up, coordinate the partners, lead projects related to the management of the nominated property, ensure accountability, prepare reports, and engage stakeholders.

Reporting and monitoring activities will be sustained through:

- **Funds and resources provided to the Stewardship Board to hire a site management coordinator**;
- **Funds and resources provided to the Stewardship Board and organizations to support the operations of the Board**.
BUILDING CAPACITY FOR THE STEWARDSHIP BOARD

The first years following a successful inscription of the nominated property will focus on acquiring the tools and information necessary for the Stewardship Board to carry out its mandate. This in effect builds capacity for the Stewardship Board to operate including with regards to communication, stakeholder engagement, interpretation, promotion, and governance. These building blocks are reflected in all four key strategies.

The Stewardship Board’s work relies on in-kind resources provided by the three levels of government as well as funds to build capacity to carry out its mandate. Partnerships with business, organizations, and academic institutions are an important part of the strategy to build capacity. **Appendix 3 identifies the resources and budget required to build capacity.**

**Communication and stakeholder engagement**

A communication strategy needs to be developed in support of the promotion of the World Heritage Site. This includes developing a logo, a brand, messages tailored for key audiences, a website, a local resident kit, and other tools. Communication on World Heritage matters and the Grand Pré site is a shared responsibility between the Stewardship Board, Parks Canada, and Nova Scotia.

The tools and strategies for stakeholder engagement are intertwined with communication and are essential to support the stewardship of the Grand Pré site.

**Interpretation and promotion**

There is currently no single opportunity and location for the interpretation of the values of the nominated property. In the event of a successful inscription, the World Heritage Committee will articulate the outstanding universal value that will guide the interpretation. An interpretation strategy will be required to identify the messages, the location for interpretation, the gaps in interpretation, and a framework to facilitate visitor experiences.

In addition, as there is currently no strategy for the promotion of World Heritage in Nova Scotia, a strategy and tools for the promotion of the Grand Pré site will be essential to support the development of economic opportunities for the stakeholder communities.

**Governance**

The Stewardship Board aims to carry out its mandate with the highest standards of accountability, transparency, and efficiency. In order to build that capacity and reach those goals, it will require developing policies to guide its work, training of the Stewardship Board in governance, and providing the Site Management Coordinator with the necessary tools.

**Sustainability of the governance structure**

The Stewardship Board has the responsibility, with the regulatory authorities, to manage the nominated property into the future. As such, one of its prime concerns is to secure the resources to implement its mandate. While public funds are essential in the first years to allow it to operate, the Stewardship Board will require resources to develop and implement a fundraising strategy as part of its commitment for the long term sustainability of the nominated property.
PARTNERSHIPS

Partnerships were core to the development of the nomination proposal and are indispensable to the future management of the nominated property. The financial and expert resources available to the Nomination Grand Pré Advisory Board during the process were essential to leverage resources from other sources. The same strategy is envisioned for the Stewardship Board and the long term management.

The Grand Pré World Heritage Site Stewardship Board has representatives from the following partner organizations:

- Municipality of the County of Kings;
- Kings Regional Development Agency (Kings RDA);
- Grand Pré Marsh Body;
- Société nationale de l’Acadie;
- Société Promotion Grand-Pré;
- Glooscap First Nation;
- Grand-Pré and Area Community Association;
- Destination Southwest Nova; and,
- Parks Canada.

In addition to these voting members, a number of organizations participate as non-voting members. Finally, its committees on technical advice and on promotion will open the Board to new partnerships.

Future partnerships will be sought to address research, protection, interpretation, and promotion.

IN KIND EXPERTISE AND RESOURCES

Partnerships that lead to the provision of in kind expertise are crucial to the long term management of the nominated property. The in-kind contribution from federal, provincial, and municipal government departments are essential to the methodical collection of reliable information and to the professional technical advice about the nominated property. These are factored in the operations of the Stewardship Board. Their value is not budgeted for.

In addition to these contributions and in keeping with the approach applied in the preparation of the nomination proposal, the Stewardship Board will rely on in kind contributions from volunteers to carry out its mandate successfully.
Appendix 1: Summary of the structure, responsibilities, and guiding principles of the Stewardship Board

Structure of the Stewardship Board

The Stewardship Board is composed of ten voting members and a number of non-voting members, co-chaired by a representative of the Société nationale de l’Acadie and a representative of the Grand Pré and area community association.

The Stewardship Board is supported in its work by the Technical Advisory Committee and the Promotion and Education Committee. The Site Management Coordinator and the Secretariat provide the resources to implement the direction from the Stewardship Board.

Responsibilities

The Grand Pré and Area World Heritage Site Stewardship Board is responsible for the following activities:

- Act as the manager of the WHS;
- Implement the Management Plan through a coordinated management approach between all Regulatory Authorities;
- Engage the stakeholders in the stewardship of the WHS;
- Consult its members on key issues;
- Promote the WHS’s Outstanding Universal Value;
- Foster and facilitate research and information sharing for the benefit of the WHS;
- Report on the condition of the property, including, as necessary, to the World Heritage Centre through the Canadian Delegation to the World Heritage Committee;
- Appoint a Site Management Coordinator;
- Obtain the support of relevant authorities;
- Oversee the management of the finances of the WHS, including adopting business plans, receiving financial reports, and approve spending; and,

Guiding principles

The following principles will guide the actions of the Stewardship Board and throughout the implementation of the management plan for the nominated property:

- **Principle 1**: Management of the property will meet or exceed World Heritage standards regardless of inscription;

- **Principle 2**: The primary focus of the management plan is to address issues directly related to the management and conservation of the World Heritage Site’s outstanding universal value and attributes by providing a framework for advice from the Grand Pré World Heritage Site Stewardship Board and for decision-making for the regulatory authorities;

- **Principle 3**: The Management Plan recognizes that the nominated property is set within an active agricultural community where people continue to live and work. People have created, lived and worked on this land for generations and have been responsible stewards of the land. The Management Plan also recognizes that this is an area of great importance for the Acadians who have a strong emotional attachment to it;
Principle 4: Management of the nominated property in relation to World Heritage guidelines will be a shared responsibility between the different owners, communities, and government entities with regulatory responsibilities for the nominated property. The management plan recognizes that actions undertaken by an owner, community, or government entity with regulatory responsibilities may have a detrimental impact and that communication, coordination, and collaboration are essential to the long-term protection of the property;

Principle 5: Management and protection will be delivered through existing boards, bodies, and government authorities, supplemented by technical advice, interpretation, and education from the Grand Pré World Heritage Site Stewardship Board and procedures developed to accommodate a designated World Heritage site.

Additional information is available in the Terms of Reference of the Stewardship Board.
### Appendix 2: Descriptions of budget categories (proposed)

<table>
<thead>
<tr>
<th>Budget category/ line</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td><strong>Communications, Public Relations, Promotion</strong></td>
<td>Objective: Develop and implement programmes related to communication, public relations, and promotion of the proposed World Heritage Site</td>
</tr>
<tr>
<td>Communications &amp; PR</td>
<td>- Implement the communication strategy to promote the site and raise awareness about its values.</td>
</tr>
<tr>
<td></td>
<td>- Prepare communication material, coordinate communication between the Stewardship Board, the Canadian delegation, Parks Canada, the Province of Nova Scotia, the Municipality of the County of Kings and other stakeholders.</td>
</tr>
<tr>
<td></td>
<td>- Raise awareness about the site and its values.</td>
</tr>
<tr>
<td>Communication Strategy</td>
<td>- Develop a communication strategy</td>
</tr>
<tr>
<td>Website and new media</td>
<td>- Create the website of the World Heritage Site.</td>
</tr>
<tr>
<td></td>
<td>- Implement the communication strategy with regards to social and other web-based media.</td>
</tr>
<tr>
<td>Web Administration</td>
<td>- Costs of maintaining the URL, the servers, and services of webmaster.</td>
</tr>
<tr>
<td>Communication-Related Materials</td>
<td>- Implement the communication strategy;</td>
</tr>
<tr>
<td></td>
<td>- Prepare and print materials to promote the site and raise awareness about its values.</td>
</tr>
<tr>
<td>Promotional material</td>
<td>- Products that promote the site.</td>
</tr>
<tr>

<tr>
<td><strong>Site management studies</strong></td>
<td>Contracting of studies regarding specific protection and management issues as needed in support of the Technical Advisory Committee’s work.</td>
</tr>
<tr>
<td><strong>Review of the management plan</strong></td>
<td>Five year review of the management plan, the archaeological heritage strategy, the monitoring programme, and other management related documents.</td>
</tr>
</tbody>
</table>

**Consultation & Stakeholder Relations**

**Objective:** Engage stakeholders in the management of the proposed World Heritage Site.

| **Stakeholder Relations - Travel** | Support for the site management coordinator travel. |
| **Travel booth** | Travel booth and other information support on the site’s value and key aspects. |
| **Meetings** | Support for organizing meetings, including annual and quarterly meetings. |
| **Meeting Documents** | Printing of documents, including for annual, quarterly, and stakeholder meetings. |
| **Simultaneous translation Services** | Simultaneous translation. |

**Administration and Management**

**Objective:** Provide administrative support to the Stewardship Board and implement the management plan.

| **Site Management Coordinator** | Full-time employee reporting to the Stewardship Board. |
| **MERC (13%)** | For Site Management Coordinator |
| **Research Assistant** | Seasonal support to the site management coordinator to implement components of the management plan, through programs such as Young Canada Works. |
| **Data - Administrative File Management** | Administrative support and cost to administer files, correspondence, and other information. |
| **Office Supplies** | Traditional office supplies to carry out work. |
| **Office equipment** | Computer, phone, and other basic working tools. |
| **Financial management** | Management of Stewardship Board’s finances. |
| | Production of financial reports. |
| **Board Operations** | Meals and other minor expenses to support meetings of the Stewardship Board. |
| **Training** | Training of the Site Management Coordinator in issues, services, and expertise related to the management of a World Heritage Site. |

**Annual and periodic report and other published material**

**Objective:** Report on condition and activities every 6 years to UNESCO and on an annual basis to stakeholders.

| **Graphic Design** | Design of reports. |
| | Design of promotional and informational material. |
| **Editing** | Editing of reports. |
| | Editing of promotional and informational material. |
| **Printing** | Printing of reports. |
| **Maps Production** | Preparation and printing of maps. |

NORTHERN NEW BRUNSWICK FIELD UNIT
BUSINESS PLAN
2010/11 - 2014/15
Management Unit Overview

Northern New Brunswick Field Unit
186 Route 117
Kouchibouguac National Park, N.B.
E4X 2P1
E-mail: kouch.info@pc.gc.ca
FAX: 506-876-4802
Phone: 506-876-2445

Introduction

The Field Unit manages: one (1) national park, nine (9) national historic sites; twenty-three (23) national historic sites commemorated by HSMBC plaques and monuments; fifteen (15) persons of national historic significance commemorated of whom five (5) are Fathers of Confederation and have grave markers; six (6) events commemorated by plaques and/or exhibits.

The Field Unit manages Parks Canada’s relations with the Acadian community in Atlantic Canada. It also provides a leadership role for the commemoration of two Aboriginal national historic sites: Augustine Mound and Oxbow. An underlying theme for the Field Unit is Acadian culture and heritage. Two of the most important Acadian-themed National Historic Sites (Grand-Pré and Monument Lefebvre) are managed by the Field Unit. Acadian culture and history are important or predominant themes at the other national historic sites managed by the Field Unit, and even the difficulties surrounding the establishment of Kouchibouguac National Park have been viewed by many as a predominantly Acadian issue.

Kouchibouguac National Park of Canada (KNP):

Kouchibouguac National Park is located in New Brunswick, approximately 100 kilometres north of Moncton; Parklands are included in the Counties of Kent and Northumberland.

General Information:
Square Kilometres: 238
Permanent employees: 26
Seasonal employees: 78
Volunteers donating 1660 hours of service
Total visitation: 161,007 in 2009 a decrease of 25% since peak year 2006 (214,223 person-visits)
Total annual budget $4.46M (Historic Sites maintenance support)
Annual revenue $746.7K

Infrastructure:
Kilometres of paved roads: 53.7km
Route 117- 23.7 km- 100% in very poor condition
Parkway – 14.3 km - 10% in very poor condition, 90% in fair condition
North Kouchibouguac Rd – 1.3 km– 100% in very poor condition
Cap St. Louis Road – 3.0 km in poor condition, 300 m. threatened by erosion
Loggiecroft Road – 4.3 km-10% very poor and 90% fair
Other Roads – 20% in very poor condition
Kilometres of unpaved throughway / trails: 1km
Campgrounds / campsites: 364 (including 46 with electricity)
One group-tenting Site
Four primitive camping areas
Contemporary structures (including VRC): 63 M

Economic impact:
In 2004, expenditures by Kouchibougouac National Park totalled $4.9 million, while visitor spending associated with the park was $18.1 million. This contributed $9.3 million towards the New Brunswick Gross Domestic Product, provided $7.2 million in Labour Income (direct and indirect) and generated 272 person years of employment in the province of New Brunswick.

Cultural Resources:
Mi’kmaq burial ground, Saint Vincent de Paul Cemetery (active), Williams Cemetery and Archaeological Sites. Former residential foundations and cultural resources relating to the communities and businesses (i.e. lobster canneries).

Natural Resources:
Four ecosystems: Terrestrial (Forest and Bogs), Estuarine, Freshwater, and Coastal (Dunes and Saltmarshes) Ecosystems
Species at risk: Piping Plover, Short-Eared Owl, and Barrow’s Goldeneye (eastern population), Wood Turtle, Leatherback Sea Turtle, Striped Bass, American Eel, the St. Lawrence aster and the Eastern Cougar.

Fort Beauséjour – Fort Cumberland National Historic Site of Canada:

Commemorates the role of Fort Beauséjour in two major struggles: between the French and British during the Seven Year War and between the British and the American colonies at the time of the War for Independence. This site is located at the southwestern end of the Cumberland Ridge, near Aulac, New Brunswick.

General Information:
Hectares of land: 181.3
Permanent employees: 0
Seasonal employees: 6
Volunteers donating 371 hours of service
Total visitation: 14,916
Total annual budget: $223.1K
Annual revenue: $34.0K

Infrastructure:
Kilometres of paved throughway: .5km
Contemporary structures (including VRC): 673.0K

Economic impact:
In 2004, expenditures by Fort Beauséjour National Historic Site totalled $161,852 while visitor spending associated with the historic site was $583,772. This contributed $337,728 towards the New Brunswick Gross Domestic Product provided $261,707 in Labour Income (direct and indirect) and generated 9 person-years of employment in the province of New Brunswick.

**Grand-Pré National Historic Site of Canada (Nova Scotia)**

Located in the Annapolis Valley of Nova Scotia, Grand-Pré NHSC was designated nationally significant in 1955 to commemorate the Deportation of the Acadians. The site also commemorates the national significance of this centre of Acadian activity from 1682 to 1755 and the strong attachment that remains to this day among Acadians to this area, the heart of their ancestral homeland and symbol of the ties that unite them.

**General Information:**
Hectares of land: 24.06 ha
Permanent PCA employees: 1 (maintenance)
Seasonal PCA employees: 4 (maintenance)
The site’s visitor and learning opportunities services are provided by a cooperating association under a service contract ($220.0K in 2009) with Parks Canada. In 2009/2010 the not for profit group is contributing an additional $125K to the site’s operations and special projects.
Total visitation: 27,655
Total annual budget: $512.3K
Annual revenue: $ 117.0K

**Infrastructure:**
Contemporary structures (including VRC): 6.0M

Economic impact:
In 2004, expenditures by Grand-Pré National Historic Site totalled $596,578, while visitor spending associated with the historic site was $2,182,248. This contributed $1,059,628 towards the Nova Scotia Gross Domestic Product provided $770,036 in Labour Income (direct and indirect) and generated 33 person-years of employment in the province of Nova Scotia.

**Monument-Lefebvre National Historic Site of Canada**

The Monument-Lefebvre, located in Memramcook, New Brunswick, was designated a site of national significance in June 1994 because the building, a memorial to Father Camille Lefebvre who had contributed so much to the rebirth of the Acadian culture, occupies a special place in the hearts and minds of the Acadian people.
General Information:
Hectares of land: .38ha
Permanent employees 0
Seasonal employees: KNP provide asset management/maintenance services
Visitor and learning opportunity services are provided by a cooperating association under contract (75.0K) with Parks Canada. The not for profit group contributes at least an additional 20.0K annually to the site’s operations.
Volunteers donating hours of service in MU: No formal Parks Canada Volunteer Agreements, however a formal co-operative association with a volunteer board is very active i.e. special events and accessing third party funding.

Total visitation: 3,095
Total annual budget: $113.3K
Annual revenue: $1.8 K

Infrastructure:
Contemporary structures: 50.0 K

Economic impact:
In 2004, expenditures by Monument Lefebvre National Historic Site totalled $115,504, while visitor spending associated with the site was $71,923. This contributed $79,852 towards the New Brunswick Gross Domestic Product provided $54,055 in Labour Income (direct and indirect) and generated two (2) person- years of employment in the province of New Brunswick.

Boishébert and Beaubears Island Shipbuilding National Historic Sites of Canada

General Information:
Hectares of land: 70ha
Permanent employees: 0
Seasonal employees: KNP employees provide asset management/maintenance services
Total visitation: 2,492
Total annual budget: $20.7 (Maintenance costs in Kouchibouguac NP budget)
Annual revenue: No entrance fees

Infrastructure:
Contemporary structures: 50.0 K

Economic impact: Not available at this time

Natural Resources: Bald Eagle Nest, rare forest ecosystem – the last pine climax forest in New Brunswick

Fort Gaspareaux National Historic Site of Canada
Was built by French troops in 1751 by order of the Governor General of Canada, and taken by British troops in 1755. The site is located in New Brunswick, adjacent to the community of Port Elgin.

**General Information:**
Hectares of land: 1.23  
Permanent Employees: 0  
Seasonal Employees: 0  
Total visitation: N/A  
Total annual budget: Included in Fort Beauséjour NHS

**Annual revenue:** No entrance fee

**Infrastructure:**
Contemporary structures: 215.0K  
No learning opportunities at this site  
Economic impact: Not available at this time

**Beaubassin National Historic Site of Canada (Nova Scotia)**

Located in a high-traffic corridor at the border between the Province of New Brunswick and Nova Scotia

Beaubassin National Historic Site commemorates a major Acadian settlement on the Isthmus of Chignecto, a pivotal place in the 17th and 18th century North American geopolitical struggle between the British and French empires. The site’s archaeological features, deposits, and artefacts attest to the Acadian way of life at Beaubassin and speak of the destruction of the village, a prelude to the final clash of the two empires in Acadia for the control of North America.

**General Information:**
Hectares of land: 43.3  
Permanent Employees: 0  
Seasonal Employees: 0  
Total visitation: N/A  
Total annual budget: annual budget not yet defined  
Annual revenue: No entrance fees

**Economic impact:** Not available at this time
**Fort Lawrence National Historic Site of Canada (Nova Scotia)**

Erected on the site of the former Acadian Village of Beaubassin by Major Charles Lawrence in 1750, Fort Lawrence was built for the defence of the Isthmus of Chignecto and garrisoned by British troops until after the capture of Fort Beauséjour in 1755, when it was abandoned.

**General Information:**
- Hectares of land: Approximately 1 hectare
- Permanent Employees: 0
- Seasonal Employees: 0
- Total visitation: N/A
- Total annual budget: Under development, annual budget not yet defined
- Annual revenue: No entrance fees

**Economic impact:** Not available at this time

**La Coupe Drydock National Historic Site of Canada**

La Coupe Drydock, located near Aulac, New Brunswick, and commemorates what was thought to be an 18th century Acadian shipyard.

**General Information:**
- Hectares of land: Approximately 1 hectare
- Permanent Employees: 0
- Seasonal Employees: 0
- Total visitation: N/A

**Augustine Mound and Oxbow National Historic Sites of Canada (owned and managed by First Nation)**

These sites are of national significance because of their exceptional and enduring expression of Mi’kmaq way of life and spirituality, exhibiting burial rituals and artefacts directly connected to Adena traditions in eastern North America. Parks Canada is providing a contribution of $150K per year for a 10-year period to support the operation of Metepenagiag Heritage Park Inc which commemorates the two NHSC.
**Issues and Opportunities**

1) The single biggest issue for the Northern New Brunswick Field Unit is long-term financial sustainability. In the 2008-2013 Business Plan, a capital budget of $0 was forecast for the five years of the plan. Although the situation has improved somewhat with the upcoming repayment of several loans from the DG East’s office, and with strategic investment of funding from the Accelerated Infrastructure Program, there remains a significant challenge in re-establishing a capital budget that will conform with Agency standards and expectations.

2) There is an opportunity linked to the issue of financial sustainability, which lies in the demographics of the Field Unit workforce. There will be a significant number of retirements over the next 2-5 years. This will provide a considerable opportunity to reallocate resources in support of Agency priorities, while having a minimum impact on indeterminate employees. While this bodes well for the Field Unit being able to adjust to accommodate the ERVE realignment and the Resource Conservation renewal, it is unlikely that the issue of appropriate long term capital funding can be resolved through transfers from the existing salary budget.

3) The potential inscription of Grand-Pré National Historic Site of Canada on the UNESCO World Heritage List is a significant opportunity for the Field Unit and for the Parks Canada Agency. Significant time and resources are being dedicated to the project, both from the Field Unit and the Atlantic Service Centre. Once inscribed, World Heritage Status will allow Parks Canada to showcase a high profile and high potential National Historic Site. This will fit well with the Agency priority of National Historic Sites renewal. There will also be opportunities for thematic promotion of the site with other UNESCO World Heritage Sites in the province (Lunenburg and Joggins) and region (Gros Morne, L’Anse aux Meadows, and potentially Red Bay).
To be completed for National Historic Sites only

Message from the Minister

It is my pleasure to present the 2009-2010 business plan for the Department of Agriculture. We are committed to providing the support needed to meet the priorities set out in this plan.

Agriculture is an important contributor to the economic and social fabric of Nova Scotia. In 2008, farm cash receipts in Nova Scotia were $474 million. The industry reaches well beyond our provincial borders, with many of our products exported throughout the world.

The Department of Agriculture is committed to helping Nova Scotia's agricultural industry become sustainable and profitable for the long term. In 2009-2010, the department is committed to implementing a Competitive Transition Framework to transition the agriculture industry toward self-sufficiency and independence. The new federal / provincial / territorial Growing Forward agreement came into effect and the department will implement the programs and initiatives identified. As well, we will continue to move forward with the revised governance structure at the Nova Scotia Agricultural College which will benefit the province's agricultural industry for years to come. Work this year will also begin on a ten-year agriculture strategy for long-term prosperity in the industry.

I encourage everyone to visit the department's website at www.gov.ns.ca/agri for more information on the full range of programs and services.

Sincerely,

Honourable John MacDonell
Minister of Agriculture
**Mission**

To foster prosperous and sustainable agriculture and food industries through the delivery of quality public services for the betterment of rural communities and all Nova Scotians.

**Organizational Structure**

The Department of Agriculture has a legislated mandate to promote, support and develop the agriculture and food industries. The department also delivers services to Nova Scotia’s fisheries and aquaculture industries on behalf of the Department of Fisheries and Aquaculture. The Department of Agriculture is organized according to the following units:

**Agriculture Services** provides regional extension services, land protection, environmental management, 4-H and support for rural organizations, agricultural awareness, industry development programs, business risk management and crop and livestock insurance. The branch also oversees the administration of the Competitive Transition Framework.

**Legislation and Compliance Services** licenses retail food outlets and restaurants, meat processing and food and game farms, and oversees activities related to food and consumer safety, farm animal welfare, animal health and laboratory services, and on-farm quality evaluation. The branch supports the orderly production and supply of major farm products and the Nova Scotia harness horse racing industry. The branch is also responsible for monitoring and enforcing compliance with regulations under the *Fisheries and Coastal Resources Act*.

**Industry Development and Business Services** integrates marketing, product and quality development, and business development and economic services. These services are provided to both the Department of Agriculture and the Department of Fisheries and Aquaculture. The branch also oversees the operations of the Farm Loan Board.

**Policy and Planning** provides corporate support for policy and planning activities, including legislative and regulatory development. The division is also responsible for the administration of the *Freedom of Information and the Protection of Privacy Act*, and Occupational Health and Safety services. Divisional services are provided to both the Department of Agriculture and the Department of Fisheries and Aquaculture.

**Communications** provides government partners, industry clients and the general public with up-to-date, timely information on issues involving the department. These services are provided to both the Department of Agriculture and the Department of Fisheries and Aquaculture.

**Nova Scotia Agricultural College (NSAC)** provides education and training related to agriculture, aquaculture, and the agri-food industries. NSAC works in cooperation with industry and government, and is the centre of agricultural expertise for Atlantic Canada.
The Atlantic BioVenture Centre at NSAC supports value-chain development, research commercialization, and technology transfer. NSAC assumed ownership of AgraPoint International in 2009 to better integrate applied training, research and development and extension services.

**Planning Context**

Farm cash receipts in Nova Scotia amounted to $474\(^1\) million in 2007. Together, Nova Scotia’s supply managed sectors\(^2\) – dairy, poultry and eggs – accounted for close to half of all production in the province. Dairy is the single biggest sector, at roughly a quarter of the overall industry. Horticulture – covering a wide range of products including apples, wild and high bush blueberries, cranberries, greenhouse and nursery products, potatoes, vegetables, and honey – combines to make up a significant part of the industry as well. Fur, mainly from mink farming, is one of the fastest growing agricultural sectors in Nova Scotia, and currently represents approximately $64 million in farm cash receipts.

Agriculture is undergoing major shifts worldwide, characterized by an opening up of markets, increasing linkages between producers and consumers, and new demands for food safety and environmental protection, among other factors. Nova Scotia’s farm community – and farmers throughout the world – need to respond to these challenges and seize opportunities for long-term sustainable prosperity.

**Globalization**

Globalization in food has fundamentally impacted the domestic arena as borders open wider and competition intensifies. On the one hand, farmers throughout the world have new export markets for their products. On the other hand, producers – even those who do not export – face increased competition. Nova Scotia’s supply managed sectors have seen Canadian tariff rates weaken in recent years, and these tariffs could fall even further. If this happens, these sectors could face more direct competition from foreign producers.

The department continues to work with federal and provincial government partners to maximize access to trade markets without disrupting Nova Scotia’s supply-managed systems. The department will implement year two of a three-year trade plan in 2009 focusing on market development and diversification, product branding, strategic alliances, core markets, and targeted market research and information. The German market will also be a focus for value-added opportunities, functional foods and nutraceuticals, mirroring the successful Japanese market development project from recent years.

---

2. Supply-managed systems use quotas to match domestic supply with domestic market demand.
Economic trends

The worldwide trend in agriculture is towards consolidation, meaning fewer but larger farms. The department recognizes the need for greater strategic partnerships and innovative thinking to deal with the increasingly complex challenges in the global economy. This includes strategic planning encompassing supply-chain linkages. A greater focus on product differentiation and value-adding will also help soften the impacts of global currency fluctuations. Improved business risk management options as a part of the new federal / provincial / territorial Growing Forward agreement will help farmers respond to sudden economic downturns and become more competitive.

Consumer trends

In today’s global environment, consumers have an extraordinary amount of choice and are willing to pay price premiums for products that fit their unique needs. Nova Scotia’s farm community is focusing on being in tune with shifting consumer demands and tastes. This means not only identifying potential markets, but also identifying the right products at the right prices, and using the right distribution channels and promotion methods. These business models need to be flexible enough to cater to today’s market demands while preparing and adapting to meet future needs.

Many farmers in Nova Scotia who are not competing in a protected market or without price input advantages are transitioning away from a production and commodity-centered orientation toward a customer and product-centered one. Improved competitiveness will stem from developing strategies and implementing plans that identify and address consumer needs and wants, and that attract and develop highly skilled people, better information, more efficient government processes, improved infrastructure and production methods, better suppliers, more advanced research institutions, and more intensive competitive pressure.

Food safety and animal health

Food safety issues have received considerable attention in recent years, particularly with several reported cases of food borne illness in the United States and the listeria outbreak in Ontario during the summer of 2008. A single food-borne illness can have serious impacts on producers whose products are recalled, causing disruptions and problems throughout the value chain. Even the threat of illness can be enough to cause serious disruptions to the system. The discovery of bovine spongiform encephalopathy in a limited event in western Canada in 2003 demonstrated the extent to which a single incident can affect farmers throughout Canada.

The department continues to expand food safety programming by working with federal, provincial and municipal government partners. This includes working with the Canadian Food Inspection Agency (CFIA) to implement national programs to provide traceability for farm products and expanded animal health surveillance services. CFIA’s investigation into the causes of the 2008 listeria outbreak could also lead to new
compliance measures nationally. The department also continues to work with the Departments of Health Promotion and Protection and Environment around education, recruitment and regulatory reform to improve overall environmental public health in Nova Scotia.

The department hired two additional inspectors in 2008 to help Nova Scotia’s food service industry, including the processing, retail and restaurant sectors comply with provisions of the new Health Act. Emphasis in 2009 will be on increasing regulatory compliance through education, such as partnering with the Nova Scotia Community College for food handler training. In addition, the new online food safety database creates efficiencies both for staff and for consumers accessing reports. Ensuring reliability, credibility and adherence to the highest food quality standards also remains a focus, requiring ongoing effort and investment to maintain laboratory accreditations.

The department will seek proclamation of the new Animal Protection Act in 2009, which gives government a greater role in responding to allegations of mistreatment or abuse of farm animals. Recruiting and retaining large animal veterinarians remains a challenge throughout Canada.

**Climate change**

Climate change could have several implications for agriculture in Nova Scotia. It could lead to longer and warmer growing seasons. It could also lead to an increase in the number of incidents of invasive species and rising sea levels. Rising sea levels are a particular concern for Nova Scotia as a coastal province. Much of the province’s most productive agricultural land is low-lying, protected by a tradition of dyke maintenance stretching back 400 years. The department will work with government partners in 2009 to examine opportunities for Maritime-wide cooperation on a long-term dyke and coastal flooding strategy.

The Environmental Goals and Sustainable Prosperity Act commits the province to having one of the cleanest and most sustainable environments in the world by 2020. The act recognizes energy use, particularly electricity from coal, as one of the key challenges in addressing climate change. The department continues to work with industry and government partners to encourage farmers to reduce greenhouse gases through on-farm energy conservation. Beginning in 2009 farmers will be able to access an energy audit process tailored specifically to their sector, and incentives to implement energy saving initiatives. The department also continues to support the development of alternate and renewable energy technologies. The focus on alternative fuels may offer opportunities for agriculture-based energy suppliers.

**Job creation and youth**

Nova Scotia’s farm population is one of the oldest in Canada. In 2006, more than 45 percent of Nova Scotia’s agricultural labour force was over the age of 55, compared to roughly 40 percent for Canada overall. Nova Scotia’s farmers were the second oldest in
the country, with an average age of 53.2 years, compared to the national average of 52 years. Only British Columbia’s farmers were older.

The next 10 to 15 years could provide significant restructuring opportunities in agriculture, and room for new entrants to bring new perspectives. The department continues to encourage and recruit new entrants to the industry through outreach and education, business development supports and financial assistance, and will develop a committee this year to improve the delivery of programs and services to new entrants.

**Environmental management**

Healthy soil is a fundamental building block for sustainable agriculture, with plants and animals relying on it for productivity. The department continues to invest in the Environmental Farm Planning Program. This program identifies and prioritizes beneficial management practices, such as support for natural protective barriers to soil erosion, utilization of cover crops and nutrient management planning to help ensure soil remains healthy for future generations.

There are increased pressures in Nova Scotia for non-farm development in agricultural areas, particularly from residential, industrial and commercial uses, which can be more profitable than agriculture in the short-term. An agricultural land review committee has been established to advise the minister on issues surrounding the use of prime agricultural land. The department will also continue to lead a review of land use planning and development initiatives in 2009, develop a tool to help planners evaluate the importance of agricultural land, and support the work of the agricultural land review committee.

The agriculture industry has a role to play in water management. As a natural buffer and filter, agriculture plays a major role in providing high quality water recharge for provincial aquifers. Quality water is a key factor in agricultural productivity, and farmers have a vested interest in ensuring it is protected in the long term. The department continues to work with industry and government partners to improve access to high-quality water resources, namely through the Nova Scotia Farm Stewardship Program.

**Technology and innovation**

The Nova Scotia Agricultural College (NSAC) is the centre for agricultural research and innovation in Atlantic Canada, and in recent years has positioned itself to play a lead role in the development of Atlantic Canada’s bio-economy. Agriculture has the potential to provide the economic basis for a bio-economy that reinvigorates rural communities and helps reverse trends in rural population decline. To do this, the industry needs to attract qualified people from around the world to ensure the diversity of training, perspective, intellectual capacity and entrepreneurial confidence needed for vigorous economic growth.

The Atlantic BioVenture Centre (ABVC) at NSAC has been highly successful in attracting research funding, securing nearly $9.5 million in industry-led initiatives since
its inception in 2005. The ABVC focuses on the development and commercialization of value-added products including food and feed supplements, nutraceuticals and functional foods. The department also continues to provide support and services to encourage an increase in the production of new, value-added and higher quality products.

**Policy Initiatives**

The department continues to work with industry and government partners to help Nova Scotia’s farm community seize new opportunities and move forward. Programs and services focus on four core business areas: sustainable resource management; industry growth and development; responsible governance; and education and life-long learning. Several department initiatives will help meet the objectives of these core business areas.

The new federal / provincial / territorial Growing Forward³ agreement came into effect in April 2009, committing $14.74 million in federal funding and $9.83 million in provincial funding to Nova Scotia’s agriculture industry throughout the next five years. The agreement outlines three overarching strategic outcomes: a competitive and innovative agriculture and agri-food sector; a sector that contributes to society’s priorities; and a sector that is proactive in managing risk.

The department is committed to working with the Nova Scotia Federation of Agriculture to implement a Competitive Transition Framework to transition the agriculture industry towards self-sufficiency, independence and sustainability. The guiding principles of the framework are: transitional support; strategic public investment; and public goods and services. Nova Scotia’s Growing Forward programs and initiatives are aligned with and complement the three guiding economic principles of competitive transition. Work will also begin on a ten year agriculture strategy for long-term prosperity.

The department is also active in the government’s Better Regulation Initiative to reduce unnecessary administrative burdens, and the service standards commitment to meet a level of excellence in responding to licence and permit approvals.

**Core Business One: Sustainable Resource Management**

**Programs and Services**

- Agriculture resource management and land protection

**Goal:** Environmentally and socially responsible development of the agriculture and food industries.

**What it means**

The department is committed to achieving a balance between long-term agricultural growth and environmental responsibility, and provides leadership to help the industry realize the benefits of good environmental stewardship.

---

³ Growing Forward is the next generation agreement to the Agricultural Policy Framework.
**Priority # 1 – Implement strategic environmental programming to support competitive transition in the agriculture industry.**

**Strategies & Actions**
- Initiate an on-farm energy conservation program and work with industry to explore opportunities in alternative energy.
- Conduct farm energy assessments and recommend energy conservation options for farmers.
- Collaborate in assessing the merits of an ecological goods and services program to protect natural capital.

**Performance Measure:**

</table>
| Environmental sustainability   | Percentage of registered farms with an Environmental Farm Plan (EFP) | 27% (2004-05) 35% (2005-06) 40% (2006-07) 50% (2007-08) 60% (2008-09) | Increase the number of registered farms participating in the EFP | Continued increase in the number of registered farms participating in the EFP | Expand the EFP to include energy audits and a farm safety component  
 Continue to deliver the National Farm Stewardship Program |

**Priority # 2 – Improve agricultural land use planning in the province.**

**Strategies & Actions**
- Increase the profile of dykeland maintenance and explore community partnership opportunities.
- Explore land-use planning and preservation options for farmland.
- Produce a risk assessment model handbook to aid municipal planners and provincial policy makers with agricultural land use planning.

**Core Business Two: Industry Growth and Development**

**Programs and Services**
- Business risk management
- Agricultural lending services
- Business development and economics
- Product and quality development
- Market services
- Agriculture development, research, regional and extension services
Goal: Competitive agriculture and food businesses that create economic growth and employment in rural communities.

What it means
The agriculture and agri-product industries are the economic engines of many of Nova Scotia’s rural communities. Strategic initiatives such as Growing Forward and the Competitive Transition Framework, together with ongoing market development activities, will better position the industry towards long-term prosperity.

Priority #3 – Promote transition in the agriculture industry towards improved competitiveness and self-sufficiency.

Strategies & Actions
- Renew existing programs to meet client needs and better align with the three principles of competitive transition: transitional support; strategic public investment; and public goods and services.
- Develop a ten-year strategy for improved prosperity in the agriculture industry.
- Develop and implement a strategic initiative to support innovation and encourage the assessment, adoption and transfer of on-farm technologies.
- Develop and implement a strategy to support innovation and commercialization of new opportunities to increase industry competitiveness.
- Promote greater understanding and participation in business risk management programs.
- Include production insurance as part of the AgriInsurance initiative under Growing Forward.
- Strengthen provincial production insurance products and develop new plans for maple, horticulture acreage loss, and stone fruit.

**Priority # 4 – Expand and re-align service capacity to better meet client needs and facilitate competitive transition in the agriculture industry.**

**Strategies & Actions**
- Finalize the integration of AgraPoint with the applied research and training activities of the Nova Scotia Agricultural College.
- Develop and implement an enhanced customer service approach, such as single-window access, online applications, and new entrants’ needs surveys.
- Develop a regional approach to the delivery of extension services.
- Establish a minister’s advisory committee on extension services.

**Priority # 5 – Attract new entrants to the agriculture and agri-product industries.**

**Strategies & Actions**
- Work with producers, educators, and volunteers in rural and urban areas to promote careers in the agriculture and agri-product industry.
- Formalize a working committee to develop and implement a strategy for new entrants and coordinate new entrant activities within the department.
- Enhance investment attraction and immigration outreach activities.
- Continue to administer the New Entrants to Agriculture Program through the Farm Loan Board.

**Priority # 6 – Expand investment in the agriculture and agri-product industries to capture growth opportunities.**

**Strategies & Actions**
- Promote value-adding and quality development, with a focus on innovative products, services and technologies, including health and wellness products.
- Implement year two of a three-year trade plan focusing on market development and diversification, product branding, strategic alliances, maintaining core markets, and targeted market research and information.
- Develop tools and tactics to encourage entrepreneurship and business skills development.
- Encourage industry diversification through new investment in the grape, wine, tree fruit and organic sectors.

6 Measures identified with an asterisk (*) refer to activities on behalf of the agriculture, fisheries and aquaculture industries.

7 Increased participation and funding from other sources results in a decrease in the overall percentage invested by the department.

8 This measure has been revised slightly from previous years to include all loans in arrears, including those classified as ‘in default’.

9 Source: Statistics Canada, CANSIM Table 029-0005
Priority # 7 – Increase the international competitiveness of Nova Scotia’s agriculture and agri-product industries.

Strategies & Actions

• Partner with the Atlantic BioVenture Centre to explore new opportunities for business development through science and innovation.
• Work with industry and government partners to improve transportation and distribution efficiencies.
• Identify additional market diversification tools and strategies, focusing in particular on the German market.
• Pursue international competitiveness capacity-building in horticulture.
• Build the department’s statistical, analytical and information capacity to support industry development.
• Finalize the development of a strategic plan to grow Nova Scotia’s beef sector.
• Deliver entrepreneurial and business skills development training.

Priority # 8 – Increase the value of Nova Scotia’s agriculture sector.

Strategies & Actions

• Participate on the Council of Atlantic Premier’s Agri-Food Action Team to address distribution and retail challenges facing small and medium sized food businesses.
• Organize Meet Your Match events to bring together food sellers, food buyers and chefs to create value-chain linkages in Nova Scotia’s food chain.
• Continue working with Taste of Nova Scotia to expand culinary and agri-tourism opportunities in the province and in the export arena.
• Continue implementing the Select Nova Scotia buy local campaign to increase awareness and purchases of Nova Scotia agri-food products in the province.

**Core Business Three: Responsible Governance**

**Programs and Services**
- Food safety
- Animal health
- Laboratory services
- Enabling / guiding legislation and regulations
- Licensing and enforcement

**Goal:** Orderly development of the agriculture and agri-product industries.

**What it means**
Nova Scotia’s regulatory framework for agriculture and agri-products establishes standards for food safety and animal health and welfare, quality control and evaluation, and the orderly production and supply of major farm products. This helps to safeguard public health and maintain a level playing field for industry, while supporting a competitive business climate.

**Priority # 9 – Enter into the new federal / provincial / territorial Growing Forward framework agreement.**

**Strategies & Actions**
- Implement the Canada-Nova Scotia Bilateral Agreement and Consolidated Contribution Agreement under Growing Forward.
- Maximize federal contributions, national coordination and development initiatives under the Growing Forward agreement.

**Priority # 10 – Increase regulatory compliance.**

**Strategies & Actions**
- Sign a Memorandum of Agreement with the Nova Scotia Community College to provide food handler training courses to for-profit food services businesses.
- Deliver a new in-depth meat processing course to industry.
- Work with the Departments of Health Promotion and Protection and Environment to address overarching environmental public health issues.
- Maximize the effectiveness and utilization of the food safety data base and online reporting system.

**Performance Measures:**

<table>
<thead>
<tr>
<th>Outcome</th>
<th>Measure</th>
<th>Data</th>
<th>Target 2009-10</th>
<th>Ultimate Target</th>
<th>Strategic Actions to Achieve Target</th>
</tr>
</thead>
</table>

<sup>12</sup> This measure refers to the number of food handlers trained in a given year. The anticipated decrease is a result of having already trained a large number of food handlers.

<sup>13</sup> An increase in the number of food safety concerns reported and suspected food poisoning cases reported is anticipated as a result of a larger number of reporting mechanisms being made available to the public.
Priority # 11 – Maintain and improve legislative authority for industry supply and development.

Strategies & Actions

• Enhance resource capacity for timely regulatory and policy development.
• Review and improve legislation that supports the orderly production and supply of major farm products in Nova Scotia.
• Integrate Natural Products Marketing Council oversight and services into the department’s Legislation and Compliance branch.
• Integrate strategic planning and policy-based legislative and regulatory development.

Priority # 12 – Enhance animal health and welfare services.

Strategies & Actions

• Examine the Livestock Health Services and Herd Health Programs and develop strategies to ensure farm animal veterinarian service will be available long-term throughout the province.
• Implement the Animal Protection Act, investigate allegations of farm animal neglect or abuse, and assist in capacity-building at the Society for the Prevention of Cruelty.
• Evaluate first-response services in support of the Animal Protection Act and the Nova Scotia Society for the Prevention of Cruelty to assess whether services need to be expanded or improved.

Priority # 13 – Develop new legislation and regulations to address emerging issues.

Strategies & Actions

• Work with industry to explore options for legislation to develop the fur industry.
• Work with industry to explore legislative approaches and options for traceability of farm products.

Priority # 14 – Implement a new governance structure at the Nova Scotia Agricultural College.

Strategies & Actions

• Work with the transitional Board of Governors to develop and implement the requirements for establishing the Nova Scotia Agricultural College as a board-governed Crown corporation.
**Priority # 15 – Reduce the administrative paperwork burden on industry and turn-around times for permits and approvals.**

**Strategies & Actions**
- Continue to participate in the government’s Better Regulation Initiative to track the number of business days required to process permits and approvals, and set targets to reduce the number of days, if required.
- Work with the Emergency Management Office and other provincial partners to develop a crisis management strategy focused on natural disasters and disease outbreaks.

**Core Business Four: Education and Life-Long Learning**

**Programs and services**
- Agriculture outreach and youth
- Continuing and post-secondary education and research

**Goal:** Increased expertise and excellence in Nova Scotia’s agriculture and agri-product industries through teaching, research, community services and youth development.

**What it means**
Education and life-long learning are important for agricultural renewal and long-term viability, helping to foster new ideas and technologies, and developing future leaders for the industry.

**Priority # 16 – Increase student enrollment at the Nova Scotia Agricultural College (NSAC).**

**Strategies & Actions**
- Adapt and develop new academic and post-baccalaureate programs that respond to and target NSAC’s priority markets and address industry needs.
- Work collaboratively with other faculties of agriculture to address common recruitment issues at the market research level.
- Increase activity for targeted international student recruitment and student exchange.
- Develop and implement a comprehensive plan for student residence renewal to bring NSAC’s residence accommodation up to modern standards.
- Increase the number of partnership agreements and articulation arrangements with other universities and colleges to improve the flexibility of student learning experiences.
- Review student service programs and structure to ensure services are coordinated, optimized and appropriate to student cohort requirements.
Priority # 17 – Increase NSAC research capacity.

Strategies & Actions

- Seek external approvals for and implement the Ph.D. program in agriculture and recruit several new doctoral candidates.
- Recruit a Vice President, Research, Extension and Outreach to lead and coordinate research, development and commercialization and outreach efforts.
- Establish new faculty positions and parallel research programs in bioproducts development, farm energy conservation, fruit horticulture, management of landscapes, as well as agricultural resource and watershed management.
- Create a collaboration framework for enhanced cooperation between NSAC and Agriculture and Agri-Food Canada scientists located at NSAC.
- Strengthen ties to AgraPoint International at both administrative and operational levels to facilitate integration of research and extension where appropriate.

Priority # 18 – Increase NSAC technology transfer and commercialization capability.

Strategies & Actions

- Support the expansion of the Atlantic BioVenture Centre as the regional innovation centre for new product development from agri-based and marine-based resources.
- Enhance communication of research results to the industry by leveraging AgraPoint resources.
- Develop a comprehensive strategy to employ research results across Nova Scotia and the wider Atlantic region to foster economic development.

Corporate Services

Programs and services
- Business planning and accountability
- Legislative and policy services
- Communications
- Employee safety, wellness and health
- Information management
- Human resources
- Information technology

Goal: To ensure the effective delivery of a suite of corporate and administrative services for the benefit of the executive offices, operational units and the Government of Nova Scotia.

What it means
Corporate services are delivered through the offices of the Minister and Deputy Minister, the Policy and Planning and Communications divisions, and Resources Corporate Service Units\(^{14}\).

Human Resource Strategy

Priority # 19 – Address priority areas identified in the Corporate Human Resource Strategy\(^ {15}\).

Strategies & Actions
- Host an orientation day to welcome new staff to the department, including an overview of departmental functions, an introduction to senior management, and information on employee services, GoverNEXT, Occupational Health and Safety, and ethics in government.
- Hold a two-day staff conference focusing on issues of work / life balance, stress in the workplace, career development, personal financial management in difficult times, and intergenerational diversity.
- Provide career coaching training to help managers guide employees interested in making decisions about their work / life future.

\(^{14}\) Resources Corporate Service Units provide financial, human resources, and information technology services to the department.

\(^{15}\) The Government of Nova Scotia’s Corporate Human Resources Plan 2005-2010 identifies five goals to guide development of the provincial public sector workforce: To make a difference, through a skilled, committed, and accountable public service; To be a preferred employer; To be a safe and supportive workplace; To be a diverse workforce; To be a learning organization.

|-----------|------------------|--------|------|----------|---------------------|----------------------|--------|
| 1. Jumelage avec St-Isidore - HP | En avril 2010, la direction générale s’est rendue à St-Isidore dans la Péninsule acadienne et a rencontré la maire Mme Cécile Renaud qui lui a proposé de faire un jumelage avec Grand-Pré; Madame Renaud aimerait venir planter un arbre à Grand-Pré et invite la présidence à venir planter un arbre dans le parc de St-Isidore. La direction générale fera les recherches nécessaires pour développer un protocole de jumelage pour l’occasion. (Voir aussi 1.1.4.). | Été 2011 | P; DG | 1 500 $ 3<sup>e</sup> année du Plan triennal | Protocole de jumelage signé | • Avantages de promotion aux deux parties  
• Visibilité de Grand-Pré  
• Nombre accru de visiteurs de la Péninsule acadienne | En cours |

### Objectif 2 : Développer des ententes avec bailleurs de fonds

2.1 Développer des ententes avec des bailleurs de fonds

### État de la situation

La Société Promotion Grand-Pré a créé plusieurs partenariats avec des bailleurs de fonds depuis sa fondation en 1998 : la Fondation Tauck; l’Assomption Vie; le ministère de Développement économique de la N.-E.; le ministère du Tourisme, Culture et Patrimoine de la N-E; Patrimoine canadien; l’APÉCA.

Objectif 5 : Créer des activités médiatiques promotionnelles et des modes expérientiels

5.1 Concentrer nos efforts sur le marketing et la promotion

État de la situation : La Société Promotion Grand-Pré souhaite continuer à augmenter la notoriété et la promotion de Grand-Pré, mais surtout sa fréquentation par divers publics en étant présent dans les médias francophones et anglophones. Les marchés prioritaires sont ceux de la grande région de Halifax, de la Vallée et des Acadiens du Nouveau-Brunswick. Depuis deux ans, grâce au financement reçu de Parcs Canada et d’autre de bailleurs de fonds dans le cadre du Plan triennal, la Société embauche à contrat une relationniste auprès des médias qui est directement impliquée dans la promotion et la mise en marché en diffusant l'information auprès des médias. Les médias sont écrits, électroniques et Internet, publics, privés et communautaires, généraux et spécialisés.

**Objectif 5 : Créer des activités médiatiques promotionnelles et des modes expérientiels**

5.1 Concentrer nos efforts sur le marketing et la promotion

**État de la situation :** La Société Promotion Grand-Pré souhaite continuer à augmenter la notoriété et la promotion de Grand-Pré, mais surtout sa fréquentation par divers publics en étant présent dans les médias francophones et anglophones. Les marchés prioritaires sont ceux de la grande région de Halifax, de la Vallée et des Acadiens du Nouveau-Brunswick. Depuis deux ans, grâce au financement reçu de Parcs Canada et d’autre de bailleurs de fonds dans le cadre du Plan triennal, la Société embauche à contrat une relationniste auprès des médias qui est directement impliquée dans la promotion et la mise en marché en diffusant l'information auprès des médias. Les médias sont écrits, électroniques et Internet, publics, privés et communautaires, généraux et spécialisés.

## PLAN D’ACTION 2013-2014

### Objectif 1 : Créer des partenariats

1.1 Maintenir et/ou créer des partenariats

### État de la situation :
La Société Promotion Grand-Pré a créé plusieurs partenariats depuis sa fondation en 1998 : la Société Nationale de l'Acadie; la Fédération de la Nouvelle-Écosse; Parcs Canada; les Amis de Grand-Pré; Kings RDA; la CTACA; DSWNS; les ministères provinciaux du Développement économique et du Tourisme, Culture et Patrimoine; les ministères fédéraux de l’APÉCA et du Patrimoine canadien; les commerçants locaux; les communautés de la diaspora acadienne; la coopérative d’artistes Évangéline; les lieux historiques nationaux du Monument Lefebvre et de Fort Anne/Port Royal; le comité consultatif Inscription Grand-Pré; Congrès mondial acadien.

### Activités | Comment ou quoi ? | Quand ? | Qui ? | Combien ? | Résultats escomptés | Critères de rendement | Statut
--- | --- | --- | --- | --- | --- | --- | ---
1. Partenariat avec Parcs Canada pour la mise en valeur du lieu historique - HPA
   La mise en valeur du lieu historique comprend la programmation, l’interprétation et la livraison des programmes et services aux clientèles (visiteurs, groupes, écoles, etc.).
   Tout au long de l’année
   DG avec PM3 de PC et experts de PC
   En nature
   Une programmation pertinente et des services d’interprétation expérientiels aux clientèles
   Une bonne collaboration avec les experts de Parcs Canada
   • Les clientèles sont satisfaites
   • Les ressources pour la livraison des programmes et services
   À venir
2. Partenariat avec les associations d’artistes Acadiens des provinces atlantiques - HPA
   En partenariat avec les associations d’artistes de la diaspora acadienne (AADA) et la Coopérative d’artistes Évangéline (CAE), choisir par juré 2 ou 3 artistes pour faire une résidence de trois semaines chacun l’été, et 5 artistes émergents qui montrent leurs œuvres dans la galerie d’art pour une période de 5 semaines à l’automne.
   Artistes en résidence : 1er juillet au 1er septembre; artistes émergents : 2 septembre au 15 octobre
   DG
   (1 000 à 1 500 $)
   2 ou 3 artistes en résidence
   5 artistes émergents
   • Nombre d’artistes en résidence
   • Nombre d’artiste émergents
   • Qualité des œuvres,
   • Réactions du public
   À venir
3. Partenariat avec les associations de la diaspora acadienne - HPA
   Vente de DVDs comme prélèvement de fonds.
   Tout au long de l’année 2013-2014
   DG
   (2 000 $)
   Création de nouveaux partenariats
   • Nombre de partenariats
   En cours

Objectif 5 : Créer des activités médiatiques promotionnelles et des modes expérientiels

5.1 Concentrer nos efforts sur le marketing et la promotion

État de la situation : La Société Promotion Grand-Pré souhaite continuer à augmenter la notoriété et la promotion de Grand-Pré, mais surtout sa fréquentation par divers publics en étant présent dans les médias francophones et anglophones. Les marchés prioritaires sont ceux de la grande région de Halifax, de la Vallée et des Acadiens du Nouveau-Brunswick. Depuis deux ans, grâce au financement reçu de Parcs Canada et d'autres bailleurs de fonds dans le cadre du Plan triennal, la Société embauche à contrat une relationniste auprès des médias qui est directement impliquée dans la promotion et la mise en marché en diffusant l'information auprès des médias. Les médias sont écrits, électroniques et Internet, publics, privés et communautaires, généraux et spécialisés.

7.0 The Landscape of Grand Pré: A Summary ......................................................................................................... 14

Appendix: Contributing (C), Non-Contributing (NC) and Not Determined (ND) Resources .......................... 15
1.0  Introduction

1.1  Purpose of assessment

The nomination proposal for the Landscape of Grand Pré requires an inventory of the resources that relate to the proposed statement of value as well as information on their condition for future monitoring purposes. Consequently, this assessment is a summary of the key attributes located within the boundaries of the nominated property, as well as a commentary on their value and their condition.

This assessment forms the basis of a more holistic analysis of authenticity and integrity, in line with the expectations of the *Operational Guidelines for the Implementation of the World Heritage Convention* (hereunder the *Operational Guidelines*), that appears in chapter 3 of the nomination proposal. In that chapter, authenticity and integrity are assess for the whole landscape as much as for individual components.

1.2  Scope

This analysis focuses on identifying and defining the main natural and cultural resources located within the boundaries of the nominated property based on the state of knowledge in 2010.

1.3  Methodology

The methodology employed in this analysis combines the direction provided in the *Operational Guidelines* and the principles and practices of Parks Canada’s Cultural Resource Management Policy. It is also inspired by approaches to assess the character of landscapes developed by English Heritage and the framework applied by the United States National Parks Service in the evaluation of Grant-Kohrs Ranch NHS.

The data used was collected from archaeological reports and field notes from work carried out by archaeologists from Parks Canada, the Nova Scotia Museum, St.Mary’s University, and other researchers; from historical archives principally from Acadia University, Centre d’études acadiennes of Université de Moncton, deeds located in Kentville, and archives from the Nova Scotia Archives; from local knowledge; from the work of Dr. Sherman Bleakney as compiled in his book *Soils, Sods, and Spades*; from aerial photography located at the National Air Photo Library in Ottawa, and LiDAR data as analysed by the Nova Scotia Community College’s Centre of Geographic Sciences (CoGS); from the Commemorative Integrity Statement for Grand-Pré National Historic Site of Canada; and from field observations by technical staff supporting Nomination Grand Pré.

This analysis begins with a commentary on the typology of the Landscape of Grand Pré based on the categories outlined in the *Operational Guidelines* (section 2). It follows with a short description of the nominated property (section 3) and the identification of the key attributes, their authenticity and integrity (section 4). A more substantial discussion of authenticity (section 5) and of integrity (section 6) provide the basis for the overall assessment of these aspects for the nominated property. Finally, a summary (section 7) provides a snapshot of the authenticity and integrity of the nominated property.

The appendix compiles more detailed data on the types of resources located within the boundaries of the nominated property. The framework used organizes natural and cultural features according to 9 categories:

- **Natural systems and features**: identifies natural elements included in the nominated property, such as watercourses, hills, and fields;
- **Vegetation**: identifies specific types of vegetation that are prevalent or distinctive;
- **Spatial organization**: identifies relationships between and patterns of features, such as location of roads, settlement distribution, and commemoration areas;
- **Land uses**: identifies uses and activities within the landscape, such as pastures, memorials, and dwellings;
- **Constructed water features**: identifies features built to manage the flow of water, such as ditches, channels, and drains;
Circulation: identifies roads;

Views and viewsheds: identifies areas that provide views of attributes and are attributes themselves;

Buildings and structures: identifies built structures, such as churches, farm buildings, and houses; and,

Archaeological and missing features: identifies located archaeological features and location of potential archaeological features based on archival information.

Attributes may appear in more than one category, for example roads will be discussed under spatial organization, as they are important elements of the distribution of elements in the landscape, as well as under circulation.

Each natural and cultural feature is assessed on whether it is contributing to the authenticity and integrity of the nominated property, not contributing, or, particularly in the case of archaeological and missing features, not determined.

2.0 The Landscape of Grand Pré

2.1 Proposed Statement of Outstanding Universal Value

The Landscape of Grand Pré is being proposed under criteria (v) and (vi) of the Operational Guidelines, namely as an agricultural landscape illustrating an interaction between humans and their environment, and as a symbolic landscape, illustrating the universal human aspirations of connection with one’s homeland.

The following is an excerpt of the proposed Statement of Outstanding Universal Value:

Brief Synthesis
The Landscape of Grand Pré is a dynamic agricultural landscape claimed from the sea. It is also a powerful symbolic landscape for the Acadians.

The Landscape of Grand Pré is the most intact agricultural polder in the world that uses an ingenious vernacular system for transforming salt marsh into fertile agricultural farmland. This system of earthen dykes, ditches, aboiteaux, and community-based management was first implemented at Grand Pré in the late 17th century by French (Acadian) settlers. The location they chose was subject to the most extreme tides in the world, which presented great challenges but also great opportunities in the extraordinary fertility of the land they transformed. Today, the agricultural landscape is still protected and drained by the same system, still exhibits distinctive field patterns, and is still managed through the same community approach, a testimony to the original Acadian settlers, the New England Planters who succeeded them, and the farmers who work the land today.

Symbolically, the Landscape of Grand Pré is the single most important lieu de mémoire for the Acadian people. The Acadians are one of the first people of European descent to call North America their homeland. The Landscape of Grand Pré is directly associated with the emergence of their new identity in this new land, but also with their tragic forced removal from it, their subsequent migration, and their renaissance. Today, this lieu de mémoire embodies the cultural consciousness of a widely scattered people. It is a landscape that has been peacefully and symbolically reclaimed by the Acadians, and it is their emotional and spiritual centre. It illustrates the importance of the connection between people and places in defining collective identity.

Criterion (v): Grand Pré is a vibrant agricultural landscape, carved out of its harsh coastal environment three centuries ago by Acadian settlers. Working collectively, they applied an ingenious system of dyking and drainage to hold back the highest tides in the world, created extraordinarily fertile farmland, and began a tradition of collective management. This land reclamation system and this management tradition continue to ensure the livelihood of the local community today. The Landscape of Grand Pré is an outstanding example of a thriving farming community that interacts with its environment by using a successful land reclamation system and management tradition that predate the introduction of engineered drainage systems.

Criterion (vi): Owing to the imposing presence of the dykelands, the Memorial Church and other memorials, and its enduring use by the Acadian people, the Landscape of Grand Pré is the most important lieu de mémoire for the
Acadians, an evocative example of a homeland symbolically and peacefully reclaimed by a diaspora that has triumphed over hardships. The legacy of the Acadian people overcoming the tragedy of a forced removal, the Grand Dérangement, their renaissance, and the ongoing efforts of reconciliation are embodied in the Landscape of Grand Pré. Here, Acadians share their common heritage, reaffirm their identity, and continue to build their sense of community in a spirit of peaceful reconciliation with history. The Landscapes of Grand Pré provides a poignant and powerful living example of the universal human aspirations to belong to a community, to connect with one’s homeland, and to seek reconciliation.

2.2 Typology of the Landscape of Grand Pré

The landscape of Grand Pré is a cultural landscape. It has significant areas or elements that fall into all three categories of cultural landscapes as defined by the Operational Guidelines.

2.2.1 Landscape Designed and Created Intentionally

There are two parts of the nominated area that come under this category. The first landscape designed and created for aesthetic reasons by deliberate human intervention is the Memorial Park setting within what in the mid-20th century became Grand-Pré National Historic Site of Canada. This part of the nominated property came into being in the 1920s when a landscape plan developed by Percy Nobbs was implemented, establishing monuments and memorials within a laid-out park of paths, ornamental beds and tree and bush plantings. The fundamentals of that Memorial Park remain intact eight decades later. The second landscape intentionally-created in part for aesthetic reasons – a desire for symmetry – is no longer sharply delineated, but it is still visible on the landscape as vestiges of the Town Plot grid designed by Charles Morris in 1760. It is found on a portion of the upland in what is known as Hortonville.

2.2.2 Organically-Evolved Landscape

All of the dykeland and most of the upland portion of the nominated property falls into this category. The only area excluded is the Memorial Park portion of Grand-Pré National Historic Site of Canada. On the gentle hills of the uplands there is today roughly what was there back in the late 17th and early 18th centuries: a scattered rural village with a mix of farm and residential properties along a variety of different roads and streets. Despite a dramatic and tragic politico-military change – the military removal and forced migration of the Acadians and the subsequent arrival of settlers from New England to take over the vacated lands – the way of living and working on this portion of the nominated property has changed little over more than 300 years. In the 1760s the British administration did impose a rectilinear grid on the highest ground – an intentionally-created feature – yet the Town Plot was not adopted by the settlers as their preferred settlement area. Rather, they mostly chose to spread out along the uplands as the Acadians had done before them, distributing themselves along the low ridge that led down to the highly fertile dykeland. That preferred settlement pattern gave them space for their upland agricultural pursuits and it gave them closer access to the agricultural bounty of the dykeland. There are no buildings in the nominated property with sufficient integrity from the Acadian and Planter periods to merit specific mention. Rather than standing architecture, what has value within the organically-evolved landscape in the upland portion of the nominated property is the low-density use, function and distribution of buildings and the tangible elements of a more than three century settlement pattern with its roads, streets and property boundaries. Many of those elements have retained their line, form, extent and shape since the late 17th and early 18th century.

2.2.3 Associative Cultural Landscape

There are three areas within the nominated property in this category. The area whose associative values go back the farthest in time is the dykeland itself. It is quite simply a 1000-hectare artifact located in an extremely picturesque setting that evokes for many if not most Acadians a time and a place that was taken away from their ancestors by the upheaval of the Acadian Deportation. The landscape setting by itself therefore evokes for many a paradis perdu. The second area with definite and intended associative power – cultural, religious and artistic – is the Memorial Park within Grand-Pré National Historic Site of Canada. Its park-like setting encourages reflection and serenity while its
monuments, especially the Memorial Church, Herbin Cross and Statue of Evangeline speak to the importance of the Acadians’ faith, hope and perseverance. The Evangeline statue and the so-called Evangeline’s well also reflect the world-wide impact of Henry Wadsworth Longfellow’s mid-19th-century literary heroine, Evangeline. Since Longfellow’s time, hundreds of artists, essayists, historians, novelists, photographers, playwrights, and poets have created pieces that have similarly been inspired by the fictional Evangeline, by visits to the Memorial Park / National Historic Site, and/or by learning the history of what happened at Grand Pré. The third area with strong associative value is the location where in 1755, the Acadians were led to board the ships that would disperse them around the world. That location was believed to be along Deportation Creek, near the railway. Since 2002, that location is now confirmed to be at Horton Landing. Long associated with the 1760 arrival of the New England Planters, this area acquired since then a powerful association with the Acadian Deportation. The relocation of the Deportation Cross (a 1924 creation of the Acadian community originally placed along the rail line) to Horton Landing has made this area a powerfully poignant spot for Acadians and for non-Acadians moved by the story of a people who overcame a tragedy and returned to symbolically reclaim their lost homeland. The Horton Landing setting is especially evocative for the Deportation Cross, with the vast expanse of the Acadian-created dykeland stretching westward while the Gaspereau River that led into exile flows quietly down the mud-banked slope.

3.0 The Nominated Property

The nominated property consists of about two-thirds dykeland and one-third upland. The dykeland portion represents the majority of the Grand Pré Marsh while the upland portion is a section of the overall upland area that runs along both sides of the dykeland.

3.1 The Dykeland

The reason for including the entirety of the dykeland is that research determined that over 1000 hectares of dykeland possess sufficient authenticity and integrity to merit World Heritage consideration. (This is discussed in more detail in section 4.1.)

3.2 The Upland Portion

Though research has established that there were first Acadian and later Planter houses and working farms along the entire two kilometres of upland between the Gaspereau River and Lower Wolfville, most of that area could not meet the tests of integrity and authenticity. There is a defined area where there is sufficient tangible evidence of that bygone and ongoing settlement pattern. (This will be discussed in more detail below, in section 4.2.)

With Long Island or North Grand Pré (the upland that extends along the northern side of the dykeland), there was insufficient historical and archaeological evidence of Acadian and Planter settlement on this part of the landscape in the greater Grand Pré area. The Planters did settle in this area not long after their arrival in the 1760s, but there is no known continuity of tangible evidence from that settlement era. Hence, Long Island was excluded completely from the nominated property. As for Boot Island, which until the 1860s formed a part of Long Island, it does have the vestiges of some Acadian dykes, but they have been for the most part washed away.

Turning to the southern upland, which today contains Horton Landing, Hortonville and the village of Grand Pré, there is abundant cartographic and documentary evidence to indicate that the Acadian community had lived in a dispersed manner along the ridge for about two kilometers between the Gaspereau River and Lower Wolfville. There is also convincing evidence of the vestiges of what once would have been seigneurial land concessions dating from the late 17th and early 18th centuries. At the time of the Acadian Deportation the agricultural community living along the highly fertile dykeland consisted of about 900 men, women and children. There were about 150 houses with another 150 farm buildings, as well as orchards, grazing animals and some wood lots. It was along this southern upland that the New England Planters and successor generations came to settle in 1760 after the forced migration of the Acadians in 1755, though some did soon establish themselves on Long Island. The Planters settled in much the same dispersed manner as their Acadian predecessors had done. The only exception was the rectilinear Town Plot introduced on the highest portion of the landscape by the British administration in 1760. Yet that symmetrical grid failed to induce very many of the new settlers to live along its streets. They preferred instead to
spread out on the upland, maximizing their proximity to the highly fertile dykeland that lay below. The spread-out settlement pattern led to the continuing use of pre-existing Acadian roads and over time to the development of new roads that either ran north-south to connect with the dykeland or east-west to facilitate communication and transportation within the upland settled area.

Though the Acadian and Planter settlement pattern extended all along the upland to the south of the dykeland, there is only a relatively small area on the upland with tangible evidence possessing sufficient integrity and authenticity. That area is bounded by the Gaspereau River on the east, Miner Lane on the west, the dykeland itself on the north and the Old Post Road and Middle Street on the south. Within that circumscribed area the cartographic, historical and/or archaeological evidence confirms that some of the roads, streets and boundary lines between properties have been there since the late 17th or early 18th centuries. Thus, the upland portion of the nominated property is seen as a representative sample of what historically was a much larger Acadian and Planter upland settlement area.

### 3.3 Inspirational / Memorial Sites

Both the 1920s-era Memorial Park within Grand-Pré National Historic Site of Canada and the 1924 Deportation Cross in its new setting at Horton Landing evoke a powerful mix of artistic, cultural and religious/spiritual associations. The sentiments and feelings arise (and have long done so) not only with Acadians but also with many non-Acadians as well. The latter, the majority of visitors, are touched by the example that Grand Pré demonstrates: an example of a people whose ancestors endured a great tragedy of forced migration yet whose descendants were able to return and reclaim symbolically the most cherished of all their previously occupied locations, Grand Pré. Research shows that both locations have sufficient integrity and authenticity, including the Horton Landing setting of the Deportation Cross. Though the cross was only installed there in 2005, the new location maintains and even enhances the associations felt at its previous spot. That is because the Horton Landing location is acknowledged to be the historically appropriate last location for the Acadians of Grand Pré and because its riverside setting reinforces a strong sense of place and poignancy.

</tbody>
</table>
5.0 **Authenticity**

The nominated property is an inspirational combination of an agricultural and memorial landscape. In its agricultural dimension it remains true to what it was at its Acadian origins in the late 17th century. That is, it is a picturesque rural landscape upon which people live in a low-density well-dispersed village setting on the upland alongside the dykeland that has long been the source of agricultural bounty. The memorial dimension of the nominated property similarly remains true to its purpose as conceived and implemented during the 1920s. That was when evocative monuments and distinctive settings were established to encourage reflections on a tragic past and to foster sentiments of reconciliation about that past event. The memorial aspect of the Grand Pré landscape has two main focal points: what began as a Memorial Park and evolved to become a national historic site of Canada and the Deportation Cross setting at Horton Landing. The overall ensemble at Grand Pré has attracted numerous researchers from many disciplines in recent years so that the nominated property is well understood and well defined.

5.1 **The Dykeland**

Researchers from different disciplines came together to recommend that the majority of the 1300 hectares of the dykeland be included in the nominated property because of the many original attributes of the dykeland.

With regard to its form and design, the dyke walls continue to face the Minas Basin and they follow the same dyking line set by Acadians in the 18th century on the east side of the Grand Pré Marsh and on the west side as set in the 19th century by the successors of the New England Planters. The dykes were raised in the 20th century but the lines remain what they always were. As for the individual fields within the dykeland, they illustrate the same interrelationship with the natural drainage pattern that they have always had since their Acadian construction, carrying water off the fields out through aboiteaux into the Minas Basin. Many of those fields have exactly the same shape and size as they did in the Acadian era.

Turning to the materials and substance of the dykeland, it remains what it always was after the inter-tidal zone was transformed: it is several metres deep of compacted soil with traces of brush, logs and wooden sluices installed by Acadians and in some instances Planters from the 17th to the 20th century.

As for the use and function of the dykeland and its dykes on the eastern and western fronts, they are unchanged from their origin. The dykeland remains a richly productive agricultural land and the (modern) dykes, (modern) ditches and (modern) aboiteaux have the same function as their predecessors. They exist to protect and drain the fertile land.

Finally, the location and setting of the dykes and dykeland are unaltered from their construction in the late 17th and early 18th centuries. The 1300 hectares of transformed inter-tidal zone continues to be exposed on two faces to the tides of the Minas Basin (a part of the Bay of Fundy) and there are still many in-situ remains of some original aboiteaux and culverts and one of the surface dykes. Three wooden sluices have been accidently uncovered and retrieved and there are likely many more buried within the dykeland in their original locations.

5.2 **The Upland Section**

An examination of the available archaeological, cartographic and documentary evidence on the upland area settled first by Acadian and subsequently by Planters and successor generations determined that there was only a portion of the overall area with sufficient authenticity and integrity to be included in the nominated property. That portion was identified as a representative sample of what in the 17th and 18th centuries had been a much larger and widely dispersed settlement area, an area that could be seen as the core of the overall village of Grand Pré because it contained its parish church, cemetery, main transportation arteries and a sample of its buildings. The tangible evidence in the area of the representative sample consists of confirmed archaeological remains of Acadian features (a cemetery, four house sites and possibly more within the boundaries of the Grand-Pré NHSC); many roads and streets that date back to the 17th and 18th centuries and most of which have been continuously used ever since; the vestiges of a Town Plot grid that reflected a desire to impose a symmetrical settlement pattern, but which was largely ignored by the agricultural community; and boundary lines between properties that the evidence suggests go back to an Acadian-era seigneurial regime.
5.3 Inspirational / Memorial Sites

With the exception of the Deportation Cross, which was moved to a more historically appropriate and evocative setting in 2005, all memorials to the Acadian experience at Grand Pré remain in their original locations as established in the 1920s. The Memorial Park continues to have the same form and design, the same materials and substance, and the same use and function as it did when it evolved to its full extent in the 1920s. The Deportation Cross has been moved to a new location, but that only enhanced its connection to the storylines and sentiments it represents and its overall evocative power. The cross itself is intact in its original design and form, materials and substance and use and function.

6.0 Integrity

The nominated property exists as an inter-connected entity with great “health”. Three questions guided this analysis. The first was the degree to which the nominated property includes all the necessary attributes to communicate its value. The second was whether or not it was of sufficient size to represent that value completely. The third was whether or not the whole and its constituent elements were under any kind of threat or pressure that might endanger or harm its attributes in the short or long term. The health of the nominated property is excellent on all three matters. This analysis begins as if the dykeland, upland portion and memorial settings were three discrete elements but at the end the integrity or health of the whole nominated property is discussed.

6.1 The Dykeland

The dykeland at Grand Pré contains all of the elements necessary to affirm its attributes and value. It exists in its entirety as originally created by the transformation of a vast inter-tidal zone. Steps have been taken by the Government of Nova Scotia to ensure that it is used exclusively for agriculture and that its dykes are maintained to protect it from the sea.

6.2 The Upland Section

The representative sample of the settlement pattern on the upland area of the nominated property possesses enough elements for it to affirm and maintain its value. It is of adequate size to ensure that its representativeness is sufficient to communicate its significance. Thanks to municipal zoning regulations, there will be no developments in the area that will lead to any of its significant attributes being adversely affected.

6.3 Inspirational / Memorial Sites

The memorial sites at Grand Pré – the Memorial Park setting within Grand-Pré National Historic Site of Canada and the Deportation Cross at Horton Landing – contain all of the elements necessary to affirm their attributes and value. The Memorial Park exists in its entirety as originally envisioned and created in the 1920s, as a place for reflection and inspiration. The agency now responsible for its operation and safeguarding, Parks Canada, takes steps on a regular basis to ensure the integrity of the setting. As for the Deportation Cross setting at Horton Landing, that area is also owned and administered by Parks Canada, which follows its cultural resource management policy to guide all actions.

6.4 The Nominated Property as a Whole

The mix of dykeland, upland and memorial setting at Grand Pré being proposed for inscription on the list of World Heritage Sites is a remarkable cultural landscape. For millennia prior to the arrival of Acadians in the 1680s, the inter-tidal zone and adjacent uplands of the greater Grand Pré area were known to only the indigenous Mi’kmaq. They frequented the overall area, crossing back and forth across Minas Basin to harvest flora, fauna and quarry sites as required. The basin and especially Cape
Blomidon figured prominently in their stories and legends. That pre-European presence and use of the area by the Mi'kmaq is attested to by numerous archaeological sites surrounding the nominated property and by an ancient stone gouge excavated within the nominated property in 2009.

With the coming of the Acadians to the grand pré (or “great marsh”), a totally different era began. That period marked the beginning of an agricultural community whose dyking accomplishment and settlement patterns are still evident on the landscape today. Though we have discussed the inter-tidal zone transformation into a highly fertile dykeland separately from the settlement on the upland, they were inextricably inter-connected. Without a farming community on the upland, there would have been no wetland transformation or dykeland creation in the first place or no ongoing maintenance of it in the years that followed. The tangible evidence of the Acadian accomplishment in altering the local ecosystem and creating a brand-new landscape is nothing less than the existence of the 1000-hectare dykeland itself. There it is in 2010 with the same form, design, materials, substance, use and function that it had in 1710 or 1810 or 1910.

So it is as well, though more subtly, with the residential and working farm portion of the nominated property. That is the portion found on the upland to the south of the dykeland. Through archaeological evidence that dates from the Acadian era and from streets, roads and boundary lines established in a combination of Acadian and Planter periods, Grand Pré is today what it has always been since the late 17th century: a low-density rural village extending east and west along the dykeland. At no time did the adjacent agricultural community consider moving out on the dykeland to erect houses or other buildings there – a phenomenon seen all too often in other locations. The fertility of the Grand Pré dykeland was too great. To build on it; to use it for anything other than food production would be a tremendous waste and loss. So, for over 300 years, the community that lives on the upland – whether it spoke French or English or was Roman Catholic or Protestant, has safeguarded its precious adjacent resource. Thus the upland settlement and community is the *sine qua non* of the story of Grand Pré. No farmers, no dykeland, no food. As mentioned, the tangible evidence of the three and a quarter centuries of occupation along the southern limit of the dykeland at Grand Pré is subtle: lines on maps and Lidar photos that manifest themselves on the ground as roads and boundaries. And then there are the archaeological sites; some excavated, others only identified through ground penetrating radar.

The dimension of time looms large over the nominated property of Grand Pré, like the tides that come and go endlessly on its eastern and western limits, marking the onward march with a twice-daily rhythm. Features are often known by their associations with this or that era. It cannot be avoided; references to before or after the Mi’kmaq, the Acadians, the Planters, the Deportation, and so on. People and events have left their mark on the landscape yet the landscape left its mark on its people. To cite just one example: the British administration sought in 1760 to establish its incoming settlers from New England on a rectilinear grid, and so had the required streets and squares laid out on the ground. About half of the Town Plot still exists, but only half and some of it is little used. The Planters preferred instead to live where and how they wished, which turned out to be along the upland much as the Acadians had done before them, thereby maximizing their relationship with and connection to the great dykeland that spread out east to west between their upland and Long Island.

The feeling of the time’s passage is inescapable in another way within the nominated property. In the two areas with the most prominent memorials to the tragedy of the Acadian Deportation – in the Memorial Park portion of Grand-Pré National Historic Site of Canada and in the Deportation Cross setting at Horton landing – one cannot help but reflect upon the forced migration that uprooted the Acadians, the agricultural community that did not just live in this area but literally created a significant portion of it. This place was theirs and now it’s not. It’s a history to make one pause and reflect yet, remarkably, because of the beauty and bounty of the overall nominated property and because of the vision of the people who erected its evocative memorials, the weight of that tragic past is not at all suffocating. On the contrary, one senses in the nominated property of Grand Pré, on its farmed and lived-on landscape and through its memorials, a sense of great hope, an inspiration. That’s because the descendants of a people forcibly removed were later able to return, to reclaim the Grand Pré area in symbolic fashion. Here on the agricultural and memorial landscape of the nominated property, perseverance and pride were able to achieve reconciliation through commemoration, an example for the world.
7.0 The Landscape of Grand Pré: A Summary

The Landscape of Grand Pré brings different aspects to the fore depending on where the viewer is located and the direction he or she is looking. About two-thirds of the nominated property is a gently undulating dykeland dedicated entirely to agriculture, as it has been ever since Acadians began to transform it from a vast inter-tidal zone in the 1680s. The other one-third of the candidate consists of a low-lying upland with several small hills. This area too has not changed in its fundamental role over the past 330 years: it is where the residents of greater Grand Pré have always lived, in a dispersed settlement pattern adjacent to the rich bounty of the dykeland.

The nominated property has integrity because its clearly defined boundaries encompass all the elements relevant both to the agricultural landscape, created from the transformation of salt marsh into farmland over several centuries, and to the symbolically reclaimed landscape. These elements include earthen dykes, ditches, aboiteaux, and field patterns, as well as the memorials, archaeological evidence of the village, and commemorations related to the forced removal and subsequent renaissance of the Acadians. The nominated property comprehensively represents the past and present agricultural settlements as defined by dykeland farmland, upland farmland, and the heart of the community. It includes the dykeland managed collectively by the Grand Pré Marsh Body and the entire area of symbolic importance to the Acadians. The integrity is enhanced by the farmland included in the buffer zone. The nominated property’s attributes are in good condition.

The nominated property has authenticity because the archaeological and historical evidence confirms the locations of the original Acadian and Planter settlements, the enduring agricultural use, and the location of the memorials. That evidence also confirms that the dykelands are maintained in the 21st century using the same principles and techniques originally implemented by the Acadians in the 17th century and that they have been managed collectively for over 300 years. The Acadians’ continuing use of Grand Pré for individual and collective events attests to the profound value of this landscape to their community.

<tr>
<td>Long Island (North Grand Pré)</td>
<td>NC</td>
<td>N/A</td>
<td>This is north of the nominated property (not included). The Acadian dyking projects of the 17th and 18th centuries benefitted from the island being there. Without its presence, they would have had to use a different strategy to transform the natural ecology of the inter-tidal zone because the island provided a partial buffer from waves and storm surges coming from the Minas Basin. Once the inter-tidal zone was fully dyked and there was land access to Long Island, its settlement became possible and attractive. The evidence indicates that there was minimal if any settlement on Long Island during the Acadian era but that began during the Planter and subsequent periods. The community on the island is known as North Grand Pré.</td>
</tr>
<tr>
<td>Boot Island</td>
<td>NC</td>
<td>N/A</td>
<td>This feature (100 ha of upland) was once attached to Long Island but forces of erosion created a “guzzle” in the 1860s that has grown steadily ever since. It used to be occupied by a small number of farming families until perhaps the middle of the 20th century. Since 1979 it has been a National Wildlife Area and part of a Ramsar site.</td>

<td></td>
</tr>
<tr>
<td>&quot;French&quot; Willows (within Grand-Pré National Historic Site of Canada)</td>
<td>C</td>
<td>There are eleven very old willows within Grand-Pré NHSC locally known as &quot;French&quot; willows. These date from at least the 19th century and more likely from the 18th-century Acadian occupation. Four, two on each side, flank the entrance to the memorial garden area when crossing the train tracks coming from the visitor centre. The other seven are behind and to the right of the Memorial Church erected in the 1920s. The willows have long been called &quot;French willows&quot; because of an oral tradition that asserts that they date back to the Acadian period. There is no reason to doubt the tradition. Willows are commonly found in Acadian-settled areas of Nova Scotia and there was a long tradition of willows being planted in wet areas in France because they helped absorb some of the wetness in the soil. When landscape architect Percy Nobbs developed a concept for a memorial park for the Dominion Atlantic Railway in 1919, he made a point to retain the already old willows in his landscape plan. Their value lies in that they are a part of the legacy of the site as it developed throughout the 19th century and they are a tangible manifestation of oral traditions about this most cherished of all Acadian historic sites.</td>

<th></th>
<th>garden portion of the Grand Pré site during the tenure of the Dominion Atlantic Railway [DAR], decades before it became a national historic site. The willows, like all other vegetation within Grand-Pré National Historic Site of Canada, continue to be monitored and overseen by Parks Canada. These willows were selected for planting at Grand Pré because they were judged to be a fitting complement to the existing French willows and because they were thought to be a symbolic tree of remembrance”. The various willows were thought to be evocative and poignant elements in a park-like setting that aimed to pay homage to a bygone Acadian occupation of the site. Their value lies in the fact that they represent a deliberate attempt by Percy Nobbs and the DAR to encourage visitors to reflect back to an earlier era when the Acadians had lived at Grand Pré before they were forcibly removed in 1755. A cutting of one of the willows of Grand Pré was taken to Châtellerault, France in 1932 by Ernest Martin, where it was planted in the jardin public”.</th>

<tr>
<td>Apple Orchard (within Grand-Pré National Historic Site of Canada, containing the following varieties: one Astrakan, three Cox Orange, 12 Gravenstein, 19 Macintosh, one Wagener, three Wealthy, one Melba, two Bishop Pippen, 14 Cortland, seven Spy, two Golden Russet, one Alexandria, one Black Macintosh, one Bow Sweet, and one unknown variety. The unknown species may be what remains of Châtellerault, France's 1932-33 gift.)</td>
<td>C</td>
<td>x</td>
</tr>
<tr>
<td>Apple trees were planted in a deliberate orchard setting as part of the memorial park created by the DAR during the 1920s. In 1932-33 Ernest Martin brought to Grand Pré from the city of Châtellerault, France, a gift of apple trees and rosebushes. Over the years most of the original trees have died and been replaced by new ones. Thus far, the particular varieties planted do not often, if at all, reflect varieties that existed in the 18th century. Nonetheless, the value of the apple orchard to the west of the Memorial Church is that they are both a literal and a symbolic evocation of the time when the Acadians occupied Grand Pré and the area was a place of great agricultural bounty, and had their own orchards.</td>
<td></td>
<td></td>
</tr>
<tr>
<td>Evergreen Trees (within Grand-Pré National Historic Site of Canada, according to a March 2009 inventory, consist of four red pine, 113 white spruce, eight Norway spruce, 17 Scots pine, two eastern white cedar, one eastern hemlock, one jack pine and three blue spruce.)</td>
<td>C</td>

<tr>
<td>Deciduous Trees (within Grand-Pré National Historic Site of Canada, according to a March 2009 inventory, consist of one gray birch, 15 white birch, 75 sugar maple, five Norway maple, five silver cut-leaf maple, six red maple, one copper beech, one Patmore ash, nine horse chestnut, three hawthorn, one cut-leaf weeping birch, one red oak, one black oak, seven Carolina poplar, six Lombardi poplar, one little leaf linden, one golden chain, three mountain ash, 41 white ash, one magnolia, two Chinese wisteria, 27 ornamental crab, and one American beech.)</td>
<td>1920s</td>
<td>As with the evergreens, there were few or no deciduous trees in this part of Grand-Pré during the Acadian or Planter eras. Photos from the turn of the 20th century reveal a landscape with few visual interruptions between dykeland and upland. These deciduous trees or their predecessors were planted by the DAR (or more recently by Parks Canada) to define the boundary of the original park or to contribute to the desired appearance of a memorial garden or park. As with the evergreens, the end result was to create something like a visual island around the national historic site (originally a memorial park) with trees providing the definition. Since 1999 the trees have been monitored on an annual basis as part of the Parks Canada vegetation management plan. The trees are pruned or replaced as needed.</td>
</tr>
<tr>
<td>Ornamental garden features (Within Grand-Pré National Historic Site of Canada, according to the March 2009 inventory: a rose garden with 32 roses; 194 shrub beds; over 5000 linear feet of hedges; 22 annual flower beds; four perennial flower beds; 3 planters; 35 foundation plantings around the former administration building.)</td>
<td>1920s</td>
<td>None of these features existed in this location before the 1920s. They owe their establishment to the creation of a memorial park setting by the Dominion Atlantic Railway, who commissioned Percy Nobbs to come up with a landscape concept for the area. The value of the ornamental gardens is that they contribute to creating a serene park-like commemorative garden setting within which visitors find it easy to understand and reflect upon the tragic history of the Acadians at Grand Pré.</td>
</tr>
<tr>
<td>Acadian kitchen garden / flax bed (within what is often called the “triangular property” of Grand-Pré National Historic Site of Canada.)</td>
<td>1970s</td>
<td>These are interpretive features added sometime after Parks Canada took over the site from the Dominion Atlantic Railway. While useful to give visitors an idea of what such plantings looked like during the Acadian era, they are recreations and are not tangible evidence of the prior period they represent.</td>
</tr>
<tr>
<td>Old elm tree (Horton Landing) (LOST TO A STORM IN 2010)</td>
<td>1800s</td>
<td>This is a well-known and beloved landmark at Horton Landing, painted at least twice by renowned Canadian artist Alex Colville. It is not a contributing element to the nominated property as it does not speak directly to any of the criteria. It was planted in the 1800s.</td>
</tr>
<tr>
<td>“Memorial Park” as an ensemble</td>
<td>1919-1955</td>
<td>The different constituent elements of the memorial park-like setting created at Grand Pré during the 1920s create an overall ensemble.</td>
</tr>
</tbody>
</table>
That ensemble began as a series of concept drawings prepared in 1919 by the Montreal-based landscape architect Percy Nobbs, on behalf of the Dominion Atlantic Railway [DAR]. The DAR had acquired the land John Frederic Herbin. Over time the DAR introduced a layout of paths, shrubs, flower beds, tree plantings and monuments that reflected Nobbs’ vision. There have been slight modifications over the years to the memorial park portion of the nominated property for a World Heritage designation, but none which have altered the original vision and intent. The value of the “Memorial Park” cultural landscape is that it continues to be an effective and evocative setting for the memorials found within it and as a serene setting for visitors to reflect upon the Acadian Deportation as an example of a people tragically uprooted by a forced migration.

| 3 Spatial Organisation | Hills / Uplands | C | X | The settlement pattern at Grand Pré has changed remarkably little over more than three centuries. Despite all the economic, political, military and social changes that have swept over the region, Grand Pré remains a dispersed rural village. As it was in the late 17th and early 18th centuries when Acadians lived there, so it continued to be through the Planter and later periods. People continue to live spread out on in low density across the hills and upland areas, adjacent to but never on the reclaimed dykeland. That dykeland is now and has always been reserved exclusively for agriculture. The value of this ongoing spatial organisation is that it preserves and continues the high fertility and productiveness of the dykeland and maintains a small population living alongside that draws either its livelihood or its inspiration from the dykeland. |
| Old Post Road | | C | x | ca. 1700 | This is both the southernmost boundary of the candidate site and a road whose origin dates back through both the Acadian and Planter occupation periods. The road has been widened, graded and paved over time, but its trace line is one that goes back to at least the 1700s. During the Acadian period it was one of two roads running east-west across the nominated property toward the Gaspereau River. The road has integrity as to its line and role going back approximately three centuries. Its value is that it continues to play the same role for today’s residents of Grand Pré as it did for their Acadian and Planter predecessors, as one of the principal east-west roads through the residential part of the agricultural community. It is not known what name the Acadians called this route; its current name derives from its
<table>
<thead>
<tr>
<th>Road Description</th>
<th>Year Range</th>
<th>Notes</th>
</tr>
</thead>
<tbody>
<tr>
<td>Dirt roads on the Grand Pré Marsh</td>
<td>ca. 1680 to ongoing</td>
<td>Prior to the Acadians completing their various dyking projects on the inter-tidal zone there was no road that led all the way across to Long Island. That’s because what lay between was still largely or partly an inter-tidal zone, depending on the period. Once the Acadians completed the various phases of their dyke construction the tops of the various dykes were used as “roads” upon which the Acadians (and later the Planters) could travel on foot, on horseback or with oxen and carts. Many of the twisting dyke-top roads still exist. Some have been widened, reinforced and perhaps altered in other ways over time as heavy equipment became available, but the trace and form of many of the old dyke-top roads remain true to the trace and form they had in the mid-18th century. One value of these roads is that their spatial integrity is intact from when they were first created, as part of the Acadians’ transformation of the inter-tidal zone into dykeland. A second value is that these roads follow the same transportation routes that farmers of the Grand Pré agricultural community have used, from Acadian times through the Planter period through to today, for more than three centuries.</td>
</tr>
<tr>
<td>Grand Pré Road (on Acadian dyke top)</td>
<td>ca. 1730</td>
<td>A one-third portion of the paved Grand Pré Road that connects the village of Grand Pré with North Grand Pré or Long Island existed in the 18th century, albeit as a dyke-top road. On that section, the road has the integrity of line and form from the Acadian and Planter periods. The values of that portion are identical to what was stated above about the dirt roads of the Grand Pré Marsh.</td>
</tr>
<tr>
<td>Grand Pré Road (from mid dykeland to the upland)</td>
<td>1800s</td>
<td>This stretch of the Grand Pré Road was constructed in the 1800s and it now serves as the main way for vehicle access to and from Long Island or North Grand Pré. The road was a new creation for about two-thirds of the way out onto the marsh where it then connects with an old dyke-top road alignment from the Acadian period that has been upgraded and paved to current standards. The value of this section of the road is that it attests to the ongoing evolution of the dykeland to meet the needs of the agricultural community that lives alongside.</td>
</tr>
<tr>
<td>Old French Road</td>
<td>ca. 1680 - ca. 1870</td>
<td>A portion of this north-south road of the original Acadian village of Grand Pré is still used, but only as a footpath within Grand-Pré National Historic Site of Canada. The old road ceased to be used as a road around the time of the construction of the railroad in the early</td>
</tr>
</tbody>
</table>
1870. Back in the 17th and 18th centuries, until 1755, this was the main north-south road in the community, linking the settled area on the uplands with the marsh and with the church of St-Charles-des-Mines and nearby cemetery. A portion of this former road became a broad garden footpath in the plan that Percy Nobbs developed for the DAR in 1919. A few years later, first the DAR commissioned a statue of Evangeline to go along the same path (former road) and then the Acadian community raised the Memorial Church. On recent Lidar photos the path of this old Acadian road can be clearly seen extending up the hill and along a property line, to where the road once connected with what today is known as the Old Post Road. The value of this vestigial road is that it is tangible evidence of what once was a transportation corridor in the heart of the Acadian community, leading down to the parish church and burial area and beyond that out to the marsh. According to Sherman Bleakney’s study of the Acadian dyking of the Grand Pré inter-tidal zone, the Acadian community began that transformation near the foot of this road. The line of this old road is intact.

When the New England Planters arrived in Horton Township (the new name given to the former Acadian village of Grand Pré) in 1760, the British authorities who had arranged for their migration expected and encouraged the newcomers to settle mainly on a rectilinear grid that had been designed by the surveyor Charles Morris. The grid was known as the Town Plot, and it was similar to many other such grids introduced at various British colonial settlements in the mid-18th century. Halifax (1749) and Lunenburg (1753) were but two of the locations where rectilinear grids were also introduced. The “town plot” settlement pattern appealed to the authorities in that it was militarily practical – close to Fort Montague down at Horton Landing, compact, and on elevated ground – while at the same time it satisfied the aesthetics of the Age of Reason which placed a priority on a symmetrical organization of urban spaces. The Town Plot was also close to water access for transportation and communication via the nearby Gaspereau River. About half of the Town Plot is still intact in the Hortonville area of greater Grand Pré, and is either used by vehicles or pedestrians. The other third has lost its visible presence on the landscape through disuse over the years. Individual streets of the grid are discussed separately below.
The value of the portions of the Horton Town Plot that remain visible on the landscape of the Grand Pré rural landscape is that they are tangible evidence of the attempt by the British authorities to introduce a rectilinear grid at the beginning of their period of settlement in 1760. The fact that the grid has lost some elements and some of its crisp straight lines brings another value. It underlines that after the perceived military crisis of the early 1760s had passed the Planters and their descendants opted to settle mostly off the Town Plot. Their preferred settlement pattern—dispersed along the upland in a manner similar to their Acadian predecessors—is a testament to the combined impact of the rolling landscape at Grand Pré and the desire of the newly-established agricultural community to spread out and live closer to the dykeland that was the source of great productivity.

The value of this street has been covered above in the discussion of the Town Plot in its entirety.

This is currently the most easterly of the streets that ran north-south on the Town Plot established in 1760 by the British authorities. It is intact in its entire length and form. The entirety of the road is included in the nominated property.

This unnamed trace was once one of the streets running north-south on the Town Plot established in 1760 by the British authorities. It is no longer a road for vehicles of any sort but its prior existence can still be detected by Lidar photography.

This was the most westerly of the streets that ran north-south on the Town Plot established in 1760 by the British authorities. About one-third of the dirt road is still intact and true to its original 1760 indication on the Morris plan.

This dirt road leads down to the Horton Landing area. At the end of the road there are the vestiges of a wharf that was used by the Grand Pré agricultural community from the 1840s until well in the 20th century. The previous wharf – used from the 18th century to the 1840s – was a little further inland along the Gaspereau River and one accessed it by a different road, which became closed at the time of the coming of the rail line. The earliest version of this road dated from the Acadians' arrival at Grand Pré and was subsequently used for the transport of people and goods heading to and from the wharf. It is worth noting that the area through which this Wharf Road passes was where the British erected first a fort known as Vieux Logis in 1749 and Fort Montague in 1760. It is also where in 2009 an Aboriginal

<td>Lower Grand Pré Road</td>
<td>Ca. 1700 – 1730</td>
<td>Most if not all of this long and gently curving dirt road that begins at the Old Post Road then descends to the marsh and runs all the way across the dykeland to Long Island dates back to early in the 18th century. The section on the upland area evolved in an unknown manner, but it was without doubt one of the roads Acadians and later Planters used to descend and go out on to the dykeland. The long section that extends completely across the marsh began as a dyke-top road that, as the Acadians completed additional phases of their dyking, continued until it eventually reached Long Island. At one point the dyke upon which the road rests was likely the eastern outer limit of the dyking undertaking. In more recent times the roadbed was graded and probably widened, yet it continues to follow the same line, trace and form of the original dyke-top road. One value of this road lies in its link across the centuries between the upland area where people live and the dyked dykeland that has long been the focus of agricultural activity regardless of the time period or cultural group involved. This was one of the principal access roads by which farmers travelled to undertake further construction, make repairs to damaged dykes and harvest their crops in those areas.</td>
</tr>
</tbody>
</table>
| Old French Road           | 1680s - 1755  | This long road runs parallel to the Grand Pré Marsh – the transformed inter-tidal zone – along much of its east-west limit. It dates back to the very beginning of the Acadian occupation of Grand Pré in the 1680s and almost certainly grew to the east and to the west as the Acadians tackled the challenge of dyking the inter-tidal zone in a series of phases. Of course it has been widened, graded and stabilised over the years, but based on an analysis of historical maps and recent Lidar photos, the line and form appear to be identical to what it became in the late 17th century and after. It was along this road that the Acadians were forcibly marched in 1755, on their way to being placed in small boats at Horton Landing and then taken out to larger ships anchored off shore. To recall the distress and sorrow of the Acadians as they made their way along that
road makes a walk along the Marsh Road a poignant experience. On a much different note, the New England Planters would also have used this road upon their arrival in 1760 and after. There are multiple values to the road. It speaks to the Acadians’ way of accessing their dyking projects out in the transformed inter-tidal zone; their need for a road leading to the Gaspereau River so they could export their surplus harvest; the tragedy of their forcible removal; the coming of the Planters; and the ongoing (still continuing) use of the very same road bed by today’s farmers to access the Grand Pré Marsh.

</tr>
</tbody>
</table>

The coming of the railway through the Annapolis Valley in the 1860s had a huge impact on many aspects of life, including the spatial organization of the agricultural community. At least two roads were closed or ceased to have a function: notably a road leading to an old wharf that was along the Gaspereau River and the Old Acadian Road that descended from Old Post Road down to what is now the National Historic Site and beyond out to the dykeland. Two train stations were constructed in what is now the nominated property, one in Hortonville and another within what in 1961 would become Grand Pré National Historic Site of Canada. The first train station was subsequently replaced by another. None of the train stations remain in the nominated property. The value of the rail line is that it represents a significant period of change to the Grand Pré area, both in terms of its impact on the local agricultural economy and on future tourism. It would be the Dominion Atlantic Railway (DAR) that would significantly alter the commemorative landscape when it created a Memorial Park with gardens, paths and the Statue of Evangeline in the 1920s. It would be along the rail line that the Deportation Cross was first placed.

**Horton Landing (Vieux Logis)**

What since 1760 has been known as Horton Landing, the Acadians used to call Vieux Logis. The name ("old house") suggests that it might have been in this area that the Acadians first established their dwellings when they arrived in small numbers in the early 1680s. In 2009, archaeologists found an Mi’kmaq artefact
dating back several thousand years in this general area, on a farmer’s adjacent property, which provides a tangible link with the Mi’kmaw use of this area long before Europeans arrived here. Returning to the Acadian period, as its agricultural community grew and prospered it was from the shoreline near the Vieux Logis area that people mostly came and went, as did the export surplus of their crops and produce. That was from the location a little further along the Gaspereau River where until the 1840s there was a wharf. Travel by water from the 17th century well into the 19th century was much easier and more common than travel by land routes. Grand Pré came to be known as the “granary of Acadie” and the area a little to the south along the Gaspereau was in the 18th century the port of Grand Pré. On two occasions, the British erected small wooden and earthwork forts in the Horton Landing area. The first, in the late 1740s, the British called Vieux Logis; the second, in the early 1760s, was known as Fort Montague. What are believed to be the vestiges of the latter fort were uncovered by archaeologists in 2009. It was from Horton Landing that the Acadians were deported in 1755. In 2005, on the 250th anniversary of that forcible removal, the Acadian community moved their evocative “Croix de la Déportation” to Horton Landing. It was also at Horton Landing that the New England Planters who came to Horton Township arrived in 1760. To mark that occasion, the Historic Sites and Monuments Board of Canada placed a stone cairn with a plaque in 1960 on the bicentenary of that event. There are multiple values to the area, which speak to all two criteria of the nominated property. Horton Landing (Vieux Logis) served as the export port for the agricultural surplus generated on the Grand Pré marsh during the Acadian era; it evolved as the Acadian, Planter and successor agricultural communities developed; and it became a doubly commemorated area with the placing of evocative monuments to both the Acadian deportation and the coming of the New England Planters.

<th>Dykeland</th>
<th>C</th>
<th>x</th>
<th>x</th>
<th>1680s-ongoing</th>
</tr>
</thead>
</table>

It was and is the exceptional fertility of the over 1300 hectares of the dykeland at Grand Pré that has sustained the agricultural communities that have lived alongside it for three centuries. Thanks to the nutrients deposited in the intertidal zone for five thousand years prior to dyking, and to the micro-climate at Grand Pré,
The dykeland has a fertility that is unrivalled at its level of latitude in North America. So valuable is the land that it has never been used for any purpose other than agriculture, regardless of the era or the cultural group living alongside it. Right from the start, the very name of this particular feature – the Grand Pré or large meadow – was also the name given to the community living on the adjacent upland. The value of the marsh to the nominated property’s application for a WH designation cannot be overstated: it is of fundamental importance as a massive artefact that is intact in its form, shape and use going back to its creation in the late 17th and early 18th centuries, and as a place of enduring agricultural use from that same era.

<table>
<thead>
<tr>
<th>Fields on the dykeland</th>
<th>C</th>
<th>x</th>
<th>Ca. 1680s - Ca. 1750s</th>
</tr>
</thead>
</table>
| Recent research comparing historical maps with aerial photos and Lidar photography confirms that 30% of the specific fields on the dykeland are in the 21st century identical in size, shape and form to what they were in the 1760s. Hypothetically, Acadian farmers from the early 1700s could come back to these fields and recognize them as the ones they worked by their size, shape, form and relation to the nearest water body into which the precipitation drained. The remaining 70% is indistinguishable from those dating back to the 18th century. The value of the unchanging nature of the fields is the testimony they give to over 300-year old artefact that is the dykeland. Their shape and extent remains what they have always been, a practical response to the geo-physical realities of drainage on the dykeland.

<table>
<thead>
<tr>
<th>Fields on the uplands</th>

</table>
| The dispersed nature of the settlement on the uplands reflects what the settlement pattern that goes back to the late 17th century. For instance, there are long and narrow boundary property lines that reflect what recent research suggests are the vestiges of the seigneurial regime that was introduced into the area at the time of the Acadian settlement. As for the open fields on the hills and uplands adjacent to the transformed inter-tidal zone, some of these also date back to the Acadian and Planter periods. Higher up on the landscape – beyond the nominated property – the Acadians had wood lots where they cut wood for burning or construction. They also allowed livestock to roam in some wooded areas. While during the Acadian era there would at times have been large numbers of sheep, cattle and goats on the open fields in the nominated property that is no longer the case. Nonetheless, the open fields in the nominated property have value both as reminders of earlier eras and as an ongoing

<tr>
<td>Settled lots on the Uplands (Villages of Grand Pré and Hortonville)</td>
<td>This is where members of the agricultural community of Grand Pré (Acadian, Planter and successor generations) have lived since the late 17th century. No particular buildings within the zone are seen as contributing to the proposed Outstanding Universal Value but rather it is the overall dispersed settlement pattern that has great value. Some parts of some properties almost certainly contain archaeological and architectural evidence of the houses and farm buildings of the Acadian and Planter eras. The value of nominated property as a representative sample of this settlement pattern is that it contains roads, property lines and potential archaeological sites that go back to the time when the agricultural community began on the uplands and where it has lived ever since, taking advantage of the great fertility of the dyked dykeland. The Hortonville portion of the nominated property contains what remains of the original Town Plot, which was a 1760 attempt by the British administration to impose a rectilinear grid on the settlement pattern. The fact that the grid did not achieve its objective, at least not as envisioned, speaks to the cross-cultural desire of the post-Acadian agricultural community to spread out in a manner similar to the Acadians, living spread out along the uplands adjacent to the dykeland. Image: aerial photo of the nominated property portion.</td>
<td>C x 1680s-2010</td>
<td></td>
</tr>
<tr>
<td>Grand-Pré National Historic Site of Canada (G-P NHSC)</td>
<td>What is now the national historic site was from the 1680s through to 1755 a part of the Acadian village of Grand Pré, which in turn was part of a larger Acadian region called Les Mines. The church of St-Charles-des-Mines was located within the area as was the parish cemetery, several roads and an unknown number of houses, barns and other farm buildings. Vestiges of several structures and the cemetery have been verified by archaeology. Following the Acadian Deportation the area of today’s G-P NHSC was taken over by settlers from New England, who either re-used the Acadian buildings left standing or built their own new structures. Beginning in the latter half of the 19th century, thanks to a growing sense of nationalistic and cultural pride among Acadians as part of what is known as the Acadian Renaissance and the international success of Henry Wadsworth Longfellow’s 1847 poem Evangeline, A Tale of Acadie, whose opening section is set in an imagined Grand Pré, this part of the real Grand Pré began to attract visitors. They came to see some ruins, the old</td>
<td>C x x</td>
<td></td>
</tr>
</tbody>
</table>
In 1909 John Frederic Herbin of Wolfville, whose mother was Acadian, purchased the land with the old willows, a well and what he believed were a burial ground and the ruins of the Acadian church. The following year the Nova Scotia legislature passed an act to incorporate the Trustees of the Grand-Pré Historic Grounds. Herbin built a stone cross to mark the cemetery of the church, using stones from the remains of what he understood to be Acadian foundations. He sold the property to the Dominion Atlantic Railway (DAR) in 1917 on the condition that Acadians be involved in its preservation. In 1919 the DAR commissioned Percy Nobbs to envision a memorial park in the area and in the 1920s the DAR erected a statue of Evangeline (by Canadian sculptor Henri Hébert) on a park path that had once been an old Acadian road linking the dykeland to the upland. The DAR next deeded a piece of the land to la Société l'Assomption, an Acadian insurance company. Another organization, the Société Nationale l'Assomption, an advocacy organization, raised funds to build a commemorative church in Grand Pré. Construction took place in 1922. Two years later, the Acadians erected a commemorative cross along the railway tracks nearly two kilometres from the church, in memory of the Deportation. The cross was moved in 2005 to Horton Landing.

With the creation of a tree-, garden- and monument-defined memorial park along a portion of the dykeland, that zone became visually separated from both the uplands and the dykeland beside it. By the mid-1920s all the major commemorative elements that mark the Acadian presence at Grand Pré between the 1680s and 1755 and their forcible removal in 1755 – the paths, trees and flower beds of a park setting, the statue of Evangeline, the Memorial Church, the Herbin Cross, the well and the Deportation Cross – were in place. They were the result of a series of actions by a few passionate individuals, a railway company promoting tourism and the Acadian community in Canada and the United States.

The Canadian government had no involvement with what today is Grand-Pré NHSC until the memorial park was well over 30 years old. The
Canadian government acquired the memorial park portion at Grand-Pré in 1957 and designated it a national historic site in 1961. In the years that followed, Parks Canada acquired adjacent properties where there were known or suspected archaeological features as well as land for use as visitor centres and parking. The current visitor centre opened in 2003, replacing the small wooden complex that served that purpose from the 1960s onward. That complex stands on the eastern side of the Grand Pré Road, close to the railway line, looking out on the dykeland.

One value of the land of the NHSC is that it includes the archaeological remains of numerous Acadian structures, the burial ground of the Acadian community between the 1680s and 1755, and possibly the archaeological vestiges of the church of St-Charles-des-Mines. Another value is that it contains all but one of the best-known and most iconic symbols of the Acadian commemoration of their history, that of a people who overcame a tragedy of forced migration through perseverance, hope and pride. The one evocative monument not found within the NHSC is the Deportation Cross, located at Horton Landing.

Dendrochronological testing was carried out on this feature in 2009. Its lowest timbers were dated to the 1840s while its upper remains were more recent. Before that there had been another wharf farther upriver along the Gaspereau River. The dating of the Horton Landing vestiges confirmed that it was used by the greater Grand Pré agricultural community for well over a century, both for the maritime export of its crops and produce and for the coming and going of residents and visitors. Its value lies in that it is tangible evidence of the long era when travel by water – from Horton Landing on to the Gaspereau River and then out into the Minas Basin and the Bay of Fundy – was the most common means of transportation, first for the Acadians and later for the New England Planters.

The portion of the upland area within the nominated property is a representative sample of a spread-out agricultural community that dates back to the late 17th century. The portion selected for inclusion is that which has tangible evidence of the Acadian and/or Planter occupations of the 17th and/or 18th centuries. One type of evidence is made up of property lines or boundaries known to date back to the...
| Grand-Pré National Historic Site of Canada | C    | x    | x    | 1909 - 2010 |

What became an official National Historic Site of Canada in 1961 began as an informal and unofficial historical site in 1909 when John Frederic Herbin acquired the land that contained the old French willows, what were said to be the old Acadian burial ground and the ruins of their church. In the years that followed the Dominion Atlantic Railway (DAR), the Acadian community and the Province of Nova Scotia all played roles that led to a dramatic alteration of the landscape within the original boundaries. (Those boundaries would grow significantly later on, with major extensions in the latter half of the 20th century and early in the 21st century.) By adding prominent monuments to the landscape – most significantly the Memorial Church and the Evangeline statue – and by planting hundreds of trees and shrubs and introducing numerous ornamental flower beds, the various players created a visual island on what had historically been a mostly open field setting extending down into the dykeland. The various monuments within their memorial park setting attracted a growing number of visitors from the 1920s on. Though Acadians and Cadiens (or Cajuns from Louisiana) were the most moved by their visits to the memorial park – to describe those visits as pilgrimages is not at all an exaggeration – the greatest number of visitors were (and remain) non-Acadians. They too have always been moved by the tragic story of the Acadian Deportation, as presented by and within the Memorial Park setting with its various monuments. (People experience similar sentiments at Horton Landing where the Deportation Cross in its evocative setting beside the Gaspereau River speaks to people from all backgrounds.)

There are many values of the Grand-Pré NHSC property to the nominated property. It is a

17th and 18th centuries. Archaeological sites are another type of evidence. Sites have been excavated on Parks Canada property and on several of the private properties of the nominated property. There are indications (from visual reconnaissance, oral traditions or other sources) of other sites within the nominated property that may be excavated or tested in the future. A third type of tangible evidence is the roads that have been continuously used since the 17th and 18th centuries or traces of previous roads or paths that have gone out of use. The integrity of all these features is high, which is what was used to define the limits of the nominated property.
sacred place for Acadian-descent people everywhere; it is an area where significant archaeological evidence of the Acadian era is located; it is where historically-minded individuals and groups took major steps to protect and present the story of the Acadian occupation of the area and the forcible removal of those people in 1755; it is a tourist attraction where visitors learn a host of interpretive messages about the Acadian era and its tragic ending; and it is an important green and recreational picnic space for the local community who feel a strong connection to this landmark in their midst.

| Farmland | C | x | 1680s – 2010 | This element – whether the cultivatable areas are located on the dykeland or on the uplands – is one of two aspects at the heart of Grand Pré’s nomination for a World Heritage designation. (The other aspect is its commemoration of a forced migration in a way that it is an example for people everywhere.) The value of the farmland in those two areas – dykeland and uplands – is that it is what has shaped land use at Grand Pré since the late 17th century. Expressed simply, people live exclusively on the uplands and farm somewhat where they live and to the exclusion of anything else on the dykeland. |
| Pastures | C | x | 1680s – 2010 | During different periods, farmers have used the overall dykeland as a sort of commons where they pastured cattle. This was never done instead of growing crops but rather something done in the autumn after the harvest. The cattle would be branded so that each farmer would know his own herd. |
| Cemeteries on the uplands (in the villages of Grand Pré Lower Horton) | C | x | 1747 - 2010 | In addition to the Acadian burial ground that is located within Grand-Pré NHSC there are three other known cemeteries within the nominated property. Two are currently unmarked and are situated on either side of the Grand Pré Road. The one to the east is where Col. Robert Noble was buried in 1747 after what is known as the battle of or attack on Grand-Pré. The unmarked burials on the west side of the road are where the ordinary enlisted men from New England who died in the 1747 attack were buried. The third cemetery is located along Old Post Road and is well marked. To the north of the road, which is within the nominated property, is a small cemetery that dates back to the 19th century. Across the road, outside the nominated property is the much larger and newer portion of the same cemetery. The value of the three burial areas – the two associated with the 1747 attack and the northern portion of the Lower Horton cemetery is that they attest to the long
and sometimes tumultuous occupation of the upland portion of the nominated property.

| 5 Constructed water features (ditches) | Drainage ditches on the dykeland | C | x | 1680s - 2010 | The man-made ditches on the dykeland are what allow the precipitation from rain and snow to drain off the land, into one of the three drainage networks. The soil of the dykeland is clayish, which means that it does not absorb moisture well. The value of the ditches is that they are part of an ongoing intervention by farmers – since the late 17th century – to make sure that the soil of the dykeland is well-drained and able to grow crops. |
| Ducks Unlimited Pond | NC | | | | This small water body dates from the late 20th century. It was introduced at the edge of the dykeland on the uplands to provide a small watering spot for ducks and other waterfowl flying through the area. |

<p>| 6 Circulation (roads) | Old Post Road | C | x | ca. 1700 | Established sometime during the Acadian era, and continued to be used by the Planters and later residents of the agricultural community, the earliest version of this road would likely have been a path. Back in the Acadian period, this would have proceeded to the west to become the road to Port-Royal (after 1710, Annapolis Royal). Meanwhile, the road proceeded east to become the road to Pigiguit (Pisaquid or today's Windsor) and after 1749 toward Halifax. Widened and stabilized over time, and eventually graded and paved, the Old Post Road was for a long time the main east-west road of the dispersed village of Grand Pré. The road has integrity as to its line and role going back approximately three centuries. Its value is that it continues to play the same role for today's residents of Grand Pré as it did for their Acadian and Planter predecessors, as one of the principal east-west roads through the residential part of the agricultural community. |
| Grand Pré Road (portion) | C | x | Ca. 1730 | One-third of the length of the Grand Pré Road existed in the 18th century as a dyke-top road. That section of the road has the integrity of line and form from the Acadian and Planter periods. Its value resides in its ongoing use, from Acadian times through to today, as a transportation route used by farmers of the Grand Pré agricultural community. |
| Dirt roads on the Grand Pré Marsh | C | x | Ca. 1680s – 1750s | These roads began as dyke-tops, which were used by the Acadians (and later the Planters) for travelling on foot, on horseback or with oxen and carts. After enough of the marsh was dyked to reach Long Island, there were several dyke-top roads that gave transportation access to what previously had been an island. That allowed for the eventual settlement of North Grand Pré. Some dirt roads have been widened, reinforced and perhaps altered in other ways. |</p>

<td>Most if not all of this long and gently curving dirt road that begins at the Old Post Road then descends to the marsh and runs all the way across the dykeland to Long Island dates back to early in the 18th century. The section on the upland area evolved in an unknown manner, but it was without doubt one of the roads Acadians and later Planters used to descend and go out on to the dykeland. The long section that extends completely across the marsh began as a dyke-top road that, as the Acadians completed additional phases of their dyking, continued until it eventually reached Long Island. In more recent times the roadbed was graded and probably widened, yet it continues to follow the same line, trace and form of the original dyke-top road. One value of this road lies in its link across the centuries between the upland area where people live(d) and the dyked dykeland that is the focus of agricultural activity. This is</td>

<td>Old French Road</td>
<td>This long road runs parallel to the Grand Pré Marsh – the transformed inter-tidal zone – along much of its east-west limit. It dates back to the very beginning of the Acadian occupation of Grand Pré in the 1680s and almost certainly grew to the east and to the west as the Acadians tackled the challenge of dyking the inter-tidal zone in a series of phases. Though widened, graded and stabilised over the years, its line and form are thought to be identical to what it was in the late 17th century and after. The values of the road as a circulation route are that it speaks to the Acadians' way of accessing their dyking projects out in the transformed inter-tidal zone; their need for a road leading to the Gaspereau River so they could export their surplus harvest; the tragedy of their forcible removal as this was the road the soldiers marched them along on their way to exile; the coming of the Planters; and the ongoing (still continuing) use of the very same road bed by today's farmers to access the Grand Pré Marsh.</td>

<tr>
<td>Views and viewsheds</td>
<td>Views of the central and western portions of the dykeland and Grand-Pré National Historic Site of Canada from Old Post Road (from directly above G-P NHSC).</td>
<td></td>
<td>This is the best known view of the nominated property, or at least a major portion of that area. In the foreground, setting off from the viewer's feet, descends a hill upon which Acadians, Planters and later residents have lived on and/or farmed since the late 17th century. The slope flattens out at the bottom of the hill where a church spire pierces both the air and a tree-defined zone on the edge of the dykeland. This is Grand-Pré National Historic Site of Canada with its Acadian Memorial Church and distinctive plantings. Beyond the tree line and spire the land opens up and undulates subtly as a vast flat open space, a patchwork quilt of greens and browns with roads and divisions evident here and there. This is the dykeland (the transformed inter-tidal zone) that has been a vital part of the agricultural community of Grand Pré for over three centuries. Beyond rises a thin strip of upland with a mix of trees and buildings. This is Long Island, not heavily settled in the Acadian era but it evolved into North Grand Pré: a place of farms, houses,</td>
</tr>
</tbody>
</table>
community buildings and summer residents in more recent times. The distant background is claimed by Cape Blomidon, a place of Mi’kmaq legends and a Nova Scotia icon, as well as by the waters of the Minas Basin. The cape is a headland that juts out into the basin, helping to create the micro-climate that for centuries has contributed to the bounty of Grand Pré’s agricultural community. The value of this view is that it speaks simply and eloquently to all two criteria of the nominated property. It offers a panorama of the breadth and scale of the Acadian dyking accomplishment at Grand Pré; it provides a perspective on the combination of settlement patterns on the upland and the agricultural use of the dykeland; and it gives a bird’s eye glimpse of the zone where are found some of the most evocative memorials to a people who overcame a tragedy of forced migration.

This view of the eastern portion of the nominated property is not nearly so well known as is its counterpart discussed above, the view from the top of the Old Post Road. It offers elements that are similar in many respects yet with some important differences. Once again the foreground is a hill descending from the viewer’s feet, upon which Acadians, Planters and later residents have lived on and/or farmed since the late 17th century. Yet in this instance, one is on a street of the rectilinear grid known as the Town Plot, an innovation of the new British administration in 1760. Down below are parallel streets that form other parts of that same grid, now tree-lined residential streets or open spaces with numerous working farms and their buildings. When the slope finally flattens out the view is dominated by a mix of land and water. To the left one takes in the eastern portion of the vast dykeland transformed from inter-tidal zone by the Acadians and maintained after their removal by the Planters and their successors. To the right are the muddy waters of the Gaspereau River that twist and flow out into the Minas Basin. It is a spectacular vista that reveals at a glance the twin elements (dyke and sea) that in the 17th and 18th centuries made Grand Pré special, and continue to do so today. Before the transformation of the inter-tidal zone, the salt water of the Gaspereau at this end of the dykeland would have twice daily spread across what for three centuries has been farmland. Five thousand years of alluvial silt deposits left behind by those tides were what rendered the dykeland so productive. Beyond the dyke-enclosed dykeland and to the left of
The Gaspereau River rises Long Island, or North Grand Pré, seen here from a different angle than from the top of Old Post Road. The farm properties stand out more sharply from this viewpoint. Here as from Old Post Road, the distant background is claimed by Cape Blomidon, but Boot Island also looms large. Until the 1860s it was attached to Long Island, but forces of erosion created “the guzzle,” turning it into a small island, now a National Wildlife Refuge.

Back before the Acadian transformation of the inter-tidal zone into dyked farmland, this view might have been described as sea level. The Acadian achievement changed that; this now is dykeland level. Though you cannot see the full scale and scope of what the Acadians accomplished from this low level, as you can from the heights of Old Post Road and Middle Street, from here you get to see what the farmland of the dykeland looks like close up, spreading out in front of you to the left and right. According to dykeland historian Sherman Bleakney’s analysis, the Acadians began their transformation of the inter-tidal zone very close to right in front of where the viewer stands to take in this view. Then, over a number of generations as the need for more farmland arose with the increase in Grand Pré’s population, the 18th-century agricultural community transformed additional areas of the inter-tidal zone. Eventually, roughly 3000 acres were transformed, a vast artefact that one can see close up from this vantage point. The value of this view is that it offers a close perspective on the Acadian tradition of turning inter-tidal zones into farmland. In addition, it has symbolic value by maintaining the connection with the dykeland as a main element of the Acadian heritage landscape.

From almost anywhere along the Long Island Road – on the eastern, central or western sections – there are panoramic vistas of the dykeland spreading out immediately in front of you with the strip of upland on the other side that is where the Acadian and Planter agricultural communities were spread out, predecessors of today’s modern Grand Pré and Hortonville. From this side of the dykeland, elements on the landscape like Grand-Pré NHSC and its memorial church spire are insignificant if not invisible. The focus is entirely on the farm-field landscape that fills the foreground and middle ground and then only in the distance comes the row of hills that form the uplands on the south side. The value
The Landscape of Grand Pré – Landscape Assessment

of the view from Long Island is that it offers a panoramic perspective on the dykeland in its scale and scope, and a fresh perspective on the relationship between that productive farmland and the upland on the far side where the Acadian, Planter and later communities have thrived since the late 17th century.

View of the Deportation Cross and the Gaspereau River from Horton Landing.

The view from Horton Landing can cover 360 degrees, and as one turns round one can take in elements that touch all two criteria for the nominated property. Two monuments rise prominently from the grass lawn to the left and right of the small parking lot. The stone cairn was erected by the Government of Canada and it holds the HSMBC plaque that commemorates the coming of the New England Planters to Horton (Grand Pré) and elsewhere in the Maritime Provinces of Canada in the 1760s. The iron cross comes from the Acadian community and was placed here in 2005, after having been in a location along the railway tracks for 80 years. That cross, fabricated in 1924 and known as the Deportation Cross, is an evocative and powerfully poignant reminder for Acadians of the tragedy of forced migration of their ancestors. This distinctive monument is the inspiration for an international commemoration programme of the Acadian community, with replica versions of the cross erected or about to be erected in various locations in Canada, the United States and in France.

Beyond the evocative monuments one can take in the Gaspereau River as it wind s inland or heads out toward the Minas Basin. From Horton Landing one has an excellent view of the modern dykes that protect the valuable farmland of the Grand Pré dykeland. Scanning the view planes to the left (south and west) one takes in the upland area where the Acadians, Planters and later generations have lived and worked overlooking the dykeland. Looking to the right (north and west), there lies the eastern end of the dykeland and beyond that, Long Island or North Grand Pré. Farther still looms Cape Blomidon and the waters of the Minas Basin. The value of the 360-degree panorama at Horton landing is that it informs and enlightens viewers about all two criteria for the nominated property: the evocative monuments that speak to a people who overcame a tragedy of forced migration; the enduring agricultural use of upland and dykeland; and the Acadian tradition of transforming inter-tidal zones into highly productive farmland.

- **Well**: This was one of the first features to be “restored” by John Frederic Herbin after he acquired the land containing the old French willows and what were believed to be the ruins of the old Acadian church. For many years the tourism industry labelled this feature as “Evangeline’s Well”. It has not yet been excavated by professional archaeologists as it was long assumed that Herbin or others cleaned it out in the early years of the 20th century before re-establishing the stones at the surface. When the well is excavated, archaeologists may be able to determine the precise period when it was dug. Current thinking is that it does not go back to the Acadian era. The primary value of the well is that in the late 19th and early 20th centuries it was an important memorial with a strong (though imagined) association with the literary story of Evangeline. The well is a part of the evolution of the site as a memorial heritage park and tourist attraction.

- **Longfellow Monument**: The Province of Nova Scotia placed the bust of Henry Wadsworth Longfellow in the memorial park in 1955, on the occasion of the 200th anniversary of the Acadian Deportation. The value of the monument is that it underlines the impact that Longfellow’s epic poem, *Evangeline, A Tale of Acadie*, had on readers around the world about the tragedy of the forced migration of the Acadians, and subsequently how the success of that literary creation brought untold numbers of tourists to Grand Pré, contributing to the creation of a non-governmental memorial park that eventually became a National Historic Site of Canada.

- **Statue of Evangeline**: The sculpture was commissioned by the Dominion Atlantic Railway (DAR) and executed by Montreal sculptor Henri Hébert after the death of his father. Sculptor Philippe Hébert had done some preliminary designs and...
early small models of an Evangeline figure. Since its installation, the Evangeline statue, especially with the Memorial Church as its backdrop, has become an iconic symbol of the Acadian history of Nova Scotia in general and of the tragedy of the Acadian Deportation from Grand Pré in particular. The value of the sculpture rests in its poignant associative power. The sculpture has moved hundreds of thousands of visitors since the 1920s because it effectively incarnates layers of complexity, including sentiments of hope, perseverance and pride. The statue has complete integrity.

| The Acadian community erected the iron cross at a location about two kilometres from the then Memorial Park of Grand Pré. The intent was to mark the location where in 1755 their ancestors had last walked on the solid ground before being put into small boats that would take them out to ships that were going to carry them into exile. From the 1920s until early in the 21st century the belief was that the creek close to the location where the Acadians raised the iron cross led out to the Gaspereau River. That belief was re-examined and found to be wanting, because in 1755 there was no water transportation link between the creek in question and the Gaspereau River. Instead, in 1755 the Acadians would have had to have been marched to the area of Horton Landing and from there been put in small boats to begin their forced migration. Accordingly, in 2005 Parks Canada moved the Deportation Cross from where it had been for 80 years and installed it at Horton Landing. The cross and its base are monitored by Parks Canada conservators with interventions made if and when necessary. The value of the cross is both that it marks literally one of the last locations from which the Acadians of Grand Pré were sent into exile and that it stands symbolically for the suffering the Acadian community endured during their forced migration. The iconic power of the Deportation Cross of Grand Pré is demonstrated by its use internationally, with replicas being placed at many different locations in Canada, the United States and France where the Acadian Deportation left its

<td>C</td>
<td>Dykes and aboiteaux</td>
<td>1680s - present</td>
<td>There are dykes and aboiteaux all over the dykeland portion of the nominated property. Though there is only one known portion of a dyke on the surface that dates back to the Acadian period (see the discussion below), there are countless other dykes on the surface of the dykeland that date from later periods. All perform the same function that the original dykes did, thereby continuing the approach that began in this particular inter-zone transformation in the 1680s. As for the aboiteaux, the technology is still used in the same way as it was in the 17th and 18th centuries, though with new materials instead of logs or timbers. That is, they are the key to draining rain and meltwater from snow off the relatively impervious clayish soil of the dykeland. In recent years farmers have accidently uncovered three Acadian-era aboiteaux as they were dredging ditches or performing other maintenance. (The three aboiteaux are discussed below under “Archaeological features”.) The exact number of other Acadian aboiteaux still buried within the depth of the dykeland is unknown, but it could easily be a dozen or more. The value to the nominated property of the in situ dykes and aboiteaux, from the complete span of three and a quarter centuries the area has been dyked, cannot be overstated. They are the sine qua non of the dykeland, and features that evolved in terms of material over the span of years but which still function in exactly the same way and in the same locations as did the original dykes raised or the original aboiteaux constructed by the Acadians.</td>
</tr>
<tr>
<td>C</td>
<td>Old French dyke</td>
<td>Ca. 1730</td>
<td>This is believed to be the only remaining Acadian-built dyke at the surface level of the dykeland. The dykeland in its entirety is an Acadian creation (except for the section on the west that was a Planter accomplishment) and there are countless sub-surface Acadian features such as buried aboiteaux. Yet all but this original surface feature was removed by generations of farmers or turned into modern roads on the same line and form as the dyke-top roads that preceded them. The Currie family, which has owned and farmed the property on which the dyke is located for more than two centuries, protected this remaining example of a surface Acadian dyke. The value of the feature</td>
</tr>
</tbody>
</table>
Standing Buildings within the nominated property (dozens of functioning farm buildings and dozens of residences, including the following notable heritage properties: Avery Bowser House, ca. 1915; Silas Crane House, ca. 1760 then modified ca. 1880; Brown/MacDougall House, ca. 1880; Hamilton House, ca. 1820; Samuel Reed House, ca. 1770, front added in 1853; Old Methodist Manse, ca. 1790, twice moved) | NC | Ca. 1760 - present | The upland portion of the nominated property is where the residents of the agricultural community of Grand Pré have built their houses, farm buildings and other structures since the late 17th century. As the value of the upland area lies in its long-established and ongoing settlement – pattern” of a dispersed village along the upland adjacent to the dykeland, there is no particular value ascribed to individual dwellings or farmer buildings. That is certainly not to say that some or most or all of those structures are without “value”. Quite the contrary, the value of some structures lies in their functional utility and in the attachment felt by their owners. In some instances historical or architectural merit has been acknowledged formally at the municipal and provincial level. The value of the various structures lies in their function, use and low density within the nominated property.

9 Archaeological and missing features

| Features within Grand-Pré National Historic Site of Canada (“Triangular Property”) | C | X | Ca. 1700 - 1755 | Two Acadian house sites (identified as 8B5 and 8B6) were excavated in this area in 1972-1973. The artefacts from these sites are held in the Parks Canada facility in Dartmouth, Nova Scotia. A third depression (8B7) was subsequently located that is another possible house site. The value of these features is that they confirm the locations of properties dating from the Acadian occupation of the agricultural community of Grand Pré.

Through ground penetrating radar and text excavations archaeologists have confirmed the presence of two Acadian building sites in this area. The value of these features is that they confirm the locations of properties dating from the Acadian occupation of the agricultural community of Grand Pré.

| Features within Grand-Pré National Historic Site of Canada (“South Fields”) | C | X | Ca. 1700 - 1755 | Through a decade of excavations by Parks Canada and St. Mary’s University researchers, archaeologists have uncovered and identified many features in the Memorial Park setting of the nominated property. Most excavations have been close to the Memorial Church, on both sides, but there have also been digs near the Herbin Cross and the cemetery of the Acadians. The value of this extensive and continuing research is that it provides tangible evidence of the Acadian and Planter occupations of the area, and a clear grasp of where buildings and burial areas were situated.

| Features within Grand-Pré National Historic Site of Canada (Memorial Park) | C | X | Ca. 1700 - 1755 |

| Acadian dalles (the dalle was the sluice box of the surrounding aboiteaux.) | C | X | Ca. 1680s-1750s | Thus far archaeologists have removed and analysed three dalles from the dykeland. One value of these objects is as tangible evidence of...
the physical means by which the Acadians transformed the inter-tidal zone at Grand Pré, with this hand-crafted technology. On a symbolic level, the value of the *dalles* of the old *aboiteaux* is enormous for Acadians everywhere. The sluice boxes are seen as symbols of not just dyking but of the practical wisdom of their ancestors and as emblems of an entire bygone era, that which preceded the trauma and suffering of the Acadian Deportation.

Executive Summary

One of the principal attractions for many tourists is the presence of cultural and historical sites. This trend in tourism to historical sites has been recognized by many, including the United Nations Education, Cultural and Scientific Organization (UNESCO), who developed the World Heritage List to commemorate cultural and natural destinations with outstanding value to humanity. Nomination Grand Pré is a group of people working together to celebrate and care for the unique place that is Grand Pré. Together they aim to successfully submit a World Heritage Nomination Dossier to the World Heritage Committee. The aim is to submit a proposal for the nomination of Grand Pré as a World Heritage Site to UNESCO in February 2011 with successful designation in the summer of 2012.

The purpose of this study was to quantify the visitation and economic impact a UNESCO designation could bring to Grand Pré. The estimated impact on visitation is developed using a regression analysis which estimates the percentage increase in visitation to Lunenburg, Nova Scotia, attributable to its UNESCO designation in 1996. This estimate for Lunenburg is used to identify the potential increase in tourism to the Grand Pré area due to UNESCO designation.

Survey data was used to develop the average spending per visitor to Grand Pré. By applying this increase in spending to our estimated increase in
visitation, we looked to quantify the economic impact a UNESCO designation would have on the local economy around Grand Pré.

The regression analysis, observing a time period covering both before and after the designation at the site for Lunenburg, while taking into account other potentially influential variables on tourism, estimated a 1.24% increase in the share of tourists visiting Nova Scotia who go to Lunenburg. This figure was then transformed to a percentage change in visitors to Lunenburg due to UNESCO designation, which was found to be a 6.2% increase. Applying this increase in visitation at Lunenburg to Grand Pré, we were able to estimate the increase in the number of tourists to the site. Survey data provided average per visitor expenditure figures attributable to Grand Pré to be $68.72. Combining these elements generated an economic impact assessment of a UNESCO designation for Grand Pré on the local (Kings County) economy.

The estimate contained two scenarios related to historic visitation figures and forecasted visitation figures for Grand Pré. The two scenarios were then combined with high and low estimates for visitor spending to produce four scenarios as shown in Table 1.

The UNESCO designation has the ability to offset, to some degree, the declining tourism industry in the Grand Pré area of Annapolis Valley by attracting visitors. It is estimated that the UNESCO designation will attract between one thousand and four thousand additional tourists and generate between $50,000 and $300,000 in spending. The economic impacts associated with this increase in tourism and the spending of visitors could also generate
considerable income for local tourism related small businesses in the area. A UNESCO designation can also act as a basis of advertising for the Site. A UNESCO World Heritage designation is a very recognizable title and can be used to promote visitation to the area on a national and international scale.

On February 17, 2009, the bid proposal to have Grand Pré designated received a major financial boost as the three levels of the Canadian government committed to contributing CDN$1.3 million to the project. This symbolizes the significance of the National Historic Site of Grand Pré, in relation to the tourism industry of Nova Scotia. An effective advertising campaign featuring the UNESCO designation may allow Grand Pré to return to its historic average (1998-2008) for visitors. Doing so would mean about 4,000 more visitors and could provide an injection of over $300,000 per year into the local economy. In conclusion, the UNESCO designation for Grand Pré could have considerable positive economic impacts for the Site and local economy for years to come.

Section 1

Introduction

1.1 Nova Scotia Tourism Industry

The Nova Scotia department of Tourism and Culture describes the province as a place of scenic beauty and rich heritage with many truly unique vacation experiences. For example:

“We take great pride in our province and invite you to discover a maritime travel destination like no other. The seven regions of Nova Scotia lead you around the province, where you’ll explore our breathtaking shores - from towering cliffs and long peaceful beaches to picturesque bays and charming villages. There is no shortage of ways to discover our natural beauty and enjoy our renowned hospitality and charm. (Nova Scotia Department of Tourism, Culture and Heritage, 2009a)”

This appeal has made it both an international travel destination and a place for out of province Canadians to visit. Nova Scotia has averaged 1.9 million non-resident visitors since 1990. Of the estimated 2.1 million non-resident tourists in 2007, 10.5% were from the United States, and 4% were non-US international travelers. Tourism in the province is a billion dollar industry, with these expenditures creating approximately 33,000 jobs, with far reaching induced and indirect impacts. The total payroll of these jobs is approximately $519 million (Nova Scotia Department of Tourism, Culture and Heritage, 2009b).
A significant but declining portion of the visitation and spending in Nova Scotia can be attributed to the Annapolis Valley region. The Annapolis Valley is located on the western shore of the Nova Scotia peninsula and is home to the population centers of Digby, Kentville, and Wolfville. Of the $1.3 billion in revenues attributed to tourism in 2007, $137 million, or 10.3% come out of the Annapolis Valley (Tourism Insights, 2008). This area is home to many tourism destinations that are both scenic and cultural, including the National Historic site of Grand Pré. Grand Pré has long been seen as the symbolic epicentre for the deportation of the Acadians from the area (Johnston and Kerr, 2004).

![Map of Nova Scotia](image.png)

**Figure 1.1.1** map of seven regional tourism areas of Nova Scotia

Grand Pré is one of many sites with significant cultural and historical implications in Nova Scotia.

The past is present every day in Nova Scotia. Explore the colourful fishing town of Lunenburg. Relive a day in the life of 1744 at the Fortress of Louisbourg, the largest reconstruction of its kind in North America. Pass through the immigration sheds of Pier 21 National Historic Site in Halifax where over a million immigrants, troops, war brides, and evacuee children started their new lives. Experience the noon day cannon at Citadel Hill, commemorated as a nationally significant symbol of Halifax's role as a principal naval station in the British Empire (Nova Scotia Department of Tourism, Culture and Heritage, 2009c).
These sites are not alone in providing a destination with rich heritage. Many other sites in and around the province commemorate the extensive and diverse history of Nova Scotia. These are major attractions for tourists and an area of focus for tourism promotion efforts aimed at preserving natural and cultural heritage resources (Nova Scotia Department of Tourism, Culture and Heritage, 2008d). In order to do this, the government of Nova Scotia has supported efforts to have both the Joggins Fossil Cliffs and Old Town Lunenburg sites in their successful designation as United Nations Educational, Scientific and Cultural Organization (UNESCO) World Heritage sites. They are taking similar strides in helping Grand Pré’s current bid in becoming a designated World Heritage Site. The Chronicle Herald (February 17, 2009) has reported that “three levels of government will contribute a total of $1.3 million to a project that would see the area receive recognition as a worldwide historic and cultural treasure. The bid process, being prepared by a nomination advisory board, began two years ago.” The government believes this will raise the awareness of cultural sites in Nova Scotia, and in turn, make the province a more attractive destination.
1.2 History of Grand Pré

Grand Pré was named after the vast meadow on which the settlement was located. When the salt marshes in and around the Port Royal area were flooded, Acadian families started to look for other suitable marshes in the vicinity. Many regions were founded at this time in and around Les Mines (Minas Basin), and one of the areas they discovered came to be Grand Pré, which was settled in the early 1680s.

The Acadians recognized the untapped agricultural potential of the area and began dyking and draining, a strategy used to make the land fertile. By the early 1700s, the district of Les Mines was the principle agricultural center for Acadia, and Grand Pré was its most populous settlement (Johnston & Kerr, 2004).

In 1713, the Treaty of Utrecht was signed in Europe, which gave Great Britain claims to a number of French territories in North America, including Acadia. The Acadian population took a neutral stance in the divide between France and England, and the post-Utrecht period was marked for the most part, by peace and prosperity. This was not to last.

Figure 1.2.1 Map of Acadia
In 1744, thirty five years after Great Britain gained sovereignty over the region, old conflicts were being rekindled in Europe between France and Great Britain, and the Acadian settlers were going to feel the effects. The matter of Acadian neutrality was starting to wear on the British administration with the increased tension between themselves and the French. In the summer of 1755, after the capture of French Forts in Nova Scotia, the British administration wanted to settle the Acadian question once and for all (Johnston and Kerr, 2004). The Nova Scotia Council made the decision to remove every man, woman and child of Acadian decent from the British colony of Nova Scotia.

On the 4th of September, 1755, a message was delivered to the Acadian inhabitants of Grand Pré saying that all men and boys over the age of ten were to arrive at the local church the following day. Upon their arrival, it was announced through interpreters by Lt.-Col. John Winslow, that they and their families were to be deported and all of their “Lands and Tenements, Cattle of all Kinds, and Live Stock of all Sortes are Forfitted to the Crown (Johnston and Kerr, 2004).” The deportation of the Grand Pré Acadians started five days later on the 10th of September. In total, approximately 2,200 people living in and around Grand Pré were deported to various Anglo-American colonies, including Massachusetts, Maryland and Virginia (Johnston and Kerr, 2004).

The deportation of the Acadian peoples effectively ended their settlement in the area of Les Mines. The ancestors of displaced Acadians did not let the tragedy become forgotten, and it remained an oral history tradition of the people until 1847, when a poem written by Henry Wadsworth Longfellow,
Evangeline, a Tale of Acadie, was published. The poem became known around the world as a tragic love story, and made Grand Pré, the home of Longfellow’s ‘Evangeline,’ the most famous of the deportation sites (Johnston and Kerr, 2004).

A contingent of New England Planters arrived in Grand Pré (renamed Horton) in 1760. Since that time, the transformed marsh has remained the focus of the area inhabitants. “The enduring settlement and land-use pattern on the Grand Pré dykeland and upland is an outstanding example of a distinctive 17th and 18th century community-based approach to agriculture in North America.” The Grand Pré marsh remains highly fertile and the most important features of the original dyked area remain in place. The Town plot of the 1760’s became essentially a pattern of roads on the landscape, a pattern that still exists in the 21st century, tangible evidence of the British colonial regime that created it. (OUV Working Group Final Report, January 2009).

In 1907, John Fredric Herbin, whose mother was an Acadian, led a campaign to have the site of Grand Pré preserved as a memorial. He bought the lands, and soon sold it to Dominion Atlantic Railway (DAR) on the condition the lands be deeded to Acadians so the site could be preserved as a memorial (Johnston and Kerr, 2004). They maintained the grounds until 1921, when it was transferred into the possession of the Société mutuelle de l’Assomption, who erected what is now the memorial church. The site remained this way until 1956, when in agreement with the federal government the Grand Pré Memorial Park was declared a national historic site. The site has since been further
developed under the sponsorship of the Canadian government who maintain the purpose of the National Park to,

“commemorate the Acadians of the Minas Basin and the expulsion of the Acadians from their ancestral homeland; to protect for all time the memorial landmarks, cultural resources, ornamental gardens and physical environment that make up the special atmosphere and nature of the park; and to encourage public understanding, appreciation and enjoyment of the Acadian historical heritage (Parks Canada, 1985).”

1.3 Tourism Trends in Rural Nova Scotia

Tourism in Nova Scotia has shown moderate growth of approximately 2.6% per year, in the last two decades with visitation increasing from 1.5 million tourists in 1992, to 2.14 million in 2007 (Nova Scotia Tourism Insights, 2008). However, much of this increase in visitation has accrued in the Halifax-Dartmouth area, while the rest of the province has experienced slower growth, or even a downward trend in recent years.

Room nights sold in Halifax increased between the years of 2000 to 2008, rising from 1.249 million to 1.329 million, an increase of eight percent (Nova Scotia Tourism Insights, 2008). In 2007, the tourism revenues generated in Halifax were approximately $654 million, a 20.6% increase from the tourism revenues in 2000 (Tourism Insights, 2008).

The tourism activity in the Annapolis Valley has not kept pace. Room nights sold in the region have seen a decline of thirteen percent from 310,500 in 2000 to 269,900 in 2007. Tourism revenues have decreased 11.6% during the same time period (Tourism Insights, 2008).
The National Historic Site of Grand Pré has suffered similar negative trends in tourism as compared to the Annapolis Valley. In 1998, 65,115 visited the Site, but by 2008, visitation had fallen to 28,516. This represents a 56% decrease over a ten year period.

Figure 1.3.1 Number of visitors to Grand Pré

Figure 1.3.1 depicts the downward trend in the number of visitors to Grand Pré. Outside of 2004, the year of Congrès Mondial Acadien, a world Acadian celebration that resulted in a large increase in the number of visitors to
the Site; there has been a consistent decline in the number of visitors from 1998 through to 2008.

This downward trend is something that Grand Pré National Park officials, Nomination Grand Pré, the Working Group on Outstanding Universal Value and other community groups/organisations, are trying to remedy. As one avenue to help accomplish this, Grand Pré is applying for a UNESCO World Heritage designation. It is believed that the status of the designation and related publicity would result in an increase in the number of tourists visiting the site and generating positive economic impacts on the local economy. It is important to note that the UNESCO bid looks beyond the national historic site to a broader cultural landscape that also includes Grand Pré Marsh, Horton landing and a representative sample of the uplands adjacent to the marsh.

1.4 What is a UNESCO World Heritage Designation

The United Nations Educational, Scientific and Cultural Organization (UNESCO) was established on the 16th of November, 1945. UNESCO has one hundred and ninety three member states and six associated members in the fields of education, science, culture and communication (UNESCO, 2009a). The objectives of the organization revolve around the promotion of equality of education, conservation and protection of history and science and promoting a mutual knowledge and understanding of peoples (Jones and Coleman, 2005). UNESCO describes itself as an organization that seeks to promote the identification, protection and preservation of cultural and natural heritage sites
around the world considered to be of exceptional significance to humanity (World Heritage, 2009a).

The aforementioned ideals are embodied in an international treaty adopted and developed in 1972 by UNESCO at the convention concerning Protection of the World Cultural and Natural Heritage. UNESCO hopes to encourage participation of the local population, as well as the international community in conserving the world’s cultural and natural heritage (World Heritage, 2009a). UNESCO World Heritage developed a list of sites with cultural and natural significance with outstanding universal value.

The World Heritage List currently consists of eight hundred and seventy eight properties. These include 679 cultural, 178 natural, and 25 mixed properties in 145 states. Canada is home to fifteen of these sites, the first being designated in 1978 at the L’Anse aux Meadows National Historic Site in Newfoundland and the Nahanni National Park in the Northwest Territories (World Heritage, 2009b).

Nova Scotia is currently home to two World Heritage sites. Old Town Lunenburg was the first to receive the designation in 1995, and is described by UNESCO as “the best surviving example of a planned British colonial settlement in North America (World Heritage, 2009c).” The second site was designated in 2008 at the Joggins Fossil Cliffs, which has the most complete fossil record from the period of 318 to 303 million years ago. Grand Pré is looking to become the third site in Nova Scotia to successfully apply to
UNESCO and join the list of World Heritage sites and garner the symbolic benefits of the designation.

As described by the World Heritage convention, belonging to the list of sites means belonging to an international community with strong appreciation for significant cultural and historical sites. Finally, UNESCO believes there is an increase in public awareness due to the designation which will increase tourist activities at the site and bring important funds to the site and local economy (World Heritage, 2009d). Grand Pré hopes to take advantage of all of these benefits by achieving a World Heritage designation.

1.5 Study Rationale: UNESCO, Grand Pré and Tourism

As the ease of travel continues to progress, tourism has become the world’s largest industry, and more attention is being placed on cultural sites as an area to expand the industry (Goeldner, McIntosh and Ritchie, 1995). Grand Pré in the Annapolis Valley of Nova Scotia realizes this trend in tourism, and in hopes of strengthening their position and attractiveness as a cultural destination, it has applied for a UNESCO World Heritage Site designation. Along with the recognition the designation would bring as a cultural destination, Grand Pré is looking to take advantage of another benefit of the designation; the belief that as a Heritage Site, there will be an increase in the level of public awareness which would in turn, spark an increase in tourist activity to the area.

This paper looks to estimate the economic impact associated with a World Heritage Site designation for Grand Pré. Given the declining trends in tourism
for Nova Scotia and the Annapolis Valley, such a designation could provide a way to attract new visitors to the area, providing economic benefits for the local tourism industry. It is hoped that the analysis contained in this thesis will be relevant not only for Grand Pré and the Annapolis Valley, but for other sites around the world considering a similar strategy to help expand their tourism industry.

Section 2:

Literature Review

Tourism is the world’s foremost economic activity and the importance of developing the industry can contribute significantly to the success of an economy. UNESCO and its World Heritage list declare there are significant economic benefits to obtaining a designation. Through an increase in tourism and global awareness, local economies surrounding cultural and natural sites should benefit from having a designation (World Heritage, 2009d). As the importance of tourism has increased, many studies have been conducted to assess the actual impact of a designation with few definitive results.

Buckley (2004) investigates the contribution of World Heritage listing to tourism in Australia. Observations in this study were extracted from several National Parks in Australia. The author attempts to make a comparison of the economic value of tourism sites before and after they were designated, and at similar unlisted sites during the same time period since other factors outside of
the designation could have affected tourism as a whole. However, there are many gaps in Buckley’s data that render his study incomplete. Rarely did a site have data on the total number of visitors, and the data that was used is conflicting. This is the case because tourist numbers reported by the International Visitor Survey are three times higher than the numbers obtained from on ground surveys in the same year. Buckley admits to this problem in his data, stating that “visitor numbers and origins are generally too incomplete to track historical trends except at the broadest scale.”

Bojić (2007) evaluated legal and economic implications of Natural World Heritage designation at Plitvice Lakes National Park, Croatia. Bojić claims the site has important economic impacts on two counties surrounding the Park, but fails to quantify the impact or develop a model in which she bases her assumptions. Bojić also mentions the many possibilities for small family tourism development and the establishment of private accommodations as good wealth opportunities in the region. These assumptions might be true, however the research lacks any sort of statistical basis to support the assumptions that significant economic impacts occur from the designated site.

Hambrey Consulting (2007) developed a commissioned report based upon documented experience from sites around the world in order to make recommendations for maximizing the benefits of UNESCO designated areas in Scotland. They suggest that benefits vary between different sites depending on the base of the site itself and the nature of the economy. The report states four benefits a site appears to receive: enhanced leverage for funding, raising
awareness, an enhanced tourism profile and enhanced opportunities for 
branding. There lacks any statistical data proving this to be true in Scotland, 
and instead looks at what kind of impacts other sites have had. It fails to 
reference specific impacts from the World Heritage designation and what kind 
of tourism growth can be expected.

Blacik (2007) assesses the under representation of Africa on the list of 
UNESCO World Heritage Sites. Blacik finds that a thirty percent increase in 
tourism can be expected in the first year alone; however, she argues that this has 
negative outcomes on local communities trying to maintain their cultures. 
Conclusions aside, this increase in tourism is not based on any statistical data; 
instead it comes from an interview with Hervé Barre of UNESCO, and lacks the 
necessary information to support the claim of a thirty percent increase in the 
first year after designation.

Soares et al. (2007) estimated the impact of the classification at the 
Portuguese World Heritage destination of Sintra. Their study is based on a 
comparative analysis of tourist demand before and after the designation. They 
assessed the visitation numbers to two palaces in Sintra between 1990 and 2004. 
The results revealed a lack of evidence of increased tourism numbers. The study 
admitted difficulties in obtaining concrete data, and stated the trouble in 
quantifying the entrance and exit of tourists to and from Sintra. An empirical study 
was also conducted to determine the level of knowledge about the classification. 
The results showed most respondents had knowledge of the designation prior to 
visiting the site and 50% admitted the classification influenced their decision to 
visit Sintra. This study is one of the more complete analyses of World Heritage
designation, but acknowledges complications in quantifying the impact due to difficulty in obtaining tourism visitation numbers.

The number of studies is noticeably increasing as time progresses, with most of the reviewed literature being written from 2007 onwards. The progress in developing a quantitative model of economic impact is fairly evident, however many of the studies lack sufficient data to properly assess the increase in tourism attributed to a World Heritage designation. These difficulties in quantifying the visitation of tourists to a particular designated site resulted in the inability to estimate the increase in tourism due to a designation. In each case which was reviewed, significant problems arose. In examining the shortcomings of previous studies, this paper looks to build upon their work and attempt to advance the search aimed at measuring impact UNESCO has on tourism and the local economy of a classified site.

First, the study looks for another site that had a UNESCO designation, with tourism attributes and characteristics similar to Grand Pré. This was found at the closest site geographically, Old Town Lunenburg. By quantifying the impact of UNESCO designation on the percentage of non-resident Nova Scotia visitors to Lunenburg and then applying it to the level of visitation to Grand Pré, a prediction of the impact of a UNESCO designation on tourism could be estimated. To minimize the problems of identifying and quantifying the number of tourists entering and exiting a specific study area, the increase in the percentage of visitors coming to Nova Scotia that visit Lunenburg is calculated. There exists no direct data on tourism visitation to Lunenburg before and after the UNESCO designation. Looking at the percentage change in visitors to Nova
Scotia since the designation will simplify measuring the number of visitors attributable to the UNESCO designation at Lunenburg. In doing this, while taking into account other economic factors such as the US CAN exchange rate, inflation rate, and other events which would have influenced the visitation, a regression analysis is conducted to isolate the impact UNESCO has on tourism to Lunenburg. This impact on Lunenburg can then be translated to the case of Grand Pré to estimate a change in tourism due to designation. In order to determine the direct impacts of tourism spending Grand Pré has on the surrounding area, survey data will also be taken into account to measure the average spending of tourists in and around Grand Pré to develop an estimated monetary value of direct and indirect spending by tourists.

To summarize, this study aims to quantify the impact of UNESCO World Heritage designation on a tourism site in terms of visitation and visitor spending. The details of the methods adopted in this paper will be presented in the next section.
Section 3

Methods

In order to estimate the potential economic impact of the designation on Grand Pré, two tools will be used. Firstly, regression analysis will be conducted to isolate the impact a UNESCO designation on a particular site. In order to accomplish this, the case of Old Town Lunenburg will be assessed and the results will be applied to the Grand Pré site. Secondly, two hundred and seventy eight surveys were collected in the summer of 2008 asking the spending habits of individuals while visiting the site. Using this data an estimated spending average can be established to quantify the economic impact of tourism on the local economy to Grand Pré. This will be further broken down into subcategories of spending, including accommodation spending, retail spending and food and beverage spending to determine the economic impact of UNESCO for various categories. These estimates can then be applied to our estimated increase in the number of tourists visiting the site to quantify the forecasted economic impact of the designation.

3.1 Regression Analysis

Regression analysis is a statistical tool used to determine the relationship between an independent variable and dependent variables. In the case of Grand Pré, we are interested in estimating the effect that UNESCO designation has
upon the level of tourism to the site and surrounding area. In order to accomplish this goal, data must be assessed from a previously designated site. Old Town Lunenburg will fill this role because it is the only existing UNESCO site in Nova Scotia with data related to visitation pre and post designation. We would also expect them to be affected similarly by the fluctuations in the Canadian exchange rate and the inflation rate in Nova Scotia. These variables will be taken into account when isolating the impact of a UNESCO designation, as well as the influence other tourist events might have on the level of tourism to Lunenburg. Our regression function will be written as follows:

\[ Y_t = \beta_0 + \beta_1 (UNESCO_t) + \beta_2 (USCANFX_t) + \beta_3 (INF_t) + \beta_4 (EVENT_t) + U_t \]

The goal of this regression is to isolate the \( \beta_1 \) coefficient in order to quantify the impact of the UNESCO designation on tourism. Holding the other variables constant, the percentage change in tourism to Lunenburg because of UNESCO can be discovered and applied to the visitation numbers at Grand Pré in order to forecast the expected impact of a designation at the historical site of Grand Pré on visitation.

The dependent variable, \( Y \), represents the percentage of visitors coming to Nova Scotia that visit Lunenburg. We explain the variation in this variable using the explanatory variables of exchange rate, UNESCO, inflation rate and the influence of other tourism events. In order to develop this variable, data was assessed from the 2004 Nova Scotia Tourism Exit Survey.
Our $Y$ variable of the percentage of visitors coming to Nova Scotia that visit Lunenburg was created by the following equation:

$$Y = \frac{Y_1}{Y_2} = \frac{\text{Number of parties visiting Lunenburg}}{\text{Number of parties visiting Nova Scotia}}$$

The numerator, $Y_1$, of the number of parties visiting Lunenburg was found by taking the accommodation nights sold in Lunenburg, and dividing it by the average length of stay. This was done so those groups staying more than one night were not counted twice. This number was then multiplied by the ratio of visitors to those who stayed overnight in Lunenburg so to include those visitors who came to Lunenburg but did not stay overnight. This is shown in the following equation:

$$Y_1 = \frac{\text{Accommodation nights sold in Lunenburg} \times \text{Visitors to Lunenburg}}{\text{Average accommodation length} \times \text{Stayed overnight in Lunenburg}}$$

The denominator, $Y_2$, the number of parties visiting Nova Scotia is calculated by taking the average number of visitors to Nova Scotia and dividing it by the average party size of 2.2 people (2004 Nova Scotia Exit Survey). This is shown in the following equation:

$$Y_2 = \frac{\text{Average number of visitors to Nova Scotia}}{\text{Average party size}}$$

This ratio of parties visiting Lunenburg to parties visiting Nova Scotia will give us the percentage of parties who visit Lunenburg of those who come to Nova Scotia.
We assume that this ratio, \( Y \), and any fluctuation in the number of parties coming to Lunenburg will be reflective of changes in the number of visitors. Hence forth, rather than referring to the percentage change in the number of parties due to UNESCO designation, we will simply identify it as a change in visitation.

The \textit{USCANFX} variable represents the US-Canada exchange rate, which denotes the value of CAN$1 in terms of American Dollars. Of the estimated 2.1 million tourists visiting Nova Scotia in 2007, 223,800, or 11\% of these individuals, were from the United States. This is the largest total of visitors from a foreign country, and the exchange rate can influence the decision of American tourists to visit Canada. When the Canadian dollar is strong in comparison to the United States dollar, as it has been in 2007 and 2008, the cost of visiting Canada for Americans is higher, and you would expect a smaller number of tourists visiting from the United States as compared to when the Canadian dollar is worth less. In other words this would imply a negatively correlated concurrent relationship, as the Canadian dollar appreciates in value an expected decrease in international tourists would occur.

Inflation in prices of goods and services would also contribute to the expense of visiting Nova Scotia. If inflation leads to an increase in the cost of, for example, an overnight stay at a hotel, then it would be expected to cause a decrease in visitation to the area. As the cost of goods and services rises, a negative impact on tourism would be expected.
In order to account for temporary increases in tourism due to particular events, the \textit{EVENT} variable is introduced. This variable would take the value ‘1’ if in that particular year there was a high profile tourism event that occurred in the region. Tall Ships Festivals can be given as examples of such events which brought a significantly larger portion of tourists to Lunenburg than would have otherwise occurred. A positive impact on the percentage of visitors to Lunenburg would be expected when an event occurs.

Finally, the \textit{UNESCO} variable was introduced. This is a dummy variable similar to the \textit{EVENT} variable, where it takes the value of 0 before the designation in Lunenburg (up until 1995), and 1 after the designation occurred in 1996. The UNESCO coefficient of $\beta_1$, holding all other variables constant, will generate the percentage change, on average, in visitation to Nova Scotia who visit Lunenburg due to the World Heritage Designation. This percentage change in visitation is then be applied to Grand Pré to forecast the change in tourism would be expected after a designation.

\textbf{3.2 Survey}

In the summer of 2008, tourists were surveyed at Grand Pré and particular locations around the historic site. The survey was comprised of fifteen questions which aimed to identify the origin and age of the visitor, as well as various questions to develop a profile of their trip to Grand Pré. This
A survey was then used to develop an economic impact estimate of tourist spending in the area.

A total of 278 surveys were completed. In order to accurately gauge the relevance of each survey to Grand Pré, a question was asked about the influence the site had on determining their visit to the Grand Pré area. Tourists were asked to pick a point on a scale from zero to ten where zero represented no influence, and ten represented the park being the main single reason for being in the area. Only surveys where the influence of Grand Pré was greater than four were taken into account when developing a spending profile of a visit to the park. Furthermore, only those surveys which indicated their primary reason for visiting the site were assessed. This eliminated those individuals or groups whose spending would have occurred in the absence of the site as indicated by their responses, since the site itself had very little influence on their trip to the area.

To gauge the spending impacts of tourists in particular divisions of the local economy, visitors were asked to estimate the amount they spent in various categories.

Figure 3.2.1  Source: UNESCO Grand Pre Park Visitor Survey
Using these estimates, an average amount spent in a visit to the Park can be established. It will then be applied to the visitation numbers to quantify the impact of the tourism attributable to Grand Pré National Historic Site.

The impact will be broken down further into the various subcategories found in table 3.2.0, and placed through an input/output model to find the multiplier effect of direct spending. This will determine the indirect impacts of tourism in the area. The data will further analysed in chapter four.
Section 4

Results

4.1 Data

The independent variables of UNESCO, USCANFX, INF, and EVENTS, as well as our dependent variable of the percentage change in visitors who come to Nova Scotia that visit Lunenburg, were each assessed between the years of 1990 to 2007, giving us a sample size of eighteen years. The data for the exchange rate and inflation rate was retrieved from Statistics Canada (CANSIM). The events and UNESCO variables were dummy variables taking the value of 0 in the years where the variable did not apply, and 1 when the variable was taken in to account. Table 4.0.0 denotes the descriptive statistics of each variable.

</table>

The UNESCO variable has a mean value of 0.667, implying that Old Town Lunenburg held the UNESCO designation during 66.7% of the time period covered in our sample. The average exchange rate over the time period...
was $US 0.76 = $CAN 1, the average rate of inflation was 1.97%, and tourist events occurred in 16.7% (three of eighteen) of the years covered by our sample.

### 4.2 Regression Results

A regression was run using the aforementioned data to find the $\beta$ coefficients and the significance of each variable. Recall that we are looking to isolate the impact of the UNESCO designation on the percentage of visitors to Nova Scotia who will go to Lunenburg.

25
From these results we can derive our p-values and our regression equation to be:

\[ Y_t = 4.41 + 1.24 \text{UNESCO}_t + 0.03 \text{USCANFX}_t - 0.02 \text{INF}_t + 0.61 \text{EVT}_t \]

(0.01) (0.00) (0.99) (0.86) (0.10)

The slope of the \textit{USCANFX} variable is equal to 0.03, implying that a one unit increase in the Canadian dollar (CAD) will lead to a 0.03\% increase in the share of Nova Scotia tourists who visit Lunenburg. The coefficient maintains an incorrect sign; an appreciation of the CAD should not have a positive impact on tourism. However, it is an insignificant impact due to the fact that the p-value is greater than the 5\% significance level.

The \textit{INF} coefficient had a value of -0.02, meaning a 0.02\% decrease in the share of visitation coming to Lunenburg out of Nova Scotia, for every one percent increase in inflation. It is a statistically insignificant coefficient at the 5\% level of significance.

The \textit{EVT} coefficient indicated that a high profile tourist event in the Lunenburg region increased the proportion of visitors who come to Nova Scotia that visit Lunenburg by 0.61\% on average. This variable is significant at the 10\% level.

The UNESCO coefficient is found to have a \( \beta \) value of 1.24. This implies that the designation at Old Town Lunenburg has led to a 1.24\% increase in the share of people coming to Lunenburg of visitors to Nova Scotia. It is statistically significant at the 5\% level. Using this positive and significant value of visitation attributable to the UNESCO designation, we will compute the percentage change in tourism on Lunenburg. This info can be applied to the
visitation numbers at Grand Pré in order to estimate the expected increase in tourism to the area after a UNESCO designation at the Historical Site. However, before we do this, we will analyze our Grand Pré survey data to generate the average spending per visitor.

4.3 Survey Results

In the summer of 2008, 284 surveys were completed at the National Park at Grand Pré. The respondent’s geographical distribution is illustrated in the following charts:

![Geographical distribution of survey respondents, 2008](image)

![Geographical distribution of visitors, 2007](image)

![Geographical distribution of respondents, 2008](image)

Of the survey respondents, 68% of them were from outside of Nova Scotia, with the largest portion being from the United States (34%). Non-
Atlantic Province Canadians comprise the second largest portion of respondents, totalling 29% of the surveys. The geographical distribution of survey respondents is reflective of the actual geographical distribution of visitors to the park (collected by Parks Canada), as shown by comparing the geographical distribution of survey respondents to the geographical distribution of park visitors in Figure 4.3.0. From this we can conclude that the survey sample is an accurate portrait of the population of those who visit Grand Pré.

The survey asked for the respondent’s spending while in the Grand Pré area. An average spending per visit to Grand Pré will be used to calculate the economic impact of the Historical Site on the local community, and the potential impact created through a World Heritage designation.

In order to establish the average spending by tourists visiting Nova Scotia, only surveys denoting the following characteristics were considered: (1) Surveys which reported their primary reason for visiting the area was for the historic site. (2) Surveys which reported the site’s importance in their trip to the area as being equal to or greater than four on a scale of 1 to 10. (3) Respondents whose origin was outside of Nova Scotia. This narrows the spending impacts of out-of-province survey respondents to be strictly attributable to the historical site and would have not occurred in the absence of the site. (4) Next, those surveys which reported zero spending in all of the categories are treated as a non-response and therefore are excluded from the analysis. This is due to the fact that it is very unrealistic for an out of province tourist to incur no spending.

---

1 Average spending estimate is not sensitive to the inclusion of Nova Scotian visitors who came to the site and were outside of 30 minute distance.
while visiting the Grand Pré area, especially since there is an admission charge to visit the Park.

Summing the average spending made in each category, we find the total average spending per person, visiting the site of Grand Pré to be $68.72. Using this figure, along with the UNESCO coefficient of 1.24%, we can establish an estimate of tourism visitation attributable to a World Heritage designation and the resulting economic impact on the local economy.

4.4 Tourism impact of UNESCO designation

In order to determine the percentage increase in visitation to Lunenburg, we must first find the average number of visitors to Nova Scotia that visit Lunenburg. On average, twenty percent of non-resident visitors to Nova Scotia visit Lunenburg (2004 Nova Scotia Visitors Study). This can be multiplied by
the average number of visitors to Nova Scotia between the years of 2002 to 2008 (2.14 million), to find the annual number of visitors to Lunenburg over that time period.

\[ \text{Average visitors to Lunenburg 2002-08} = 2.14 \text{ million NS tourists} \times 20\% = 428,000 \]

It is therefore estimated that the annual, average number of visitors to Lunenburg was 428,000.

Next, the increase in the number of tourists who visited Nova Scotia after the UNESCO designation in Lunenburg must be established. To do this, we take the 1.24% increase in visitation we identified using the regression model and multiply it by the average number of visitors to Nova Scotia between 2002 and 2008.

\[ \text{Forecasted visitors coming to Lunenburg due to UNESCO designation} = 2.14 \text{ million NS tourists} \times 1.24\% \text{ UNESCO impact on share of NS visitors going to Lunenburg} = 26,536 \]

Using this equation, the predicted number of visitors coming to Lunenburg because of the UNESCO designation is 26,536. To find the percentage increase in visitation to Lunenburg due to the UNESCO designation, we will divide this number by the historical average of visitors to Lunenburg\(^2\).

\(^2\) We calculate the percentage change in visitors as opposed to just the change in visitors because Grand Pré has a different base number of visitors per year than does Lunenburg.
Impact of UNESCO designation as % of people visiting Lunenburg =

\[ \frac{26,536}{428,000} = 6.2\% \]

The impact of UNESCO designation as a percentage of people visiting Lunenburg was calculated to be 6.2%. This 6.2% increase in the number of people visiting Lunenburg after the designation will now be used as our estimated increase in visitation we would expect at Grand Pré were it to receive a designation.

If successful, the UNESCO designation would occur in the summer of 2012. We will calculate two figures for visitation to Grand Pré to estimate the impact of a UNESCO designation: (1) an estimate using the historical average based on the years from 2002 to 2008 and (2) an estimate using a next period forecasted value given the trend in visitation to Grand Pré form 2002 to 2008. The historical scenario of a UNESCO designation at Grand Pré is reflective of visitation returning to where it has been in the past, rather than where it looks to be going given the current downward trend. The forecasted scenario looks at this trend and develops an estimate of visitation for 2012 with this in mind. Multiplying these visitation numbers by the impact of UNESCO designation as a percentage of people visiting Lunenburg will give us an estimated change in tourism due to the designation. Furthermore, by using the average spending per visitor, we can develop the corresponding economic impact of a UNESCO designation applicable to each scenario.
The historical scenario of visitation is found by taking the average number of visitors to the site between the years of 2002 to 2008. The average number of visitors for this time period is 45,000 people. Applying a 6.2% increase in visitation due to a UNESCO designation, to the average number of visitors to Grand Pré, our estimated increase in visitors is 2,790 more people visiting because of the designation. Taking this number of new tourists, multiplying it by our average spending per visitor of $68.72, we find the spending of new visitors in the local economy to be approximately $191,729.

Figure 4.4.1 Number of visitors to Grand Pré with 2009 forecast

The forecasted scenario takes in to account the downward trend in tourism since 2002. To find a forecasted number of visitors for 2012, we will
use a regression analysis taking into account a time trend in downward visitation and any events (such as the Congrès Mondial Acadien in 2004) that would have caused an unusual change in visitation. The time trend variable is equal to the number of years after 1998, where 1998 takes the value of 1. Given that visitation data covers 1998-2008 and that the trend is downward, it was decided that projecting visitation numbers out three years would provide an estimate that was unreasonably low. Furthermore, given that increased advertising by the National Park and media coverage garnered via the UNECO bid is likely to have a positive impact (thus impacting the existing trend), a one period projection was deemed appropriate. Therefore, in the case of 2012 visitation, the time trend variable will be equal to 12. The attractions variable is a dummy variable where years that held tourist events at Grand Pré took a value of 1; otherwise it is equal to zero. The forecasted year was given the value of 0 for this variable. The regression equation and results will be:

\[
\text{Forecasted visitation to Grand Pré} = \beta_0 + \beta_1(\text{timetrend}) + \beta_2(\text{attraction}) \\
= 72,508 - 3,988(12) + 29,000(0) \\
= 24,652
\]

When considering the downward trend in visitation and the effect of other attractions, the predicted visitation to Grand Pré historical park is equal to 24,652. Our 6.2% forecasted increase of visitors for 2012 is then 1,530 more people visiting the site because of a UNESCO designation. A summary of the historical and forecasted impacts is found in figure 4.4.2.
We find that a UNESCO World Heritage designation would have a considerable economic impact on the Grand Pré site and surrounding area (ranging from approximately $100,000 to $200,000 under the forecasted and historic visitor estimates respectively). The spending of new visitors at Grand Pré constitutes a 7% increase in spending associated with the Site. A sensitivity analysis on the percentage increase in visitation will now be performed to discover an estimated low and high amount of visitation to the site and the economic impact of both scenarios. The multiplied impacts of the spending of new visitors via an input-output model will also be assessed.

### 4.5 Sensitivity Analysis

A confidence interval of our dependent variable was constructed to find a low and high estimate for the percentage increase in visitation to Lunenburg under each of the historical and forecasted scenarios. The confidence interval

</tr>
</tbody>
</table>

Following the same process as in the previous section, we can determine the low and high spending estimates of new visitors to Grand Pré. Taking the historical average of 45,000, we will first find the increase in number of visitors. Multiplying 45,000 by our low estimate of a 2.75% increase in visitation due to UNESCO, and our high estimate of a 9.8% increase in visitation due to UNESCO, we discover the increase in number of visitors to have a low estimate
of 1,238 and a high estimate of 4,410. The low estimate of new visitors will spend approximately $86,700, and the high estimate will spend $308,700.

Using our forecasted number of visitors for 2012 of 24,650, the process can be repeated to find visitation increase to be a low of 678 and a high of 2,416, spending an estimated low of $47,460 and a high of $169,120.

4.6 Assessing Multiplied Impacts via an Input-Output Model

In order to estimate the direct, indirect and induced impacts of the exogenous change in spending due to a UNESCO designation, an input-output model will be used. This will estimate both how the spending of new tourists will be divided between the various divisions of the economy, as well as the income generated by visitor spending. The re-spending of income generated by visitor spending is included in the final total spending generated figure. The spending division was done in the historical and predicted scenario described in Section 4.4, as well as using both our high and low estimated spending for both scenarios explained in Section 4.5. The model will be further explained in the forthcoming sections.

4.6.1 The Input-Output Framework

Input-output (I/O) analysis attempts to quantify, at a point in time, the economic interdependencies of an economy. I/O accounting is a framework that explicitly recognizes interdependencies among productive industries of the
economy and the elements of final demand. Final demand is the demand for goods and services consumed directly by ultimate consumers. Final goods and services are referred to as final because they are not put back into the production process to make some other good. The interdependencies are characterized by the inter-industry structure, which shows the inputs that are combined to produce output. The I/O analysis framework is similar to a financial accounting framework that tracks purchases of and expenditures on goods and services in dollars. The I/O framework traces the dollar flows between businesses and between businesses and consumers in an economy.

The input-output model is summarized below in matrix form.

\[ X^* = (1-A^*)^{-1} F^* \]

Where:

- \( X^* \) = the vector of total output
- \((1-A^*)^{-1}\) = the closed model total requirements matrix (Leontief inverse)
- \( F^* \) = vector of final demand changes associated visitor spending

### 4.6.2 The Kings County Input-Output Model

The Kings County input-output model was developed in 2001 by Dr. Brian Vanblarcom of the Economics Department at Acadia University. The Nova Scotia input output (I/O) model forms the basis of the Annapolis Valley I/O model. The provincial I/O model for Nova Scotia is based on Statistics
Canada data and produced by CANMAC Economic Consulting Ltd. The provincial I/O direct requirements matrix was obtained from the NS Department of Finance and adjusted via employment based location quotients (LQ) to approximate the Annapolis Valley economy. The location quotient in this case is a measure comparing the concentration of an industry in Kings County and its concentration in the province of Nova Scotia as a whole.

Location quotients were calculated for each industry (excluding households). The rows of the direct requirements matrix are adjusted based on the LQ values. It is assumed that all wage payments are made to county residents, profits are treated as leakages and no adjustment is made for commuters. After adjusting the direct coefficients via the location quotients, the model is transformed into the total requirement matrix via the Leontief inversion technique described earlier. Given changes in final demand generated by the UNESCO designation, the model can be solved to estimate indirect and induced impacts on the local economy.

The model is closed with respect to households. In the standard or open model, household consumption is a column vector located in final demand and household income (comprised of wages/salaries/profits and other income) is a row vector contained in value added. When the model is closed with respect to households, the household row and column vector are incorporated into the endogenous (inter-industry) matrix. The processing sector is therefore expanded to include households as an industry and the inter-industry matrix reveals the relationships between the household industry and all other industries. As a
result, the household sector is no longer exogenous but is now part of the internally determined portion of the model and therefore endogenous. The inclusion of households in the processing sector assumes part of the analysis is to assess not only the impacts of inter-industry purchases but also the effects of household spending on the economy.

The closed model allows the direct, indirect and induced effects of an exogenous change to be captured. The inclusion of households in the inter-industry portion of the table results in multipliers that reflect not only the direct and indirect purchases from the household industry (labour inputs) by other industries but incorporates the effects of household income being re-spent in the economy. The economic activity resulting from the re-spending of income generated by the direct and indirect effects is known as the induced effect. The induced impacts are additional expenditures resulting from increased income brought about by increases in final demand.

One assumption inherent in the induced effects is that household income flows to residents and these residents spend their new income following the pattern of expenditures identified in the household expenditure column of the inter-industry matrix. Given the assumed leakages from the local economy (related to production of goods and industry profits), the closed model is most applicable due to its ability to capture the induced effects associated with the re-spending of income created via the direct and indirect effects.
4.6.3 Converting Expenditures to Final Demand Changes

Visitor expenditures therefore need to be converted to final demand changes by accounting for wholesale, retail and transportation margins, as well as identifying direct leakages related to non-local production and taxes. Details of the conversions of visitor expenditures to final demand changes are discussed below.

Sales Tax Adjustments:

Most goods and services in Kings County are subject to the GST tax of 13 percent collected at the point of sale and remitted to the federal and provincial governments. The GST is a value added tax. Retailers add it to the price of goods sold. Businesses pay the GST on goods received, charge GST on their sales and remit the difference to the government. Some products, such as food items purchased at grocery stores are exempt from the GST. There is no GST charged on gasoline retailed to consumers. For gasoline, all taxes are levied at the producer level and included in the cost of gas sold to retailers. To account for GST leakages outside the local economy, tourist expenditures for all categories are reduced by the applicable GST rate when converting sales figures to local final demand.

Trade Margin Adjustments:

Visitor expenditures are equal to output attributable to visitors for all tourism expenditures except that associated with retail trade. Output generated by tourist retail spending is limited to the trade margins (the difference between the price charged for the good and the cost of acquiring that good). The
The margining process involves multiplying the value of retail sales by the wholesale and retail margins wholesale and retail trade industries respectively. The aggregate retail trade industry margin (adjusted for direct leakages via location quotients) is 25.7 percent (of the purchaser price) and the aggregate wholesale trade margin is 14.6 percent. Retail sales expenditures, less wholesale and retail trade margins, are usually adjusted for transportation margins with the remainder (the producer price) being apportioned to the producing industry (usually manufacturing). In this model, since all goods sold are assumed to be imported into the region, leakages associated with transportation margins and non-local production are accounted for by treating the cost of the goods sold as imports.

Figure 4.6.1 denotes how the direct spending of new tourists due to a UNESCO designation at Grand Pré is divided amongst all of the spending categories in the Survey. Accommodations would receive the greatest impact of visitor spending, followed by food and beverage purchases in restaurants.

Figure 4.6.2 shows the direct visitor spending, combined with the indirect and induced spending, attributable to a UNESCO designation at Grand Pré, would be divided among industries. The accommodation and food and beverage services would see the greatest impact from visitor spending, followed by retail trade. Total spending is estimated to range from approximately $100,000 to $300,000 under the historical scenario and $50,000 to $175,000 under the projection scenario.

Section 5

Conclusion

Tourism is the world’s foremost economic activity, surpassing other major industries such as autos, steel, electronics and agriculture. The World Travel & Tourism Council estimates the contribution of tourism and travel to gross domestic product in 2009 to be $US 5,474 billion (World Travel & Tourism Council, 2009). This translates into 219 million jobs around the world. With this said, the importance of tourism is undeniable, and the study of tourism economics is relevant even on the smallest scale.

“Every job in tourism generates three more jobs in businesses supplying goods and services to the industry. Furthermore, this business creates more tax dollars proportionate to its size than does any other industry (Goeldner et Al, 1995).”

One of the principal attractions for many tourists is the presence of cultural and historical sites. This trend in tourism to historical sites has been recognized by many, including the United Nations Education, Cultural and Scientific Organization (UNESCO), who developed the World Heritage List to commemorate cultural and natural destinations with outstanding value to humanity.

Grand Pré is fortunate enough to have been the home of the Acadian people and their culture in the late 17th century. In 1956, a National Historic Site was declared at Grand Pré to commemorate the Acadian history of the area.
In combining Grand Pré with a UNESCO World Heritage designation, the goal is to expand a tourism market with significant positive impacts for the site and the local community. The purpose of this study was to quantify the visitation and economic impact a UNESCO designation could bring to Grand Pré.

This study took an empirical approach in attempting to quantify the impact of UNESCO World Heritage designation on a tourism site, using accommodation statistics from the Lunenburg Site, visitation figures to Nova Scotia, and a 2004 visitor study which identified the proportion of non-resident visitors to Nova Scotia that visited Lunenburg.

The estimated impact on visitation was developed using a regression analysis which estimated the percentage increase in visitation to Lunenburg attributable to the UNESCO designation. This quantified an estimate of the potential increase in tourism to the area due to UNESCO designation. Survey data was used to develop the average spending per visitor to Grand Pré. By applying this increase in spending to our estimated increase in visitation, we looked to quantify the economic impact a UNESCO designation would have on the local economy around Grand Pré.

The regression analysis, observing a time period covering both before and after the designation at the site, while taking into account other potentially influential variables on tourism, estimated a 1.24% increase in the share of tourists visiting Nova Scotia who go to Lunenburg. This figure was then transformed to a percentage change in visitors to Lunenburg due to UNESCO designation, which was found to be a 6.2% increase. Applying this increase in
visitation at Lunenburg, to Grand Pré, we were able to estimate the increase in
the number of tourists to the site. Survey data provided average per visitor
expenditure figures attributable to Grand Pré to be $68.72. Combining these
elements generated an economic impact assessment of a UNESCO designation
on the local economy encompassing Grand Pré National Park. The estimate
contained two scenarios related to historic visitation figures and forecasted
visitation figures for Grand Pré. The two scenarios were then combined with
high and low estimates for visitor spending to produce four scenarios as shown
in Table

Various policy implications for Grand Pré can be taken away from this study. The most important implication being that the UNESCO designation has the ability to offset, to some degree, the declining tourism industry in the Grand Pré area of Annapolis Valley by attracting visitors. Given the downward trend in tourism to Grand Pré emphasized throughout this paper, a 6.2% increase in tourism could cushion forecasted declines in visitation. The economic impacts associated with this increase in tourism and the spending of visitors could also generate considerable income for local tourism related small businesses in the area.

A UNESCO designation can also act as a basis of advertising for the Site. A UNESCO World Heritage designation is a very recognizable title and can be used to promote visitation to the area on a national and international scale.

On February 17th, 2009, the bid proposal to have Grand Pré designated received a major financial boost as the three levels of the Canadian government committed to contributing CDN$1.3 million to the project. This symbolizes both the significance of the National Historic Site of Grand Pré, as well as the tourism industry to the Nova Scotian economy. In committing this amount to the bid proposal, the government has also recognized the potential impacts of a
UNESCO designation and the importance of rural tourism in Nova Scotia. The government wants to take the opportunity to try and improve the attractiveness of the Grand Pré area and the Annapolis Valley to tourists. An effective advertising campaign featuring the UNESCO designation may allow Grand Pré to return to its historic average (1998-2008) for visitors. Doing so, would mean about 4,000 more visitors and could provide an injection of over $300,000 per year into the local economy. In conclusion, the UNESCO designation at the National Historic Site of Grand Pré could have considerable positive economic impacts for the Site and local economy for years to come.

Appendices: Introduction and Hi-Lights

This section of the study contains appendices A-D. These appendices provide a brief overview of some key questions regarding visitors (defined as those living more than a 30 minute drive away) to attractions in Grand-Pré as follows:

Appendix A: Grand-Pré National Park
Appendix B: Grand-Pré Winery
Appendix C: Evangeline Beach
Appendix A: Evangeline Restaurant

Appendix A is based on 257 completed questionnaires and contains more details relative to the others. Appendices B, C and D are based on significantly fewer questionnaires and contain less detail.

**Hi-Lites Appendix A: Grand-Pré National Park Surveys (257 respondents)**

- 70 percent of international visitors indicated visiting Grand-Pré National Park was the primary purpose of their visit to this area.
- Approximately 36 percent of Non-Nova Scotia Canadian visitors indicated visiting Grand-Pré National Park was the primary purpose of their visit to this area.
- 36% of international visitors found out about Grand-Pré National Park via “Guides/Books,” followed by “Family/Friends” and ‘Tour Company” at 21%.
- 86% of New Brunswick (NB)/Price Edward Island (PEI) visitors found out via “Family/Friends”
- 33% of Non-Maritime Canadian visitors found out via “Family/Friends,” followed by “Guides/Books,” (26%) and “Road Signs” at (16%).
- 70% of visitors indicated they visited/planned on visiting other attractions in the area, ranging from 80% for international visitors to 47% for NB/PEI visitors.
- Winery, Beach and Restaurant were the three most common attractions comprising 34%, 29% and 9% respectively of the responses.
- Common themes related to “What Amenities would enhance Visit?” included; better signage, more places to eat/shop.

**Hi-Lites Appendix B: Grand-Pré Winery Surveys (34 respondents)**

- 40% of respondents indicated that visiting the winery was the primary purpose for their visit to the area.
- 55% of visitors who indicated they visited/planned to visit other attractions in the local area indicated Grand-Pré National Park, followed by “visiting other wineries” with 17%.
- Common responses related to “What Amenities would enhance Visit?” included; “more wineries,” “winery tours,” “children attraction,” “picnic areas.”
Hi-Lites Appendix C: Evangeline Beach Surveys (37 respondents)

- Only 10% of respondents indicated that visiting “the Beach” was the primary purpose for their visit to the area.
- 50% of visitors who indicated they visited/planned to visit other attractions in the local area, indicated Grand-Pré National Park, followed by Grand-Pré Winery (23%) and Evangeline Restaurant (19%)
- Common themes related to “What Amenities would enhance Visit?” included; “easier access to beach” (stairs/boardwalk), “washroom facilities at beach,” “more picnic areas” and “restaurant at beach.”

Hi-Lites Appendix D: Evangeline Restaurant Surveys (51 respondents)

- 20% of respondents indicated that visiting “the Restaurant” was the primary purpose for their visit to the area.
- About 50% of respondents indicated it was their first visit to the restaurant.
- 42% of visitors who indicated they visited/planned to visit other attractions in the local area, indicated Grand-Pré National Park, followed by Grand-Pré Winery at 30%.
- Common responses related to “What Amenities would enhance Visit?” included; “more picnic areas, “more dining options,” “better signage,” “bigger wine store/more wineries/more wine events.”

GRAND-PRé
NATIONAL HISTORIC SITE OF CANADA

State of the Site Report

2009
State of the Site Report (SoSR)
Grand-Pré National Historic Site of Canada

This report was produced with the assistance of a number of Parks Canada staff:

Géraldine Arsenault, Manager, Visitor Experience, National Historic Sites, Northern New Brunswick Field Unit
Alain Boudreau, Social Scientist, Atlantic Service Centre
Rob Ferguson, Archaeologist, Atlantic Service Centre
Wayne Kerr, Senior Interpretation Specialist, Northern New Brunswick Field Unit
Ronnie-Gilles LeBlanc, Historian, Atlantic Service Centre
Éric Tremblay, Ecologist, Northern New Brunswick Field Unit

Principal team members and authors:

Claude DeGrâce, Manager, External Relations, Northern New Brunswick Field Unit
John Johnston, Historian, Atlantic Service Centre
Christophe Rivet, Planner, Atlantic Service Centre
Robert Sheldon, Field Unit Superintendent, Northern New Brunswick Field Unit

Executive Summary

This State of the Site Report (SoSR) provides a synopsis of the current condition of Grand-Pré National Historic Site of Canada (NHSC) and assesses performance in meeting established objectives for indicators associated with Parks Canada Agency’s mandate.

This is the first SoSR for Grand-Pré NHSC which will review the accomplishments of the current management plan tabled in 2001, and will serve as a tool for informed decision-making in the planning review with respect to issues associated with protection, visitor experience and public education. Since the completion of the previous management plan, Parks Canada Agency (PCA) has been in transition. Due to the timing of the changes being carried out in the Agency and the timing of the preparation of this SoSR, this report was prepared using the best available information while trying to incorporate elements of the Agency’s new direction. During the next reporting cycle, the integration of Parks Canada’s mandate elements related to visitor experience, public education and protection will be better reflected.

The 1999 State of the Protected Heritage Areas Report was used as the benchmark to assess changes in commemorative integrity.

The state of visitor experience, public outreach education, stakeholder and partner engagement and Aboriginal relations was assessed based on corporate targets where available. The benchmark documents for visitor experience are the 2000 and 2007 Visitor Information Program visitor surveys. No rating is available for these elements.

### SUMMARY - STATE OF THE SITE

<table>
<thead>
<tr>
<th>Indicator</th>
<th>Measure</th>
<th>Target</th>
<th>1999 rating</th>
<th>2007 rating</th>
<th>Since 2001</th>
<th>Highlights</th>
</tr>
</thead>
<tbody>
<tr>
<td><strong>Condition and threats to cultural and natural resources</strong></td>
<td>Improve elements of commemorative integrity that are rated as poor</td>
<td>☑️ G (Good)</td>
<td>☑️ Y+ (Fair/Good)</td>
<td></td>
<td></td>
<td>• The 2007 commemorative integrity is rated at 7 out of 10;  • The overall condition of cultural resources at Grand-Pré NHSC is fair for archaeological resources to good for all other resources, a slight deterioration since the last evaluation in 1999. It is meeting corporate plan targets;  • The main threats to the site come from vegetation encroachment and potential off-site development;  • With the construction of the visitor reception and interpretation centre, the site has improved its ability to convey site messages;  • Opportunities outside of the visitor reception and interpretation centre are available for on-site communication of the site’s key messages particularly with regards to conveying all the reasons for designation as a national historic site - such as an understanding of the Acadian settlement and the archaeological resources that speak to it on the site;  • The inventory of the site’s cultural resources is not up-to-date, however decision-making on activities at the site have been respectful of the presence or potential presence of cultural resources;  • The inventory of natural resources has been completed;  • There are no species at risk on the site;</td>
</tr>

<td></td>
<td></td>
<td></td>
</tr>
</tbody>
</table>

- The mustard plant, an invasive species, has been located on-site. Parks Canada is involved with local stakeholders in eradicating the species.

### State of Visitor Experience

<table>
<thead>
<tr>
<th>Indicator</th>
<th>Measure</th>
<th>Target</th>
<th>2000 Assessment</th>
<th>2007 Assessment</th>
<th>Since 2001</th>
<th>Highlights</th>
</tr>
</thead>
<tbody>
<tr>
<td>Heritage Presentation</td>
<td>85% overall satisfied, 50% very satisfied with on-site programming, 75% of visitors understand key messages</td>
<td>N/R</td>
<td>⬆️ Meets corporate targets</td>
<td></td>
<td></td>
<td>Overall state of visitor experience is positive. The 2007 VIP revealed that an overwhelming majority of visitors are satisfied to very satisfied with the site’s interpretive programs, visitor services and facilities, meeting Corporate Plan targets.</td>
</tr>
</tbody>
</table>

### Visitor Services

<table>
<thead>
<tr>
<th>Indicator</th>
<th>Measure</th>
<th>Target</th>
<th>2000 Assessment</th>
<th>2007 Assessment</th>
<th>Since 2001</th>
<th>Highlights</th>
</tr>
</thead>
<tbody>
<tr>
<td>Visitor Services</td>
<td>Quality Visitor Services achieve 85% overall satisfaction and exceed the expectations of 1 of every 2 visitors.</td>
<td>N/R</td>
<td>⬆️ Meets corporate targets</td>
<td></td>
<td></td>
<td>The building of a new visitor reception and interpretation centre in 2003 has played a key role in significantly improving visitors’ satisfaction with interpretive programming, site services and facilities. Visitation has decreased significantly in the past decade. A higher percentage of Canadians from outside Atlantic Canada arrived in 2007 as compared to 2000. Seniors and adults make up the overwhelming majority of visitors. Trip planning was noted by visitors as being an area for improvement.</td>
</tr>
</tbody>
</table>

### Number of Visitors

</table>

- The relationship between the Mi’kmaq and Parks Canada is positive and growing.

N/A – not available  N/R – not reported
Successes include:

- the development of a visitor reception and interpretation centre in partnership with the Acadian community;
- the high level of satisfaction of visitors with their visit overall and overall condition of the facilities (98%); The greater amount of time on average spent at the site (119 minutes) by visitors;
- the good condition of buildings, landscapes and objects;
- the unveiling of the Dispersal of the Acadians National Historic Event plaque in 2005;
- the 250th anniversary of the Deportation was celebrated on-site with a number of stakeholders and partners in 2005;
- the moving of the Deportation Cross in 2005;
- working with the Planter community at Horton Landing;
- the designation of the Grand-Pré Rural Historic District National Historic Site of Canada in 2004;
- hosting the 3rd Congrès Mondial Acadien event in 2004 at Grand-Pre NHSC which attracted over 15,000 people to the site; and
- the partnership created with a number of stakeholders to develop a UNESCO nomination for the Grand Pré area.

Challenges include:

- the maintenance of sections of the property that may affect cultural resources and improvement of cultural resource inventories;
- the increased land base;
- the mustard plant infestation;
- declining visitation; and
- trip planning.
1.0 Introduction

1.1 Purpose of the State of the Site Report (SoSR)

The State of the Site Report (SoSR) addresses all aspects of Parks Canada’s mandate: protection, visitor experience and public education.

The report:
- portrays the state of the site regarding all aspects of the Agency’s mandate;
- reports on the activities and results of actions that have taken place to maintain or improve that state;
- serves as a tool for informed decision-making with respect to issues associated with each of the mandate elements and their interconnection;
- reports back to the CEO on the state of the national historic site every five years; and
- communicates the state of the site to a wide public audience.

1.2 Context for Grand-Pré NHSC

Grand-Pré NHSC was transferred by the Dominion Atlantic Railway to the federal government in 1957 and designated a national historic site of Canada in 1961. The current management plan dates from 2001 and is the third plan since the Government of Canada took over the site’s administration.

The Commemorative Integrity Statement (CIS) was developed in 1997. In 1999, Parks Canada acquired new property, almost doubling the size of the national historic site.

As a result of the acquisition of new property and in the context of the five-year review of the existing management plan, this State of the Site Report (SoSR) reviews the accomplishments of the current management plan cycle. This is the first SoSR for Grand-Pré NHSC.

1.3 Reasons for Designation

The reasons for designation, as derived from the 1982 HSMBC minutes which clarifies those reasons are that:
- It was a centre of Acadian activity from 1682 to 1755;
- It commemorates the Deportation of the Acadians, which occurred at Grand-Pré in 1755;
- It commemorates the strong attachment that remains to this day among Acadians throughout the world to this area, the heart of their ancestral homeland and symbol of the ties which unite them.

1.4 Description of Designated Place

The designated place consists of the entire property administered by Parks Canada surrounded by cornfields, orchards and rural residential properties. That property is divided in half by a rail line that runs east-west through the site. The designated place is circumscribed on the north side by a gravel road along the marsh. Farmers’ fields and orchards form the boundary along the entire length of its southern and western edges. The Grand-Pré Road forms the eastern boundary (cf. Appendix 1 – Map). A portion of the property, which includes parking space and the former visitor centre, is located on the east side of Grand-Pré Road and is surrounded by fields.

The designated place includes the commemorative garden designed by Percy Nobbs, the Memorial Church, the bronze statue of Evangeline that reflected the site’s importance as a symbol of Acadian
identity, archaeological resources (including three known Acadian cellars and a burial ground), a visitor reception and interpretation centre built in 2003, a parking lot for that centre, and two HSMBC plaques – one for Grand-Pré Rural Historic District National Historic Site of Canada, designated in 1995, and the other for the Dispersal of the Acadians National Historic Event, designated in 1955. Though the historic village is found throughout the site, there are two concentrated programming areas where the interpretation of Grand-Pré NHSC currently occurs – the new visitor reception and interpretation centre and the 1920’s Memorial Church and memorial gardens.

1.5 **Methodology and Rating (see Appendix 4 for details)**

The objective of this State of the Site Report is to determine the Agency’s progress in fulfilling its mandate. To achieve this, a variety of tools are used to evaluate the current state of the site and compare it to the goals set for the site.

In evaluating the current state of the site, Parks Canada uses tools that look at the condition of cultural resources, the effectiveness of the communication, selected management practices, visitor satisfaction of the site’s services, and visitation. All the evaluations for Grand-Pré NHSC were carried out in 2007.

The goals for the site are set in the management plan and the Agency’s Corporate Plan at the time of the tabling of the management plan. The goals used in this report were set in the 2001 Management Plan and the 2003-04 Corporate Plan.

The rating is the result of a multi-disciplinary team review.

![Fig. 1: Monitoring Timeline for Key Components of the State of Grand-Pré NHSC: on top of the arrow are the documents used as benchmarks for evaluations and those that identify targets, at the bottom are the tools used to evaluate progress.](image)

1.6 **Indicators and Targets**

As this is the first State of the Site Report for Grand-Pré NHSC, the indicators that are used are the ones relating to the states of resources (which for national historic sites refer to Commemorative Integrity), visitor experience, public outreach education, stakeholder and partner engagement, and Aboriginal relations.
Sections such as Aboriginal relations, public outreach education and stakeholder and partner engagement information is presented in a factual manner, focussing on describing actions as they relate to overall Agency mandate and objectives set in the current management plan.

Targets are available for Commemorative Integrity, Visitation, Heritage Presentation, and Visitor Services. These were identified in the Agency’s 2003-04 and 2004-05 Corporate Plans which were in effect at the time of the tabling of the 2001 Management Plan.

For Heritage Presentation these were:
- 85% overall satisfied, 50% very satisfied with on-site programming.
- Visitations to targeted national historic sites increased by 10%.
- 75% of visitors understand key messages.

For Visitor Services these were:
- Quality Visitor Services achieve 85% overall satisfaction and exceed the expectations of 1 of every 2 visitors.

Performance expectations for commemorative integrity were indicated in the Agency’s 2004-05 Corporate plan as:
- Improve elements of commemorative integrity that are rated as poor.

1.7 Reliability of Data

The data provided is the most up-to-date available for the site. The CI evaluation, VE assessment and VIP were completed in 2007. The management plan was tabled in Parliament in 2001.

The CI evaluation only assessed the portion of the property owned and administered by Parks Canada prior to the acquisition of new lands in 1999. The rest of the property consists mainly of fields containing significant archaeological features.

1.8 Key Elements of the Vision Statement and Outline of the Key Issues Identified in the Previous Planning Cycle

The key elements of the vision statement include:
- Parks Canada is recognized for its stewardship of Grand-Pré NHSC and for having ensured its commemorative integrity in partnership with its valued stakeholders;
- Grand-Pré NHSC will be known as a significant heritage area where Canadians and others can learn and understand historic and contemporary Acadie;
- the national historic site will demonstrate a greater ability to serve its clients by providing more efficient and improved interpretation and visitor services;
- the agreement for the operation of Grand-Pré NHSC will be recognized as a model of cooperative work between Parks Canada and Canada’s Acadian community; and
- the site will be appreciated for its contribution to heritage tourism.

Some of the key issues identified in the previous planning cycle, include:
- the visitor facilities which were considered inadequate for visitor experience and public understanding;
- the need to ensure that Acadian themes presented at Grand-Pré NHSC, St. Croix Island International Historic Site, and six other national historic sites in Atlantic Canada complement each other; and
- maintaining the grounds and their appearance.
2.0 Evaluation of the State of the Site

2.1 State of Resources (Commemorative Integrity)

The evaluation of the condition and threats to resources considers both cultural and natural resources. The commemorative integrity at Grand-Pré NHSC is rated at seven out of 10.

It is Parks Canada’s primary goal to ensure commemorative integrity at all national historic sites. Commemorative integrity describes the health and wholeness of a national historic site. The site possesses CI when: a) the resources directly related to the reasons for designation are not impaired or under threat; b) the reasons for designation are effectively communicated to the public; and c) the site’s heritage values (including those not related to the reasons for designation as a national historic site) are respected in all decisions and actions affecting the site.

</tbody>
</table>

2.1.1 Condition and Threats to Cultural and Natural Resources

The overall condition of cultural resources at Grand-Pré NHSC is rated „Yellow +” indicating minor deficiencies that will impair the site’s commemorative integrity. The condition of most cultural resources was rated as good with the exception of archaeological sites, which were identified as being in fair condition. That rating was achieved because of the archaeological resources located in the „triangular property”, where vegetation encroachment may impact potential and existing archaeological resources. (cf Fig. 2 Summary Table of Resource Condition)
The notable threats identified for Grand-Pré NHSC, which were deemed to have a moderate to high immediacy and impact, were both from natural processes and human actions.

Vegetation infestation and higher tides were identified as the two natural processes that may have an impact. The immediacy of the impact of vegetation encroachment was rated as moderate as the triangular property is the key area that is being impacted with a potential for high impact if maintenance is not resumed and the situation monitored. The main impact is on archaeological resources and views on the dykelands.

The main concerns related to human actions come from the possibility of development that would be incompatible with the site’s historic values. The immediacy is moderate as currently there are proposals underway, but their impact is deemed to be low since they are not in the immediate vicinity of the site.

The condition and threat to cultural resources were assessed for the portion of the site administered by Parks Canada prior to the acquisition of new properties in 1999.

The 1999 State of the Protected Heritage Area Report reported that buildings and structures, most notably the Memorial Church, Evangeline statue and the well, were deemed to be in good condition, an improvement from the fair condition noted in the 1997 State of the Parks Report. This followed the stabilization and repointing work performed on these structures. The 2007 Commemorative Integrity Evaluation confirms that their condition is good, this as a result of conservation actions and ongoing maintenance.

Also in the 1999 report, the condition of the archaeological sites was deemed to be good. The site inventory at the time was not complete, but the cultural resource management inventory of the known sites was complete. The 1997 report indicated that curatorial objects located on-site were overall good with 11% of those rated in poor condition, mainly referring to the blacksmith’s tools, a condition that was maintained in the 1999 assessment. The 2007 CI evaluation found that the

Fig. 2: Summary Table of Resource Condition (from the 2007 CI evaluation). * See Appendix 4: Rating guide: 1) Commemorative Integrity Evaluation
condition of archaeological resources face challenges as a result of vegetation encroachment. Collections are now deemed to be in good condition as a result of conservation work having been completed.

The state of commemorative integrity fulfills the Agency’s performance measure set in the 2003-2004 Corporate Plan to improve elements of CI rated as poor.

The condition of natural resources was assessed through the CI evaluation and a survey of plant species conducted in 2007. The survey identified the presence of the garlic mustard plant, an invasive species that has the potential of negatively impacting vegetation on and off-site. Work is underway with partners to contribute to its eradication in the area.

Also to be noted is the encroachment on the site by low shrubbery, in the triangular property. This is mainly due to reduced vegetation maintenance. The 2007 survey did not identify species of particular interest. The Commemorative Integrity evaluation identified this as a possible issue due to the potential impact of roots on the archaeological resources, and to the potential impact on the views towards the dykelands which limit the visitor's appreciation of the site’s relationship with its context.

A species at risk inventory was conducted in 2007 which did not identify any species of concern on the site.

2.1.2 Effectiveness of Communication of Messages

The overall assessment of the effectiveness of communication of messages at Grand-Pré NHSC was rated as 'yellow', which indicates the effectiveness is fair and requires improvement (cf Fig. 3 Summary Table of Effectiveness of Communications).

Both the CI evaluation and the VE assessment have noted relatively good results related to the means used for communicating, as the messages are diversified and take into account the interests of various audiences. The new visitor reception and interpretation centre, built in 2003, has had a significant positive effect and has supported the communication of messages. Both the multimedia experience and the exhibit are effective tools to communicate the site’s historic values. The VE assessment suggests that an emphasis on non-personal interpretation on-site should be considered.

Challenges remain concerning the communication of the reasons for designation and the communication of messages not related to the reasons for designation outside of the visitor reception and interpretation centre. The link between the reasons for designation, such as Grand-Pré NHSC being a centre of Acadian activity between 1682 and 1755, and the cultural resources related to those reasons is limited on the grounds, but communicated effectively in the exhibit and the multimedia presentation.

However, the understanding by visitors of these reasons was partially confirmed by the VIP. For example, to the question concerning Grand-Pré NHSC as a centre of Acadian activity, 84% of visitors identified the correct answer. As most visitors access the grounds after having viewed the multimedia presentation and the exhibit, this number seems to indicate the communication of that message at the visitor reception and interpretation centre is effective. This highlights the key role that the visitor reception and interpretation centre plays in communicating the messages, an opportunity that is limited outside of the regular seasonal hours. Overall, the results concerning the understanding and knowledge of the site were deemed to achieve the Agency's performance indicators as 77% of all respondents and 78% of all participants in site activities provided the correct answer to the site knowledge questionnaire.
2.1.3 Selected Management Practices

The 2007 CI evaluation indicated that overall there were opportunities for improvement in the practices. The principles and practices of cultural resource management were generally followed and there is a solid ability within the Field Unit to make decisions based on these. There were, however, gaps with the inventory of cultural resources, both of in-situ and moveable resources. The 1997 State of the Park Report, later echoed in the 1999 State of the Protected Heritage Areas Report, had identified this issue and it remains unchanged. The CI evaluation also identified a lack of up-to-date records, and challenges in implementing a maintenance program in all areas of the site which lead to the overall rating of selected management practices as ‘yellow’ or fair (cf. Fig. 4 Summary Table of Selected Management Practices). The 2001 management plan identified the objective to develop a conservation plan. This is currently being developed.
2.2 States of Visitor Experience, Public Outreach Education, and Stakeholder and Partner Engagement

Connection to place is an essential element of the Parks Canada strategic outcome. Connection to place is achieved through meaningful visits and can lead to a sense of ownership and stewardship of the place. In order to facilitate connection to place, we work with partners to enhance visitor experience opportunities. The 2003-2004 Corporate Plan highlights as a priority the engagement of Canadians, so that they feel a strong connection to Canada’s protected heritage sites, bringing with it a strong sense of ownership and pride (2003-2004 Corporate Plan). Although the connection is strong with some groups, other groups such as the local community, have not used the site as much since the introduction of entry fees.

Recent organizational changes to Parks Canada’s corporate direction have resulted in a distinction between Agency program activities related to public outreach education and stakeholder and partner engagement from visitor experience. New reporting requirements for visitor experience, public outreach education, and stakeholder and partner engagement were not fully developed to meet the new corporate direction at the time of writing this report. The next reporting cycle will provide a more detailed assessment of visitor experience, public outreach education, and stakeholder and partner engagement in line with the new corporate direction and reporting requirements.

2.2.1 Visitor Experience: Heritage Presentation, Visitor Services, and Visitation

Visitor experience covers aspects of heritage presentation and visitor services. It includes such aspects as personal and non-personal interpretation, diversity of service offer, and quality of facilities. The heritage presentation and visitor services are delivered on contract by the Société Promotion Grand-Pré. Parks Canada has no staff on-site delivering heritage presentation or visitor services. Since the 2000 VIP, the site has experienced some significant changes in heritage presentation, visitor services, and visitation.
The main change comes from the building of a visitor reception and interpretation centre in 2003, which hosts a variety of interpretation media, including a multimedia presentation and an exhibit. The number of activities has also increased, resulting in visitors spending significantly more time at the site. Heritage presentation is principally non-personal, and focuses in the multimedia presentation, the exhibit and the grounds. Visitors in the 2007 VIP have indicated a desire for additional activities, mentioning in particular Acadian focused activities and displays (27%), interactive activities (21%), and costumed interpreters (20%). The 2007 VIP also revealed that visitors are overwhelmingly satisfied to very satisfied with the site’s interpretive program, services, and facilities (cf. Fig. 5 Summary table of visitor experience and visitation). These figures meet Corporate Plan targets.

Since 2000, visitation in Nova Scotia has been hovering around 2.1 million visitors. Visitation to national historic sites in Atlantic Canada, and Nova Scotia is no exception, has been steadily declining from approximately 1.6 M to 1.2 M visitors. Grand-Pré NHSC has experienced a similar trend, with about 62,000 visitors in 2000 dropping to a current figure of 30,535. A spike was experienced in 2004 when the site hosted the Congrès mondial acadien. Visitation has steadily declined since the first record in 1998. A number of factors need to be taken into account when reading this number including the impact of the introduction of fees to access the site in the late 1990s, which reduced local use of the place, and the way visitation is accounted for. Nevertheless, independently from these considerations, the site has been experiencing a significant visitation decline in the past decade.

Another notable change in visitation comes from the origin of the largest group of visitors. In 2000, 40% of visitors came from the United States, while in 2007 the majority came from Canada, with the largest group coming from outside Atlantic Canada (35%). Seniors and adults are also the overwhelming majority of visitor age groups (85%), with 62% of visitors being over 50. The 2007 VIP also noted that 20% of visitors identified themselves as Acadians or Cajuns. This, proportionally, is an increase from the 2000 VIP which identified only 12% of visitors as being of Acadian descent. However, in overall numbers, this represents a decrease in the number of visitors of Acadian descent, from around 7,400 in 2000 to 5,500 in 2007.

During the summer of 2007, a Visitor Origin Monitoring Program, part of the national initiative, was also conducted at Grand-Pré NHSC, in order to learn more about the site’s visitor profile. From this study, it was determined that 66% of visitors to Grand-Pré NHSC are Canadian, while approximately 28% are from the United States. From the Canadian visitors, 35% came from Nova Scotia and a greater portion came from Ontario and Québec (38%). These numbers are similar to the VIP figures.

Access to the site is exclusively by road, mainly coming from Halifax on the way to the Annapolis Valley. The majority of visitors come in individual vehicles (97%), with markedly reduced visitation from tour operators. This reflects the trend in tourism in Nova Scotia. There was a significant increase of repeat visitation as in 2007, 32% were repeat visitors, compared to the 19% noted in 1997. Trip planning was identified by visitors as being a challenge, as only 74% were satisfied with that aspect.

When asked what other activities visitor engage in, the 2007 VIP outlined that 72% visit towns in the area, 62% visit other historic sites, and 61% scenic areas. A majority had visited other historic sites operated by Parks Canada, including the Halifax Citadel (58%), Port Royal (52%), Fort Anne (44%) and the Fortress of Louisbourg (39%). Fort Beauséjour – Fort Cumberland (16%), Melanson Settlement (12%) and Fort Edward (11%), which also have direct historical ties with Grand-Pré NHSC, were significantly less visited and were not planned to be visited. Most visitors (36%) considered the multimedia experience to be the highlight of their visit, followed by the site’s history and place as a learning experience (20%). Finally, 35% of visitors indicated that site improvements, such as directions and accessibility, and 22% more interpretation and hands-on activities, would enhance their visitor experience. The VE assessment also identified these aspects.
La Société Promotion Grand-Pré, which is under contract to provide visitor services and heritage presentation for the site, conducted a Market Development Study in 2007. The study identified product and market opportunities and recommended a marketing and product development action plan. Potential markets for growth identified in this study were Maritime Acadians, group tours, van tours (smaller groups or special interest groups), cruise ship passengers, Canadian tourists already visiting Nova Scotia and other American and international tourists already visiting Nova Scotia. Programming enhancement was also strongly suggested, such as offering scheduled guided tours for groups, on-site demonstrations, costumed staff, wine, cuisine, and artisan displays. It was also proposed in this study to hire a marketing coordinator, increase interpretation staff for new programming and increase marketing.

Parks Canada and the Société Promotion Grand-Pré have partnered with St. Mary’s University’s department of anthropology since 2001 to host the department’s archaeological field school at Grand-Pré NHSC. Although primarily focused on offering field experience to student archaeologists, the program attracts attention from visitors and the media.

Grand-Pré National Historic Site was also included in the National Historic Sites Marketing Initiative (Phase II) and was awarded $75,000 to develop a long-term marketing plan for the site, work on new product development and implement sustainable actions in efforts to increase visitation to the site. Work on this initiative is ongoing and will address recommendations identified in the Market Development Study conducted by the Société Promotion Grand-Pré in 2007 as well as other new initiatives identified through work sessions with the Société and Parks Canada.

N/R – not reported

Fig. 5: Summary Table of Visitor Experience and Visitation. * See Appendix 4: Rating Guide: 3) Visitor Experience

The relatively new focus of visitor experience for Parks Canada has required a shift from emphasizing the provision of services, facilities and programs in a way that focuses principally on Parks Canada’s goals and objectives, to one where visitor motivations, expectations and needs are met and accommodated. This entails proactively addressing all aspects of the trip cycle from pre-visit to post-engagement and ensuring that service delivery is integrated across all functions. The Explorer Quotient has not been incorporated into programming for the Grand-Pré NHSC. However the field unit will review options to introduce this in to the next planning cycle and look at enhancing the visitor experience offer using a market-based approach.

2.2.2 Public Outreach Education

There are no programs offered by the site that can be delivered off-site and the website has minimal content about messages and resources.
The site continues to market itself to visitors of Acadian descent and those who have an interest in Acadian culture. While the site appeals to all Canadians as the numbers demonstrate, certain sectors of the population, such as recent immigrant families and youths, seem to be underrepresented.

Parks Canada archaeologists and St. Mary’s University’s field school director have given numerous talks in the local community, at conferences, and interviews with the media on the results of the archaeological work which have effectively provided Grand-Pré NHSC with additional exposure. The archaeological field school has provided a limited contribution to Parks Canada’s cultural resource management mandate.

2.2.3 Stakeholder and Partner Engagement

Maintaining and nurturing strong stakeholder relations is an important component of the management of Grand-Pré NHSC. The key stakeholders are the Acadian community and the local residents of Grand Pré.

The 2001 Management Plan stated that Parks Canada will continue to cooperate with the Fédération acadienne de la Nouvelle-Écosse, la Société Nationale de l’Acadie and the other Acadian organisations of Nova Scotia and Atlantic Canada. This was achieved through maintaining an ongoing relationship with the Comité consultatif acadien, the Société Promotion Grand-Pré, and Les Amis de Grand-Pré.

The Comité consultatif acadien was created in 1985 to assist Parks Canada in activities pertaining to research and interpretation of Acadian history. It includes representatives from the Acadian community and are named by the Director General East, on the recommendation of the Société Nationale de l’Acadie and the provincial Acadian associations. The Comité has been active over the years in advising Parks Canada on issues relating to the management of the national historic sites that have an Acadian theme. There are annual meetings.

Two groups representing Acadian interests, the Société Nationale de l'Acadie (SNA) and the Fédération acadienne de la Nouvelle-Écosse (FANE), in 1997 created la Société Promotion Grand-Pré (SPGP), a not-for-profit organization that includes representatives from the SNA and the FANE, as well as local residents. Since 1997, the SPGP has been providing heritage presentation and client services at the site through a contract arrangement with Parks Canada. The SPGP plays a key role in promoting the site and in seeking resources from third parties, which are invested at Grand-Pré NHSC.

Les Amis de Grand-Pré is a community association that has been in existence since 1990, and was formally incorporated as a society in 1993. Primarily made up of volunteers who live in the Grand Pré area who are linked by a shared interest in Acadian history, culture and genealogy, the group is directly involved with Grand-Pré National Historic Site. Les Amis sponsor various programs and activities at the site, including events on the official day commemorating the Deportation, la Fête nationale des Acadiens, and cultural activities, which gives visitors an opportunity to experience local activities and engages the local community.

This positive relationship between the Acadian community and Parks Canada is further demonstrated by events and activities important to the Acadian community at the national historic site. Most notable are the hosting of the Congrès mondial acadien in 2004 and the 250th anniversary of the Deportation in 2005, which together attracted large numbers of visitors to events held at Grand-Pré NHSC from Acadian communities throughout the world. The 2007 VIP confirmed that Grand-Pré NHSC is still attracting an important Acadian audience, with 20% of visitors self-identifying as Acadian or Cajun.
A number of successful activities have continued to build on existing partnerships that have celebrated and researched other events and places of national historic significance. These activities include: the unveiling of the Dispersal of the Acadians National Historic Event plaque (2005); the celebration of the 250th anniversary of the Deportation on-site with a number of stakeholders and partners (2005); the successful moving the Deportation Cross (2005) closer to the original location of the Deportation; working with the Planter community at Horton Landing; the designation and unveiling the plaque for the Grand-Pré Rural Historic District National Historic Site of Canada in 2004; and the partnership created with a number of stakeholders to develop a UNESCO nomination for the Grand Pré area. Parks Canada has also been actively involved to make such events as the 3rd Congrès Mondial Acadien (2004) possible that has strengthen and supported the Acadian community. The event was hosted at Grand-Pré NHSC and attracted over 15,000 people to the site.

The relationship with the local residents is overall positive, in particular with heritage associations and marketing bodies. The national historic site is recognized as a place of reference for heritage preservation, which is illustrated by events such as the one where Parks Canada was contacted to assist in the preservation of an “aboiteau” discovered in the dykelands. That collaboration with the community is also demonstrated with addressing “mutually compatible objectives”, such as the resolution of the domestic fly infestation issue, the preservation of viewplanes from the site and land use planning in general, and promoting heritage tourism, marketing and special events (2001 Management Plan, p.22). PCA continues to support the local community by providing a venue to host a number of local activities at the site. These actions have been carried out successfully.

2.3 State of Aboriginal Relations

<table>
<thead>
<tr>
<th>Highlights</th>
</tr>
</thead>
<tbody>
<tr>
<td>- The relationship between the Mi'kmaq and Parks Canada is positive and growing.</td>
</tr>
</tbody>
</table>

Due to their long history in the Grand Pré area, the Mi'kmaq have a vested interest in management actions undertaken at the national historic site. By virtue of this fact, the continued positive relations between the site and the Mi'kmaq are a priority in site management.

The Mi'kmaq have been instrumental in developing the visitor reception and interpretation centre exhibits and multimedia presentation in a way that reflected their perspective, lending their voices to the accounts from their ancestors that interacted with the Acadians and witnessed the Deportation. This collaboration between Parks Canada and the Mi'kmaq was fruitful in delivering a meaningful experience for visitors and in building a positive relationship.

The Mi'kmaq were invited by Parks Canada and the SPGP to the Congrès mondial acadien in 2004, and to the commemoration of the Deportation in 2005. Their participation was welcomed and enriching, further strengthening the positive relationship between the organisations.
3.0 Overall Site Assessment: Key Successes, Issues, and Challenges

Grand-Pré NHSC is an iconic site in Nova Scotia and Canada. It is a site of cultural and spiritual importance for the Acadians, with a rich concentration of cultural resources that is evidence to its long history.

The greatest success achieved over the years was Parks Canada’s investment of resources, in partnering with the Acadian community, to develop a visitor reception and interpretation centre transforming the site into a world-class destination. This is clearly demonstrated by the high level of satisfaction from visitors and the greater amount of time on average spent at the site. Stakeholder relations have been front and centre with Parks Canada, and it is an important element in the delivery of services. Parks Canada has also invested resources to improve the condition of cultural resources on the site. The results were tangible as the condition of buildings, landscapes, and objects has been maintained.

Parks Canada assisted the Société Promotion Grand-Pré to market the site. Parks Canada helped the Société obtain third-party funding to carry out a market research study that has helped the Société reach new markets, promote the site and develop new products as well as provided funds for a marketing strategy and capacity-building within its staff.

Challenges remain principally linked to the maintenance of the sections of the properties that may affect cultural resources, such as vegetation encroachment in areas dense in archaeological resources. New challenges at the site include the increased land base, which has doubled since 1999, the invasive mustard plant infestation on the site, improving the cultural resource inventories, and the continuing vegetation encroachment which has hampered the historic viewscapes of the surrounding site and in particular, to the dykelands. Ongoing challenges are associated with declining visitation at national historic sites. Grand-Pré NHSC has seen its visitation drop significantly in the past decade due in part to changing tourism patterns, and the addition of entry fees to the site. Faced with declining revenue, Parks Canada made the decision that the Agency would fund only essential personal visitor services at the site while encouraging the Société Promotion Grand-Pré to access other sources of funding to enhance these services. Visitors have indicated that they would welcome interactive activities and additional personal heritage presentation. Grand-Pré NHSC is one of a few sites that in 2008 that was included in a national marketing strategy pilot to attract new visitors to national historic sites. Visitors also indicated that they would welcome better trip planning information. These issues, as well as changing Canadian demographics, have been the focus of that marketing strategy and the development of new products.

The emphasis of the next management plan for Grand-Pré NHSC will focus on facilitating opportunities for visitor experience to ensure that visitors experience the site in a way that responds to their needs and expectations. Parks Canada will continue to centre its efforts on protecting cultural resources, by integrating them into elements of visitor experiences and educational opportunities. The field unit will build upon its successes with the Acadian community and research organizations. It will continue to engage and enhance its relationships with stakeholders and partners by seeking new opportunities with them and providing opportunities for innovative public outreach education.

The state of Grand-Pré National Historic Site of Canada has improved as a result of Parks Canada’s significant investments in resources and personnel, and the strong and healthy collaboration with stakeholders and the Mi’kmaq.
APPENDIX 1: Map
APPENDIX 2: Bibliography

APPENDIX 3: Glossary

**Commemorative Integrity:**
Commemorative integrity describes the health and wholeness of a national historic site. A national historic site possesses commemorative integrity when: the resources directly related to the reasons for designation as a national historic site are not impaired or under threat; the reasons for designation as a national historic site are effectively communicated to the public; and the site’s heritage values (including those not related to the reasons for designation as a national historic site) are respected in all decisions and actions affecting the site.

**Indicator:**
A nationally or bio-regionally consistent summary reporting statement that provides a comprehensive synopsis of each element of the Agency mandate. It is based on a combination of data, measures and critical success factors that provide a clear message about current conditions and the change since the last measurement.

**Measure:**
Data, surveys or other measurements that present conditions or trends. Measures are components of indicators.

**Target:**
Aim or objective set by managers and to be achieved within a specified time frame.

**Threshold:**
Level of an indicator or measure that represents a good (green), fair (yellow), or poor (red) condition. It represents the point of transition between the three levels of condition on which the Agency reports.
APPENDIX 4: Methodology, Evaluation Tools, and Rating Guide

The methodology applied for this State of the Site Report consists of evaluating the aspects of the management of a national historic site for which we currently have assessment tools and comparing the results to benchmark indicators available.

**Evaluation Tools:**

<table>
<thead>
<tr>
<th>Tools</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>Commemorative Integrity evaluations (CI evaluation):</td>
<td>Assesses the state of the site’s commemorative integrity by looking at the condition of cultural resources, the effectiveness of communication and selected management practices</td>

Table 1: General list of tools and indicators used to assess the state of the national historic site.

The state of resources (commemorative integrity) is assessed based on the results appearing in the 1999 State of the Protected Heritage Areas Report that serve as the benchmark and the 2007 CI evaluation and VE assessment which monitor performance. The 1997 Commemorative Integrity Statement which was used for the 2007 CI evaluation only covers a portion of the national historic site’s current area since in 1999 new properties were acquired by Parks Canada. As a result the assessment of that portion is unavailable.

The state of the natural resources is based on an inventory completed in 2007.

The state of visitor experience is based on the 2007 VE assessment and VIP. The benchmark used was the information provided in the 2000 VIP. The VE Assessment looks at the delivery of activities and services at the site identifying priorities, and the VIP looks at the visitor’s appreciation of the site’s services. The management plan provides the benchmark information and the direction for the management actions.

Currently, there is no tool to report on the state of stakeholder engagement and Aboriginal relations. To assess Aboriginal relations and stakeholder engagement a description of activities is included and assessed based on the management actions included in the 2001 management plan. There is currently no national baseline or targets for public outreach education indicators for awareness, understanding, appreciation and learning.

**Rating Guide**

1) Commemorative Integrity Evaluation

The Commemorative Integrity Evaluation evaluates the overall state of the national historic site’s commemorative integrity on a ten-point scale by evaluating:
The condition and threats to cultural resources;
- The effectiveness of communication;
- Selected management practices.

For each of these measures, a rating is attributed based on the following:

<table>
<thead>
<tr>
<th>Color</th>
<th>Definition</th>
</tr>
</thead>
<tbody>
<tr>
<td><strong>Green</strong></td>
<td>good, effective, or not currently impaired. Any deficiencies are not a threat to the commemorative integrity of the site.</td>
</tr>
<tr>
<td><strong>Yellow</strong></td>
<td>fair or minor to moderate impairment or threat. Requires improvement.</td>
</tr>
<tr>
<td><strong>Red</strong></td>

</tr>
</tbody>
</table>

- **N/A** = not applicable; the question does not apply to this site.
- **N/R** = not rated or not reported on because the information is not available.
- **+ or -** = the actual state is on the high or low borderline side of the colour.
- **1 or 2** = indicates a trend, either improving or deteriorating.

For threats to cultural resources, the following is provided:

<table>
<thead>
<tr>
<th>immediacy</th>
<th>Definition</th>
</tr>
</thead>
<tbody>
<tr>
<td><strong>High</strong></td>
<td>refers to a threat that has a high probability of occurring at the site or its cultural resources within the coming year.</td>
</tr>
<tr>
<td><strong>Medium</strong></td>
<td>refers to a threat that has a high probability of occurring at the site or its cultural resources within the next 3 years.</td>
</tr>
<tr>
<td><strong>Low</strong></td>
<td>refers to a threat which may occur at the site within the next 10 years.</td>
</tr>
</tbody>
</table>

- **Impact** refers to the degree of damage that a particular threat would have on a site or its resources, or on our ability to communicate national historic significance. A wooden building with no fire suppression system, for example, is likely to be highly impaired should a fire take place in it.

- **High** - the threat could result in extensive damage or destruction of the site or resource.
- **Medium** - the threat would impair commemorative integrity but not cause extensive damage or complete devastation.
- **Low** - the impact of the threat is unlikely to have a major effect on commemorative integrity.

---

2) Visitor Experience

Visitor Experience Assessments review the services provided to visitors and when possible their appreciation by them, and determine priorities for action. These priorities are assessed according to a star-system, the higher number of stars indicating a greater level of priority.

In rating visitor experience in this report, the following measures are assessed which are based on Agency commitments and targets included in Corporate Plans:
- Visitor Experience;
- Satisfaction with Interpretive programming;
- Satisfaction with Site Services and Facilities;

The rating simply identifies whether the targets have successfully been reached.

1.0 Introduction

The purpose of this study is to gather information to determine the impacts, both positive and negative, on an area’s economic environment of a UNESCO Heritage Site Designation. The approach for this study was to look at selected comparison areas and attempt to draw inferences for Grand Pré and surrounding communities, particularly in relation to increased economic activity that may result from a Grand Pré designation.

Study methodology consisted of:
- Identification of potential comparison communities, including Lunenburg, NS.
- Literature review of impacts of UNESCO designations and economic development based on the tourism opportunities of heritage and cultural characteristics.
- Interviews and correspondence with comparison communities and knowledgeable researchers and educators on heritage developments.
- Analysis of property values to attempt to determine if a UNESCO Heritage designation has an impact on those values.

2.0 Comparison Communities

In addition to Lunenburg, comparison communities with similar characteristics to Grand Pré and area were sought through a review of the UNESCO World Heritage Site webpage. Countries with similar types of economic systems were targeted. The sites chosen were in Scotland and Ireland, which both have western-style economies and tax regimes. The sites are examples of two extremes. New Lanark, in Scotland, is a refurbished town that has become a tourist destination. The Archaeological Ensemble of the Bend of the Boyne, in Ireland, is a large natural area with three prehistoric sites and is part of the area’s tourist attractions.

Old Town Lunenburg, NS was designated in 1995 and was already a well-known tourist destination at that time. The designation was because it is “…the best surviving example of a planned British colonial settlement in North America.”

Opinions on the impact of the designation are mixed. Some people believe that it has benefited the community through increased economic development around tourism. Others believe that it has led to congestion during the tourist season that reduces residents’ quality of life and enjoyment of their own community, as well as driving property values to a level at which local residents and their families cannot afford to live in the community. Some believe that property taxes have increased as a result of climbing property values and higher tax rates.

1 http://whc.unesco.org/en/list/741
Discussions with Lunenburg municipal authorities indicate that the UNESCO designation may have had a short-term impact on tourism, but the Town was a significant tourism attraction before the designation was awarded. They also stated that:

- Tourism marketing and management have to be planned in advance and ready for roll-out immediately upon announcement of the designation. People are much more mobile now and can explore interesting attractions.
- UNESCO World Heritage Site (WHS) designation attracts tourists who are interested in the uniqueness of the attraction and marketing efforts need to clearly target that type of tourist.
- Potential issues need to be identified and addressed prior to the designation, not after. Municipal and other government authorities need to ensure that zoning and heritage controls are in place when the designation is awarded.
- UNESCO will review the site on a regular basis to ensure that the characteristics that justified the WHS designation remain valid. The working community must be maintained and supported, not just the tourist aspects.

**New Lanark, South Lanarkshire, Scotland** received its UNESCO Heritage designation in 2001 as an example of “…a model for industrial communities that was to spread across the world in the 19th and 20th centuries.”

New Lanark consists of an extensive system of mills, workers’ housing and public buildings that formed a self-contained community. It is located two kilometres from the town of Lanark, 40 kilometres from Glasgow and 56 kilometres from Edinburgh. Its location is not part of a traditional tourist area but its proximity to two major cities supports economic activity based on its heritage attraction.

New Lanark had deteriorated significantly and many buildings were in ruins until the New Lanark Trust was formed in 1974 to spearhead its regeneration. The regeneration strategy focused on housing, tourism and hospitality, commercial property rental, and hydroelectric power to support the community. Subsequently, a visitor centre, hydroelectric plant and textile production mill were refurbished and formed the base of the heritage tourist attraction. A hotel and other types of tourist accommodations (e.g.: housekeeping-style units) opened in 1997 and the most recent development is residential rental housing completed in 2009.

New Lanark has become a self-contained tourist attraction and community based on the efforts of the local community and government support. Hundreds of local people were employed on the restoration in the 1980s. It has become a tourist destination for the area.

Originally there were concerns about coexistence between the business communities of New Lanark and Lanark; however, careful planning addressed the issues to both communities’ satisfaction.

---

3 http://whc.unesco.org/en/list/429
The Archaeological Ensemble of the Bend of the Boyne (Brú na Bóinne), Meath County, Ireland received its WHS designation in 1993 as “… Europe’s largest and most important concentration of prehistoric megalithic art. The monuments there had social, economic, religious and funerary functions.”4 The site’s information centre is located in Donore 50 kilometres north of Dublin and three kilometres south of the historic site of the Battle of the Boyne, which is also a tourist attraction. The site covers approximately 3,300 hectares (33 square kilometres).

Brú na Bóinne became an attraction in the 1960’s and 1970’s as reports of the findings of excavation and conservation efforts became well known5. A guide service was originally established to control tourism impacts on the site; however, visitor numbers increased rapidly and created problems of wear and tear on the monuments, traffic congestion, litter and the need for increased security, parking and toilet facilities increased. Eventually the site was designated as a park by the Irish government and the Brú na Bóinne Visitor Centre opened in 1997 under the authority of the Office of Public Works. The primary purpose of the centre is to manage visitor flows. Visitors enter the site in shuttle buses to reduce traffic congestion in the area. A partial, full-scale replica of the chamber in the Newgrange site was constructed in the visitor centre for those who do not have sufficient time for the full tour.

Originally, the proposed changes to the site caused concern among local people regarding the impact of its conversion to a park on business activities, particularly farming. The government engaged in extensive public consultation before opening the visitor centre to ensure that concerns were aired and the local community was involved in its design and operation. The visitor centre has become an integral part of the community as a focal point for community activities, including Christmas parties for seniors, sports for children, school plays, crafts exhibits, and other community-focused gatherings.

Local residents and their guests are admitted to the site free of charge and recognize that they live in a special area. A concerted effort has been made to emphasize the educational benefits of the area for both local residents and visitors.

The major public concern regarding the WHS designation is that people believe that it has restricted their ability to develop their properties (e.g.: build new houses). However, the restrictions on property development were in place before Brú na Bóinne was developed and received its designation. The restrictions are from the planning regime of the local authorities (i.e.: municipal government), not from the federal designation of the historic site or UNESCO WHS status.

3.0 Factors Influencing UNESCO Impacts

Discussions with heritage impact researchers indicate a UNESCO designation does not by itself create the impact. Demand for certain types of heritage properties or attractions is the true driver and long-term economic impacts usually relate to tourism. The acknowledgement by UNESCO creates awareness that may increase tourism-based demand but the site must have the basic characteristics attractive to visitors in the first place. Many heritage and cultural sites have significant tourism activity without UNESCO WHS recognition.

Economic impacts, both negative and positive, are complex issues and there has not been much research done to assess and measure them. Impacts cannot be effectively controlled by government through regulation; however, negative impacts can be mitigated with careful monitoring and targeted intervention. For example, some tourist areas levy special taxes on tourist accommodations (e.g.: Halifax, NS) that are directed toward supporting increased infrastructure and services that a significant growth in tourist activity requires. This approach requires effective, continuous monitoring to identify issues early before they become problems within the community.

A study conducted for the Lake District World Heritage Project in the United Kingdom indicates that there is not an automatic economic benefit from a UNESCO designation and that increases in tourism are often short-term. The impact reflects the focus of the community and site proponents. Sites that are focused on social and economic impacts and carefully plan for and manage the opportunities see more economic impact than those whose focus is mainly the recognition and maintenance of a cultural or heritage site. UNESCO designation provides another marketing tool.

UNESCO sites that did not previously attract tourists do not normally see an increase in economic activity beyond the impact of employment for site maintenance that is usually supported by some level of government.

4.0 Potential UNESCO Heritage Site Benefits

A United Kingdom (UK) study of the costs and benefits of UNESCO Heritage status from 2007 identified eight types of benefits:

1) **Partnership** – Status increases the level of partnership activity through consultation to prepare the proposal and manage the facility, benefiting local residents and visitors through improved management.

2) **Additional Funding** – Several levels of government and, sometimes, corporate support greater than the individual community can provide on its own are brought

---

to development and maintenance of the site, augmenting local community resources.

3) **Conservation** – Additional funding and increased scrutiny influences the scale and quality of local resources to protect and maintain the heritage site.

4) **Tourism** – Heritage status may provide a “branding” opportunity and increased awareness that can be used in tourist promotions, although the study found that the impact within the UK was mixed.

5) **Regeneration** – In cases where the site has deteriorated significantly, such as New Lanark, UNESCO Heritage status can act as a catalyst for regeneration of the site, although New Lanark completed much of its work prior to designation in 2001.

6) **Civic Pride** – Status is believed to be a mechanism for building local confidence and pride, an important impact identified in the interviews for this study with researchers. Community involvement at all levels of development increases social unity and cohesiveness.

7) **Education and Learning** – Heritage sites are considered an opportunity for use in education depending on the site and involvement of the educational community. They can also become educational experiences for tourists, both local and international. The UK report indicated that, on average, 20% of visitors to the sites were from outside the UK, therefore, they provide significant potential to educate the local population on its heritage.

### 5.0 Potential UNESCO Heritage Site Costs

The UK study focused on readily identifiable costs, including:

1) **Bidding Costs** – These costs include bid co-ordinator costs, whether hired specifically for the position or provided by another organization, partner and consultation time to oversee bid preparation and make decisions, production costs for the document and supporting media (e.g.: photography), and supporting studies on tourism, conservation, etc.

2) **Costs of Producing a Management Plan** – These costs include partner and consultation time and production costs of the document, manuals, etc.

3) **Management Costs** – These costs depend on the type of ownership and characteristics of the site and have a wide range. Sites like New Lanark that are essentially tourism and resident-based heritage communities have significantly higher and more complex management systems and costs than a relatively remote site with little development.

The UK study did not address indirect community costs such as increases in property tax to support added infrastructure, increased property values that improve resident-owner wealth but also raise property tax, or negative impacts on community social structure if development does not include or reflect community values.
Another study from 1998\textsuperscript{8} looked at the impact on the community of St. Jacobs, Ontario of significant tourism development without full involvement of the community from the first. The study concluded that while there had been significant economic growth, 80% of those employed in the tourist-related businesses lived outside the community and that there was substantial public dissatisfaction with the pace and direction of development. St. Jacobs’s location places it in a different situation than the comparison communities or Grand Pré area. It is close to densely populated areas of Ontario (Kitchener-Waterloo, Guelph) and is only an hour from the outskirts of Metropolitan Toronto. Many residents of the cities in the area have moved closer to St. Jacobs into new housing developments, creating easier opportunities for visiting the community. Its development has been mainly around specialty retail businesses rather than maintenance of the historic community’s Mennonite background. While Lunenburg and Grand Pré are influenced by Halifax Regional Municipality, the population pressures are nowhere near as great as those on St. Jacobs.

6.0 Business Impacts

Business impacts can be positive or negative. Some businesses will react to opportunities while others may be replaced by larger or more competitive businesses drawn to the area by increased activity. Research completed for this study indicates that the major business impacts resulting from a UNESCO WHS designation are in tourism.

6.1 Change in Business Environment

Changes in the business environment may be in the mix of business, the number of businesses, ownership (corporate or local), and employment by industry. Data were not available on changes in the business environment for New Lanark and Brú na Bóinne, however, information provided by representatives of both sites indicated that tourism activity increased in both locations, supporting businesses based on accommodation, food, crafts and other tourism operations. Much of the development in New Lanark was within the designated site itself, but that at Brú na Bóinne was in the surrounding communities as the site is protected from development that would damage the historic artefacts.

Census information on employment by industry for residents of the Town of Lunenburg was gathered from the 1996, 2001 and 2006 censuses\textsuperscript{9}. The following table contains information on the percent of employment by major category for both the town and province. Data is for the year prior to the census and includes total labour force number and percent of labour force employed in each industry. Data for the 1996 census were not broken down in as much detail as for the other censuses so detailed comparison for each year is not possible.

The table shows that the proportion of service employment in Lunenburg increased relative to the other main categories. The significant reduction in manufacturing and construction relative to the province as a whole may reflect the moratorium in the fisheries that reduced processing activity and may also have negatively impacted construction activity due to the loss of a major source of residents’ income. Tourism employment is included in the “Other services” category and details on tourism employment impact related to the UNESCO designation are not obvious. However, there may be an indirect impact on “Wholesale and retail trade” employment from increased tourism. Lunenburg was well known as a tourist destination prior to the designation.

There is no clear indication that the UNESCO WHS designation had any major impact on the business environment in Lunenburg. Grand Pré is also a well developed tourist area that has a variety of attractions and services. Tourist numbers to the area have dropped over the last several years and a UNESCO World Heritage Site designation may increase visitation, which will support existing infrastructure. Tourism activity would have to increase significantly to change the existing business environment in the Grand Pré area or Kings County and estimates of visitation impact do not support a large increase in the number of tourists (see Section 8).

6.2 Economic Impact

A study was completed for New Lanark in 2007 that estimated the economic impact of the site10. The study found the following annual impacts on the local community, municipal area and country are created by the development.

- Impact on the town of Lanark: 198 direct and indirect jobs and 3.2 million pounds in Gross Value Added to the economy.
- Within South Lanarkshire: 210 direct and indirect jobs and 3.6 million pounds in Gross Value Added.

---

• Impact on Scotland: 279 direct and indirect jobs and 6.2 million pounds in Gross Value Added.

The information did not identify the direct relationship between the UNESCO WHS designation and increased impacts, but New Lanark representatives believe that the recognition provided worldwide supported existing activity and had a positive impact for both national and international visitation.

A full economic impact study has not been completed for Brú na Bóinne; however, in 2007, over 240,000 visitors stopped at the site, of which 20% remained in the centre without touring the site. One of the greatest benefits to the community since the visitor centre was opened has been from increased employment. Prior to opening the visitor centre four full-time and 16 temporary guides provided visitor services at the site. Employment has grown to 30 full-time and 12 temporary (seasonal) staff, plus an additional 29 full and seasonal jobs with the Newgrange Tourist office and visitor Tearooms at Brú na Bóinne.

Economic impact studies similar to that completed for New Lanark have not been completed for Lunenburg, but municipal representatives believe that the designation offers an on-going opportunity to increase tourism activity for the area. A study completed for the Nomination Grand Pré Committee11 found that Lunenburg tourism visitation increased 6.2% as a result of the UNESCO WHS designation.

Section 8 of this report provides a range of projected visitor increase to the Grand Pré national historic site based on Lunenburg’s experience. The economic impact on the Grand Pré area and Annapolis Valley will reflect the amount of effort that is put into marketing the site based on the uniqueness of the UNESCO WHS designation and cooperation with the two other Nova Scotia sites: Lunenburg and Joggins Fossil Cliffs.

6.3 Government Support for Local Business

New Lanark has incorporated some of the tourism-related businesses created by its reconstruction into the site itself. It receives some funding from federal agencies that would indirectly help local business, but information on government support for business beyond New Lanark was not found.

Brú na Bóinne offers local businesses providing accommodations to tourists discount coupons for entry to the site and the ability to reserve tour times so that their customers do not have to wait in line for a tour.

Lunenburg has established a special, lower commercial tax rate for seasonal businesses that do not have income for the full year. They also cooperate with the business community in some marketing activities.

Some locations apply differential tax rates for resident and non-resident ownership (e.g.: Prince Edward Island). The argument is that non-resident landowners demand high levels of service and infrastructure that are supported by local taxes on businesses and non-businesses but do not support local business and economic activity for the full year. This means that some businesses struggle to remain viable in the off season. Differential property tax rates on non-residents indirectly reduce rates for local businesses.

7.0 Cost Impacts

Developments that attract economic or residential activity to a community have the potential to impact the costs of living and doing business in that community. It must also be recognized that many of the cost increases generate increased revenue for some local businesses. While there may be many cost impacts, the main one that has drawn public discussion in the Grand Pré are is the effect on property values and taxes of a UNESCO designation.

7.1 General Cost Changes

No information was available from any of the comparison sites on the impact on general costs to businesses and the community, such as increased rent, changes in cost of accommodations or food services. It is reasonable to assume that increased property values will lead to increased rent and mortgage payment and that the increase in the cost of living to employees will push up wages paid, thus increasing labour costs for local business. However, data are not available to test this assumption.

7.2 Property Value Impacts

Property values are influenced by many factors, including location, access, attractiveness, and economic activity in the area. Value increases add to the owner’s wealth, but can increase carrying costs if property taxes go up in relation to increases in property values. Value decreases reduce the owner’s wealth, but may reduce property taxes if tax appraisals closely reflect property values.

Another concern that has been expressed in several areas of Nova Scotia is the significant increase in shoreline property based on increased construction of residences and businesses attracted by the beauty of the province’s shoreline. Tourist businesses based on activities associated with the ocean and our rural heritage have multiplied drawing tourists to our attractions.

Many people mistake the impact of UNESCO recognition with tourism impacts. Increased real estate values leading to higher property taxes occur in all cases of
increasing tourist interest in any area. Information provided by New Lanark indicated that the development did not have a significant impact on area real estate values, possibly because it is a self-contained and self-financing development. New Lanark has also added a residential component to the development that is likely to restrain property value changes.

Property in the area of Brú na Bóinne rarely comes up for sale and when it does is generally purchased by local residents. Ireland had a significant housing bubble through the 1990s, which has subsequently burst, and this influence was felt in County Meath as well. The main issue in the area of Brú na Bóinne is lack of properties offered for sale.

The chart below provides an index of property values for Lunenburg compared to a combination of Bridgewater, Liverpool and Mahone Bay (BLM), communities in relatively close proximity to Lunenburg that have similar geographic settings. The data is from Multiple Listing Service (MLS) Real Estate sales provided by Central Mortgage and Housing Corporation (CMHC). The data are limited to properties that were sold through the MLS listing and do not include private sales or real estate sold by a broker that was not included in the MLS system. Prices were only available from 1996 through 2008 and were indexed to 1996 by dividing the average sales price for each year by the value for 1996. Indexing allows comparison of price trends between data that have different dollar values.

Lunenburg property prices increased by almost three-and-a-half times compared to two times for the comparison communities between 1996 and 2007, after which they dropped in all communities as a result of the recession. Price increases were greatest during the property boom years of the mid-2000s. MLS property prices increased by 30% in Lunenburg in 2007, which was a period of strong economic activity and relatively low mortgage interest rates.
While the comparison communities also saw significant price increases for properties sold, they were not as rapid as in Lunenburg. Also, prior to 2007, it appears that price changes for the comparison communities lagged Lunenburg price changes by one year, indicating that Lunenburg prices influenced those in the surrounding areas.

Lunenburg municipal representatives and real estate professionals were consulted to determine the forces that influence the town’s property values. Property prices began increasing significantly in the mid-1980s when US residents from New England began buying and restoring historic homes and properties as seasonal residences. Many of these people have a historic relationship to Lunenburg through the fisheries connection between Lunenburg and Boston, and most had relatives in Lunenburg. The US currency was strong relative to the Canadian dollar and these people were able to purchase and restore Lunenburg properties much less expensively than in New England communities.

In the mid-to-late-1990s residents of Central Canada became interested in Lunenburg for seasonal and retirement residences. This compounded demand from the United States. Also, German residents identified the area as one in which it would be nice to have a vacation home, although many of the Germans purchased property in surrounding rural communities rather than directly in Lunenburg. Lunenburg is relatively close to the Halifax Regional Municipality, which also influences prices.

Until recently there was not much subdivision or affordable housing development in Lunenburg. Some new developments focused on the historic nature of the town, but housing prices were high and not in the range that would attract buyers with young families. This meant that there was little opportunity to offer a wide range of house prices and local residents with young families tended to move to surrounding communities like Bridgewater to seek affordable housing. The lack of affordable
housing development may partly explain the direct relationship between prices in Lunenburg and surrounding communities as people moved there to find affordable houses. Real estate sales representatives stated that they believe the municipal government’s restrictions on the location and type of development had a direct impact on the increase in property values in the Town of Lunenburg.

Those interviewed about real estate values believe that, while the UNESCO WHS designation may have heightened pressure on property values, it was not a strong influence. It may have raised the awareness of some people who subsequently visited Lunenburg and decided to locate in the community, but many of these people have since sold their properties and moved to other areas that they found interesting.

Discussions with real estate professionals from the Annapolis Valley identified some of the drivers of property prices in Grand Pré and the surrounding community. Grand Pré’s history and ambiance are attractive to people; however, supply is tight as few properties are offered for sale. The proximity to Halifax and twinning of Highway 101 have increased demand while supply has not changed, resulting in strong upward pressure on property prices.

Very little land comes up for sale in the Grand Pré area and many of the large landholdings are closely held by families who are not interested in developing them for residential uses outside the family. Land use regulations inhibit development and reduce opportunities to offer affordable housing in the community. Municipal restrictions on development of agricultural land reduce the potential for increased supply of residential housing in rural Kings County. At the same time, there has been increased interest from Europeans, particularly Germans and those from the United Kingdom, who wish to retire to the community or own a seasonal property in the area. Many of these people prefer rural properties with a couple of acres of land.

All of the above factors are presently placing significant pressure on property prices in Grand Pré and surrounding communities. They are unlikely to ease in the short term. UNESCO WHS designation may make people more aware of the attractions of the area, but it is unlikely to have a major impact on property prices. The main influence on those prices will be supply relative to demand, and that situation is already strongly influencing prices.

### 7.3 Property Tax Impacts

Property taxes are one of the few revenue sources used by municipal authorities to fund local services. The revenue generated from the taxation of real property depends on a number of variables. Those variables include:

- The tax base – what properties are subject to tax or are not exempt from tax,
- The assessment ratio – assessed value relative to the market value, and
- The tax rate – the rate applied to the assessed property values.
While there are no data available to support the opinion, New Lanark and Brú na Bóinne representatives do not believe that the UNESCO designation has influenced property taxes. Much of the infrastructure investment came either from non-local government or institutions. New Lanark has developed its community site in such a way that it is mostly self-financing and Brú na Bóinne is a federal-government owned and operated site so that local government funding requirements are limited.

Property values have a direct impact on property taxes paid by Nova Scotians. The provincial government responded to property owners’ concerns about rapid increases in property values leading to tax increases by passing an amendment to the property tax act in 2004 that allowed residents to apply for a cap to increases in property appraisal values (15% - 2003-2004; 10% - 2005-2008). This move addressed some of the concerns regarding rapid increases in the annual cost of owning a property in desirable locations.

Lunenburg tax rates are comparable to those in other Nova Scotia towns, such as Kentville. As previously noted, a special rate is applied to seasonal tourism operations. However, some people are concerned that the designation has driven property tax appraisals much higher than other communities. The following graph provides information on average residential property appraisals as at the first of each year from 1989 to 2009 for four communities: Bridgewater, Lunenburg, Mahone Bay and Wolfville.

The graph provides indexes of appraisal values for each year with 1989 as the base year (index = 1). Appraisal values in Mahone Bay have increased the most, followed by Lunenburg and Wolfville with Bridgewater appraisals slightly lower than those two communities. The graph shows that property appraisal values in Lunenburg and Wolfville have risen at almost the same rate over the last two decades. Wolfville is an attractive community with a well-known university and is located on the Minas Basin. The other three communities are also attractive rural towns on the water or in close proximity to it, so that all three communities would have similar influences on property values and, thus, tax appraisals.
The pattern of appraisal increases for Lunenburg follows the same pattern as for Bridgewater and Wolfville both before and after the UNESCO World Heritage Site designation in 1995. There is no indication in the property tax appraisal data that the UNESCO designation had any impact on the tax-appraised value of residential properties in the Town of Lunenburg.

8.0 Infrastructure Impacts

Public infrastructure investment may also be needed to address increased transportation requirements for a historic site as well as the demands of increased numbers of visitors during the tourist season. This investment has the potential to impact the community through property tax rates.

Potential infrastructure impacts on Grand Pré will reflect the extent of changes in the number of visitors to the site relative to historic tourist activity. A recent study12 estimated the potential increase in visitors based on changes to Lunenburg’s tourist visits from its WHS designation. The study estimated a range of annual visitor increases from a low of 678 to a high of 4,410 per year.

The following table provides estimated visitors by month based on information from the Grand Pré visitor centre (2004 has been removed from the estimates as that was the year

---

12 Grand Pré: An Economic Impact Assessment of a UNESCO World Heritage Designation, prepared for Nomination Grand Pré by Dr. Brian VanBlarcom, Dr. Cevat Kayahan and Adam McLeod, April 2009.
of the Acadian Homecoming). The high and low estimates were added to the average visitor numbers from 2005 to 2008 to show the visitor range that can be expected each month.

The following chart shows annual visitation from 1998 to 2008 along with the high and low visitor estimate from the table. The chart clearly shows the steady decline in visitation over the last decade, with the exception of 2004. Visitation from 1998 to 2003 averaged almost 60,000 tourists. The average for 2005 to 2008 is less than 33,000.
Existing infrastructure supported almost twice as many tourists over the last decade as can be expected to visit Grand Pré if it receives a UNESCO WHS designation. Part of the site is a National Park and has an existing visitor management system with the capacity to handle many more visitors than have been coming to Grand Pré over the last several years. Also, historical parts of Grand Pré have been designated a National Park, which provides the ability to cooperate with federal funding partners for maintenance, improvement and creation of infrastructure that will benefit the local community.

It is highly unlikely that significant municipal investment will be needed to support increased tourism or that property tax rates will have to be increased as a result of a UNESCO WHS designation.

9.0 Summary
In summary, it appears that the benefits of a UNESCO World Heritage Site designation will be positive for Grand Pré and area.

- It may help slow or reverse the downturn in visitors without requiring significant public investment in infrastructure to support increased activity,
- It has the potential to offer benefits to the community by preserving heritage and present lifestyle, while supporting the community’s economic activity, and
- Designation has helped other areas educate the local population and visitors about the uniqueness of an area and increase community pride in its heritage.

The designation is unlikely to have a major impact on issues that concern community members, in particular property price and tax changes. The factors pushing up property prices in the Grand Pré area and other parts of rural Kings County are not related to economic activity, but to land use regulations. The area is already attractive to non-residents and they are finding their way to Grand Pré in any case. The relatively small projected increase in visitor numbers is unlikely to generate additional pressure, good or bad, on property supply and demand.

Property appraisal values for tax purposes have been influenced by the increase in property values due to the lack of supply of residential properties relative to the demand. Increased tourism from the UNESCO WHS designation may put further pressure on some property prices if international tourists who came to the area because of the designation decide to relocate to the area. However, the UNESCO designation does not appear to have been a significant factor in Lunenburg, which faced the same limited supply of affordable housing as is presently the case in Grand Pré.

Based on the information gathered during this project, maximum economic impact will result from a professional, coordinated management plan to leverage the profile associated with a UNESCO WHS designation. Minimum community disruption will be the result of a comprehensive, inclusive consultation process.
OVERVIEW OF COASTAL CHANGE INFLUENCES ON THE LANDSCAPE OF GRAND PRÉ

Executive Summary

Objectives and Methodology
The objectives of this study are to review observations and trends in coastal erosion within Nova Scotia, particularly the Grand Pré area, to review coastal management literature, and to identify means to mitigate these risks. The information reviewed has been compiled from several sources, each with their own methodology for data collection and analysis. Sources include aerial photos, academic material (Acadia University, Dalhousie University), as well as municipal (Municipality of the County of Kings), provincial (Coastal Coalition for Nova Scotia, Nova Scotia Department of Agriculture) and federal level reports (Environment Canada, Canadian Wildlife Services, Natural Resources Canada, Parks Canada Agency).

Background
The Grand Pré peninsula, consisting of dyklands and uplands, is an important economic and cultural resource to the residents of the area. Built by the Acadian people in the 17th century, the area represents innovations of historical significance and cultural meaning. The near 13km of coastline, composed of erodible geological materials such as sand, shale and gravel, is confronted twice daily to the highest tides in the world. The coastline is under pressure from the continued rise in sea level, increasingly variable and intense storm events, growing shoreline erosion and the possibility of dyke breaches, all of which present significant risk to the local economy and cultural resources.

Observations
The coastline is under pressure from coastal change and rising sea levels. Archaeological evidence indicates that many of the original dyke walls are buried under 1.5 to 1.8 m of sediment; a testament to the steady rise in sea levels and subsequent alteration to the coastline. An average of 15m (50’) of shoreline erosion has occurred along the North Grand Pré coastline between 1961 and 2002 according to aerial comparisons, with coastal erosion ranging from 0.3m and 68.4m (0.97’ to 224.34’). Furthermore, on Boot Island, an average annual decrease of shoreline over two year intervals was recorded from 1990 to 2008 at a rate of 0.34 to 0.85 m/yr (1.11 to 2.79’/yr). Though coastal erosion is taking place along the east and west sides of the marsh, there is evidence of saltmarsh regeneration. Saltmarsh regeneration is a natural occurrence, but scientists do not fully understand the process.

Potential Coastal Management Policies and Strategies
Coastal communities need to take into account the potential for accelerated coastal erosion and mitigate risks through proper land management. The Municipality of the County of Kings has a planned retreat setback from the shoreline for any future development, and has protective measures for the dykes in order to minimize erosion and dyke breaches. The provincial government is preparing a Sustainable Coastal Development Strategy, which will provide a framework for coastal management, including how to manage accelerated coastal erosion. Parks Canada developed a Climate Change Strategy which includes a modified Commemorative Integrity Evaluation that provide the tools and a framework to evaluate the impacts of coastal change on lands its administers at Horton Landing.

Since Grand Pré has significant economic, social and cultural value for the region, active coastal erosion strategies are enacted so that the effect of coastal erosion can be mitigated. Continual monitoring and maintenance of the dykes will aid in combating potential failure and minimize the threat of dyke breaches and subsequent dykeland flooding.
1.0 Introduction

The dykelands, and other lands of the Grand Pré peninsula, are an important economic and cultural resource to the residents of the area. They are of special heritage significance due to their construction by the Acadian people in the 17th century, and because of their enduring significant cultural use and meaning. The area comprising the Grand Pré peninsula, including Grand Pré, North Grand Pré, Hortonville and Lower Wolfville, as well as the Grand-Pré National Historic Site, is being nominated for UNESCO World Heritage Site status, owing to the dykelands and the active agricultural landscape as well as to its symbolic meaning for the Acadian people. The nominated property requires a buffer zone to ensure that the integrity of the dykeland and the continuity of its agricultural use are maintained. The buffer zone includes a land component and a marine component. The land component is defined by the boundaries of the Grand Pré and area community plan excluding the nominated property. In addition, Boot Island National Wildlife Area is included in the buffer zone. The marine component extends 500 metres from land (Figure 1).

Figure 1: The UNESCO World Heritage Site nominated property and buffer zone, including the 500 metre marine component.

The area of Grand Pré is consistently under the threat of coastal change, which presents significant risk to the local economy and to the cultural resources held within the dykelands. The continued rise in sea level, combined with increasingly variable and intense storm events in our changing climate, increase the hazard of erosion on the Grand Pré peninsula. Erosion of the North Grand Pré shoreline, combined with potential breaches of the dykes that separate the interior of the Grand Pré region from the Minas Basin, represent substantial risk to the cultural and economic property of the area. Therefore, appropriate coastal management of the area needs to be considered in order to minimize the risks of erosion on the local economy and the cultural resources contained on the Grand Pré peninsula.
2.0  Objectives

The purpose of this document is to summarize literature relevant to coastal change in Nova Scotia and specific to the Grand Pré area, where possible, in order to provide an overview of coastal change to the proposed Grand Pré World Heritage site. This summary will only include available literature and data.

The specific objectives of this study are:

- To review pertinent background literature that refers to observations and trends in coastal change within Nova Scotia and the Grand Pré area;
- To conduct a limited aerial photograph review to identify trends in coastal change within Grand Pré;
- To review coastal management literature and recommend how risks associated with coastal change can be mitigated.

3.0  Methodologies

The report was developed from a review and synthesis of existing reports that refer to coastal erosion in Nova Scotia and the Grand Pré area, and of a review of aerial photographs taken of the area, in 1961 and 2002. According to the scope of this project, no new data will be collected regarding coastal erosion rates and other changes in the Grand Pré area. The intent of the literature and air photo review will be to identify, and comment on, trends relevant to coastal change in Grand Pré.

Several sources compiled the information reviewed in this report, each with their own means for data collection and analysis. Therefore, the comparability of the information relevant to erosion rates may be affected, and only the important trends in coastal erosion will be noted, without particular forecasting of the rate and related risk of coastal erosion to the area.

4.0  Literature Review

4.1  Grand Pré Setting and Context

Grand Pré is a community located within the County of Kings, Nova Scotia, along the eastern portion of the Annapolis valley, and is situated on a small peninsula that extends into the Minas Basin, which is part of the Bay of Fundy. The Grand Pré peninsula was formed as a result of the creation of dykelands by the Acadian settlers. The network of dykes created the portion of land between mainland Nova Scotia and North Grand Pré, which was at one time an island, called Long Island (Hood et al., 2009). Consequently, the dykes form the eastern and western coastline of the Grand Pré peninsula, together creating approximately 13 km of coastline (Hood et al., 2009).

As the Grand Pré area is found within the Minas Basin of the Bay of Fundy, it is subjected to the highest recorded tidal fluctuations in the world. In the Minas Basin, the rise and fall of the tides are a significant force in the formation of coastal landscapes and ecosystems. Landscapes created by erosion and deposition of sediment material, adjacent to land basins, provide the foundations for salt marshes - wetlands that harbour salt-resistant plant species and provide habitat for numerous shorebirds. The deposited sediments within the salt marshes are very fertile and provide substantial nutrients to the wetland plants. It is the fertility of the salt marsh soil, combined with the ease of cultivation in comparison to rocky, forested upland areas that lead the Acadians to dyke the salt marshes for agriculture. The dykelands were created by constructing earthen walls around the original edges of the original salt marshes, essentially preventing the sea from flowing over the marsh surface. Aboiteaux, or tidal gates, were installed to allow fresh water to drain away from the marsh.

The dykelands have been, and continue to be, a significant source of value for Grand Pré residents. Substantial agriculture in the region provides economic benefits to landowners, and the Grand-Pré National
Historic Site provides social and cultural benefits to local, national and international visitors that wish to learn about the history of the region and of the Acadian peoples.

As the Grand Pré region provides significant benefit to residents, the area has been continually developed over time, specifically in regard to infrastructure and residences. Roads and utilities are common throughout the region, and several buildings are located in the area. These buildings are either residences, public buildings or are used for agricultural activity (Hood et al., 2009). However, there is no permanent infrastructure on the dykeland, aside from phone and power poles, and roads.

Although the Grand Pré region has been developed for human use, protected areas exist for habitat conservation. Boot Island National Wildlife Area, located off the east shore of North Grand Pré, is the notable conservation area. This island was protected as a sanctuary for migratory and shorebird habitat. Furthermore, the coastal salt marshes found around Grand Pré are protected under current provincial and federal legislation, as part of wetland and migratory bird protection. Additionally, Boot Island and the coastal salt marshes are recognized as a Wetland of International Importance under the Ramsar convention—named the Western Hemispheric Shorebird Reserve at Southern Bight- Minas Basin. This recognition does not add a layer of protection, but instead elevates the prominence of the site on the international significance of the wetland.

The region, however, along with all coastal communities in the Canadian maritime provinces, must constantly address issues concerning coastal erosion. The drivers of erosion are wind, waves, tides, currents, and ice scouring. The removal, transfer, and accumulation of soil and sediment material cause the alteration and loss of shoreline features like saltmarshes, mudflats, and beaches. Additionally, structures such as seawalls and dykes that form the shoreline of built environments, as is the case with the Grand Pré area, are also subject to erosive forces that threaten the integrity of these structures. As such, the Grand Pré area must develop strategies to manage coastal erosion in order to protect the economic, environmental and cultural resources in the Grand Pré dykelands, primarily through the maintenance and protection of the dykes that restrict the inward migration of seawater.

4.2. Salt Marshes

Prior to settlement, the Grand Pré dykelands were salt marshes that developed from the accumulation and transfer of sediment, introduced to the system through the gradual erosion of upland areas by oceanic wave forces along the coastline and from sediment distribution from freshwater streams (Bleakney, 2004). In salt marsh formation, the eroded sediment is then deposited during tidal ebb, creating large areas of mudflats, which are colonized by plant species capable of tolerating saline seawaters. The deposition of upland sediments into salt marshes creates conditions of high fertility, due to the continual addition of nutrients to the system (NSDA, 2007a).

Recent research in the Bay of Fundy confirms the important role that winter sea ice plays in the development of salt marshes. In the winter, thick ice forms over the marsh surface, trapping mud and pieces of vegetation. This ice, along with trapped debris, is shifted and carried by tides and storms throughout the winter. In the spring, melting ice deposits mud and clumps of vegetation on portions of the mud flat and, if conditions are favourable, the vegetation establishes itself and contributes to salt marsh vegetation dispersal and ecosystem development (van Proosdij, 2006).

The elevation of salt marshes generally coincides with the average high tide level and the continual deposition of sediment creates deep, rich soils that are relatively free of large debris, such as boulders and trees (Bleakney, 2004; NSDA, 2007e). As salt marsh elevation coincides with high tide, the continued rise in sea level affects the elevation and surface area of mudflats and salt marshes. (Ollerhead et al, 2003). Bleakney (2004) notes that archaeological evidence indicates that many of the original dyke walls at Grand Pré are buried under 1.5 to 1.8 m of sediment under the present marsh surface; a testament to the steady rise in sea levels and subsequent alteration of the coastline over the past few hundred years.
Salt marshes are also important in coastal erosion prevention, as they assist in the dissipation of wave energy and reduce the force of impact on the shoreline (Hood et al., 2009). Consequently, converting salt marshes from their natural state into agricultural land, or removing them altogether as a result of anthropogenic development, results in accelerated shoreline erosion and increased potential for property damage in coastal communities (Hood et al., 2009). Given historical loss of salt marshes in the Bay of Fundy and the subsequent increase in coastal erosion, the general emphasis is to limit or stop further loss of salt marsh.

4.3. Dykeland Development

The dykelands at Grand Pré were originally developed by Acadian settlers in the late 1600s. They recognized the agricultural value of the salt marshes on account of the thick, fertile soils and the absence of rocks and trees, which allowed for easier cultivation (Bleakney, 2004; NSDA, 2007a). The Acadians reclaimed the salt marshes by constructing a system of dykes made of sod-bricks to restrict tidal input of seawater into the dykelands. Once seawater was restricted from flooding the dykelands, the Acadians installed drainage devices called aboiteau, which allow the passage of freshwater from the dykeland into the ocean during low tide and restrict seawater inputs from entering the dykeland during high tide events (NSDA, 2007c).

The dykelands are still a functional piece of the local economy, as local residents utilize these fields for agricultural production. Indeed, approximately 80% of salt marshes in the Bay of Fundy have been dyked, due to the high productivity and relative ease of cultivation of these areas (Environment Canada, 1994). Most aboiteau channels, however, have been replaced with PVC piping (a new, more durable technology) and the dykes have been maintained and built-up, in order to prevent dyke breaches (NSDA 2007b). As the sea level has risen since the time of the Acadians, the original dykes have been maintained and renovated to accommodate for higher sea levels. Most dykes in Nova Scotia measure between 1.9 and 2.5 m high and it is common practice for the dykes to be maintained around 0.3 to 0.6 m (1’ to 2’) above the high tide mark (NSDA 2007c; Hood et al., 2009).

With sea levels anticipated to rise 70 to 140 cm over the next century, and with projected risks associated with more intense storm surges owing to a changing climate, it is anticipated that the dykes bordering the Grand Pré region will need consistent maintenance in order to minimize the hazard of dam breaches and to ensure that the dykelands contribute to the economic and socio-cultural climate of the Grand Pré region.

4.4. Tidal Influences

The Grand Pré region is located within the Minas Basin of the Bay of Fundy, which is renowned for having the highest tides in the world, with daily fluctuations averaging between 12 to 15 m (Bleakney, 2004; Hood et al., 2009). Tidal fluctuations are important to the Bay of Fundy ecosystem as low tides expose 7,800 ha of intertidal mud flats, which provide habitat to shorebirds, and high tides mobilize sediments, causing turbidity influences on aquatic habitat and sediment deposition in salt marshes and flooded dykelands (Environment Canada, 1994).

Tidal patterns, however, are cyclic and the elevation of high water peaks change on a regular basis. Extreme high tide peaks follow a regular pattern that correspond to high peaks every 12 h, 24 h, 14.8 days, 207 days, 4.52 years and 18.3 years (Bleakney, 2004; Hood et al., 2009). High tides occur frequently, and extreme high tide events can occur every month of every year (Bleakney, 2004). Extreme high tides are problematic, as they can breach dams, causing flooding and dyke erosion, and contribute to shoreline erosion of upland areas (NSDA, 2007c). In the event that extreme high tides combine with storm surges, high winds or low barometric pressure, the erosion and flooding hazard increases significantly (NSDA, 2007c; Hood et al., 2009). Such was the case in 1869 when an extreme high tide, combined with a storm surge occurred, known as the Saxby Gale. The tide was reported higher than 2 m (6.56 feet) above regular extreme high tides, which breached dykes around the Bay of Fundy and caused extensive damage to properties, infrastructure and lives. Further to erosion effects, flooded dykelands are unsuitable for agricultural production for at least one growing season (Hood et al., 2009).
4.5. Coastal Change in Nova Scotia and Grand Pré

The occurrence of coastal erosion in Nova Scotia, and more specifically Grand Pré, is prevalent due to the many factors previously discussed. Dykeland development, through alterations to salt marsh area and subsequent reduction in area for wave energy dissipation, increases not only the occurrence of erosion, but also the potential costs of erosion due to the negative economic and social impacts that could occur through dam breaching and damage to infrastructure and property (Coastal Coalition for Nova Scotia, 2008; Hood et al., 2009). However, it should be noted that coastal erosion is a naturally occurring, global process that cannot be completely stopped, but the impacts of coastal erosion to communities can be mitigated through proper land management. Coastal communities need to take into account the potential for accelerated coastal erosion especially those living on the Bay of Fundy, which experiences the highest tides in the world. Living with or managing erosion then, must be formulated into any management strategy for coastal communities.

Many locations within the maritime provinces of Canada are considered especially sensitive to erosion, due to the geological characteristics of the shoreline, inclusive of soil and rock types, low relief, landform types, and ocean processes, mainly concerning the tidal range and wave height (Natural Resources Canada, 2004). The prevalence of low elevations and shorelines made of erodible unconsolidated materials, such as sand, shale and gravel, increase erosion risk in the Atlantic region (Coastal Coalition for Nova Scotia, 2008).

Particular to the Grand Pré area, the Municipality of the County of Kings (2010) states that an average of 15m (50’') of shoreline erosion has occurred along the North Grand Pré coastline between 1961 and 2002, due to the sandstone shoreline of Evangeline beach (figure 2). MacKinnon and Kennedy (2008) from the Canadian Wildlife Services, documented average annual decreases of shoreline on Boot Island over two year intervals between 1990 and 2008 at a rate of 0.34 to 0.85 m/yr (1.11 to 2.79’’/yr), with 2004 to 2006 and 2006 to 2008 having the highest erosion rates over the study period (figure 3). The authors suggest that Boot Island erosion is accelerated because of rapid loss of forested area due to storm-surge blow down.

![Shoreline Erosion North Grand Pré 1961 - 2002](image)

Figure 2: Shoreline erosion along North Grand Pré between 1961 and 2002.
4.5.1. Aerial Photograph Review

Aerial photographs of the Grand Pré region from 1961 and 2002 were reviewed to determine coastal change trends specific to the area. A separate comparison was made for the West Grand Pré, North Grand Pré, East Grand Pré, and Boot Island National Wildlife Area.

The Municipality of the County of Kings examined coastal change along North Grand Pré. Coastal erosion over the period has ranged between 0.3m to 68.4m (0.97' to 224.34'), with an average distance of 14.08m (46.19') over the review period, or 0.34m (1.12') annually (Figure 2). It is apparent that erosion along North Grand Pré is proceeding at a steady rate, and is highly variable. This is likely due to differences in the land exposed to the ocean, as soil is more likely to erode than rock faces (Natural Resources Canada, 2008; Shaw et al., 1998).

The Parks Canada Agency looked at coastal change trends along the east and west sides of the Grand Pré peninsula. The air photos for the east and west side marshes are presented as Figures 4 and 5, respectively. Each figure presents assumed salt marsh area from the 1961 photograph, overlain on the 2002 photograph for comparison purposes. In each photograph, it appears that the total salt marsh area has extended over the review period. This is due to any of three factors: (1) the air photos were taken in different months, with subsequently different vegetation characteristics (1961 photographed in June and 2002 photographed in September), (2) sediment has continually been deposited over the period along the outer fringes of the dykes, and (3) the river flow and speed influences the amount and location of deposition. The deposition of sediment, then, has lead to an increase in the salt marsh area. The deposition of sediment is a likely occurrence, as coastal erosion manifests itself as an erosion-sedimentation process, whereby earth eroded at one point along the coast is deposited along another portion of the coastline (Bleakney, 2004). Although no significant shoreline loss is evident, the air photos do not allow for the review of dyke characteristics over the period; the dykes may have been maintained either through erosion repair or height adjustment.

Boot Island was also considered due to its inclusion in the buffer zone and the availability of literature for this area. Air photos from 1946 and 2002 were compared, with the 2002 shoreline being overlain over the 1946 photograph (Figure 3). It is evident that substantial shoreline erosion has occurred on Boot Island.
over the period. This assessment agrees with site observations by MacKinnon and Kennedy (2008) with the Canadian Wildlife Services, who stated that the average shoreline erosion of Boot Island has occurred at an annual rate of 0.34 to 0.85 m between 1990 and 2008.

Figure 4: Salt marsh area in 1961 and 2002 for the east side of the marsh.
4.6. Anticipated Climate Change Impacts on Dykelands

The erosion effect is projected to increase substantially with the changing climate, due to increasing water levels, more severe wave patterns and greater storm surge magnitudes (Natural Resources Canada, 2004). Higher sea level rise is expected through thermal expansion of oceanic waters, combined with melting of polar ice caps (Natural Resources Canada, 2004). Increased sea level will only serve to increase the effect of erosion on coastal areas. The consistent rise in sea level is expected to intensify the rates of shoreline alteration, such as beach and bluff erosion, landward migration of barrier islands, inundation of coastal lowlands and increase storm-surge flooding (Natural Resources Canada, 2004).

Not only will higher sea levels influence erosion, but alterations in rainfall patterns and storm events will effect coastal erosion and dykelands. Heavier rains associated with increased evaporation of oceanic waters will increase storm surge activity, which has the potential for dyke breaching. However, fluctuations in rainfall patterns can also occur, with dry periods influencing erosion as well. If precipitation patterns are sufficiently altered, and extended dry periods occur, the end of an aboiteau risks being buried by sediment, causing clogging and flooding hazards during storm events, as the freshwater added to the dykelands would not be able to escape through the drainage channel (NSDA, 2007f).

Atlantic Canada is expected to have a 70 to 140 cm rise in sea level over the next 100 years, which will only serve to accelerate coastal change and lead to extensive flooding and more intense storm surges (Coastal Coalition for Nova Scotia, 2008). The rise in sea level, combined with climate alterations, such as increased temperatures and precipitation, and permafrost melting in the arctic, are expected to directly influence Canada’s national historic resources (Parks Canada, 2009). Thus, active management must be enacted in order to mitigate the effects of increasing sea level and changes in climate on important economic and cultural resources in Canada.
5.0 Coastal Management in the Grand Pré Region

5.1 Coastal Management Policies

5.1.1 Municipal

The Municipality of the County of Kings (2010) has recently made amendments to Bylaw 56: Municipal Planning Strategy for the Grand Pré and Area Community Plan, based on recommendations provided by Hood et al. (2009). These amendments identify the special significance of the heritage of the Grand Pré, recognize coastal erosion effects to the economic and cultural well-being of the area, and propose land-use constraints to limit impacts to natural heritage and reduce the erosion effects of development. The goals of the document are to limit non-agricultural uses in the Grand Pré dykelands, and provide guidance on appropriate recreational and residential growth in the area, as well as guidance on responsible coastal development to limit the damage of coastal erosion to infrastructure and property. The revisions suggest that responsible coastal development must take into account natural rates and processes of shoreline change to avoid damage and alternation to natural processes. Thus, construction and shoreline armouring are restricted due to the potential for increased erosion rates. The County currently has a 45’ buffer of any development to the top of the shoreline bank.

5.1.2 Provincial

Although the County is responsible for the land use planning for Grand Pré and Area, and has prepared the strategic direction of Grand Pré, the dykes and dykelands are managed by the Nova Scotia Department of Agriculture (NSDA). The Agricultural Dykeland Protection Act enables the NSDA to repair and reconstructed dykes to maintain agricultural lands and allows the NSDA to dyke and develop additional dykeland for agricultural purposes (Hood et al., 2009).

Hood et al. (2009) summarize that no existing provincial regulations exist that provide guidance on coastal erosion. The authors state that the Nova Scotia Municipal Government Act guides municipal actions, but does not provide specifics regarding coastal erosion, which can be considered the responsibility of individual municipalities. However, without appropriate guidance, few municipalities have accounted for coastal erosion in their land-use bylaws to date.

Hood et al. (2009) further note that the Department of the Environment is responsible for coastal wetlands through the Environment Act, Wetland Conservation Policy and Wilderness Areas Protection Act, and the Department of Natural Resources has jurisdiction over the shoreline through the Beaches Act and Off-Highway Vehicle Act. However, the authors suggest that these policies do not specifically refer to, protect against, or provide guidance for managing coastal erosion or mitigation measures. Currently, the provincial government is preparing a Sustainable Coastal Development Strategy. This initiative is led by the Provincial Oceans Network (PON) - an intergovernmental department intended to coordinate activities between the provincial departments concerned with the coast. In December 2009, PON released a State of Nova Scotia’s Coast technical report. This report focuses on six priority coastal issues including sea level rise, storm surges and sensitive coastal ecosystems and habitats. A public consultation process is now underway to get public input into the contents of a Sustainable Coastal Development strategy. This strategy may provide a framework for provincial leadership on coastal management including how to manage accelerated coastal erosion.

5.1.3 Federal

Environment Canada (1994), through the Canadian Wildlife Service (CWS), has enacted management plans for the Western Hemisphere Shorebird Reserve ( WHSR) and RAMSAR wetland of Southern Bight, Minas Basin, on Boot Island, which protects shorebird and waterfowl habitat of the region through the establishment of the Minas Basin Wildlife Management Area. Under these provisions, major shorebird roosting beaches and wetlands are protected, and a stewardship program with landowners of adjacent uplands and dykelands is being administered to ensure the maintenance and security of critical roosting
areas, salt marshes and coastal habitat. Boot Island, through the CWS, has a management plan that includes regular monitoring for coastal erosion.

Parks Canada is the federal agency responsible for overseeing the management and maintenance of the Grand-Pré National Historic Site and Horton Landing. As such, these areas are subject to adhering to Parks Canada directives. One such directive applicable to coastal erosion is the Parks Canada Climate Change Strategy (2009), which was developed according to UNESCO’s Policy Document on the Impacts of Climate Change on World Heritage Properties (2007). According to the climate change strategy, Parks Canada (2009) has adopted a commemorative integrity evaluation that enables the assessment of climate change effects on historic resources. This evaluation procedure will provide the tools and framework for Parks Canada to evaluate climate change effects, and the subsequent influence on sea level rise and storm surge effects on coastal erosion in the Grand Pré area. This evaluation procedure is essential for Parks Canada to have an appropriate means of decision-making and adaptive management for Horton Landing, the site along the coast.

5.2  Potential Coastal Management Strategies

Although no official regulatory guidance currently exists for coastal erosion mitigation in Nova Scotia, individual municipalities are free to adopt coastal management strategies in their land-use framework. Indeed, the Municipality of the County of Kings (2010) has made such provisions, as discussed in Section 5.1.

Generally, climate change adaptation strategies can fall under any of three broad categories - planned retreat, accommodation, and protection - which are summarized in Hood et al. (2009). Planned retreat recognizes that erosion is a natural process and allows shoreline erosion, emphasizing policy and land use planning to regulate land uses and promoting the use of vegetated buffers to prolong shoreline life. Accommodation is similar to managed retreat in that it allows coastal erosion, but human activities are adjusted to minimize risk of damage, such as flood-proofing measures in home development, rather than creating setbacks. Protection involves active human intervention to mitigate coastal erosion, through reinforcing shorelines with engineered structures, such as seawalls and groins, or soft erosion control measures, such as vegetated buffers and dunes. Protective measures, then, are more expensive and require constant monitoring and maintenance to avoid failure of the systems.

The adoption of any of the three strategies is dependent on the current and planned use of the land base, and requires cooperation among local landowners and all levels of government that have jurisdiction over the land base (Coastal Coalition for Nova Scotia, 2008). Typically, protective measures are adopted where current infrastructure or land-use is of value and cannot accommodate the planned retreat or accommodation measures. The Municipality of the County of Kings (2010) has a planned retreat measure of a 13.7 m (45') setback from the shoreline for any future development. Protective measures must also be put in place for the dykes in order to prevent erosion and dyke breaches. These measures are necessary as the dykelands of Grand Pré support a significant amount of economic activity to residents of the area and contain significant historical and cultural artefacts in the Grand-Pré National Historic Site. Thus, in order to preserve this region for further utilization and enjoyment, protective measures need to be performed along the dykes.

6.0  Conclusion

The Acadian settlers reclaimed salt marsh lands in the Grand Pré region for agricultural purposes by establishing a system of soil-based dykes to restrict seawater from re-entering the dykeland as part of tidal fluctuations. The established dykelands provided a significant land base of fertile, tillable land for agriculture. Although the settlement of the Grand Pré area and development of the dykelands occurred in the 17th Century, this region is still important to the economy of the local residents, and as a social and cultural resource to the nation. This area, however, is consistently under pressure of coastal change due to its proximity to the Bay of Fundy, which experiences the greatest tidal fluctuations in the world, and is continually rising in level.
Shoreline erosion of up to 1m (3.3’) per annum has been observed in the area. These observations suggest that coastal erosion is a real threat to the economy of the area and to the cultural artefacts held within the dykelands. Furthermore, anticipated rising sea levels and increasing storm surge magnitude threatens the Grand Pré area by exacerbating the erosion of the dykes and the shoreline of Northern Grand Pré. As Grand Pré has significant economic, social and cultural value for the region, it is recommended that active coastal erosion strategies be enacted such that the effect of coastal erosion on the area can be mitigated. Continual monitoring and maintenance of the dykes will aid in combating the potential failure of the dykes, and minimize the threat of dam breaches and subsequent flooding of the dykelands.

Introduction

During the summer of 2008 the Advisory Board of the Grand Pré World Heritage nomination proposal formed what it called the Working Group on Outstanding Universal Value. Its mandate was to come up with what would be the foundation or raison d’être of the UNESCO application: an articulation of just what it was about the Grand Pré area that gave it “outstanding universal value” and where precisely within the overall area was the tangible evidence required to support such a claim before UNESCO’s World Heritage Committee.

Because of the long history and multi-dimensional nature of the Grand Pré area, experts were needed from many different fields: Acadian history and culture; Planter history and culture; Mi’kmaq history and culture; and archaeology, biology, botany, geography and marine sciences. Seventeen individuals from Nova Scotia and New Brunswick and a cross-section of disciplines agreed to join the Working Group, and they worked alongside several Parks Canada staff tasked with providing information, coordinating and reporting on the progress of the group and its discussions. In addition, from time to time, two Parks Canada staff in Gatineau (Québec), members of Canada’s delegation to the World Heritage Committee provided essential input that helped to clarify certain aspects of the process and of UNESCO’s criteria. Between early September and late November 2008 three separate meetings of the Working Group were held, first at Grand-Pré National Historic Site of Canada and then twice at Acadia University. Otherwise, the group worked effectively by email, telephone or in smaller committees. Moreover, additional information was shared with the Working Group by residents, independent researchers, and members of the different stakeholder communities.

I am very happy to table this report, the result of eminent experts’ advice and an important piece of the nomination proposal, and look forward to the next steps of the process.

Chair, Outstanding Universal Value Working Group
Coordonnateur, Groupe de travail sur la valeur universelle exceptionnelle

Le comité consultatif du projet d’inscription de Grand Pré comme site du patrimoine mondial a formé le groupe de travail sur la valeur universelle durant l’été 2008. Son mandat était d’établir la base et la raison d’être de la proposition à l’UNESCO, soit un argument qui exprime ce qui a une valeur universelle exceptionnelle dans la région de Grand Pré et où se trouvent les témoins tangibles qui permettront d’en faire la démonstration auprès du comité du patrimoine mondial de l’UNESCO.

Je suis très heureux de déposer ce rapport, le fruit de la réflexion d’éminents experts et une pièce importante du dossier d’inscription, et attends avec enthousiasme le déroulement des prochaines étapes du processus.

What Was Accomplished

The discussions of the Working Group were carried out in the three general meetings as well as in several small group encounters, email exchanges and phone calls. All were stimulating and far-reaching. At the end of the process, reached in January 2009, the Working Group succeeded in selecting the UNESCO criteria thought to be the most appropriate; producing a Statement of Outstanding Universal Value (OUV) along with justifications; recommending specific boundaries for the candidate site; developing a list of attributes and tangible evidence; and establishing a framework for the forthcoming comparative analysis. This fulfilled the mandate given the Working Group by the Advisory Board.

The output of the Working Group is summarized on a document entitled “Summary Table” and the maps that indicate the proposed boundaries of the candidate site and which portions speak to which UNESCO criteria.

What follows in this document is an in-depth historical background on the Grand Pré area, as well as a summary of the tentative Statement of Outstanding Universal Value as it applies to that candidate area.
Context of the Work Undertaken

Why is an Outstanding Universal Value so important?

The definition of the Outstanding Universal Value (OUV) is the first step of any nomination proposal. The OUV is the argument for the site’s exceptional value, a value that humankind as a whole will come to cherish if the proposed property is designated by the World Heritage Committee. The OUV allows the definition of the boundaries of the property and guides the management decisions for its preservation.

What is a Statement of OUV?

The statement of outstanding universal value summarizes the reasons why the property is deemed to have OUV. It identifies the criteria under which it is being submitted and the assessment of integrity and authenticity. It is the basis for the future protection and management of the property. The nomination includes a proposed statement of OUV. However, it is the World Heritage Committee that sets it out in its report following designation of the property.

How is OUV defined and described?

For a property to have OUV it needs to justify its proposal based on one or more of the 10 criteria set by the World Heritage Committee. It does so by demonstrating that it is unique or exceptional as compared to other properties in the world, that it has authenticity because the elements that support the value are present, and that it carries integrity because those elements are in good condition. The boundaries of the proposed property are set in order to preserve its OUV, authenticity, and integrity.

The following table summarizes those concepts:

<table>
<thead>
<tr>
<th>Question</th>
<th>Answer</th>
<th>Nomination component</th>
</tr>
</thead>
<tbody>
<tr>
<td>What is so special?</td>
<td>The cultural heritage that is of outstanding universal value</td>
<td>Statement of OUV</td>

</table>
Definition of the Proposed Property

The property proposed for nomination is an example of a place where people have successfully adapted to unique natural constraints and opportunities. It is also a place that carries an exceptional meaning for a people because of the symbols that it embodies. As such, the type property is defined as a cultural landscape under the terms of the World Heritage Convention.

More specifically,

*It represents the “combined works of nature and of man” [...] illustrative of the evolution of human society and settlement over time, under the influence of the physical constraints and/or opportunities presented in their natural environment and of successive social, economic and cultural forces, both external and internal. (Operational guidelines, Annex 3, par. 6)*

This cultural landscape, falls under the categories of organically evolved landscape, meaning a continuing landscape which retains an active social role in contemporary society.
Components of the nomination proposal

1.c Map showing the boundaries of the nominated property (Preliminary: excluding buffer zone)

The following is a first proposal of the boundary based on the knowledge that the OUV working group members had at their disposal. It focuses on the OUV, its authenticity and its integrity, based on the attributes (tangible evidence) supporting that OUV.
2b. History and Development

Unique Setting, Distinctive Cultural Landscape

From the 1680s when a small number of Acadians first settled in the area and called the vast wetlands they saw la Grande Pré right through to today, the human history of Grand Pré has been linked to its natural setting, microclimate and the exceptional fertility of its land-sea interface.

That in the beginning, the Mi’kmaq, the area’s indigenous people, did not prevent the Acadians from altering and ultimately removing a vast wetland from the regional resource base speaks volumes about the harmonious relationship that generally existed between the two peoples, a relationship that was rare in the colonial era of North America. Further to that point, it was at Grand Pré that parish records reveal the greatest number of inhabitants who were the product of “mixed” marriages between the Mi’kmaq and the Acadians. The close relationship with the Mi’kmaq – not just at Grand Pré but elsewhere in Acadie – along with the relative isolation and independence of the Acadian community from either French or British administrations for long periods, and the influence of the natural setting within which the Acadians lived and worked, contributed to the development of a new and distinct identity. Though French speaking and Roman Catholic, over the course of the second half of the 17th century they came to see themselves as belonging to l’Acadie, as being Acadiens and Acadiennes.

Over the course of roughly seventy years before their forcible removal in 1755, the Acadian community of Grand Pré introduced an environmental management approach that had already been perfected elsewhere in Acadie (mainland Nova Scotia), using techniques adapted from similar European practices around wetlands and saltpans. The Acadians adapted those techniques to a much different environment in Acadie than what had existed back in Europe. In the specific conditions at la Grande Pré, where are found some of the highest tides in the world, Acadians were able to transform – not all at once but over a period of three generations as the needs of their community evolved – over 1000 hectares of tidal marsh into some of the most fertile and valuable farmland to be found at that latitude of the North American continent, then or now.

The Acadians’ transformation of the natural setting was of course a major rupture or alteration to the local ecosystem. In 1755 there came another huge rupture, in this case in the politico–military sphere. That was the Acadian Deportation, an event that took away the very people who had created the fertile marsh for agricultural purposes.

Since 1760 when a contingent of New England Planters arrived at Grand Pré (renamed at the time, Horton) to take over the lands Acadians had been removed from in 1755, the transformed marsh has remained a primary focus of the area’s inhabitants. The Grand Pré Marsh remains highly fertile and the most important features of the original dyked area remain in place, in some cases where they are visible and in other cases at sub-surface levels. Like the Acadians before them, the Planters in the Grand Pré area developed their own strong connections to the land and their rural way of life.

Then, beginning in the late 19th century and continuing throughout the entire 20th century and into the 21st, Grand Pré developed as a historic site to commemorate the events of the 18th century and as the most important lieu de mémoire of the Acadian people. A variety of memorials were erected in the area to mark different historical people and events, and a park setting was created adjacent to the reclaimed marsh to commemorate the prior Acadian period of occupation and their removal in 1755.
From Tidal Marsh to Fertile Farmland
As the Acadians reclaimed la Grand Pré and enjoyed its remarkable fertility and productivity, the adjacent village community grew steadily. Within a few decades the Grand Pré area within the district of Les Mines had become the most populous of all Acadian settlements in what today are Canada’s Maritime Provinces. Acadians began to export their surplus production, especially grain, beyond their own area, to both French and British settlements. The exports were shipped away in vessels that anchored in the Minas Basin and which on-loaded and off-loaded their cargoes at the landing (now known as Horton Landing) on the Gaspereau River. (That same landing area would later be the last spot of firm ground upon which most of the area’s Acadians would trod before being sent into exile in 1755. And it would be there in 1760 that hundreds of New England Planters would make landfall to come take over the region in 1760.)

The great fertility of the dyked marsh at Grand Pré – a gift the local residents had given themselves by desalinating what nature had provided – was an important key to the region’s success. Before following the story of Grand Pré further, let’s consider just what it was that nature had provided with the original wetlands the Acadians called la Grand Pré.

The Estuarine Environment before the 1680s
Following retreat of the glaciers after the last Ice Age (about 14,000 years ago), sea levels around the planet rose, and rivers draining from the land began to wash away the sediments so that they came to line the bottom of the Bay of Fundy. At this time, Minas Basin was a shallow freshwater or brackish lake, and Georges and Browns banks at the entrance to the Bay of Fundy were dry land. As sea levels continued to rise, and Georges Bank became submerged, more sea water entered the Bay. By 4,000 years ago, the tidal range in Minas Basin was only about 1 to 1.5m, but this range has steadily increased over time to an average of 12 m, and a maximum in excess of 16 m – the highest recorded tides in the world. The greatest amplitudes and greatest extent of intertidal zone occur today in the Minas Basin, and are expected to continue increasing in the future.

In the period just before the first Acadians came to settle at Grand Pré, the lower-lying parts of what is today the Grand Pré Marsh, lying between the upland and Long Island (then 2 km offshore), were covered twice a day by seawater, while the higher areas were covered less frequently during extreme high tides. When the tide fell, it revealed an extensive salt marsh, consisting of over 1,000 hectares of marsh grasses and tidal drainage creeks. This luxuriant marsh was home to a wide range of marine and estuarine life. What brought such vitality to the marsh – and the potential for incredible agricultural production as opposed to marine life if ever desalinated – was the tidal cycle within the Bay of Fundy.

Now, twice a day as part of the tidal cycle, 100 billion tonnes of seawater flow in and out of the Minas Channel. That is more water than the combined flow of all the world’s rivers. Furthermore, these Bay of Fundy waters are nutrient-rich, continuously providing the nutrients needed for plant growth. These nutrients were continually being stored in the soils of the marsh as the marsh level grew upward to keep pace with sea level rise. It was those water-borne nutrients, once deposited in the original wetlands along the Bay of Fundy that made them so incredibly fertile. Nothing comparable exists elsewhere in North America at the same latitude. The fertility,
however, is only theoretical for farming until the salt is removed from the top level at which crops are grown. That is what the Acadians achieved in the late 17th and first half of the 18th centuries.

For thousands of years before the arrival of Europeans in northeastern North America, the Mi’kmaq, the indigenous people of Nova Scotia, were familiar with Grand Pré and nearby areas. The parts of the Maritime Provinces and Gaspé peninsula in Quebec where the Mi’kmaq lived came to be known collectively as Mi’kma’ki. The particular district in which the shores of the Minas Basin are located was – and still is to today’s Mi’kmaq – Sipekni’katik.

There are many specific Mi’kmaw connections with areas close to what the Acadians called la Grand Pré. One is that the Mi’kmaq frequently used landing areas nearby – one on Long Island and one not far beyond the western end of the Grand Pré marsh. Another is that there are documented archaeological sites at Oak Island and at Melanson along the Gaspereau River; sites that go back several thousand years. Then there is the evidence from Acadian parish records between 1707 and 1748 of the high number of “mixed” heritage families and individuals at Grand Pré, and frequent documentary references to the Mi’kmaq being at or near Grand Pré, in what the Acadians called the district of Les Mines. Moreover, the Minas Basin figures prominently in the history, legends and spirituality of the Mi’kmaq, especially Cape Blomidon, which was and is the most dominant feature on the landscape in the overall Grand Pré area. Before the Acadian transformation of the inter-tidal zone at Grand Pré – a process that could only have taken place with the consent and understanding of the Mi’kmaq since the latter greatly outnumbered the Acadians in that area in the late 17th century – the Mi’kmaq typically harvested a wide range of resources in estuarine environments like the one that existed at Grand Pré: waterfowl, fish, shellfish, sea mammals, and medicinal plants. It is almost certain that the Mi’kmaq took the resources they needed from the area on a seasonal basis, such as when certain fish species were abundant in adjacent waters and when the huge flocks of migratory birds came to the area to rest and fatten up.

The migratory birds that come to feast in the marsh creeks and on the inter-tidal mud flats near Grand Pré – and which before the 1680s existed right at Grand Pré – number in the millions in late summer and early autumn. So important is the Minas Basin to many different species of birds that in 1988 the governments of Canada and of Nova Scotia designated the area as Canada’s first shorebird reserve. The area is recognized internationally as a key migration stopover zone for shorebirds, especially semi-palmed sandpipers who fatten up in the Minas Basin before undertaking their 72- to 96-hour non-stop flights to South America.

**The Acadian Achievement**

Beginning in the 1680s, three generations of Acadians gradually enclosed and converted the marsh (la grand pré), turning it into one of the most fertile agricultural areas at that latitude in North America. The agricultural abundance that resulted brought prosperity to its local community and allowed it, along with other similar Acadian communities, to enjoy a remarkable population growth, with one of the highest birth rates in world history.

By the 1680s, Acadians already had a half-century experience of land conversion in Acadie. In the 1630s, under the leadership of Charles de Menou d’Aulnay, with saulniers from western France who were familiar with salt pans back in their homeland taking the lead, Acadians learned how to build dykes and enclose tidal marshes in the area of Port-Royal (Annapolis Royal). Impressed by the fertility and productivity of the initial reclaimed lands, other Acadians would go on until 1755 transforming many marshes of different sizes around the Bay of Fundy, in various
parts of today’s Nova Scotia and New Brunswick, along tidal rivers and various coves and bays. Accordingly, Acadians came to be known as défricheurs d’eau (land clearers of the sea), to contrast them with other colonists in North America whose mode of settlement was first and foremost to clear away the forest. The Acadians did clear some upland areas, where they established their villages, planted orchards and gardens, and raised livestock, but the dominant element in their agriculture, highly unusual in North America, was to claim by enclosures the tidal marshes. They became the only pioneer settlers in the North American colonial era to farm so extensively below the high tide level.

The technology the Acadians used to transform wetlands and marshes could not have been simpler: spades, pitchforks, axes, and hollowed out tree trunks. Much more important than the tools was the ingenuity of the people to read the natural drainage systems of the marshes and to then build dykes that channelled the flow of those creeks to only one direction, discharging into the sea. One element of the Acadians’ success was that they re-used in their earthen dykes what nature provided them in the form of sods cut from the original wetlands. The grasses in the sods were no ordinary grasses, for they could withstand being covered by salt water for many hours each day. Moreover, they had deep and densely matted root systems to keep them intact when the seawater swirled over them. Ordinary grasses, like people grow on their lawns, would have easily broken apart in the fast-flowing tidal waters of the Minas Basin. The sods that came from the marsh itself consisted of very fine tidal silts deposited in the matrix of the roots of the grasses Spartina patens and Juncos gerardi.

Along with the strong, dense grasses in their sods, the Acadians took advantage of the natural drainage patterns of the marsh by building sluice boxes right in the small creek beds that naturally criss-crossed the marshes. These sluices were at the heart of the aboiteaux, each of which had a clapet (clapper), a wooden valve that allowed the freshwater from rain or snow to run off the land, out the sluice box and into the river or bay – thereby gradually washing the salt out of the top layers of the soil – but which would not allow sea water back in. The desalination process generally took two to three years for each plot of the dyked land.

The aboiteau approach used by the Acadians was imaginative and ingenious, an adaptation of techniques used in Europe and elsewhere in the world for centuries before the coming of French colonists to North America. Modern industrial sluice gates in place today use the same principle, only on a larger scale.

Though the Acadians used marsh enclosures to give themselves agricultural land in many different areas, the challenge at Grand Pré was unique. Nowhere else in the region were the tidal amplitudes as high as they were at la Grand Pré between the 1680s and the early 1750s. To illustrate, along the Annapolis Basin, where the first Acadian dykes were erected, the tidal range varies from 4 to a maximum of 8.5 m. Within the Minas Basin, at the head of the Bay, however, the average tidal range is almost 12 m, and the highest tides can reach more than 16 m—nearly double or more what they are elsewhere. Those tidal amplitudes at or near Grand Pré are among the highest in the world. The churning volume of seawater presented a major challenge to the Acadian dyke builders, yet it was also a major agricultural opportunity if they could exclude the sea and claim the highly fertile tidal marshes. This was the project they took on with a series of exclusion, or dyking, projects over a seventy-year period. They appear to have begun with the “easiest” part of the marsh, in the centre roughly parallel to where the Memorial Church of Grand-Pré National Historic Site would be erected in the 1920s. Once that area was successfully enclosed the Acadians moved on from there in a series of dyking projects. Biologist and dykeland historian Sherman Bleakney has offered a likely construction sequence of the dykeland enclosures in his book Sods, Soils and Spades. Gradually, the Acadian farm families of Grand Pré turned nearly all of la Grand Pré into agricultural land. They left only a
portion at the western limit of the wetland undyked; a project that the descendants of the New England Planters would successfully undertake after their arrival in the area in 1760.

Because the transformation of the marsh produced land that was much more fertile than could be obtained by clearing the forested upland, the Acadians made this their preferred approach to agriculture. At Grand Pré, they eventually reclaimed over 1000 hectares, a massive artefact that still exists, a living testament to the Acadian accomplishment. It was also the largest single dyking project Acadians would complete anywhere in Atlantic Canada before 1755.

It is noteworthy that the dyking projects at Grand Pré and in most other areas where the Acadians settled in the late 17th and early 18th centuries were undertaken as community-based projects. This distinguishes what they achieved from a number of other land conversion or water management projects in world history, where projects were more typically carried out on a large scale from the top down, as authorized or imposed by social hierarchies. The decision to reclaim the vast wetlands of Grand Pré was taken locally, by the farming families who inhabited the area. They were also the people who then carried out the work over a period of three generations. Most other Acadian dyking and land reclamations followed the same process. Only the original reclamation initiated by Charles de Menou d’Aulnay at Port-Royal in the 1630s and the uncompleted project led by the missionary Abbé Le Loutre in the Chignecto area in the 1750s were initiated and controlled by a “leader” or hierarchical figure.

It is equally noteworthy that the pattern of local ownership and control over the dyked marshland that manifested itself at Grand Pré with the Acadians would be the model followed when the New England Planters took over the same lands in 1760. Moreover, the approach continues today in the 21st century with the individual farmers of the Grand Pré Marsh Body, holding and working many of the same plots that the Planters farmed in the 1760s and the Acadians before them in the late 1600s.

Meanwhile, on the adjacent upland, the Acadians erected their houses, barns, mills and other buildings, and they created a system of roads and footpaths to link them with other Acadian villages. The lands they occupied initially formed part of the seigneurie of Alexandre LeBorgne de Béisle who was the seigneur of Port-Royal.

**Contention and Strife**

The European colonization of the region known alternatively as Mi’kma’ki or l’Acadie or Nova Scotia did not proceed without rivalry and conflict. From the early 1600s onward the region was sometimes a battleground. There were numerous violent incidents and occasionally outright wars. The struggles were sometimes between French and Anglo-Americans, sometimes among rival groups of French colonists, sometimes between French and British forces, and sometimes between the Mi’kmaq and British or Anglo-American forces. The conflicts occurred on a sporadic basis over a period of about 150 years, the same era in which Acadians were establishing their communities and building dykes to reclaim highly fertile marshes such as the one at Grand Pré.

The Minas Basin area was not spared the negative impacts of the different conflicts. In both 1696 and 1704, expeditions from New England, led by Benjamin Church, came to different parts of Acadie. In the latter episode, the attackers devastated the community at Grand Pré, burning houses, carrying off prisoners and breaking the dykes to let in seawater, because they understood that the enclosed marshland was the basis of the Acadians’ agricultural output. A contemporary account expressed it this way: the soldiers dug “down the dams [dykes], and
let the tide in, to destroy all their corn, and everything that was good.” Once the force left, the Acadians returned to the area, rebuilt their houses and repaired their dykes to begin anew.

The above incident took place during the War of the Spanish Succession, a European conflict that had many repercussions in North American colonies. When the war ended with the signing of the Treaty of Utrecht in 1713 one of the terms of the peace agreement was to have a major impact on the Acadians and their settlements. The clause in question saw France transfer sovereignty over Acadie / Nova Scotia to Great Britain. The British presence in Nova Scotia was small at the time, with few British settlers and small garrisons only at Annapolis Royal and Canso. Most of the territory remained either under the control of the Mi’kmåq or it was home to growing Acadian villages. Nonetheless, beginning in 1713 and increasing in the years that followed, British officials regarded Acadians as a people owing obedience to their monarch, with all the obligations such a status entailed. The question of the Acadians’ loyalty was one that would not be settled — to the satisfaction of the British officials — between 1713 and 1755. On the contrary, that issue played a major role in the sequence of events that led to the forcible removal of Acadians from Grand Pré and elsewhere beginning in 1755.

For their part, the Acadians, including those at Grand Pré, mostly tried to remain apart the over-arching imperial rivalry between France and Great Britain. They sought instead to be accepted as “neutrals”. Such a stance, however, was not acceptable to either French or British officials; both powers wanted the Acadians, or the “neutral French” as the British and Anglo-Americans labelled them, to assist and/or fight for their side. The French perspective was based on the fact that the Acadians were Roman Catholics, mostly of French descent and spoke French. The British on the other hand viewed the Acadians as subjects of their king. A few Acadians were pro-French and others worked with the British, but the vast majority were simply caught in the middle between competing and rival imperial aspirations.

In 1729-30, Acadians throughout mainland Nova Scotia agreed to a modified oath proposed by the British governor based at Annapolis Royal. The governor gave a verbal assurance that the Acadians would not be forced to take up arms against the French and the Mi’kmåq but would be allowed to remain neutral. Events in the 1740s and 1750s, however, led later British administrations, based in Halifax after 1749, as well as those in Boston and London to revisit the question of Acadian neutrality.

**Imperial Tensions and the Crisis of the 1750s**

After three decades of peace, Great Britain and France again found themselves in conflict during the War of the Austrian Succession (1744-1748). The main theatre was in Europe yet Atlantic Canada saw its share of action. Several incidents occurred at or near Grand Pré that had long-term impacts on the Acadian population.

In the summer of 1744 a military expedition from the French stronghold at Louisbourg advanced through the main Acadian communities, including Grand Pré, appealing to the Acadian men to join the campaign. Few answered the call; most chose instead to stay out of the conflict between the two European powers. In addition, there was a harvest to bring in at that time of year. The overall Acadian response in 1744 disappointed the French at the same time as it worried the British, who wanted the Acadians to have turned against the French in a more active fashion.
The following year, 1745, there was an unsuccessful French attack on the British base at Annapolis Royal around the same time that a large army of provincial soldiers from New England, supported by British warships, captured Louisbourg. In 1746, France outfitted a massive expedition to sail across the Atlantic on a mission to regain Louisbourg, to take Annapolis Royal and to compel the Acadians to commit themselves to the French cause. The expedition ended in disaster because of delays, storms and illnesses.

Both the French and the British strengthened their positions in the Atlantic region in the late 1740s. In late 1746 the British sent roughly 500 New England soldiers to establish a post in the village of Grand Pré because of French actions in the region. The Anglo-American troops took over numerous houses located on the upland overlooking the reclaimed marsh and settled in for the winter. A few hundred kilometres away in the Chignecto region, a contingent of 250 French soldiers and 50 Amerindian warriors from Canada (the name of the French colony along the St. Lawrence River) heard reports of the New Englanders’ occupation of Grand Pré. Despite being outnumbered two to one and facing the difficulties of mid-winter travel, they set out for Grand Pré in January 1747. They were joined or assisted by a small number of Acadians who were sympathetic to the French cause. At the same time, some pro-British Acadians warned the New England soldiers that an attack might be imminent. The New Englanders ignored the warnings, thinking the severe winter conditions made an attack unlikely.

In the early morning hours on 11 February 1747, in the middle of a blinding snowstorm, the French and Amerindian force caught the New Englanders installed at Grand Pré by surprise. Known to history as the Battle of Grand Pré, the encounter left perhaps as many as 80 New Englanders dead, including their commander. The incident was to loom large in the thinking of some British leaders in 1755, when the decision was taken to implement a massive removal of the Acadians. (The Historic Sites and Monuments Board of Canada concluded in 1924 that the 1747 attack was an event of national significance. This was the first “national” commemoration in the Grand Pré area.)

When the War of the Austrian Succession ended in late 1748, the Treaty of Aix-la-Chapelle returned Louisbourg to the French. Not long after, both France and Britain took further military action in Atlantic Canada. France’s major move was to send an expedition of several thousand colonists to re-occupy Louisbourg in 1749. In other moves in the period 1749-1751 the French established a post at the mouth of the St. John River and two forts in the Chignecto region, at Beauséjour and Gaspareaux. The British meanwhile sent a massive expedition to found Halifax in 1749 as a counterbalance to Louisbourg. Over the next few years the British established several new posts, forts and settlements beyond Halifax. They included Fort Edward within the Acadian community at Pisiquid, a small fort at Vieux Logis (Horton Landing) near Grand Pré, Fort Lawrence in the Chignecto region (opposite Fort Beauséjour) and a sizeable new town of “foreign Protestants” at Lunenburg.

The new British administration wanted to revisit the question of Acadian neutrality. They did so with much more forcefulness than in previous decades when their control over the province had been more nominal than real. Over the next few years there was a complex series of events that culminated in what is known to history as the Acadian Deportation. That singular term refers to many separate forcible removals that took place across what today are the Maritime Provinces of Canada over a period of seven years beginning in 1755. In the end, close to three quarters of the slightly more than 14,000 Acadian men, women and children were deported to North American or European destinations while the rest went into hiding or fled to locations where they hoped they would be safe.
The Acadian Deportation

Historians in the 19th and 20th centuries have provided many different accounts of the Acadian Deportation. There is no need to enter into the details of those differing interpretations in this document. Instead, our focus is on the following points that relate to the tragic event as they relate specifically to the Acadian community and the adjacent marshland at Grand Pré.

- Eighteenth-century British and French commentators acknowledged the unrivalled fertility of the marshlands reclaimed by the Acadians. Grand Pré was renowned for its grain production.

- By the 1720s there was a school of thought among the British that it would be preferable to remove the Acadians from Nova Scotia, replacing them with Protestants, British or “foreign”, who would be unquestionably loyal to the British crown. Other British officials pointed out that if the Acadians were removed then obviously their agricultural production would disappear, since there was no one to take over their lands.

- The idea of attracting “foreign Protestants” surfaced periodically for several decades. In the early 1750s the British did bring over large numbers of German and Swiss Protestants to Nova Scotia to settle in the new town of Lunenburg. A British plan of 1746 that shows where Protestants might be settled in the Grand Pré area; the area identified is where the New England Planters would in 1760 establish a rectilinear town plot.

- In 1755, the surveyor-general of Nova Scotia, Charles Morris, prepared a detailed plan for the Nova Scotia Council that outlined in detail how the Acadians might be removed from their lands in Nova Scotia and dispersed elsewhere in other British colonies. (The same Charles Morris would produce detailed maps of the Grand Pré area, marsh and uplands, at the time of the arrival of the New England Planters.)

The Removal of Acadians from Grand Pré, 1755

In June 1755 an expedition put together by acting Nova Scotia Governor Charles Lawrence and Governor William Shirley of Massachusetts captured the two French forts in the Chignecto region, Fort Beauséjour and Fort Gaspareaux. The authorities in Halifax interpreted the fact that 200 to 300 Acadians had taken part in the defence of Beauséjour – compelled to do so by the French commander of the fort – as a sign of complicity on their part with the French. The Nova Scotia Council decided that all Acadians in the Chignecto region would be rounded up and deported, regardless of whether or not they or a member of their family had been active in the defence of the French fort. About a month later, on 28 July 1755, after meeting twice with the deputies of the Acadian communities on mainland Nova Scotia, the Nova Scotia Council resolved to remove every Acadian – men, women and children – from all of Nova Scotia. That decision would be implemented at Grand Pré and nearby Pisiquid in early September.

While it would be an oversimplification to claim that the Deportation was entirely about the value of the Acadians’ land that was used for agriculture, there is no denying that the fertility and scale of the land at Grand Pré and elsewhere was extremely important for the British officials. For instance, the acting governor of Nova Scotia,
Charles Lawrence, offered the following opinion on October 18, 1755, in a letter to the Lords of Trade in London, England: “…As soon as the French are gone, I shall use my best endeavours to encourage People from the Continent to settle their lands … and the additional circumstances of the Inhabitants evacuating the Country will, I flatter myself, greatly hasten this event, as it furnishes us with a large Quantity of good Land ready for immediate Cultivation.”

Lt.-Col. John Winslow of Massachusetts was the officer in charge of rounding up and deporting the Acadians from Grand Pré. He arrived in the village on 19 August 1755 with about 300 New England provincial soldiers. He gave no indication of what was to happen, but gave the impression he was there on a routine assignment. His first act was to establish a secure base of operations, because his force was greatly outnumbered by the 2,200 Acadian men, women and children living in the Minas Basin area. Winslow selected the area around the Grand Pré parish church, Saint-Charles-des-Mines for his stronghold. His soldiers erected a palisade around the priest’s house, the church, and the cemetery and his troops pitched their tents within that enclosed area. So as not to upset the Acadians unnecessarily, Winslow informed community leaders they should remove the sacred objects from the church before it became a military base.

As August 1755 came to a close and September began, the Acadians of Grand Pré and other nearby villages were busy harvesting various crops from the marshland and cultivated upland areas. There had been many harvests over the preceding seventy years, but this one, unknown to the Acadians, would be the last they would undertake in these surroundings.

On 4 September 1755, Lt.-Col. Winslow issued a call for all men and boys aged 10 and older in the Grand Pré area to come to the parish church at three o’clock in the afternoon on the following day to hear an important announcement. A similar ploy was used by Capt. Alexander Murray to call Acadian males of the nearby Pisiquid region to come to Fort Edward, on the same day at the same time.

On September 5, as requested, 418 Acadian males of Grand Pré proceeded to their parish church – now surrounded by a palisade and controlled by armed soldiers – for the announcement. Once inside, Winslow had interpreters who spoke French inform the assembled inhabitants that they and their families were to be deported and, “that your Lands and Tenements, Cattle of all Kinds and Live Stock of all Sorts are Forfeited to the Crown with all of your Effects Saving your money and Household Goods and you your Selves to be removed from this...Province.”

An eyewitness account states that the look on the Acadian faces as they heard the announcement was a mixture of “shame and confusion ... together with anger.” He added that the “countenances” of the Acadians were so altered they could not be described.

The removal of the roughly 2,200 people who lived at Grand Pré and in the neighbouring villages of the Minas Basin did not proceed quickly or smoothly. Winslow had to cope with a shortage of transport ships and a lack of sufficient provisions. The men and boys would spend more than a month imprisoned within either the church of Saint-Charles-des-Mines or on the transports anchored in the Minas Basin, before the rest of the population was similarly forced on board the ships. Winslow described the scene of the first contingent of young men marching from the church along the road beside the dyked marshland over to the shoreline at what today is known as Horton Landing: they “went off Praying, Singing, & Crying, being Met by the women & Children all the way...with Great Lamentations upon their knees praying.”
On 8 October 1755 the embarkation of the men, women and children to the waiting ships began, with the small boats setting off from Horton Landing. Those who lived at Grand Pré and Gaspareaux went first. Winslow recorded that the inhabitants left “unwillingly, the women in Great Distress Carrying off Their Children in their Arms, Others Carrying their Decrepit Parents in their Carts and all their Goods moving in Great Confusion and appeared a scene of Woe and Distress.”

Winslow gave orders that the families were to be kept together, though in the confusion that was not always possible. Moreover, Acadian families included more than a mother, father, and children. There were also grandparents, in-laws, aunts, uncles, cousins, nephews, and nieces. As a result, friends, relatives and neighbours were sometimes separated, never to see each other again.

On October 19-21, the soldiers compelled families from the outlying communities to assemble at Grand Pré in preparation for their eventual loading on board transport ships. This time the departure point was not Horton Landing but “Budrot Point,” (Boudreau Point), located between the Canard and Habitant Rivers. This group of Acadians numbered about 600, coming from 98 families. While awaiting the arrival of the transports, they lodged in the recently vacated Acadian homes near Winslow’s camp, along the upland area that extends along side the reclaimed marsh.

By late October 1755 soldiers had forced over 1,500 Acadian children, men, and women – with children by far the largest category – from Grand Pré and nearby villages onto the transport ships. The convoy sailed out of the Minas Basin bound for Pennsylvania, Virginia, Maryland, Connecticut, and Massachusetts. At the same time, transport ships carrying approximately 1,000 Acadian deportees from the Pisiquid area also sailed south to their destinations in the Anglo-American colonies.

In total, approximately 2,200 Acadians were deported from the Minas area in 1755. That accounted for roughly one-third of the 6,000 to 7,000 Acadians deported from Nova Scotia during the first year of forcible removals.

*The Village Left Behind*

The usual approach adopted by the New England and British troops in 1755 was to burn most if not all Acadian houses, barns, churches or other structures as they depopulated those areas, so that there would not be any shelter left behind for anyone who might escape mass deportation. In the overall Minas Basin area, soldiers set fire to about 700 houses, barns, and other structures. The village of Grand Pré, however, was spared at least initially. That was because it was where Winslow had his headquarters, and later on it was where the approximately 600 Acadians brought from Boudreau Point were held in the houses. They were sent into exile in mid-to-late December, with 350 sent away on December 13 and the remainder a week later.

It is possible that some of the structures at Grand Pré were incinerated after that date. Yet we know from other sources produced in 1760, that at least some – and possibly a good many – were still standing. According to the surveyor-general of Nova Scotia, Charles Morris, there were roughly a hundred buildings still standing at Grand Pré when the Planters arrived in the spring of 1760. One of those structures was apparently the church of Saint-Charles-des-Mines. In fact, there is even a description of that church in the oral tradition of some Planter family descendants.

The cartographic and documentary evidence from the 1760s provides a clear indication of where the Planters settled. The detailed plans produced by Charles Morris and John Bishop in the 1760s et 1770s suggest strongly that
many of the lots conceded to the Planters on the uplands had previously been occupied and developed by Acadians, and may even go back to the era of the former seigneurial concession of Alexandre LeBorgne de Bélisle.

**The Storm of 1759**

After the forcible removal of the Acadians from Grand Pré in 1755 there was no one left in the area to carry out routine repairs on the dykes that protected the extensive marsh enclosures.

In 1759 a Seros cycle maximum high tide, which occurs every 18.03 years in the Bay of Fundy and Minas Basin, struck. It came at the same time as a great storm in November 1759. A high sea surge broke the dyke walls at Grand Pré in several places where the dykes ran along side the Gaspereaux River. A large portion of the marshland was flooded with seawater, but not all because the Acadian dykes on the inside enclosed areas held firm.

The submerged land might have returned to something like its original condition as a tidal marsh had it not been that there was soon to arrive in the area a large group of new settlers. Those people made it a priority to repair or rebuild the old Acadian dykes that had been overwhelmed. As a result, it was not long before the agricultural use of Grand Pré began anew, this time with people from a different ethnic and cultural background than the original Acadians.

**The Coming of the New England Planters**

A long-held goal of British officials in Nova Scotia in the 18th century, dating well before the Acadian Deporatation, had been to attract settlers to the colony who would be unquestionably loyal to the British side. The 1753 founding of Lunenburg, for instance, was carried out with “foreign Protestants” from Europe. Once the Acadians were removed from their lands at Grand Pré and elsewhere, the targeted newcomers the British sought to attract were in New England. Inducements were issued in late 1758 and again in early 1759 to attract land-hungry settlers from those colonies.

In 1760, Anglo-American colonists who were at the time unable to find land in western Massachusetts were induced by the Government of Nova Scotia to come instead to various locations of what are today’s Nova Scotia and New Brunswick. Those colonists are known collectively as the New England Planters.

One of the areas to which the Planters came within Nova Scotia was Grand Pré, which they already knew was a highly productive agricultural district. The Planters renamed the overall area Horton Township yet they continued to call the vast marsh by its original French name, the Grand Pré. They took over the Acadian buildings that were still standing and erected others of their own, choosing to live along the same uplands where the Acadian village had once been. In the upland area closest to the Gaspereau River they imposed a rectilinear grid with central town squares. In the 21st century, much of that grid is still in place on the landscape as rural roads.

The interior sections of the Acadian-created marsh that were still protected by dykes – that is, they had not been overwhelmed in the great storm of 1759 – the Planters distributed right away to individual farmers. The parts that had been flooded with seawater in 1759, however, posed a great challenge. Dyking and the construction of **aboiteaux** was not something the Planters were yet familiar with. They turned for advice, assistance and labour to
Acadians, some of whom were imprisoned nearby in Fort Edward, in what had once been Pisiquid and which was now as a Planter community renamed Windsor.

**The Dyking Legacy Continued**

Thanks to the transmission of knowledge and techniques from the imprisoned Acadians to the New England Planters, the newcomers who settled on the uplands at Horton (formerly the village of Grand Pré) eventually became master dyke builders of their own. They would maintain what the Acadians had built and re-enclose the sections flooded in 1759. Eventually they would add new dykes of their own. Some new construction was on top what the Acadians had built; other tidal marsh transformations were achieved in areas the Acadians had not previously reclaimed from the sea. Most notably, the Planters succeeded in enclosing a large section of the western side of the Grand Pré marsh that the Acadians had not tackled.

The foremost Nova Scotian expert on agriculture in the early 19th century, John Young, offered this assessment of the Grand Pré marshland in 1822, at which point the area had been in Planter hands for about 60 years.

“The coast of the Bay of Fundy is unquestionably the garden of Acadia, and accordingly we find that the French planted themselves there on the first occupation of the country. They threw across those dikes and *aboiteaux* by which to shut out the ocean, that they might possess themselves of the rich marshes of Cornwallis and Horton, which prior to our seizure they had cropped for a century without the aid of manuring. ... Spots in the Grand Prairies [Grand Pré] of Horton have been under wheat and grass alternately for more than a century past, and have not been replenished during that long period with any sort of manure."

Writing in the early 1880s, D.L. Boardman observed that the “Grand Pré Dike [marshland] is one of the oldest in Kings County and one of the best in the province. The old French had dikes here on the first occupation of the country, and there are now to be seen all over the Grand Pré remains of old dikes within those now doing their duty in keeping back the tide. These have been plowed down and leveled off in places, but it is not a difficult matter to trace them.”

The American biologist and writer Margaret W. Morley (1858-1923) was clearly impressed by what the Acadians had first achieved and the Planters maintained when she wrote in 1905: “we cannot gaze upon the broad meadows before the door of grand Pré without remembering the hands that first held back the sea.”

Despite the turmoil of political and military events in the 18th century, especially the profound rupture that was the Acadian Deportation, the cultural landscape created by the Acadians at Grand Pré had continued to show remarkable continuity into the centuries that followed.

**The Evolution of Horton / Grand Pré**

In many ways, the settlement and land use patterns that developed at Grand Pré after 1760 were similar to those seen before 1755. That is, as the Acadians had done, the New England Planters lived on the uplands in a spread-out manner and took full advantage of the fertility of the dyked marsh that lay in front of them.
One major difference between the two cultural groups was that when the Planters first arrived, they felt the need – in common with other 18th-century British and Anglo-American settlers in frontier regions – to establish a compact township on a tight, rectilinear grid pattern. Most of that grid pattern still exists in the 21st century in the form of farm roads, yet the Planters ended up not building all their houses upon the grid but rather in a dispersed landholding pattern similar to that of their Acadian predecessors. Nonetheless, the persistence of that 1760 “town plot” on the landscape over the next 250 years represents an evocative artefact all by itself.

**The Planter Legacy**

Like the Acadians before them, though some influences were quite different, the Planters also wrestled with questions of loyalty to the British administration. When their friends and relatives back in New England broke with Great Britain at the time of the American Revolution (1776-1783), the Planters in Nova Scotia did not follow suit. A neutral position emerged as their preferred option for – a stance that had echoes of the majority Acadian position a generation earlier. Perhaps as an outlet for their conflicted emotions, many Planter settlers in Nova Scotia took part in the province-wide religious revival led by the evangelical preacher Henry Alline.

As time went by the Planter settlements at Horton and elsewhere put down deep roots. Wherever they settled the Planters and their descendants exerted an influence on Nova Scotia’s culture, politics, landscape and architecture. Horton itself would in the 20th century see its name revert back to what it had been in the time of the Acadians: Grand Pré. The best-known standing buildings in that community, today’s Grand Pré, that are associated with the New England Planters are the Crane house (1767), the Calkin house (1768) and the Covenanters Church, constructed between 1804 and 1811. Nearby Acadia University, in Wolfville, also has a link with the Planters, though it dates from a few generations after their arrival in the province. A Prime Minister of Canada, Sir Robert Borden (1854-1937), is probably the best-known Planter descendant. He was born and raised in the village of Grand Pré.

**Remembering the Prior Acadian Presence**

Early in the 20th century a number of different private individuals and organizations began to commemorate the bygone Acadian presence at Grand Pré. There were two major forces at work. One related to the historical, literary and artistic works that linked Grand Pré more than any other Acadian village of the pre-1755 era to the Acadian Deportation. The other influence was the Acadian renaissance that manifested itself in the latter half of the 19th century throughout the Maritime Provinces of Canada. Together, the two forces combined to ultimately transform a portion of the Grand Pré upland area into what was initially a 14-acres area immediately adjacent to the enclosed marsh.

The best known and most influential of the many literary works that would be produced with a Grand Pré connection was Henry Wadsworth Longfellow’s epic poem *Evangeline, A Tale of Acadie*, published in 1847. Over the next 100 years, Longfellow’s *Evangeline* went through at least 270 editions and 130 translations. The first foreign-language adaptations were in German and Polish in 1851; French and Danish in 1853; Swedish in 1854; Dutch and Italian in 1856; and so on around the globe. Illustrated editions began to appear in 1850, and over the next century and a half dozens of artists offered their visual (and often fanciful) interpretations of Grand Pré and other locales. When motion picture technology came along, the story of Evangeline and the Acadian Deportation
soon turned up in cinematic versions. Short, one-reel adaptations of the tale by Longfellow were produced in 1908 and in 1911. In 1913, the first feature-length film ever produced in Canada was a 5-reel production of Evangeline. It lasted over one hour. American film versions of the Evangeline story were released in 1919 and 1929.

The love story that Longfellow told in his poem employed two fictitious personages, Evangeline and Gabriel, yet it was based on a tale he had heard of a young couple separated at the time of the Deportation. The American poet was not the first to write about the upheaval in a literary form, but his characters and plot line became by far the best known. Longfellow’s description of the events presented in his poem was loosely based on Thomas Chandler Haliburton’s An Historical and Statistical Account of Nova-Scotia (1829), wherein the historian described what had occurred at Grand Pré in 1755 by presenting material from the eyewitness account found in John Winslow’s journal. Thus it was that Grand Pré, a real place with a real tragic history became the opening location for a fictitious work that for the next century would become the best-known interpretation of the Acadian deportation.

Though the Evangeline phenomenon began among non-Acadians, first Americans then British, it was eventually embraced by Acadians and other Francophones. They often came to know the story through the French-language adaptation written by Pamphile Lemay. Lemay’s adaptation differed significantly from the original poem by Longfellow, yet the central characters were the same, the opening setting remained Grand Pré, and the narrative arc was essentially the same.

Quite apart from the famous poem, it took a series of actions by individuals like John Frederic Herbin and André Cormier, by private companies like the Dominion Atlantic Railway and the Société nationale de l’Assomption, and by the overall Acadian community to turn a portion of the Grand Pré area into an important historic site and a major tourist attraction in North America. Those steps and the commemorative monuments, buildings and garden that went along with them represented a symbolic reclaiming of the Grand Pré area by the descendants of the people forcibly removed from there in 1755. As a result, for people of Acadian descent who came to visit Grand Pré from the Maritimes, Quebec, Louisiana, France or elsewhere, Grand Pré became the most cherished of all their Acadian historical sites.

**Grand Pré becomes a Historical and Tourist Site**

With Longfellow having generated a high public awareness of the Acadians’ tragic story and its link with Grand Pré, it was the work of many others to transform the actual Grand Pré into a location that physically reflected the attachment people felt about the region and especially about what had happened there in 1755.

In 1869, at the newly opened Grand Pré railway station, the Windsor and Annapolis Railway Company hung a sign that read: “Welcome to the Land of Evangeline and Gabriel.” The next year saw the first organized tour by rail of the “Land of Evangeline” area by Americans from Boston. Acadians were not involved in these tourism developments.

During the 1880s the Acadians of the Maritimes began to hold “national conventions” in the Maritimes to achieve cultural objectives. The first convention was at Memramcook, New Brunswick and the second in Miscouche, Prince Edward Island. By the end of the decade Acadians had a national feast day (August 15), a patron saint (Notre-Dame-de-l’Assomption), a flag (the French tricolour with a gold star in one corner), an anthem (Ave Maris Stella) and a motto. Moreover, the Acadian and French-language college in Memramcook had obtained university status. In 1895 there appeared a newspaper article by Henri L. d’Entremont in which the author argued that Acadians
needed to honour their ancestors at the emerging tourist site at Grand Pré. A little over a decade later, concrete steps were taken in that direction.

In 1907, John Frederic Herbin, a jeweller, amateur poet and Acadian descendant in nearby Wolfville, purchased the land at Grand Pré that contained the most prominent ruins said to date back to before the events of 1755. This was a piece of land Herbin bought from the widow Mary Bowser. Previous owners, dating back to the time of the Planter arrival in 1760 had included Silas Crane and Samuel Avery and later on the Rev. John Murdoch. Herbin had already published a book of local history in 1898 that had echoed the opinions of Henri d’Entremont. The oral tradition of the time was that the ruins on Herbin’s new property were vestiges of the old Acadian parish church, Saint-Charles-des-Mines, the same church in which Acadian males were imprisoned on 5 September 1755. Not far away from those ruins was a well said to date back to the Acadian period. A little further on was the old Acadian burial ground or cemetery. And then there were the old willow trees, which the oral tradition stated had been silent witnesses to the events that had occurred in the village in 1755. All those cultural resources are still there, as evocative in the 21st century as they were in the early 20th century.

In 1908, the Government of Nova Scotia passed an act to incorporate the trustees of the “Grand-Pré historic Grounds.” This was the first attempt by any government at any level to safeguard the site at Grand Pré.

In 1917, Herbin and the other trustees sold the property with the ruins on it to the Dominion Atlantic Railway [DAR], on the condition that the church site be deeded to the Acadian people so they could erect a memorial to their ancestors. The DAR assumed responsibility for the Grand Pré site and engaged renowned architect Percy Nobbs to develop a detailed landscape plan for the grounds, complete with pathways, flower beds and potential monument locations. With Nobbs’s drawings in hand, the rail company developed a “park” for tourists who wanted to see the spot Longfellow had made famous in his epic poem. The park-like setting – a cross between a jardin des plantes and a commemorative cemetery – encouraged many visitors to reflect on the tragedy of the Acadians in 1755. The first major artistic element added to the landscape was a bronze statue of Evangeline, unveiled in 1920. That statue was the work of renowned Québec sculptor Henri Hébert, who produced a variation on an earlier design of his father, sculptor Louis-Philippe Hébert.

Throughout the 1920s and 1930s the DAR, Nova Scotia Tourism, and many private companies used images and slogans employing the Evangeline theme and Grand Pré association to sell their products. At the same time there was a rampant commercialization of Evangeline: various depictions of the fictitious heroine showed up on a range of products from soft drinks to car dealerships to chocolates.

**Grand-Pré as a lieu de mémoire acadien**

Despite the commercial overlay and despite the frequent tie-ins with an imaginary literary figure, Acadians during the 1920s were showing increasing interest in and attachment to Grand Pré as an evocative site that marked the saddest period of their ancestors’ history. In 1921, the Société nationale l’Assomption (predecessor of today’s Société nationale de l’Acadie [SNA]) held part of its eighth national convention at Grand Pré. During a special ceremony the SNA took official possession of the church site and launched a fund-raising campaign to build a Memorial Church (Eglise souvenir) at Grand Pré on the presumed ruins of the parish church destroyed in 1755. The following year, 1922, Acadian workers began to build that Memorial Church. Acadians and their friends and
supporters from throughout Canada and the United States donated to the cause. The construction of the church reflected the growing wave of Acadian nationalism that had been on the ascendancy since the 1880s.

The Acadian community’s commemoration efforts at Grand Pré continued in 1923 when funds were raised for a sculpture of the Acadian patron saint, Notre-Dame de l’Assomption, to be placed inside the newly completed church. The very next year a group of Acadians and those interested in their history erected a poignant symbol of the 1755 Deportation. That new marker was an iron cross, which was erected along the DAR rail line, about 2 km from the Grand Pré site. At the time it was placed at a dry creek bed that was then believed to be the spot where their ancestors had embarked in small boats during the Deportation. Later research demonstrated that the actual embarkation spot was at Horton Landing so the cross was relocated to that spot in 2005.

By the 1930s Grand Pré had become an important pilgrimage site for Acadians, and for non-Acadians who knew about the Deportation and felt a connection with the tragedy. People came not just from the Maritime Provinces of Canada but from across North America and abroad. In 1924 and 1926, for instance, the Quebec-based newspaper *Le Devoir* organized group visits to Grand Pré. First in 1930, then again in 1936, large groups made the trip from Louisiana. Those visits were the first official contact between *Acadiens* and *Cadiens* – Acadians of the North and of the South – since the time of the Deportation two centuries earlier. Then in August 1955, thousands of Acadians from across North America gathered at what was then known as Grand Pré Park, today’s Grand-Pré National Historic Site of Canada, to mark the 200th anniversary of the Deportation.

Increasingly and movingly, Grand Pré has become a symbol to people everywhere of perseverance, hope and pride, for that is the example of the Acadian people’s survival and flourishing after the events of the Acadian Deportation.

**The Government of Canada Recognizes the Significance of Grand Pré**

Up to the mid-1950s, concerned citizens and organized groups, primarily within Canada but also in the United States, were responsible for all the commemorative action and development at Grand Pré. By 1955, all the major elements on the *lieu de mémoire acadien* had been in place for three decades: the Memorial Church, the statue of Evangeline, the Deportation Cross, the old willows, a stone cross to mark the Acadian burial ground, the well, and flower beds. In May 1955, the Historic Sites and Monuments Board of Canada, the arms-length advisory body that recommends designations of national significance to the responsible federal minister, concluded that the “Grand Pré Memorial Park possesses historical features which would make it eminently suitable as a National Historic Park.” Negotiations took place over the next year and on 14 December 1956, the Société nationale de l’Assomption (later Société nationale des Acadiens, and today the Société nationale de l’Acadie) finalized the sale of Grand Pré to the Government of Canada. Five years later, in 1961, Parks Canada officially opened Grand-Pré National Historic Park.

Since that transition, the federal government agency responsible for the officially designated historic site of Grand Pré has maintained the original commemorative monuments and worked closely and collaboratively with representatives of the Acadian community. The aim has been, and remains, to have
the site fulfill its obligations as a national historic site and at the same time to continue to be the principal
lieu de mémoire of Acadians everywhere.

Grand Pré as a Candidate World Heritage Site
Looking beyond the national historic site to the broader cultural landscape that also includes the Grand Pré Marsh, Horton Landing and a representative sample of the uplands adjacent to the marsh, we have an ensemble that is a worthy candidate site for World Heritage status.

3. Justification for inscription
3.a Criteria under which inscription is proposed (and justification for inscription under these criteria)

(iii) to bear a unique or at least exceptional testimony to a cultural tradition or to a civilization which is living or which has disappeared.

The intact dykeland at Grand Pré is an exceptional example of the distinctive Acadian tradition of turning wetlands into highly fertile farmland.

Justification

The technology used by the Acadians to claim their farmland came from the salt marshes of Western France, a technology used since Antiquity. That technology consisted of a dyke and a drainage system that captured salt from seawater trapped behind earthen walls. Acadians, the French colonists in Acadie (Nova Scotia), adapted the technology to drain marshes and create fertile farmland. This was accomplished through the use of the aboîteau, an assemblage in which there were earthen dykes with sluices passing through them in natural drainage creeks. Each sluice had a wooden hinged valve that prevented seawater from entering when the tide rose yet which allowed fresh water to run off the marshes at low tide, following the original watersheds. Thus the approach worked with nature rather than trying to completely alter it. It generally took two to three years for the marsh to be desalinated enough to be used as farmland.

The Acadian system of marsh transformation was a complete and ingenious system, one that took advantage of the unrivalled natural fertility of the wetlands of the Minas Basin, which thanks to the waters of the Minas Basin are exceptionally rich in nutrients. The Acadians erected their dykes with sods extracted from the very marshes they were transforming. By using sods cut from the marsh itself, where Spartina patens (Salt Meadow Hay) and the Juncus gerardi (Black Grass) grew plentifully, the Acadians used materials that they knew could withstand the sea water on the outside of the dykes and the swirling surge of the world’s highest tides. Those grasses have a very tightly knit root system and thrive naturally in salt water. Cut into sods and installed on the faces of the dyke walls, they were the ideal protection against erosion. By adapting the European technology to the natural conditions that existed in the Minas Basin, Acadians developed a farming practice that was exceptional in North
America – exceptional in its ingenuity, exceptional in the fertility of the farmland created, and exceptional in that the indigenous people, the Mi’kmaq, accepted the Acadians’ transformation of so many wetlands.

Compared to the Dutch polders, the Acadian dykelands did not require a system to pump the water out of the lands claimed on the sea. This is partly explained by the fact that the Acadians settled beside inter-tidal zones and made use of natural environmental features to create their fertile land. The farming practices in France’s Marais poitevin, the area from which the Acadian technology came, differed in that there drainage systems were built using trenches and they stabilised their dyke walls with willows and other trees with dense root systems to prevent erosion. (This is to be explored further in the comparative analysis). Unlike the Acadians’ dyking projects, those in Europe were led by governments or religious powers and were managed hierarchically. The Acadian dykelands were the result of locally driven initiatives that reflected and encouraged their community-based social structure.

The dykeland at Grand Pré is the pre- eminent example among the 30 or so different Acadian dyking projects carried out in the 17th and early 18th centuries. It remains the most fertile and productive as well as one of if not the largest. It is still actively used for agricultural purposes and continues to have exceptional fertility for its latitude in North America. As has been the case since the 1680s, it continues to face the highest recorded tides in the world and much stronger surges than at any other location. Though now protected by modern, machine-made dykes, the marsh at Grand Pré stands as a remarkable accomplishment of pre-industrial, vernacular engineering. Initially conceived and constructed by Acadians, the marsh was later renewed and maintained by New England Planters, beginning in 1760. Succeeding generations, Planter descendants and newcomers, have maintained the essential characteristics of the dyke and taken advantage of its remarkable fertility.

The Grand Pré dykeland is exceptional in the simplicity of its creation and operation and exceptional in comparative terms with other similar projects in its expanse and the particular challenge of its setting.

\[(v)\) to be an outstanding example of a traditional human settlement, land-use, or sea-use which is representative of a culture (or cultures), or human interaction with the environment especially when it has become vulnerable under the impact of irreversible change.

The enduring settlement and land-use pattern on the Grand Pré dykeland and upland is an outstanding example of a distinctive 17th and 18th-century community-based approach to agriculture in North America.

**Justification**

For nearly three and a half centuries the dykeland and upland at Grand Pré have formed a distinctive cultural landscape, an outstanding example in North America of an 18th-century land use that has persisted despite the dramatic sequence of political, military and demographic changes that swept over the area. It is a landscape that
clearly reflects both French colonial and British colonial influences. Yet at the same time, the settlement and use patterns also speak of the power that ordinary people – first Acadians and later Planters – exerted to determine how and where they lived.

The original attributes of the dykeland – when it was one of the largest dykelands in North America, -- remain largely in place while on the upland there is tangible and persistent evidence of roads and settlement patterns. Moreover, there is a continuing link between a farming and residential population on the upland and the wetlands transformed into dykeland.

Year-round settlement on the upland on the south side of the inter-tidal zone began with the arrival of Acadians in the area in the 1680s, a time when the region was known as Acadie (mainland Nova Scotia) and there was a French colonial administration at Port-Royal (later Annapolis Royal). That administration made a seigneurial concession at Grand Pré, evidence of which is still visible in the form of narrow lots on the upland that persisted throughout the Acadian occupation, were subsequently retained by the Planters when they arrived in the 1760s, and still evident today.

Between the 1680s and 1755, when the Acadians were forcibly transported to the Anglo-American colonies, they developed an extensive community at Grand Pré, with all their construction (roads, houses, barns, sheds, mills, church and cemetery) being on the upland. The roads and cemetery are still in situ and there are archaeological sites of some of the now-vanished buildings. Thanks to the incredible fertility of the wetlands transformed into agricultural land, Grand Pré became the largest and most prosperous of all Acadian-settled regions in the Maritime Provinces of Canada. Those other settlements were similar to but smaller and less productive than Grand Pré.

With the arrival of New England Planters at Grand Pré in 1760, a new population began to live on the uplands and farm on the dykeland as the Acadians had done. The British colonial administration that encouraged the Planter migration and settlement established a rectilinear grid known as the Town Plot on the upland, where they wanted and expected most of the Planters to concentrate. Yet it was not long before the Planters opted to settle all along the upland ridge in a scattered fashion similar to what the Acadians had done before them. The Town Plot of the 1760s became essentially a pattern of roads on the landscape, a pattern that is still visible in the 21st century, tangible evidence of the unrealised expectations of the British colonial regime that created it.

Thus one finds at Grand Pré a pattern of settlement and land use with remarkable continuity of use across what in North America is a long time span. Though coming from different cultural, linguistic and religious backgrounds, the Acadians, the Planters and later settlers retained their close relationships with and attachments to the dykeland and did so by restricting their settlement exclusively to the upland. There, they built their houses and other buildings along the ridge as they saw fit. Though the settlers sometimes (or often) ignored the wishes of the French and British administrations over them, the French seigneurial regime concessions and the British Town Plot are still largely intact and visible today. Equally, all roads used by Acadians in the Grand Pré area are still present, with most still in use.

With the exception of the French seigneurial regime vestiges and the grid of the British Town Plot, the rest of the settlement pattern and use at Grand Pré reflects an organic and community-based evolution. As it was in the 17th and 18th centuries, so Grand Pré is today, a low-density settlement on the upland with a close relationship to the adjacent and highly-fertile dykeland. Though not the only such Acadian then Planter cultural landscape, it remains exceptional in its scale, continuity, integrity and authenticity.
To be directly or tangibly associated with events or living traditions, with ideas, or with beliefs, with artistic and literary works of outstanding universal significance;

Through its evocative memorials to a people who overcame a tragedy of forced migration, the Acadian Deportation, Grand Pré is a symbol of hope, perseverance, and pride for all humanity.

_Justification_

Beginning in 1755 and lasting until 1762, two-thirds of the Acadians of the Maritime Provinces of Canada were deported from their homes and the other third forced to find refuge elsewhere. This period of forced migrations and terrible suffering is commonly called the Acadian Deportation.

In 1755, the first year of the Acadian Deportation, all Acadians living at Grand Pré were forcibly removed, and transported to the Anglo-American colonies. Their vacant and highly fertile lands were subsequently settled in 1760 by incoming colonists from New England, known as Planters.

In the late 19th and early 20th centuries Acadians returned symbolically to Grand Pré. On their own and in partnership with others they added exceptional new layers to the area, transforming Grand Pré into by far the most cherished of all Acadian historic sites and one of the most recognizable historic sites in North America. For well over a century now, Grand Pré has been synonymous with Acadian history in general and the Acadian Deportation in particular.

There were several reasons why Grand Pré acquired its symbolic status, with the international success of Longfellow’s mid-19th-century epic poem _Evangeline_, whose opening section is set in an imagined Grand Pré, and the Acadian Renaissance of the 19th century being the two most important factors. By the early 20th century, Acadians and others (notably the Dominion Atlantic Railroad) had erected several evocative monuments at Grand Pré to mark the area’s history and the symbolic return of the descendants of the people who had once thrived and then been removed from the area. The most iconic symbols, all erected in the 1920s, turned out to be the Memorial Church, the Deportation Cross and the statue of Evangeline. Each is widely recognized across North America and in parts of the wider world as symbols of Acadian identity and history. They are also, increasingly, seen as symbols of how a people can overcome a tragic history through perseverance, giving way to hope and pride. In the late 20th century the Deportation Cross inspired another project, still ongoing, that aims eventually to place 20 Acadian Deportation memorials in Canada, the United States and in France.

In addition to its commemorative dimension, Grand Pré is the setting and inspiration for a few hundred literary, artistic and musical creations, beginning in the mid-19th century through to today. The majority of the works focus on story of the Acadian Deportation, the forcible removal that occurred at Grand Pré in 1755 and which saw all Acadians then living there transported to British American colonies. Over time, the experience of the particular
Acadians at Grand Pré came to symbolize the suffering endured by all Acadians everywhere, across the Maritime Provinces of Canada and throughout the seven years of many different forcible removals.

At one and the same time, Grand Pré – the dykeland, the adjacent uplands and the memorials – symbolize both the traditions and way of life before the Acadian Deportation and equally the ability of a people to overcome the tragedy of a forced migration.

3.b Proposed Statement of Outstanding Universal Value

Grand Pré is an enduring and inspirational cultural landscape, an outstanding example of a distinctive community-based approach to farming in 17th and 18th-century North America and through its 20th-century memorials an exceptional example of a place of tragedy that has become a symbol for all humanity of hope, perseverance and pride.

</tbody>
</table>
### Traditions, techniques and management systems
- N/A
- Dykeland managed by a community-based body of landowners responsible for the protection and maintenance of the area for agricultural purposes;
- Modern dykes are now maintained and managed by the Nova Scotia Government
- N/A

### Location and setting
- Exposed on two faces to the tides of the Bay of Fundy;
- In-situ remains of a few ancient dykes and of most 17th and 18th century aboiteaux and culverts (impossible to determine percentage);
- Dykeland continues to be located in the area originally transformed by the Acadians between Long Island and the mainland;
- Location of culverts and aboiteaux has not changed;
- The remains of the heart of the Acadian settlement (cemetery, documented location of the church, and other buildings are protected within the boundaries of the Grand-Pré NHSC;
- In situ remains of houses, roads, landing area / wharf are tentatively identified in locations beyond the G-P NHSC;
- Rural setting defined by low density of structures along the dykels, fields on the dykelands and the uplands;
- Representative sample of the upland settlement of Acadians is protected within the boundaries of Grand-Pré NHSC;
- Many of the roads (and streets) in the villages of Grand Pré and Hortonville and on the dykeland date back to the 17th and 18th centuries
- Most memorials remain in their original locations established in the 1920s; exception is the Deportation Cross, recently relocated to more historically appropriate spot at Horton Landing;
- Grand-Pré NHSC contains archaeological remains of the heart of the community that existed until 1755;
- Horton Landing is the original location from where Acadians were deported and New England Planters arrived;
- Dirt road running along the dykeland and beside Grand-Pré NHSC is the very road upon which the Acadians were marched to deportation and the road upon which the New England Planters walked to take over the area and begin to settle and repair the dykes damaged in the 1759 storm;
- Numerous archaeological sites on the uplands within the boundaries of Grand-Pré NHSC attest to the prior Acadian occupation

### Spirit and feeling
- N/A
- N/A
- Grand-Pré NHSC and the Deportation Cross at Horton Landing inspire strong emotional and spiritual attachment from Acadians across the world;
- The overall Grand Pré area has inspired and continues to inspire a great many literary and artistic works (Longfellow, painter Alex Colville and hundreds of others)
- Grand Pré, especially the NHSC, have for over a century been central to the Acadian identity, conveying messages of perseverance, hope and pride;
- Most visitors to Grand-Pré NHSC are non-Acadians, yet they too are typically much affected by the spirit of the place, and share sentiments similar to those of Acadians.

symbolically to Grand Pré. On their own and in partnership with
others they added exceptional new layers to the area, transforming Grand Pré into by far the most cherished of all
Acadian historic sites and one of the most recognizable historic
sites in North America. For well over a century now, Grand Pré has been synonymous with Acadian history in general and
the Acadian Deportation in particular.

There were several reasons why Grand Pré acquired its
symbolic status, with the international success of Longfellow's
mid-19th-century epic poem Evangeline, whose opening section
is set in an imagined Grand Pré, and the Acadian Renaissance
of the 19th century being the two most important factors. By
the early 20th century, Acadians and others (notably the Dominion
Atlantic Railroad) had erected several evocative monuments at
Grand Pré to mark the area's history and the symbolic return of
the descendants of the people who had once thrived and then
been removed from the area. The most iconic symbols, all
erected in the 1920s, turned out to be the Memorial Church, the
Deportation Cross and the statue of Evangeline. Each is widely
recognized across North America and in parts of the wider world
as symbols of Acadian identity and history. They are also,
increasingly, seen as symbols of how a people can overcome a
tragic history through perseverance, giving way to hope and
pride. In the late 20th century the Deportation Cross inspired
another project, still ongoing, that will eventually place 20
Acadian Deportation memorials in Canada, the United States
and in France.

In addition to its commemorative dimension, Grand Pré is the
setting and inspiration for a few hundred literary, artistic and
musical creations, beginning in the mid-19th century through to
today. The majority of the works focus on story of the Acadian
Deportation, the forcible removal that occurred at Grand Pré in
1755 and which saw all Acadians then living there transported to
British American colonies. Over time, the experience of the
particular Acadians at Grand Pré came to symbolize the
dykelands were the result of locally driven initiatives that reflected and encouraged their community-based social structure.

The dykeland at Grand Pré is the pre-eminent example among the 30 or so different Acadian dyking projects carried out in the 17th and early 18th centuries. It remains the most fertile and productive as well as one of if not the largest. It is still actively used for agricultural purposes and continues to have exceptional fertility for its latitude in North America. As has been the case since the 1680s, it continues to face the highest recorded tides in the world and much stronger surges than at any other location. Though now protected by modern, machine-made dykes, the marsh at Grand Pré stands as a remarkable accomplishment of pre-industrial, vernacular engineering. Initially conceived and constructed by Acadians, the marsh was later renewed and maintained by New England Planters, beginning in 1760. Succeeding generations, Planter descendants and newcomers, have maintained the essential characteristics of the dyke and taken advantage of its remarkable fertility.

The Grand Pré dykeland is exceptional in the simplicity of its creation and operation and exceptional in comparative terms with other similar projects in its expanse and the particular challenge of its setting.

With the arrival of New England Planters at Grand Pré in 1760, a new population began to live on the uplands and farm on the dykeland as the Acadian had done. The British colonial administration that encouraged the Planter migration and settlement established a rectilinear grid known as the Town Plot on the upland, where they wanted and expected most of the Planters to concentrate. Yet it was not long before the Planters opted to settle all along the upland ridge in a scattered fashion similar to what the Acadians had done before them. The Town Plot of the 1760s became essentially a pattern of roads on the landscape, a pattern that is still visible in the 21st century, tangible evidence of the unrealised expectations of the British colonial regime that created it.

Thus one finds at Grand Pré a pattern of settlement and land use with remarkable continuity of use across what in North America is a long time span. Though coming from different cultural, linguistic and religious backgrounds, the Acadians, the Planters and later settlers retained their close relationships with and attachments to the dykeland and did so by restricting their settlement exclusively to the upland. There, they built their houses and other buildings along the ridge as they saw fit. Though the settlers sometimes (or often) ignored the wishes of the French and British administrations over them, the French seigneurial regime concessions and the British Town Plot are still largely intact and visible today. Equally, all roads used by Acadians in the Grand Pré area are still present, with most still in use.

With the exception of the French seigneurial regime vestiges and the grid of the British Town Plot, the rest of the settlement pattern and use at Grand Pré reflects an organic and community-based evolution. As it was in the 17th and 18th century, suffering endured by all Acadians everywhere, across the Maritime Provinces of Canada and throughout the seven years of many different forcible removals.

At one and the same time, Grand Pré – the dykeland, the adjacent uplands and the memorials – symbolize both the traditions and way of life before the Acadian Deportation and equally the ability of a people to overcome the tragedy of a forced migration.
centuries, so Grand Pré is today, a low-density settlement on the upland with a close relationship to the adjacent and highly-fertile dykeland. Though not the only such Acadian then Planter cultural landscape, it remains exceptional in its scale, continuity, integrity and authenticity.

### Form and design

- Dyke walls face the Minas Basin and follow the dyking line set by Acadians in 18th century on the east side of the Grand Pré Marsh and on the west side as set in the 19th century by the successors of the New England Planters. The dykes have been raised as necessary in the 20th century to hold back the highest recorded tides in the world, because those tides rise steadily as sea level rises.
- Forms of the individual fields within the dykeland illustrate the interrelationship between the original dyking projects and the natural drainage patterns that take away water from the fields, out through aboiteaux, into the Minas basin;
- Field pattern follows the natural drainage and are little changed since created in the 17th and 18th centuries;
- Of the approximately 30 different Acadian dykelands, the one at Grand Pré is the most studied and the best understood;
- Flat open area;
- Sightline across the dykelands is uninterrupted by buildings and structures;
- Fields are connected but not separated by a physical obstacle (i.e. fence);
- Fields accessible by dirt roads used since they were first created;
- Field pattern illustrates the evolution of the dyking of the marsh (can read the successive stages of dyking);
- Maximum extent of the dyked area;
- Interrelationship between the different components of the heart of the Acadian, Planter and later settlement (cemetery, roads, houses, dykeland) and the dykelands;
- Linear and dispersed settlement pattern along the marsh and North of the Old Post Road;
- Town Plot of the New England Planters mostly intact and still visible;
- Roads from the Acadian period lead in and out of dykelands, through the settlement

### Materials and substance

- Remains of 17th, 18th, 19th, and early 20th century dykes made of compact soil, brush;
- Accumulated soil in fields as a result of tidal deposition;
- N/A

### Use and function

- Continued function of the dykes and the aboiteau system to protect the fertile land;
- Uninterrupted use for agricultural purposes: raising cattle and growing corn, wheat, grass etc.
- Continues to function as one of the most fertile lands in the country; remains exceptional for its latitude in North America
- Continued use of the commemorative gardens and the various monuments as a place of reflection on the events that took place at Grand Pré, with a focus on the Deportation of 1755;
- Regularly – on an annual basis (July 28, August 15 and September 5) and on important anniversaries – Grand Pré is the place where great numbers of Acadians and others
come together to reflect on the events of the Deportation and how a people was able to overcome such a tragedy.

<table>
<thead>
<tr>
<th>Justification</th>
<th></th>
</tr>
</thead>
<tbody>
<tr>
<td>La technologie des aboiteaux qui a permis aux Acadiens de créer leurs polders tirs ses origines des marais salants du littoral ouest français, une technologie qui remonte à l’Antiquité. Les marais salants consistent à capturer l’eau de mer à l’intérieur d’une digue en vue d’en retirer le sel par évaporation. Les Acadiens, les colons français établis en Acadie (Nouvelle-Écosse) y ont adapté cette technologie pour transformer les zones intertidales en de fertiles terres agricoles. Ceci a été accompli grâce aux aboiteaux, ces écluses construites à même la levée dans le fond des fleuves.</td>
<td>Depuis près de trois siècles et demi, le marais et les terres hautes à Grand-Pré ont formé un paysage culturel particulier, un éminent exemple, en Amérique du Nord, d’un mode d’utilisation du sol qui remonte au XVIIIe siècle et qui perdure en dépit des changements d’ordre politique, militaire et démographique qui ont touché la région. C’est un paysage qui reflète les influences coloniales françaises et britanniques. En même temps, les modes d’établissement et d’utilisation du sol témoignent de la force de caractère de gens ordinaires.</td>
</tr>
<tr>
<td>Entre 1755 et 1762, les deux-tiers de la population acadienne des provinces Maritimes du Canada ont été déportés de leurs foyers et l’autre tiers a été forcé de trouver refuge ailleurs. Cette période de déplacements forçés et de dures tribulations est connue comme la Déportation des Acadiens. En 1755, au début de la Déportation (1755-1762), tous les Acadiens et Acadiens demeurant à Grand-Pré ont été évincés de force et déportés dans les colonies anglo-américaines. Les terres très fertiles qu’ils ont laissées vacantes ont été établies en</td>

</tr>
</tbody>
</table>
Au tournant du XXᵉ siècle, des descendants du peuple acadien et des personnes d’autres origines ont ajouté un sens symbolique à Grand-Pré et à son marais et cet ancien établissement acadien est devenu le lieu historique le plus choyé par le peuple acadien et un des lieux historiques les plus reconnus en Amérique du Nord. Depuis plus d’un siècle, Grand-Pré est devenu synonyme de l’histoire acadienne en général et plus particulièrement du Grand Déplacement des Acadiens. Plusieurs raisons ont milité en faveur de ce statut symbolique qu’a acquis Grand-Pré, dont deux facteurs très importants, nommément la renaissance acadienne du XIXᵉ siècle et le succès international qu’a connu le poème épique de Longfellow, Evangeline dont l’action débute dans un Grand-Pré imaginaire.

Dès le début du XXᵉ siècle, des Acadiens et des personnes d’autres origines, surtout le Dominion Atlantic Railway, ont érigé de nombreux monuments évoquant le passé de Grand-Pré, afin de marquer l’importance exceptionnelle de l’histoire de la région. Des parcelles de terrain adjacentes au marais ont été réservées pour ces monuments tous érigés dans les années 1920 et dont certains sont devenus de véritables symboles iconiques, à savoir l’église-souvenir, la Croix de la Déportation et la statue d’Évangéline. Chacun est largement reconnu en Amérique du Nord et dans certaines parties du monde entier comme étant des symboles de l’histoire et de l’identité acadiennes et, de plus en plus, comme des symboles d’espoir, de persévérance et de fierté. À la fin du XXᵉ siècle, la Croix de la Déportation a servi de source d’inspiration pour un projet, toujours en cours, qui vise à ériger des monuments évoquant le Grand Déplacement dans une vingtaine de sites au Canada, aux États-Unis et en France.

Outre sa dimension commémorative, Grand-Pré a servi de source d’inspiration à des centaines d’œuvres littéraires, artistiques et musicales depuis le milieu du XIXᵉ siècle jusqu’aujourd’hui. La majeure partie de ces œuvres gravite...
tire son origine, puisqu’on se servait entre autres, de saules ou d’autres arbres pour consolider la levée et la protéger de l’effet de l’érosion. Contrairement aux projets d’assèchement des Acadiens, ceux entrepris dans le contexte européen étaient gérés au sein de hiérarchies civiles ou religieuses. En Acadie, les travaux d’assèchement étaient le résultat d’initiatives locales qui reflétaient et favorisaient leur structure sociale à caractère communautaire.

Le marais de Grand-Pré est le meilleur exemple des 20 ou 30 projets d’assèchement entrepris en Acadie, aux XVIIe et XVIIIe siècles, puisqu’il était le plus fertile et le plus productif en plus d’être l’un des plus étendus, sinon le plus étendu des marais acadiens à l’époque. Par ailleurs, il continue toujours de servir à des fins agricoles et est toujours d’une fertilité exceptionnelle à cette latitude en Amérique du Nord. Comme dans les années 1680, il continue de faire face aux plus hautes marées enregistrées au monde et la levée de la mer y est plus forte qu’en aucun autre marais de la baie de Fundy. Quoique protégé par des levées modernes érigées à l’aide de machines, le marais de Grand-Pré figure comme un projet d’ingénierie vernaculaire pré-industrielle, créé par les Acadiens et entretenu après eux par les Planters de la Nouvelle-Angleterre et leurs successeurs.

Ce marais est exceptionnel en raison de la simplicité de sa création et de son fonctionnement en comparaison avec d’autres projets d’assèchement étant donné son envergure et les défis qui présentaient la force ses marées dans cette partie de la baie de Fundy.

Des ressources in situ, alors qu’il ne reste que des vestiges archéologiques de leur patrimoine bâti. Grâce à la très grande fertilité des terres d’alluvion transformées en terres agricoles, Grand-Pré est devenu, à l’époque, le plus important et le plus prospère des établissements acadiens de la région actuelle des provinces Maritimes du Canada. Les autres établissements acadiens étaient semblables, mais moins importants et moins productifs que celui de Grand-Pré.

Avec l’arrivée des Planters de la Nouvelle-Angleterre en 1760, une nouvelle population s’est établie sur les terres hautes et a continué de cultiver le marais comme les Acadiens avant eux. Les autorités coloniales britanniques qui ont favorisé l’établissement des Planters ont établi, sur la terre haute, un plan en damier à l’intérieur duquel elles désiraient et s’attendaient à ce que ces derniers s’établissent. Or, peu de temps après leur établissement, les Planters ont suivi l’exemple des Acadiens établis avant eux et se sont plutôt éparpillés le long de la crête bordant le marais. Le plan en damier des années 1760 est devenu un réseau de rues ou de routes dont il reste encore des traces à ce jour, des témoins des attentes frustrées du régime britannique qui l’a créé.

Ainsi, l’on retrouve à Grand-Pré des modes d’établissement et d’occupation du sol d’une grande persistance puisqu’ils s’étaient sur une assez longue période dans le contexte nord-américain. Même s’ils ont différentes origines culturelles, linguistiques et religieuses, les Acadiens, les Planters et leurs successeurs ont maintenu des liens étroits et un attachement au marais qu’ils ont toujours exploité à des fins agricoles, autour de l’histoire de la Déportation des Acadiens, soit le déplacement forcé de la communauté acadienne de Grand-Pré en 1755 et sa déportation vers les colonies anglo-américaines. Avec le temps, l’expérience de ces Acadiens et Acadiens de Grand-Pré est devenue le symbole des souffrances qu’a dû endurer la communauté acadienne, dans la région qui correspond aujourd’hui aux provinces Maritimes, durant la période de sept années qu’ont duré ces évacuations forcées. Donc, Grand-Pré - le marais, les terres hautes adjacentes et les monuments - symbolise à la fois, des traditions et un mode de vie avant la Déportation et la tragédie entourant la Déportation elle-même.

Pour les descendants du peuple acadien, peu importe où ils se trouvent – principalement au Canada, aux États-Unis et en France – de même que pour les autres peuples, Grand-Pré est devenu un parfait exemple servant à illustrer comment un peuple qui a dû faire face à une grande tragédie a réussi à réclamer, de façon symbolique, les terres qu’on avait enlevées de force à leurs ancêtres. Grand-Pré est donc un témoignage exceptionnel qui inspire l’espoir, la persévérance et la fierté pour tous.
préférant s’établir sur la terre haute, en érigeant leurs
habitations et dépendances sur la crête qui longeait ce
marais. Malgré la résistance des Acadiens et des Planters
après eux, de se conformer aux exigences des autorités
françaises et britanniques, il reste encore des vestiges et des
traces visibles des concessions de l’ancienne seigneurie de
Grand-Pré, de même que du plan en damier établi en 1760. Il
en est ainsi du réseau routier des Acadiens dont la majeure
partie est toujours en usage.

À l’exception des vestiges du régime seigneurial français et du
plan en damier des Britanniques, le reste des modes
d’établissement et d’utilisation du sol est une réflexion d’une
evolution organique et communautaire. Tout comme aux XVIIe
et XVIIIe siècles, Grand-Pré a gardé son caractère
d’établissement rural sur la terre haute avec des liens très
certains avec le très fertile marais adjacent. Quoiqu’il ne soit
pas le seul paysage culturel acadien et Planter, Grand-Pré
demeure exceptionnel quant à son étendue, sa persistance,
sont intégrité et son authenticité.

State of Conservation of Cultural Resources
Grand Pré

The property nominated for World Heritage inscription, referred to as the Landscape of Grand Pré, contains a complex suite of cultural resources that represent the cultural evolution of this landscape since the arrival of Acadians more than 300 years ago. These resources encompass a cultural landscape, archaeological sites and the Memorial Church building. This report presents an assessment of the state of conservation of the cultural resources required as part of a nomination being prepared for UNESCO towards the inscription of Grand Pré in the World Heritage List.

In order to make this assessment information was drawn from the following sources:

- Parks Canada planning and management documents - the *Commemorative Integrity Statement* (Parks Canada 1997) and *State of the Site Report* (Parks Canada 2008) for Grand Pré National Historic Site of Canada
- John Johnston’s (2010) analysis of *The Landscape of Grand Pré—Landscape Assessment*
- archaeological reports and field notes on file at Parks Canada’s Atlantic Service Centre - Campbell 1983; Ferguson 1993; Fowler 2002; 2006a; 2006b; 2010; Hill 1973; Korvemaker 1972
- conversations with researchers currently working on Grand Pré - Rob Ferguson, Jonathan Fowler, Katie Cottreau-Robins, and Ronnie-Gilles Leblanc

The criteria used to rate the state of conservation of archaeological sites are based on a report on *Condition Indicators for In Situ Archaeological Sites* prepared by Michael Brand for Parks Canada in 2008. The three different types of cultural resource found at Grand Pré are assessed separately here due to the distinct character of each type:

1) Cultural Landscape

2) Building – the Memorial Church

3) Archaeological Sites

State of Conservation: Cultural Landscape

The property at Grand Pré incorporates a cultural landscape that has elements of a landscape designed and created intentionally, an organically-evolved landscape and an associative cultural landscape (Johnston 2010:1-2). This cultural landscape is described in detail by Johnston (2010) including an assessment of its “health” which he finds to be in excellent condition. The cultural landscape retains its overall character and function within a context of evolution over time, the relationships among its components are maintained and well understood and key attributes remain intact (see Johnston 2010 section 3.0 and appendix).
State of Conservation: Memorial Church Building

The 2008 State of the Site Report (Parks Canada 2008:12) found the Memorial Church to be in good condition. Stabilization and repointing work were performed in the late 1990’s and the good condition has been maintained through ongoing monitoring and conservation actions. A fire suppression sprinkler system was installed in 2010 and is scheduled to be completed in 2011.

State of Conservation: Archaeological Sites

The archaeological sites include specific identified features, such as Acadian house sites, as well as broader areas that incorporate artifact deposits along with the potential for buried Acadian and/or Planter era features. The condition of archaeological sites is summarized in Table 1 (see also Appendix A for the detailed worksheet used to determine these ratings). Each resource is rated as good, fair or poor based on the following definitions:

Good  - major portion of the cultural resource is in situ
        - the resource is stable and not under threat

Fair   - significant portion of the cultural resource is in situ
        - the resource has sustained some disturbance and may be under threat

Poor  - minimal portion of the cultural resource is in situ
        - disturbance is significant and actively continuing

Voyage du Devoir en ACADIE, 1924

HORTON LANDING — Bénédiction de la Croix commémorative de l'embarquement des déportés
Dear Sir,

ICOMOS is currently assessing the World Heritage nomination of Landscape of Grand Pré and we thank you for your assistance with the recent mission to the property.

As part of our evaluation process, the ICOMOS World Heritage Panel has now reviewed this nomination and identified a few areas where it considers that further information is needed.

We would be pleased if the State Party could consider the following points and provide additional information:

1. Further develop the comparative analysis with sites which witness the history of Acadians, in Canada but also in other parts of the world; and consolidate the justification of criterion (vi) on the basis of this comparative analysis;

2. Consider the extension of the buffer zone in its northern maritime side, in order to ensure the preservation of the visual perspectives from Grand Pré and the protection of the natural resources of the Minas Basin.

We will look forward to your responses to these points which will be of great help in our evaluation process.

ICOMOS has no obligation to contact States Parties during the evaluation process. However, with a view to being as transparent as possible, ICOMOS has agreed to approach States Parties in specific cases. This does not prejudice the ICOMOS recommendation on the nomination and should be considered as preliminary information. It also does not prejudice the World Heritage Committee’s decision.

We would be grateful if you could provide ICOMOS and the World Heritage Centre with the above information by **Tuesday 28 February 2012**.
We thank you in advance for your kind cooperation.

Yours faithfully

Regina Durighello
Director
World Heritage Programme

Subject: Supplementary information requested by ICOMOS for the *Landscape of Grand Pré* nomination

Dear Mr. Rao:

On behalf of Canada, I am writing in response to the letter from ICOMOS of December 14th, 2011 addressed to H.E. André Bachand, former Ambassador and Permanent Delegate of Canada to UNESCO, and email correspondence of January 5th and January 24th, 2012 addressed to John Pinkerton, with respect to Canada’s nomination of *The Landscape of Grand Pré* for inscription on the World Heritage List.

I am pleased to provide you (attached) with the requested supplementary information.

Thank you for your collaboration in the implementation of the World Heritage Convention in Canada.

Yours sincerely,

Larry Ostola
Vice President
Heritage Conservation and Commemoration Directorate, Parks Canada Agency
and
Head of Canadian Delegation to the World Heritage Committee

Att.

cc  H.E. Jean-Pierre Blackburn, Ambassador and Permanent Delegate of Canada to UNESCO
    Yasemin Heinbecker, Deputy Permanent Delegate of Canada to UNESCO
    David Walden, Secretary-General, Canadian Commission for UNESCO
    Valérie Bisson, Senior Policy Advisor, Foreign Affairs and International Trade Canada
    Alessando Balsamo, Programme Specialist, World Heritage Centre

    Carol Sheedy, Vice-President, Operations, Eastern Canada
    Robert Moreau, Field Unit Superintendent, Parks Canada
    Christophe Rivet, Project Manager, Parks Canada
Context

ICOMOS, in a letter dated December 14th 2011, requested additional information from Canada. The request read as follows:

- Further develop the comparative analysis with sites which witness the history of Acadians, in Canada but also in parts of the world and consolidate the justification of criterion (vi) on the basis of this comparative analysis
- Consider the extension of the buffer zone in its northern maritime side, in order to ensure the preservation of the visual perspectives from Grand Pré and the protection of the natural resources of the Minas Basin.

Canada required clarification on these questions which was made by email on December 19th 2011 and read as follows:

1. In the first point, what does 'consolidate the justification of criterion (vi)' mean? Does it mean adjusting the articulation of the justification to include the findings of comparative analysis with other Acadian sites?
2. In the second point, what is the precise 'northern maritime boundary' considered by ICOMOS? Is it the boundary north of North Grand Pré only? Does it include Boot Island?
3. Also in the second point, ICOMOS suggests consideration for an extension in order to protect the 'natural resources of the Minas Basin'. What is ICOMOS referring to? What are those 'natural resources'? The fauna and flora? The water? The sediments? The values of the natural forces of the Basin?

In response, ICOMOS clarified the following by email on January 5th 2012 (answer in French in the original):

1) In the first point, what does 'consolidate the justification of criterion (vi)' mean? Does it mean adjusting the articulation of the justification to include the findings of comparative analysis with other Acadian sites?

Il s’agit essentiellement d’approfondir l’étude comparative de la mémoire acadienne en elle-même avec d’autres sites Acadiens et par rapport aux cultures et aux lieux de mémoire d’autres peuples déplacés. L’esprit d’un tel approfondissement est de mieux justifier la pertinence du critère (vi) et de bien montrer en quoi cette justification relève d’une éventuelle valeur universelle exceptionnelle ou pas. Il ne s’agit pas d’en changer la nature ou les arguments, mais bien d’en « consolider la justification ».

2) In the second point, what is the precise 'northern maritime boundary' considered by ICOMOS? Is it the boundary north of North Grand Pré only? Does it include Boot Island?

L’ICOMOS suggère à l’Etat Partie de s’interroger sur deux éléments d’environnement importants et à bien préserver pour une conservation durable du bien et l’expression la meilleure possible de ses valeurs :

a) L’intégrité visuelle de Grand Pré et de son environnement maritime : la préservation visuelle du bien est-elle suffisamment prise en compte par la zone tampon actuellement définie et/ou par des protections plus larges ? La zone maritime du Bassin dans son ensemble peut-elle être l’objet de projets de développement avec un impact visuel sur le bien et son environnement ?

Certains éléments terrestres et maritimes pourraient être ajoutés à la zone tampon, comme suit : les zones est de marées et de terres hautes des îles Boot et Oak et les zones de marées entre celles-ci ; le cap Blomidon et le Bassin des Mines entre l’île Long et le cap Blomidon ; les zones ouest de marées et de terres hautes des communautés au nord de Wolfville entre la rivière Cornwallis et Blomidon.
Afin de préciser ces propositions, nous vous joignons une carte qui indique les changements possibles de délimitation de la zone tampon.

b) La qualité et le niveau de protection des ressources naturelles dans l’ensemble du Bassin des Mines sont-ils suffisants pour pleinement coïncider avec les valeurs du bien auquel le Bassin des Mines est étroitement associé ?

Suivant les réponses apportées à nos remarques, il appartient à l’Etat Partie de voir s’il convient ou non de modifier les zones tampons terrestre et/ou maritime, plus largement de préciser les régimes de protection assurant une réponse satisfaisante aux deux questions posées.

On January 24, ICOMOS sent an additional request for clarification to Canada which read:

1) Est-ce qu'il serait possible de dresser un programme récapitulatif des actions prévues par le Plan de gestion avec un calendrier de leur mise en œuvre ? Quelle place y tient le programme d’action de la Société de promotion de Grand-Pré ? Quelle est la programmation concernant la conservation du bien ?

2) Est-ce qu'il serait possible de confirmer la mise en place du Comité d’intendance ? de préciser sa composition, ses responsabilités, ses moyens humains et matériels de gestion ainsi que ses relations avec la Société de promotion de Grand-Pré ?

Outline of Canada’s response

In order to facilitate ICOMOS’ evaluation of the nomination proposal for the Landscape of Grand Pré, each question is addressed separately.

The first question regarding the comparative analysis includes tables listing Acadian settlements as well as maps locating the Acadian settlements with which Grand Pré is compared. The clarification is found on pp. 5-16, the tables listing the sites in Appendix A-1, and the maps locating those settlements in Appendices C-5, C-7, C-8, and C-9.

The second question pertaining to a consideration for an extended buffer zone includes an analysis of ICOMOS’ suggestion and Canada’s proposal. The clarification is found on pp. 17-27. Supporting maps for the analysis are found in Appendices C-1, C-2, C-3, and C-4. The map reflecting Canada’s proposal is found on page 23.

The third question pertaining to the Stewardship Board, confirming its establishment, role, structure, and resources is answered on pp. 28-31. Supporting documentation in the form of a letter of funding confirmation from the Government of Nova Scotia is found in Appendix D-1.

Finally, the fourth question regarding the summary of the implementation timeline and the conservation activities is found on pp.32-35.

Appendix E – 1: List of photographs and map resources
I. Question: Comparative Analysis and Justification of Criterion (vi)

Further develop the comparative analysis with sites which witness the history of Acadians, in Canada but also in parts of the world and consolidate the justification of criterion (vi) on the basis of this comparative analysis.

State Party Answer to Question I

The following further development of the comparative analysis aims to demonstrate the Landscape of Grand Pré best meets criterion (vi) compared to all the Acadian sites worldwide.

I. Sites associated with the history of the Acadians

There are hundreds of sites associated with the history of the Acadians in Canada and the world. They can be categorized in four distinct groups:

a) **Acadian settlements prior to the Deportation (1604 – 1755)**: locations of Acadian settlement until 1755. These include a diversity of size and complexity of settlement ranging from a ‘village type’ settlement (church, cemetery, houses, common spaces, etc.) to a multi-family farm. These are all concentrated in Acadie, which covers the area currently defined by the Canadian eastern provinces of Nova Scotia, New Brunswick, and Prince Edward Island. (see Map in Appendix C-5 for location of settlements)

b) **Acadian settlements post-Deportation and prior to 1816**: locations of Acadian settlement and resettlement following the Deportation. These include sites in Canada, the United States of America, France, and Haiti. The date of 1816 marks the arrival of the Acadians in Miquelon, the last place to welcome the last deportees as settlers. As such, it was chosen as a cut off date to identify the location of Acadian settlements following the Deportation. (see Maps in Appendices C-7, C-8, and C-9 for the location of settlements).

c) **Places of transit (1755 – 1816)**: locations where Acadians were deported to or transited through during their forced removal but did not settle. These include places in the United States of America, France, the United Kingdom, the Caribbean, South America, and places where Acadians sought refuge in Canada. (See Map in Appendix C-6 for locations)

d) **Places of commemoration, culture and heritage**: locations where Acadian culture and identity are celebrated and commemorated. These include places in Canada, France, and the United States of America. These places generally refer to sites that are also part of the three aforementioned categories.

A short overview of the historical context for the first three categories is necessary for the background of this comparative study. For more detailed information, please refer to chapter 2 of the nomination proposal for the Landscape of Grand Pré. The fourth category is discussed in section 2 ‘Comparative framework’.

**1.1. Acadian settlements prior to the Deportation (1604 – 1755)**

In the early years of European settlement in Acadie, the settlers were referred to as French. The expression ‘Acadian’ and the distinct Acadian identity began appearing in historical records in the 1690s. By the 1750s, there were close to fifty Acadian settlements in Acadie (there were other settlements mainly populated by British, French, and German settlers. The French settlements were colonies established after 1710). Of these fifty, thirteen are comparable to Grand Pré as a village type of settlement: Port Royal, Beaubassin, Pigiguit, Rivière-aux-Canards, Cobeguit, Chipoudie, Port-Lajoie, Port-Toulouse, Memramcook, Petoudiac, Sainte-Anne-des-Pays-Bas, Baie-Verte, and Tintamarre. These village settlements typically included religious and commercial functions and the infrastructure that supported them (e.g. church, cemetery, warehouses, and harbours). The other settlements were associated to a few families and typically depended on the larger settlements of Port Royal, Beaubassin, Grand Pré, Louisbourg or Port Lajoie, for commerce, administration, and religious congregation. The Acadian population prior to the deportation numbered approximately 14 100 inhabitants. For additional contextual information on European settlements in Acadie prior to 1755, please refer to Chapter 2, section 2b, pp.31-
40. A list of Acadian settlements prior to 1755 is included in Table 1 in Appendix A-1. A map locating Acadian settlements prior to deportation is included in Appendix C-5.

The size, complexity and function of settlements is important contextual information to understand how certain settlements played a greater role in shaping Acadian identity by being relevant, at the time, to a larger community of Acadians. That relevance later played a role in identifying those sites of commemoration.

1.2. Acadian settlements post-Deportation and prior to 1816

After the Acadians were forcibly removed from their lands in Acadie, they began a journey that brought them to Europe, other places in North America, South America and the Caribbean. They began new permanent settlements in Nova Scotia, Québec, the United States of America, and France. Additional contextual information can be found in Chapter 2, section 2b, pp.44-49.

**Nova Scotia**

In 1764, the Government of Nova Scotia allowed Acadians to return to Nova Scotia on the condition they not settle the lands they were deported from and that they not congregate in large Acadian communities. The communities in Nova Scotia, New Brunswick and Prince Edward Island (both provinces carved out of Nova Scotia in 1784) were founded following that decision. The new communities’ primary economic activity shifted from dykeland agriculture to fisheries and forestry as a result of being located in rocky coastal areas. In Nova Scotia, Acadian settlement was concentrated in the regions of Baie Sainte-Marie (southwest Nova Scotia), Par-en-Bas (southern Nova Scotia), Isle Madame (island between mainland Nova Scotia and Cape Breton Island), Chéticamp (northwest corner of Cape Breton Island), and Halifax. A list of settlements in Nova Scotia, New Brunswick and Prince Edward Island is included in Table 2.1 in Appendix A-1. A map locating those settlements is included in Appendix C-8.

**Québec**

The Governor in Québec had welcomed Acadian settlers as early as 1760 in response to an urgent need for settlers. They settled principally in areas along the St. Lawrence River, the Richelieu River, and Gaspésie. A list of settlements in Québec is included in Table 2.1 in Appendix A-1. A map locating those settlements is included in Appendix C-9.

**United States of America**

The Acadians that settled in the modern territory of the United States of America largely went to Louisiana first in the mid-1760s. A second wave of deportees arrived in 1785 after the French authorities allowed them to settle in their former colony now under Spanish control. They became the ancestors of today’s Cajuns. There are a few communities in the State of Maine. These were settled after 1785 by Acadians that had been forced to leave settlements they had established after 1764 along the River Saint John (modern New Brunswick) when the United Empire Loyalists, fleeing the American War of Independence, were given land by the British authorities. These communities formed a distinct region called the Madawaska which was split between the United States and the British colonies in Canada when the boundary was confirmed in 1842. A list of settlements in the United States of America is included in Table 2.2 in Appendix A-1. A map locating those settlements is included in Appendix C-7.

**France**

Some Acadians settled in France and in French territories where they mostly integrated into French society. Communities like Belle-Ile-en-Mer (Brittany) and Archigny (Poitou) retained elements of Acadian identity. The largest concentration of Acadian inhabitants in a French territory to retain an Acadian identity settled in Saint-Pierre-et-Miquelon first in 1763 and, after three more events of deportation, one final time in 1816. Haiti, as a French colony, was the final destination of many families who settled in the communities and contributed to the economy of the plantations.
By 1816, the large majority of Acadians had either returned to the British colonies in Canada or settled successfully in France, the United States, and the Caribbean. By the early 1800s, the Acadian population in Atlantic Canada amounted to about 9500 inhabitants. An estimated 13000 individuals of Acadian ancestry lived in Québec, 17000 in Louisiana and 5000 in France and its colonies. In total, the estimated worldwide Acadian population around 1816 is 44500 people. These figures are estimated from the number of individuals that settled in those locations adjusted for the demographic changes (deaths and births) that would have occurred up to 1816. A list of settlements in France and its colonies is included in Table 2.2 in Appendix A-1. A map locating those settlements is included in Appendix C-7.

1.3. Places of transit (1755 – 1816):

The British authorities in Nova Scotia commissioned numerous ships to embark the Acadians towards their exile. They all had different destinations depending on where these authorities had decided to have them sent, the willingness of local authorities to host the Acadians, and the political brinkmanship between Great Britain and France. For many, the final destination was unknown as they were turned back by authorities suspicious of these Catholic ‘French Neutrals’ (as the Acadians were still referred to by some British authorities). For others, the colonial authorities treated them as French subjects and were henceforth sent back to France. There, they faced a society with norms and customs different from those they were accustomed to in North America. There was little land available in France which resulted in much time spent in urban areas (Nantes for example) waiting for an opportunity to go to America or be given land in France.

In the course of sixty years of wandering, Acadian families and groups transited through dozens of places in Europe and America. They were imprisoned in British forts in modern day Nova Scotia, New Brunswick, and Prince Edward Island before boarding ships. Some individuals tried to flee and took shelter in areas of New Brunswick and Québec. The ships that transported them sailed for the Anglo-American colonies, Great Britain, and France. Once these ships arrived at a suitable destination, their Acadian passengers were concentrated in urban and rural areas of France and America while awaiting an opportunity to settle. Finally, Acadian groups were expelled time and time again from lands they were at first allowed to settle after the Deportation in order to make space for settlers more suitable for the authorities. These places of transit were interruptions, sometimes lasting a few months and other times decades, in this people’s ‘odyssey’ to find a new home in Louisiana, France, Québec or other parts of Atlantic Canada. A list of those places of transit is included in Table 3 in Appendix A-1. Additional contextual information can be found in Chapter 2, section 2b, pp.44-49.

1.4. The places of a diaspora

This overview of the different places associated with Acadian history provide a wide-spectrum of sites that speak to the homeland in Acadie, the uprooting during the events of the deportation, and the resettlement and renaissance in Atlantic Canada and elsewhere in the world. As a result, the Acadian people managed to thrive and despite geographical distances, linguistic differences, and socio-economic challenges, maintained a sense of identity and unity that transcends time and space. The Acadian people connect with those numerous places related to their history so as to nurture that identity, both by anchoring it in the commemoration of the events of the past and by expressing its pride. The following comparative framework will allow distinguishing those places of history from the lieux de mémoire in order to highlight the importance of Grand Pré.

2. Comparative framework

The comparison of the Landscape of Grand Pré with other sites that witness the history of the Acadians will apply the same criteria as the ones used in the nomination proposal to compare it with other lieux de mémoire worldwide. These criteria are (section 3.c.iv. – p.96):

- they are lieux de mémoire;
they show the tangible evidence of the community’s use and continuing transformation to reflect its identity;
• they have been symbolically reclaimed by a diaspora;
• they exhibit the qualities of the diaspora’s homeland;
• they display evidence of the diaspora’s identity;
• they illustrate a successful reclamation through reconciliation.

The nomination proposal includes the following statement about the Landscape of Grand Pré and other sites of importance to the Acadian people:

“Of all the Acadian sites, Grand Pré emerges as the character-defining lieu de mémoire for the Acadian diaspora. Canada has several archaeological sites of abandoned Acadian settlements, particularly in the provinces of Nova Scotia, New Brunswick and Prince Edward Island, that are significant for the Acadian community. The cemeteries and remains of Acadian houses in places such as the Sainte-Famille cemetery, Pointe-à-Major cemetery, Belleisle, and Beaubassin National Historic Site of Canada (NHSC) (all located in Nova Scotia), and other locations associated with the Deportation, such as Boishébert NHSC (New Brunswick) and Port-La-Joye–Fort Amherst NHSC (Prince Edward Island), are the end point of pilgrimages by members of the Acadian community from around the world. The desire to connect with the place where their ancestors lived or from where they were deported motivates Acadians to visit those places. Finally, there are places associated with particular accomplishments and community pride such as Monument-Lefebvre NHSC (New Brunswick), the site of the first national convention of Acadians. Similarly, other locations in Europe and North America can claim to be important to the Acadians, in particular the places where Acadians landed after they were deported or settled. All these places contribute to the collective identity and awareness of the Acadian community, but none comes close to playing the role of Grand Pré as the most important lieu de mémoire. At Grand Pré, Acadians not only share their common heritage and celebrate their identity, they also continue to build their sense of community. Grand Pré is the centre of their reclaimed homeland, a reality they continue to demonstrate through their ongoing use of the landscape in key formative cultural events, in artistic expressions, and in the use of its symbols throughout the Acadian diaspora.” (section 3.c.v. – pp.95-96)

The following comparative analysis focuses on demonstrating more clearly the assertion that “none comes close to playing the role of Grand Pré as the most important lieu de mémoire”.

Most sites described in section 1 of this document and included in Appendix A-1 cannot be used in this comparative because they do not fulfill the role of lieux de mémoire as defined in section 3.c.iv – p.90. In general, they provide historical evidence of past events (such as the location of the pre-deportation settlements) but show very little tangible evidence of the community’s use and continuing transformation to reflect its identity. Most pre-deportation settlements are not identified, commemorated, or otherwise remembered in today’s landscape. In fact, most sites that remain relevant in the collective memory of the community have a commemorative plaque marking the location of a settlement or event. They however do not necessarily play a central role in defining collective identity of Acadians worldwide. As an example, the ‘monuments de l’Odyssée acadienne’ is an initiative that began in 1999 by the Société nationale de l’Acadie to commemorate those places associated with the Deportation around the world. Together, those sites form a network that illustrate and commemorate the events of the Deportation. However, those and other commemorated sites have seldom gained further attention from the community thus limiting the ‘continuing transformation to reflect identity’.

Over time, starting in the 19th century and continuing today, Acadian communities worldwide have nurtured their identity and collective memory through cultural and historical sites. These sites include museums, cultural centres, interpretive centres, research institutes, and memorial centres. They are located in sites listed in tables 1, 2, and 3. A list of such sites is included in Table 4 in Appendix A-1.

Based on an analysis of that list, the sites that are most comparable to the Landscape of Grand Pré are:

- Monument-Lefebvre National Historic Site of Canada (Canada)
- Musée acadien in Bonaventure (Canada)
- Acadian Museum of Prince Edward Island (Canada)
- The Acadian Memorial in St. Martinville (United States of America)
- Ligne acadienne and Musée de la ferme acadienne in Archigny (France)
3. Comparative analysis

The same framework used to compare the Landscape of Grand Pré to other sites around the world (section 3.c.v. – p.97-98) is applied to compare it to other sites of significance to the Acadian community:

- Association with a diaspora
- Authenticity of location and setting in relation to the homeland
- Elements of the memorial experience
- Role of the site in collective memory
- Sharing of the landscape
- Condition of the site

Monument-Lefebvre National Historic Site of Canada (Canada)

Built in 1896-1897, Monument-Lefebvre is a stone building in the village of Memramcook in the province of New Brunswick. It sits on the campus of the former Collège Saint-Joseph, the first French-only institution of higher-learning in Atlantic Canada. The building was erected to commemorate the founder of the Collège, Father Camille Lefebvre. The latter was instrumental in providing the tools for the renaissance of the Acadian people, from the education of an ‘elite’ to the holding of the first Convention nationale des Acadiens during which the framework for the survival and growth of the Acadian culture were developed (Chapter 2, pp.52-54). The building houses a theatre and classrooms that has played a role in sustaining the education of the Acadian community in the first part of the 20th century. Today, it continues to serve the Acadian community as a place of cultural expression. It hosts plays by French-speaking playwrights from the Acadian community of Atlantic Canada and elsewhere as well as shows and exhibits that attract an audience from the nearby city of Moncton.

In 1994, Monument-Lefebvre became a national historic site. The statement of commemorative intent by the Historic Sites and Monuments Board of Canada (HSMBC) states that Monument-Lefebvre is of national historic significance because “it was built to commemorate Father Camille Lefebvre who had contributed so much to the rebirth of the Acadian culture, and it occupies a special place in the hearts and minds of the Acadian people.” The Monument-Lefebvre also houses the exhibit to the Acadian Odyssey, an event of national significance designated by the HSMBC. The exhibit highlights the Acadian experience immediately following the deportation of 1755. Combined with the significance of the building itself, the events that occurred at Monument-Lefebvre emphasise the importance of commemorating the renaissance of the Acadian people.

Monument-Lefebvre NHSC is similar to the Landscape of Grand Pré in that it is associated to the Acadian people and speaks to their history of survival. Its location in Memramcook, in south-eastern New Brunswick, next to dyked marshes and the location of resettlement starting in 1764, is a reminder of the successful establishment of a community in what was then Nova Scotia post-Deportation. It plays an important role in collective memory as a witness to the ‘rebirth of the Acadian culture’ and as the setting for the events that confirmed that renaissance.

Monument-Lefebvre NHSC contrasts with the Landscape of Grand Pré however, because its memorial experience focuses on the events surrounding the rebirth of the Acadian people. Whereas the Landscape of Grand Pré provides an experience that ties Acadian identity pre- and post-Deportation and that connects a people to its homeland, the attraction to Monument-Lefebvre is focused on a building and the seminal 19th century events of the creation of the Collège Saint-Joseph’s and the hosting of the first Convention nationale acadienne in Memramcook. Those events, while important to Acadian identity, have not transformed Monument-Lefebvre into an evocative symbol in its own right like Grand Pré. Monument-Lefebvre has not been the subject of political, social, and artistic appropriation and does not carry the same evocative meaning as Grand Pré. Furthermore, while the story at Monument-Lefebvre is relevant to the Acadian people by celebrating their accomplishments, it is primarily known to those members in Atlantic Canada.
The comparison of the nominated property with Monument-Lefebvre NHSC highlights that the Landscape of Grand Pré is a site that is relevant to the entire Acadian diaspora because it relates to both the pre- and post-Deportation stories and connects a people to its homeland. The literary fame acquired by Evangeline A Tale of Acadie had a positive impact on public awareness about the Deportation, allowing places like Monument-Lefebvre to gain commemorative significance of people and events associated to the consequences of it. But Evangeline also made Grand Pré the de facto location associated with that awareness and the only location of active collective memory of the entire community’s identity and aspirations. In fact, at the first Convention nationale acadienne in Memramcook, Grand Pré was referred to in speeches and sermons to evoke the Acadian people and their plight thus becoming part of their places of identity. The renaissance that began in Memramcook with calls for unity was followed by a second Convention in 1884 that confirmed the creation of unifying symbols, from which Grand Pré continued to gain prominence in the collective memory of the Acadian people thus progressively becoming the ultimate unifying symbol: a symbol of the homeland. This role was possible in large part because of the tangible presence of the defining Acadian landscape of dykes and aboiteaux still being worked.

Musée acadien in Bonaventure (Canada)

The Musée acadien is located in the village of Bonaventure in the province of Québec. It serves primarily as a historical and ethnological museum of the Acadians in Québec but also provides a public space for cultural and educational events. The village of Bonaventure was founded in 1760 by Acadians fleeing forced removal by the British authorities. It is located in one of the important resettlement areas for the Acadians. The museum, officially founded in 1990, resides in a building built in 1914 to house a boys’ academy and a credit union. It had existed for years prior as a regional collection and interpretation centre.

The Musée acadien is important as a cultural institution that allows the Acadian people to learn about history, culture, and life after the deportation and resettlement in Canada. It contains numerous artefacts related to the everyday life of the settlers and their sense of identity. The display of Acadian identity through music and arts is an annual occurrence at festivals and other events held at the museum.

The Musée acadien is similar to the Landscape of Grand Pré in that it plays a role in maintaining the cultural identity of the Acadian people by exhibiting artefacts related to their resettlement after the Deportation and hosting cultural events on an annual basis that attracts thousands of people. There are elements of the memorial experience that are similar through the direct contact with artefacts from the past and the annual gathering of Acadians to celebrate their community.

However, the Landscape of Grand Pré contrasts sharply with the Musée acadien in its relevance to the entire diaspora, the elements of the memorial experience, and its role in collective memory. The Musée acadien, much like Monument-Lefebvre has a regional relevance that is greater than its broader diasporic relevance. The Landscape of Grand Pré is a place of pilgrimage for the Acadian people as a whole because of its powerful symbolic function whereas the Musée acadien serves primarily as a place of preservation and celebration of Acadian culture. Furthermore, the role of the Landscape of Grand Pré in articulating Acadian identity from its beginning, through the Deportation and its Renaissance, distinguishes it from the Musée acadien’s focus on understanding life and culture of Acadians that settled in Bonaventure after 1760.

The comparison of the nominated property with the Musée acadien highlights the character of the Landscape of Grand Pré as a place that speaks to the connection between people and their homeland. Whereas the Musée acadien highlights the importance of the connection between people and their heritage through exhibits and festivals (a function that is also experienced at other cultural institutions and gatherings in Acadian communities), the Landscape of Grand Pré illustrates the importance of certain places as lieux de mémoire. These are places where members of a community share a common heritage, reaffirm their identity and build their sense of community in a transformative way.
Acadian museum of Prince Edward Island (Canada)

The Acadian museum of Prince Edward Island was founded in 1964 and is located in Miscouche in the province of Prince Edward Island. The museum’s mission reads as follows: “Acquire, preserve, study and interpret the artifacts and arts relating to the heritage of Prince Edward Island Acadians from 1720 to the present.” As such, its primary objective is to “create awareness among Island Acadians and make them proud of their culture [...] and thus contribute to the survival and development of Prince Edward Island’s Acadian community”. In addition to its role of preserving and exhibiting artefacts, it supports various educational and community programs as well as annual festivals promoting Acadian culture.

The community of Miscouche was founded in the early 19th century and is located east of one of Prince Edward Island regions, the Evangeline region. The latter, named after Longfellow’s heroine, acquired its name in the 1970s and hosts the largest concentration of Acadian communities on Prince Edward Island. It is proud of its Acadian heritage and of its role in the cultural renaissance. Indeed, Miscouche was the host of the second Convention nationale in 1884 during which the Acadian national symbols were chosen, including the flag, the anthem, and the motto. The museum was founded in Miscouche as a means to commemorate that event and maintain a cultural connection. The Acadian museum plays a role in strengthening the Acadian identity of the communities nearby and thus is an anchor in the ongoing development for those communities.

The Acadian museum is similar to the Landscape of Grand Pré in that it plays an active role in creating awareness about Acadian heritage and pride in that culture. Furthermore, the place plays an important role in Acadian identity because of the events surrounding the choice of symbols of identity.

The Landscape of Grand Pré contrasts with the Acadian museum in nurturing a dynamic memorial experience combining the tangible presence of the past, contemporary memorial structures, and ongoing use. Whereas the Acadian museum exhibits artefacts of the past and raises awareness about Acadian culture, the Landscape of Grand Pré combines the artefactual experience of Acadian heritage, such as the archaeological remains and the dykes, with the tangible manifestations of community identity, such as pilgrimages and milestone political and social events. While Miscouche remains important in Acadian history for the events that contributed to building collective identity, the Landscape of Grand Pré not only hosts the symbols of Acadian identity thus affirming it, but has become itself a symbol of identity. Once again, like in Memramcook, Grand Pré was evoked in the speeches during the second Convention nationale acadienne in Miscouche thus reinforcing its then budding role as a unifying symbol.

The comparison of the nominated property with the Acadian museum highlights that the Landscape of Grand Pré is a location with a symbolic meaning that transcends the needs of a local and contemporary community in order to be universally relevant to a diaspora in the present and in the future.

Acadian Memorial in St. Martinville (United States of America)

The Acadian Memorial in St. Martinville is located in the heart of “Cajun country” in the State of Louisiana. It consists of a series of monuments and memorials to the Acadian deportation and the arrival of some Acadian families in Louisiana. A committee to create a memorial was founded in 1990 at the initiative of Cajun citizens in St. Martinville. The following year, the Louisiana State Legislature passed a resolution in support of the project and declared St. Martinville the home of the "World Memorial to All Acadian Refugees Who Ended their Exile in Louisiana". The memorials were planned starting in 1992 and completed with the opening of a museum in 2001. They include a museum, a large mural depicting the arrival of the Acadians in Louisiana, a wall with bronze plaques listing the close to 3000 names of the Acadian refugees in Louisiana, an eternal flame, a mosaic with the coats of arms of some of the more prominent Acadian families, a quilt representing the Acadian Odyssey, and a Deportation Cross identical to the one in Grand Pré. The town of St. Martinville is also home to the Evangeline Oak, the oak tree where the real individuals that are said to have inspired Longfellow for his characters of Evangeline and Gabriel finally met again after decades of separation following the Deportation. A statue of Evangeline,
different from the one at Grand Pré, sits in the middle of the park on top of what folklore claims to be her grave. The Acadian Memorial is important as a gathering space, a memorial, and a historical centre for Cajuns and visiting Acadians.

The Acadian Memorial is similar to the Landscape of Grand Pré in displaying elements of the memorial experience and its role in the collective memory. The tangible manifestations of sharing of heritage, affirmation of identity, and pride are apparent in similar ways through the erection of culturally identifiable monuments such as depictions of the deportation, crosses, and walls of names. In both locations, visitors are invited to reflect on the past events while at the same time celebrate a vibrant culture. Both sites play a central role in the collective memory of the communities. Finally, the association of the story of *Evangeline* with both places stresses the important role that the fictional character played in successfully raising awareness about the Acadians' Deportation.

The Landscape of Grand Pré contrasts with the Acadian Memorial in its setting in relation to the homeland and in the symbolic reclamation of a land no longer inhabited by Acadians. While the Acadian Memorial is located in the heart of "Cajun country" and asserts that identity firmly in that region, it nevertheless evokes a connection with the homeland located thousands of kilometres away in Nova Scotia. In fact, Grand Pré’s symbols (the Deportation Cross for example) are reproduced at the Acadian Memorial as a means to express that connection a fact that confirms Grand Pré’s place in the collective memory of all those of Acadian descent. It is of note that both sites were twinned with each other in 1996, a fact that confirms the importance of that connection. Finally, the Landscape of Grand Pré embodies the symbolic return to the homeland and the resulting sharing of a landscape with those who now live on those lands.

The comparison of the nominated property with the Acadian Memorial highlights that unlike memorials erected by diasporas in their new homes, such as the Acadian Memorial, the Landscape of Grand Pré exemplifies the successful symbolic reclamation of the homeland by a diaspora.

**Ligne acadienne and Musée de la ferme acadienne in Archigny (France)**

The *Ligne acadienne* is a large complex of 57 farmsteads located close to Archigny in the département of Vienne. The *Musée de la ferme acadienne* is one of those farmsteads located at the *hameau des Huit-Maisons*. It consists of a farm complex of buildings, including a farmhouse, a stable, and barn. These structures were built in 1773 on the orders of the local nobleman to host close to 1500 Acadians that had been scattered in the French ports along the west coast. Due to various administrative challenges and the difficulty of farming the poor soils of the area, some 1400 decided to leave for Louisiana in 1785 leaving behind 12 families of approximately 73 individuals to populate the settlement. In 1793, they were given the right to own their land and progressively integrated into French society, partly losing their connection with their relatives in Acadie and Louisiane.

The *Musée de la ferme acadienne* was founded in 1973 at the initiative of descendants of those Acadians that settled, the *Association Les Cousins acadiens du Poitou*. They sought the support of the local authorities to acquire the farm. Of the 57 original farms, 38 remain in various state of repair. All the remaining farms have been declared *Monument historique* by the French authorities. Many of these are still in use.

Visitors to the *Musée* are invited to discover exhibits inside the buildings, including period artefacts and furniture, as well as the landscape around it. The *Association* is in charge of the interpretation and carries out some outreach programs and events. Every year, it holds a *fête du 15 août* to celebrate the national day of the Acadians.

The *Ligne acadienne* and *Musée de la ferme acadienne* are similar to the Landscape of Grand Pré in that they play a role in the Acadians community’s collective memory by exhibiting a landscape with tangible evidence associated to the deportation and to Acadian culture. In both cases, the memory of the events is present and authentic in the landscape in the form of cultural remains and agricultural fields. In both
cases as well, the initiative to identify those locations as significant for the Acadian community began as a desire from descendants of those affected by the Deportation. Furthermore, the authenticity of the places and objects associated to that experience provide a medium for reflecting on that experience, sharing a common heritage, and affirming their identity through regular celebrations.

The Landscape of Grand Pré contrasts with the Ligne acadienne and the Musée de la ferme acadienne in its defining role in shaping collective identity and its setting in the homeland. Where the Ligne acadienne and the Musée de la ferme acadienne contribute to the maintenance of the collective memory of Acadian refugees in France and of their descendants in France and Louisiana, the Landscape of Grand Pré is an active lieu de mémoire that continues to shape the identity of the diaspora. Its location in the homeland which includes the dykes and aboiteaux as defining elements of Acadian identity, makes it universally meaningful for all those of Acadian ancestry. In contrast, the landscape in Archigny is relevant specifically to the descendants in Louisiana and France of those settlers of 1773. Furthermore, the artistic, social, and political expressions tied to Grand Pré over 150 years, crystallize the aspiration of a people that was forcibly removed from their lands by providing an experience of the homeland and a symbolically meaningful place for all Acadians to gather and reaffirm their identity.

The comparison of the nominated property with the Ligne acadienne and the Musée de la ferme acadienne highlights that for the Acadian diaspora, connecting with its heritage is important to sustain its identity. It also highlights that the Landscape of Grand Pré’s elements of the memorial experience are tied to the connection to the homeland, its attributes, and the symbolic reclamation of the landscape.

The following table (Table A) summarizes the main points of comparison between the Landscape of Grand Pré and the five other sites related to Acadian history worldwide.

4. Conclusion and consolidation of the justification for criterion (vi)

As this in depth analysis of the sites that witness the history of the Acadians demonstrates, there are many sites of heritage and culture that foster the collective identity of a community of Acadian descent. Many of these sites highlight the way of life of the Acadians and of their descendants (e.g. The Ligne acadienne and the Musée de la ferme acadienne (France), the Musée acadien in Bonaventure (Canada), are memorials to their ordeals and accomplishments (e.g. Monument-Lefebvre NHSC (Canada), Acadian Memorial (USA), or serve as repositories of the historic memory of the community (e.g. Acadian Museum of Prince Edward Island (Canada). The hundreds of places around the world where Acadians originated, transited through, and resettled are all places that together illustrate eloquently the history, challenges, and accomplishments of that community. Some places acquire meaning for specific families (e.g. archaeological remains associated to a family settlement in Nova Scotia (Canada) others for local existing communities (e.g. Musée acadien in Bonaventure (Canada). Yet others are significant for the political and social milestones reached during the 19th century Acadian renaissance and later years (e.g. Monument-Lefebvre NHSC (Canada). Finally, some sites are located in the homeland (e.g. Monument-Lefebvre NHSC (Canada), yet most exist within the Acadian communities worldwide that continue to feel a sense of belonging and identity (e.g. Acadian Memorial (USA). However, as stated in the nomination proposal “none comes close to playing the role of Grand Pré as the most important lieu de mémoire” (section 3.c.v. – pp.95-96).

As this comparative analysis highlights, the Landscape of Grand Pré has four distinguishing characteristics that sets it apart from other Acadian sites and that confirms its role as the most important lieu de mémoire for the Acadian people:

a) **Connection to the Acadian homeland:** the Landscape of Grand Pré emerges as the only site that enables and nurtures a connection to the homeland. This is a landscape with a sense of place and memorials that evoke the traditional landscape of the Acadian people prior to the deportation. This in effect highlights the link between the articulation of criteria 5 and 6.

b) **Lieu de mémoire that evokes the Acadian people:** The Landscape of Grand Pré is the only site that combines and commemorates the characteristics of the Acadian traditional landscape together with the symbols of the people’s survival and renaissance. The historical and archaeological evidence of the events, the fact that there is no longer an Acadian community in Grand Pré, and the progressive peaceful symbolic reclamation of the landscape are evocative of the Acadian experience and the people themselves. The sharing of the landscape only serves to reinforce the consequence of the Deportation, the successful renaissance of the people, and the ongoing work of reconciliation.

c) **A symbol in itself:** The Landscape of Grand Pré is the only site that has become a symbol in itself and is used in artistic representations, political discourses, and literary works for the past 160 years to evoke Acadian identity. This is the result initially of the Acadian community’s desire to return to their homeland, being communicated widely through Longfellow’s *Evangeline*. The setting described in the poem as well as the Acadian collective memory of the land left behind during the Deportation transformed the dykes and aboiteaux in Grand Pré in evocative symbols of the Acadian way of life and history. These attracted people in Grand Pré which along with the willows became the first ‘memorials’ of the homeland. The Acadian elite referred to Grand Pré as the homeland, as the place of tragic events, and as an inspiration for overcoming the consequences of those events. The progressive symbolic appropriation continued with the buying of land to create the memorial park and church, and the erection of monuments throughout the 20th century. Longfellow’s *Evangeline* was instrumental in bringing to the fore the story of the Deportation and of the Acadians, thus making it possible for Acadians to tell their story and mark the locations around the world that are associated to it. But it is *Evangeline*’s setting in Grand Pré
that made the story real because it gave it a tangible place and historical evidence for people to relate to and come on pilgrimages. Today, the symbols of Grand Pré, such as the Deportation Cross, are reproduced elsewhere in the world to evoke Acadian identity. There is no other Acadian site that has had this power of evoking identity and collective memory. This, in addition, highlights the link between the articulation of criteria 5 and 6 and the relationship between the agricultural landscape and the symbolic landscape.

d) \textit{A site for all Acadians:} the Landscape of Grand Pré is a site for all Acadians in part because there is no longer an Acadian community in Grand Pré, because it connects and commemorates the homeland as well as the renaissance, and because it followed the impulse of identifying unifying symbols for the Acadian community that began with the \textit{Conventions nationales}.

As the comparative analysis in the nomination proposal has demonstrated, the desire to connect with one’s homeland and the role in maintaining a sense of belong to a community is shared amongst numerous cultural groups. The Landscape of Grand Pré plays that role for the Acadian community and the experience illustrates universal values of connecting with the homeland, sharing a common heritage and belonging to a community.

This confirms in perpetuity the exceptional role of Grand Pré as the most important \textit{lieu de mémoire} for the Acadian community. The evidence of that significance for the Acadians is not only in the antiquity of that connection and of its presence in the landscape itself (i.e. in the form of the memorials), it is in the way the memorials of Grand Pré are used to symbolically reclaim the locations associated to the deportation elsewhere in the world. The Landscape of Grand Pré remains the only place that evokes for the Acadians the unity of their people dispersed throughout the world and has served as the place of gathering and pilgrimage to share a common heritage, reaffirm their identity, and continue to build their sense of community.

II. Question: Buffer Zone and Protection of Visual Setting

Consider the extension of the buffer zone in its northern maritime side, in order to ensure the preservation of the visual perspectives from Grand Pré and the protection of the natural resources of the Minas Basin.

State Party Answer to Question II

ICOMOS recommended that Canada consider two important environmental aspects for both conservation purposes and best expression of the proposed values. The first is the protection of the visual integrity of Grand Pré and its maritime setting and the second is the protection of the natural resources of the Minas Basin. After careful consideration of ICOMOS’s suggestion and of the buffer modification submitted, Canada wishes to provide the following analysis and conclusion, based on the definitions included in the Operational Guidelines, the information already provided in the nomination proposal, and additional analysis of the legal and environmental characteristics of the nominated property’s immediate setting.

1. Definition of buffer zone applied by Canada

In its nomination of the Landscape of Grand Pré, Canada considered that the nominated property required a buffer zone based on its analysis applying the definition in the Operational Guidelines included in paragraphs 104 and 105:

104. For the purposes of effective protection of the nominated property, a buffer zone is an area surrounding the nominated property which has complementary legal and/or customary restrictions placed on its use and development to give an added layer of protection to the property. This should include the immediate setting of the nominated property, important views and other areas or attributes that are functionally important as a support to the property and its protection. The area constituting the buffer zone should be determined in each case through appropriate mechanisms. Details on the size, characteristics and authorized uses of a buffer zone, as well as a map indicating the precise boundaries of the property and its buffer zone, should be provided in the nomination. [NB text in bold and italics emphasized by author of this report]

105. A clear explanation of how the buffer zone protects the property should also be provided.

Furthermore, Canada implemented the direction provided under paragraph 112:

112. Effective management involves a cycle of short, medium and long-term actions to protect, conserve and present the nominated property. An integrated approach to planning and management is essential to guide the evolution of properties over time and to ensure maintenance of all aspects of their Outstanding Universal Value. This approach goes beyond the property to include any buffer zone(s), as well as the broader setting.

2. Information included in the nomination proposal

In the determination of the appropriate buffer zone, Canada relied on its proposed articulation of outstanding universal value (Chapter 3, section 3.a. p.69-71) and of statement of Outstanding Universal Value (Chapter 3, section 3.b. p.71-73):

Criterion (v): “an outstanding example of a traditional human settlement which is representative of a human interaction with the environment.”

Grand Pré is a vibrant agricultural landscape, carved out of its harsh coastal environment three centuries ago by Acadian settlers. Working collectively, they applied an ingenious system of dyking and drainage to hold back the highest tides in the world, created extraordinarily fertile farmland, and began a tradition of collective management. This land reclamation system and this management tradition continue to ensure the livelihood of the local community today. The Landscape of Grand Pré is an outstanding example of a thriving farming community that interacts with its environment by using a successful land reclamation system and management tradition that predate the introduction of engineered drainage systems.

Criterion (vi): “a property that is tangibly associated with beliefs of outstanding universal significance.”

Owing to the imposing presence of the dykelands, the Memorial Church and other memorials, and its enduring use by the Acadian people, the Landscape of Grand Pré is the most important lieu de mémoire for the Acadians, an evocative example of a homeland symbolically and peacefully reclaimed by a diaspora that has triumphed over hardships. The legacy of the Acadian people overcoming the tragedy of a forced removal, the Grand Dérangement, their renaissance, and the ongoing efforts of reconciliation are embodied in the Landscape of Grand Pré. Here, Acadians share their common heritage, reaffirm their identity, and continue to build their sense of community in a spirit of peaceful reconciliation with history. The Landscape
of Grand Pré provides a poignant and powerful living example of the universal human aspirations to belong to a community, to connect with one’s homeland, and to seek reconciliation.

The buffer zone is currently described as follows in the nomination proposal:

“[...] The buffer zone is an area surrounding the nominated property. It has complementary legal requirements placed on its use and development to give an added layer of protection to the property. The nominated property of Grand Pré requires a buffer zone to ensure that the integrity of the dykelands and the continuity of its agricultural use are maintained [...]” (Chapter 1, section 1.e.ii)

Further information is found in the management plan, in particular in chapter 6, sections 6.1 and 6.2:

6.0 Buffer Zone

6.1 Purpose of the Buffer Zone

The purpose of the buffer zone is threefold:

- To provide long-term capacity to maintain the agricultural economy: most of the area within and outside the boundary is currently part of the agricultural district. As farmers and dyke landowners don’t all live within the boundary, but most live in close proximity, the buffer would identify an area to focus attention to support the agricultural industry.

- To identify areas to manage tourism access and services: although the current main heritage attraction in the community is the national historic site which is located inside the property boundary, most of the services are located in North Grand Pré, in the hamlet outside the boundary and at exit 10 of highway 101. The existing infrastructure and services allows managing visitor traffic and tourism pressure inside the property. The concentration at the highway exit and in the hamlet focuses traffic along highway 1 and Grand Pré road and directs visitors towards the main tourism node at the national historic site.

- To identify areas where activities may have an impact on the integrity of the dykes: dykes are most vulnerable to coastal erosion. Activities to mitigate that impact have been left to the initiative of different departments and individuals. A holistic approach to monitoring and mitigating the effects of coastal erosion is required. A buffer would identify sensitive areas outside of the boundary that need to be included in the coordinated approach.

6.2 Policies and Strategies

The buffer includes a number of controls that support and complement the policies and legislation in place inside the boundary of the proposed property.

These include:

- Municipal policies through the Community Plan for Grand Pré and Area;
- Provincial policies through the Department of Agriculture’s policies regarding agricultural activities, the Department of Tourism, Culture, and Heritage through the Special Places Protection Act for archaeological sites, the Department of Natural Resources through the Beaches Act, and the Department of the Environment for the management of salt marshes;
- Federal policies and legislation concerning natural water management through the Department of Fisheries and Oceans; and,
- A number of other provincial and federal policies regarding protected natural heritage areas and heritage properties.

Canada considers that the current buffer aims to provide the nominated property with the necessary complementary legal policies to manage use and development outside of its boundaries that might affect the integrity and authenticity of a landscape characterized firstly by a particular land reclamation system and management tradition and secondly by its memorial value for the Acadian people. The immediate setting and areas that are functionally important as support to the property are considered to be related to:

- the maintenance of the agricultural use of lands outside the nominated property so as to sustain the farms that also own lands on the dykelands. This justifies the inclusion of the entire area covered by the communities of Grand Pré, North Grand Pré, Hortonville, and Lower Wolfville;
- the structural integrity of the dykes and aboiteaux and their protection from both the impact of the tides of the Minas Basin and potentially negative human activities. This justifies the inclusion of an area extending 500 metres into the Minas Basin so as to capture the shifting path of the Gaspereau River’s channel, as well as the maximum extent of coastal changes and salt marsh regeneration that have an effect on the structural integrity of the dykes;
- the management of tourism activities so as to maintain and nurture the residents’ ability to work and live in their community, as well as on the Acadian connection to Grand Pré. This justifies the
inclusion of the entire area covered by the communities of Grand Pré, North Grand Pré, Hortonville, and Lower Wolfville so as to have a broader view of the distribution of services, traffic management, and potential experiences for visitors.

3. Analysis of the legal and environmental characteristics of the nominated property’s setting

Canada carefully considered ICOMOS’ suggested buffer extension, as illustrated in the map sent from ICOMOS to Canada on 5 January 2012. The entire area suggested by ICOMOS falls under the jurisdiction of the federal, provincial, and municipal governments.

Most of the land within ICOMOS’ suggested buffer extension is privately owned with the balance being owned by the provincial government in the form of Blomidon Provincial Park, the dykes protecting the marshes designated under the Agricultural Marshlands Conservation Act, and roads. The provincial park is covered by the highest level of protection afforded by the Provincial Parks Act as a ‘natural environment park’ and is managed as an IUCN category III protected area. There are a number of protected environments that manage human interaction with wildlife under the provincial Wildlife Act, the provincial Endangered Species Act, and the provincial Beaches Act and under international initiatives such as the North American Waterfowl Management Plan.

Municipal zoning in the entire area consists of agricultural (A1), coastal shoreland (CS), environmental open space (O1), and hamlet zones. The entire area is subject to the County of Kings Municipal Planning Strategy. This includes policies regarding proposed development such as industrial densification and wind farms. The current setback for the erection of large-scale wind turbines is set through municipal regulation at 700 m from dwellings. There are no significant amounts of land within the proposed extended buffer zone that can welcome large-scale wind turbines and make it commercially viable (see Appendix C-10). The regulation is currently under review to strengthen it even further. This zoning and other policies are similar to those in force within the current buffer zone for the nominated property with the exception of large-scale wind turbines not being permitted within the Community Plan for Grand Pré and Area.

The maritime component is designated as a Ramsar site under the Convention on Wetlands of International Importance (Site 379; WI Site 4CA029) Southern Bight – Minas Basin designated in 1987 under types A, D, E, F, G, and H of the Convention. The Management Plan for the Southern Bight – Minas Basin Ramsar site can be found in Appendix B-3. The designation provides protection on federal and provincial Crown lands. Impacts to other Ramsar sites in Nova Scotia have successfully been assessed and mitigation measures implemented which demonstrates due consideration from authorities for these designations. In addition, much of the maritime area around the nominated property is identified by BirdLife International, a global partnership of governmental and non-governmental conservation organizations that strives to conserve birds, their habitats and global biodiversity, as an Important Bird Area which refers to a science-based initiative to identify, conserve, and monitor a network of sites that provide essential habitat for Canada’s bird populations. As such, while not a legislated form of protection, this demonstrates that the area is deemed significant by scientists and stakeholders groups from non-governmental organisations who are its active stewards.

Numerous species of birds, fish and marine mammals that nest, grow, or otherwise live in the Minas Basin are protected by federal and provincial acts. These include aquatic species listed under Schedule 1 (the list of species at risk in Canada) of the federal Species at Risk Act such as the inner Bay of Fundy population of Atlantic Salmon; Blue Whale; North Atlantic Right Whale; Fin Whale and Atlantic Wolfish. A listing makes it illegal to kill, harass, capture or harm these species in any way. Critical habitats associated to those species are also protected from destruction under that piece of legislation. The Act also requires that recovery strategies, action plans and management plans be developed for all listed species. Any proposed development would undergo federal and/or provincial environmental impact assessment that would consider the impact on these designations and on these protected species. In addition, there are traditional fisheries in the area on which the impact of new development and uses would have to be assessed.
In addition to the application of legal and policy protections, development in the area suggested by ICOMOS is limited by geophysical features and natural forces. Much of the land mass included in ICOMOS’ boundary is subject to floods or is otherwise limited in its potential for development by ease of access and types of soil. The maritime component is affected by the highest tides in the world (100 billion tonnes of water twice a day) making it extremely challenging to build and maintain any permanent structure in that environment. To this day, no such structure exists above or under water.

The natural values of the Minas Basin are characterized by the ocean waters, tidal forces, fish and bird species, and the minerals and nutrients resulting from the movement of the tides and its effect on coastal erosion. The landscape of the marshlands, the Minas Basin and much of the surrounding land mass (within the boundary suggested by ICOMOS) is flat. It is framed by the hills of Grand Pré to the south which are already included in the buffer. From the highest point within the nominated property, the scope of the eye extends far into the horizon, stopping only when it reaches Cape Blomidon. The distance from the hills of Grand Pré to Cape Blomidon is close to 20kms.

4. Conclusion

In light of this analysis, which considers ICOMOS’ suggestion and the information already provided in the nomination proposal and above, Canada is willing to consider a minor modification of the current buffer. Two elements pertain:

- **The proposed criteria and natural values:** as illustrated in Section 3.d of the nomination proposal, natural resources and natural values with any relationship to the nominated property are sufficiently protected by legislation and policies. Canada considers that the natural values of the Minas Basin beyond the area already included in the immediate vicinity of the coastline do not directly contribute to the maintenance of authenticity or integrity of the nominated property in light of the proposed criterion (v) as a ‘successful land reclamation system and management tradition’. Canada considers first that the monitoring of coastal change and of the saltmarsh is sufficient to ensure the protection of the nominated property, and second that the connection with the maritime environment is sufficient to express the full value of both the land reclamation system (criterion v) and the memorial value to the Acadians (criterion vi).

- **The proposed criteria and visual perspectives:** Canada considers that in accordance with the direction of the Operational Guidelines, there is a possibility for defining two important views that are functionally important. One is from the highest point within the nominated property to the red bluff of Cape Blomidon and the other is from the Deportation Cross at Horton Landing to the red bluff of Cape Blomidon. This is consistent with the current statement included in the nomination proposal which reads “Dominating the distant background, beyond the nominated property, Cape Blomidon extends into the basin as an instantly recognizable landmark.” (Chapter 2, section 2.a. p.9). The red bluff and land projecting off Cape Blomidon into the Minas Basin is a landmark that immediately serves to identify Grand Pré and has appeared in numerous artistic and literary representations from Henry Wadsworth Longfellow’s *Evangeline a Tale of Acadie* (“[...] and away to the northward Blomidon rose, [...]”), to early 19th century engravings (see fig. 1 and fig.2) to modern representations of Grand Pré and the Acadian Deportation (see fig 3, fig. 4). Cape Blomidon qualifies as a geographical feature that, while not directly related to the proposed criteria, distinguishes Grand Pré as a place and requires management attention. Figures 1, 2, 3 and 4 illustrate the role of Cape Blomidon in visual arts to identify Grand Pré as a location (Cape Blomidon is circled for ease of identification).

5. Proposal from the State Party

Based on this assessment, Canada wishes to propose a modification to the buffer in its northern maritime side to include visual perspectives from Grand Pré and Horton Landing to the red bluff of Cape Blomidon and protect the visual connection between those points (see map in Appendix C-1). Both the Grand Pré and the Horton Landing viewpoints are located on publicly accessible land. This would support the second purpose of the existing buffer zone which is to manage tourism pressure.

The visual perspective from Grand Pré begins from the highest point in the nominated property which is located on land owned and administered by Parks Canada and recognizes the visual connection between Grand Pré and Cape Blomidon enjoyed by visitors, residents, and artists. It captures the red bluffs of Cape Blomidon and the water of the Minas Basin (see Fig 5). Policies and regulations on land and water are consistent with managing development that will maintain that visual connection.

The visual perspective from Horton Landing begins at the location of the Deportation Cross located on land owned and administered by Parks Canada and recognizes the visual connection between the site where the Acadians were deported and Cape Blomidon. It captures the red bluffs of Cape Blomidon and the water of the Minas Basin (see Fig 6). Policies and regulations on land and water are consistent with managing development that will maintain that visual connection.

![Figure 5 View from the highest point at Grand-Pré NHSC towards Cape Blomidon. All land visible in the foreground is included in the nominated property (Grand-Pré National Historic Site of Canada and dykelands) or in the buffer zone (the row of trees in the distance is North Grand Pré) already included in the original submission.](image)

The Landscape of Grand Pré (Canada) – Response to request for clarification from ICOMOS – February 2012

Visual Perspectives Towards Bloomidon
from Grand Pré National Historic Site and Horton Landing

- View Points, Grand Pré National Historic Site and Horton Landing
- Edges of the Visual Perspectives Towards Bloomidon

Yellow and green transparent vertices indicate the watershed delineating towards Bloomidon from Horton Landing and the northern extension of Grand Pré National Historic Site.

- Bloomidon Provincial Park
- Proposed Site
- National Historic Site

Elevation source: Provincial (NSOCC) 1:10,000 points and contours. Observer height: 172 meters tall (or 5' 7").
As a result, the buffer zone is to extend into the Minas Basin and capture the section of Blomidon Provincial Park that is visible from those two view points. The following map illustrates this proposed modification to the boundaries of the buffer zone (Map C-1).
The Landscape of Grand Pré (Canada) – Response to request for clarification from ICOMOS – February 2012
The exact description of the buffer zone in the nomination would therefore read as follows (clarification section 1.e.ii) (in bold red is the new text to be added to existing text):

The boundary of the Grand Pré and Area Community Plan encompasses four communities: the hamlet of Grand Pré at the centre, and the communities of North Grand Pré to the north, Hortonville to the east, and Lower Wolfville to the west. Starting at the southern tip of Grand Pré Road as it meets the Gaspereau River (Point 3, see Map “Boundary of the Nominated Property and Buffer Zone” in Appendix C-1 for the location of points), the boundary follows the river counter-clockwise in the middle up to its mouth where it meets the Minas Basin at the former railway bridge. Then the boundary continues northward and follows the coastline, turns westward along Long Island and continues to follow the coastline. As it reaches the western tip of Long Island, it continues southward, still following the coastline. It then makes a sharp turn westward (Point 1) as it meets the corner of the dyke and continues westward until it meets the legal boundary of the town of Wolfville (Point 4). It turns southward following that boundary to the southern limit of the right-of-way of Highway 101.

It follows this right-of-way until it intersects the western right-of-way of Martin Cross Road. It continues south on Martin Cross Road 0.07 kilometres until it meets a point opposite the southwest corner of a property, PID #55222897 (Point 6). The boundary turns southward on Biggs Road by the middle to Hamilton Road (Point 7), continues eastward on Hamilton Road, in the middle, to Grand Pré Road, finally continuing southward on Grand Pré Road, in the middle, ending at the Gaspereau River.

The marine component of the buffer zone extends 500 metres from the water-facing boundary of the property and, where relevant, from the land buffer zone, with the exception of the buffer component covering the visual perspectives to Blomidon Provincial Park. On the eastern side of the property, the marine component of the buffer zone begins at Point 8 and extends north along the property extending from the edge of the nominated property. It then continues eastward around Boot Island following the coastline. At Point 9, the boundary for the buffer zone follows the edge of the coastline of Long Island westward until Point A where it follows the edge of the visual perspective from Horton Landing in a straight line to Point B (see Map in Appendix C-1, and table of points below) where it intersects with Blomidon Provincial Park. The boundary then follows Points C through S, in straight lines, staying within the boundary of Blomidon Provincial Park. Points R is the intersection of the visual perspective from the highest point on the Nominated Property (see visual perspective map in Appendix C-2) with Blomidon Provincial Park. The boundary then travels in a straight line, following the edge of the visual perspective, from Point R to Point S, where it runs 500 metres from the edge of the coastline of Long Island until Point 10, where it then follows the coastline of the nominated property at 500 metres. At Point 11 it turns westward following the edge of the area covered by the Grand Pré and Area Community Plan. At Point 12, the marine component of the buffer zone ends with a straight line southward, meeting with the land buffer zone. The marine component of the buffer zone includes salt marsh, beaches and mudflats.

Points defining the new buffer zone:

</tbody>
</table>
A modification to the total extent of the buffer zone is required (Chapter 1, section 1.f). The area would now stand at:

- **Land component**: 1248 hectares + 204 hectares (Blomidon area) = 1448 hectares
- **Marine component**: 945.09 hectares + 3475 hectares (extension into the Minas Basin) = 4420.09 hectares
- **Total area of the new proposed buffer zone**: 5868.09 hectares

A fourth purpose would be added to the purpose of the buffer zone as described in the management plan (section 6.1) that would read as:

- To protect the visual connection between Grand-Pré NHSC and Cape Blomidon and Horton Landing and Cape Blomidon, a recognizable nearby landmark that contributes to the sense of place for the nominated property.

The legal and policy tools that ensure the protection of the visual perspectives extending from Grand-Pré NHSC and Cape Blomidon and Horton Landing and Cape Blomidon and the management of development and uses in this area are ensured by existing protections within the boundaries of the nominated property and the land buffer zone. Focusing on the extension suggested by ICOMOS, Canada confirms that legal and policy tools are in place to ensure the protection of the visual perspectives within the Minas Basin and on Cape Blomidon, namely:

- The *Provincial Parks Act* (Nova Scotia) which protects Cape Blomidon (copy provided in this document as Appendix B-1);
- The *Convention for Wetlands of International Importance (Ramsar)* which designates the Southern Bight of the Minas Basin (copy provided in this document as Appendix B-2);
- The *Canadian Environmental Assessment Act* (Canada) that manages the environmental impact assessment process under federal jurisdiction (copy provided in the nomination proposal as appendix 3B); and,
- The *Species at Risk Act* (Canada) which protects species at risk in the area and their habitat (copy provided in the nomination proposal appendix 3E).

These legal and policy tools ensure the protection of the visual perspectives by limiting densification and restricting development and inappropriate land use in protected areas under federal and provincial jurisdiction. Effective management will be ensured by engaging the federal and provincial agencies responsible for the implementation of these acts in the work of the Stewardship Board. This will consist of information exchange, consultation on proposed activities, and recommendations to the agencies. This approach is identical to the one applicable in the current buffer zone.
III. Question: Stewardship Board: Implementation, role, responsibilities, and resources

Est-ce qu'il serait possible de confirmer la mise en place du Comité d'intendance ? de préciser sa composition, ses responsabilités, ses moyens humains et matériels de gestion ainsi que ses relations avec la Société de promotion de Grand-Pré (sic)? (would it be possible to confirm the setting up of the Stewardship Board? to clarify its composition, responsibilities, human and financial resources, and its relationship with the Société de Promotion de Grand Pré? (sic)

State Party Answer to Question III

1. [...] confirmer la mise en place du Comité d'intendance [...] (confirm the setting up of the Stewardship Board)

Canada can confirm that the Stewardship Board will be put in place immediately upon successful inscription. This is based on the following information already provided in Chapter 5 of the nomination proposal (Chapter 5, introduction, p.151 and section 5.c.v. pp.164) and the Memorandum of Understanding (MOU) in Appendix 2G:

- The MOU signed between the authorities and the key stakeholders indicates that “If the World Heritage Committee inscribes the Nominated Property on the World Heritage List, the Stewardship Board will act as the WHS manager in accordance with the Operational Guidelines and as described in its terms of reference.” (6.2.1)
- The MOU also indicates that “If the Nominated Property is inscribed on the World Heritage List by the World Heritage Committee, the Nomination Board will cease to exist” (6.1.3) and “If the Nominated Property is inscribed on the World Heritage List, the Parties agree to create the Grand Pré World Heritage Site Stewardship Board.” (6.1.4)

2. [...] préciser sa composition [...] (clarify its composition)

The Stewardship Board will include representatives from the organisations that signed the MOU as well as other key stakeholders that will, first, best ensure the preservation, interpretation, and promotion of the nominated property and, second, maintain the active engagement of residents and the Acadian community in the management of the nominated property. (Chapter 5 p.151, section 5.c.v pp. 164; MOU)

The details of the composition of the Stewardship Board are included in the Terms of Reference (ToR) included as appendix 2F of the nomination proposal.

The Stewardship Board will be co-chaired by a representative from the Société nationale de l’Acadie and by a representative from the Grand Pré and Area Community Association. The members are the following organizations (section 5.1 of the ToR):

As voting members
- Councillor of District 12, Municipality of the County of Kings (“County of Kings”);
- Kings Regional Development Agency (“Kings RDA”);
- Grand Pré Marsh Body (“Marsh Body”);
- Société nationale de l’Acadie (“SNA”);
- Société Promotion Grand-Pré (“SPGP”);
- Glooscap First Nation (“Glooscap”);
- Destination Southwest Nova (“DSWN”);
- Grand-Pré and Area Community Association (“Community Association”); and,
- Parks Canada Agency (“Parks Canada”).

As ex-officio and non voting members
- Staff, the Municipality of the County of Kings (“County of Kings”);
- Atlantic Canada Opportunity Agency (“ACOA”);
- Department of Tourism, Culture and Heritage of the Province of Nova Scotia (“DTCH”);
- Office of Acadian Affairs of the Province of Nova Scotia (“OAA”).
Each organization shall delegate one representative and one alternate (section 5.2 of the ToR)

The Stewardship Board will set up two subcommittees to ensure the effective implementation of the Management Plan: a Technical Advisory Committee and an Education and Marketing Committee. It may set up any other committee it deems necessary to achieve its mandate (section 8.5 of the ToR).

The Technical Advisory Committee will provide technical advice on the protection of the property’s OUV and assist in reporting on the condition of the WHS (section 11.2 of the ToR). The membership of the Technical Advisory Committee may include representatives of the federal, provincial and municipal governments, ICOMOS Canada, outside experts and stakeholders (section 11.3 of the ToR). The Technical Advisory Committee will review Requests For Input within a time frame of no longer than four weeks. It will provide comprehensive, accurate, and objective information to the Board through the Site Management Coordinator in the form of reports (section 11.5 of the ToR). The Technical Advisory Committee will provide an annual report on its activities (section 11.7 of the ToR).

The Education and Marketing Committee will advise the Board on issues relating to promotion, interpretation, and education, as well as to coordinate the development of products, activities and messages related to the WHS (section 12.1 of the ToR). The membership of the Education and Promotion Committee will include representatives of the government and non-government agencies responsible for tourism, interpretation, and regional economic development, outside experts and local area stakeholders (section 12.2 of the ToR). The Education and Marketing Committee will provide an annual report on its activities (section 12.4 of the ToR).

3. ... [préciser] ses responsabilités... (clarify its responsibilities)

The mandate and responsibilities of the Stewardship Board are described in Chapter 5 of the nomination proposal, in the MOU included in the original submission as appendix 2G and in the ToR included in the submission as appendix 2F.

“The mandate of the Stewardship Board is to ensure the conservation, protection, presentation and transmission to future generations of the property’s OUV through implementation of the Management Plan through a coordinated management approach between all Regulatory Authorities, advice to ensure the integrity of the WHS, promotion of the WHS’s OUV, engagement of the stakeholders in the stewardship of the WHS, and reporting on the condition of the WHS. If it is necessary to report to the World Heritage Centre about the condition of the WHS, the Canadian Delegation to the World Heritage Committee will work cooperatively with the Stewardship Board to provide the necessary information.” (section 6.2.4 of the MOU)

The responsibilities of the Board will be to:

a) Act as the manager of the WHS;
b) Implement the Management Plan through a coordinated management approach between all Regulatory Authorities;
c) Engage the stakeholders in the stewardship of the WHS;
d) Consult its members on key issues;
e) Promote the WHS’s Outstanding Universal Value;
f) Foster and facilitate research and information sharing for the benefit of the WHS;
g) Report on the condition of the property, including, as necessary, to the World Heritage Centre through the Canadian Delegation to the World Heritage Committee;
h) Appoint a Site Management Coordinator;
i) Obtain the support of relevant authorities;
j) Oversee the management of the finances of the WHS, including adopting business plans, receiving financial reports, and approve spending; and,
k) Review and approve contracts and other forms of agreements.” (section 4.1 of the ToR)
4. ... [préciser] ses moyens humains et matériels de gestion... (clarify the human and other resources for its operations)

The information relating to the resources provided to the Stewardship Board is included in Chapter 5, section 5.f, 5.g and 5.j, as well as in the Management Plan, MOU, the ToR, and the letter confirming the financial contribution from the Municipality of the County Kings (Appendix 10A of the original submission). In addition, the Government of Nova Scotia officially announced on November 14\textsuperscript{th} 2011, the creation upon successful inscription of a 2.5 million dollar public trust fund to support the operations and work of the Stewardship Board. This will ensure the stability of the operations and is based on the requirements outlined in the Strategic Plan. Canada is providing ICOMOS with confirmation from the Government of Nova Scotia that those financial resources will be made available to the Stewardship Board for its operations (Appendix D-1).

“The Stewardship Board will be assisted in its work by a Secretariat and a Site Management Coordinator whose mandate is to coordinate the management of the nominated property. The Stewardship Board will rely on three sources of expertise to provide advice on matters of protection, promotion, and education. The first is a Technical Advisory Committee, which will provide professional advice on matters pertaining to the protection of the dykelands and of the memorials. The second is the Education and Marketing Committee, which will provide direction and coordination between partners for matters relating to interpretation, promotion, marketing, and education. The third will be a variety of outside sources of expertise in government agencies, non-governmental organizations, and consultancies when required” (p. 18, Management Plan)

The Stewardship Board’s key staff will consist of a Site Management coordinator, whose responsibilities include:

- Coordinate the implementation of the Management Plan for the WHS;
- Coordinate the implementation of the decisions of the Board;
- Coordinate the review of Requests For Input;
- Chair the Technical Advisory Committee;
- Chair the Education and Marketing Committee;
- Chair any other committees created by the Board;
- Prepare a five-year business plan for the Board with annual statements of implementation;
- Prepare reports, position papers and recommendations to the Board;
- Coordinate media, public, and stakeholder relations with key partners;
- Seek and facilitate partnerships to pursue the goals of implementing the Management Plan, particularly for activities relating to research, protection, promotion, and sustainability;
- Report annually on the implementation of the Management Plan and on the condition of the World Heritage Site;
- Coordinate and prepare the report on the condition of the WHS for Canada’s Periodic Report under the guidance of the Canadian Delegation to the World Heritage Committee;
- Review the Management Plan and any other management related document;
- Represent the WHS on the Canadian Network of World Heritage Sites;
- Liaise with the Canadian Delegation to the World Heritage Committee, in particular on matters relating to media relations, project reviews, pressures on the WHS, and, as necessary, communication with the World Heritage Centre. (section 9.2 of the ToR)

The technical expertise will be provided specifically by Parks Canada, the Government of Nova Scotia, the Municipality of the County of Kings, the Kings Regional Development Agency and other key partners as required. (section 6.2.7 of the MOU)

The Kings Regional Development Agency will be responsible for the Secretariat and all administrative matters (sections 6.5.2, 6.5.5, 6.5.6, and 6.5.7 of the MOU)
Parks Canada will provide support for managing visitors and tourism, interpretation and resource management (sections 6.7.5, 6.7.7, 6.7.10, 6.7.11).

The Government of Nova Scotia through its departments of Tourism, Culture, and Heritage AND Agriculture, AND Rural and Economic Development AND the Office of Acadian Affairs will provide support for the promotion, preservation, and interpretation of the nominated property (sections 6.8.3, 6.8.4, and 6.8.7).

The Municipality of the County of Kings, the Grand Pré Marsh Body, the Grand Pré and Area Community Association will provide support as required based on its expertise available (section 6.3.4, 6.4.4, 6.6.2, 6.6.5).

In terms of financial resources, the nominated property benefits from a number of ongoing operational investments as described in section 5.f of the nomination proposal. In addition, the Stewardship Board will benefit from direct financial contributions. In early 2011, the Municipality of the County of Kings committed to contributing $25,000 per annum for 10 years to the operations of the Stewardship Board (see Appendix 10A in the original nomination proposal). In late 2011, the Government of Nova Scotia announced the creation of a public trust of $2,500,000 to be created by the government immediately following a successful inscription (see Appendix D-1). Both these significant contributions ensure financial stability for the operations of the Stewardship Board.

5. ... [ préciser] ses relations avec la Société de promotion de Grand-Pré (sic). **(clarify its relationship to the Société Promotion Grand-Pré)**

The information regarding the mandate of the Société Promotion Grand-Pré (SPGP) and its relationship with the Stewardship Board are included in Chapter 5, section 5.d, 5.f and 5.j, as well as in the MOU, the ToR, and the SPGP’s business plan included as appendix 5D. In addition, Canada is submitting the following clarification as to the role and mission of the SPGP.

As described in the MOU with Parks Canada, the main goal of the Société Promotion Grand-Pré is to promote Acadian culture and history related to Grand-Pré. In order to fulfill this goal, the Société Promotion Grand-Pré has as priority the co-management of Grand-Pré National Historic Site in collaboration with Parks Canada. (excerpt from its MOU with Parks Canada) **(original in French: L’objectif premier de la Société Promotion Grand-Pré est de promouvoir la culture et l’histoire acadiennes se rattachant à Grand-Pré. Pour rencontrer cet objectif, la Société Promotion Grand-Pré a comme priorité la cogestion, en collaboration avec Parcs Canada, du lieu historique national du Canada de Grand-Pré.)**

The mission of Société Promotion Grand-Pré is to promote Grand-Pré as the symbolic and authentic place of the Deportations of the Acadians, at the national and international level. **(Original in French: La mission de la Société Promotion Grand-Pré est de promouvoir Grand-Pré comme lieu symbolique et authentique des déportations du peuple acadien à l’échelle nationale et internationale.)**

As such the primary responsibility and scope of work of the SPGP is with regards to Grand-Pré NHSC.

As one of the key organisations with a responsibility within the nominated property, the SPGP has actively participated in the preparation of the nomination proposal. In addition, it will play a role in the management of the nominated property.

The SPGP will be a member of the Stewardship Board upon its creation (section 6.9.1 of the MOU) and one of the key partners in the implementation of the management plan. It will support promotional activities in relation to the WHS (section 6.9.2 of the MOU). The SPGP will be a member of the Education and Marketing Committee to ensure the values and importance of the WHS are communicated to target audiences (section 6.9.3 of the MOU). The SPGP will support and contribute to the development, distribution and display of educational products related to the WHS (section 6.9.4 of the MOU).
IV. Question: Management Plan: implementation timeline

Est-ce qu’il serait possible de dresser un programme récapitulatif des actions prévues par le Plan de gestion avec un calendrier de leur mise en œuvre ? Quelle place y tient le programme d’action de la Société de promotion de Grand-Pré ? Quelle est la programmation concernant la conservation du bien ? (would it be possible to summarize the management plan actions in an implementation timeline? Where does the Société Promotion Grand-Pré’s business plan fit? What are the site conservation activities?)

State Party Answer to Question IV

The information concerning the management plan actions are included in the management plan itself which was appended to the original submission (Appendix 2A).

Other management documents associated with the management plan that focus on specific aspects of the nominated property’s management were also included in the original submission in 2011. These include the Strategy for the Management and Conservation of Archaeological Heritage in the Landscape of Grand Pré (Appendix 2B), the Risk Preparedness Framework (Appendix 2C), and the Coastal Change Monitoring Programme (Appendix 2D).

Finally, there are other plans which detail the implementation of work within the jurisdiction of specific groups. These include the Grand-Pré National Historic Site of Canada Management Plan (Appendix 2I), the Grand Pré and Area Community Plan (Appendix 2J), the Plan d’action de la Société Promotion Grand-Pré (Appendix 5D), and the Nova Scotia Department of Agriculture’s Business Plan (Appendix 5C).

As the management plan focuses on the overarching direction for the management of the nominated property, this response to ICOMOS’ question will focus on that document’s timeline. Since the Stewardship Board will be responsible for coordinating the implementation of the management plan, the Strategic Plan for the Stewardship Board (Appendix 5A) provides the framework for that timeline and will be the focus of Canada’s answer.

1. ... dresser un programme récapitulatif des actions prévues par le Plan de gestion avec un calendrier de leur mise en œuvre... (summary of the management plan actions and implementation timeline)

The Management Plan identifies three goals (Management Plan pp.38-39):

1. providing for the protection, continuing community and agricultural use and appreciation of the nominated property.
2. enriching the existing tourism destination by promoting wide recognition, understanding and appreciation of the educational and cultural values represented by the nominated property.
3. instilling a strong sense of shared community pride and stewardship in the protection, interpretation and promotion of the nominated property.

These goals set the framework for the action of the Stewardship Board, the regulatory authorities, and the partners to manage the protection, promotion, and interpretation of the nominated property.

In addition to these goals, the Stewardship Board has added two further goals as found in its Strategic Plan (Strategic Plan, p. 3):

4. fostering increased economic, tourism and agricultural opportunities through partnerships at the nominated property.
5. ensuring the long-term sustainability of the nominated property’s governance

These two last goals focus on capitalizing on the opportunities that a World Heritage inscription may bring to the local and Acadian communities to contribute to their sustainable development. They also focus on acquiring the tools necessary to ensure the long-term stability and sustainability of the Stewardship Board. Based on these goals, the following implementation timeline was included in the Strategic Plan.
(p.13). This timeline includes the priority actions described in the management plan and described here as activities (section 11, p. 62). The goals and activities are set for a ten-year period in three-year phases.

| Vision |
| The Landscape of Grand Pré will be maintained as an outstanding and sustainable living heritage landscape, a shared legacy connecting the communities that care for it for the world to appreciate. |

| Mission |
| On behalf of people of the world and of the communities that care for the Landscape of Grand Pré, the Stewardship Board will work cooperatively with each government authority and engage the communities to protect, promote, interpret, and foster the sustainable development of this outstanding area for present and future generations. |

| Key Strategies |
| Protecting an outstanding heritage asset | Creating an outstanding and sustainable experience | Engaging the communities to build strong stewardship | Facilitating economic opportunities for stakeholder communities | Sustaining the management of the nominated property |

| Goals |
| To provide for the protection, continuing community and agricultural use and appreciation of the Nominated Property | To promote recognition, understanding and appreciation of the values represented by the Nominated Property | To instil a strong sense of shared community pride and stewardship in the protection, interpretation and promotion of the Nominated Property | To foster increased economic, tourism and agricultural opportunities through partnerships at the Nominated Property | To ensure the long-term sustainability of the nominated property’s governance |

| Activities |

### Phase 1: years 1 – 3: Development and Capacity Building

- Hire Site Management Coordinator
- Organize forum on research priorities and partnerships
- Implement outcome of the forum on research priorities
- Set up the Technical and Advisory Committee
- Prepare training
- Respond to requests for information
- Monitor condition
- Conserve key attributes

- Set up the Education and Promotion Committee
- Prepare and implement website
- Prepare and implement promotion and branding strategy
- Prepare and implement interpretation strategy
- Organize forum on creating an outstanding and sustainable experience with key stakeholders based on the Tourism Management Study
- Establish institutional and tourism partnerships
- Provide an opportunity to experience the World Heritage Site

- Establish the Stewardship Board
- Prepare and implement communications and engagement strategy
- Prepare and implement Board policies
- Prepare residents’ kit
- Organize annual events around heritage and community values
- Prepare outreach and communication materials
- Administer and prepare the Board, committee, and public meetings
- Support media relations
- Liaise with key stakeholders
- Engage the communities
- Prepare business plans

- Incorporate the nominated property into the brand for Eastern Kings County
- Participate in the Commission du tourisme acadian du Canada Atlantique
- Develop cross marketing strategy with the 2 other World Heritage sites in Nova Scotia
- Organize a forum on agricultural issues relevant to the sustainability of the nominated property
- Work with the CDENE to articulate economic opportunities for the Acadian community of Nova Scotia
- Prepare a paper on agrotourism in Nova Scotia
- Explore fundraising strategies for the long term management of the nominated property
- Identify resources to develop and implement the preferred fundraising strategy
- Develop options for financial model
- Submit funding applications to provincial and federal agencies for specific projects

### Phase 2: years 4 – 6: Transition

- Coordinate output of the research units
- Manage resources and stakeholder relations for the survey and conservation of the property’s values
- Review management plan and other management related documents
- Coordinate the information for preparing the report to the World Heritage Committee
- Respond to requests for information
- Monitor condition
- Conserve key attributes

- Maintain website
- Maintain the Education and Promotion Committee
- Develop tourism products in partnership
- Sustain institutional and tourism partnerships
- Provide an opportunity to experience the World Heritage Site

- Maintain presence in the communities
- Support local initiatives
- Maintain community engagement
- Support media relations
- Liaise with key stakeholders
- Engage the communities
- Prepare business plans

- Contribute to the implementation of the local, regional branding strategies
- Contribute to the development of a World Heritage tourism package with World Heritage Sites in Atlantic Canada
- Implement the outcome of the forum on agricultural issues as they are relevant to the sustainability of the nominated property
- Identify opportunities for leadership from the nominated property in agrotourism in Atlantic Canada
- Implement the fundraising strategy

### Phase 3: years 7 – 10: Full operations

- Maintain the Technical Advisory Committee
- Monitor research activities, development pressures, policy development
- Work with partners to ensure the protection of the nominated property
- Respond to requests for information
- Monitor condition
- Conserve key attributes

- Maintain the Education and Promotion Committee
- Review website
- Reviewing products and interpretation
- Work with partners to promote and interpret the nominated property.
- Provide an opportunity to experience the World Heritage Site

- Review communications strategy
- Update communication materials
- Work with stakeholders and other partners to manage the property effectively in a sustainable manner.
- Support media relations
- Liaise with key stakeholders
- Engage the communities
- Prepare business plans

- Carry out regular events regarding agricultural issues
- Nurture partnerships with World Heritage sites in Atlantic Canada and abroad
- Carry out fundraising activities
- Implement financial model
2. ... quelle place y tient le programme d'action de la Société de promotion de Grand-Pré ?... (Where does the Société Promotion Grand-Pré's business plan fit?)

The Management Plan identifies five principles (Management Plan p.38, Chapter 5 section 5.e p.168,):

- **Principle 1:** Management of the nominated property will meet or exceed World Heritage standards regardless of inscription.

- **Principle 2:** The primary focus of the Management Plan is to address issues directly related to the management and conservation of the site’s outstanding universal value and attributes by providing a framework for advice from the Stewardship Board and for decision-making for the regulatory authorities.

- **Principle 3:** The Management Plan recognizes that the nominated property is set within an active agricultural community where people continue to live and work. People have created, lived and worked on this land for generations and have been responsible stewards of the land. The Management Plan also recognizes that this is an area of great importance for the Acadians, who have a strong emotional attachment to it.

- **Principle 4:** Management of the nominated property in relation to World Heritage guidelines will be a shared responsibility between the different owners, communities, and government agencies with regulatory responsibilities for the nominated property. The Management Plan recognizes that actions undertaken by an owner, community, or government agency with regulatory responsibilities may have a detrimental impact on the nominated property, and that communication, coordination, and collaboration are essential to its long-term protection.

- **Principle 5:** Management and protection will be delivered through existing boards, bodies, and government authorities, supplemented by technical advice, interpretation, and education from the Stewardship Board and procedures developed to accommodate a designated World Heritage Site.

Based on principles 4 and 5 each member of the Stewardship Board has a role in the implementation of the management plan. As such, the Société Promotion Grand-Pré will contribute to the promotion and interpretation of the World Heritage site within its mandate at Grand-Pré National Historic Site (MOU, section 6.9). Following a successful inscription, its future business plans will reflect that role in accordance with the terms of the MOU.

3. ... Quelle est la programmation concernant la conservation du bien ?... (What are the site conservation activities?)

Conservation activities fall under the jurisdiction of four levels of government as described in Chapter 5 of the nomination proposal. The following table summarizes their jurisdiction and the activities undertaken to preserve the nominated property. Specific information about conservation activities are found in Chapter 4 (section 4a, pp-137-140), Chapter 5 (section 5.c., pp. 162-164), Chapter 6 (section 6.a. p.181), the Management Plan for the nominated property (Appendix 2A), the Strategy for the Management and Conservation of Archaeological Heritage (Appendix 2B), the Grand-Pré NHSC Management Plan (Appendix 2I), and the Grand Pré and Area Community Plan (Appendix 2J).

</tbody>
</table>

*NB: The Acadian settlement on the Falkland Islands was short-lived as it only lasted for about four years (1764-1768). France had surrendered the ‘Iles malouines’ to Spain in 1766 and, while some individuals may have remained on the ‘Islas Malvinas’, most made their way to other more suitable locations.

An Act Respecting Provincial Parks

Short title

1 This Act may be cited as the Provincial Parks Act. R.S., c. 367, s. 1.

Purpose

2 (1) The purpose of this Act is to develop and operate provincial parks to

(a) provide opportunities for a wide variety of outdoor recreational opportunities ranging from relatively high intensity near-urban facilities to low intensity wildland experiences;

(b) preserve unique, rare, representative or otherwise significant elements of the natural environment and historic resources of Nova Scotia;

(c) provide opportunities for exploration, understanding and appreciation of Nova Scotia's natural and cultural heritage through interpretation, information and educational programs;

(d) provide resident travellers and out-of-Provence visitors with opportunities to discover, experience and enjoy Nova Scotia's distinctive outdoor recreational and heritage resources; and
(e) assemble and maintain, within a system of provincial parks and park reserves, a land base adequate to meet present and future needs of Nova Scotians for outdoor recreation and heritage resource protection.

(2) All provincial parks are dedicated in perpetuity for the benefit of present and future generations of Nova Scotians. R.S., c. 367, s. 2.

**Interpretation**

3 In this Act,

(a) "bow" means a tool for projecting arrows which consists of a handle and one or more flexible limbs which are held bent by a string or cable which is drawn, pulled or released or held in a drawn position by hand or hand-held release and not by any mechanical device attached to any portion of the bow other than the bowstring;

(b) "concession" means a right granted by the Minister to operate a building, installation, service or facility within a provincial park;

(c) "conservation officer" means a person appointed or holding office pursuant to this Act;

(d) "Crown land" means land, whether or not covered by water, and includes an interest in land vested in Her Majesty in right of the Province;

(e) "Department" means the Department of Lands and Forests;

(f) "Director" means the Director of Parks and Recreation appointed pursuant to this Act;

(g) "domestic animal" means an animal that is kept under human control or by habit or training lives in association with man;

(h) "firearm" means a barrelled weapon from which a shot, bullet or other missile can be discharged and that is capable of causing serious bodily injury or death to a person, and includes a frame or receiver of such a barrelled weapon and anything that can be adapted for use as a firearm and includes a bow;

(i) "Minister" means the Minister of Lands and Forests;

(j) "park reserve" means land set aside as park reserve land pursuant to Section 6;

(k) repealed 1993, c. 9, s. 7.

(l) "provincial park" means land designated pursuant to Section 8 and a provincial park continued by Section 36;

(m) "vehicle" means a vehicle propelled or driven otherwise than by muscular power, whether or not the vehicle is registered pursuant to the Motor Vehicle Act, and includes an airplane;

(n) "vessel" means a means of conveyance of a kind used on water and includes an accessory to the vessel;

(o) "wildlife" means a species of animal which is wild by nature and hence not normally dependent on man to directly provide its food, shelter or water and, where appropriate, includes wild plants. R.S., c. 367, s. 3; 1992, c. 30, s. 1; 1993, c. 9, s. 7.
Supervision of Act

4 (1) The Minister is responsible for the general supervision, administration and management of this Act and the regulations.

(2) The Minister may, from time to time, designate a person to act on behalf of the Minister. *R.S., c. 367, s. 4.*

Powers of Minister

5 The Minister, with the approval of the Governor in Council, may

(a) acquire by purchase or gift, expropriate or otherwise acquire title to land, whether or not covered by water, or an interest in land for the purpose of a provincial park;

(b) exchange Crown land for privately owned land for the purpose of a provincial park;

(c) acquire an easement or right of way across privately owned land to gain access to or provide an exit from a provincial park; or

(d) accept the transfer of the administration and control of land from the Government of Canada or an agency thereof. *R.S., c. 367, s. 5.*

Park reserves

6 (1) The Governor in Council may set aside and reserve Crown land as park reserve for the purpose of protecting those lands that have the potential to be a provincial park.

(2) The Minister may develop programs and policies deemed necessary to control and develop a park reserve.

(3) No person shall grant or transfer any Crown land constituted as a park reserve unless permitted by the regulations or authorized by the Minister.

(4) The Governor in Council may, by regulation, declare any provision of this Act or the regulations to be applicable to a park reserve as if it were a provincial park. *R.S., c. 367, s. 6.*

Provincial Parks Trust Fund

7 (1) There is hereby established a Provincial Parks Trust Fund for the purpose of funding programs to establish, develop and operate provincial parks throughout the Province.

(2) There shall be paid into the Provincial Parks Trust Fund

(a) money acquired by gift, donation and bequest or by disposition of any land acquired for the purpose of the Fund;

(b) income accruing to the Fund; and

(c) in accordance with the Finance Act, money that accrues from any programs of the Province, including programs conducted under agreements with other governments, entered into for any of the purposes for
which the Fund is established.

(3) Real property may be donated to the Provincial Parks Trust Fund.

(4) The Minister may expend, in accordance with the Finance Act, money from the Provincial Parks Trust Fund for

(a) the acquisition of land, with the approval of the Governor in Council, for a provincial park or park reserve;

(b) the enhancement of a provincial park or park reserve;

(c) research and studies pertaining to a provincial park or park reserve. *R.S., c. 367, s. 7; 2010, c. 2, s. 140.*

**Powers of Governor in Council**

8 The Governor in Council may

(a) designate land owned, leased or otherwise acquired by Her Majesty in right of the Province as a provincial park and make such regulations as may be necessary for the control thereof;

(b) increase or decrease the size of a provincial park;

(c) terminate the status of a provincial park or any part thereof;

(d) declare the name by which a provincial park is to be known. *R.S., c. 367, s. 8.*

**Procedure on designation**

9 Where the Governor in Council designates an area of land as a provincial park, the Minister shall

(a) publish a notice containing a description of the provincial park in the Royal Gazette and in a newspaper circulating in the county or counties where the provincial park is located; and

(b) deposit a description and plan of the provincial park in the office of the registrar of deeds for the registration district in which the provincial park is located. *R.S., c. 367, s. 9.*

**Jerry Lawrence Provincial Park**

9A The Lewis Lake Provincial Park is renamed as "Jerry Lawrence Provincial Park". *2007, c. 22, s. 1.*

**Classification system**

10 The Minister may, with the approval of the Governor in Council, develop a classification system for provincial parks. *R.S., c. 367, s. 10.*

**Studies and research**

11 The Minister may undertake studies and carry out research on matters relating to provincial parks. *R.S., c.*
Promotion of provincial parks

12 In an effort to promote greater public awareness and understanding of provincial parks, the Minister may

(a) promote education programs with regard to provincial parks;

(b) co-operate with the private sector and encourage an exchange of information between the public and private sectors;

(c) provide for the establishment of interpretative facilities and programs to enhance the quality of park-user experiences and their appreciation of park resources;

(d) develop promotional programs, literature and market opportunities provided in parks;

(e) encourage use of provincial parks as outdoor educational resources available to educational institutions and organized groups. R.S., c. 367, s. 12.

Powers of Minister

13 The Minister, or any person designated to act on behalf of the Minister in respect of a provincial park, may

(a) co-ordinate and implement provincial park policies and programs in co-operation with federal, provincial or municipal governments or agencies thereof or other persons;

(b) construct and operate buildings and facilities for the convenience of the public and necessary for the purposes of a provincial park;

(c) construct and operate food concessions and other facilities for the convenience of the public;

(d) construct and operate buildings, compounds and other facilities for the public display of exhibits;

(e) construct, renovate, restore, repair and improve any building, structure or site in order to preserve its historical significance;

(f) construct and operate recreation facilities that the Minister considers necessary for the convenience or benefit of the public;

(g) prescribe the use to be made of a provincial park by erecting, posting or otherwise displaying notices and signs;

(h) initiate conferences and meetings respecting provincial parks;

(i) declare the dates in any year when a provincial park is opened and closed to the public;

(j) dispose of flora or fauna in a provincial park;

(k) issue permits for scientific, historic and educational research within a provincial park;

(l) take such measures as the Minister deems necessary to protect flora and fauna within a provincial park;
(m) prepare a management plan to guide the long-term development and operation of a provincial park;

(n) prohibit or regulate the cutting and removal of forest products in a provincial park;

(o) undertake matters that may be assigned to the Minister pursuant to this Act and the regulations. R.S., c. 367, s. 13.

**Prohibition**

13A Notwithstanding anything contained in this Act, no person shall remove forest products from a provincial park except for the purpose of development or management of the park. 1992, c. 30, s. 2.

14 repealed 1993, c. 9, s. 7.

**Personnel**

15 (1) The Minister may appoint a Director of Parks and Recreation to administer and enforce this Act and the regulations.

(2) The Director, conservation officers and other persons required for the administration of this Act and the regulations shall be appointed in accordance with the Civil Service Act.

(3) Notwithstanding subsection (2), the Minister may utilize, upon such terms and conditions as the Minister deems fit, the services of such persons as the Minister considers necessary for the efficient carrying out of the purpose of this Act.

(4) A member of the Royal Canadian Mounted Police or a police officer appointed by a city, incorporated town or municipality of a county or district is by virtue of office a conservation officer pursuant to this Act and has the powers of a conservation officer.

(5) A conservation officer appointed pursuant to the Wildlife Act, the Forests Act or the Crown Lands Act is by virtue of office a conservation officer pursuant to this Act.

(6) A conservation officer, in carrying out duties pursuant to this Act and the regulations, has and may exercise in any part of the Province all the powers, authorities and immunities of a peace officer as defined in the Criminal Code (Canada).

(7) The protection afforded by this Act and any other enactment to a conservation officer extends to any other person while and to the extent that that person is in the course of assisting a conservation officer under the conservation officer’s direction. R.S., c. 367, s. 15.

**Oath of office**

16 (1) A conservation officer, before commencing duties pursuant to this Act, shall take an oath or affirmation of office.

(2) Subsection (1) does not apply to members of the Royal Canadian Mounted Police, National Park wardens, conservation officers or peace officers who have already taken and subscribed an oath or affirmation of office.
(3) A copy of an identification card purporting to be signed by the Minister is prima facie proof in any court of law that the individual named therein is a conservation officer pursuant to this Act or the regulations without any further proof. *R.S., c. 367, s. 16.*

**Grant of rights**

17 (1) The Minister may grant a licence, privilege or concession with respect to a provincial park or any part thereof or any land, building, installation or facility therein.

(2) No licence, privilege or concession shall extend beyond five years without the approval of the Governor in Council. *R.S., c. 367, s. 17.*

**Grant of easement**

17A The Minister may, with the approval of the Governor in Council, grant an easement with respect to a provincial park or a part thereof. *1992, c. 30, s. 3.*

**Agreement by Minister**

18 (1) The Minister may, for the effective management of provincial parks or park reserve, enter into agreements with the Government of Canada or an agency thereof, with a provincial or municipal government or an agency thereof or with a person for any purpose coming within the provisions of this Act or the regulations.

(2) Without restricting the generality of subsection (1), the Minister may enter into an agreement with the owner or occupier of land adjacent to a provincial park or park reserve to manage or preserve those lands so that they complement the provincial park or park reserve.

(3) Regulations made pursuant to this Act are, if they so provide, applicable to the lands which are the subject of an agreement made pursuant to subsection (2). *R.S., c. 367, s. 18; 1992, c. 30, s. 4.*

**Parks committee**

19 The Minister may appoint a parks committee to perform such advisory functions as are considered necessary or desirable in connection with the planning and management of one or more provincial parks and establish the terms of reference and procedures for such committees. *R.S., c. 367, s. 19.*

**Regulations respecting activities in parks**

20 (1) The Governor in Council may make regulations

(a) prescribing a zoning system within a provincial park;

(b) prescribing activities that may or may not be carried on within a zone.

(2) The Minister may determine the boundaries of a zone within a provincial park. *R.S., c. 367, s. 20.*

**Roads in parks**
21 (1) Notwithstanding any other enactment, the Minister may

(a) construct, maintain and administer any roads, other than a public highway, situate within a provincial park;

(b) open or close to travel the whole or any part of any highway, road, trail or other area, except a public highway, situate within a provincial park;

(c) control the mode of travel in a provincial park.

(2) Notwithstanding any other enactment, no road shall be built within the boundaries of a provincial park without the consent of the Minister. *R.S., c. 367, s. 21.*

**Use of park**

22 (1) Except as provided in this Act and the regulations, no person shall use or occupy any land, building, installation or facility in a provincial park or park reserve.

(2) No person acquires a right or title to land contained within a provincial park or park reserve through the use, possession or occupation of the land. *R.S., c. 367, s. 22.*

**Regulations respecting hunting, fishing, trapping, firearms and bows**

23 Notwithstanding any other enactment, the Governor in Council may make regulations

(a) prohibiting or regulating hunting, fishing and trapping in a provincial park;

(b) prohibiting or regulating the possession, discharge, use and conveyance of a firearm or bow in a provincial park. *R.S., c. 367, s. 23.*

**Waste**

24 No person shall transport garbage, refuse or domestic, hazardous or industrial waste through, over or in any provincial park or deposit such material in or on a provincial park, except as may be authorized by permit issued by the Minister. *R.S., c. 367, s. 24.*

**Obstruction or assault**

25 No person shall

(a) obstruct;

(b) cause to obstruct;

(c) incite others to obstruct; or

(d) assault,

a conservation officer while the conservation officer is exercising authority pursuant to this Act or the
regulations or any person assisting that conservation officer. **R.S., c. 367, s. 25.**

**Offences**

26 (1) It is an offence for a person to refuse or fail to comply with an order, visible sign or direction of a conservation officer.

(2) It is an offence for a person to engage in an activity which is prohibited in a provincial park or park reserve by a sign or notice.

(3) It is an offence for a person to remove, deface or destroy a sign posted in a provincial park or park reserve. **R.S., c. 367, s. 26.**

**Search and seizure without warrant**

27 (1) A conservation officer, who has reasonable and probable grounds to believe that a vehicle, vessel or receptacle of any description has been used by, or is in the possession of, a person in violation of this Act or the regulations or any other enactment, if the offence is committed in a park or park reserve, may, without warrant, stop and search the vehicle, vessel or receptacle.

(2) A conservation officer may seize anything, including a vehicle or vessel, that the conservation officer believes on reasonable and probable grounds is evidence of an offence contrary to this Act or the regulations. **R.S., c. 367, s. 27.**

**Search and seizure with warrant**

28 (1) Every conservation officer who has reasonable and probable grounds to believe that a contravention of this Act or the regulations has occurred and that there is evidence of the contravention to be found in a place to be searched may, with a search warrant,

(a) enter and search the premises in or on which evidence of a contravention of this Act or the regulations is located; and

(b) seize and take possession of any article or document that may constitute evidence of a contravention of this Act or the regulations.

(2) A conservation officer shall not enter a building or other place that is actually being used as a dwelling place without a search warrant unless the occupant of the dwelling place consents to the entry. **R.S., c. 367, s. 28.**

**Detention and disposal of item seized**

29 (1) Subject to subsection (2), anything seized pursuant to this Act may be detained for a period of six months following the time of seizure or, if proceedings are instituted within the two months following seizure, until the proceedings are concluded.

(2) Anything seized pursuant to this Act shall

(a) upon application be released to the owner thereof
(i) after the expiration of two months from the date of seizure, where no proceedings have been instituted, or

(ii) after a verdict of acquittal has been handed down, where proceedings have been instituted;

(b) be returned to the owner upon the Minister ordering its return, if it is not required for evidence in a court of law;

(c) be disposed of in accordance with subsection (3), where a conviction is obtained against a person committing an offence pursuant to this Act; or

(d) be deemed to be forfeited to the Crown where, after a period of six months from the date of seizure, no application has been made and no proceedings have been instituted, in which case the Minister may dispose of the item at public auction or in any manner and at such time as the Minister considers fit.

(3) Where a judge convicts a person of an offence pursuant to this Act or the regulations, the judge shall order anything seized to be

(a) returned to the owner as soon as practicable; or

(b) forfeited to the Crown, in which case it shall be disposed of at public auction or in such manner and at such time as the Minister considers fit. R.S., c. 367, s. 29.

Arrest

30 A conservation officer may arrest without warrant a person whom the conservation officer finds committing an offence pursuant to this Act or the regulations or may arrest without a warrant a person who the conservation officer finds, in a provincial park or park reserve, committing an offence pursuant to any enactment. R.S., c. 367, s. 30.

Order of Minister or conservation officer

31 (1) Where the Minister or a conservation officer has reasonable and probable grounds for believing that a person has violated or is about to violate this Act or the regulations, or that the entry upon or remaining within a provincial park or park reserve by any person may be detrimental to the safety of other park users or their enjoyment of the provincial park or park reserve and its facilities, the Minister or a person authorized to act on the Minister's behalf may, without notice or hearing, issue an order in writing prohibiting that person from entering upon or being within a provincial park or park reserve specified in the order for a period specified therein.

(2) Every person having knowledge of an order made pursuant to subsection (1) shall observe that order and, in the event the person is within a provincial park or park reserve when the order is made, shall leave forthwith. R.S., c. 367, s. 31.

Forfeiture of lost or abandoned property

32 (1) Any lost, mislaid or abandoned property coming into the custody of a person in charge of a provincial park or park reserve and not claimed by the owner within three months is forfeited to Her Majesty in right of the Province and may be disposed of at public auction or in such manner and at such time as the Minister
(2) Where a person establishes to the satisfaction of the Minister within one year of the date of sale that that person was the owner of property sold pursuant to subsection (1), the Minister may direct the payment to such person of an amount equal to the price received for the property less the cost of the sale and other expenses incurred in connection with the property. R.S., c. 367, s. 32.

Prohibited behaviour in park

33 While in a provincial park or park reserve, no person shall

(a) be impaired by alcohol or drugs;

(b) act in a noisy or disorderly manner;

(c) create a disturbance;

(d) pursue a course of conduct which is detrimental to the safety of other park users or their enjoyment of the park and its facilities;

(e) wilfully destroy park property or trees and other natural resources;

(f) dump or deposit garbage or other material in a provincial park other than in a receptacle so provided; or

(g) engage in any other activity prohibited by regulation. R.S., c. 367, s. 33.

Proof

34 (1) In a prosecution for a contravention of this Act or the regulations,

(a) the existence of a sign or notice is prima facie proof that the sign or notice was properly placed and maintained by the proper authorities; and

(b) evidence that the sign or notice was in existence, both before and after the conduct in question, is prima facie proof that the sign or notice was in existence at all material times,

without further proof thereof.

(2) In a prosecution for a contravention of this Act or the regulations, where an act that the accused is proven to have done is alleged to have been done in a provincial park or park reserve, the accused is, in the absence of evidence to the contrary, deemed to have done the act within the provincial park or park reserve.

(3) The Minister, or a person designated to act on the Minister's behalf, may prepare a certified copy of an order, record, permit, letter or other document, the production of which is not regarded by the Minister as being contrary to public policy, and any document purporting to be signed by the Minister or the Minister's designate shall be received as prima facie proof of the contents thereof in any court in the Province without proof of office or of the signature thereon. R.S., c. 367, s. 34.

Additional powers of court
In addition to a penalty imposed pursuant to the Summary Proceedings Act, the court may order a person convicted of an offence pursuant to this Act or the regulations to restore the land to a condition as near as practicable as it was before the offence was committed and pay an amount equal to twice the market value of park property which was damaged or destroyed. *R.S., c. 367, s. 35.*

### Existing regulations and parks

36 (1) Regulations made by the Governor in Council pursuant to Chapter 244 of the Revised Statutes, 1967, remain in force until otherwise determined.

(2) All provincial parks declared pursuant to said Chapter 244 are and are deemed to be provincial parks until otherwise determined pursuant to this Act. *R.S., c. 367, s. 36.*

### General regulations

37 (1) The Governor in Council may make regulations

(a) for the care, preservation, improvement, control and management of provincial parks;

(b) prohibiting or regulating the occupation of land within provincial parks;

(c) regulating the use of lands in provincial parks;

(d) prohibiting the erection of buildings or installations in provincial parks or regulating the nature, cost, type of construction or location of buildings or installations that may be erected therein;

(e) prohibiting or regulating the conduct of persons using any building, installation, equipment or facility in a provincial park;

(f) prohibiting or regulating the erection, posting or other display of notices, signs, signboards and other advertising devices in provincial parks;

(g) prohibiting or regulating the use, setting and extinguishing of fires in provincial parks;

(h) prohibiting or regulating pedestrian, vehicular or vessel traffic in provincial parks;

(i) providing for the issuance of permits to persons to enter and travel in provincial parks, to occupy campsites therein or to otherwise use any land, buildings, installations or facilities within a provincial park;

(j) prescribing the fees or rent payable for any permit given in respect of a provincial park or for any use of land, buildings, installations or facilities within a provincial park for which a permit is not required;

(k) prohibiting or regulating trades, businesses, amusements, sports, occupations and other activities or undertakings in provincial parks;

(l) prescribing the maximum periods of stay of persons, vehicles or vessels in a provincial park;

(m) providing for the imposition and collection of fees for entrance into a provincial park of persons, vehicles or vessels;
(n) prohibiting or regulating the use or keeping of domestic animals in provincial parks;

(o) prohibiting or regulating any activity carried on within any waters contiguous to a provincial park or on the shoreline thereof, to the extent that the activity could be prohibited or regulated pursuant to this Act if carried on within the limits of the provincial park;

(p) respecting the removal of sand, earth, stone and other materials from a provincial park;

(q) respecting the use of a provincial park for agricultural purposes;

(r) providing for the issuance of permits for pasturing and grazing of livestock in a provincial park;

(s) respecting leases;

(t) respecting the use of vessels or water craft in a provincial park;

(u) for the prevention of damage to or destruction, removal or defacement of park property;

(v) respecting the management or preservation of areas adjacent to provincial parks;

(w) respecting the classification and zoning of parks;

(x) prescribing a minimum penalty of not less than fifty dollars and a maximum penalty of not more than one thousand dollars for an offence pursuant to the regulations;

(y) defining any word or expression used in this Act and not defined herein;

(z) respecting any other matter necessary or advisable to carry out effectively the intent and purpose of this Act.

(2) Any regulation made pursuant to subsection (1) may be made applicable to all provincial parks or to any provincial park or to any part of a provincial park. R.S., c. 367, s. 37.

Regulations Act

38 The exercise by the Governor in Council of the authority contained in Sections 20, 23 and 37 shall be regulations within the meaning of the Regulations Act. R.S., c. 367, s. 38.
The Contracting Parties,

RECOGNIZING the interdependence of Man and his environment;

CONSIDERING the fundamental ecological functions of wetlands as regulators of water regimes and as habitats supporting a characteristic flora and fauna, especially waterfowl;

BEING CONVINCED that wetlands constitute a resource of great economic, cultural, scientific, and recreational value, the loss of which would be irreparable;

DESIRING to stem the progressive encroachment on and loss of wetlands now and in the future;

RECOGNIZING that waterfowl in their seasonal migrations may transcend frontiers and so should be regarded as an international resource;

BEING CONFIDENT that the conservation of wetlands and their flora and fauna can be ensured by combining far-sighted national policies with co-ordinated international action;

Have agreed as follows:

Article 1

1. For the purpose of this Convention wetlands are areas of marsh, fen, peatland or water, whether natural or artificial, permanent or temporary, with water that is static or flowing, fresh, brackish or salt, including areas of marine water the depth of which at low tide does not exceed six metres.

2. For the purpose of this Convention waterfowl are birds ecologically dependent on wetlands.

Article 2
1. Each Contracting Party shall designate suitable wetlands within its territory for inclusion in a List of Wetlands of International Importance, hereinafter referred to as "the List" which is maintained by the bureau established under Article 8. The boundaries of each wetland shall be precisely described and also delimited on a map and they may incorporate riparian and coastal zones adjacent to the wetlands, and islands or bodies of marine water deeper than six metres at low tide lying within the wetlands, especially where these have importance as waterfowl habitat.

2. Wetlands should be selected for the List on account of their international significance in terms of ecology, botany, zoology, limnology or hydrology. In the first instance wetlands of international importance to waterfowl at any season should be included.

3. The inclusion of a wetland in the List does not prejudice the exclusive sovereign rights of the Contracting Party in whose territory the wetland is situated.

4. Each Contracting Party shall designate at least one wetland to be included in the List when signing this Convention or when depositing its instrument of ratification or accession, as provided in Article 9.

5. Any Contracting Party shall have the right to add to the List further wetlands situated within its territory, to extend the boundaries of those wetlands already included by it in the List, or, because of its urgent national interests, to delete or restrict the boundaries of wetlands already included by it in the List and shall, at the earliest possible time, inform the organization or government responsible for the continuing bureau duties specified in Article 8 of any such changes.

6. Each Contracting Party shall consider its international responsibilities for the conservation, management and wise use of migratory stocks of waterfowl, both when designating entries for the List and when exercising its right to change entries in the List relating to wetlands within its territory.

Article 3

1. The Contracting Parties shall formulate and implement their planning so as to promote the conservation of the wetlands included in the List, and as far as possible the wise use of wetlands in their territory.

2. Each Contracting Party shall arrange to be informed at the earliest possible time if the ecological character of any wetland in its territory and included in the List has changed, is changing or is likely to change as the result of technological developments, pollution or other human interference. Information on such changes shall be passed without delay to the organization or government responsible for the continuing bureau duties specified in Article 8.
Article 4

1. Each Contracting Party shall promote the conservation of wetlands and waterfowl by establishing nature reserves on wetlands, whether they are included in the List or not, and provide adequately for their wardening.

2. Where a Contracting Party in its urgent national interest, deletes or restricts the boundaries of a wetland included in the List, it should as far as possible compensate for any loss of wetland resources, and in particular it should create additional nature reserves for waterfowl and for the protection, either in the same area or elsewhere, of an adequate portion of the original habitat.

3. The Contracting Parties shall encourage research and the exchange of data and publications regarding wetlands and their flora and fauna.

4. The Contracting Parties shall endeavour through management to increase waterfowl populations on appropriate wetlands.

5. The Contracting Parties shall promote the training of personnel competent in the fields of wetland research, management and wardening.

Article 5

1. The Contracting Parties shall consult with each other about implementing obligations arising from the Convention especially in the case of a wetland extending over the territories of more than one Contracting Party or where a water system is shared by Contracting Parties. They shall at the same time endeavour to coordinate and support present and future policies and regulations concerning the conservation of wetlands and their flora and fauna.

Article 6

1. There shall be established a Conference of the Contracting Parties to review and promote the implementation of this Convention. The Bureau referred to in Article 8, paragraph 1, shall convene ordinary meetings of the Conference of the Contracting Parties at intervals of not more than three years, unless the Conference decides otherwise, and extraordinary meetings at the written requests of at least one third of the Contracting Parties. Each ordinary meeting of the Conference of the Contracting Parties shall determine the time and venue of the next ordinary meeting.

2. The Conference of the Contracting Parties shall be competent:
   a) to discuss the implementation of this Convention;
   b) to discuss additions to and changes in the List;
c) to consider information regarding changes in the ecological character of wetlands included in the List provided in accordance with paragraph 2 of Article 3;

d) to make general or specific recommendations to the Contracting Parties regarding the conservation, management and wise use of wetlands and their flora and fauna;

e) to request relevant international bodies to prepare reports and statistics on matters which are essentially international in character affecting wetlands;

f) to adopt other recommendations, or resolutions, to promote the functioning of this Convention.

3. The Contracting Parties shall ensure that those responsible at all levels for wetlands management shall be informed of, and take into consideration, recommendations of such Conferences concerning the conservation, management and wise use of wetlands and their flora and fauna.

4. The Conference of the Contracting Parties shall adopt rules of procedure for each of its meetings.

5. The Conference of the Contracting Parties shall establish and keep under review the financial regulations of this Convention. At each of its ordinary meetings, it shall adopt the budget for the next financial period by a two-third majority of Contracting Parties present and voting.

6. Each Contracting Party shall contribute to the budget according to a scale of contributions adopted by unanimity of the Contracting Parties present and voting at a meeting of the ordinary Conference of the Contracting Parties.

Article 7

1. The representatives of the Contracting Parties at such Conferences should include persons who are experts on wetlands or waterfowl by reason of knowledge and experience gained in scientific, administrative or other appropriate capacities.

2. Each of the Contracting Parties represented at a Conference shall have one vote, recommendations, resolutions and decisions being adopted by a simple majority of the Contracting Parties present and voting, unless otherwise provided for in this Convention.

Article 8

1. The International Union for Conservation of Nature and Natural Resources shall perform the continuing bureau duties under this Convention until such time as another organization or government is appointed by a majority of two-thirds of all Contracting Parties.

2. The continuing bureau duties shall be, inter alia:
a) to assist in the convening and organizing of Conferences specified in Article 6;
b) to maintain the List of Wetlands of International Importance and to be informed by the Contracting Parties of any additions, extensions, deletions or restrictions concerning wetlands included in the List provided in accordance with paragraph 5 of Article 2;
c) to be informed by the Contracting Parties of any changes in the ecological character of wetlands included in the List provided in accordance with paragraph 2 of Article 3;
d) to forward notification of any alterations to the List, or changes in character of wetlands included therein, to all Contracting Parties and to arrange for these matters to be discussed at the next Conference;
d) to make known to the Contracting Party concerned, the recommendations of the Conferences in respect of such alterations to the List or of changes in the character of wetlands included therein.

Article 9

1. This Convention shall remain open for signature indefinitely.

2. Any member of the United Nations or of one of the Specialized Agencies or of the International Atomic Energy Agency or Party to the Statute of the International Court of Justice may become a Party to this Convention by:
signature without reservation as to ratification;
signature subject to ratification followed by ratification;
accession.

3. Ratification or accession shall be effected by the deposit of an instrument of ratification or accession with the Director-General of the United Nations Educational, Scientific and Cultural Organization (hereinafter referred to as "the Depositary").

Article 10

1. This Convention shall enter into force four months after seven States have become Parties to this Convention in accordance with paragraph 2 of Article 9.

2. Thereafter this Convention shall enter into force for each Contracting Party four months after the day of its signature without reservation as to ratification, or its deposit of an instrument of ratification or accession.

Article 10 bis

1. This Convention may be amended at a meeting of the Contracting Parties convened for that
purpose in accordance with this article.

2. Proposals for amendment may be made by any Contracting Party.

3. The text of any proposed amendment and the reasons for it shall be communicated to the organization or government performing the continuing bureau duties under the Convention (hereinafter referred to as "the Bureau") and shall promptly be communicated by the Bureau to all Contracting Parties. Any comments on the text by the Contracting Parties shall be communicated to the Bureau within three months of the date on which the amendments were communicated to the Contracting Parties by the Bureau. The Bureau shall, immediately after the last day for submission of comments, communicate to the Contracting Parties all comments submitted by that day.

4. A meeting of Contracting Parties to consider an amendment communicated in accordance with paragraph 3 shall be convened by the Bureau upon the written request of one third of the Contracting Parties. The Bureau shall consult the Parties concerning the time and venue of the meeting.

5. Amendments shall be adopted by a two-thirds majority of the Contracting Parties present and voting.

6. An amendment adopted shall enter into force for the Contracting Parties which have accepted it on the first day of the fourth month following the date on which two thirds of the Contracting Parties have deposited an instrument of acceptance with the Depositary. For each Contracting Party which deposits an instrument of acceptance after the date on which two thirds of the Contracting Parties have deposited an instrument of acceptance, the amendment shall enter into force on the first day of the fourth month following the date of the deposit of its instrument of acceptance.

**Article 11**

1. This Convention shall continue in force for an indefinite period.

2. Any Contracting Party may denounce this Convention after a period of five years from the date on which it entered into force for that party by giving written notice thereof to the Depositary. Denunciation shall take effect four months after the day on which notice thereof is received by the Depositary.

**Article 12**

1. The Depositary shall inform all States that have signed and acceded to this Convention as soon
as possible of:
signatures to the Convention;
a) deposits of instruments of ratification of this Convention;
b) deposits of instruments of accession to this Convention;
c) the date of entry into force of this Convention;
d) notifications of denunciation of this Convention.

2. When this Convention has entered into force, the Depositary shall have it registered with the
Secretariat of the United Nations in accordance with Article 102 of the Charter.

IN WITNESS WHEREOF, the undersigned, being duly authorized to that effect, have signed
this Convention.

DONE at Ramsar this 2nd day of February 1971, in a single original in the English, French,
German and Russian languages, all texts being equally authentic* which shall be deposited with
the Depositary which shall send true copies thereof to all Contracting Parties.

* Pursuant to the Final Act of the Conference to conclude the Protocol, the Depositary
provided the second Conference of the Contracting Parties with official versions of the
Convention in the Arabic, Chinese and Spanish languages, prepared in consultation with
interested Governments and with the assistance of the Bureau.
MANAGEMENT PLAN
FOR THE
RAMSAR/WHSRN SITE
AT
SOUTHERN BIGHT, MINAS BASIN
BAY OF FUNDY

25 March 1992
1.0 INTRODUCTION:

The Southern Bight of the Minas Basin, Bay of Fundy (Figure 1), has long been recognized as wetland of great importance to waterfowl and shorebirds. Large flocks of ducks and geese migrate through the area each spring and fall and massive numbers of shorebirds congregate in the wetland in late summer and early autumn.

Initial steps to protect some of the key habitats associated with the site began in 1977 when the province of Nova Scotia created the Minas Basin Wildlife Management Area (Figure 2), to protect agricultural and coastal lands important to migrant Canada Geese Branta canadensis. Similarly, in 1982, the province established the Dewey Creek Wildlife Management Area for the protection of waterfowl at a small inland wetland closely associated with the marine wetlands. In 1977, the federal government purchased a key habitat at Boot Island and established the Boot Island National Wildlife Area. The NWA is an important site for colonial nesting waterbirds as well as a migration stopover for waterfowl and shorebirds.

In 1987, the entire Southern Bight of the Minas Basin was given international prominence by being added to the List of Wetlands of International Importance under the RAMSAR Convention (Figure 3). One year later on August 10, 1988, the same area was declared a Hemispheric Shorebird Reserve as part of the Western Hemisphere Shorebird Reserve Network (WHSRN). The WHSRN is an organization which encourages the voluntary collaboration of private and government organizations committed to protecting millions of shorebirds and the wetlands they depend upon. WHSRN gives international recognition to critical shorebird habitats like the Southern Bight and promotes cooperative management and protection of these sites. The primary rationale behind the WHSRN designation (and RAMSAR) is the more than 500,000 migrant shorebirds which feed there each year to put on fat reserves which fuel the birds' transatlantic migration from eastern Canada to South America.

Although habitat protection afforded by the aforementioned designations is significant, many of the critical habitats within the Ramsar/WHSRN designated area are unprotected and unregulated in any way. The Southern Bight–Minas Basin together with Shepody Bay in New Brunswick (also a Ramsar/WHSRN site) are considered to be the most important shorebird migration habitats in eastern North America and have, through the WHSRN, been twinned with Reserves on the coast of Suriname in South America.

Sixteen species of migratory shorebirds stop in the Minas Basin during their fall migration. At peak times, the area supports flocks of over 100,000 Semipalmated Sandpipers Calidris pusilla with
up to 10,000 Least Sandpipers C. minutilla also present. The Semipalmated Sandpiper is by far the most abundant species making up 95% of the 1-2 million shorebirds which migrate to the Bay of Fundy each year in late summer and fall (Hicklin, 1987). Large numbers (thousands) of Short-billed Dowitcher Limnodromus griseus, Semipalmated Plover Charadrius semipalmatus and Black-bellied Plover Pluvialis squatarola are also present each year.

The Ramsar Convention promotes the conservation of the wetlands listed by the Convention as "Wetlands of International Importance" but, more importantly, the Contracting Parties have an obligation to maintain "the ecological character of the wetlands, which has important implications for wetland conservation measures" (Ramsar Convention Bureau, 1990). The provincial government has recently initiated actions to protect a key portion of this valuable wetland for migratory birds. In 1989, the Wildlife Habitat Advisory Committee of the Nova Scotia Department of Lands and Forests (now DNR) proposed the designation of Evangeline Beach and its neighbouring mudflats as a Wildlife Habitat Area under the Wildlife Act (1987). This new designation will hopefully become a reality in 1992.

The primary reason that migrant shorebirds are attracted to the intertidal habitats is the great abundance of food, especially the tiny "mud shrimp" Corophium volutator and numerous species of polychaete worms. However, since about 1987, a baitworm industry which "harvests" polychaetes for sale to fisherman in the United States has expanded into the flats of Minas Basin thus creating a conflict between man and birds competing for the same resource.

This Management Plan was prepared to help focus actions required to further protect habitats within the Ramsar/WHSRN site and to address current and developing conflicts associated with increasing human use of the wetland.

The implementation of recommendations contained in this Plan will hopefully ensure that the natural resources of this internationally important wetland are adequately protected and managed.

2.0 OBJECTIVES AND GOALS

2.1 Objective:
To contribute to the maintenance of the ecological balance and integrity of the Southern Bight of the Minas Basin.

2.2 Goals:

(a) To provide for additional protection for key habitats by;
   - creating the Evangeline Beach Wildlife Habitat Area under the provincial Wildlife Act.
   - declaring major shorebird roosting beaches under the Beaches Act.
   - securing key saltmarshes
(b) To regulate the baitworm harvesting industry.
(c) To institute controls to minimize human disturbance to wildlife.
(d) To establish a joint federal-provincial monitoring program.
3.0 NATURAL RESOURCES AND PRESENT STATUS

3.1 The Southern Bight

The area is characterized by a high tidal range averaging 11.5 metres resulting in an expansive intertidal zone. At low tide, 7,800 hectares of intertidal mud and sand is exposed. The high tidal range and fine sediments which make up this habitat result in very turbid waters. As a result, there is little phytoplankton present in this marine system. However, large populations of invertebrates thrive on algae (which grows rapidly on the flats when exposed to sunlight at low tide) and on particles of detritus, coated with bacteria, brought in by the tides from the salt marshes. Of particular importance are the small tube-dwelling amphipod Corophium volutator and various species of polychaete worms which populate the mud and sand flats. Both invertebrate groups attain maximum abundance in July and August which coincides with the arrival of southbound migrating shorebirds. At low tide, the birds feed on the invertebrates in the mudflats and, during high tide, they roost on Evangeline Beach, Kingsport Beach, Avonport Beach or on neighbouring agricultural lands (Elliot, 1977). Evangeline Beach is by far the most important site for roosting shorebirds in the Southern Bight (Hicklin, 1987).

Much of the area of the Southern Bight is inter or sub-tidal and is thus undeeded and technically Provincial crown land. Boot Island (144 ha.) is owned by the federal government and scheduled as a National Wildlife Area. Much of the salt marsh area in the Southern Bight is privately owned. In addition to Boot Island, the only portions of the Southern Bight area with protected status are the Minas Basin and Dewey Creek Wildlife Management Areas (186.2 and 55.4 hectares, respectively) protected under Schedules "A" and "B" of the Lands and Forests Act (1987). Boot Island NWA is administered by the Canadian Wildlife Service through the Wildlife Area Regulations under the Canada Wildlife Act (1973).

The Ramsar and Hemispheric Shorebird Reserve designations are not linked with any legislated protection which can be enforced. Both organizations, however, do support and encourage wetland conservation and "the maintenance of the ecological character" (Ramsar Convention Bureau, 1990) of the wetlands they recognize as being of international importance to waterfowl.

3.2 Human Activities

a) Hunting

Reclaimed agricultural lands at Grand Pre and along the Canard, Habitant, Cornwallis and Gaspereau rivers are used as resting and feeding areas by up to 1500 Canada Geese (D. Toews, pers.comm.) and, consequently, goose hunting is a common
autumn activity at these sites. About 400-500 Canada Geese also use the marshlands and agricultural fields along the Avon River near Windsor and geese are hunted there as well.

Teal and Black Ducks, the latter numbering up to 3200 birds in September-November (Pearce and Smith, 1974), are also commonly hunted along the Canard, Habitant, Cornwallis and Avon River estuaries. The mouth of the Avon River estuary supports large numbers of overwintering Black Ducks as well.

Pheasant hunting is also a common activity in reclaimed agricultural lands, such as the Grand Pre dykelands, bordering the Southern Bight, Minas Basin.

The American Crow, a species not protected by law, is commonly hunted (presumably for target practice) in Grand Pre.

b) Agricultural Use

Agricultural lands which border the Cornwallis, Canard and Habitant River estuaries are used for growing crops such as grains and hay, apples, peas, beans and potatoes. These areas are typically sprayed with herbicides, insecticides and fungicides (see Clair and Bailey, 1987). As a result, water and sediment samples have shown the presence of herbicides 2,4-D and atrazine in water and the pesticide DDT and the fungicides mancozeb and dichlone in sediments (Clair and Bailey, 1987).

c) Birdwatching

Many birdwatchers congregate at Evangeline Beach in late July and August each year to watch the large numbers of shorebirds which roost on the beach at high tide. Following the 1988 declaration of the site as a Western Hemispheric Shorebird Reserve this activity has increased substantially and will continue to grow as the conservation and educational activities of WHSRN, the Canadian Wildlife Service, and the Nova Scotia Department of Natural Resources, continue.

d) Beach Use

The Evangeline Beach area is lined with summer cottages owned by private citizens. A private campground operated by Mr. Wilford Tracy overlooks the beach where large flocks of shorebirds (100,000+) roost. The area from, and including, Mr. Tracy’s campground to the eastern extent of Long Island, is all privately owned and zoned as "Recreational Commercial". The general public is therefore allowed to freely use the beach for recreational purposes. Although the province of Nova Scotia has the Beaches Act (1975) "to protect the physical integrity of beaches", Evangeline Beach is not protected under this legislation. Under the Act, no sand, gravel, stone or other material may be removed from a beach below or above the mean high water mark.

e) Baitworm Harvesting

The bloodworm Glyceria dibranchiata is a large polychaete worm which can reach a maximum length of 34 cm (Klave and Dickie, 1957). It is a favourite bait of saltwater sport fishermen on both
coasts of North America. In the Maritimes, commercial harvesting of bloodworms began in the Yarmouth area around 1950 (P.J. Austin-Smith, pers. comm.). With an increase in the salt water sport fishery in the United States in recent years, the harvesting of this bait species expanded to the intertidal areas of Minas Basin about 1986. There are indications from areas along the south shore of Nova Scotia that harvesters remove a major portion of the populations of Glycera which take a number of years to repopulate to former levels. The adult worms breed only in their third year and they die soon after spawning (Klaue and Dickie, 1957). Hence, the process of recovery would be expected to slow. There is also concern as to how well worm populations do recover, even if harvesting proceeds at intervals of a few years, as has been done at some sites in southern Nova Scotia. Some observers and harvesters have concluded that some harvested flats along the coast of Maine have been decimated. For example, from a 1975 peak of 1.6 million pounds, Maine's annual harvest of large polychaetes had dropped to 300,000 pounds in 1991. A longtime worm dealer from Wiscasset, Maine, has recently stated that the "lack of conservation regulations has depleted the entire New England coast of worms" (Kageleiry, 1991).

Equally important, from the standpoint of protecting the integrity of the Minas Basin intertidal wetland habitat, is the possibility that the process used to harvest bloodworms may have negative impacts on the mudflat sediments and their stability. Consequently, this may adversely affect associated invertebrate communities and populations as well as the populations of the large worms which are being harvested. For example, Jackson and James (1979) have suggested that the increase in bait-digging at Blakeney Point in England during the 1950's and 1960's was responsible for the loss of the local cockle fishery. In similar fashion, the fish, such as flounder Liopsetta putnami, and birds which occupy those habitats in the Southern Bight and use the invertebrates as food, may also be similarly affected in the long run.

f) The Flounder Fishery

The Basin supports a small fishery for flounder with six draggers operating from the wharf at Delhaven. In early summer each year up to 15 additional flounder draggers come into the Southern Bight from other areas. Some of these draggers remain in the area for up to two months (Brylinski, 1991).

Damage to the intertidal habitat due to this fishery is limited to i) the physical disturbance to the sediment caused by the drag, ii) changes in chlorophyll "a" and iii) in macrofauna biomass. Preliminary research to monitor the impact of this activity on the intertidal sediment and polychaete populations therein indicate that dragging has no significant effect on the biological community although the rate of recovery in the variables measured, over a two-month study period, was low (Brylinski, 1991).
4.0 KEY HABITATS

a) Boot Island

This island supports considerable numbers of breeding birds such as the Great Black-backed Gull Larus marinus (1351 pairs), Herring Gull L. argentatus (527 pairs), Double-crested Cormorant (181 pairs) and Great Blue Heron (46 pairs; field census conducted by CWS in May, 1990.) The large expanse of salt marsh attached to the small upland portion of the island supports waterfowl in spring and fall and shorebirds in summer.

Boot Island was also well-known for supporting an unusually large winter roost of American Crows Corvus brachyrhynchos in the 1980's, numbering about 25,000 birds (Hilton, 1983), but which has not been used by crows since 1990 because of changing agricultural practices in the surrounding area (C. MacKinnon, pers. comm.). This change in roosting patterns by crows may be temporary.

b) Evangeline Beach

This sandy beach is the main roosting site currently used by migrant shorebirds during high tide periods in the Southern Bight during late summer and early fall. The recorded number of shorebirds using the site has increased since the mid-1970s, when numbers peaked at 35,000 birds, to numbers of 150,000 sandpipers in 1990 (Nawrinney, 1990). These numbers bring the status of this beach for migrant shorebirds in the Bay of Fundy equivalent in importance to roosting sites at Mary's Point and Dorchester Cape in Shepody Bay (see Hicklin, 1987). For the Semipalmated Sandpiper in particular, this beach takes on increasing importance at the international level since the peak numbers recorded in recent years (e.g. 150,000), amount to over 10% of the total number of this species which migrates annually through the Bay of Fundy (Hicklin, 1987). Thus a significant portion of the world population of Semipalmated Sandpipers occurs on this one beach each day at high tide during a short period in late summer.

The beach is also heavily used by vacationers in summertime. The best time for swimming by campers at the campground at Evangeline Beach is during the high tide period when birds are also roosting. Beyond the public beach, there are many summer cottages, the owners of which utilize the beach area for sunbathing and other summertime activities. Birds are often displaced to the easternmost rocky portion of the Evangeline (Long Island) shoreline at East Point (Figure 2). There are no cottages on that portion of beach and less public use because of the rocky substrate.

c) Starr's Point and Avonport Mudflats

Overall, the mudflats of the Southern Bight are biologically very productive and contain high densities of invertebrates (Hicklin
et al. 1980). However, the levels of production and the densities of invertebrates vary between mudflats (see Hicklin, 1981). In turn, some mudflats are used more extensively by the sandpipers than others and are thus significantly more important to shorebirds (Gilliland, 1992).

The highest densities of Corophium volutator occur at Avonport and Starr's Point and as a result, the densities of foraging birds are greatest at those two sites. Furthermore, the sandpipers which feed on those flats put on more fat and are in better body condition than those feeding on the Evangeline Beach mudflat (Gilliland, 1992). The Starr's Point flat is the most important, with significantly greater rates of fat deposition in Semipalmated Sandpipers that forage there (ibid.). Mavhinney (1990) clearly shows that these two mudflats are of key importance to shorebirds in the Southern Bight, and are thus in need of protection.

d) Kingsport/Blomidon mudflats

The Kingsport mudflats extending to Lower Blomidon are used by shorebirds for foraging although the flats adjacent Kingsport are more important in this respect than the areas which extend further north. The flats beyond Kingsport are populated primarily by polychaetes, especially the bloodworm G. dibranchiata.

The flounder drag fishery, described earlier, occurs primarily in this location, over these mudflats, during high tide periods.

5.0 HABITAT PROTECTION

5.1 Existing Protection

Of the key habitats mentioned in the previous section only Boot Island has any protective status (National Wildlife Area). The Dewey Creek and Minas Basin Wildlife Management Areas (241.6 ha) are technically not within the boundaries of the Ramsar/WHSRN site but are closely associated with it. Thus to date only a small portion (144 ha or 1.5%) of the 9,300 ha of intertidal mudflats and salt marshes in the Southern Bight, which are of importance to wildlife, enjoy any substantial degree of protection.

5.2 Proposals for Increased Protection

(a) The NSDNR has proposed the creation of the Evangeline Beach Wildlife Habitat Area to protect, under provincial law, upland sites and intertidal lands important to shorebirds for roosting and foraging. The proposed designation of portions of the Southern Bight as the Evangeline Beach Wildlife Habitat Area would be legislated under the Wildlife Act (1987). Such designation under the Act will allow for the joint management of wildlife, establishment
of such regulations as may be necessary, mutual assistance in the enforcement of regulations and the joint management of wildlife habitats.

(b) The NSDNR has also proposed that Evangeline Beach be protected under the Beaches Act (1975). The Beaches Act is designed to protect the physical integrity of beaches, as well as the natural processes affecting them.

6.0 ISSUES AND THREATS:

6.1 Fundy Tidal Power

The issue of the environmental threats posed by the proposal to build a power barrage across the Bay of Fundy has been exhaustively reviewed (see Gordon and Dadswell, 1984). With regard to this proposal, Smith and Hicklin (1984) stated that the construction of a power dam across the Bay would be detrimental to migratory shorebirds, waterfowl and wintering Bald Eagles Haliaeetus leucocephalus.

The primary concern regarding shorebirds is that sandpipers and plovers, which normally feed in the proposed headpond area (Cobequid Bay), would be displaced to the Southern Bight where already large numbers of shorebirds forage. Such considerable increases in foraging densities could be detrimental to the birds and reduce their ability to deposit fat reserves (Smith and Hicklin, 1984).

6.2 Disturbance at Shorebird Roost Sites

Vacationers using Evangeline Beach for recreation (swimming, sun-bathing, walking dogs, driving all-terrain vehicles etc.) disturb large flocks of roosting shorebirds at high tide. Protection under the Beaches Act and the Wildlife Act (1987), once the Evangeline Beach Wildlife Habitat Management Area is approved, should help alleviate these problems.

6.3 Bait Harvesting

Baitworm harvesting is substantial. For example, it has been estimated that a crew of 15 men remove an average of 16,000 worms per day (Kentville Advertizer, 1990). In 1991, on a single day, 49 men were seen harvesting polychaetes on the Starrs Point Flat, the most important mudflat to shorebirds for fat deposition, within the confines of the Bay of Fundy Western Hemispheric Shorebird Reserve (Mawhinney, 1991). The worms harvested are the primary prey of Short-billed Dowitchers and Black-bellied Plovers (Hicklin and Smith, 1979). How many worms are actually required on a daily basis for those shorebird species is unknown and the research needs have been identified (see section 7.3).
It has been noted by harvesters (Kageleiry, 1991) and others (Goodspeed, 1991; The Sunday Capital, Annapolis, Maryland, September 22, page C14) that some flats in Maine are overharvested and that the polychaete populations in those areas are not returning to pre-harvest levels. As this species only breeds in its third year of life and adults die soon after reproduction, replenishment of severely-reduced populations may be a difficult process.

Beyond the reduction of polychete numbers, an observable and measurable phenomenon in the Southern Bight, additional threats to the intertidal environment may be due to the process of harvesting itself. The process of "turning over" a large volume of sediment when actually digging for worms, each year, may have some impact on less obvious aspects of the intertidal ecosystem, such as gradual changes to the sedimentation regime and the particle-size composition of the substrates. Fine silts may be brought into suspension and deposited elsewhere thus altering the existing particle-size composition, and substrate stability, which many invertebrate species depend on. The physical disturbance caused by the harvesters themselves to the mudflats (by walking and digging), as well as the impacts on the sediments (changes in particle-size composition) and sedimentation rates, may have long-term impacts on the invertebrate communities inhabiting them. In such a case, negative impacts on shorebirds may be inevitable.

7.0 RECOMMENDATIONS

1.) Designate the Southern Bight as the "Evangeline Beach Wildlife Habitat Area".

The federal government should assist the government of Nova Scotia in appropriate ways to implement the province's proposal to create the Evangeline Beach Wildlife Habitat Area under the Wildlife Act (S.N.S. 1987) for the protection of the beaches and intertidal wetlands used by shorebirds for roosting and foraging (see the "Evangeline Beach Wildlife Habitat Management Area Strategy"; Draft #4, September, 1989).

2.) Schedule Evangeline Beach, Kingsport, and Avonport Beaches under the protective legislation of the Beaches Act.

Wardening may be required during the first few years to advise of regulations and show enforcement presence.

3.) Control baitworm harvesting via a permit system and prohibit harvesting from the Starr's Point mudflat.

harvesting in the Southern Bight with the necessary enforcement personnel assigned the task of monitoring bait diggers with/without permits. The Starr's Point mudflat should be closed to harvesters because of its great importance to sandpipers. Since there is only one location from which harvesters can gain access to Starr's Point, preventing access would be a feasible proposition. Apparently, a local farmer who owns lands at this site, has already attempted to stop bait-harvesters from using his land for access to the flats by putting up a gate at the site (K. Gilliland, pers. comm.).

Bait harvesters using the important intertidal flats of the Southern Bight, Minas Basin can harvest an estimated 1000-2000 polychaetes per day per harvester. The first priority for the protection of the resource, would be to control the number of harvesters using the Southern Bight. Based on the evidence now available (Gilliland, 1992) we know that some mudflats are more important to shorebirds than others and, for the benefit of both harvesters and birds, certain flats should be left undisturbed. By leaving at least one mudflat unharvested, polychaetes in the Southern Bight may have a better chance of recovering from any overharvesting with a "seed" population left undisturbed to repopulate the surrounding mudflats regularly harvested by man and used by birds.

The permit system, to be administered by the Nova Scotia Department of Natural Resources, should issue up to 50 permits for the Southern Bight. If, in the first year, controlling and checking the numbers of harvesters using the flats is unmanageable, then fewer permits (e.g. 30) should be issued. Through experience in restricting the number of harvesters in initial years, and as research data becomes available, effective and practical controls should be developed to ensure the prevention of any long-term damage to this valuable wildlife habitat.

4.) Secure key salt marshes.

Purchase salt marshes near Kingsport at the mouth of the Habitant River and the extensive intertidal marshlands at the mouth of the Cornwallis River. Funding sources such as the Eastern Habitat Joint Venture may be accessible and the acquired wetlands could be incorporated into the Boot Island National Wildlife Area and regulated via the Wildlife Area Regulations.
5.) Institute a joint program of research and monitoring.

a) Shorebirds and Waterfowl
   In cooperation with the Acadia Biology Department and the Center for Estuarine Research at Acadia University, funds should be made available annually through NSDNR surveys programs and the CWS Habitat Program to conduct regular surveys of roosting shorebirds and wintering staging/waterfowl during August – December each year. But in most years, CWS staff could conduct censuses of staging ducks and geese in the salt marshes as part of biannual censuses of migratory birds in the National Wildlife Areas, of which important salt marshes in the Southern Bight could become a part. Such censuses are needed in the long term in order to recognize any declines in populations which might occur so that management initiatives can be put in place.

b) Bait Harvesting
   A study should be conducted to determine the impact of bait-harvesting on the invertebrate communities of the intertidal mudflats of the Bay of Fundy. The most appropriate research would be a study conducted partly in the Southern Bight, where bait-harvesting is concentrated, and in a control area where birds are abundant but no harvesting occurs. Based on this research, habitat managers would better understand the impacts that harvesting exerts on polychaete populations, as well as on foraging shorebirds, by comparing the shorebird species foraging in both areas. Any differences would suggest which species might be more seriously affected by impacts on the food resources due to harvesting.

c) Toxic Chemicals
   In cooperation with the Inland Waters Directorate (Environment Canada, Conservation and Protection), sample biannually the waters of the Habitant, Canard and Cornwallis Rivers and sediments of the Southern Bight for the presence and/or levels of agricultural toxic chemicals and submit a report to CWS and NSDNR.

d) Ecological Impacts
   As was indicated earlier, impacts of harvesting methods on sedimentation rates and particle-size composition of the substrates should be conducted in order to determine if any long-term changes to the intertidal habitat might be occurring.

Mr. Peter Herbin, Co-chair
Dr. Gérald C. Boudreau, Co-chair
Nomination Grand Pré Advisory Board
C/O Kings RDA
35 Webster Street
Kentville, Nova Scotia B4N 1H4

Dear Mr. Herbin and Mr. Boudreau:

Thank you for your inquiry regarding the Trust to be established for the Grand Pré UNESCO World Heritage Site.

I am pleased to confirm that the Province is committed to provide $2.5 million to the Grand Pré Trust upon the successful inscription of the site on the World Heritage list. It is our understanding that these funds will be used to implement the Strategic Plan for the site developed and approved by the Nomination Grand Pré Advisory Board.

Should you have any questions about this Trust, please do not hesitate to contact William (Bill) Greenlaw at (902) 424 4986, or greenlbe@gov.ns.ca.

Once again, we are pleased to provide this support and look forward to the successful designation of the site in July 2012.

Sincerely,

David A. Wilson
Minister

Subject: Inscription of Landscape of Grand Pré (C 1404), Canada, on the
World Heritage List

Dear Ambassador,

I have the pleasure to inform you that the World Heritage Committee, at its 36th
session (Saint Petersburg, Russian Federation, 24 June – 6 July 2012),
examined the nomination of the Landscape of Grand Pré and decided to
inscribe the property on the World Heritage List. The decision of the
Committee concerning the inscription is attached.

I am confident that your Government will take the necessary measures for the
effective conservation of this new World Heritage property. The World Heritage
Committee and its Secretariat, the World Heritage Centre, will do everything
possible to collaborate with you in these efforts.

The Operational Guidelines for the Implementation of the World Heritage
Convention (paragraph 168), request the Secretariat to send to each State
Party with a newly inscribed property a map of the area(s) inscribed. Please
examine the attached map and inform us of any discrepancies in the
information by 1 December 2012.

The inscription of the property on the World Heritage List is an excellent
opportunity to draw the attention of visitors to, and remind local residents of,
the World Heritage Convention and the outstanding universal value of the
property. To this effect, you may wish to place a plaque displaying the World
Heritage emblem and the UNESCO logo at the property. You will find
suggestions on this subject in the Operational Guidelines for the

In many cases States Parties decide to hold a ceremony to commemorate the
inscription of a property on the World Heritage List. Upon request to the World
Heritage Centre by the State Party, a World Heritage Certificate can be
prepared for such an occasion.

I would be grateful if you could provide me with the name, address, telephone
and fax numbers and e-mail address of the person or institution responsible for
the management of the property so that we may send them World Heritage
publications.

Please find attached the brief descriptions of the property, prepared by
ICOMOS and the World Heritage Centre, in both English and French. As these
brief descriptions will be used in later publications, as well as on the World
Heritage website, we would like to have your full concurrence with their wording. Please examine these descriptions and inform us, by 1 December 2012 at the latest, if there are changes that should be made. If we do not hear from you by this date, we will assume that you are in agreement with the text as prepared.

Furthermore, as you may know, the World Heritage Centre maintains a website at http://whc.unesco.org/, where standard information about each property on the World Heritage List can be found. Since we can only provide a limited amount of information about each property, we try to link our pages to those maintained by your World Heritage property or office, so as to provide the public with the most reliable and up-to-date information. If there is a website for the newly inscribed property, please send us its web address.

All the Decisions adopted by the 36th session of the World Heritage Committee are available at the following web address of the World Heritage Centre: http://whc.unesco.org/archive/2012/whc12-36com-19e.pdf.

As you know, according to paragraph 172 of the Operational Guidelines for the Implementation of the World Heritage Convention, the World Heritage Committee invites the States Parties to the Convention to inform the Committee, through the World Heritage Centre, of their intention to undertake or to authorize in the area protected under the Convention major restorations or new constructions which may affect the outstanding universal value of the property.

May I take this opportunity to thank you for your co-operation and for your support in the implementation of the World Heritage Convention.

Please accept, dear Ambassador, the assurances of my highest consideration.

Kishore Rao
Director

Extract of the Decisions adopted by the 36th session of the World Heritage Committee (Saint Petersburg, 2012)

Decision: 36 COM 8B.27

The World Heritage Committee,

1. having examined Documents WHC-12/36.COM/8B and WHC-12/36.COM/INF.8B.1,

2. inscribes the Landscape of Grand Pré, Canada, on the World Heritage List as a cultural landscape on the basis of criteria (v) and (vi);

3. adopts the following Statement of Outstanding Universal Value:

   Brief synthesis

   The Grand Pré 'marshland' and the remains of the associated old villages constitute a cultural landscape bearing testimony to a remarkable effort, over many centuries, using the polder technique to develop agricultural farmland, in a maritime location with extreme tides. In particular, it demonstrates the permanency of its hydraulic drainage system using dykes and aboiteaux and its agricultural use through a community-based management system established by the Acadians and then taken over by the Planters and their modern successors. Grand Pré is also testimony to the history of the Acadians in the 17th and 18th centuries and their deportation.

   Grand Pré forms a vast area of polders or marshlands, in which the land division and crop farming methods have continued for three centuries. It is the most important example of its type in North America. The farming landscape is complemented by the strip land division method along the coastal area, bearing testimony to 17th century French colonization. The hydraulic system is based on an exemplary ensemble of dykes, aboiteaux to evacuate the water, and a drainage network. These techniques and community-based management have continued through to today. The property includes archaeological remains of the villages of Grand Pré and Hortonville that testify to the settlements and lifestyles of the Acadian settlers and their successors. The property and its landscape include traces of the major pathways that crossed the marshland and organized the adjacent coastal area. The locations of Grand Pré village and Horton Landing have memorial buildings and monuments erected in the 20th century in homage to the Acadian ancestors and their deportation, starting in 1755. The overall property forms the symbolic reference landscape for the Acadian memory and the main site for its commemoration.

   Criterion (v): The cultural landscape of Grand Pré bears exceptional testimony to a traditional farming settlement created in the 17th century by the Acadians in a coastal zone with tides that are among the highest in the world. The polderisation used traditional techniques of dykes, aboiteaux and a drainage network, as well as a community-based management system still in use today. The resultant rich alluvial soil enabled continuous and sustainable agricultural development.

   Criterion (vi): Grand Pré is the iconic place of remembrance of the Acadian diaspora, dispersed by the Grand Dérangement, in the second half of the 18th century. Its polder landscape and archaeological remains are testimony to the values of a culture of pioneers able to create their own territory, whilst living in harmony with the native Mi'kmaq people. Its memorial constructions form the centre of the symbolic re-appropriation of the land of their origins by the Acadians, in the 20th century, in a spirit of peace and cultural sharing with the English-speaking community.

   Integrity

   The conditions of integrity of the material and landscape ensemble formed by the property are met, as well as for the memorial and symbolic values. However, the coastal instability due to the tidal currents makes this integrity fragile in the long term. Also, the possibility of
wind farm projects being developed in the maritime and coastal environment could also affect it.

**Authenticity**

The conditions of authenticity are met for the component material elements of the marshland and its landscapes, and for the hydraulic, regional and agrarian management of the marshland. They are also met for the memorial aspects of the Acadian culture and for the symbolic dimension of these landscapes.

**Protection and management requirements**

The property's protection measures are appropriate and they are effective because they correspond to clear directions and choices that are well accepted by both the inhabitants and the Acadian diaspora. They are applied to the main place of remembrance by the Federal Government's Parks Canada Agency, and elsewhere by the other stakeholders in the property's practical management: regional technical authorities, the municipality, the Grand Pré Marsh Body and farmers. The maritime component of the buffer zone has been extended to guarantee the visual integrity of the property viewed from the coastal area of the old village of Grand Pré at Horton Landing.

The property's management system is in place and acts effectively. It involves a series of specialist entities, either public, such as the Federal Parks Canada, provincial, or traditional bodies such as the Grand Pré Marsh Body. Overarching coordination of the various stakeholders has been confirmed by the implementation of the Stewardship Board and its personnel, together with a schedule for the implementation of actions programmed in the Management Plan. The property's memorial dimension is handled by the Société Promotion Grand Pré.

4. **Recommends** the State Party give consideration to the following:
   a) Applying without delay the Archaeological Management Plan announced for the overall property, and consider extending it to the property's buffer zone and surrounding coastal areas,
   b) Expanding the property's monitoring system with a regular assessment of changes to farmland and building use.

Surface and coordinates of the property inscribed on the World Heritage List by the 36th session of the World Heritage Committee (Saint Petersburg, 2012) in accordance with the Operational Guidelines.

**Brief Description in English**

Situated in the southern Minas Basin of Nova Scotia, the Grand Pré marshland and archaeological sites constitute a cultural landscape bearing testimony to the development of agricultural farmland using dykes and the aboiteau wooden sluice system, started by the Acadians in the 17th century and further developed and maintained by the Planters and present-day inhabitants. Over 1,300 ha, the cultural landscape encompasses a large expanse of polder farmland and archaeological elements of the towns of Grand Pré and Hortonville, which were built by the Acadians and their successors. The landscape is an exceptional example of the adaptation of the first European settlers to the conditions of the North American Atlantic coast. The site – marked by one of the most extreme tidal ranges in the world, averaging 11.6 m – is also inscribed as a memorial to Acadian way of life and deportation, which started in 1755, known as the Grand Dérangement.
**Brief Description in French**
